According to Plotinus, the first and only principle of all things (in the *Theology of Aristotle* = God) is raised above the logos of the Stoics (*kalina*, active force) and above the energeia of the Peripatetics (*h'v*). It is true that one can say of the *voûs* (*'ahā*), the first created thing, if as *λόγος καὶ ἐνέργεια* of the First, but the First himself is from his nature *δύναμις*, i.e. power, all-power. With the uniqueness of the First (also called, as e.g. by Plato, the absolute good) only one quality, that of omnipotence, is compatible. All activity however, whether it is thinking or setting, presupposes multiplicity and effort, which cannot be ascribed to the absolutely simple Being. On this definition of the First as *Dynamis*, cf. Plato's utterance (*Soph.*, 247 E): "I define the being of the existing in this way, that it is nothing but a *Dynamis*".

Excluding the Mu'tazila, it may be said that this emphasis on the omnipotence in the being of the Unique (God) must have been much more natural to the Muslim theologians—although traditionally they deal with God's knowledge before his power—than the Aristotelian view that God is pure *Energeia*, which manifests itself only in thinking.

KUZAH (see KAWA KUZAH).

KWANADI (self-designation—Kwantl hekua or Bago'at, Russian designation—Bagual), but Kwandinsky yatk for longueux), a people of the eastern Caucasus. Kwanadi forms, with Andi, Akhvakh, Botkh, Camial, Godoberi, Karata and Tlidi, the Andi division of the Avar-Andi-Dido group of the Ibero-Caucasian languages. Their population was 3,054 according to the 1926 Soviet census.

The Kwanadi inhabit the area of Khushtada, Kwanadi (Tsumada region), Glimso, Tisi, Tibisho (Akhvakh region) south of the bend of the Andi Koyu in the Dagestan A.S.S.R. Living in isolated mountain valleys, the Kwanadi have maintained many patriarchal customs. The Kwanadi are Sunnis of the Shāhī school. Their traditional economy was based on sheep and goat herding and related activities, and on agriculture.

There are two dialects of Kwanadi, sc. Bagual and Tisi, both of which are purely vernacular. Avar and Russian serve as literary languages. The Kwanadi are being culturally and linguistically assimilated by the Avars, and they appear as Avar-speaking Avars in the 1959 and 1970 Soviet censuses (see also ANDI, AVAR, DAGESTAN, AL-KARK).

KWATTA, QUETTA, a town and district of northern Baluchistan, now in Pakistan. In both the former British India and now in Pakistan, Quetta and Pishin, some 20 miles to its north, have formed an administrative district. The region is geologically complex and is very mountainous, with peaks rising up to nearly 22,000 feet/3,850 metres, and it is centred upon the basin of the Pishin-Lora river and its tributaries. The climate is temperate, with cold winters. Crops—wheat being the chief rabi' or spring crop and sorghum the chief kharif or autumn one—can only be grown in the alluvial river bottoms, and then by irrigation; at present, there are about 300 *kāris* or *qānds* (q.v.), plus a reservoir and a canal, for this. The surrounding mountains furnish chromite and also coal (in the Sor range near Quetta and at Mač in the Boila Pass area), whose exploitation now employs several thousand men, including Swati migrant labour and Pothan and Balūč nomads in the off-herding seasons.

In mediaval Islamic times, the history of the Quetta-Pishin region was closely connected with that of Kandahār (q.v.), some 130 miles/210 km. to the north-west with which it is connected by an ancient route through Caman just on the Pakistan side of the modern border with Afghanistan. The town of Quetta (whose name may stem from *Paghto hante* "heap, hill", or from *koia* "room, fortress", ultimately from Hindi *koila*) was more commonly known till the 19th century, and is still known by the local people, as *Shāl* or *Shālikol*; Mount Stuart Elphinstone in 1809 calls it "Shawl" (*An account of the kingdom of Candahar*, London 1839, 8, 225). In 884/1479 Husayn Mirza Baykara (q.v.), the Timurid ruler of Herat, awarded *Shāl*, Mustang and Sibi to *Dhu 'l-Nūn* Beg Arghan of Kandahār (see ARGHAN). These places passed after *Dhu 'l-Nūn*'s death in 913/1507 to his progeny, and in 930/1524 Shāh Husayn Beg b. *Dhu 'l-Nūn* acknowledged the Mughal Babur's suzerainty. After a brief Safawid occupation of 963-6/1556-9,

they were incorporated in the Mughal empire. The *Āḥm-i Akbarī*, tr. H. S. Jarrett, II, Calcutta 1949, states that the Quetta-Pishin region supplied the Emperor Akbar with 2,500 cavalry and 2,500 infantry, plus grain, sheep and 38 *tāmdīs* in money. After 1031/1622 it came under Safawid control again, and Shāh 'Abbās I (r.) conferred Shāl, Mustang and Sibi to the Pathan chief Shīr Khān Turīn. In the 18th century, the Quetta-Pishin region was disputed by Ghilzai Pathans and the Brahuis of Kalāt, but after 1758/59, Ahmad Shāh Durrānī (r.) left Nasir Khān of Kalāt as ruler in Quetta in return for a contingent of troops, at a time when the Afghān ruler's position in India was being threatened by the Mahrātās. Henceforth, Quetta was controlled by the rulers of Kalāt, whose seat was the town of that same name 103 miles/165 km. to the south (see KILAT); Pishin and Shorārūd, however, remained in Afghān hands till 1879 (see below).

The importance of Quetta in recent times has arisen from its commercial role as an emporium for trade between southern Afghānistān and the lower Indus valley, but above all, from its strategic position. It lies at a point where a north-south route runs from Kandahār and the southern Afghānistān frontier via Quetta and the Bolān Pass to Jacobabad and the Indus at Shikarpur in Sind, and where a transverse route comes from the middle Indus at Dera Ghāzi Khān (see DERAGHAZI) and runs westwards through Quetta to the Persian border. These factors became especially operative in the 19th century after the annexation by Britain of Sind (1843) and the Panjāb (1849). During the First Afghān War (1839-42), when Shīr Shudhā' al-Mulk was placed on the throne in Kabul (see AFGHANISTAN, v. History), Quetta was occupied by British forces during these years; the town was used as a forward base for operations in the Kandahār region, and a political agent, Capt. Beane, installed there. It was, nevertheless, still only a small place, with a mud wall pierced by two gates and the governor's fort or *mīrī* on artificial mound; C. Masson in the late 1820s said that "Shāl" possessed "about 300 houses and a fair bazaar" (*Narrative of various journeys in Baluchistan, Afghanistan and the Panjab*, London 1842, I, 327-30); and W. Hough described it in 1839 as "a most miserable mud town, with a small castle on a mound, on which there was a small gun, on a rickety carriage" (*A narrative of the march and operations of the army of the Indus in the expedition into Afghanistan*, London 1840). Three decades later, A. W. Hughes still estimated its population at only ca. 4,000 (*The country of Baluchistan, its geography, topography, ethnology and history*, London 1878, 67, 73-4).

After 1842, when Quetta reverted to the Khān of Kalāt's control, voices in the Government of India, such as that of General Sir John Jacob in 1856, urged its permanent occupation as a vital strategic point and also its being linked with Sind and Karachi by railway (*The views and opinions of General John Jacob*, ed. L. Pelly, Bombay 1858, 349). It was, however, feared that such a distant place, as it then was, in the heart of the tribal area of northern Balūchistān, would be difficult to hold in times of crisis, and the proponents of "masterly inactivity" carried the day until the 1870s. Fears arising from the Russian advances against the Central Asian khānates and possible pressure on Afghānistān led, however, to the adoption now of a "Forward policy", and in 1876 a decision was made to occupy Quetta. The Treaty of Jacobabad between the Viceroy Lord Lytton and the Khān of Kalāt renounced the right of Britain, already secured in 1854, to send

troops into Kalāt territory in times of stress and made Kalāt into a protected native state. Quetta was occupied, and Major (later Sir) Robert Sandeman became the first Agent there to the Governor-General.

Quetta's military value was soon proved in the Second Afghān War (1878-80), when troops were moved through the Bolān Pass and via Quetta into the Kandahār region. By the Treaty of Gandamak of 1879 with the Afghān Amīr Ya'qūb b. Shīr 'Alī, Sibi and Pishin, with the land up to the Khwādja 'Amrīa Mts., the so-called "assigned districts", were ceded to Britain, to form with Quetta in 1887 the nucleus of British Balūchistān. In 1883 Quetta was formally leased to the Government of India by the Khān of Kalāt in return for an annual payment of 25,000 rupees. It was at this time that the administrative District of Quetta and Pishin was formed. After 1879 a broad-gauge railway was built from a point near Sulduz to Pishin via the Harnai Pass, and Quetta now became linked with the North-West Railway system of India. Later, during the First World War, a lengthy branch (442 miles/830 km.) was constructed through British Balūchistān westwards to a railroad in Persian territory at Zāhidān.

Quetta town is situated in lat. 30°10' N. and long. 67°1' E., and lies at an altitude of 5,508 feet/1,770 metres at the northern end of the Shāl valley. Under British rule, it became a very important military centre, the headquarters of the 4th Division of the Western Command, and the seat of the Staff College. In 1896 it became a municipality. Quetta lies in an earthquake zone, and was severely hit by the earthquake of 1935, when tens of thousands of people died; buildings subsequently erected there have had to be earthquake-proof (see R. Jackson, *Thirty seconds at Quetta, the story of an earthquake*, London 1960). It now possesses a good amount of local industry, and in 1972 had an estimated population of 139,800 (swollen in summer-time by temporary residents), comprising the cantonment and the civil area. The population of Quetta itself is now somewhat mixed, though still largely Pathan. The surrounding areas are, to the north, overwhelmingly Pathan and Pashto-speaking (Kāfirs, Tardis and Ācākzayis); this Pashto is close to that of Kandahār, i.e. of the southwestern group (for specimens of the Pashto of Kandahār and Pishin, see *Linguistic survey of India*, 2, 103-12). To the south of the town, the Brahui area begins. Quetta accordingly straddles the ethnic and linguistic boundary between Pathans and Brahuis-Balūch.

In the present administrative organisation of Pakistan, Quetta is the centre of Quetta-Pishin District, continuing the former British arrangement here (area 3,314 sq. miles/8,763 km.²), and also, since the re-organisation of 1955, when Balūchistān was merged into the single western unit of Pakistan, the centre of the Quetta Division, comprising the Districts of Quetta-Pishin plus those of Zhob, Loralai and Sibi to the east, and Chagai to the west (area 53,123 sq. miles/137,567 km.²).

L

LA'AKĀT al-DAM "lickers of blood", the name given to a group of clans of Kuraysh. According to tradition, Kuraysh [q.v.] had allocated to the different subdivisions of Kuraysh the quarters which they were to occupy in Mecca and had entrusted to the Banū 'Abd al-Dār various local offices: administration of the *dar al-nadwa* and bearing the standard (*himī*), the harnessing of provisions (*riḥāda*) and drink (*shāḥya*) to the pilgrims, and custodianship of the Ka'ba (*ḥifẓa*) [see KA'AB]. However, the Banū 'Abd Manāf thought themselves more worthy of these privileges, and Kuraysh (with the exception of the B. 'Amir b. Lu'ayy and Muḥarrir b. Fihir, who stayed neutral) split into two hostile factions.

The B. Asad b. 'Abd al-'Uzzā, the Zuhra b. Kilāb, the Taym b. Murra and the al-Ḥarith b. Fihir joined the side of the B. 'Abd Manāf, and the five clans swore to aid each other and not to abandon each other's cause *waḥalla biḥayyihim yāfa*, i.e. till the end of time. In order to make binding the oath, a vessel full of perfume was brought into the Ka'ba, and the participants dipped their hands in it and then dried them on the walls of the shrine. Thus they became known as the Muṭayyabūn "perfumed ones".

In the opposing group, the B. 'Abd al-Dār had the support of the B. Maḥẓūm, the Sahm, the Qumayh and the 'Adī b. Ka'b, and these five clans took the same oath and became known as the Ahlāf "allies". The two sides were ready to come to blows when an appeal for reconciliation was made, and peace was kept by the 'Abd al-Dār's conceding to the 'Abd Manāf the *shāḥya* and the *riḥāda*.

The composition of the respective two groups is given identically in the old sources, but the Ahlāf are not always given, and Ibn Kutayba, for instance, speaks only of the Muṭayyabūn (*Ma'sūf*, 604). Nevertheless, in his recension of the *ḥikāya* of Ḥassan b. Thābit (ed. W. Ararat, London 1971, I, 260), Muḥammad b. Habib cites a passage of al-Kalbi which attributes also the name *la'akāt al-dam* to the Ahlāf, and in his *Mukabbar*, 186, the same author states that this group slaughtered a camel and plunged their hands into its blood; since one member of the B. 'Adī licked this blood, the rest of the Kuraysh present imitated him and were therefore called *la'akāt al-dam*. A parallel version is given by Ibn Sa'd (*Tabaḥṭāḥ*, ed. Beirut 1980/1960, I, 77), with the difference that we only have mention of a vessel containing blood and no reference to the sacrifice of a camel. The author of the *Kānūs* (s.v. I, 5, 4) echoes this tradition and gives the name of *la'akāt al-dam* to the five clans mentioned above, giving the detail that in order to seal the oath they killed a camel and either licked its blood or dipped their hands into it; he does not however say anything about the circumstances surrounding this ceremony.

Now, for its part, the *Sira* indeed sets forth the difference between the Muṭayyabūn and the Ahlāf over the public duties in Mecca (I, 231-2), but does

not mention here the name *la'akāt al-dam*, which it reserves (I, 196-7) for one of the two groups formed at the time of the dispute among Kuraysh about the positioning of the Black Stone during the rebuilding of the Ka'ba. It relates that the B. 'Abd al-Dār brought in a vessel filled with blood and dipped their hands in it, swearing, together with the 'Adī b. Ka'b, to fight to the death; it was at this time that they became called *la'akāt al-dam*, but the *Sira* does not say whether other clans joined with the 'Abd al-Dār and the 'Adī nor anything about the licking of fingers. In any case, it was a member of Maḥẓūm who advised the two opposing sides to submit to the arbitration of the first person who entered the Ka'ba by the door of the Banū Shayba, and as is well-known, this was the Prophet. We find exactly the same version as the *Sira*'s one in al-Fahārī, I, 118.

A little later, al-Mas'ūdī (*Musādīq*, II, 119-21 = §§958-70) enumerates the factions making up the Ahlāf and Muṭayyabūn, but gives the name of *la'akāt al-dam* to the ten clans belonging, in his view, to the Kuraysh al-Biḥār and made up, apart from two exceptions, of the united body of the two factions involved.

It appears clearly from all the pieces of evidence mentioned here and agreeing about the Muṭayyabūn and Ahlāf of Mecca, but disagreeing about the episode of the *la'akāt al-dam*, that we have such a vague tradition that one wonders whether the story of the hands dipped in blood and licked has not been invented in the interests of symmetry by traditionalists anxious to find a parallel with the perfumes of the Muṭayyabūn. It is furthermore the only attestation of a practice involving the taking in of a few drops of blood [see DAM in Suppl.] which we possess, and the *LA* makes no allusion to it when it cites, in regard to the oath called *ghamāl* (s.v. gā, m. 2.), the ashes, perfume and blood in which the oath-takers slept their hands.

(CH. PELLAT)

LA'B [see LA'IB]

LABĀB (from Pers. *lab-āb* "riverside"), the irrigated region along the banks of Amū Daryā [q.v.] in its middle course. The name, though of Persian origin, became known apparently only in modern times, when this region became one of the main centres of the settlement of the Turkmen. The exact limits of the region have never been defined; it seems that it extended as far as Darghān (the southernmost town of Khwāzma [q.v.]) in the north and as far as Kūh [q.v.] in the south. In pre-Mongol times a narrow tract of cultivated land stretched along both the left and the right banks of the river, though on the left bank conditions for artificial irrigation were better; the uniformly cultivated tract began to the north of Amū [q.v.].

In the post-Mongol period, the irrigation system fell into decay, and both banks of Amū Daryā were inhabited by nomads, except for several townships with their surroundings. After the middle of the 17th century, a number of Turkmen tribal groups began to migrate to Labāb from Western Turkmenia through Khīwāz, and in the 18th century the region was inhabited mainly by Turkmens who became sedentarised and built a network of irrigation canals. In the 18th and 19th centuries, Labāb belonged to the Khānate of Bukhārā and was administratively divided between two wilāyats, Čardjūy (former Amul) and Kerkī. In the 19th century, Labāb was the most densely populated region among all those inhabited by the Turkmens, and lack of irrigated lands brought about considerable emigration to Afghanistan and Eastern Bukhārā. The most numerous among various Turkmen groups of Labāb have been the tribes Sākur [a.v.] to the north-west of Čardjūy, Sākur to the south-east of Čardjūy, and especially Ersārī [a.v. in Suppl.] further to the south, up to Kālf. Besides them, there have been in Labāb almost 30 other tribal groups of Turkmens interspersed with each other and, in the vicinity of Čardjūy, with Uzbeks. Now Labāb belongs to the Turkmen Soviet Republic of the U.S.S.R., forming the core of the *oblast'* (province) of Čardjūy.

LABBAI (Tamil *laṭṭai*, thought by Tamil *śaivās* to derive from *laṭṭaiyā*, the pilgrims' cry (see TALAIYA)), a community of Tamil-speaking Muslims residing in or originating from Tamilnadu State, South India. Labbai is a generic term incorporating four subdivisions, the Marakkayars, Kayalar, Rawther and Labbai. All four groups are Sunnis, the first two predominantly of the Shāfi'i school, while the latter two are Hanafis. The Marakkayars and Kayalars predominate in the southern coastal regions of Tamilnadu, while Rawthers and Labbais reside in greater numbers in the state's north and its interior. Urbanisation has led to the geographic mixing of these communities, but in the countryside usually only one group lives in a particular location.

Each subdivision is associated with a distinctive tradition. The Marakkayars claim to be the descendants of Arab sea traders and have a reputation as dealers in gems and pearls and as smugglers. Kayalars are said to originate from Kayalpatinam, once an important port on the southern Coromandel coast. These two groups once published books and newspapers written in the Tamil language and using the Arabic script. The Rawthers claim a heritage as cavalymen and horse-traders, while the subdivision

of Labbais are said to be the descendants of Qur'anic scholars. In Madurai District, Rawthers refer to the employees of their mosques as Labbais.

The four Labbai subdivisions are effectively endogamous, although they accept no ideology that would dictate this. On the contrary, they are adamantly egalitarian and do not accept any caste ranking of their groups, despite being surrounded by caste Hindus. The small amount of intergroup marriage that does occur in the cities substantiates this egalitarianism, since these marriages are considered socially acceptable.

The Labbais are more urban than rural, and consider mercantilism to be their occupational forte. In 1961 approximately 55% of the Muslim population of Tamilnadu was urban compared to 26.7% of the total state population. This latter figure is commensurate with a society based on an agricultural economy. The 55% figure is high and reflects the non-agricultural basis of the Muslims' livelihood. Throughout the state they are recognised as astute businessmen and traders. A few families have achieved wealth, but most operate petty businesses.

In search of a livelihood, Labbais have travelled over much of the Asian world, especially over South-east Asia. For centuries they were an important economic and political force in Malacca, and they are found in numbers in Malaysia, Thailand and Singapore. Prior to World War II, some had business in Japan. Wherever they go, they are primarily merchants.

Despite the Labbais' far-flung wanderings, India remains a homeland for them and ties are maintained with kinsmen in India. Often, overseas Labbais maintain households and families in India to which they periodically remit money and return home. It is clear that, despite their wanderings and attachment to Islam, they identify themselves as Tamilians.

The Labbais identify strongly with Tamil culture and society. For most of them, Tamil is the language both within and without the mosque. The Tamil-speaking Muslims are proud of their contributions to Tamil literature, the *asir* *qua* *nos* of Tamil culture. The Labbais of the countryside dress in a fashion which is more similar to the Hindu mode than do most of their urban fellows. Their celebration of the 'Abd al-Qādir Dīlāl 'Urs commemorating the death of 'Mabaiyadeen Abdul Kadar Andakal Dīlāl' is in many features similar to the Hindu cart festivals. Saint worship centred around this 'Urs forms an important popular undercurrent to the strict orthodoxy of urban religious leaders. Many Labbais do not eat beef because they have been socialised to Hindu custom, but not to Hindu religious ideology.

In the northern part of Tamilnadu and in Madurai City, the Labbais have undergone a process of Islamisation with a stress on Sunni orthodoxy. Saint worship is frowned upon as *ghirk* by religious leaders, and when it occurs is much less flamboyant than the gala events of the countryside and is accompanied by consensus attempts to avoid *ghirk*. Labbai dress is distinctively Muslim, and many have acquired Urdu as a second language because they consider it the language of Indian Muslims and akin to Arabic, if only in script. Some mosques in this northern part of the state recognise the importance of the *Dār al-'Ulūm* at Deoband as a centre of religious learning, and hire *hāfīz* from there during Ramadan. The impulse towards Islamisation is part of a process of de-parochialisation. As Muslims have become urbanised, their desire to become

recognised as good Muslims as well as good Tamilians has increased.

LABBAYKA [see TALFĪYA].

LABIBI, the pen name of a Persian poet who lived at the end of the 4th/11th and the beginning of the 5th/12th century. His personal name as well as almost any other particulars of his life are unknown. The *Tarāf-nāmā al-balaghā* has preserved an elegy by Labibi on the death of Farrukh [q.v.], which makes clear that the former was probably still alive in 420/1027-8. A *kašida* attributed to him by 'Awfī is addressed to a *mawḍā* by the name of Abū 'I-Muḍallīf, who in that source is identified with a younger brother of the Ghaznavid Sultan Maḥmūd. But it is more likely that he was a member of the Ālī Muḥtādī, the rulers of Čaghāniyān, who was also a patron of Farrukh's poetry (see C. E. Bosworth, *The rulers of Čaghāniyān in early Islamic times, in Iran, JBIS*, xix [1981], 11-17). In the *Madḡma al-fuṣṣāḥ* (4, 445) the poem is in fact presented as a work of the latter, but it also occurs in manuscripts of the *Dīwān* of Manūčīrī and in the works of other poets. The attribution to Labibi was rejected by Rypka and Borecký, but is defended by most modern Iranian scholars. Apart from this poem, the remaining poetry of Labibi consists of fragments only, mostly single lines quoted in evidence by lexicographers. Some of these lines belonged to *maṭnawī*-poems, the subject of which can no longer be ascertained.

Though his work fell into oblivion quite soon, Labibi must have been a poet of some distinction in his own age. Bayhaḡī, writing about 450/1058, appreciated him as an *ustād-i sukhān*; and so did Mas'ūd-i Sa'd-i Salmān, who also styled him *sayyid*

al-gha'arā' and imitated one of his *ḥašidas* (Dīwān, ed. R. Yāsīnī, Tehran 1339/1960, 571). The many quotations contained in the *Lughat-i Furs* of Asadī prove that his poems were still circulating in the later part of the 5th/11th century.

Bibliography: The remnants of Labibi's poetry were collected and studied most comprehensively by J. Rypka and M. Borecký, in *ArD*, xiv (1943), 261-307; other collections were published by Muḥammad Dabir-Siyāḡī, in *Mīhr*, viii (1331/1952), 320-2, 367-71, 630-3; Labibi wa *al-gha'arā'*, Tehran 1332/1953, and *Gawḍ-i bās yāfān*, i, Tehran 1334/1955, 1-34. LABID b. RAB'Ā, Abū 'Aḡlī, Arab poet of the *maḥḥad*-era. He belonged to the family of Banū *Ḥaṭṭā*, a branch of the Kilāb, who belonged to the Banū 'Amīr b. Ṣaḥā'a (see Ibn al-Kalbi-Caskeel, *Teb*, 93 and Register, ii, 374-5).

According to Ibn Sa'd, vi, 21, he died in 40/660-1 in the night on which Mu'āwīya arrived in al-Nukhayla to conclude peace with al-Ḥasan b. 'Alī. Others, like Ibn Ḥaḡār, ii, 657, whom Nūḏte (Fayṣ *Mo'allagā*, ii, 51) thinks ought to be followed, give 41 A.H., others again 42. He is said to have reached an unusually great age (al-Sagḡānī, K. *al-Mu'amarīn*, ed. Goldziher, § 61). In fact, he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 600 A.D. he seems to have attained a prominent position in his tribe by his command of language. As quite a young man, he is said to have accompanied a deputation from his tribe to the court of King Abū Kābūs Nu'mān of al-Ḥīra (ca. 580-604), and when the latter was incited against the Banū 'Amīr by his friend Abū Rab' b. Rāyād al-'Aḡalī (of the tribe to which Labid's mother belonged), Labid succeeded with a satirical *raḡ'as* poem (Dīwān, no. 33) in so ridiculing him to the king that he restored his favour to the Banū 'Amīr. A verse from Nu'mān's answer to his courtier, who sought to defend himself from the lampoon on him in this *raḡ'as* poem, became proverbial (cf. al-Mufaḡḡal, *al-Fāḡḡ*, I, 41-2; al-'Askarī, *Amḡāl*, on the margin of al-Maydānī, I, 117, 7-18; al-Maydānī, I, 33; K. *al-Aḡḡāl*, xv, 94 f.; xvii, 22 f.; 'Abd al-Kāḍir, *Kāḡḡān al-adab*, ii, 79 ff., iv, 171 ff.). In his later poems Labid also often prides himself on having helped his tribe by his eloquence. He remained loyal to his tribe even when a famous poet, and scorned the profession of a wandering singer, practised by his contemporary al-'Aḡḡāl. But the coming of the Prophet Muḥammad threw him out of the usual groove. We do not know the exact date of his conversion to Islam. As early as Djumādī II of the year 8 Sept.-Oct. 629, the chiefs of the tribe of 'Amīr b. Ṣaḥā'a, sc. 'Amīr b. Tuḡayl and Arbaḍ b. Kays, a stepbrother of Labid, seem to have negotiated in Medina about the absecession of their tribe to the new community, but without reaching any result (see Caetani, *Annali*, ii, 90 ff.). Both men are said to have soon afterwards come to an

untimely end, 'Amir from plague and Arbad from a lightning stroke; the latter story seems to find confirmation in Labid's lament for him (*Diwān*, no. 3). The accusation on the other hand that Arbad attempted to kill the Prophet is quite incredible. In the year 963-4, the tribe again sent a deputation to Medina which included the poet, and an agreement was reached. Labid is said on this occasion to have become a Muslim. He later migrated to Kufa, where he died. Of his family, only a daughter is mentioned who is said to have inherited his talent (see al-Maydāni, i, 49, 13 ff.; al-Ghazālī, *Maṭāhīl al-budūr*, i, 32, 7 ff.).

Labid's poems were very highly esteemed by the Arabs. Al-Nābiḡa is said to have declared him the greatest poet among the Arabs or at least of his tribal group, the Hawāzin, on account of his *Mu'allaka*. He himself is said to have claimed third place after Imru' al-Qays and Tarabā. Al-Djūmālī (*Tabaḥḥiṭ al-ghurā'*, ed. Hell, 29-30) places him in the third class of pagan poets along with al-Nābiḡa al-Dja'fī, Abū Dhū'ayb and al-Shammūkh. Labid showed himself equally master of the *hijā'*, the *maṭhiya* and the *ḡazal*. One of his *ḡazals* was adopted into the collection of *Mu'allakāt* and is thought by Nöldeke (*Fünf Mu'allakāt*, ii, 51) to be one of the best specimens of Bedouin poetry. Labid uses the traditional pictures from the animal world—wild asses and antelopes fleeing before the hunter and fighting with his dogs—no charmingly as the usual complacencies about drinking bouts. He seems, on the other hand, to have cultivated the *nasīb* only because it was traditional. He deals far less with the subject of woman's love than with the description of the *ḡazal*, which he likes to compare with artistic calligraphy. He is also fond of recalling memories of places of his native district, the palmgroves and irrigation channels which continually move him to charming descriptions; indeed, in one such connection he gives the whole itinerary (*Diwān*, no. 19, vv. 4 ff.) of a journey from central Arabia to the coast of the Persian Gulf (see von Kremer, *op. cit.*, in *Bibl.* below, 12). As his almost contemporary Abū Dhū'ayb is fond of doing, in the *Mu'allaka*, v. 55 ff., he turns however once more to his beloved, and thus combines the *nasīb* with the main part of the *ḡazala* into an organic whole; but for him this is simply a mode of transition to a new descriptive passage. His poetry is, however, distinguished from that of other poets of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muhammad's mission. While Zuhayr, for example, still expresses his practical wisdom derived from the experience of a long life, in plain though impressive language, Labid on such occasions always strikes a religious note. He certainly did not profess Christianity, nor can we see in him a representation of the so-called *ḥanṣā* of the Sira, as von Kremer wished to do. In him, rather, we find the belief in Allāh as the guardian of morality finding particular expression, a belief already widely disseminated in Arabia. Such passages naturally invited the Muslim traditionalists to increase them. Indeed, a later author went so far as to ascribe to him a verse by Abū 'Aṭhāya (fragment 18). But many passages of his *Diwān* seem to owe their inspiration to the Qur'ān. The statement that he wrote no more poetry after his conversion to Islam is obviously an invention (see Ibn Sa'd, vi, 21, 4, repeated later; e.g. by al-Ghazālī, *Maṭāhīl*, i, 52, below); it is contradicted by the simple fact that poems 21 and 53 of the

Diwān were only composed shortly before his death (*al-Ghazālī*, xvi, 101). The description of Paradise (*Diwān*, nos. 3, 4) is certainly inspired by the information in the Qur'ān, like the idea that precedes it, that a record is kept of the doings of men. Under the influence of Islam in nos. 39 and 41 (v. 12 of which, as Ibn Kutayba (*K. al-Shi'r*, 153, 5) already points out, certainly must be written after his conversion, if it is not to be considered an interpolation), he replaces the *nasīb* by pious admonitions. Thus he creates a new artistic form, that of poetical paranesis on the transitoriness of human life; besides the Qur'ān, he may of course have been influenced by the Christian preaching in the works of 'Adī b. Zayd. He only follows older models in this connection when he combines admonition with the averting of blame from a woman in no. 14, as in Tarabā's *Mu'allaka*, vv. 56 ff., 63-5 (cf. Cankal, *Das Schekel*, 9), where this is, however, only an episode in the *ḡazala*.

Labid's *Diwān* was edited, according to the *Fihrist*, 150, by several of the greatest Arabic philologists, al-Sukkarī, Abū 'Amir al-Shaybānī, al-Asma'ī, al-Tūst and Ibn al-Sikkīt. Of these recensions, only half of that of al-Tūst, together with a commentary, has survived in the manuscript of al-Khalidī (see below) from the year 389/1193. All other manuscripts are much later, e.g. those in Leiden and Strasbourg, and that in Cairo not yet utilised, which also contains the *Diwān* of Abū Dhū'ayb, ed. by J. Hell.

LABIN or LABA (coll.; singular *labna*, *labna*) designates in Arabic the unfired brick whose use in building dates back to the earliest antiquity; to speak only of the present domain of Islam, some traces have survived above-ground on the Iranian plateau, in Mesopotamia, Palestine and Egypt, where this material was used in the Pharaonic period to build palaces and royal tombs as well as poor hovels; it is certain that it was also in use in the Arabian peninsula and North Africa. The bog-backed bricks of Mesopotamia appear to be no longer used, and the *labna* generally has a geometric, fairly regular shape, that of a parallel-sided rectangle, whose variable dimensions are at the largest those of a bond-stone and often have the ratio $4 \times 3 \times 1$ (e.g. length 56 cm., width 18, thickness 14, or $42 \times 21 \times 10.5$,

36 x 18 x 9, 32 x 16 x 8; but 45 x 35 x 3 in South Arabia). This unfired, rough and fairly economical brick is composed essentially of dampened, shaped clay, which is then turned into a wooden mould (*malban*) without a bottom or cover, packed tight and finally dried in the sun; the clay is lined down, depending on the region, with sand, gravel, chopped straw, and potsherds in fixed proportions to prevent its crumbling and cracking. Once taken out of the mould, the bricks are left for a while longer in the sun and sometimes stockpiled before being used in the construction of buildings which can reach a considerable height; this was notably the case of the ziggurats of Mesopotamia, and it is still that of the houses, several storeys high, which are built in South Arabia (the technique of manufacture and construction is explained by M. Bataïh and J. Chelhod, *Notes préliminaires sur l'architecture de Sabaïm*, in *St Isl.*, II [1960], 295-6). At *Shibām*, the foundations to a depth of 3 m. are of stone; however, the trench intended for them, usually wider than the wall, may only be filled up with beaten earth and ballast. In low houses and enclosures the walls are sometimes supported by wooden posts driven into the ground with regular spaces between them. The building can be strengthened, at least in its lower part, by means of two thicknesses of bricks placed alternately longwise and crosswise, the walls erected are generally thicker at the bottom than at the top, which, on the outside, gives the impression that they are leaning dangerously. Houses of unfired brick have the advantage of being warm in winter and cool in summer, and there are countries, such as Egypt, where *labin* is preferred to fired brick. But the large buildings form great masses of thick walls (as much as 10 m. in antiquity), pierced with a few narrow apertures.

This material is in current use, either because of its low cost, or because, in the region, clay is readily exploitable, and stone is rare, hard to extract or too heavy; but rainfall must not be very plentiful, for heavy rains cause severe deterioration of the walls to the point of making them disintegrate, even if they are lined with a coating of earth mixed with lime or plaster. The ancients took some supplementary precautions against erosion, by providing gutters, drains, reed beds, etc.

Unfired bricks are pointed with a mortar made of earth with an admixture of lime or ash (the use of bitumen, as in ziggurats, does not seem to be current). This mortar, like the coating mentioned above, is called *madar* (see *L.A.*, s.v.) in Classical Arabic, but this term (which one hesitates to connect with *matéria*) seems clearly to be applied also to construction of earth and *labin*, to judge at least by the expression *ahl al-madar* which designates the sedentaries as opposed to *ahl al-masār* "the people of the camel skin" = tents, i.e. the nomads, even allowing for the Arab taste for paronomasia; a fairly strong indication is supplied by the meaning of *madasa* "a village built of *labin*". However, the ambiguity of the vocabulary does not always enable us to distinguish clay or mud from unfired brick, for Arabic texts give the impression that the same term was used for the different techniques; but it is probable that the Prophet's house in Medina was actually of unfired brick and that the *ahl al-madar* lived in dwellings of the same kind, while the expression is also applied, by extension, to some citizens living in stone houses.

Another difficulty arises from the uncertainty of the terminology. Although Ibn Manẓūr (*L.A.*, s.v.)

classifies *ṣab* as a synonym of *ḡḡurr* "fired brick" (see below) and this word still has this meaning in Egypt for example, it designates in the Muslim West a lump of earth or an unfired brick, and it is furthermore in this latter sense that it has been adopted and preserved in Spanish in the form *adobe*. But Ibn Khaldūn (*Muḥadditha*, Bk. I, Ch. v, 23) states that the *ṣawṣab* is the mason who builds a wall in clay. At first sight, this craft name appears to be derived directly from *ṣab* with the meaning of "clay", but it is quite possible that a telescoping may have taken place with *ṣab* (ṣ) *ṣay* "clay, mud" which, on the other hand, comes from the Spanish *tapia* (see Dorj, *Suppl.*, s.v.). This borrowing leads us to think that the clay technique, well-known in antiquity, notably in Mesopotamia, was imported into the Maghrib from Spain. *Tāḡiya*, which is still in use today in Algeria and Morocco, is used by Ibn Khaldūn, when he speaks (loc. cit.) of *ḥmad* (ḥ) *T-turāb* and describes in detail the way a clay wall is built, according to a process which has not changed since then (cf. a description in Berber in E. Lacoust, *Mots et choses berbères*, Paris 1929, 24). The masons, generally specialists belonging to particular tribes, use a frame made of two boards (*ṣawḥ*) of variable dimensions, but on average 150 to 280 cm. long by 80 wide, which they place face-to-face at a distance equal to the width of the wall under construction, the frame is held in place by cross-pieces and ropes and closed at both ends. The earth, prepared as for unfired brick, is mixed with lime, gravel etc. and carried in baskets; as soon as it is ready to be turned into the frame, it is beaten with a kind of rammer (*ṣurḡat*, pl. *ṣurḡat*). The workmen generally arrange several frames so as to be able to carry out their work horizontally, then vertically with superimposed coats until the work is completed. Clay, which can form a really solid concrete, is used for the construction of all kinds of buildings, which can reach a great height and be very long-lasting. This is the case particularly with ramparts and military works; near Fās a bridge was built of very hard clay reinforced with fired bricks on top of the arches.

The kiln-fired brick is designated in Arabic by the collective *ḡḡurr*, but to judge by the multiplicity of forms which this term assumes (*ḡḡur*, *ḡḡir*, *ḡḡir*, *ḡḡirān*, *ḡḡurr*, etc.; noun of unity *ḡḡurra*, *ḡḡurra*, etc.), all at any rate in the *L.A.*, it is clear that the Arabs did not possess either the term signifying or the object signified; nor is it known in what period there took place the borrowing from Persian *ḡḡur* which Arab lexicographers freely recognise. It is a fact that fired brick, whose use is widespread throughout the Islamic world, was used particularly in Persia and the lands which fell directly under its influence. It will be recalled, for example, that the Muslims who founded Bagra first demarcated the mosque by means of a reed enclosure, then built it in *labin* and rebuilt it in fired brick a few years later. All the same, a Roman and Byzantine influence was left to an equal extent in the regions situated further west. The word which is used today with the meaning "tile", *ḡḡmad*, is a sing. made from *ḡḡmad*, of which the *L.A.* asserts (*Yāḡmad*) that it designates in Syria the fired bricks (*ḡḡurr*) of the baths and comes from the *ṣami* word *ḡḡmadall* (sic; *κεραμικὸς ἰδὸς* "brick, tile", rather than *κεραμικός*).

The *ḡḡin* (*ḡḡin*) is similar to that of the potters, and consists of a furnace with a firing-room on top of it. Of smaller dimensions than the *labin*, the fired brick is not nearly so thick (3 to 6 cm.). Buildings

(J. Bosen Vuk)

LACCADIVES, a group of coral islands in the south-eastern Arabian Sea lying off the Malabar Coast of India between lat. 8° and 12°30' N., and between long. 72° and 74° E. Under British Indian rule these were formerly the Laccadive Minicoy and Amindivi Islands, but in 1956 the group was brought under a single administration to form the Indian Union Territory of Lakshadweep (Sanskrit: *Lakṣadvīpa* 'the hundred thousand islands'). There are in all 27 islands and islets of which ten—Maliku, Kalpeni, Kavarathi, Androth, Agathi, Amind, Kadmat, Kiltan, Bitra and Chetlat—are inhabited, Maliku, which is separated from the rest of the group by the 114 mile-wide Nine Degree Channel and from the Maldivé Islands (q.v.) by the 71 mile-wide Eight Degree Channel, is attached to Lakshadweep politically, but belongs ethnically and culturally to the Maldives. In this article it is considered separately from the "Laccadives Proper".

The Laccadives were originally settled (possibly as early as the 2nd century A.D., but certainly by the 1st/7th century) by Hindu groups (Nambudiri, Nayar and Tiyar) from North Malabar. Little is known of the early history of the islands. They were conquered by the Chola Rājās of South India in the 4th/10th century. By ca. 1500 they had passed under the rule of the Kolattiri Rājās of Kōlattunād (North Malabar), by whom they were given in *giḡḡi* (q.v.) to the Āli Rājās of Kannanūr (q.v.) in the mid-16th/16th century. The Āli Rājās were the leading family of the Malabar Muslim community or Māppilas (q.v.), and under their rule the Laccadive Islands' coir trade became the monopoly of the Kannanūr Māppilas.

In 1786 the inhabitants of the northern (Amindivi) islands of Amin, Chetlat and Kiltan rose in protest against the coir monopoly and the harshness of Kannanūr rule. They appealed for protection to Tipu Sultān of Mysore (q.v.), and as a result were transferred to his rule in 1787; they passed to the East India Company after the fall of Seringapatam in 1799. The Southern (Laccadives) group remained under Kannanūr until they were finally sequestered by the British in 1835 (though the Bīb of Kannanūr retained a nominal sovereignty until 1908). Both groups of islands remained under British rule until India attained independence in 1947. Today the capital of the Union Territory of Lakshadweep is Kavarathi Island, and the population (including Maliku) is 32,840 (*Census of India*, 1971, Series 29 (Laccadive, Minicoy and Amindivi Islands, part II(A), 5)).

The people of the Laccadives are linked ethnically and culturally with the Malayalam-speaking Dravidian people of Kerala, especially with the Māppilas of North Malabar. There has also been a sustained Arab—particularly Yemeni—influence on the islands which lie in the path of the direct sea route between Arabia, South India and the Far East; certainly the mediaeval Arab navigators were familiar with the Laccadives, which they knew as the *Dhīwar al-Jāl*, *Dhīwar al-Jāhī* or (collectively with the Maldives) as the *Dhīghāḡi* (G. R. Tibbets, *Arab navigation in the Indian Ocean before the coming of the Portuguese*, London 1972, 458-60). As a result of this Arab

influence, the islanders speak Malayalam with an admixture of Arabic, and write in the Arabic script.

The Laccadives were converted to Islam in ca. the 7th/13th century, according to legend by one 'Ubayd Allāh, an Arab castaway whose tomb on Androth Island is particularly venerated. The islanders are overwhelmingly Sunnī Muslims of the *Shāfi'i madhhab*, but there are also followers of the Rīfā'i and Kādiri *fariḡas*, and of the Wahābī-oriented Muḡāhid movement (which is active in Kerala). The women do not observe *pardā* and may (as in the neighbouring Maldives) have their own mosques with a *ṭanaḡ* *imām* (Ellis, *A short account of the Laccadive Islands and Minicoy*, Madras 1924, 66).

Unusually for an Islamic society, the Laccadives are predominantly matrilineal. The people follow the Malabar system of matrilineal descent (Malayalam: *Maramakkhāḡayam*). The community is organised in exogamous matrilineal groups known as *lanavās*. There is a dualocal residence pattern (i.e. after marriage the wife remains in her maternal home and is "visited" by her husband). Descent is traced through the mother, and family (*lanavā*) property is passed on through the mother's line. The self-acquired property of the father is passed on according to the Islamic family law. Monogamy is usual, but divorce is common.

The Laccadive Islanders are divided into three caste-like endogamous groups, in hierarchical order the *Koyas* (the land-owners); the *Māimis* (from the Arabic *mawālīm*, traditionally the sailing class); and the *Melachars* (the coconut workers—originally the agricultural serfs of the *Koyas*). Today both the traditional caste-structure and the *maramakkhāḡayam* system are breaking down under the impact of modernisation.

Maliku (corrupted by Europeans to Minicoy, perhaps from the Arabic *Mīḡāl*), is an isolated island within the Maldivian cultural sphere which by the mid-16th/16th century had fallen under the control of the Āli Rājās of Kannanūr. Maldivian political control has never been re-established. The inhabitants are Indo-European, speak the Maldivian language *Divehi* (though it is known on Maliku as *Māhi*), and use the Maldivian script *Tāna*. Originally Theravāda Buddhist, the islanders are today Sunnī Muslims of the *Shāfi'i madhhab*. They were probably converted in the mid-6th/12th century. Descent is patrilineal, but women occupy a respected and powerful position in society. They do not observe *pardā*, but sometimes wear a head-veil called the *burāḡa*. As in traditional Maldivian society the people are divided into four hierarchical, caste-like groups; see MALDIVES.

(Census Reports) The Government of India issues decennial census reports, the most recent being 1971. See *Census of India*, 1971, Series 29, 'Laccadive, Minicoy and Amindivi Islands' (3 vols.). (A. D. W. FORBES)

LADĀKH, a region of the extreme north of India. It lies between lat. 32° and 36° N and long. 75° and 80° E, and is bounded on the north and east by the Chinese territories of Szechuan and Tibet, on the south by the Indian province of Himachal Pradesh, on the north-west by Baltistan, and on the west by Kashmir, of which it now constitutes a province, covering an area of 30,220 sq. miles. Its capital is Leh.

Ladākh is known to the Tibetans as Mangyāl or Märyul. The population may be divided into four racial groups, Čāmpās, Ladākhīs, Baltis and Dards, of whom the first three are of Tibetan stock and the last Aryan. There is a small Muslim community, but the majority are Buddhist, whence the name Bhettas traditionally given to the inhabitants of Ladākh by their neighbours.

The indigenous chronicles furnish little more than a list of rulers with the merest sketch for each reign (see K. Marx, *Three documents relating to the history of Ladākh*, in *JASB*, ix [1891], 97-135; ix/1 [1894], 94-107; ix/2 [1901], 21-34), but from time to time references in external sources provide a

valuable landmark. In the 8th century A.D., through the medium of Kashmir, then vassal to the Tang, Ladākh was briefly drawn into the Chinese sphere of influence, after which there is a long gap until around 1400, when Leh received an embassy from the great Tibetan reformer Tsong-kapa. At this time there were two main principalities in Ladākh, but in the mid-10th/16th century we find the country reaching its greatest extent and united under one ruler. Its size was temporarily reduced through subsequent wars with its neighbour 'Alī Mīr (see BALTIŠTĀN), and late in the 11th/17th century it was invaded from Tibet by the Džungarian Mongols (see KASHMIR). This threat Ladākh withstood by calling in the aid of the Mughal Emperor, who made it a condition that the ruler should become a Muslim. His successors were again Buddhists, but from this time dates the penetration of the country by Islam.

In 1834 it was invaded by Zulfar Singh, the general of Maharājā Gulāb Singh of Džammū, and was obliged to pay tribute. There ensued a series of risings and intrigues until 1841, when Ladākh seized its opportunity to revolt following the defeat of the Džōrgis in Tibet, but was soon crushed by a fresh army from Džammū. It was now definitely annexed to Džammū (q.v.), thus becoming in 1846 part of Kashmir. For its subsequent history, see KASHMĪR.

Francke, *A history of Western Tibet*, London 1907, *Imperial gazetteer of India*, new ed., Oxford 1907-9, xvi, 88-94, for mentions of Ladākh in the Kashmir sources, see Pandit D. R. Sahni and A. H. Francke, *References to the Bhottas or Bhautas in the Rajatarangini of Kashmir*, in *Indian Antiquary*, xxxvii (1908), 181-92.

(P. JACKSON)

LĀDHĪK, the name of several Anatolian towns, and the Turkish form, phonetically identical, of the name of Laodicea (Λαοδικεα), which, since the imperial period often appears in inscriptions with the form Λαδδικεα, accented on the second syllable (cf. Robert, *Villes d'Asie Mineure*, Paris 1902, 283; Modern Turkish orthography Lâdik).

1. Lādhīk near Denizli, Laodicea of Lycos, or Laodicea of Phrygia. The ruins are located at a place called Eskî Hisar, 8 km. to the north of the centre of Denizli, the acropolis standing on a hill which dominates the valley of the Lycos (Çürük Su), a left-bank affluent of the Great Meander. Captured for the first time by the Turks before 1129 (Cinnamus, Bonn ed., 3), this date saw the restoration of the town's defences by John Comnenus (Nikeas, *Johannes Comnenus*, Bonn ed., iv, 17), but the town was abandoned before 1156, at which period its population was dispersed into the surrounding countryside (idem, *Manuel Comnenus*, iii, 163). It survived, however, for some time, following a shift in location, transferring to a more remote and more defensible site close to the foothills of the Baba Dağı [in *pede altissimi montis*, Aubert, *Historia de expeditione Frederici imperatoris*, in *Fontes rerum Austriacarum* (Scriplices, v), Vienna 1863, 58], where the fortified stronghold perhaps survived until the end of the 13th century. But a parallel development was the growth in the immediate neighbourhood of the Turkish urban settlement of Denizli, where the first epigraphical datings go back to the second third of the 13th century. The latter had no direct connection with Laodicea, but nevertheless bore the name of Lādhīk concurrently with

its own. It is also found separately (for example in the work of Ibn Bibi who, writing in 579/1180-2, speaks exclusively of Lādhik) until the 8th/14th century (in Mustawfī, *Ta'rikh-i guzida*, ed. Browne, 444, 483, and on the coinage of the Inançlı Oğulları and the Germiyan Oğulları until the year 760/1360), then as the equivalent of the new name until the 12th/18th century, at least in the work of Western writers (Kātib Çelebi, *Diwan-nüma*, tr. Armin, 620, in L. Vivien de Saint-Martin, *Histoire des découvertes*, . . . iii, Paris 1848: "Degruell on Lazikie"), but this was nothing more than a scholastic tradition; the original text does not give the name of Lādhik.

Bibliography: N. de Planhol, *Le centre géographique: le pays de Laodicea-Denikli*, ii, *De Laodicea à Denikli*, 403-13, in Jean des Gagniers (ed.), *Laodicea du Lycaon. Le Nymphée, campagnes 1957-1962*, Québec-Paris 1969, which presents a detailed discussion of the problem and the solutions previously offered (Ramsay, Philippon, Akçaya) regarding the relationship between the two towns, together with a full bibliography.

a. Lādhik near Konya, Laodicea Katakekaumene. Currently a large village, 35 km. to the north of Konya, in the *kaza* of Kadınhanı, *nahiye* of Saraybük, on the road leading towards Afyon Karabırsar and Eskişehir. The ancient name (Λαοδικεα ἡ κατακεκαυμένη, Laodicea Combusta, which passed into the Islamic sources with the form Lādhik Sükhā, "the burnt L"), no doubt referred not, as is the opinion of J. A. Cramer (*A geographical and historical description of Asia Minor*, Oxford 1832, ii, 331, to the volcanic nature of the terrain (as in the case of Phrygia Katakekaumene), which here is primarily calcareous, but definitely to the existence of ancient mining or metallurgical workings. There is no need to retain the form "Yorgan Ladik" (from *yorgan*, quilted covering fixed to the upper bed-sheet), recorded by the Western travel literature of the 19th century (and the works which derive from it, *Et*, art. s.v.), starting with W. M. Leake, *Journal of a tour in Asia Minor*, London 1824, 43, and explained by the textile industry (coverings, carpets) which was active in the locality. What has happened, as has been shown by Besim Darkot (art. *Ladik* in *IA*), is a mis-reading of the form لادیک given in the *Diwan-nüma*, which should be interpreted as Yürükün Ladik ("Lādīk of the Yürük or nomads", with Persian suffix). The form "Ladik-el-Teħaus", also given by Leake (*loc. cit.*) appears incomprehensible. The village, which Ewlyās Celebi (*Seyāhat-näme*, ed. Zuburi Danışman, iv, Istanbul 1970, 87) describes as having suffered ravages on the part of the *Diğilāl* (see *Diğilāl* in Suppl.), is cited by Kātib Çelebi as a small town which is nevertheless the administrative centre of a subsidiary district of Konya (fr. M. Norberg, Lund 1818, ii, 584-5), with numerous shops, and Leake (*loc. cit.*) calls it "a large place". Decline must have set in in the 19th century (cf., for a comparison of the population in the 19th and 19th-20th centuries, the figures of W.-D. Hütteroth, *Ländliche Siedlungen im südlichen Inneranatolien in den letzten vierhundert Jahren*, Göttingen 1968). It had no more than 1,785 inhabitants in 1961 and had no administrative role of any kind.

3. Lādhik near Amasya, a large village 40 km. north of Amasya, currently centre of a *kaza* (*ilçe*) subsidiary to the *vilayet* of Samsun. At an altitude of 950 metres, it stands on the edge of a plain, at the extremity of the Phazimonitis of antiquity,

the base of which is occupied by a lake (formerly Lake Suphanus, currently "Lake of Lādīk") 9 km. to the east of the town, reduced to a shallow swamp in summer but considerably augmented to the point of overflowing in spring, its waters, at this time, spreading, via the Terekkan Çayı, into the Yeşil Irmaç. According to Ewlyās Celebi, who has left us a detailed description of the place (iv, 87-91), the urban area comprised, in the 11th/17th century, 3,000 houses and 400 shops. Its prosperity was owed in particular to the fact that Bayezid II, when he was governor of Amasya (known to be residence of hereditary Ottoman princes in the 9th/15th and 10th/16th centuries; cf. P. Kappert, *Die Osmanischen Prinzen und ihre Residenz Amasya im 15. und 16. Jahrhundert*, Istanbul 1976), chose it as a summer resort, spending six months of the year there, and embellishing it with numerous monuments and gardens. Important *sakfs* were constituted there and the village, in the 17th century, still lived practically independently of provincial authority. Being off the main route, it declined when it lost its status as a princely residence. J. Hamilton, *Researches in Asia Minor, Pontus and Armenia*, London 1842, saw only "a small and miserable place, but called a town because it possesses a royal mosque with two minarets". It had no more than about 1,500 inhabitants at the end of the 19th century, rising to a population of 5,054 in 1950.

4-5. Two other localities, in the same region, currently small villages of a few hundred inhabitants, also bear this name: Lādhik near Çekerek, in the *nahiye* of Kadı Şehiri, *kaza* of Çekerek, 28 km. to the south of Zile, on the southern flank of the Deveci Dağı; and Lādhik near Niksar, 28 km. to the west of this town, to the south of the valley of the Kelkit, on the northern slope of the Kemer Dağı.

All these three localities must correspond to ancient "Laodiceas". Only one is attested in the region: Pontic Laodicea (Λαοδικεα Ποντικῇ), whose existence is, in addition, known only from the coinages of Mithridates Eupator. Although E. Hünigmann, in *Et*, wanted to locate it at Lādhik near Çekerek, it should almost certainly be sought at Lādhik near Amasya, in accordance with the opinion of Ruge, in Pauly-Wissowa, *Realencyclopädie*, on the basis of the text of Strabo (xii, 560) which identifies near the lake a ruined fortress (*ἰκίσμα*) and a royal place (cf. J. G. C. Anderson, *A journey of exploration in Pontus*, Brussels 1903 (*Studia Pontica*, ii) 79-80).

6. Finally, "The Blind Lādīk". (Kör Lādhik) is known exclusively from the works of Ewlyās Celebi (*loc. cit.*, 87), who mentions it as a *sandak* of the province of Van. This locality is cited in no other source, and it may be an error on the part of Ewlyās.

Bibliography: on the overall subject, see the article *Lādīk* by Besim Darkot, in *IA*, vii. (X. DE PLANHOL)

AL-LADHIKIYYA (European transcriptions: Latakié, Latakia), a major Syrian port, was known by the Greek name of Λαοδικεα ἡ ἐν θαλάσῳ, and later by the Latin name of Laodicea ad Mare, whilst the Crusaders called it La Liebe. In the second millennium, the settlement bore the name of Ramatha of the Phoenicians and was dependent, before taking its place, on Ugarit, a powerful metropolis lying 8 miles/12 km. to the north. It was in 327 B.C., or six years after the death of Alexander that Seleucus Nicator (301-281 B.C.) founded on this site

a city to which he gave the name of Laodicea in honour of his mother Laodice. At the end of the period of Seleucid domination it belonged to the Tetrapolis, a union linking the four most important cities of Syria: Antioch, Apamea, Laodicea and Seleucia, πόλεις ἀδελφαί—the "sister cities". It was for a long time to remain one of the major centres of Greek-Roman Syria.

Conquered by Pompey in 64 B.C., it suffered in the Roman civil wars. Sacked by Pescennius Niger at the end of the 2nd century, it was restored by Septimius Severus. In the 3rd and 4th centuries the city was dependent on Antioch.

The city is situated in lat. 35° 32' N. and long. 35° 40' E. and is built below a massive rocky promontory pointing towards the south, the Rūs Ziyāra, which is surrounded by the sea on three sides with cliffs. It is principally linked to the dry land towards the east, two hills of 60 to 70 m. in height constituting the eastern limit of the ancient town. On the northern hill are two twin castles. The modern city has grown to the west of the mediaeval town. The urban area has been the victim of a number of severe earthquakes, of which the most recent took place in 1822.

The city plan. When Laodicea was founded, Seleuces laid down housing blocks of 112 m. by 57 m., following an orthogonal schema, as in other Seleucid foundations. To the original settlement the Romans added identical blocks. It is the remains of four avenues with lateral colonnades which have enabled Jean Sauvaget to reconstruct the ancient plan of the city and to discover in the present-day layout of Lādhīkiyya some elements of the Seleucid square design. The limits of the ancient city are defined by two large extramural cemeteries to the east and the north. Together with the port, the city covered an area of 280 ha. "The city of Laodicea has retained its straight streets. It is curious that this apparently quite modern design existed in the Middle Ages. It possibly dates back to antiquity, like some straight streets of Damascus and Jerusalem", observed Max van Berchem (*Voyage en Syrie*, I, 289).

Around Lādhīkiyya stretches a small fertile coastal plain (*sāhīl*); it is bounded to the north by the Djabal al-Lukkām [q.v.], to the east by the Djabal Anṣariyya, and enjoys a Mediterranean climate with strong prevailing winds from the west and south-west in January and March; rainfall varies from 750 to 1000 mm. annually, while temperatures reach their average minimum in January at 11° C. and their average maximum in July at 26°. To the north of the city, olive-trees flourish, while in the hinterland citrus fruits grow in abundance. In the Middle Ages, white and green marble were mined in the vicinity of the town and this material was exported to 'Irāk.

Mediaeval history. After the revolt of Antioch in 387 A.D., Laodicea returned to imperial favour and enjoyed prosperity in the Byzantine period. Justinian made it the capital of the province of Theodorias, recently founded (528). At the time of the Muslim expansion, the town was captured, after a siege, by troops under the command of 'Ubāda b. al-Sāmit al-Anṣārī. The citadel was stormed. Those of the Christian inhabitants who had taken refuge at al-Buṣayr were permitted to return on payment of the *gharāfi*; they retained their church while 'Ubāda built a mosque which was later enlarged.

In 1007/19, supported by their fleet, the Byzantines attacked the coast of Lādhīkiyya, burnt the city and led the inhabitants away into captivity. 'Umar b.

'Abd al-'Azīz organised the restoration of the buildings and the fortifications and ransomed the prisoners. After the death of the Umayyad caliph, his successor and cousin Yazīd b. 'Abd al-Malik completed the reconstruction of the city, improved its fortifications and reinforced the garrison.

In the golden age of the 'Abbasid caliphate, Lādhīkiyya does not seem to have played a particularly distinctive role. In 357/968, Ncephorus Phocas appeared in northern Syria; two years later the city, which was the port of Apamea, was taken over from the Hāmidanis and became Byzantine. According to Yahyā b. Sa'īd (d. 458/1066), the emperor Basil II appointed as governor of Lādhīkiyya in 980 a certain Karmarūk, who distinguished himself in an expedition against the Fātimid province of Tarābulus [q.v.]. When the city was attacked by Nazāl, governor of Tarābulus, Karmarūk was taken prisoner in the course of a sortie and later beheaded in Cairo. In 374/985, Lādhīkiyya belonged to the *ghund* of Hums [q.v.]. Ibn Butlān gave a description of the Byzantine city in 440/1049.

In 479/1085 it belonged to the Banū Munkidh [q.v.] of Shayzar, who then ceded it to the Saldjūk sultan Malik Shāh. On 8 Ramaḍān 490/19 August 1097 a fleet of twenty-two ships from Cyprus penetrated the harbour and sacked the town. In 491/1098, Raymond de Saint-Gilles in the course of his journey to Jerusalem left a garrison at Lādhīkiyya and returned to establish his base there following the success of the First Crusade. In spring 1100, Raymond set out on the Anatolian crusade; returning to the coast in 1101, Raymond was obliged to renounce his claims to the city, then occupied by the Byzantines. Tancred took control of the city in 1103, after a siege lasting eighteen months, with the aid of a Genoese fleet of forty ships. Lādhīkiyya was integrated into the principality of Antioch and at that time was one of the most active ports of the eastern Mediterranean. This port, called by the Crusaders La Liche, used to export the commodities brought by the caravans from the Far East. For a number of years the city was the object of rivalry between the Franks and the Byzantines. In 1104, a fleet commanded by the admiral Cantacuzenus succeeded in forcing the Franks to capitulate. Tancred succeeded in forcing the Franks to capitulate. Tancred succeeded four years later, after Bohemond had promised it to Alexis Comnenus, in recapturing Lādhīkiyya with the aid of the Pisans; the latter, like the Genoese before them, were granted an enclave in the city, as well as freedom of trade in the ports and markets of the Principality.

In 1134, the princess Alice donated a house to the Knights of the Order of the Hospital [see *awriyya* and *isarrāwriyya*, in Suppl.], who made it their headquarters in Lādhīkiyya. In Ramaḍān 530/April 1136, the amir Sawrā who governed Aleppo on the authority of Zankī, mounted a raid against Lādhīkiyya and devastated it. In 559/1164, Nūr al-Dīn [q.v.], in his turn, invaded the region and attacked the port.

On 25 Dhuḥada 584/22 July 1188, after a rigorous siege, Salāḍīn captured Lādhīkiyya; the most beautiful city of the coast, according to 'Imād al-Dīn Iṣfahānī, was pillaged, and the marble façades of the houses were ripped off and carried away. The Ayyūbid prince appointed the amir Saḥkur al-Khīlāfi as governor of the city, which was given a strong Muslim garrison. This was the end of the Frankish occupation. In 1190, at the approach of Frederick Barbarossa, Salāḍīn had the ports of the

Syrian coast dismantled. In October 1191 Bohemond III tried in vain to recapture Lādhīkiyya. He renewed the attempt in 1197, but al-Malik al-Zāhir Ḡhāzī had given the order to make the port unusable; seeing the damage, the prince of Antioch withdrew and shortly after, al-Malik al-Zāhir of Aleppo restored the citadel.

Under the Ayyūbids, the district of Lādhīkiyya was part of the province of Aleppo. In 601/1204-5, the Franks of Tripoli and the Hospitallers attacked the town, which was also an embarkation base for expeditions against Cyprus. In 1207 the Venetians, the rivals of the Genoese, received from al-Malik al-Zāhir Ḡhāzī a concession with a *fundūq*, a *ḥammām* and a church. At the end of 620/December 1223, an army sent from Aleppo, fearing it would be unable to resist the forces of the Fifth Crusade, destroyed the defences of Lādhīkiyya and dismantled the citadel. In 1261, taking advantage of the defeat of the Muslims at the hands of the Mongols of Hüllegü, Bohemond VI took possession of the town with the support of the Hospitallers, to whom he awarded half of the city and of the surrounding area. The Genoese re-established themselves there at the expense of the Venetians. In 673/1275 there was an exchange of correspondence between Baybars [q.v.] and King Hugo III of Antioch-Lusignan on the subject of Lādhīkiyya. On 4 July 1275 the Franks obtained from the Mamlūk sultan the freedom of the city in return for an annual tribute of 20,000 *ḍinārs*, and continued to exercise authority, but the town was in a state of constant decline to the benefit of Tripoli, Alexandria and Payas, whither commerce was diverted following the fall of the Principality of Antioch. In 1287, a severe earthquake caused damage to the fortifications and a number of towers, including the Pigeon Tower, the Pier and the lighthouse collapsed; without delay, the sultan Kālāwūn [q.v.] sent the *amir* Turuntay, one of his lieutenants, to attack Lādhīkiyya. The siege machinery completed the destruction of the fortifications; to capture a massive tower built by Bohemond III in order to guard the entry to the harbour, Turuntay was obliged to enlarge the embankment linking it to dry land. On 5 Rabi' I 686/20 April 1287, the city fell, putting an end to the presence of the Franks in northern Syria. Lādhīkiyya soon became the centre of one of the *ḥiṣṣas* of the new province of Tārābulus, its *adīb* being an *amir* of ten with military responsibilities. When Ibn Baṭṭūṭa visited the city in 1355 he was impressed by its size and by the number of its inhabitants, as well as by its fine anchorage. But the city was not slow to decline. In 1360, arriving from Cyprus, Pierre de Lusignan attacked Lādhīkiyya, pillaged and razed it. In 1436, the sultan Barsbay [q.v.] expelled the Venetian merchants from the town, and in the middle of the 15th century it was less populated than Beirut and Tripoli, and much of it was in ruins. It exported cotton and luxury fabrics (*ṣamīs*) as well as Arabian manna to Europe, and in 1494 was importing its sugar from Cyprus. Until 1516, Lādhīkiyya was apparently subject to the viceroys of Ḥamāt.

Ancient and mediaeval monuments. Arab historians and geographers mention a large number of ancient buildings in Lādhīkiyya. Ibn al-Aṭhīr and Abū Shāma praise the "high and beautiful houses and the perfectly straight streets paved with slabs of marble". The baths, the amphitheatre, the hippodrome and the sanctuaries built by Septimius Severus existed at the start of the 5th/11th century only in the memory of the inhabitants.

However, thirteen monolithic columns still mark the location of commercial streets covered in by porticos of the Roman period. A number of cisterns in use at the beginning of this century and the remains of an aqueduct to the east of the city bear witness to the ancient hydraulic systems. The city's ramparts have finally disappeared as a result of earthquakes, innumerable sieges and successive demolitions. The anchorage was designed according to the relief plan which is unconnected with the external shape of the built surface. The gates of the city were situated at the ends of the main arteries, each one flanked by two crenellated towers, if we are to judge by the mural crown worn on Roman coinage by Tyche, the tutelary goddess of the city. There were two gates, that in the east which was the starting point of the road to Afāmiya [q.v.] and which proceeded by way of the pass between the hills dominating the town, and the north gate which stood at the end of the colonnaded avenue which passed by the foot of the citadel and continued beyond the walls as the road towards Antākīya [q.v.]. Among the best-known towers are the Tower of the Pigeons that provided the postal service, and the Pier which, in the Middle Ages, protected the narrows of the harbour on the site of an ancient lighthouse, probably the new tower constructed by Bohemond in 666/1268. On the northern causeway, at the site of the modern lighthouse, the *Fārās* marked the entry to the port. This was, judging by the evidence of numismatic iconography, a round or polygonal tower built on a base of two levels with a second smaller tower bearing a tall, draped statue at its summit. This monument existed in the reign of Domitian (1st century A.D.). The *Fārās* gave its name to a famous convent, the Dayr *Fārās*, which was held to be the most beautiful in Syria; situated outside the town according to Ibn Baṭṭūṭa, it was much visited by Christians and also attracted large number of Muslims.

At the perimeter of the ancient town there stands an important monumental arch, the *Tetrāpylē*, with its four fully-rounded arches banded between four strong pillars. The east-west thoroughfare came to an end at this monument. At a distance of 500 m. from the *Tetrāpylē* there remain four Corinthian columns of a peristyle—doubtless the remains of a temple dedicated to Bacchus which was converted into a church (*Kanīsat al-mu'allāḥa*).

All the authors speak of two twin castles linked together and built on a hill overlooking the town to the north-east. Röhrich (in *ZDPV* x, 350) has prepared a list of the buildings that are known to us from the Frankish sources.

The Ottoman period. In the middle of the 16th century, the port of Lādhīkiyya was part of the *ḥiṣṣa* of *Ḍiḡbala*; cotton and olives were cultivated in the region; walnuts and mulberry trees were of high quality, while vine-growing retained its ancient reputation. In the first half of the 16th century, Lādhīkiyya was subject to Tārābulus, and was governed by Yāsā Bey, son of Ibrahim Paṣṣā al-ʿAzīm. In Rabi' I 1143/September 1720, there was a major uprising; the rebels were joined by the troops sent to rescue Yāsā Bey, and when a few months later fresh troubles broke out, the ʿAḡams were removed from all their positions of authority in Syria.

The modern period. In 1914, Lādhīkiyya, with a population of 7,000, was nothing more than a small town belonging to the *vilāyet* of Beirut and administered, according to the Ottoman law of

1904/1877, by a municipality of which the president was chosen by the government in Istanbul from among the elected councillors.

In 1919, with the arrival of foreign troops, the opposition rallied behind the *Shaykh Sūkh* and incited insurrections against the French. On 31 August 1920, with the establishment of the French Mandate—confirmed by the League of Nations in 1922 and put into effect in 1923—Lādhīkiyya became the capital of the autonomous territory of the Alawites, with a governor under the authority of the mandatory administration. In June 1922 this territory became the State of the Alawites, composed of two *sawgads*: that of Lādhīkiyya and that of Tartūs. It received a French governor and was integrated into the federation of mandated states. In 1923, Sulaymān Murshid headed an anti-French movement with a religious flavour. In December 1924, General Weygand announced the secession of the State of the Alawites, proclaiming its independence on 1 January 1925. In 1930, a fundamental law, published on 14 May by the High Commissioner, created a government of Lādhīkiyya. In 1936 this government was integrated into Syria, but benefited from a special administration under the authority of the Syrian government. France was authorised to station troops there for five years. In July 1939, Lādhīkiyya became the capital of the autonomous territory of the Alawites, separate from Syria. On 20 June 1942, this territory was once more integrated into Syria. This integration was confirmed in 1946 with the proclamation of independence.

The port. At the present day, the port of Lādhīkiyya is the most important port of Syria. Originally, it was a bay open to the south-west, with no protection from the prevailing winds. The seabed is of inferior consistency, but the inlet is well protected from the south winds. Immediately behind rises a range of hills with fertile soil; "it is not the prosperity of the port that has created that of the town, but the reverse" observes Wenkser.

The ancient port was "perceptibly more flourishing on the ground than the present-day port". In 1934, Sauvaget noted a depression, which corresponded to the ancient docks, gradually covered over by shifting soil, whose outline marked those of the ancient port. The conquering Arabs found a port which had already lost its prominence. Its economic value remained; the battles fought by Byzantines, Muslims and Crusaders for possession of the town are proof of this. The Arab geographer al-Dimashqī (d. 757/1327) describes it as "a very beautiful port, one of the most spacious, always full of great ships".

The expulsion of the Franks led to a decline which lasted until the Capitulations. The port silted up. In the 18th century it could contain no more than four to six small boats. In the 19th century the haven was used only by small sailing boats; European ships anchored out at sea. Nevertheless, the port was very active, and around 1835 more than a hundred ships were visiting it annually. At the end of the 19th century, the volume of traffic using Lādhīkiyya placed this port behind Beirut and Tripoli, but well ahead of Sidon and Akkā (q.v.). The annual traffic was 220 steamships (55 of them French) and 370 sail boats.

With the establishment of the Mandate, Lādhīkiyya was roused from its lethargy. A restoration of the harbour was undertaken; the north and south moles were rebuilt, the depth of the inner harbour was increased from two to six metres, but these

enlargements were still not sufficient for large ships, and merchandise and passengers continued to be disembarked at sea and brought ashore in lighters. In 1939, the scale of Syrian importing and exporting was such as to give rise to speculations that Lādhīkiyya might be able to regain its original prosperity, and a plan was formulated to double the size of the dock by building an outer harbour and to construct a solid embankment further to the west proceeding towards the north, thus creating a deep-water port and an easily dredged inner harbour.

Lādhīkiyya lived "a life without glory and without future" until the day when, after the loss of the *zangaf* of Alexandretta in 1938, Syria had no other solution to the problem of its commerce than to provide the means of restoration to its sole remaining harbour on the Mediterranean coast. The first plan was prepared in 1944 and then a more extensive project was envisaged in 1948. Lādhīkiyya was at that time only a fishing port, with an annual turnover of 300 to 400 tons of fish. The construction of the modern port began in 1950; the following year, 24.6% of overseas trade passed through Lādhīkiyya. In 1953, the construction of a large jetty was begun and also a mole of 33,000 tons capacity. In 1955, it was realised that the original project no longer responded to the needs of a major port. In 1957 the first stage of the modernisation was completed. If the activity of the port was modest until 1958, it was already handling no less than 52% of overseas trade. The ten-year plan of 1958-68 foresaw important works of infrastructure; thus it was that by 1968 there was a breakwater 1423 m. in length, assuring the protection in all seasons of a dock of 44 ha. a principal quay 600 m. long by 9.50 m. high capable of accommodating five ships at once, a quay 250 m. long beside the old dock, the total length of the quays amounting to 1160 m., and with modern equipment permitting the rapid handling of merchandise. The construction of a railway and of the highway No. 3 leading to Aleppo and the valley of the Euphrates have given a strong impetus to the economic activity of the Lādhīkiyya, which has become the commercial outlet for Aleppo, northern Syria and the Djazira. In 1967, 1,526 ships visited the port; they imported 1,294,000 tons and exported 321,000 tons of such Syrian products as tobacco, cotton, silk, fruit and eggs. The activity of the port is supplemented by industry represented by asphalt factories, soap factories, cotton processing works, flour-mills. The population of Lādhīkiyya has expanded remarkably: in 1914, 7,000, in 1931, 20,000; in 1940, 30,000; in 1960, 68,000; and in 1970, 126,000.

LADJĀ' (literally "reduge") is the largest, geologically-recent lava-field in the south of Syria, comprising a plain of ca. 500 square km. It has roughly the form of a triangle, the base of which is formed in the south by the line Izra'-Shahba (ca. 45 km.) and the apex of which lies ca. 48 km. to the north near Busrā' (ca. 50 km. south-east of Damascus). In the north, the area is limited by the Wādī al-'Adām, in the east by the Arḍ al-Baḥaniyya [see AL-BAGHANIYYA], in the south-east by the Djabal al-Durū', in the south by the Nuḡra of Hawrān [g.n.], in the south-west by Djablān [g.n.] and in the north-west by Dayrār.

Volcanic cones, some more than 1,000 m. high (the highest, 1,159 m., lies west of Shahba), tower up from the volcanic fields, which lie at an average of 600-700 metres above sea level. The fringes of the area are inhabited, as are also a few favoured places in the interior where agriculture is made possible by depressions which are free of stones and which have a diameter of several hundreds of metres. These depressions, called *ḥaf*, probably originated from volcanic eruptions of gas. Since springs and underground water are now fading, water is supplied by cisterns [R. Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1927, 371-81; E. Wirth, *Syrien*, Darmstadt 1971, 419ff.].

The area has borne its contemporary name since the Middle Ages (Yāqūt, IV, 350). In antiquity, it was known under the name of Trachonitis (indicating also the *Tūlā' al-Safā'* which lies further eastward) [Josephus, *Ant.* XV, 10, 1; Ptolemy, V, 15, 26; Strabo, XIV, 2, 16 and 20]. During the second and first millennia B.C., Trachonitis, itself without any political and economic significance, was under the influence of the Hebrews in the south and the Assyrians of Damascus in the north. In the second century B.C., Trachonitis was annexed to the empire of the Seleucids and formed the frontier between the spheres of influence of the two Arab peoples, the Nabataeans in the south and the Hasmoneans in the north-west. When in 24 B.C. the region was put by the Romans under the command of Herod, it was inhabited by a rapacious nomadic people without agriculture, who infested both the trade route to Damascus and the Jewish pilgrimage route from Babylonia to Jerusalem. In order to check the Trachonites, who were firing with their cattle in the volcanic caves and depressions of the region [Josephus, *Ant.*, XV, 10, 1], the town of Bothya was founded during Herod's reign (its site is disputed, but was probably in the neighbourhood of Samanayn, see Dussaud, *Topographie*, 331). Trachonitis and the neighbouring regions obtained freedom from taxation and were soon sedentarised.

Between the 1st century B.C. and the 4th century A.D., numerous settlements and towns with theatres, colonnades and several temples were founded, like Philappopolis (Shahba) and Shā'ara (the classical

name of which is unknown). A road, traversing the Ladjā' from north-west to south-east, was connected with the Roman road system in Syria. Inscriptions and ruins from the Roman period are found in nearly 20 sites (for the antiquities, see H. C. Butler et al., *Syria*, *Publ. of the Princeton Univ. Arch. Expedition to Syria in 1929-5*, Division I, Leiden 1930, 95 ff.; Division II, Section A, Part 7: *The Ladjā'*, Leiden 1907-19).

The post-Roman pattern of settlement in the Ladjā' resembles that of other regions in Syria which are equally disfavoured by nature. Under the Byzantines (4th-7th century A.D.), the density of settlement reached a height that can only be compared with that of most recent times. In nearly 30 sites, Byzantine remains have been preserved, among which is the famous bilingual inscription in Greek and Arabic at Harrān in the south of the Ladjā' (RCEA, I, no. 3). Not far from Harrān, in Busr al-Harrī (Bosor in ancient times) and Izra' (Andrea Zorara, with the still undamaged St. George's church from 515), lie the most impressive Byzantine ruins of the region. Both sites are also mentioned by the Arab geographers of the 7th/13th century. According to Yāqūt (II, 921), Izra' (= Zurrā' or Zurf) belonged to Hawrān (also in the later Ibn Baṭṭā, I, 236). Busr (= Busr al-Harrī), where the tomb of al-Yasā' or Ilyasā' was revered (Harawī, *K. al-Ziyārat*, 16; Yāqūt, I, 621), seems to have been the more important site at the time. The fact that the Ladjā' is mentioned only by the later Arab geographers points to a re-settlement in the area at that period. As in other volcanic regions of Syria, repopulation was caused by the pressure produced by the Mongols on the population to the east of Syria. There is no doubt that the greater part of the Islamic ruins, proved to exist in 13 sites of the area, date from the 13th century.

We do not have accurate information on the period when settlement started to decline after the Middle Ages. With the exception of a few Christian settlements on the borders, the region seems to have been depopulated by the 17th century at the latest. During the 18th and 19th centuries, Druzes immigrated from Lebanon into the eastern and southern parts of the Ladjā', and in the 19th century Bedouins settled in the north and the west. As in pre-Roman times, the Ladjā' was considered to be a hiding place for rebels and marauders during extensive periods of Ottoman rule. Notwithstanding the garrisons established on the border of the Ladjā', the Ottomans were not able to bring it under control. Only the French mandatory power succeeded in doing this by sending over low-flying aircraft. At present, the Ladjā' is inhabited by peasants who are Muslim, Druzes and Christians (the latter mostly Greek Catholics).

Bibliography given in the article.

(H. GAUSS)

LADJIDJUN, a small town in the Esdrælon plain in the vicinity of ancient Megiddo, in the north of Palestine, at lat. 32° 34' N. and long. 35° 21' E. It was the seat of the sixth Roman legion, on account of which it came to be known as Legio, and Ladjidjun is the Arabic adaptation of the Roman name. The town, which is 175 m. above sea level, is referred to by early Arab geographers as part of Djabal al-Urdunn bordering on the Djabal of Palestine. The Islamic geographers emphasise its location on the highway between Damascus and Egypt, and it was also well connected by roads to other parts of northern Palestine.

remains of Kalāwūn's reign made him one of the most powerful magnates in the realm at the accession of al-Malik al-Ashraf Khānī in 689/1290, and the two regarded each other with mistrust. Lādjīn headed the Damascus contingent at the siege of Acre, during which he was arrested and sent to Safad (Djumādī I 690/May 1291). He was restored to favour, but in Shawwāl 691/September 1292 he fled, fearing arrest, was captured by Arabs, and sent a prisoner to Cairo. Again released, he conspired with the viceroy (nā'ib al-saltāna) Baydarā al-Manṣūrī and other malcontent amirs against the sultan, who was murdered during a hunting expedition (Muharram 693/December 1293). The conspirators failed, however, in their further aim of placing Baydarā on the throne; he was killed, and Lādjīn absconded. Khānī's infant brother, al-Malik al-Nāṣir Muḥammad, was installed as sultan with the viceroy Kutbughā al-Manṣūrī as *de facto* ruler. In Ramadān/August, Lādjīn emerged from hiding. Under his inspiration, Kutbughā usurped the sultanate (Muharram 694/December 1294), and Lādjīn himself was invested as viceroy. Kutbughā's short reign was marked by dearth and famine in Egypt, and by the settlement in Palestine of numerous Orali warriors with their families, fugitives from the Ilkhān (Qāzān) after his overthrow of Baydā [q.v.]. Since Kutbughā was himself a Mongol, the Turkish and Circassian amirs may have seen this immigration as a threat to their ascendancy. A faction headed by Lādjīn deposed Kutbughā and installed Lādjīn as sultan in Muharram 696/November 1296.

Recurrent crises of the Mamlūk sultanate arose from the inveterate hostility between the *mamlūks* of the reigning sultan and those of his predecessor, whom the new ruler invariably sought to displace in order to reward his own household and to secure his own position. In an attempt to safeguard themselves, Lādjīn's fellow-conspirators made an accession compact with him by which he undertook to renounce the absolute discretion, the essence of the royal autocracy, and not to give his own *mamlūks* power over them. The absence of institutional sanctions for this compact soon rendered it null. In Dhū 'l-Qa'da 696/September 1297, the sultan removed his fellow-conspirator, Karā Saṣṣar al-Manṣūrī, from the viceregency, which he bestowed on his own *mamlūk*, Mankūtāmūr. The tactless exercise of plenary powers by the new viceroy antagonised the amirs, who had still more reason to be alarmed by the sultan's fiscal reforms. A cadastral survey and redistribution of *shikāṭ* in Egypt (*al-raṣḥ al-Muḥammī*) was carried out in Djumādī I-Radjab 697/March-April 1298, the first measure of this kind since Salādin's time (572/1176). The sultan retained the previous categories of beneficiaries, i.e. the privy purse (*al-ḥiṣṣa*), the amirs and the *halā* [q.v.], but whereas the allocation to the privy purse was unchanged, the other two categories were combined and given a smaller lotal assignment. The sultan was thus left with a surplus, free of the charges on the privy purse, on which he could maintain a new military force—an obvious threat to the power of the amirs. In the following months their resentment led to a conspiracy, and on the night of 22 Rabi' II 698/eve of 26 January 1299 Lādjīn was murdered and Mankūtāmūr put to death. After some days of uncertainty, al-Malik al-Nāṣir Muḥammad was restored as titular sultan.

LAGHOUAT (al-Aḡḡwāy), Algerian town and oasis, administrative centre of a *sulḍya* (district), 420 km. to the south of Algiers (long. 0° 30' E. [Paris], lat. 33° 48' N. Altitude: 782 m.). It was formerly the administrative centre of one of the four 'Territories of the South' forming the region of Algeria administered under martial law, until the reform instituted by the law of 20 September 1947 (*Statut de l'Algérie*). On account of its geographical position, dominating the defence of the Sahara, as well as memories connected with the dramatic story of its conquest by the French (1844-52), not to mention its attractions as a centre of tourism, Laghouat has been the subject of numerous studies (see Beld.). On the other hand, the town occupies a position of eminence in the cultural and religious history of contemporary Algeria, especially as one of the very first focal points of orthodox reformism of the Salafīyya [q.v.].

Population. Because of its isolated location, on the fringes of the desert, far removed from the main areas of economic activity in the north, Laghouat has for a long time lived the uneven life of a self-contained oasis. Its small-scale economy was limited to the cultivation of palm-trees, supplemented by local craftsmanship (weaving of wool) and sheep-rearing, according to long-standing practices of association between Laghouatis and Bedouins of neighbouring tribes (Larba' and Mighāt). In this phase of economic stagnation, the population only grew at a very slow rate: from 7,000 in 1926, to 12,999 in 1954, a rate of increase lower than that of the remainder of the Muslim population of Algeria. With independence (1962), and in spite of the departure of the Europeans (who numbered about a thousand) and of the Jewish community (about 600), the population of the town underwent a spectacular increase, this being due to the economic influx engendered by the hydrocarbon industry (particularly prospecting and exploitation of natural gas deposits in the area of Hassi Rmel, and heavy road traffic towards the oil-fields of the far south).

Location. The town and the oasis are situated on the right bank of the Wādī Mzi, which descends from the Djabal 'Amir and is absorbed into the Shatt al-Maghīr, in the Constantinian south. The oldest sectors are set out on the two slopes of two rocky outcrops, foothills of the Djabal Tiāgrān. The new town has developed to the north-west of these hills, and is steadily encroaching on the area of palm-plantations. The oasis itself extends in a semi-circle to the north-west and south-east of the town. The palms (about forty thousand trees) produce several excellent varieties of dates (but not the famous *daglat ndr*) and constitute one of the main pillars of the local economy. Through its position on the central north-south (Algiers-Sahara) axis, which has become a vital artery for independent Algeria, and its location between the Oranian south and the Constantinian south, at the point of divergence of routes leading, to the west towards the territory of the Wādī Sīdī 'l-Shīkh, to the east towards the

Zibān and the Biskra, to the south towards the Mzāb (lbadī territory), then towards the oilfields (Bāst Mas'ūd) on the one hand, and towards the main highway for penetration of the African continent, the "Trans-Sahara", on the other, Laghouat is at the centre of a considerable network of communications.

History. In the 4th/10th century, there already existed on the banks of the Wādī Nāl a locality whose inhabitants, after acknowledging the authority of the Fātimids, took part in the revolt of Abū Ya'fūd al-Nukkārī (s.n.). The neighbouring region was overrun by Berber tribes belonging to the family of the Maghrawa (s.n.) (cf. Ibn Khaldūn, *Kitaḥ al-'Iḥṣān*, Algiers 1851, i, 64, Beirut 1956-9, vii, 96; Baron de G. de Sane, *Mémoires des Berbères*..., iii, 473). The Hilālīan invasion brought into the region other tribes of the same race, notably the Ksel, fugitives from the Zāb, who founded a village called Ben Būṭa (the nisba "al-Būṭī" is still in use in Laghouat). Several other *ksour* (Du Nendala, Nedjāl, Sidi Mīnūn, Badla, Kaṣbat Ftūḥ) were built by other emigrés, some of Arab origin (Dwāwda, Awlad Bū Zaayyān), others from the Mzāb. This collection of urban centres was known by the name *Laghūat/Laḡadī*, the latter orthography being the only one which corresponds in reality to the current pronunciation in the Laghouati dialect. The modern form *al-Aghwāt* indicates a concern for conformity with the paradigms of Classical Arabic (cf. the model *af'āṭ*). Now the classical form *al-aghawāt*, plur. *aghwāt*, is totally foreign to the linguistic usage of Laghouat and its surrounding neighbourhood. In spite of the feeling of Arabism which is a feature of the collective consciousness, there is still evidence of an ancient Berber etic, in various forms: personal names: numerous patronyms cited by Ibn Khaldūn (cf. above) are still borne in Laghouat and its surroundings; toponymy, place-names of Berber consonance in the Laghouat region are too numerous to be mentioned (see the detailed maps); agricultural sphere: the technical vocabulary of palm cultivation includes terms of Berber pedigree, particularly to denote fine varieties of dates (*ṭimṭimot-rot*, *ḥṣanet*, *ṭaddalet*, etc.); social sphere: the *ḥawla* (Berber *ḥawla*) has for a long time been a form of ritualised collective mutual aid (domestic tasks, weaving of wool, seasonal work in the oasis or the fields); and folklore: the old antagonism between sedentary Berbers and Arab tribesmen is still expressed in the form of a satirical folklore which perpetuates a more or less caricature image of "Arabs" (meaning Bedouin).

Little is known of the social and political history of Laghouat until the 18th century. At the end of the 16th century, it paid tribute to the king of Morocco. In 1666, the *ksour* of Badla and Kaṣbat Ftūḥ were abandoned. In 1698, a holy man, a native of Tlemcen, Sidi Ṭ-Ḥājjī, took up residence in Ben Būṭa and sought to reconcile the rival factions. His moral authority extended to the people of three other *ksour* as well as to the neighbouring tribe of the Larbi'. Under his leadership, the people of Laghouat defeated the inhabitants of the *ksar* al-'Assaḥiyya, but found themselves obliged to pay tribute to the sultan of Morocco, Mawlay Ismā'īl (1671-1727 [s.v.]), who came and camped under the walls of the town in 1708. After the death of al-Ḥājjī, the patron of the town (1751/1758), the history of Laghouat was reduced to that of confrontations between two parties who competed for political and religious superiority: the Awlad Serḡīn, inhabitants

of the south-west quarter, allied to the Tighlamiyya [s.v.] and the Ablāl, the majority of them affiliated to the Kaḍiriyya [s.v.]. In the course of these intercaste struggles which periodically brought bloodshed to the oasis, the Turks succeeded in having their supremacy recognised. From 1727, the Bey of Tīṭri had, in effect, imposed an annual rent on the people of the *ksour*. On the other hand, the Mzābis, expelled from the oasis where they had acquired a share of the plantations, formed a confederation with the nomads of the south, over which the Laghouatis triumphed thanks to the support of the Larbi' (1752). This memorable episode seems to have put an end to a prolonged religious war, through the definitive elimination of lbadīyya from an oasis wholeheartedly attached to Māhādī orthodoxy, over and above its ancestral discords. Towards the end of the 18th century, the Turks made an effort to reassert their supremacy, from which the Laghouatis had been gradually freeing themselves. Military expeditions were undertaken for the annual collection of taxes, with varying degrees of success, by the Bey of Meḍea, then by the Bey of Oran (1784 to 1802). In turn, the Ablāl and the Awlad Serḡīn were the object of favours or reprisals on the part of the Beys.

The two parties were not slow to re-align themselves with their respective allies, and the confrontations resumed with even greater severity, until the day when the chieftain of the Ablāl, Ahmad b. Sālim, having allied himself through marriage with one of the leading Serḡīn families, became master of Laghouat and of the neighbouring *ksour* (1828). After a period of tranquillity, Laghouat became involved in the struggle of the amir 'Abd al-Kādir against the French. The chieftain of the Awlad Serḡīn, al-Ḥājjī al-'Arbi (descendant of the patron saint of the town) was appointed *ḥāḍifa* by the amir. But he was unable to maintain his position and was obliged to flee to the Mzāb. His successor, 'Abd al-Bāqī, was a more fortunate, although he had a force of 700 regular soldiers and a piece of artillery. His policies met opposition from the *cliv* leaders and caused a riot; he was forced to leave Laghouat (1839). Al-Ḥājjī al-'Arbi was appointed *ḥāḍifa* for the second time. The same year, when the amir was forced to raise the siege of 'Ayn Māḍī (after eight months) to regain control of the Tell, Ahmad b. Sālim and his partisans took the opportunity to rally their troops. The *ḥāḍifa* al-Ḥājjī al-'Arbi was overthrown and then captured, at *Ḥsar al-Hīrān*, where he was killed (1839). Thus restored to power in Laghouat, Ahmad b. Sālim entered into negotiations with the French (Col. Marey-Monge) to ask for recognition of his authority over southern Algiers (March 1844). This protectorate constitutes the first stage in the process of annexation of Laghouat, a process too long to be summarised (cf. R. Le Tourneau, *Occupation de Laghouat par les Français (1844-1852)*, in *Études Maghrébines. Mélanges Ch. A. Judem*, Paris 1964, 113-36). Following several expeditions (1844, 1847, 1852), the town was taken by storm on 4 December 1852, at the cost of heavy losses on both sides (more than 2,500 dead). The taking of Laghouat (on the orders of General Palissier) was one of the bloodiest episodes in the conquest of Algeria. On the Algerian side, the memory of the martyrs never ceased to be honoured, in the guise of a semi-folkloristic, semi-religious ritual, until the time of independence. After its conquest and fortifications, Laghouat received a permanent garrison and became the operational base of the French in the south.

In its various phases, from the beginnings (4th/10th century) to the eve of the contemporary period, the dramatic history of Laghouat has been a microcosm of the general history: (a) of the Central Maghrib, as depicted by the historian Ibn Khaldūn: chronic anarchy, with no respite for the population, exhausted by a perpetual struggle for survival independent of any aspiration for economic and cultural order, and any effort towards civilisation; (b) of modern Algeria under Turkish domination. Like all urban centres or tribes escaping direct control on the part of the central authority (Algiers) and of its beyliks (Oran, Medea, Constantine), Laghouat had only the most distant connections with the Turkish administration, which was interested only in the collection of taxes (the regularity of which was determined by the relative strength of the sovereign power and its vassals); and (c) of French Algeria. After a rigorous conquest and a long period of pacification, the oasis of Laghouat was, for almost a century, to be oriented towards the Sahara, as administrative centre of one of the four "Territories of the South" under military control. The population of Laghouat and its environs thus lived on the fringe of northern Algeria, without becoming permeated by French influence. In the absence of a political will and sufficient means, the "moral conquest" by means of education and the exercise of republican freedoms would seem to be a myth incompatible with colonial realities. Until the inter-war period (cf. the celebration of the "Centenary of Algeria" in 1930), the diffusion of French language and culture attained only insignificant proportions, even within the native Jewish community. For this reason, the traditional aspect of the Muslim society of Laghouat were preserved almost intact. With its natural connections with neighbouring Bedouin peoples (on account of pressing economic requirements), with the permanence of specific symbols of religious culture (a dozen mosques, some twenty Qur'anic schools), and the preponderance of shrines and institutions of religious mystics (Tijāniyya, Kādiriyya, Shādhiliyya, etc.), Laghouat found itself well-equipped in its cultural resistance to the West. These socio-cultural features were to be reinforced, in the nineteenth-twentieths, by the reformist preachings of the Salafīyya. In fact, thanks to the prestige and the strong personality of the ḡayyāḥ Mubārak al-Mīl (1897-1945), Laghouat became (from 1927) onward) one of the strongest centres of the reformist movement in Algeria, under the stimulus of the Association of Algerian Muslim 'Ulamā' and of its leader, the ḡayyāḥ 'Abd al-Hamid b. Bādīs (q.v.) (cf. A. Merad, *La réforme musulmane en Algérie...*, Paris 1967, 199-200).

LAHAD (see KADR).

LĀHAWR (LAHAWR), the principal city of the Pandjāb (q.v.), situated on the left bank of the Rāwī about 700 feet above sea level, at lat. 31° 35' N. and long. 74° 20' E. Its strategic location in the

fertile alluvial region of the upper Indus plain has guaranteed it an important rôle in Indian history, very often as a frontier stronghold and more recently as the capital of the Sikh (q.v.) empire. Since 1947 it has been included in the republic of Pākistān, of which it is the second largest city.

I. History. Popular etymology connects the foundation of Lāhawr with the mythical Lava (Lōh), son of Rāma, and the forms Lōhāwar (cf. Peshāwar) and Lavapura have both been hypothesised by scholars, Cunningham (*Ancient geog. of India*, I, 197-8) identifying it with the place Labokla (< Lavakla) mentioned by Ptolemy. Yet another possibility, Lahanagar, may have been preserved in the spelling Lāhanār which appears in the 7th/13th century *Kitāb al-asādayn* of Amīr Ḥusraw. It has also been identified with the anonymous flourishing city which the Chinese pilgrim Hsüan Tsang came upon around A.D. 630 on his way to Džalāndhar.

At one time confused with Lohara in Kaśmīr (see Sir M. Aurel Stein, *Kaśmīr's Rājatarāngīnī*, Westminster 1900, II, 293, 298, 363-4), Lāhawr is actually first mentioned in 378/982 in the *Uddad al-salam*, 89-90, where we read that it was subject, although a city populated exclusively by Hindus, to the Kurayshite ruler of Multān (q.v.). Possibly this is what underlies a later tradition that at the time of the first Ḡhaznawid invasion the capital of the Hindū-ḡhāḥ rulers of the western Pandjāb had been moved from Lāhawr to Siyālkōt (q.v.); and certainly Bīrūnī, writing shortly afterwards, locates the capital of the Lāhawr region at a place called Mandhokūr (ed. Sachau, 101; cf. the discussion in S. H. Hodivala, *Studies in Indo-Muslim history*, Bombay 1939 52, I, 53). Lāhawr was captured at an uncertain date by Maḥmūd of Ḡhazna (q.v.), who constructed a fortress there and allegedly renamed the city Maḥmūdāpur, though this is doubtful. Under his successors it effectively became, as the administrative centre of the Indian provinces, the second capital of the Ḡhaznawid empire. The governor Ahmad Yūsufīn rebelled in 414/1033, and in 435/1043-4 Lāhawr was subjected to a long and unsuccessful siege by a confederacy of Hindu princes. But it remained firmly in Ḡhaznawid hands, serving, after the loss of Ḡhazna itself in 558/1163, as the capital until its capture by the Ḡhūrīds (q.v.) in 583/1187 put an end to the dynasty.

On the murder of the Ḡhūrīd Mu'izz al-Dīn Muḥammad b. Sām in 603/1206, Lāhawr became temporarily the capital of the Indian domain ruled by his slave Kutb al-Dīn Aytak (q.v.), but after his death it was disputed for some time among the other former Ḡhūrīd officers Kubāṣa, Vīlchī, and Shams al-Dīn Itutmish (q.v.). Hasan Nizāmī in his *Tāyī al-ma'āthir* (Brill Lib. no. Ad. 7, 623, fol. 124b-129a) describes at great length its capture by Itutmish's forces in 613/1217, although Ḥajjāl al-Dīn Ḥū'āzmaḡhāḥ (q.v.), who invaded the Pandjāb a few years later, found a son of Kubāṣa in revolt against his father at Lāhawr (Nasawī, ed. Houdas, text 90), and it probably fell definitively to Itutmish shortly before Kubāṣa's overthrow in 625/1228. Under Itutmish's weak successors (see *muḥd. sultānāt*), the governors of Lāhawr were frequently in rebellion, and Kabir Ḥāsh Ayūz was virtually independent there in 639/1241, when Lāhawr was taken and sacked by the Mongols. They did not follow up their victory, abandoning the city immediately, but around 651/1253, in the course of another invasion, they installed at Lāhawr the renegade prince Ḥajjāl al-Dīn Mas'ūd b. Itutmish. Sub-

sequently, however, it appears again as part of the Dhill Sultanate under its governor *Shīr Khān*, who is credited by the historian Barani (*Ta'rikh-i Firāqihī*, ed. S. A. Khān, Calcutta 1860-2, Bibl. Indica, 65) with numerous military successes against the Mongols. The city was restored by the Sulṭān Ghiyāth al-Dīn Balban [q.v. in Suppl.] soon after his accession in 654/1266, but Lāhawr was to remain for some decades a frontier region subject to regular Mongol attacks and seems to have been replaced as an administrative centre by Dēpālpūr. It attained to a temporary prominence once more early in the 8th/14th century under the governorship of Ghāzī Malik, who himself ascended the throne of Dhill in 720/1320 as Ghiyāth al-Dīn Tughluq [q.v.]. In the reign of his son Muhammad [q.v.], however, the district was ravaged by the Caghatai Khān Tarmashīrīn around 739/1329, and a few years later Lāhawr was occupied by a Mongol chief named Hülegü (see MÖLÖC) in alliance with the Khokars [q.v.]: the brutal reprisals against the populace by Muhammad's forces are mentioned by Ibn Baṭṭāya (ibid. 333). After this, its history is again obscure until the turn of the century, when Shaykhā Khokar, who had been appointed governor of Lāhawr by Mahmūd Shāh Tughluq, made a timely submission to Timūr (802/1398), but on showing signs of disaffection was suppressed by an army under the conqueror's grandson Pir Muhammad b. Djabāngir.

Lāhawr was included in the territory conferred by Timūr upon Khidr Khān, who in 817/1414 seized power in Dhill and established the Sayyid dynasty. Under his successor Mubārak Shāh, the city was twice attacked by the Khokars, now led by Shaykhā's son Djasrat, while at the same time the Afghān Lodīs [q.v.] were beginning to encroach upon the Panjāb. In 845/1441 Muhammad Shāh Sayyid, in an effort to curb the power of the Khokars, granted Lāhawr to Bahālu Lodi, who repaid the Sayyids by supplanting them at Dhill ten years later. During the Lodi era, the province continued to enjoy a quasi-independence. It was the sultan's kinsman Dawlat Khān Lodi, governor of the Panjāb, who encouraged the designs of Bābur [q.v.] on Hindūstān, leading to the occupation of Lāhawr by the Mughals in 930/1524. On the outbreak of the rebellion of Shīr Shāh Sūr, Bābur's son and successor Humāyūn fled to Lāhawr, which he had been compelled at an earlier date to cede to his brother Kāmran Mīrā, the two Mughal princes were unable to hold the Panjāb, and abandoned it to Shīr Shāh (947/1540), with the result that Lāhawr once again enjoyed a period of Afghān rule. Shīr Shāh is said to have regretted on his deathbed that he had not razed the city, in view of its strategic value to an invader from the northwest, a sentiment doubtless echoed by his ephemeral successors when Humāyūn reoccupied Lāhawr in Rabi' II 962/February 1555.

With the restoration of Mughal rule, Lāhawr entered on the era of its greatest prosperity, to which belong also its principal monuments (see below). Abu 'l-Faḍl in his *Akbar-nāma* testifies to its flourishing condition under Akbar, who used it as his headquarters for his expeditions against Kashmir, Sind and Kandahār in the period 998-1006/1584-98. It was here that he received in 1595 the Portuguese Jesuit missionaries who were later, under his son Djabāngir, to build the church and school which were destroyed by Shāh Djabān. Djabāngir actually made Lāhawr his capital from 1031/1623, and it continued as such for most of the reign of Shāh Djabān, who was particularly attached to it as his

birthplace, establishing a carpet manufactory and renovating the *darīst-ghāna*. During the period of its apogee, Lāhawr continued to serve at intervals as a centre of disaffection. Akbar had to march to its relief when besieged by his half-brother Muḥammad Hākim Mīrā in 974/1566-7, and under his successors it was several times used as a base by aspirants to the imperial dignity: by Shūsrāw at the outset of Djabāngir's reign (1015/1606), by Shāhriyār on the accession of Shāh Djabān (1037/1628), and by Darā Shukōh on that of Awrangzīb (1068/1658).

Lāhawr's importance declined under Awrangzīb, who resided there less than his predecessors, though it continued to be styled *Dār al-salṭana* and the emperor was responsible for the construction of the *Darwāz Mas'ūdī*, with which the city's architectural history is usually assumed to have terminated. Bernier, however, visiting Lāhawr in 1665, gives the impression that it was already decaying and that large areas were in ruins. And with Awrangzīb's death, the region swiftly became a prey to the rising power of the Sikhs.

In 1123/1712 the Mughal emperor Bahādur Shāh I arrived at Lāhawr in the course of a campaign designed to crush the first Sikh insurrection under Banda, which was threatening the city, but died before he could achieve his object. The struggle for the succession between Djabāndār Shāh and 'Aṣṭa al-Shāh in 1124/1712 was actually fought out in the vicinity of Lāhawr, and it was not until the reign of Farrukh-shāh (1124-31/1713-19) that further action could be taken against the Sikhs. They were ruthlessly suppressed in a series of expeditions mounted by the governors of the Panjāb, 'Abd al-Ṣamad Khān and his son and successor Zakariyyā Khān, the activities of the latter winning Lāhawr the nickname of *Shahidganj*. Zakariyyā submitted to Nādir Shāh [q.v.] in Shawwāl 1150/January-February 1738, but recovered his independence once the Persian monarch had withdrawn from India. After the governor's death in 1158/1745, however, his sons engaged in a struggle for power, as a result of which the Afghān Ahmad Shāh Durraṇi [q.v.] was able to launch his first invasion of the Panjāb and occupy the city in Muḥarram 1162/January 1748. On his departure, the court of Dillī entrusted Lāhawr to Mu'īn al-Mulk, surnamed Mir Naimū, son of the waṣīr Kamār al-Dīn, but he was shortly obliged to submit to the Afghāns; and following a further invasion by Ahmad Shāh in the winter of 1165/1751-2, the Mughal emperor signed a treaty whereby Lāhawr passed into the Afghān sphere of influence. This did not prevent the Dhill waṣīr Ghāzī al-Dīn 'Imād al-Mulk from invading the Panjāb in 1169/1756, seizing Lāhawr from Mir Naimū's widow, who had endeavoured to secure recognition from both Dhill and Kabul, and installing as governor Adina Beg. Ahmad Shāh was thereby provoked into reoccupying the city in the following winter and establishing there his son Timār Shāh. During this time, the Sikhs are found assisting Adina Beg and his allies the Marāṭhās against the Afghāns. Together they expelled Timūr in 1171/1758 and repulsed another Afghān attempt on the city in 1173/1759. When Ahmad Shāh decisively crushed the Marāṭhās at Pānpat [q.v.] in 1174/1761 and again took Lāhawr, it was the Sikhs who were the ultimate beneficiaries of the victory. On his withdrawal, they simply reoccupied the city, and did so again after each of two further Afghān invasions, finally securing it in 1181/1767. For the next thirty years Lāhawr was governed by a triumvirate of Sikh chieftains, whose rule was disturbed

only by two temporary Afghan occupations under Ahmad's grandson Zamin Shāh in 1211/1796 and 1213/1798-9. During the second of these invasions, the Sikh chief Ranghīt Singh negotiated with the Afghans for the office of *sūbādar* of Lāhaur, but it was not until Šafar 1214/July 1799 that he was able to wrest it from its three Sikh lords, who had meanwhile retaken it in the wake of Zamin Shāh's retreat.

Under the rule of Ranghīt Singh, proclaimed *mahārājā* of the Panjāb in 1802, Lāhaur, as his capital, recovered something of its lost prestige. He repaired its walls, and embarked upon a programme of construction works which did much to rehabilitate the city. On his death in 1839, it passed among various members of his family until the accession of Dalip Singh in 1843, but the Sikh government soon became embroiled in its first war with the British, and by the terms of the two treaties of Lāhaur, in March and December 1846, Dalip Singh had to accept a temporary British garrison into his capital and a permanent British Resident in the person of Colonel Henry Lawrence. In March 1849, as a result of the second war with the British and Dalip Singh's deposition, Lāhaur was formally incorporated in the British empire. The city remained comparatively quiet at the time of the Indian Mutiny in 1857, though it was the scene of numerous disturbances during the twenties and thirties of the present century, with the rise of the Congress Movement and the conflicting claims of the Muslim League. In the partition of 1947, despite Sikh hopes of separate statehood for the Panjāb, the city and most of its district were allotted to Pākistān. From 1951 it was the capital of West Pākistān, and since 1970 it has been the capital of the new province of the Panjāb.

During this century Lāhaur has undergone a considerable expansion. In 1901 its population stood at less than a quarter of a million, but at the 1961 census it had reached 1,296,477 and in 1971 was estimated at 1,985,300 (all these figures include the cantonment). It consists essentially of the old city, the Anglicised quarters and the cantonment (formerly called Miyaṇ Mī) added during the late 19th and early 20th centuries, and the industrial areas which have grown up over the last few decades. First linked by rail to Amritsar in 1861, Lāhaur is now well integrated into Pākistān's railway network, being situated on the main line from Karāṭi to Peshāwar, and is also accessible by air. It is an important educational centre, possessing two universities.

Bibliography. Historical surveys are to be found in the standard descriptive accounts of Lāhaur see *Imperial gazetteer of India*, Oxford 1907-9, xvi, 93-113; *Imp. gaz. of India. Provincial series. Panjab*, Calcutta 1908, 1; S. M. Latif, *Lahore: its history, architectural remains and antiquities*, Lāhaur 1892, 1-83, contains many chronological inaccuracies, and is in any case mostly derived from the earlier account of F. H. Thornton, dating from 1860 and reproduced in H. R. Goindling, 'Old Lahore'; reminiscences of a resident, Lāhaur 1924, 56-80; see now also M. Bāqir Malik, *Lahore past and present*, Lāhaur 1952 (Panjab University Oriental Publications, 34).

(P. JACKSON)

a. Monuments. The architectural history of Lāhaur can be traced substantially from the Mughal administration. Tombs remaining from earlier periods have undergone such extensive alteration that their interest lies mainly in their inscriptions. Among these are the graves of Abu 'l-Hasan 'Alī Hudjwiri (d. 465/1072 [g.v.]), called *Dātā Ganādh-bakhsh*, Kutb al-Dīn Ayyub (d. 607/1210 [g.v.]) near the Lawhāt (sic) Gate, Pir Balhūt (d. 637/1239?), of which the small domed *hujra* may be original, and Sayyid Šāl (d. 786/1384); the tomb of Sayyid Muhammad Isbāḥ Kikarūnī, or Miyaṇ Pādshāh (d. 788/1386) is preserved in the *sahn* of the Masjid-i Wastī Khān. Of the eighty-four tombs in the city listed by Clisht, few in fact survive. No trace has been found, either, of the victory tower at the Fort and the mud-brick mosque known as Khajhī Masjid said by Fakhr-i Mudabbir to have been built by Mahmūd of Ghazna [g.v.], or the Kaṣī-i Humāyūn of Kutb al-Dīn Ayyub. There is, however, an impressive *mīhrāb* from the Sultanate period which appears to have been the focus of an *iqāḥ* near Chā Mirān. The *piḡḡāh* [g.v.], 7.4 m high, is surrounded by a band of geometric interlance; the semidome within the arch is reticulated to match, as is its central arched nook, and the squinches on either side have simple nets of grains, with hoods in floral relief. This decoration, which shares some features with Timurid work, is carried out in plaster on a brick core. Burnt brick is in fact typical of Lāhaur, as of the Panjāb as a whole, for want of local stone; it is usually covered with a revetment of cut plaster or tilework which conceals the structure, while stressing its main lines.

The Fort (Kila) which still dominates the city centre has been shown by excavations (1959 ff.) to rest on strata dating back to the Ghaznavid occupation, the fort of Ghūrid times, and those rebuilt by Balban and Muḥarrak Shāh in 666/1256 and 823/1422 were presumably on the same site near the northwest corner of the former city wall. The present structure was begun by Akbar (ca. 974/1566) while work at Āgrā Fort was still in hand. He extended the site to the bank of the Rāwī in the north, maintaining the level by an elaborate undercroft, and enclosing a rectangle of about 340 by 427 m with walls that still exist to the north, east, and south. The twin polygonal towers of the Masjid-i Darwāza (Panjābī: Masjid Darwāza) are panelled in blind arches like the Dihl Gate at Āgrā, here offset vertically, and their rhythm continues throughout the north wall. Of Akbar's palace we know only that its *Dawlat khāna-yi 'Amn* had a courtyard enclosed by 114 bays (*ḥaḥa* [g.v.] or *aywān*). The *Dihārakha* balcony which still overlooks the site may be of this date. Akbar also built the city wall with its thirteen gates, now largely demolished or replaced. The early phase of building at the Fort was completed by Dīshāngir in 1027/1618 with a courtyard of private apartments in the same trebeated style, with faceted pillars and intricately

carved surfaces of Mathurā stone; the *chadqī* brackets with their profusion of elephants, lions and peacocks owe much to Hīna timber-work. The architect responsible for this complex, 'Abd al-Karīm Ma'nūr Khān, appears also to have carried out the remarkable and unorthodox cladding of panels in mosaics of cul glazed tiles, on the north, and later the west walls, with the semi-octagonal Shāh Burj, between 1034/1624-5 and 1041/1631-2. Their brilliant colours, which extend the range previously used in the Panjāb from dark blue, azure and white to include yellows, brown and green, depict courtiers, scenes of hunting, elephant fights, battle and myth. The Diwān-i 'Āmm of forty columns ordered by Shāhjahān in 1037/1628 follows the pattern of its contemporary at Aḡrā; its present form was reconstructed by the British in 1848, but fragments of two ceremonial railings survive Shāhjahān, dissociated with the existing scheme, raised the level of the earlier work, and built a new group of private apartments inside the Shāh Burj, including the Shīsh Mahall of white marble set off with *pietra dura* inlay of floral motifs, opening onto the court through five bays with paired columns supporting engaged arches in the fully-developed marble style: it rises to double height, with a ceiling of convex glass set in gypsum plaster (*āyina-kārī*), the walls now being Sikh work. To its west is a marble pavilion, the Baḡlā (Nawākhā), that reproduces a Bengal but with its gridwork walls and arching roof, again inset with semi-precious stones (*parīn-kārī*). In 1043/1633 he had the Diwān-i Khāss and Kh. 'Abgāl replaced, the former with a marble hall five bays by five, anticipating that at Dhili [q.v.] in layout, with open arcades surrounding an inner hall, and a parapet inlaid to simulate merlons. The Motī Masjid (ca. 1645) makes finely restrained use of marble as the first of the three Pearl Mosques (cf. Aḡrā 1648-54, Dhili ca. 1660); its *piśābā* frames a four-centred arch that contrasts with the cusped ones on either side, and the three domes rise from strong cavetto mouldings in a rounded profile recalling Humāyūn's tomb, though crowned with a small pointed lotus. The round towers of Awrangzib's 'Ālamgiri Gate (1084/1673-4) rise vigorously from a swelling lotus-petal base in broad godrooms to leaf-like merlons, and each is capped with a light *chattr* to counter the upthrust.

The Mosque of Maryam Zamān, built for Dījahāngir's mother in 1023/1614, follows the established scheme of a five-arched prayer hall, with a tall semi-domed *piśābā*, and five domes supported on massive brickwork piers. Square towers at the angles carry domed lanterns. The slitted central dome, less overpowering than that at Fatḥpur Sīkri, has an inner shell of stucco; extensive use is made of squinch nets and honeycomb squinches, and the interior has the finest floral painting in Pakistan, on incised plaster. The prayer hall of the Masjid-i Waṭir Khān (1044/1634) is of the same type, with four-centred arches, double-shelled *Lōḍī* domes—albeit of an improved shape—and deep piers separating the façade from the domes. The courtyard is much longer and arcaded with stout octagonal minarets, capped with *chattr*s and set on squared bases: the first use of such towers, it seems, for a Mughal mosque. The main gate is enlarged to house the domed, octagonal central chamber of a bazaar street. The brickwork is extensively panelled, and its grids house flat panels of cul mosaic tile [see *āḡgī*] on the surfaces of the gates, prayer-hall and minarets, with flowers, trees, tendrils and

inscriptions in an inventive but strongly Iranian display. The building achieves great distinction in contrasting this vivacious decoration with the robust composition of the structure. Inside, the mosaic is replaced by paint. A *ḡamāmān* of the same date, and Iranian in type, still exists near the Dhili Gate. These elements are readjusted in the much smaller mosque of Dā'i Aḡā (1045/1635), where the three frontal arches are engraved, the domes articulated with cavetto mouldings well above the parapet, and the hall is limited at either end by the massive square bases for minarets with lanterns that have been rebuilt this century, exceptionally, tile mosaic is used inside as well as out. Its form is close to that of the mosque and its counter-image flanking the Tāj Mahall (ca. 1632-47). The mosque of Muḡammad Ṣāliḥ [q.v.] the historian and calligrapher (1070/1659) is also tiled, and remarkable for its inscriptions. The Rādshāhi Masjid (1084/1673), Awrangzib's finest building, combines local tradition with experience from the Dīwān Masjid at Dhili (1039/1649) [see *qnaī*]. From the former come the octagonal minarets at the courtyard corners, the smaller ones at the angles of the prayer hall, and the recessed panelling; from the latter are drawn the plan, the raised plinth with steps and gateway, the bulbous domes, and the handling of the façade. The brick structure is faced throughout in red sandstone, and white marble for the domes, the interior is decorated with floral reliefs in lime plaster (*manakhat-kārī*), and painted, with almost Rococo delicacy.

Tombs. The tomb of ḡhaykh Mūsā Aḡangar (ca. 1560?) whose squat dome on a cylindrical drum rests on a square, panelled cell, provides unique evidence of earlier tilework in the city: the dome is tiled in green horizontal courses, and the upper part of the walls in square tiles set diagonally, with floral motifs in blue and white. The squared mass of Dījahāngir's Tomb at Shāhdara (completed ca. 1046/1637) is derived from the base of Akbar's tomb [see *Acāī*], with the same number of arches and projecting bays at the centre of each side. Its red stone façades are inlaid with white and black marble in magpie elegance within the usual grid, and the tall octagonal corner towers are patterned in chevrons of white and yellow between four balconies. The absence of a central pavilion on the roof destroys the composition: the original arrangement is uncertain. A finely inscribed cenotaph lies in an octagonal central chamber with floor and walls all in superb *pietra dura*. This single-storey form is repeated at half-size in the tomb of his empress Nūrjāhān (d. 1035/1645) nearby, built by herself; no vestige of its original surface remains on the brickwork core. Dā'i Aḡā's Tomb (1084/1673-2) in the Gulābi Bāḡ is also square, with gridwork walls and a square *chattr* on each corner; the plan however incorporates a cross-shaped tomb chamber, with calligraphy by Muḡammad Ṣāliḥ in the coffer, and an ambulatory with octagonal corner cells. A central dome shaped like those of Waṭir Khān's Mosque is patterned in chevrons of white and dark blue tiles, and its tall drum with floral motifs.

A series of octagonal tombs begins with that of Anārkaḡ (1024/1615), built by Dījahāngir for a former love. It has octagonal, panelled corner towers with *chattr*s at roof level, arched walls rising through two stories, and a dome of this same profile. It suffered various alterations when adapted for a church in 1851. Entrances formerly alternated with octagonal corner cells around a central octagon,

with the cenotaph, carved in bold relief, at the middle. The tomb of Āṣal Khān (d. 1051/1641 [g.u.]) at Shāhdara has a single octagonal chamber, and a semi-domed arched recess on each external face around it. The reveals once had dados of square painted tiles, unique in this reign, and the squinch nets were enhanced with mosaic tile; the tall bulbous dome, now stripped of its white marble, was contemporary with that of the Tāq Mahall. The cenotaph is modelled on that of Dīdārkhān, below a *munabbai-hārī* vault. 'Alī Mardān Khān's tomb (ca. 1650), built for his mother, is similar in plan, but is crowned with a dome of the earlier type on a tall drum, balanced, Sūrī-style, by a *charī* set above every angle of the octagon. Once more the veneers have been stripped by the Sikhs, but there are traces of a floral marble inlay on the dome. The Mausoleum of Shāh al-Nāsir Begam (d. 1565/1745), called Sarw-wālā Makbara, is a low tower, square in plan, whose walls are relieved by a frieze of cypress trees (*tarī*) 2.5 m high in glazed tilework around a tomb chamber at the upper level, surmounted by a *dhagidja* and a hipped square dome. That of Sū Mubammad Ikbāl, designed by Nawwāb Zayn Yaḥyā Bahādur in 1957, is a severe orthogonal cell with battered walls, set off by mouldings around a strong plinth and *charidja*, and deep openings, reminiscent of Tughluk building yet somewhat Germanic; the white marble interior is carved in ornamental relief and lines from his *Zabār-i 'Adām*.

The gardens associated with these buildings, all but obliterated and requiring extensive restoration on Lord Curzon's initiative, have lost their original planting, but still display the *chārbāgh* layout, with causeways patterned in local brickwork set between regularly-spaced cypresses. The first, planted by Mirza Kāmrān on the bank of the Rāwī (ca. 1530-40) has disappeared, but its unimpeachable, a *hārādārī*, survives in midstream. Nāḍīkhān's Bāgh-i Dī-kushā, adapted for her husband's tomb at the centre, has each of the four quarters subdivided into four square plots, with canals and tanks at the intersections, within a huge walled enclosure. The Bāgh-i Shāllimār [see *ASTAR*, II], completed in 1051/1642, and like its namesake at Dīhli inspired by the eponym in *Kashuk* [g.u.] was originally entered at the lowest terrace, allowing movement, as in the palace, through successively more private areas, past cascades backed by lamp-niches, a *ṭakki-gūsh* set in a tank, and 450 fountains. The Hādārī Bāgh, formerly a sardī built by Aurangzib, is apparently Sikh work.

Three gateways clad in mosaic tile have survived the gardens to which they once led. The Čawbāghī (1050/1640), with four corner towers like those of Wazī Khān's mosque, but more attenuated and lacking their *charīs*, has cleanly-cut archways set in a gridded surface. The Gulābī Bāgh Gate (1066/1655) follows a similar scheme, but with angle-shalls in place of the towers, and with cusping of the upper arches. The undated gate at Nawānkōt (ca. 1650) has the paneled corners left unbroken as support for its twelve-pillared *charīs*, remarkable for their gadrooned, green-tiled domes.

Bibliography: See *INDO* for general works including references to Lāhawr; of these Sir R. F. Mortimer Wheeler, *Five thousand years of Pakistan*, London 1950, 75-93, is the most comprehensive. For works on the city in particular, see T. H. Thornton and J. L. Kipling, *Lahore*, Lahore 1876; S. M. Latif, *Lahore: its history, architectural remains and antiquities*, Lahore 1892; H. R.

Goulding and T. H. Thornton, *Old Lahore*, Lahore 1924. A more recent guide incorporating the latest information then available is by Muhammad Wab Ullah Khan, *Lahore and its important monuments*, Lahore, Dept. of Archaeology, 1951. Works in Urdu include a translation of Dārā Shikōh, *Sakinat al-awliyā*¹, Lahore, n.d.; Mawlawī Nūr al-Dīn Chishtī, *Tadhkirat-i Chishtī*, repr. Lahore 1934, and M. Tufayl, *Nafīsh*, Lahore 1962, on the inscriptions. Earlier work on inscriptions is in H. Cope, *Public inscriptions at Lahore*, in *JASB*, xxvi (1859), 308-13, and the latest in S. Mahmood, *Islamic inscriptions in Pakistan architecture to 1707*, unpublished Ph.D. thesis, Edinburgh University, 1981, 3 vols., II, 427-566.

The pre-Mughal buildings are considered by M. A. Chaghatay, *Pre-Mughal architecture of Lahore (Ghaznavide Period)* in *Proceedings of the Pakistan History Conference II* (Lahore 1952), Karachi (1953), 230-34; idem, *Pre-Mughal art and architecture of Lahore (during the Ghori period)*, ibid. III (Dacca 1953), Karachi (1955); idem, *The oldest extant Muslim architectural relic at Lahore*, in *Journal of the Pakistan Historical Society*, xli/2 (1963), 60-81.

The works on the Fort include Nūr Baksh, *Historical notes on the Lahore Fort and its buildings*, in *Archaeological survey of India annual report 1902-3*, 218-24, including translations from Mughal historians; G. Sanderson, *The Dīwān-i 'Imam*, in *Lahore Fort*, ibid., 1909-10, 33-9; J. Ph. Vogel, *The master builder of the Lahore palace*, in *Journ. For the gardens see S. Crowe, S. Haywood and S. Jellicoe, *The gardens of Mughal India* (London 1972).

(P. A. ANDREWS)

LAHDJ, colloquially called Lahdij, a town and area of south-western Arabia, now situated in the second governorate of the People's Democratic Republic of Yemen. The town, also known as

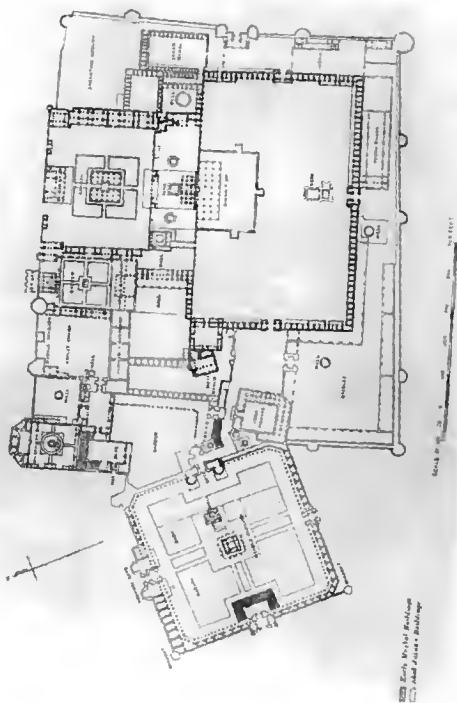

Fig. 1 Plan of the Ezer (Archaeological Survey of Israel)

Fig. 2. Plan of the Masjid-i Wasir Khan. (From M.A. Chaghatai, *The Wasir Khan Mosque, Lahore*)

al-Hawṣ, lies between the two tributaries of the Wādī Tubān, al-Wādī al-Kabīr and al-Wādī al-Ṣaḡīr, about 25 miles north-west of Aden. The town is surrounded by a fertile area which is cultivated by means of an elaborate system of irrigation using the water of the wādīs and also of wells. Date-palms abound, as well as cereal crops and vegetables. In fairly recent years too, cotton has become an important addition to the local agricultural economy.

Definition. In early Islamic, mediæval and later times, Lahdj comprised a whole area to the north and north-west of Aden and formed a joint fief with Abyan which at that time must have extended much further westwards to the north and north-east of Aden than the present-day area of the same name. Perhaps Lahdj and Abyan in those times might have been divided by a line drawn due north from Aden, with the former on the western side and the latter on the eastern. It seems that the area of Lahdj remained as described above until the late 19th century, when the then sultan of Lahdj occupied the territories of the Subayḥa, the tribal group inhabiting the territory between Lahdj proper and Bāb al-Mandab. Thus the Lahdj sultanate was composed of historic Lahdj and Subayḥi territory.

History. The genealogists connect the geographical name with the Himyar, Lahdj b. Wā'il b. al-Ḡhawṣ b. Kaṣn b. 'Arib b. Zuhayr b. Abyan b. al-Hamaysa'.

After the Yemen had been won for Islam, Lahdj shared the fortunes of this extensive province of the Arab empire. Lahdj thus passed with the Yemen to the Umayyads and then to the 'Abbāsids, though in early times governors in Sana'a and Hadramawt must have had little control in the area. In 203/818-19 the caliph al-Ma'mūn appointed Muḥammad b. 'Abd Allāh b. Zayd as governor of the Yemen. He was the founder of the Zayyid dynasty and built the Ṭihāma town of Zabīd, which was to be their capital until 403/1012-13. Lahdj, with Aden, Abyan, Hadramawt and al-Ṣībīr, passed into the hands of the Banū Ma'n in the time of the Abyssinian slaves who ruled Zayyid territory when the dynasty came to an end. In 434/1042-3, Aden came under the control of the Ismā'īlī 'Alī b. Muḥammad al-Ṣulayḥī, though the Ma'fūds were left in effective control until his death in 473/1080-1, when his son, al-Mukarram Aḥmad, reclaimed the area. Aḥmad installed as rulers of Aden and the neighbouring area al-'Abbās and al-Ma'fūd, the two Zuray'ids, in return for their past services to the Ismā'īlī cause in the Yemen on behalf of the Ṣulayyids. The Zuray'ids remained in power until the entry of the Ayyūbids from Egypt into the Yemen in 569/1173. Lahdj, with Aden and indeed the rest of the Yemen, thus came under the control of the Ayyūbids (569-626/1173-1228) and their successors, the Rasūlids (626-858/1228-1254), who were followed by the Ṭāhirids (858-ca. 954/1254-ca. 1257).

The expeditionary force led by Ḥusayn al-Muḥrīl which the Mamlūk Sultan Kānsawh al-Ḡhawrī sent at the request of the Ṭāhirid Sultan 'Amīr b. 'Abd al-Wabbāb to prevent the encroachment of the Portuguese in the Red Sea, and which conquered a great part of the Yemen, only paved the way for the Turks. In 945/1538 the Turkish governor of Kuluṣ, Sulaymān Paṣhā, set out with a fleet and took Aden, which thus belonged to the Turkish empire until in 1045/1635 the Turks had to leave the Yemen to the Zaydī Imāms.

In 1141/1728, however, the 'Abdālī tribal leader, Faḍl b. 'Alī b. Faḍl b. Ṣāliḥ b. Ṣālim, made himself

independent of the Zaydīs and made Lahdj the capital of his territory. Thus the area remained under the 'Abdālī house down to the evacuation of south-western Arabia by the British in 1967. With the arrival of the British under Captain S. B. Haines in 1839, when the Lahdj sultan also controlled Aden, the latter was ceded to the Government of Bombay. As already mentioned, the vast area of the Subayḥa fell under their sway in the late 19th century. By the time of the formal signing of the agreement with the British Government to inaugurate the Federation of the Amirates of the South in 1959, the Lahdj sultan Faḍl b. 'Alī, as ruler of the senior state in the Western Aden Protectorate, held the key portfolio of Federal Minister of Defence and continued in that post until the collapse of the Federation and declaration of the new Republic in 1967.

LAHDJĀN. 1. A town in the Caspian coastal province of Gilān [q.v.] in north-western Persia, in long. 50° 0' 20" E. and lat. 37° 12' 30" N. It is situated on the plain to the east of the lower reaches of the Saḡīd-Rūd and to the north of the Dullek mountain, and on the small river Čom-ḡhāl or Purdesar, but at some 14 miles/20 km. from the Caspian Sea shore.

Lahdjān does not seem to have been known as such to the earliest Arabic geographers, though legend was to attribute its foundation to Lahdj b. Sām b. Nāḥ. It does, however, appear in the Persian *Ḥudūd al-'ālam* (372/982) as Lahdjān, one of seven "large districts" (i.e. it was not yet a town) of the south-eastern part of Gilān, that known locally as Biya-ṣāḡh ("this side of the water"), biya cognate with Avestan *vaidhi* "water-course" as opposed to Biya-pas ("beyond the water") on the north-western side of the Saḡīd-Rūd, which had Fōman [q.v.] and Rašt [q.v.] as its centres (tr. Minorsky, 137, § 2, 25, notes. 388-90; on this passage of the *Ḥudūd al-'ālam*, see Barthold, in *Investing Kavkaz. Isl. arḥēol. Institut*, vi [1927], 63-6). In ancient times, the Saḡīd-Rūd or Amardus River (see Gilān, 0222) had formed the frontier between the Amardor or Mardi to the east and the Geis or Kadusoi to the west; see F. C. Andreas, in Pauly-Wissowa, 1/2, 1729-33, s.v. Amardos.

During the middle years of the 3rd/9th century, Lahdjān district formed part of the dominions, straddling Gilān and the mountainous hinterland of Daylam [q.v.] of the Dīstānīd or Dīstānīd Wabbāḍīn b. Dīstānī (still alive in 398/873, according to al-Tabarī, iii, 880; see also Sayyid Aḥmad Kasravi, *Shāhryār-nāma gum-nāma*, Tehran 1315/1956, i, 25); the rulers of Biya-ṣāḡh were generally able to extend

their power up from the plain into the mountains, and even at times over them to the south of the Elburz (as was to be the case with the Kar-Kiyā'i Sayyids, see below).

There then arose in Biya-pish a family taking from Kōtūm or Hōtūm in the Rān-i Kōh district, whose centre is Langarūd to the east of Lāhījān. This line was founded by the 'Alid Nāsir al-Dīn al-Hasan b. 'Alī al-Utrūsh (d. 304/917) (q.v.), who introduced Zaydī Shī'ism into the Caspian region; the eastern part of Gilān, i.e. Biya-pish, thus became strongly affected by Shī'ism, whereas Sunnī doctrines, including Hanbalism, remained dominant in Biya-pas. The wider political authority of al-Utrūsh's family shrank during the middle decades of the 4th/10th century, and became concentrated more on Tabaristan or Māzandarān to the east, but the Nāsirid Sayyids remained influential in the Caspian region because of their religious prestige. The history of Lāhījān in the succeeding period is obscure; but it is probable that the Dīstānids reasserted their authority there after the highland region of Daylam had passed into the hands of the Mušallirids or Sallārids or Langarids (the latter name better than "Kangarids") of Tārum (see *mušallirids* and *šallār*), and it was the Dīstānīd "king of Daylam" who submitted at Kāzwīn to the incoming Saljūq Toghril Beg in 434/1042-3 (Ibn al-Athīr, ix, 348).

Subsequently, we find a family of local origin called the Nāsirwands ruling Biya-pish from Lāhījān. The story of their origin from Maḥmūd of Ghazna's brother Nāsir al-Dawla b. Sebektigin related by Abu 'l-Kāsim 'Abd Allāh b. 'Alī Khāshānī in his *Ta'riḥ-i Oḡeyn* is wholly fanciful, and the name Nāsirwand obviously relates to a connection, real or supposed, with Nāsir al-Dīn al-Utrūsh's tenure of power there. In the time of the Mongol Il-Khān Hulegū, the Nāsirwand Dīstān al-Dīn Ša'fūk b. Ša'fūk was ruler in Lāhījān; some decades later, in Oḡeyn's reign, the family was divided into two branches, that of Ša'fūk b. Šālār in Kōtūm, and that of Naw-Pādīšāh or Shāh-i Naw in Lāhījān. The latter submitted to the Il-Khān when he appeared in Gilān and at Lāhījān specifically in 706/1306-7, receiving in marriage the daughter of a Mongol commander and being granted suzerainty over the other local princes of Gilān; Rashīd al-Dīn also testifies to Naw-Pādīšāh's riches and prestige at this time. Lāhījān itself flourished, and Hamd Allāh Mustawfī describes Lāhījān and Fūnān as the two chief towns of Gilān: in the vicinity of Lāhījān silk cultivation and weaving were actively pursued, and corn, rice, oranges and other sub-tropical fruits were grown (*Nuḥdat al-bulbūl*, ed. Le Strange, 162-3, ix, 158-9; R. B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, 71).

Biya-pish was racked by warfare between the various local chiefs during the course of the 8th/14th century, and by 792/1390 the rule of the Nāsirwands, already once interrupted in Lāhījān, foundered completely, and Sayyid Maḥdī Kiyā became master of Biya-pish. The Kar-Kiyā'i Sayyids ruled there from 799/1397-8 (with a brief revanche shortly after this by the last Nāsirwands) till 1000/1592, the first of the family to make himself completely independent being Sayyid Amīr Kiyā (for a genealogical table of the family, see H. L. Rabino, in *JA*, cccxxvii [1949], at pp. 322-3). His son Sayyid 'Alī Kiyā, with the help of the Mar'ashī Sayyids of Māzandarān, made himself master of all Biya-pish, and extended as far as Kāzwīn, Tārum and Šamīrān; and Sayyid

Raḍī Kiyā (d. 829/1426) chased out of the mountains south of Lāhījān the local family of Hāzārāspids and the Ismā'īlis. Likewise, Mirzā 'Alī b. Sulṭān Muḥammad Kiyā (883-911/1478-1506) at the zenith of his power controlled Kāzwīn, Tārum, Šamīniyya, Šāwa, Zangjān, Frūkūdh, Tehran, Rayy and Warānda.

From the end of the 9th/15th century, the information of the local Caspian chroniclers like Zahr al-Dīn Mar'ashī may be supplemented by that of the Salawid chronicles, the interest of the latter being focussed on the region because of the crucial role played by Mirzā 'Alī Kiyā in sheltering the young Šafawid Ismā'īl b. Haydar (see *ismā'īl*). The future ruling family of Persia already had close links with the Lāhījān district, for in the village of Shaykhānbar on the Lāhījān-Langarūd road lay the tomb of Shaykh Ibrāhīm Zāhid (d. 714/1314) *the pīr and martyr of Shaykh Sa'ī 'Alī 'Alī Šafawī* (cf. Sylvia A. Matheson, *Persia: an archaeological guide*, London 1972, 71). When Ismā'īl was a fugitive from the Ak Koyunlu in 895/1494, he fled eventually from Ardabīl to Lāhījān. Mirzā 'Alī welcomed him there, refused in 902/1497 to extradite him to the Ak Koyunlu leader Rustam Mirzā (allegedly after receiving a vision of the caliph 'Alī enjoining him to protect the young prince), and assigned for his education a tutor, the Lāhījān scholar Šams al-Dīn. Then early in 905/1499, when he was still not quite 11 years old, Ismā'īl left Lāhījān for the bid for power which was to end in the defeat of the Ak Koyunlu and Ismā'īl's conquest of Āghar-bāyījān (see E. D. Ross, *The early years of Shah Isma'īl*, in *JRAS* [1896], 249-320, W. Hinz, *Iran: Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin-Leipzig 1936, 98-100; Minorsky, *Tadhkirat al-mulūk, a manual of Šafawid administration* (Leica 1137/1725), London 1943, Appx. II, 191 ff.).

During the 10th/16th century, Biya-pish and the Kar-Kiyā'is became vassals of the Šafawids from 909/1503-4 till the region's final incorporation in the Šafawid empire in 1000/1592. At first, a Kīlī-Bāgh (q.v.) governor was appointed to oversee the Kar-Kiyā'is, and then in the middle years of the century, royal princes acted as governors, including a brother and two sons of Šāh Tahmāsp I (in 943/1536-7 and 985/1577-92). The Kar-Kiyā'i Sayyid Ahmad b. 'Alī (943-75/1536-67 and 985-1000/1577-92) introduced at Šāh Tahmāsp's behest the official Šafawid Twelve or Dīstānī form of Shī'ism in place of the Zaydī one, but he fell from favour when he started intriguing with the Ottomans, inviting them to send troops into Šīrwān and to Lāhījān for an attack on Kāzwīn, so that in 975/1567 Tahmāsp invaded Gilān and deposed Ahmad. He was restored nine years later, and was formally adopted in brotherhood (*akāwāf*) by Šāh Ismā'īl II and Muḥammad Khudabanda. But he continued to have relations with the Ottomans, and in 1000/1592 Šāh 'Abbās came to Lāhījān, whilst Ahmad fled to Šīrwān and then Istanbul, where he ended his days (cf. Von Hammer, *GOR*, ii, 562, 576). All Gilān was now placed under a centrally appointed *wāzīr*, and after the death of the grantee of the province Farhād Khān in 1008/1600, it became till the end of the Šafawid period one of the crown domains (*mahd-i-āḥāḥā*); see K. M. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 19, 44, 83, 87, 93, 105, 121).

Since then, Lāhījān's history has been only sporadically eventful. Under Šāh Sulaymān I there took place in South Russia the Cossack revolt of

Stepan Razin (1668-71), with raids expected against Persian territory along the Caspian coasts; hence troops were mustered in Biya-pish, the Ghâziyân-i Şahî. During the Russian occupation of Gilân 1736-46/1724-34, the Russians built two forts at Lâhidjân, and the town was once more under Russian domination during the local Soviet Republic of Gilân in 1920-1. According to the traveller Gmelin, who was in Gilân in 1772, Lâhidjâa had seven years previously submitted to Hidâyât Khân of Fûman. Kâdjâa control was subsequently established there, but the last hereditary governor of Lâhidjân, Mirzâ Ahmad Khân, Shîrî Mu'ayyad, was dismissed by the constitutionalist government in 1907.

In recent times, Lâhidjân has lost most of its administrative importance to Rasht, but still has considerable commercial importance as a centre for the local Gilân silk and cotton industries and as a centre for citrus fruit growing; tea was first introduced into the Caspian region in 1914, and later, Ridâ Shâh Pahlavî employed Chinese experts to start new plantations near Lâhidjân in the lower foothills adjoining the coastal plain (see *Admiralty Handbook, Persia*, London 1945, 148, 464).

The antiquities of the town include various graves of the Kar-Kiyâ'î Sayyids. Administratively Lâhidjân is now the centre of a *shâhrisân* or district of the same name, in the first province of Iran; according to the 1906 census, it had a population of 25,725 and ca. 5,573 houses (see Rammân, ed., *Pashang-i dîghârîyîsh-yi Irân*, II, 270-1, and L. W. Adamec, ed., *Historical gazetteer of Iran. I. Tehran and Northwestern Iran*, Graz 1976, 410).

(very detailed geographical survey of the region); idem, *Rulers of Lâhidjân and Fûman, in Gilân, Persia*, in *JRAS* (1918), 35-92, idem, *Les dynasties locales du Gilân et du Daylam*, in *JA*, cccxxvii (1940), 'Abbâs Kadivar, *Ta'rikh-i Ghilân*, Tehran 1319/1940. For the coins minted at Lâhidjân, see E. von Zambaur, *Die Münzprägungen des Islams, südlich und östlich gerichtet*, I, Wiesbaden 1968, 218, (C. E. Bosworth).

2. Several districts in Persia have however derived from the stems *Lâh* and *Lâr* [q.v.]: Lâhidj, an important little town in Transcaucasia west of Shemâkh (see *ghatawân*); Lâhidjî, a village in

the canton of Kurbûl in the province of Fîrs; Lâhidjân, a canton of Mukri Kurdistan (see *sawguzîg*), which the *Shâh-nâmâ* of Shârah al-Dîn Bidlisi, ed. Vahamînof-Zernof, St. Petersburg 1860-2, I, 280, calls Lâridjân. There is a village of Lâhidjân near Nîkhîlî, south of Tabriz, and a village of Lâridjân south of the Araxes about 12 miles above the mouth of the river of Ardâbil (Kara-Şu). The forms *Lâh* and *Lâr* may both come from **Ladh* (cf. the Old Persian *Mâda*, which gave *Mâh* in Persian and *Mar-ah* in Armenian). According to the dictionaries (e.g. Vullers) the old name of the town of Lâr [q.v.] was Lâd, Lâdh; the silk called *lâdh* is also known as *lâh* (*lâh* however may equally well be explained by *lâs*). The change of *d* (dh) to *r* is attested in the Caspian dialects (it is regular in Tâti; Melgunoff, *Das südliche Ufer des Kaspischen Meeres*, 231). The fact that we have districts of Lâhidjân and Lâridjân in the adjoining provinces of Gilân and Mîzandârân is remarkable, but still more significant is the fact that Lâhidjî of Shîrwân represents an island of Iranian Tâti surrounded by Turks (the Tâti are now found scattered throughout Daghestân, the country round Tehran, Âlharbâydjân, etc.). Their present name has a rather general and vague character, see TAT. The colony of Lâhidjî may have retained the original dialect formerly spoken in the metropolis. The name of the silk *Lâhidjâa* suggests the former existence of a place called Lâd, which produced silk (cf. Yâkût, s.v. Lâhidjî; he says that Lâhidjî produces the silk called "Lâhidjî" which is not of high quality). With the suffix -î, the word *Lâh-î* would mean the people of Lâd. It remains to be seen if the region of Lâhidjân is not the ancestral home of numerous Lâhidjî colonies. At the present day there is spoken in Lâhidjân—although with certain local peculiarities—the Gilakî dialect, but this parent dialect has here exercised a levelling influence, of which the foreign Turkish was incapable in the case of the people of Lâhidjî of Shîrwân. As to Lâhidjân of Kurdistan, we may recall the hypothesis of Andrews that the name "Dimla" by which the Zâzâ call themselves (north of Diyârbakr) is a metathesis of Dêlâm (Daylam). The emigrations from Gilân, still very obscure, certainly penetrated far to the west. Finally, to the names mentioned one might add perhaps that of Kal'â-yi Lâhûdî in Khûzistân (?); cf. Mustawî, *Ta'rikh-i gushda*, GMS facs., 240, (V. MINOASKEY).

LÂHDJÛ, the sūba of several eminent persons connected with Lâhidjân [q.v.] in the Caspian region of Persia, among whom the following may be mentioned.

1. SHAMS AL-DÎN MUHAMMAD A. YAHYA GHILÂNÎ, theologian, mystic, and poet of the Timûrid-Sâlsawd period and a renowned *ghayyâ* of the Nûrbakhhîyya Şûfî order in Shîrâz. He joined his master Sayyid Muḥammad Nûrbakhhî in 849/1445, and during a period of 16 years, under Nûrbakhhî's spiritual direction, accomplished considerable progress along the Şûfî path. After the death of Nûrbakhhî (869/1464), or even slightly before then, Lâhidjî retired to Shîrâz, where he founded a Nûrî (= Nûrbakhhî) *khânqâh* [q.v.], and spent much of his time in mystical exercises and teaching Şûfî doctrines. During this period of retirement, he was held in great respect not only by scholars such as Dowânî [q.v.] and Dîrâmî [q.v.], but also by the Safawid Shâh Ismâ'îl I, who paid him a visit at his *khânqâh* in 905/1503 in Shîrâz. Nevertheless, the biographical data which we can glean from his own writings are minimal: a six-months' stay in Tabriz

prior to his master's death; a pilgrimage to Mecca in 882/1477; and a short sojourn in Yemen, where in the course of his way back home from Mecca, he made an investiture of Nūrbaḥāshī Ḥārās as a couple of disciples—a father and son—in Zabīd, for whom he also wrote a concise *ijāza* in Arabic, with traditional Sūfī instructions. His death, according to an oft-cited chronogram (= *Madda ta'riḥ*), occurred in 912/1506. Other dates, including 980/1572 [cited by Feruch, *Persische Handschriften*, 830] and 809/1464 (H. Corbin, *Trilogie ismaélienne*, Tehran-Paris 1961, index) are definitely incorrect. Lāhījī's literary output, including his *Diwān*, with Asrī as his pen-name, and a didactic *maḥṣūf* called *asār al-ḡudāḥ*, contains a theological prose work called *Mafāḥih al-ʿiḡdā* (an extensive commentary on the well-known *Guḡḡan-i rūḥ* of Māhmunī; Shabstari [a.v.], together with a number of shorter tracts with comments on the difficult verses of some old poets. His own poetry, although of considerable philosophical value, is of rather mediocre literary quality. His son Fikr-i Lāhījī (d. 927/1521), better known as Ḥayyūkhānda, was also a poet and reportedly a Nūrbaḥāshī Ḥayyā as well.

Bibliography: [in addition to works mentioned in the text] Nūr Aḥsh-i Shuḡhartī, *Madḡis al-ʿawwamin*, lith. Tabriz, 306-9; Rūḡ ḥuḡ Ḳhān-i Midāyat, *Riyāḡ al-ʿarfīn* 1, 63; Al-ḡam ʿAlī-Shāh, *Tarāḡ al-ḥaḡḡā*, II, 143, II, 53-6; Ibn-i Yūsuf-i Shīrāzī, *Fikr-i Kitābkhāna-yi Mudarras-i ʿAlī-yi Sipākhān*, Tehran 1381/1959, II, 359-60; Mudarras-i Ḳhlyābīnī, *Riyāḡat al-ʿadā* 1, II, 125-6; Kaywān-i Samīʿī, preface to his edn. of the *Mafāḥih al-ʿiḡdā*, Tehran 1357/1958. For an analysis of some of Lāhījī's personal mystical experiences, see H. Corbin, in *Iranica Jahrbücher* (1959); the *Diwān-i Asrī-yi Lāhījī*, together with his minor tracts, edited by Dr. Barāʾi Zandjānī, is now in press.

2. ʿABD AL-RAZZĀK B. ʿALĪ B. HUSAYN GILĀNĪ, theologian, philosopher and poet of the late Sāfawīd period and a leading master of the so-called philosophical school of Iṣṭihān. Although a favourite pupil and a son-in-law of Mullā Shāh Shīrāzī, he did not share his master's philosophical teachings over several topics. Among these one may mention Mullā Shāh's belief in the movement of substances (= *al-ḥarakat al-ḡhawariyya*) and his opinion on the basicity of being (= *asālat al-ʿuḡḡūd*). Lāhījī spent the latter part of his life in Kūm, where he died in 1072/1662, leaving behind him a considerable literary output. His own philosophy was of a rather eclectic character, owing much to Ibn Sīnā's and Naṣīr al-Dīn Tūsī's thought. His works include the *Ḥāḡḡiyā-yi Kitāb-i Iḡḡarāt*, being glosses upon Tūsī's commentary on Ibn Sīnā's *Kitāb al-Iḡḡarāt* wa *ʿIḡḡāḡihāt*, and the *Shawāḡih al-ʿiḡḡān*, a concise but original commentary on Naṣīr al-Dīn Tūsī's *Tadwīr al-ʿaḡḡāḡ*. He wrote also a commentary on Shīkh al-Dīn Yahyā Suhrawardī's *Hayyāh al-mūr*, along with other theological works. Among these are two Persian books dealing with the elements of Shīʿī theology: the *Gawḡar-i murād*, which he dedicated to Shāh ʿAbbās II ca. 1052/1642, and *Sarmāyī-yi imān* which he composed in 1058/1648 at the request of a friend. Lāhījī's poetical pen-name was Fayyāḡ, under which he composed a *diwān* of no less than 5,000 verses. He is said to have had personal connections with contemporary poets, such as Šāh-i Tabrizī and others. His own poetry contains gnostic ideas, though Lāhījī had no sympathy for

the Sūfī ḡhayyās of his time. Although equally criticised by some fanatical ʿulamāʾ of his epoch, Lāhījī has been considered as in general more acceptable to orthodox Shīʿism than his teacher Mullā Shāh was. Lāhījī's sons Mirzā Ibrāhīm and Mirzā Ḥasān were also theologians of some repute. The latter, who died in 1123/1709, left behind no less than twelve books on theological problems.

Bibliography: later authors have sometimes confused Shams al-Dīn Lāhījī and ʿAbd al-Razzāq Lāhījī, so that they have called the commentator of the *Guḡḡan-i rūḥ* ʿAbd al-Razzāq (see e.g. E. G. Browne, *LHP*, IV, 1461, or Muḡammad ʿAbd al-Razzāq, which is but a forged name (see Corbin, *Histoire de la philosophie islamique*, Paris 1964, 36). Concerning the philosophical school of Iṣṭihān, see Corbin, *En Islam iranien*, IV, Paris-Tehran 1972, 9 ff.; A. Bausani, *La Persia religiosa*, Milan 1959, 386 ff.; S. H. Nasr, in M. Shari's *A history of Muslim philosophy*, 1966, II, 904 ff. For an analysis of the philosophical teachings of ʿAbd al-Razzāq Lāhījī, see S. D. J. Āḡḡiyān's *Antologie des philosophes iraniens, textes persanes et arabes*, Introduction analytique par H. Corbin, Tehran-Paris 1972, I, index. For his life and works, see Brockelmann, II, 590; C. Rieu, *Cat. of Persian manuscripts*, Suppl., 205-6; Browne, *LHP*, IV, 408-9, 435; Mudarras-i Ḳhlyābīnī, op. cit., IV, 367-8. (A. H. ZARRINKOOB)

LAHN AL-ĀMMA, "errors of language made by the common people", is an expression which characterises a branch of lexicography designed to correct deviations by reference to the contemporary linguistic norm, as determined by the purists. The treatises which could be classed under this heading, correspond, broadly speaking, to our "do not say... but say...", the incorrect form generally being introduced by "you say" or "they say = one says" (*ḡḡāḡ*, *yaḡḡāḡ*) and the correct form by *wa* "I-say..."; "whereas the norm is..."; they are most often entitled *Kitāb Laḡa al-āmma* or *Kitāb mā ḡaḡḡanīyān fī al-āmma*, but may also be *Kitāb mā ḡaḡḡat fī al-āmma*, *Kitāb ḡaḡḡat al-ʿawām*, *Kitāb ḡaḡḡat al-ʿiḡḡān*, etc., although this range of titles does not necessarily imply a significant difference in the manner of presentation of linguistic facts or a particular method of choosing the material to be considered. These works give evidence of the development of current usage and can, to a certain extent, serve as a means of tracing the history of the language, especially from the time that a standardisation of the *ʿarabiyya* (p.v.) came into operation through the efforts of the philologists.

Under the heading *al-ḡuḡḡa wa ʿl-āmma*, reference has been made to the *āmma* of the grammarians, without any attempt to define it and determine its limits. ʿAbd al-ʿAzīz al-Aḡwānī, who has considered this point [in *RIMA*, II/1 (1376/1956), 233 ff.], relies quite rightly on a passage of al-Dhāḡirī (*Bayān*, I, 137) who writes: "When you hear me speak of the *ʿawām*, I do not refer to the peasants, the lower orders, the artisans and the tradesmen, nor the Kurds of the mountains or those who dwell on the islands in the sea... the *ʿawām* who belong to our nation and our religious community and possess our culture and morals constitute a class endowed with intelligence and qualities superior to these categories cited above, without however attaining the level of our *ḡuḡḡa*. It should be noted, in addition, that the *ḡuḡḡa* is also divided into hierarchical strata". It will be seen from this passage that al-Dhāḡirī, without making a decisive contribu-

tion to the problem posed by the definition of the *ḥāṣṣa* and of the *'amma*, excludes from the latter, from a linguistic point of view at least, the lower orders of society and the foreign elements whose language was not regarded as belonging to the *'arabiyya*, as strictly defined, and he includes among the *'ammam* a medium social class who, at a time when literary Arabic and dialectal Arabic, as we call them, had not been irrevocably divorced, were expressing themselves in a language which was already less formal, but still fairly close to that of the *ḥāṣṣa*, of the intellectual elite, or the upper echelons of the latter, theoretically guardians of the norm of the past, of the innate and spontaneously respected *fasāḥa* (q.v.).

Al-Zubaydī provides a number of definitions in this context when he writes in the introduction to his *Lahn al-'ammam* (cf. al-Ahwāl, *art. cit.*, 133; G. Krotkoff, *The "Lahn al-'ammam" of Abū Bahr al-Zubaydī*, in *Bull. of the College of Arts and Sciences, Baghdad*, II (1957), 6-7): "I have examined the language employed in our time and in our land (Muslim Spain) and here I have found phrases which are cited neither by Abū Ḥatīm (al-Sidjistānī, see below) nor by other lexicographers; it is a question of alterations, owed to our *'amma*, which has modified the pronunciation (of certain words) or adapted the meaning, and has been followed in this practice by a great many people, to the point where these incorrect usages have infiltrated into the works of poets, and the most eminent scribes and functionaries include them in their correspondence and make use of depraved expressions in their conversations. I have therefore decided it appropriate to draw attention, in my turn, to these faults, to indicate the correct form which corresponds and to devote a book to the inaccuracies which I have observed... while leaving aside those that are committed by the mass of the people... and concentrating on those which one may expect to find in the language of the *ḥāṣṣa*." His treatise is however entitled *Lahn al-'ammam*, and one gains the distinct impression that this last term, or its singular *'amma*, in the titles considered in this connection, is pure euphemism designed to disguise the truth and spare the feelings of the *ḥāṣṣa*, while laying the responsibility for linguistic deviations upon the latter. In fact, if he was referring to the uneducated people of whom al-Djāhiz speaks, the works which belong to this genre would be descriptions of dialects, of the type which are known today as *'ammī* or *'ammayya*; now this is far from being the case, even if dialectal forms did infiltrate the usage of the scholars who constituted a faction of the *ḥāṣṣa*. Furthermore, authors are well aware that their works will not be read by "the man in the street" and it is not a part of their objective to induce illiterates totally separated from their roots, or, which is more to the point, arabophones of foreign origin, to express themselves like the Arabs of the Djāhizīyya who merit the qualifying adjective of *faṣīḥ*. In reality, all the treatises of which we shall attempt a fully inventory in due course address themselves to a fairly closely-defined *ḥāṣṣa* whose practices are in need of correction, and al-Ḥarīzī is one of the few authors who has the courage to break with tradition and tell the truth, when he laments his book *Durrat al-ghawwāḥ fī anḥām al-ḥawwāḥ* (7).

In this case, *anḥām*, elsewhere *ḥawwāḥ*, *ghawwāḥ*, *ghawwāt* or *ṣawwāt*—"errors, faults, lapses"—are often substituted, in the titles of treatises, for *lahn*, which is the time-honoured term. This technical

expression has been the object of a vigorous semantic study on the part of J. Fück, in an appendix to his history of the Arabic language, *'Arabiyya* (Berlin 1950, 128-35; Fr. tr. Cl. Denizeau, Paris 1955, 195-203). Apart from its ancient connotations such as "word with double meaning, obscure allusion", "intelligence" etc., between which a subtle line of association may be traced, *lahn* also appears to have signified, originally, "manner of speaking", "use of a word or pronunciation of a phonem peculiar to an individual or an ethnic group", in such a way that it could be considered an equivalent of the word *luga*, adopted by the grammarians to take on the technical meaning of "dialectal or regional variation". These peculiarities were not, in themselves, reprehensible, but they were observed and sometimes derided by Arabs who, rightly or wrongly, stimulated by a spirit of purism and regarding themselves as defenders of the *fasāḥa*, judged them contrary to their instinctive conception of the norm. *Lahn* was not slow, however, with the establishment of normative grammar, to be applied to any deviation with regard to the rule and, in the first instance, to the abandonment of the *'āḍ* (q.v.), of which an illustration or a relic may be perceived in the use of the word *malḥūḥ* (q.v.) to designate a form of popular poetry. It is thus that *lahn* takes on the sense of "deed of committing faults of language", then of "perverted use (solecism, barbarism, malapropism, etc.)", as opposed to idiomatic usage and simple regionalism. Having become a synonym of *ḥawwāḥ*, it is with this meaning that it figures twice in the *Kutub* of Sibawayh (I, 262, 349; see G. Troupeau, *Lexique-index du Kitāb de Sibawayh*, Paris 1976, 188). In the following century, the use of the term in this precise sense had become so widespread that al-Djāhiz himself, commenting on a verse in which *lahn* signified "word with double meaning, obscure allusion", spontaneously, but erroneously, gave it the meaning of "fault" (see Fück, *op. cit.*, 131-2; Fr. tr., 200-1; Pellat, in *Arabica*, xxi/2 [1974], 183-4).

The norm to which reference has been made above is nothing more than an ideal to which the various grammatical schools are at pains to pay attention in their application of criteria which sometimes lead to contradictory results. In addition to differences in viewpoint, there is no shortage of regional peculiarities, as is to be expected in a region as vast as the Arabic-speaking world, which serve to explain both the relative abundance of works of *lahn al-'amma* and the divergent tendencies of which they are sometimes the expression.

In the course of the last hundred years, more or less detailed inventories of these works have been compiled, completed, and corrected by both Eastern and Western scholars who have taken a particular interest in this branch of philological study. The earliest is that of H. Thorbecke who, in his introduction to the *Durrat al-ghawwāḥ* of al-Ḥarīzī (Leipzig 1872, 7-12) supplied a preliminary list which was soon to be enlarged by I. Goldziher (in *ZDMG*, xxvii [1873], 135-6); a few years later, the latter devoted an article to the question, *Zur Literaturgeschichte des Ḥawwāḥ al-'amma* (in *ZDMG*, xxxv [1881], 147-52). In publishing his catalogue of the Arabic mss. of Berlin (VI, 1894, 319), Ahlwardt was to put a considerable store of useful information at the disposal of Arabist scholars. Although two books on the *lahn al-'amma* were written during the subsequent period, a gap of some forty years elapsed before the appearance of a new inventory, this time

in Arabic, compiled by ʿIsā Iskandar al-Maʿrūf (al-Lahad al-ʿArabīya, in the *Magallā* of the Academy of Cairo, 1 [1935], 350-66 and II, 349-71). The following year, ʿIzz al-Dīn al-Lanūdhī was to put forward, in the introduction to his edition of the *Takwīm al-Dhawāʾif* (in *MMJA*, xiv [1936], 169-226) a brief list, later to be completed by Ṣalāḥ al-Dīn al-Munadīdī (in *MMJA*, xvi [1941], 237, Kurds ʿAwwād, *ibid.*, xvii [1942], 282) and ʿAbd al-Kādir al-Maghribī (*ibid.*, xxv [1950], 471-7). In 1953, the IFAO of Cairo published the anonymous *Drumma*, preceded by an introduction by the editor, Ḥ. H. ʿAbd al-Wahhāb, and containing a list of Maghribī treatises. The most complete inventory is that with which U. Rizzitano prefaced his analysis of the *Taḥḥīṣ al-ḥisn* of Ibn Maḥdī (*Studia et documenta orientalia*, 5, Centro di studi orientali della Custodia Francescana di Terra Santa, Cairo 1956); this work, which has lost none of its value, will be extensively utilised in the present article. In the same year, there appeared in Cairo a thesis presented in 1953 by Husayn Naṣṣār, al-Muʿayyad al-ʿArabī, which also contains (pp. 115) a rather muddled list. The history of research on the *lahn al-ʿamma* up to the year 1957 has been traced by G. Krochko (op. *lahn*), who also corrects and supplements Rizzitano on points of detail. Apart from the editions to which attention will be drawn in due course, the most recent works on this subject are those of ʿAbd al-ʿAzīz al-Ḥawālī (in *KIMA*, III:2 [376-7] 1957), 133-7, 283-321, of Ramaḍān ʿAbd al-Tawwāb (*Lahn al-ʿamma*, Cairo 1961, and *Lahn al-ʿamma wa-Tawawur al-ḥikmah*, Cairo 1967) and of ʿAbd al-ʿAzīz Maṭar (*Lahn al-ʿamma fi dawʾ al-dīnīyat al-ḥikmah*), Cairo 1967; the studies of these three last-mentioned authors are based on the partial or complete editions which they had procured.

The earliest treatise dealing with the genre studied here could well be the *Kutāb maṭṭan fī al-ʿamma* (or *Riḥla fī lāḥ al-ʿamma*) attributed to al-Kisāʿī (d. 289/805 [q.v.]) and published by C. Brockelmann (in *ZA*, xii, 31-46; cf. Nöldeke, *ibid.*, 111-15), later by al-Maymūn (in *Tahḥīṣ rasāʾil*, Cairo 1344/1965); this work comprises 102 entries in which the correct form is introduced by *taḥalīl*—"you shall say..." and the incorrect form by *id taḥalīl*—"you shall not say..." (see also Brockelmann, I, 115, S 1, 198; Rizzitano, no. 181; the two editors, faced with the question of the legitimacy of the attribution of the text to al-Kisāʿī, finally decided in favour of its authenticity, but Fück (*ʿArabīya*, 50-2; Fr. II, 77) has cast serious doubt on the issue; since Rizzitano indicates (no. 181) that al-Naṣīb al-ʿamma is *al-ḥikmah* wa *al-ʿamma* by a certain Muḥammad b. Abmad b. al-ʿAlaʾī al-Ḥanāfī is a presentation in alphabetical order of the *Lahn al-ʿamma* of al-Kisāʿī, this fact would seem to be an argument in favour of authenticity (cf. Krochko, 12, n. 13).

In the list of the writings of al-Farrūʿī (d. 207/822 [q.v.]), there figures a *Kutāb (al-Baḥāʾ fī) maṭṭan fī al-ʿamma*, now apparently lost (see Ibn al-Nadīm, Cairo ed., 100; Yāqūt, *Iḥṣāʾ*, vi, 278 = *Udabāʾ*, xx, 13; Ḥādīdī Khāḥifa, v, 357; al-Suyūṭī, *Bughyā*, 411; Rizzitano, no. 4); Ibn Khāḥifa (Wafayāt, Cairo 1376, II, 229) compares it with the *Faṣṣḥ* of Thaʿālab (see below). In keeping with the chronological order of the authors, by dates of death, it is appropriate to mention next Abū ʿUbayda (d. 207/825) [q.v.], who is also credited with a *K. maṭṭan fī al-ʿamma* (Ibn al-Nadīm, 80; Yāqūt, *Iḥṣāʾ*, vii, 169 = *Udabāʾ*, xix, 161; *Bughyā*, 395;

Ḥādīdī Khāḥifa, v, 357; Rizzitano, no. 1) which has not been preserved. The same applies to an article by his compatriot al-ʿAsmaʿī (d. 213/828 [q.v.]), bearing the same title and mentioned notably by Ibn Yaʿqūb (*Shiʿa al-Mufaṣṣal*, Leipzig 1882-6, I, 8), Ibn Khayr al-Ishbīlī (*Fahrasa*, 375), Ibn al-Dhawāʾī (*Takwīm al-ḥisn*, 97, 175) and Rizzitano (no. 2) but omitted, perhaps inadvertently, from the lists of works of this prolific philologist Abū ʿUbayd al-Kāsim b. Saʿlām (d. 224/838 [q.v.]) is said to be the author, according to the *LA* (root *ʿA-S-S*), of a *K. maṭṭan fī al-ʿamma* *luḥāt al-ʿArab* (cf. Rizzitano, no. 3). The *K. maṭṭan fī al-ʿamma* of al-Bāḥilī (d. 251/865 [q.v.]) has not yet been recovered (see Ibn al-Nadīm, 83, al-Kisfī, *Iḥṣāʾ*, I, 36; *Bughyā*, 130; Rizzitano, no. 10).

A different title, *Iḥṣāʾ al-manṣūḥ* (ed. Shāḥin and Ḥārūn, Cairo 1949, 1956; cf. *Oriens*, III [1950], 325 ff.; Krochko, 13), was chosen by Ibn al-Sikkī (d. 244/858 [q.v.]) to deal with the same subject. Al-Māzī (d. 249/863 [q.v.]) reverted to the traditional title (Ibn al-Nadīm, 85; al-Anbārī *Nuḥa*, ed. ʿAmīr, 112; *Iḥṣāʾ*, I, 246; *Iḥṣāʾ*, II, 388 = *Udabāʾ*, vii, 122; Ibn Maḥdī, *Taḥḥīṣ*, 265; *Bughyā*, 202-3; Rizzitano, no. 6), but his treatise is lost. The same fate has befallen that of Abū Ḥātim al-Sijistānī (d. 255/869 [q.v.]), also entitled *Mā taḥḥan fī al-ʿamma* (al-Zubaydī, *Lahn al-ʿamma*, introd., Ibn al-Nadīm, 87; *Iḥṣāʾ*, II, 62; Ibn Khayr, *Fahrasa*, 348; *Bughyā*, 265; Brockelmann, S I, 167; Yāqūt, *Iḥṣāʾ*, II, 87 = *Udabāʾ*, xi, 265; Rizzitano, no. 7).

It was no doubt a particular category of the intellectual *ḥikmah* which came under attack from ʿUmar b. Shabbā (d. 262/877 [q.v.]) in his *K. al-Naḥw wa-man kāna yaḥḥan min al-naḥwīyyin* (*Iḥṣāʾ*, vi, 49 = *Udabāʾ*, xvi, 61; *Bughyā*, 361; Rizzitano, no. 7A); to judge by the title adopted, this work must certainly have covered a less extensive span than those mentioned so far, since the author was apparently obliged to draw attention to individual faults committed, in conversations and lectures, by certain grammarians identified by name in order to chastise them for the bad example that they were setting, not with the object of illustrating the evolution of the language and certainly not to justify a certain degree of informality and abandonment of the *ʿarab*, as was done by his contemporary al-Djāhiz. In imitation of the latter, even an individual as conservative as Ibn Kutayba (d. 276/889 [q.v.]) went on record as arguing "in favour of the introduction of the spoken, or more exactly, vulgarising style into the written language, when the context requires that the expression be enlivened or embellished" (G. Lecomte, *Ibn Kutayba*, 435); it is nevertheless true that this author, in the chapter entitled *Taḥwīm al-ḥisn* of his *Adab al-ḥikmah*, also takes his place among the ranks of the defenders of the purity of the *ʿArabīya*. His contemporary Abū Ḥanīfa al-Dīnawarī (d. ca. 281/895, see al-Dīnawarī) follows the now well-established tradition in writing a *K. Lahn al-ʿamma* or *maṭṭan fī al-ʿamma* (Ibn al-Nadīm, 116; *Iḥṣāʾ*, I, 42; *Iḥṣāʾ*, I, 127 = *Udabāʾ*, III, 32; *Bughyā*, 132; Ḥādīdī Khāḥifa, v, 358; Rizzitano, no. 8), as well as, according to al-Suyūṭī, an *Iḥṣāʾ al-manṣūḥ* (which is perhaps none other than the *Lahn al-ʿamma*).

To *Ṭaʿālab* (d. 291/904 [q.v.]) there is attributed a *K. maṭṭan fī al-ʿamma* (*Iḥṣāʾ*, I, 150; Ḥādīdī Khāḥifa, v, 357; Rizzitano, no. 9), but this title must apply, as is suggested by Krochko (op. *lahn*, 12-13, n. 15), to the well-known *Faṣṣḥ* (ed. Muḥammad ʿAbd al-Munʿim Khāḥifa, Cairo 1949), which is

concerned with the genre being studied here; this work, with its object of establishing the norm, has given rise to a series of commentaries and supplements such as the *Faḥṣ al-Faḥṣ al-ḡhulūm* Thā'ib (d. 345/957 [q.v.]), the *Tamīm Faḥṣ al-halīm* of Ibn Faḥṣ (d. 355/1004 [q.v.]) edited by A. J. Arberry, London 1951, the *Ḥayāt Faḥṣ al-halīm* of al-Ḥaznawī (d. 442/1050), the *Sharḥ al-Faḥṣ* of Ibn Ḥishām al-Laḥḥānī (d. 577/1182 [q.v. in Suppl.]), the *Ḥayāt Faḥṣ Thā'ib* of 'Abd al-Laṭīf al-Baḥḡādī (d. 629/1231 [q.v.]) edited with the *Sharḥ al-Faḥṣ* of al-Haravī, etc. (see Brockelmann, S I, 181).

Abu Ḥaydhām (d. after 300/913) is likewise credited with a *K. mā talāḥa fihī 'l-'amma* (Ibn al-Nadīm, 122; *Irghād*, vi, 209 = *Udabā'*, xvii, 21; *Bughya*, 382; *Ḥāḡiḡī Khulāṣa*, v, 357; Rizzitano, no. 3). Ibn Durayd (d. 321/934 [q.v.]) wrote a *Tahwīm al-hisn*, composed in imitation of Ibn Kutayba and left incomplete (*Irghād*, vi, 89 = *Udabā'*, xviii, 136), but his *K. al-Maḥāḡim* (Brockelmann, I, 112, S I, 173; Rizzitano, no. 19) is not to be taken into account in this context, since it deals with words of double meaning and not with errors (cf. Krotkoff, 13, n. 15).

As Krotkoff (14) quite correctly points out, reference to mistakes is made in a vast number of works, so that it is difficult to select those which belong to the category of *laḥn al-'amma* without leaving this specific title or one of the equivalents so far encountered. As far as it is possible to judge, the preceding treatises are concerned essentially with oral usage and its more or less accidental repercussions as they affect the written language, but it is legitimate to include in the present inventory works which draw attention to faults of orthography and errors of transmission or reading which threaten to be repeated on a lasting basis and to damage the integrity of the 'arabyya; after all, authors whose object is undoubtedly to correct what they call the *laḥn al-'amma* do not neglect to devote a chapter to *taḥṣīf* and to *taḥrīf* [q.v.], and it will be noted that even Ibn Maḡkī puts the *adab al-taḥṣīf* at the head of his book. It will therefore be appropriate to mention here *al-Taḥṣīf 'alā ḥudūd al-taḥṣīf* (ed. A. Tālas, Damascus 1958) of Ḥamza al-Iṣfahānī (d. after 350/961 [q.v.]), which deals largely with erroneously transmitted verses (cf. Brockelmann, I, 145, S I, 221; Rizzitano, no. 20) and *al-Tamhīd 'alā ḡhāḡīḡaḡ al-rusūḡ* of Abu 'l-Ḥasim al-Baḡrī (d. 375/985), which deals with errors and inaccuracies of one stratum of the intellectual *ḡhāḡa* (on the mas., see Brockelmann, S I, 176-7). Also belonging to the same category are the *K. al-Taḥṣīḡ al-Taḥṣīf wa 'l-taḥrīf* of al-Dārakutnī (d. 385/995 [q.v.]), mentioned by Krotkoff (14), and the *ḡharḡ mā yaḡaḡ fihī 'l-taḥṣīf wa 'l-taḥrīf* (ed. 'Abd al-'Azīz Aḡmad, Cairo 1963) of Abū Aḡmad al-'Askarī (d. 382/993, see AL-'ASKARĪ), where there are studies of words whose similar *ḡḡḡḡ* leads to errors of reading and pronunciation among the *ḡḡḡḡ* as well as among the *'amma*. Also deserving mention perhaps is the *Iṣṡṡṡ al-ḡḡḡḡ* of al-Zubayḡī (d. 379/989 [q.v.]) which corrects the errors of the *K. al-'Ayn* of al-ḡḡḡḡ (ed. Guidi, in *Mem. Acc. Lincei*, vi [1890], 414-57).

We return to the subject as such with the *K. Laḥn al-'ammam* or *K. mā yaḡaḡ fihī 'ammam* of Andalus of the same Zubayḡī; this work has been analysed by G. Krotkoff (*op. laud.*) before being published successively by R. 'Abd al-Yawwāb (Cairo 1963) and 'Abd al-'Azīz Maṡar (Cairo 1966, with the *Tahwīm al-hisn* of Ibn al-Djawālī and the *Taḡḡīf al-hisn* of Ibn Maḡkī; see below); for the first time, we encoun-

ter an Andalusian author who observes curiously that Abū Ḥatīm al-Saḡḡḡnī (see above) has landed in the Orient faults which are not committed by his compatriots, but he adds that the latter are not immune to inaccuracies; it will be noted that another Andalusian, Ibn Ḥishām, does not hesitate to criticise his predecessor.

Abū Ḥilāl al-'Askarī (d. 395/1005, see AL-'ASKARĪ) is credited, for his part, with a *Laḥn al-'Aḡḡḡḡ* (*Bughya*, 221) which is mentioned several times by Ibn al-Djawālī, but which has not survived. We do however have the *K. Taḡḡīf al-hisn wa-taḡḡīf al-hisn* of Ibn Maḡkī (d. 504/1105 [q.v.]) first analysed by U. Rizzitano (*op. laud.*), then edited by 'Abd al-'Azīz Maṡar (Cairo 1966, see above). This Sicilian author, who was ḡḡḡḡ of Tunis, makes statements analogous to those of al-Zubayḡī with reference to the Orient and the Maghrib, and he takes up arms against the degradation of the 'arabyya which has become so accentuated that people who express themselves correctly are subjected to ridicule; in his opinion, even the few individuals who respect the norm when they read and write cannot resist using the informal language of the common people, that is, dialectal Arabic, in their speech.

The *Durrat al-ḡḡḡḡ fī ḡḡḡḡ al-ḡḡḡḡ* (d. 516/1122 [q.v.]) may be considered the most eminent work of this category (ed. H. Thorbecke, Leipzig 1871 and several oriental editions; numerous commentaries; see Brockelmann, I, 277, S I 488).

Salāma b. ḡḡḡḡ al-Kaḡḡḡḡ (d. 532/1138) is the author of a *K. mā talāḥa fihī 'l-'amma* which is now lost (*Irghād*, iv, 246 = *Udabā'*, xi, 234; *Bughya*, 259, Rizzitano, no. 12). Besides the celebrated *Mu'arrab*, al-Djawālī (d. 539/1144 [q.v.]) wrote a *K. al-Taḡḡīf fī mā yaḡaḡ fihī 'l-'amma* published by H. Derenbourg (in *Festschrift Fleischer*, Leipzig 1875, 107-66, under the title *K. ḡḡḡḡ al-'ammam*), then by 'Azz al-Dīn al-Tamhīdī (in *MMA*, xiv [1936], 163-226, under the title *Tamhīd 'alā mā taḡḡīf fihī 'l-'amma*); this is a supplement to the *Durrat al-ḡḡḡḡ* of al-Haḡḡī (see introd. of Tamhīdī, 167-8) which al-Suyūṡī (*Bughya*, 407, cf. Rizzitano, no. 24) entitles in fact *Tamhīd Durrat al-ḡḡḡḡ*, also citing a *Mā talāḥa fihī 'l-'amma*, which must be the same work. Besides the commentaries and supplements to which reference has been made above, the treatise of al-Haḡḡī gave rise to several refutations, among which that of Ibn al-Khaḡḡḡḡ (d. 567/1172), the *Kadd 'alā Durrat al-ḡḡḡḡ* (*Bughya*, 276-7), is preserved in the *Dās al-Kutub* (*Madḡḡḡ*, 198). Al-Djawālī (*Tahwīm*, ed. Tamhīdī, 167) mentions *al-Laḥn al-ḡḡḡḡ* of Ḥishām b. Aḡmad al-Haḡḡī (d. 577/1182) also noted by al-Suyūṡī (*Bughya*, 406; cf. Rizzitano, no. 13).

Ibn Ḥishām al-Laḡḡḡḡ (d. 577/1182 [q.v. in Suppl.]) revises the *Laḥn al-'ammam* of al-Zubayḡī and the *Taḡḡīf al-hisn* of Ibn Maḡkī in searching out the ancient attestations of terms rejected by these authors and also corrects faults current in Spain in a work in two parts entitled *al-Kadd 'alā 'l-Zubayḡī fī laḥn al-'ammam* and *al-Madḡḡḡ al-hisn*; 'Abd al-'Azīz al-Aḡwānī has extracted from it and published in the *Miḡāḡḡ* *Taka ḡḡḡḡ* (Cairo 1962, 273-94) the chapter on popular proverbs drawn from more or less corrupt classical verses, and he has also devoted to this author two articles inserted in *RIMA*, II/1-2 (1376-7/1957). On the problems posed by the revision of this

treatise and the successive summaries which have been made of it, see below and Ibn Hishām in the Suppl.; in addition, al-Suyūṭī (*Bughya*, 20) cites a *Sharḥ al-Faṣḥ* (of Thaʿlab) by the same author, considered to be of high quality.

Ibn Barrī (d. 582/1187 [q.v.]) takes issue, in his turn, with the *fuṣḥā*, but not without taking precautions since he entitles his article *K. Ghalaṭ al-Aghlāt al-fuṣḥā min al-fuṣḥā* (ed. C. C. Torrey, in *Oriens. Studia* ... Th. Nöldeke, Gießen 1906, 211-22). The *K. Ghalaṭ al-ʿasām* of Ibn al-Djawālī (d. 597/1200 [q.v.]), published by Mataṇ (Takwīm al-lisān; see above), is mentioned under a variety of titles.

Nothing is known of al-Taḥṣīf wa l-taḥrīf (Krotoff, 14) of al-Balāṭī (d. 599/1102 [q.v. in Suppl.]), nor do we have any information on the refutation of Ibn Maḳṭī by Ibn al-Adībīl (7th/13th century [q.v. in Suppl.]), al-Radd ʿalā Taḥṣīf al-lisān, mentioned in the introduction by H. H. ʿAbd al-Wahhāb to his edition of the *Djumāna* and in that by ʿAzat Ḥasan to that of the *al-ʿAsma wa l-ʿaswā* (Damascus 1964, 22) by the Tripolitanian philologist (see also Rizzi, no. 14).

Abū ʿAlī ʿUmar al-Sakūnī al-Iḥbīlī (8th/14th century) is the author of a *Lahn al-ʿasām fi-mā yataʿallaḥ bi ʿilm al-kalām* (*Djumāna*, p. 98, n. 9; Brockelmann, ii, 250; Rizzi, no. 30), but this work deals with Ashʿarism and not with errors of language properly speaking (see J. D. Itham, *The content of the Lahn al-ʿasām of Abū ʿAlī ...*, in *Actes du premier Cong. de Études Arabes et Islamiques*, Madrid 1964, 293-307, it has been published by ʿAbd al-Kādir Zamāna in *Revue des manuscrits arabes*, xviii (1971), 235-76 and by S. Ghāṣ, in *Ḥawṣiyyāt al-Djumāna* al-Tawṣiyya, xii, (1975), 111-255). The father of the editor of the *Rihla* of Ibn Battūṭa, Abū ʿI-Kāsim Ibn Dūzayy (d. 741/1320), left a *K. al-Fawā'id al-ʿamma fi-lisān al-ʿamma* (see *Djumāna*, p. 8, n. 6; al-Maḳṭarī, Naḥḥ al-ib, viii, 29; Rizzi, no. 15). By another Andalusian, Ibn Hānī al-Laḥmī (d. 733/1332), the *Irḥād al-ʿawā'id* wa l-irḥād al-ʿasām is a revision of the work of Ibn Hishām al-Laḥmī (see above).

Saḥī al-Dīn al-Bulḥī (d. 749/1348 [q.v.]) is the author of an article entitled *Aghlāt*, of which one ms. has survived (Derenbourg, *Mss arabes de l'École*, 76, no. 123; cf. Brockelmann, II, 256), but it is unclear whether it fits into the category which concerns us (cf. Rizzi, no. 31).

The *Taḥṣīf al-taḥṣīf wa-l-taḥrīf al-taḥrīf* of al-Safādī (d. 764/1363 [q.v.]) is a criticism and a résumé of nine previous works (of al-Barī, al-Djawālī, Ibn Maḳṭī, al-Zubayḍī, Ibn al-Djawālī, in particular; see Rizzi, no. 32), a ms. of it exists in the *Dār al-Kutub* (37 *luḡa*) and it has been the object of an analysis by ʿAbd al-Kādir al-Maghribī (*K. Taḥṣīf al-taḥṣīf* li ʿI-Safādī al-Safādī, in *MMA*, xxv (1950), 471-7; see also al-Ahwānī, in *RIM*, 4, 1957/8, 133, n. 1).

Ibn Khayyāma (d. 770/1369 [q.v.]) restricts himself to a summary, in the *Irḥād al-ʿawā'id* fi irḥād al-ʿawā'id of the work done by Ibn Hānī al-Laḥmī on the *Takwīm al-lisān* of Ibn Hishām al-Laḥmī, and his abridgment has been further edited, anonymously, into the form of a brief article published by G. S. Cohn (in *Hesperis*, xi [1931], 1-23). Another unknown western scholar of the 9th-10th/15th-16th century has left a treatise with the revealing title *al-Djumāna fi idlāl al-naṣa* which has been edited by H. H. ʿAbd al-Wahhāb (*PIFAO*, Cairo, ix, 1953).

The prolific Suyūṭī (d. 911/1505 [q.v.]) was not a

man likely to omit a contribution to the genre, and there remains in Istanbul (see Rizzi, no. 34) a ms. of his *Ghalaṭ al-ʿasām*. The same title was given to the Turkish translation (*Terdüme-i Ghalaṭ al-ʿasām*) of al-Tanbīh ʿalā ghalaṭ al-ʿasām (or al-dijāl) wa l-naḥla by Ibn Kamāl Paṣḥa (d. 940/1533, see KEMAL PAṢḤA-ZADE), which concerned Arabic words distorted or badly pronounced mainly by the Turks (see also GHALATAT-I MEGHNOHA); the Arabic text of the *Tanbīh* has been published by R. ʿA. al-ʿUbayḍī, in *al-Mawrid*, 12/4 (1401/1981), 557-98.

Radī al-Dīn al-Haṭṭābī (d. 972/1563) seems to a certain extent to take the opposite view from that of previous authors in his *ʿIḥd al-ghalaṭ fi naḥl al-ʿasām al-ghawṣi* of which one manuscript exists in Istanbul (Rizzi, no. 3) and his *Baḥṣ al-ʿasām fi-mā aḥḍa fih ʿI-ʿasām* (ed. Taḥṣīlī, in *MMA*, xv, 85-139, 165-215). Khawar-zāde (d. 995/1590) summarises al-Farrāʾī, al-Aḡmaʾī, Abū ʿUbayḍa, al-Sagḥānī, Ibn al-Sikdī, Ibn Kutayba, Thaʿlab, al-ʿAskarī, etc., in his *Ghalaṭ al-ʿasām* (ms. in Istanbul; see Rizzi, no. 38) and corrects some linguistic errors in his *Tanbīh al-ʿasām fi taḥṣīl al-kalām* (ms. in Berlin; see Brockelmann, II, 423; Rizzi, no. 39).

Whereas al-Djawālī confines himself, in his *Mawrid*, to considering words borrowed from Arabic, al-Khafaḍī (d. 1060/1659 [q.v.]) gives, in his *Shifāʾ al-ghalaṭ fi-mā fi ḥalām al-ʿArab min al-dakḥ*, numerous examples of commonly-committed errors.

Rizzi further mentions (nos. 43-5) some anonymous *Saḥāḥ al-ʿasām*, equally anonymous *Aghlāt al-ʿasām* wa l-ghawṣi (ms. in Istanbul) and al-Tanbīh ʿalā ʿI-lisān al-dijāl wa l-taḥṣīf by Abū ʿI-Ḥasan al-Rizī (various mss.; on the difference between *lahn* *dijāl* and *lahn* *ghaṭ*, see al-Tahānawī, *Kaḥṣif* *ijlālāt al-funūn*, iv, 1308).

The attitude of the authors cited above is by no means homogeneous. Some of them show an excessive purism and lay down the law without reservation, whereas others take a more liberal line, accept variations and are content to define the form which they consider the most correct in terms of the *faṣḥa*, the latter applies, in particular, to the work of Thaʿlab, in his *Faṣḥ*. The study of those treatises that have survived enables us to make a few general remarks.

In the first place, as has been stressed above, the philologists are not concerned with purely dialectal usage, which they regard as an adaptation of the *ʿarabiyya*, of the perfect form of Arabic, and not at all as a survival and evolution of ancient speech-patterns influenced by the mixture of ethnic elements as well as by the language formerly spoken in that territory and the language of neighbouring areas. It is therefore quite interesting to see for example an Ibn Hishām going in search, to justify usages considered erroneous, of attestations of terms rejected by his predecessors with regard to the criterion of the *faṣḥa*, but alive and well in the ancient Arabic dialects. The faults to which attention is drawn in the works in question do not however apply exclusively to elements of vocabulary, and usages which transgress the norm can be classified in five main categories: 1. The most common applies to phonetics (incorrect vocalisation; lengthening of a vowel; alteration of a consonant by lengthening, emphasis, disemphasis, sonorisation, deadening, etc.; metathesis; reduction of a diphthong, etc.); 2. Morphology gives rise to remarks on, for example,

tion as a high-falling tone, but normally without the low-rising tone of P., and morphologically by the use of extension in -e to mark the singular oblique or unextended masculine nouns. Immediately to the east of this "northern L." group (of which the Hindkō of Peshāwar may be regarded as a member having many innovating features) is found Pōthohārī, the speech of the Rāwalpōddī area, which appears to be an intermediate dialect between it and P. Finally, to the south of this, in the Shāhpūr area, a complex group, containing features of P., northern L., and Sūr, is encountered. This is clearly a linguistic frontier area, and it is unfortunate that Emerson should have chosen it as his standard for the description of L. The number of all speakers of varieties of L. other than Sūr is impossible to estimate accurately, but may amount to about 7 million.

a. Muslim literature. While the L.-speaking region was one of the first in the sub-continent to fall under Muslim political dominance, and the area has long had a large majority of Muslims in its population (now almost total, since 1947), the predominant literary language was naturally always Persian until its replacement by Urdu in the last century. Sir, has, however, also been cultivated for some types of writing, leading to the creation of an interesting local literature.

The earliest record of Muslim poetry in the Panjāb is in the *ghazal* and *ghazal* attributed to Farīd in the *Sikh Aḍī Granth* (1604). While their traditional ascription to Farīd al-Dīn Gāndī-i Shāker (572-664/1175-1265 [g.v.]) is exceedingly doubtful, their language does suggest that a composite idiom, based on the Sir, of Multān, long important as the seat of influential Sūfi dynasties, and the P. of the political capital of Lahore, was already well established as a local Muslim literary language by the 16th century. This is confirmed by the more reliably transmitted works of such slightly later writers as Mawlawī 'Abd Allāh "'Abdī" (d. 1073/1664), author of many versified treatises on Islamic law and dogma.

Only in the 18th century, with the collapse of centralised Mughal authority, does a linguistically distinctive tradition of Sir, as opposed to P., Muslim literature properly emerge. This literature is nearly all in verse, and most of its genres and themes are naturally very similar to the contemporary local literatures being cultivated both in P. and in Sindhi. The largest single category of writing was probably the versified teaching material produced in the form of short treatises on the tenets of Islam, or rhyming Persian-Sir vocabularies, of little intrinsic literary interest. Adaptations of popular Persian *maḥnawī*-themes were also made, the best-known of these poems (locally termed *hijaz*) being the *Sayf al-Mulūk* by Laṭī 'Alī of Bahāwalpūr (1219/1804) and the *Yusuf Zuleykā* by 'Abd al-Hakīm of Uch (1218/1803). Local legends were also treated in this form, the best early example being from Sind, in the *Sassi Pannoon* by Nābi Balūsh Laghārī (1254/1838).

The chief glory of the literature is, however, its Sūfi lyrical poetry, whether in the form of the short *ghazal*, cultivated by 'Alī Haydar of Multān (d. 1202/1783), or the longer *hazf*, a sung lyric with a refrain repeated after each verse, first brought to perfection by Saḥabī Surmest (1132-1224/1739-1827) of Khayrpūr in Upper Sind, who wrote with equal fluency and immediacy in Sindhi also. The finest example of the Sir. *hazf* are to be found in the *diwān* of Khwāja Ghulām Farīd (1845-1901), the head of an important Sūfi dynasty, who lived at Chāḥrān in Bahāwalpūr State. With their subtle blend of a

sensitive handling of local desert scenery, and the most profound Islamic learning, these poems mark both the end and the culmination of Muslim writing in the local languages of the Indus valley.

Mention should be made of the Shīfī elegies (*marthiyā* [g.v.]) produced in great numbers from Multān since the mid-19th century. These represent interesting local adaptations of the vast store of Shīfī legendary material found in the popular Persian sources, and are notable stylistically as being typically written in alternating sections of verse and prose (*sharīf*), thus directly reflecting the usual style of performance of the professional *shākir* at the local *maḥāzīr-i naḥān*.

Traditional genres continue to be cultivated, while in recent years a modern prose literature has begun to be created. The problem of a uniform adaptation of the Perso-Urdu *marthiyā* script (see *MAṬṬ*, 4. India) to record the many additional phonemes of Sir, has yet to be fully resolved. In Sind, no longer important as a centre for the production of original Sir literature, older Sir texts are published in the Sindhi *naḥāzī* script, with its many additional letters.

There is a much smaller Muslim literature in the northern L. Hindkō. Writings produced in the areas of Pōthohārī and Shāhpūr are hardly to be distinguished from the main stream of Muslim Panjābī literature [g.v.].

Bibliography. 1. Language. G. A. Grierson, ed., *Linguistic survey of India*, viii, part I, *Sindhi and Lahndā*, Calcutta 1919, has a full bibliography of the earlier sources. H. Bahri, *Lahndā phonology*, Allahabad 1962, and *Lahndā phonetics*, Allahabad 1963, are excellent studies of *Awāḥkārī* and valuable correctives to Grierson; his criticisms are partially assimilated in the composite study of Yu. A. Smirnov, *Yazik Lendī*, Moscow 1970 (tr. as *The Lahndā language*, Moscow 1975); C. Shackleton, *The Siraiki language of central Pakistan*, London 1976, is a reference grammar of the modern language with a full bibliography of later sources; Idem, *Problems of classification in Pakistan Panjab*, in *Trans. of the Philological Soc.* (1979) examines the internal divisions of L. more widely.

2. Literature. The best surveys of the literature (in Urdu) are Kayfī Dīlshāz, *Sindhi ghā'irī*, Multān 1969; Farīgh Bughārī, *Hindkō adab*, and Hussain al-Haydarī, *Siraiki adab*, in *Tārīkh-i adabiyāt-i musallimān-i Pākistān 3-Hind*, ed. Fayyāz Maḥmūd, xiv, part II, Lahore 1971, 210-36, 237-343, there is a general survey of Sir literature in C. Shackleton, *Sindhi and Sindhi literature, c. 1750-1900*, in *Upper Sind and South-West Panjab*, University of London Ph. D. thesis 1972 (unpublished), while detailed aspects are considered in Idem, *The south-western style in the Gurm Granth Sahib*, in *Journal of Sikh Studies*, vi (1978), 69-87. *Styles and themes in the Siraiki mystical poetry of Sind*, Multān 1976; *The Pilgrimage and the extension of sacred geography in the poetry of Khwāja Ghulām Farīd*, in Attar Singh, ed., *Socio-cultural impact of Islam on India*, Chandigarh 1976, 159-70; *The Multani marthiyā*, in *Isl.*, iv (1978), 100-38; and [Muḥammad Dīnālī Multānī], *Nūr-e-ajamāl*, ed. Mahār Abdul Haq, tr. C. Shackleton, Multān 1977. (C. SHACKLETON)

LAHORE [see LAHAWR].

LAHŪT and NĀSŪT (A.), two terms meaning divinity (or deity) and humanity, and forming a pair which plays an important role in the theology of certain Muslim mystics and in the theosophical conceptions of the extremist Imāmate.

1. **Philological considerations.** The termination *-ūt* of these two words may be traced to an Aramaic origin. It is also present in the words *malakūt* (which is Kuz'anic, XXXVI, 83), and *ḡabarūt* which appears in the *ḡadīth*. "Glory to the One to whom belongs Ruling Power (*ḡabarūt*) and Kingship (*malakūt*).¹ So *malakūt* was already Arabised in the time of the Prophet. It is a direct borrowing from Syriac (*malakūt*), or Ethiopic (*malakūt*), where this word means divinity, the Semitic root *ʾl* (God) being lost and replaced by the composite noun *ʾl-rnʾ abēhʾr*? Is it a difficult question to settle. Muḥammad's known relations with Abyssinia would lead one to suppose a Ge'ez influence. Whatever may be the case, Ibn Manẓūr, in *L.A.*, states, without posing the problem, that "*al-malakūt* comes from *malik* (kingdom), just as *raḥabūt* (terrifying nature) comes from *raḥba* (terror)."² As for *ḡabarūt*, he says that it is the *faʿālūt* form of *ḡabar*. Consequently, he seems to give these words in *-ūt* a right to be cited as Arabic. He is more precise with regard to *lāhūt*: "Sibawayh thinks that *lāh* is the original form (*asl*) of the name of God (*Al-lāh*)", and he cites a verse of al-Aʿghā in which *lāh* is understood in the sense of *ilāh* ("god"). Then he adds: "As for *lāhūt*, if it is correct that it is a word drawn from the language of the Arabs, it is derived from *lāha*: *lāha al-lāh al-lāhūt*, *yalāhūthum* = *ḡalāḥ-āsum* "He created them". The form of this word (*maḥ*) is *faʿālūt* like *raḡhabūt* (e.g. *raḡhabūt* = a man of desires, naturally carried away by desire) and *raḡhamūt* ("compassionate nature").³ Thus there are several examples in Arabic of words in *-ūt*. The question as to whether they are, as such, of Arabic origin, remains unsettled by the lexicographers. In any case, a Syriac text of Aphraates (4th century) has *ḡem al-lāhūt*, followed by *ḡem malakūt*, the noun of the Divinity and the noun of the Kingship, and further on *raḡhamūt* (*Patrologia Syriaca*, I, 794). *Al-lāhūt* may be the equivalent of *lāhūt*, although Syriac preserved the *alif* which is in the name of God, *aloh* = *lāh*, and which forms part of the root (cf. the discussions of the grammarians on the formation of the name *Al-lāh*). Finally, one should note that in Syriac, *al-lāhūt* designates the essence or nature of God (*kyriōn*).

On the origin of *nāsūt*, by contrast, there is no information available. Al-Tahāwī in his *Dictionary of technical terms* has not devoted any article to it. Ibn Manẓūr does not cite this word under the root *nās* or under the root *ʾns* from which come *ins* and its pl. *anās*, as well as *insān*. Here, it is well-established, according to Abu 'l-Havḡam, that the *alif* is radical (*asliyya*), this grammarian is also ingenious in showing how *nās* ("man") could have come from *anās*, by adding the article *al*: *al-anās* > *anās* > *anās* (*al-nās*), and, after the dropping of the article, *nās*. This laborious explanation shows that if the form *nās* raises difficulties, a *fortiori* the form *nāsūt*. But Syriac has a word (ܢܫܘܬ) (*nōshūt*) with an occulting stroke (*māʾadnō*) under the *alif*, indicating that his letter must not be pronounced. There is the form *nōshūt* without *alif*, which means "man". This can be compared, in Sermon xv of the *Liber graduum* (P.S., III, 379), with *per humilitatem hypostasos eius humanae* (*la-būmah d-bar nōshūt* "from the hypostasis of the son of man"). So the Syriac origin of the word *nāsūt* does not seem to be in doubt; it designates human nature. Doubtless it was also chosen because of its assonance with *lāhūt*.

2. **Lāhūt and nāsūt in Christian literature.**

Al-Bakillānī in the *Tawḥīd* (Cairo 1366/1947) speaks of the Christians who claim that the union of the Word with the *nāsūt* is a mixture and mingling (*al-lāhūt wa-miḡāḡūt*) like that of water with wine (the Jacobites) or with milk (the Nestorians). Some claim that the significance of the union of the Word with humanity (*nāsūt*) which is the body, consists in its taking it as a temple (*haykal*) and dwelling place (*mahall*) (86). Further on, al-Bakillānī reports that for the Christians, the name Messiah has two meanings; *lāhūt*, God (*lāh*) and *nāsūt*, created man (*insān maḡhūḡ*); the prayers of Christ come from the man, his miracles come from God and not from the man. But, demands the Muslim theologian, could the same not be said of Moses? The production of his miracles comes from the divinity, to the exclusion of his humanity (*min al-lāhūt, dūn al-nāsūt*) (95). For his part, al-Djauwānī, in his *Kiṭāb al-Shāhid fī ḡayb al-dīn* (ed. al-Naḡār, Alexandria 1965, 582), writes with regard to the Christian doctrines concerning the union (*al-lāhūt*), that the Christians mean by it the manifestation of divinity in humanity (*ḡayb al-lāhūt fī al-nāsūt*). But in the way in which they conceive of this manifestation, they are divided into three groups. Some say that an object placed in front of a polished body appears there and can be seen without being transferred there and without dwelling there (*wa-lam yakhūḡ*); it is in this sense that divinity appears in humanity, thus without *ḡaybūt*. Others take the example of the impression of a seal in wax; it is the seal itself which appears there, although there is no part of it which comes to dwell there. The last group say that the manifestation of divinity in Christ means the same thing as, for Muslims, God's sitting on the throne, all of them agreeing that contact is impossible. Furthermore, they express union with the image of an act of clothing oneself (*ṭadarru*), as if they believe that it is possible and true that the divinity had taken the body of Christ as clothing (*ḡur*). Reference may be made to what H. Corbin wrote (*En Islam iranien*, III, 285, n. 102), on al-Semṇānī (d. 726/1336). So it may be reasonable to suppose that the terms *lāhūt* and *nāsūt* were borrowed from the Christians who wrote in Arabic using Syriac sources and originals, particularly the Nestorians who had had, as we learn from al-Tawḥīd, numerous relations with Muslim thinkers, especially in Baghdad. It is conceivable that the problem of the union of the divinity and humanity in Christ had been able to interest the mystics of Islam, who were faced with an analogous problem, *maḡāḡat maḡāḡas*. On this subject, the ideas of assuming a garment, indwelling and temple are present in the writings of St. John and St. Paul, and these images were applied not only to Christ, but also to the saints in whom God, Christ and the Spirit are said to reside. An echo is to be found in Syriac literature. Thus one can read in the *Liber graduum* (Sermon III, P.S., III, 71): "And Christ dwells in them" (*u-ḡmer b-ḡān Maḡhūḡ*); they are "filled with God" (*metamelen men Al-lāh*). One should note the translation of the passage of St. Paul: "You are the temple of God" (I Cor., III, 16): *Haykalak a(n)ḡān d-Al-lāh*. The Arabic language has the word *haykal* whose significance, according to the lexicographers, is that of an adjective which has the meaning of "corpulent", "large", "long or high". This qualification is applied to animals and plants, especially the horse when it is "high on its hooves" (*ḡawḡ*). A building is called *haykal*, when it is raised like a horse on its hooves (L.A.); Ibn Manẓūr (ibid.) informs us that the *haykal*

"is stated as being, among the Christians, a temple (*bayt*) in which there is an idol in the likeness of Mary (*fihi sanam 'alid al-hakkar Maryam*) or even: "in which there is the effigy of Jesus and Mary". He adds that this name is sometimes given to Christian convents. Only lastly does he mention the meaning of an idol temple. So it seems indisputable that the use of the term *baykal* to designate the place where the *lāhūt*, i.e. the *nāsūt*, resides is of Christian origin. As for the image of clothing, in Christian literature, it has the two senses: the divine nature wears (*lāhūt*) the form (*ḥayāt*) of the earthly man and we wear (*nasūt*) the form of the celestial man (Aphraates, *Demonstration* vi, 28, P.S., i). As for the Word, it wore (*lāhūt*) a body of dust, and it drew it to its own [divine] natura (*la-ḥayyitak*) (*Dēm.* xxiii, 49, P.S. ii). But what is involved here is the Melkite doctrine of God made body (in Arabic: *illāh musajjasad*), meaning by body human nature, or even *illāh al-musajjanis* (cf. St. Athanasius, *P.G.* 26, col. 804, where the incarnation *σάρκωσις*, is identified with "humanisation" *ἐνσωματώσις*). According to the Nestorians, the divine nature of the Word wears an integral human nature and subsists as such in the union, this union being that of two concurrent wills (*sympetia*) in a *prosōpon* of union. In the *Book of Hieracides of Damascus* (French tr. P. Nau), Nestorius explains his conception clearly (136, 212-13), and he expands in several ways on the image of the clothing which has its own nature, but which nevertheless is always and everywhere present with that which bears it, for example "on account of the One which is worn, I adore the clothing" (*ibid.*, 159). The image of the temple is also developed: "The temple is passive (*παθητός ὁ ναός*), but not God who gives it life" (*ibid.*, 207). In the same sense, Ibn al-Djāwzi writes in *Talbis Iblis*: "the Christians maintain that Christ is two substances, the one eternal, the other created; that he had need of nourishment; that he was crucified; and that this was on account of his humanity" (*fi ḥikm al-ḥayāt bi-l-nāsūt*). But, as a good Muslim, Ibn al-Djāwzi asks "why did not the divine element in him (*lāhūt*) cast that from the *nāsūt*?"

The word *lāhūt* is used by Arabic-speaking Christians. Thus in the *History of the Twelve Patriarchs of the Church at Alexandria*, Severus, bishop of al-Ashmūnāyā (towards the end of the 10th century), citing a letter from St. Cyril to Nestorius (*Patrologie orientale*, i, 434), reports that Christ "died on the cross in his body, while he is living by the force of his divinity" (*ḥayy bi-ḥaywat lāhūtīh*). He confesses the Trinity by saying that there are three persons (*akānīm*), one unique nature (*ḥabī'a nāḥida*) and one unique divinity (*lāhūt wāḥid*).

3. The pair *lāhūt-nāsūt* in the thought of al-Hallāj. The preceding discussion may clarify many difficult aspects of Hallājīan invocations. According to L. Massignon (*Passion*, iii, 57), al-Hallāj borrowed from the lexicon of the extremist Ismā'īlī theologians the words *lāhūt* and *nāsūt*, "however, profoundly modifying their significance". In a note he states that it is unlikely that he had made this borrowing from the Christians, as was formerly believed: "for him, as for the *ḡhulāt*, *nāsūt*, *nūr ḡhā'ī* (resplendent light) and *awr* ('command') are synonyms, which is in no way Christian". But the argument does not stand up, for the question is that of the origin of the words and not of the origin of their significance; if, even by the confession of Massignon, al-Hallāj modified the significance of expressions which he took from

the Ismā'īlīs, why would he not have accommodated to his own thought some terms which he had taken from the Christians? 'Affī, in his book *al-Tasawwuf: al-ḥawā al-rakīyya fi 'l-ḥisām* (Alexandria 1963, 82-3), followed by Kāmil Mustafā al-Shībī in his *Sharḥ Dīwān al-Hallāj*, has upheld the thesis of the Christian origin. But which Christians are concerned? If it is the Nestorians, it seems that, even going beyond words, similarities in ideas may be detected, allowing for the fact that in al-Hallāj there is no Christian christology. In fact, the Hallājīan *nāsūt* could be considered the equivalent of the *prosōpon* of union in which the will of God and the will of man are united, which justifies L. Massignon's important remark (*ibid.*, iii, 52): "The only aspect through which divine action takes part in transforming man is not *lāhūt*, the creative omnipotence . . . but this essential, intelligible word which is at the basis of every command of the Divine . . .". *Nāsūt*, like *awr*, is actually the place where the wills of the One who commands and the one who obeys are united. As in Nestorianism, there is never any confusion between the divine essence, *lāhūt*, or as L. Gardet says (*Dieu et la destinée de l'homme*, 492), "the sealed word of the divine essence" and the human substance. To mark this irreducible distinction of the two natures, al-Hallāj uses the terms *lāhūtīyya* and *nāsūtīyya*. "My observance of what is properly Yours differs from Your observance of what is properly mine, in fact, Your observance of what is properly mine is divinity (*lāhūtīyya*) and my observance of what is properly Yours is humanity (*nāsūtīyya*), and even while my humanity (*nāsūtīyya*) is lost in Your divinity (*fi lāhūtīyyatī*) without being confused with it, at the same time Your divinity takes possession of my humanity without having any contact with it" (*Akhbār al-Hallāj*, no. 1, Arabic text, 8). "He who supposes that *lāhūtīyya* mingles with humanity (*ḡhā'īyya*), or that *ḡhā'īyya* mingles with divinity (*lāhūtīyya*) is an infidel" (*ibid.*, no. 25). The synonymous *lāhūtīyya-lāhūtīyya* and *ḡhā'īyya-nāsūtīyya* allow us an accurate understanding of the meaning of the two terms constructed from *lāhūt* and *nāsūt*. Let us note that Ibn al-Fāriḍ (*Tāḥīyya*, 455) uses *lāhūt* in the sense of *lāhūtīyya* and *nāsūt* in the sense of *nāsūtīyya*: "I am not diverted by *lāhūt* from the condition of the place of my appearance, and I do not forget, through *nāsūt*, the place of my wisdom's appearance." If, as for the Nestorians, there is no mingling of the two natures, by contrast, when al-Hallāj uses the image of clothing, it is to say "my temporality is beneath the clothing of Your eternity" (*ḥadāḡi laḥt mulāḡi ḡhāmīka*) (*Akhbār*, no. 2). "O All of my all . . . The all of Your All is a clothing worn by my inner significance" (*Dīwān*, 7, v. 5 *ma ḥuln ḡhāmīka maḡḡ bi-ma'ndī*). The act of wearing this All (*laḡ*), that Massignon explains by "the deformity of the sanctified man" (*Passion*, iii, 350, n. 7), results in the all of the man containing the all of God with which he is clothed. "I contain in my all the All of Your All, O You, my sanctity. You are revealed to me to the point where it is as though You were within me" (*Dīwān*, 44, v. 2). Indeed, in the order of the stations of mystical ascension, *laḡ* comes immediately after *ḡhā'ī*. Finally, there is also to be found in al-Hallāj the image of the *baykal* which is the corporeal form: "The *baykal* remains on earth, putrefied" (*Dīwān*, 63, v. 2). So it is not simply a question of the divine dwelling within him; he must also be transfigured. Al-Hallāj asked for "the destruction of the Ka'ba,

then its rebuilding with wisdom." The Ka'ba to be destroyed is the "temple of the human body", the *haykal* "whose transfiguration is to be hastened" (Passon, I, 689). As for myself, He does not veil Himself from me for a single moment, until my *nāsūt* is lost in His *lāhūt* and my body disappears in the lights of His essence" (*Āḥḥār*, 10; cf. Passon, III, 52-3). *Nāsūt* must then, in so far as it is purely human, be assumed by the *lāhūt*, the aspect of God in which union is realised. "Glory be to Him whose *nāsūt* manifested the secret of His dazzling *lāhūt*'s sublimity, in the form of a man who eats and drinks" (*Diyān*, 9, v 2).

The origin of the idea of *nāsūt* conceived by al-Hallāj must be looked for in the word that, in eternity before all creation, God addresses to man, the Word which is contained in the uncreated Kur'ān. To this idea of a pre-eternal conversation between God and man is linked all the Hallājīan dialectic of Me, You and Him, which underlies the relations between *lāhūt* and *nāsūt*, *lāhūt* and *nāsūt* as in the following example, "The Yourself which is a Him has borne witness to Me" (*ānā wa-illā shahīdāsh* 'I-him') i.e. that the dialogue between the divine You and the human me, on the level of the *nāsūt*, manifests the essence of God (*lāhūt*) in his ipseity (*ānūt*).

4. The pair *lāhūt-nāsūt* in the thought of Ibn 'Arabi. For Ibn 'Arabi, the *lāhūt* is the divine aspect in the prophet and saint, as supposed to the *nāsūt* which is the human aspect. In a poem concerning knowledge of Jesus (*Fuṣūṣ*, ed. 'Uḡmān Yabyā, II, 41, 68-9), one can read: "His *lāhūt*, which was in the world of the Invisible, was his union (with God: *ghar*), was a spirit in whose image (*raḥ* *mumaththal*) God made the secret appear." The term *ghar* (relationship through women) indicates, according to 'Uḡmān Yabyā, that no natural parenthood is concerned, but the result of a divine choice. The spirit is a lifegiver; it is through it that Jesus brought the dead to life. Also, generally speaking, the *lāhūt* is the life infused in things, and the recipient that the spirit brings to life is called *nāsūt* (*Fuṣūṣ al-bihān*, ch. x, where it is Christ; tr. Burckhardt, 110). The same definition is to be found in 'Abd al-Razzāk al-Kāshī (or al-Kāshānī [g.u.]): "The *lāhūt* among the Sūfis is life which flows into things, and *nāsūt* is its place (*mawḍi'*): it is the spirit" (cited by al-Tahānawī, art. *Lāhūt*). Ibn 'Arabi does not make systematic use of these two terms. There are equivalents in his theory of the relation between the two domains of the Kingdom (*Mulk*) and the Kingship (*Malakūt*), in that of the Light of Muhammad (*Nūr Muḥammad*) and the Muhammadan Tree, which is "the totalling, universal human Tree" (R. Deladrière, *Ibn 'Arabi: la profession de foi*, 62). The *Tadhkirat al-ḥawāṣṣ* (*ibid.*, 62, 123) also says: "The letters of the Muhammadan Tree are the human nature of its intelligible truth and the veils of its significance..."

5. The pair *lāhūt-nāsūt* in Shī'ī thought. According to the Imāmī conception, different planes of the universe exist (cf. H. Corbin, *En Islam iranien*, I, 35): *lāhūt*, *ghabarūt*, *malakūt*, *nāsūt*, [see 'ALAM]. *Lāhūt* is the world of secrets (*alam al-asrār*) and the Unrevealed (*ibid.*, 203). The mystical relations between *lāhūt* and *nāsūt* express the different aspects of the theophanic conception of the Imām. Al-Tahānawī, who discusses *lāhūt* in his article *ghabarūt*, refers essentially to Persian texts. It is thus finally in Iranian thought that the two terms *lāhūt* and *nāsūt* received the widest reception,

following what al-Hallāj and Ibn 'Arabi had written on this subject. If comparisons can be made with the Christological doctrines of Christianity, particularly with regard to the image of clothing (cf. H. Corbin, *op. loc. cit.*, III, 174-5), it must be stated that these two terms were henceforth perfectly integrated in Shī'ī terminology.

We shall mention in conclusion a curious etymology given by al-Tahānawī: *lāhūt* originally derives from the formula: *lā ānwa illā ānwa*: it is the custom of the Arabs when they use a complex formula in speaking to add something to it (*lāsi ziyāda ānwa*, i.e. the final letter *ā*), and to cut something off it (*haḍf ānwa*: here *illā ānwa*). The result is that *lāhūt* is the radiance of the essence (*ladghān* 'lāhūt').

Bibliography: given in the article.

[R. ARNALDEZ]

LĀHŪTĪ, *Asr 'L-Kāsim*, Persian poet and revolutionary, was born in Kirmānshāh on 4 December 1887, the son of a petty shoemaker. As a youth he joined the struggle for constitutionalism in Persia, and in 1908 took part in the fight against the royalist troops in Rasht, following Muḥammad 'Alī Shāh's attempt to reimpose autocracy. After the restoration of the Constitution in 1909 he entered the gendarmerie and was eventually promoted to the rank of major. There, charged with subversion, he was condemned to death, but he managed to escape taking refuge in the Turkish (now in 'Irāk) border town of Sulaymāniyya. In 1915 he returned to his home town, and was drawn in the movement against Allied intervention in Persia. Around this time he also started the periodical *Shams* from Kirmānshāh, and founded a workers' party. In the period that followed, he again came into conflict with the authorities and migrated to Istanbul. While he was there he taught in a Persian school and issued the Persian-French periodical *Pārs*. Towards the end of 1921 he was allowed to return to Persia and was reinstated in the gendarmerie. Not long afterwards he headed an abortive revolt in Tabriz and, after its failure, fled to the Soviet Union (February 1922).

In the Soviet Union, Lāhūtī's activities were connected mainly with the political and cultural life of Tadjikistan, where he took up residence after 1925. He served as deputy commissar of education, and was honorary president of the Tadjik Writers' Union. The Soviet government awarded him several honours including the Order of Lenin. He died in Moscow on 16 March 1947.

Lāhūtī was the most outstanding Communist poet in Persia, and has been rightly acclaimed as one of the founders of Soviet Tadjik poetry. His early political verse appeared in the periodicals of the Constitutional Period, such as *ḡhāb al-mafin*, *Irām-i naw* and *Shark*. In his poems written before 1922 he often displayed sentiments favouring workers and peasants. Thereafter, his permanent domicile in the Soviet Union strengthened his trend towards Communism, and his art became progressively identified with the literary and political assumptions of the Soviet government. The poem *Kreml* ("Kremlin"), composed in 1923, was the first notable indication of this development. It recalled Tsarist atrocities and condemned imperialism and capitalist exploitation, welcoming the triumph of the Communist Revolution in Russia. Lāhūtī's subsequent poems concerned themselves largely with his immediate environment, but themes dealing with Persia were not lacking. The poet employed both conventional and new forms,

and used non-traditional metres, which were apparently inspired by Russian literary models. He also composed songs, and wrote the libretto of *Kāwa-i āhangar* ("Kāwa the Blacksmith"), which was the first original opera to be performed in Tadjikistan. His literary endeavours extended to the field of translations, which he rendered from the works of such writers as Shakespeare, Pushkin, Gorky and Mayakovsky. His diction was simple and uncomplicated, and he used a language which almost verged on ordinary speech.

LA'IB (Lā'in, La'a), the Arabic word for "play" (also used variously in Persian, against Turkish *oyun*), in the Muslim world as fundamental a concept of vast sociological and psychological implications as in other civilisations. Only a few of its aspects can be briefly discussed here. The "play" character of many important human activities (dance, theatre, music, etc.) does not come under our purview, nor do ritual games as survivals of pre-Islamic religiously-motivated customs. We find them occasionally mentioned, as, for instance, in references to New Year practices, cf. al-Bīrūnī, *Āḡhar*, ed. Sachau, 216, who also mentions the enactment of a Persian religious ceremonial played on reesaws; for a modern example from southern Morocco, see M. R. Rabatē, *la Objets et Mondes*, x (1970), 239-62. The stress here is on children's games, too, in Islam as elsewhere, no clear dividing line separates the games of children from those of adults; there is no typological distinction, the only difference sometimes encountered being certain material factors. Al-Jibālī, *Ḥayawān*, Cairo 1325, iii, 79, may have been aware of this circumstance when he singled out playing with pigeons as best representing the easy potential transition in games from playfulness to seriousness. The various expressions of the human play instinct and the various types of games were all cultivated in the Muslim world. The constant use in literature of metaphors built upon combinations with the root "to play" attest to the concept's living strength.

The large role of "play" in Muslim life is all the more remarkable as it ran counter to firm religious objections. These objections have indeed greatly coloured the expressed Muslim attitude toward play. They were no doubt effective in curtailing the factual information on games available to us. The Qur'ān refers to play (and *lahw* "amusement") as a particularly insidious expression of human unconcern

with man's true task in this world, which is working toward salvation in the other world. Much indignity was spent by Muslim intellectuals on condemning it, as attested in innumerable statements such as, for instance, many verses in the *suhūfiyyāt* of Abu 'l-ʿAlīyah or 'Alī's indignant rejection of being called a *ḥilwāṭa timāḥa* (al-Balaghīyūn, *ʿAḥād*, i, ed. M. B. al-Mahmūdī, Beirut 1394/1974, 151). Not dissimilar to the thought expressed by Anaxagoras (Aristotle, *Nicomachean Ethics*, 1176 b 33), that playing should be tolerated only when it enhances a man's ability for serious occupations, is the idea that all work and no play dulls the sensitivity of even the greatest and most dedicated minds, and light relaxation, therefore, is to be tolerated (e.g. F. Rosenthal, *Humor in early Islam*, Leiden 1956, 5, and see AL-ḤIDM WA 'L-ḤAZL), but the authors who quote statements to this effect would hardly have gone so far as to include simple games in what they meant by relaxation. Worldly wisdom required that rulers be warned against excess in playful activity. As a matter of fact, "play" in Islam came to be considered the exclusive prerogative of children, bracketed at times with women also in this respect. In the Greek tradition as represented by Bryson (ed. M. Plessner, Heidelberg 1928, 202; cf. also al-Ḥanāzī, *Ḥayāt*, *riyāḡat al-naḡs*, Cairo 1352/1934, iv, 63) and used by such influential thinkers as Naḡawayh, even children should be permitted moderate playing as relaxation only to be better able to tolerate the hardships of education, or (according to al-Saʿīda wa 'l-ʿIsāʿī, ad M. Minovi, Wiesbaden 1937-8, 360) to acquire serious skills. Sometimes, we find statements to the effect that future greatness is foreshadowed in childhood by a disdain shown for playing. References to children are often routinely associated with play. It was quite natural to have the youth killed in the story in Qur'ān, XVIII, 74/75, described as having been found playing with others (al-Buḡḡārī, *Sahīḡ*, cf. Ibn Haḡḡar, *Fath al-bārī*, Cairo 1378-83, i, 232, xl, 24, 33; al-Taharī, *Tafsīr*, ad loc.), or to worry that Yūsuf's playing in XII, 12 (the only morally neutral reference to "playing" in the Qur'ān) might implicate his adult brothers (I. Goldheiler, *Die Richtungen der islamischen Koranauslegung*, Leiden 1920, 281 f.), or to explain *al-ʿamīṣ* applied in the *ḥadīṡ* to Muslim infants in Paradise from their being similar to water bugs (?) because of their playing in the rivers of Paradise (al-Sharīf al-Raḡī, *Madḡṣar*, Cairo 1387/1967, 406). The Prophet as a child is said to have engaged in a game called *ʿaym* ('*ayaym*) *maḡḡib*, described as searching (in the dark) for a very white bone tossed far away, with the finder being allowed to ride upon his playmates (Ibn, 2057b, 2947a, *Lisān al-ʿArab*, iv, 478; Ibn Zafar, *Aḡḡḡḡ maḡḡib al-ʿaym*, Cairo n.d., 24); the Prophet's alleged participation in such a game could easily have struck strict interpreters of the doctrine of *ḡaym* as objectionable and is, in fact, mentioned only very rarely. The Prophet's uncle al-ʿAbbās is described as having played *ḡala* as a boy, a game mentioned in ancient poetry ('*Amr b. Kaḡḡam*, Labid, cf. T. Nöldeke, *Fünf Maʿallagat*, i, Vienna 1899, 47; *Sharḡ Dimān Labid*, Kuwait 1962, 81) and described as played with two small wooden boards, one twice as long as the other and the one being hit with the other (or with a *mukīḡ*), this being in an anecdote intended to show al-ʿAbbās's innate decency (Ibn Zafar, *Aḡḡḡ*, 52).

The most influential reference to child's play goes back to the biography of ʿAḡḡḡ, reported in

many traditions with only slight variations (for instance, *Concordance*, 2. v. 1-2; Ibn Sa'd, 40-5; al-Balighuri, *Ansāb*, i, ed. M. Hareidullah, Cairo 1939, 420-2). It happened when the Prophet saw 'Ā'isha playing on a seesaw (*urdjūba, mardjūba*) that she first caught his attention, and he once, or on different occasions, came upon her playing with dolls. "Dolls" (*ḥand* "girls", or *la'ib*, pl. *la'ib*), the typical "plaything" came thus to be discussed intensively in the legal literature. The gist of the Sunnī jurists' discussion and the problems of detail they chose to face can best be captured from Ibn Ḥadjar, *Faḥ*, xiii, 243 f. In sum, dolls were usually given very reluctant approval as having educational value for training little girls to become good mothers. The obvious conflict between the prohibition of figurative representations (see E¹ art. 368a) and the permissibility of dolls, although often they were not realistic representations of living beings, proved impossible to solve to everybody's satisfaction. The connection with idol worship was only hesitantly mentioned. The *ḥadīth* also informs us that dolls were made of wool (Ibn, *Concordance*, iv, 409a, 16 L.) to be given to children who were made to fast, in order to divert them (as other toys, such as polo sticks, might be promised to children as incentives for studying, see Ibn 'Aknūn, *Tibb al-nafīs*, ms. Bodl. or Hunt. 518, 70b). Some of 'Ā'isha's toys had, or were seen by the child's imagination to have, the shape of (winged) horses, with the wings made of rags. In this connection, al-Ḥazālī, *Iḥyā'*, *adab al-sana'*, ii, 245) speaks of the "imperfect forms" (of toys) fashioned by children from clay and rags as something tolerated by Shāfi'is, as he also mentions elsewhere (*Iḥyā'*, *adab al-haḥ*, ii, 60) animal toys made of clay given to children on festivals.

Numerous names of games were mentioned as being of philological interest and listed because of their strange forms or because of literary connections (e.g. al-'Askari, *al-Taiḥīs fī ma'rifat asma' al-aghya'*, Damascus 1389-90, 718-24, see F. Rosenthal, *Gambling in Islam*, Leiden 1975, 65). We also find references to such things as *dhindih*, *dhukla*, *ḍa'if* (a running, and ? catching, game, al-Kāḥ, *Amāli*, Cairo 1373, li 315; *Lisān al-'Arab*, iii, 97), or the putting of *ḡirām* into *waḥā* (al-Kāḥ, iii, 4 L.). Games are given at times names in the form of noun combinations or sentences, such as *al-ma'ālīm wa-l-aghā'ir* "master and hired hand" (T. Hyde, *De ludis orientibus*, 4, Oxford 1894, 234-6), *ḡirāḡum ḡirāḡūn* "I have come to you, seize me" (Hyde, li, 240 f.), *ḡasā' wa-zakā* for even-and-odd, (Turkish) *tui Laila* "catch Layla" (H. Ritter, *Knabenspiele aus 'Amāra*, in *Jsl.*, xxvi [1942], 49-57), etc. Characteristically, the names of games change greatly in the course of time so that those found in Hyde from the 17th century and even more so those from modern times (e.g. K. L. Tallqvist, *Arabische Sprichwörter und Spiele*, Helsingfors 1897, or Ritter) are nearly all different from those known from the mediaeval literature, quite apart from local differences.

The philologists no doubt had often no personal experience of the games they sought to describe. Descriptions are often non-existent, or they are so brief as to indicate hardly more than the general type of a given game and to be practically useless; this is nothing peculiar to Muslim philologists but something worldwide, since the play instinct required to be satisfied by intricate and volatile rules hard to describe fully. Ambiguities of interpretation are always present. Similarities between modern and mediaeval names, in the rare cases in which they

exist, do not necessarily indicate that the games are the same. Thus, the *la'ib al-ḡasūmayya* mentioned by Ibn Kuzmān (E. García Gómez, *Todo Don Quixote*, Madrid 1972, i, 32/33, 36 n. 6) is hardly the *ḡasūm* described by A. Robert from Algeria, in *Revue Africaine*, lxiii (1921), 69. The ring (*ḡāḡam*) game of prestidigitator is no doubt the guessing game described by Robert, but hardly represents all the games thus designated (cf. Rosenthal, *Gambling*, 62; al-Simāwī, *Uḡyūn al-ḡasūm*, ch. 11). The modern game called *bilbil* may be related to ancient *ḡale* as suggested by Ritter, but we have no way of knowing how far this relationship, if it in fact exists, extends to details.

Of the more important types of games, we may mention here (1) guessing games such as *ḡarāḡ*; (2) board games of the chess (see *ḡharāḡ*) and backgammon (see *ḡharāḡ*) types and of the *maḡāḡ* type which were usually, but not always, played on boards, involving the placing of chips into holes, as, for instance, the game of "fourteen" (*arba'ata 'aḡḡara*), the throwing of dice and, of greater antiquity in Arabia, of koudlebones (*kaḡ*, pl. *kaḡḡ*), also in a way the walnut (*ḡawḡ*) game, see also *ḡharāḡ*, (3) skill and sports games, such as ball playing, the great favourite of children, often mentioned as done in the streets, also played with balls and (polo) sticks, see al-ḡharāḡ, *Iḥyā'*, *riyad al-nafīs*, iii, 55, further jumping games, catching games, the seesaw, imitation fighting games, the egg game, also tops (*ḡawḡma*, *ḡawḡḡ*); dancing with a hobby-horse (*ḡurraḡ*) was apparently not practiced as a children's game, cf. M. Gaudeloy-Dombombyes, in *Mé. Wm. Marçais*, Paris 1930, 155-60; and (4) "playing" with animals such as small birds, pigeons, dogs (add al-Djāḡit, *ḡayawān*, ii, 28, to Rosenthal, *Gambling*, 58 n. 242n), or reptiles, either as an innocent pastime or as a gambling, racing, and fighting sport.

Most children's games contain an element of gambling, inasmuch as they entail rewards for the winners and penalties for the losers (see *ḡamāḡ*). This added to the scruples raised by the play concept in general and the *yāsa* problem of dolls, and cast doubt in the eyes of jurists upon the legality of commercial transactions involving toys. In conjunction with prevailing economic conditions, it probably contributed to keeping toys used by children mostly simple and makeshift.

Bibliography : given in the article, in particular, Hyde, *De ludis*, and Rosenthal, *Gambling*. For board games, cf. H. J. R. Murray, *Board games*, Oxford 1952. (F. ROSENTHAL)

LAK 1. The most southern group of Kurd tribes in Persia. According to Zayn al-'Abidin, their name (Lāk, often Lākk) is explained by the Persian word *lak* (100,000), which is said to have been the original number of families of Lak. The group is of importance in that the Zand dynasty arose from it. The Lak now living in northern Luristan [q.v.] are sometimes confused with the Lur (Zayn al-'Abidin), whom they resemble from the somatic and ethnic point of view. The facts of history, however, show that the Lak have immigrated to their present settlements from lands further north. The Lākkī language, according to O. Manu, has the characteristics of Kurdish and not of the Lur dialects (cf. Lya, Čirikov, *Puteviĭ ġurnal*, St. Petersburg 1875, 227, says that "the Lur and the Lak speak different dialects, and hate one another").

The Lak appear in the *ḡharāḡ-nama*, i, 323, along-

side the Zand, among the secondary Kurd tribes, and as subjects of Persia. According to Rabino, the Lak were settled in Luristan by order of Shāh 'Abbās, who wished in this way to create some support for the new walls of Luristan, Husayn Khān, whom he had chosen from among the relatives of the old Shāhwardī Atabeg (Tā'rikh-i Ālām-āra, 366). Of these tribes, the Salsā had formerly lived at Māhābzāt (to the south-west of Kirmānshāh); the Dillān take their name from Abū Dulaf [see AL-KASIM A. 461], whose fiefs in the 3rd/9th century lay in the north of Luristan [see SURTANĀKĀD]; the Bādjilān of Zohāb as well as Luristan say they come from al-Mawālī and are evidently one tribe. The Luristan branch seems to have exchanged its Kirmānshāh dialect for Lakkī during its sojourn among the Lak at the time of Shāh 'Abbās. Even after Shāh 'Abbās there were several Lak tribes outside of Luristan. Zayn al-'Abidin (opening of the 19th century) mentions among the Lak: the Zand, the Māfi, the Bādjilān and the Zandī-yi kāla (?). To the last tribe (according to Houtum-Schindler: Begele) belonged Karīm Khān Zand (born in Pāriyā, the modern Pārl, about 20 miles from Dawlatābād on the Sulṭānābād road). When al-Shīrāz, Karīm Khān sent for the Lak tribe of Barīr-wand. In 1212/1797 the Bayrānwand and the Bādjilān actively supported Muḥammad Khān Zand in his attempt to seize power from the Kājārs (Sir Harford Jones Brydges, *A history of Persia*, London 1933, 46, 58; R. G. Watson, *A history of Persia*, London 1866, 116). Under the Kājārs, several Lak tribes were broken up. The Zand have almost completely disappeared; in 1830 remnants of them were to be found among the Bādjilān of Khānshāh (Khutshid-Efendi, *Siyāhat-nāma-yi ĩndūd*, Russ. tr. 112, 221); there are still a few Zand families in the Dorā-Farīmān district to the south-east of Kirmānshāh (RMM, xxviii, 39); a section of the 'Amālā of Puṣht-i Kūn claims to be descended from the Karīm Khān tribe. At the present day, there are Māfi at Warānā, Tehran and Kāzvin.

According to a good list compiled by Rousseau at Kirmānshāh in 1807 (cf. *Fundgruben des Orients*, Vienna 1813, III, 85-98), there were considered as Lak the following tribes: Kāthūr, Māfi, Nānākī, Dālwānd, Pāyrawānd, Kulyāṭī, Šūfawānd, Bākrām-wānd, Karkūki, Tawālī, Zāyir-wānd, Kākāwānd, Nāmtwānd, Abnedsowānd, Bōbtū, Šūliya, Harzād and Šhaykhwānd.

According to O. Mann and Rabino, the Lak tribes of Luristan are as follows: Salsā (9,000 families), Dillān (7,479), Tīrshān-Amrshā (1,582 families), the Bayrānwānd (6,000 families) and Dālwānd (2,000 families) forming part of the Bālā girwa group, a total of about 15,000 tents. The Bayrānwānd and Dālwānd live to the east of Khurramābād around the sources of the river which flows through this town; the Salsā and the Dillān occupy the beautiful plains of Altghār and Khāwa respectively, while the Tīrshān (perhaps = Tārghān, i.e. "exempt from taxes") live between the left bank of the Saymāra and the lower course of its left-bank tributary from Khurramābād. The territory occupied by the Lak, and including northern and north-western Luristan is sometimes called Lakistan.

The cohesion of the Lak tribes is evident from the fact that even before 1914 the Salsā, Dillān and Tīrshān were united under the authority of Nāzar 'Alī Khān of the Amrshā clan. In addition to the bonds of tribe and language, there is that of religion, for all the Dillān and many of the 'Amālā

of Tīrshān belong to the extremist Shī'a sect of the Ahl-i Ḥakīq [g.v.].

Wien* (1904), 1173-93; O. Mann, *Die Mundarten der Lur-Stämme*, Berlin 1910, pp. xxiv-xv; to the number of tribes speaking "Lakkī", the author adds the Kāthūr of Kirmānshāh and the Māfi of the Puṣht-i Kūh; Rabino, *Les tribus du Luristan*, in *RMM* (1916); Minorsky, *Notes sur la secte des Ahl-i-Haq*, in *RMM*, xl (1920), 36.

6. The name given to themselves by the Ghāzī-Kumuk, a people living on the eastern Koy-su in central Daghistan (see the next article and *KUMUK*, also Breckitt, *Der Kaukasus und seiner Völker*, Leipzig 1887, 246-57, and Ditt, *Die heutigen Namen der kaukasischen Völker*, in *Petersmanns Mitteil.* [1908], 204-12).

On the other hand, the term Lak in Armenian and Lək-l (plural Lək-eb) in Georgian means the Lezg/Legzi of Daghistan (where the e may certainly designate the value of *ə* [a] [Legzi]). This last name seems to have been applied to the highlanders of Kirs, living in and around the sources of the Samur, and later to have been extended to all the people of Daghistan, although no people of the Caucasus actually call themselves Lezg/Legzi. Marquart, *Besuche zur Geschichte und Sage von Erzen*, in *ZDMG*, xlix (1895), has attempted to explain the Arabic al-Lakz by the addition of the Persian suffix *-i* to the name Lək (or Lak), cf. Sag-zī, "inhabitant of Sistan". (V. MINORSKY)

LAK (self-designation. Lak, Laku; Russian variants. Lak(tal), Kankumukh(tsi); Avar. Tumaw, pl. Tumal, Lezg. Yakholshu; Dargui; Vuhugui, Vuleham; other: Kankumukh (from Arabic Ghāzī, warrior for the faith, and Kumukh, the political and cultural centre of the Lak territory, see *KUMUK*), a Muslim people of the Caucasus.

The Lak language belongs with Dargui, Kaytak and Kubachi (g.v.) to the Daghino-Lak (Lak-Dargwa) group of the Northeast-Caucasian language family. There are five dialects of the Lak language, Aghī Kuli, Balghar, Vitskh, Vighli and Kumukh. The Kumukh dialect forms the base of the Lak literary language, as Kumukh was, and is, the cultural and economic centre of the Lak territory. Lak was originally (till the late 19th century) written in the Arabic script, this was changed to the Latin script in 1928, since 1938 it has been written in the Cyrillic. Prior to the establishment of Lak as a written language, Arabic served as the literary language of the Lak people. Lak is at present one of the same official literary languages of the Daghistan ASSR, although it is no longer used as a medium of instruction in the schools (Lak served as a language of education among the Laks until the fifth year, between the late 1920s and the late 1960s; virtually all education since then has been conducted only in Russian).

The Laks are inhabitants of the mountainous central region of the Daghistan ASSR. They live primarily in the basins of the upper Kankumukh, Tleserakh, and Khatar Koyus rivers located in Lak and Kuli districts, and in separate settlements in the districts of Tsudakhar, Akusha, Rutul, Kurakh, Caroda, and Dakhadaev. In 1844 many Laks were resettled in the steppes and foothills north of the Andi Ridge in what is now "Novo Lakskiy" ("New Lak") district of the Daghistan ASSR. According

to the 1970 Soviet census, there were 89,822 Laks in the USSR, of whom 72,240, or 84.2%, lived in Daghistan (1 926 population, 40,380; 1959 population, 63,529). Although the Laks are reported to be the most Russified of all Daghistanis, according to the 1970 census only 3.7% of the Lak population considered Russian their native language, with 95.8% considering Lak their native language.

According to legend, the Laks were conquered by Abū Muslim in 777 [sic] and converted to Islam, making them the first Daghistani people to be Islamised. However, it is more likely that the final conversion did not occur until the 13th century, with some Christian and Jewish traditions surviving up until the 15th century. The Laks are Sunni Muslims of the *Shāfiʿī* school.

Legend has it that the *Shah-Baala* was the first Muslim ruler of all Daghistan and founder of the *Shamkhal* dynasty, which reigned at Kumukh until the 19th century. At this time Kumukh, which had been established by Abū Muslim as the seat of the ruler of Daghistan, was renamed Kazikumukh. In the 14th century, the rulers of Kazikumukh adopted the title "*Shamkhal*" (supposed etymology from *Shām* — Syria, suggesting descent from the former Arab governors). During the 15th and 16th centuries, at the time when the *Shamkhal*s ruled a large part of central and coastal Daghistan, a second capital, which also served as a winter residence, was established at Tarku in the Kumukh territory. In 1640 the Laks broke away from the rule of the *Shamkhalate*, replacing it with appointed *khan*s (from Arabic *khal* "people", and Lak *lən* "supreme"). Although appointed administrators, their chief function was that of military leaders, and as such they received land and tribute as payment.

With the death of the last Kazikumukh *khan*, Agdar, the Lak territory was incorporated in the Daghistan *oblast'*, and became an integral part of the Russian empire. By 1842 both the Lak territory and Avaristan had come under the control of *Shamil* [s.c.] and his Murids, and in 1877, during the Russo-Turkish War, the Lak beks, together with other Daghistani feudal lords, staged a revolt against Tsarist rule. This revolt was, however, put down, resulting in a greater integration of Daghistan into the Russian empire.

The Laks are reported to have been the first mountaineer Daghistani people to establish a feudal system. Their feudal society was comprised of the *khan*s; the *baghis* (beks), i.e. the *khan*'s family and the nobility; the *canbri*, i.e. children of marriages between beks and women of lower social orders; the *uzdental* (*uuden*), i.e. free peasants (the numerically largest class); the *rayat* or serfs; and the *laghari* or slaves. This feudal system coexisted with a system of free societies based on the patriarchal clan (*tukhum*), which was made up of one or more extended families. These free societies were ruled by the village *'adat*. Within the *tukhum*, there was mutual help in work and family affairs, as well as group responsibility in vendettas, which were under the jurisdiction of the *'adat*. Although exogamy was not forbidden, an endogamic marriage system prevailed.

The traditional economy of the Laks was based upon transhumance, with sheep and goat raising, and home industries (leather working, pottery, weaving, gold and metal smithing, etc.). These activities still play a large role in the village economies. Due to the lack of fertile land in the mountainous regions of the Lak territory, agriculture played only a minor role in the Lak economy, and

migrant working was common (with the highest rate of migrant labour among any Daghistan people). In the steppe and foothills of the new Lak territory of northern Daghistan, horticulture, vineyards, agriculture and silk production are important activities. In the larger towns in the Lak territory, there is a rising level of industrialisation (flour milling, printing, etc.).

The first written documents of the Lak people appear in the 15th century. A rich religious and didactic literature appears in the 18th and 19th centuries (*Unsur* of Baŋkur, *Qahat* Saŋid Hincayn, *Haŋŋat* Mōsā Haŋŋat, etc.), lyrical literature in the late 19th century (Yūsuf Kāŋi Murŋulinskij, as well as historical (*Shāh* Nitsovkrinskij). Lak literature of the Soviet period was established by Hārōn Saŋidov, who was both the first Daghistani dramatic author and the author of the first Bolshevik Daghistan journal, *IM* ("The Messenger"). Other Lak authors include Soŋid Gabiev, Abutalib Gaŋurov, Abdurrahman Omarov, and Efendi Kāpov (who wrote in Russian only).

See also **DAGHISTAN AND AL-KAB**. (R. WIXMAN)

LAKAB (A.) nickname, and at a later date under Islam and with a more specific use, honorific title (pl. *alāb*). For suggestions about its etymology, see L. Caetani and G. Gabrieli, *Onomasticon arabicum*, i. *Fonte-introductions*, Rome 1913, 144-5; and for its place in the general schema of the composition of Islamic names, see **RAM**.

The *lakab* seems in origin to have been a nickname or sobriquet of any tone, one which could express admiration, be purely descriptive and neutral in tenor or be insulting and derogatory. In the latter case, it was often termed *nabaz*, pl. *anābz*, by-form *lahaz*; cf. al-Bayḍawī on sūra XLIX, 11, "In common usage, *nabaz* is particularised for an unpleasant *lakab*". The grammarians, in their love for schematisation, divided *alāb* into simple (*mufrad*) ones, comprising only one word, and compound (*muwakkab*) ones, comprising two or more words, but this division has neither historical nor semantic significance, beyond the obvious point that as Islamic society developed and became more complex, honorific titles tended to become lengthy and grandiloquent.

1. The pre-Islamic and the earliest Islamic periods. Already in these times, we have many examples of Bedouin leaders, poets, orators, etc. with nicknames, e.g. *Ākil al-Murk*, *al-Abras*, *al-Mutlamams*, *Ā'id al-Kalb*, *Mukabbal al-Rih*, etc., and from the 'Abbāsid period we have *Dik al-Djinn*, *Sari' al-Qhawān*, etc. These names might relate to physical characteristic or defects, to striking lines in a poet's verses, to incidents in the holder's life, but often to events whose significance is now lost in the mists of time. Explanation of the more unusual and bizarre names drew the authors of literary biographical works into much fanciful

theorising; cf. Aghaṣ, ed. Bāḥ, xviii, 209, ed. Beirut, xviii, 480-1, on the origins of the name Ta'abbate Sharran, and for a useful list of such names, together with explanations drawn from the sources, A.-C. Barbier de Meynard, *Synonymes et sobriquets dans la littérature arabe*, in *JA*, Ser. 10, ix (Jan.-June 1907), 173-244, 365-428, x (July-Dec. 1907), 55-118, 193-275.

The giving of nicknames was clearly widespread in early Arab society, where the number of personal names was limited and where there was, as in the Arab world today, keen observation of personal foibles, physical peculiarities, etc.; and from the Arabs, the practice spread to the Persian, Turkish and wider Islamic world. The personal connection of such nicknames is presumably behind the oft-quoted anonymous line of poetry, "It is rare that you see a man whose character is not revealed, if you consider the matter, in his *laḥab*" *Al-Ḥaḥibī*, who devotes two out of the ten chapters of his *Laḥab al-maḥab* to the *alḥab* of prominent literary and political figures, quotes this verse in reference to the philologist al-Hubarrad (s.a.), and makes the curious observation that the people of Baghdad and Nishāpūr were celebrated for their facility in coming appropriate nicknames; he gives numerous examples from each town, some quite grotesque, but unfortunately omitting to explain—I have ever known—the origins of the names (ed. I. Ayyār and H. K. al-Ṣayrafi, Cairo 1960, 46, 53-4. tr. C. E. Bosworth, *The book of curious and entertaining information*, Edinburgh 1968, 63, 66-7).

Some nicknames were clearly given as *nomina boni auguri*, aimed either at attracting a favourable future for the recipient or else at averting harm. Thus arose the practice of giving antiphrastic and apparently unpleasant names and nicknames in order to avoid attracting the evil eye (see 'ayn) which might otherwise fix itself on something wholesome and perfect; whilst slaves and other persons of little importance might be given euphemistic and euphuistic names, such as those of flowers, jewels, perfumes, etc. Thus the caliph al-Matawakkil called one of his slave concubines, the mother of al-Mu'tazz, *Kabīḥa* 'the hideous one' because she was famed for her beauty. Euphuism is seen in such names as *Yakūt* (lit. 'jacinth, ruby') and *Diḍak* (< Turkish *çiçek* 'flower', the slave mother of the caliph al-Muktafi), and a good example of antiphrasis in the name of *Kāfir al-Iḥṣān* (s.a.) (*kāfir* 'carnivor' being white and fragrant, whereas *Kāfir* was a black eunuch, proverbially noxious and noxious (see *ḥaṣṣ*, i. In the Central Islamic lands)). In these connections, there is an interesting passage in Ibn Durayd's *K. al-Iḥṣān*, ed. Wustenfeld, 4-5, to which he quotes al-ʿUṭbī as having once been asked, "How is it that the Arabs give their sons names which are considered unpleasant (*muṣṭashanāʾ*), yet give their slaves names considered pleasant (*muṣṭashanāʾ*)?" Al-ʿUṭbī replied that the Arabs gave their sons names with their enemies in mind, whereas they gave their slaves any names they wanted (i.e. without any ulterior motive). Ibn Durayd then goes on to give examples of names given to sons which would augur well against their enemies (*laḥab* s.a. 'ala *al-dāʾim*), expressing violence, harshness, bellicosity and endurance, e.g. *Ḥālib*, *Zālim*, *Nukhl*, *Ṭhābit*, etc. (see further, M. P. Kister, *Call yourself by graceful names* . . . in *Lectures in memory of Professor Martin B. Plessner*, Jerusalem 1970). We are here perhaps straying into

the realm of the *ism* proper rather than the *laḥab*, although the names given to slaves and slavegirls may be considered as *alḥab* replacing those persons' first given names.

The looseness of the Arabs, and of Kuraysh in particular, for giving satirical and opprobrious nicknames is condemned in Kur'an, XLIX, 11, where there is a warning against the practice of groups of both men and women mocking at each other, "Do not snail at each other or give each other derisory nicknames (*wa-lā talmizū anfusakum wa lā taḥababū bi' l-ḥabab*)". This *sūra* is accounted late Meccan, from a year or two before Muhammad's death, by Noldeke (*Gesch. des Islams*, i, 221) and Montgomery Watt (*Companion to the Qur'an*, London 1962, 237); it may be that the Prophet was feeling particularly aggrieved by nicknames given to him in the past by his opponents and by the Hypocrites, like that of al-Abtar 'the childless one', even though the *ṣabab al-nasab* was, according to the commentators, the women's insults to Muhammad's wife Ṣafīyya bint Ḥuwayy because of her origin from the Jewish tribe in Medina of al-Naḥr (cf. Sale-Whitely, *A conspectus commentary on the Qur'an*, London 1896, iv, 70-1).

Yet whilst retaining for some time to come its derogatory and insulting aspects, the *laḥab* tended to be transfigured into higher roles within Islamic society. In one direction, it evolved into the ascription of authors and artists, the *maḥab* or *alḥab* (s.a.), above all in the Persian, Turkish and Indo-Muslim worlds, such as we find in the name of the Persian poet *Shāhīn* (s.a.) or the pseudonym adopted by the Safawid *Shāh Ismāʿīl I* for his Azeri Turkish verses (see Ismāʿīl, 1. 2. His poetry). Most significantly for the development of Islamic culture, the *laḥab* developed from being a nickname of praise or admiration (as in such examples as *Muḥab* al-Asinna 'he who played with lances' for the pre-Islamic poet *ʿAmir b. Nāḥik*, famed for his prowess in battle) into becoming an honorific title, conferring status and prestige on its owner, since it frequently implied a specially close relationship to the sovereign or the divinity or else a reward for personal bravery or services to the state. As such, the *laḥab* was to have an extended life-span in the Islamic world—more particularly, in those parts of lying between Egypt and India, though these honorifics were also to be found to a more limited extent in Muslim Spain and North Africa, see below, 3—right up to the 19th and early 20th centuries, when floridity and hyperbole went out of Islamic titulature just as they did from literature and other aspects of culture.

It is not difficult to discern why such titles became eagerly sought after; the desire to stand out above the rest of mankind is a universal one. Indeed, al-Kalīlaghandī, in his *Ṣabab al-ʿaṣāʾ*, v, 440, following the line of traditional Islamic *andāl* literature writers, traces what he calls the *alḥab al-maḥab* *wa-nasab* back to such figures as Abraham al-Ḥalāl 'the friend of God', Moses al-Kalīm 'the one who spoke with God', Jonah *Iḥu* 'I-Nūn "the man in the fish", etc. Within a hierarchical, hierarchical society such as the Islamic one became in the 'Abbasid period, modes of address, insignia or rank and office, dress, etc. all contributed to the fixing of a man's status in society and the state, and as such were prized as the visible and audible symbols of success in the temporal world. In this process of the spread of honorifics, there were—as for other aspects of early Islamic culture—the precedents of

the earlier Near Eastern civilisations, the Romano-Byzantine and the Persian ones, to provide an element of continuity with the past.

The early Arabs knew from their contacts with the Byzantines on the Syro-Palestinian borders that a complicated system of honorific titles and modes of address existed for Byzantine civil and military dignitaries. Allies of the Greeks, such as chiefs of the Ghassânids (see GHASSÂN) like al-Hārith b. Djabala and his son al-Munajjim, were honoured by having the honorary title of *patricius* bestowed on them; this term found its way into general Arabic usage as *ḥarīṣī/batṛīṣī* (see *ḥarīṣ*). In Achaemenid Persia, the characteristic expression of pomp and magnificence (*μεγαλοπρεπεία*) through grandiloquent titles was familiar to Herodotus (I, 430), who further mentions (viii, 85) that meritorious servants of the state were enrolled in the list of 'the king's benefactors' (*ὀποδωγγῆς*). Under the Sasanids, the great men of state were likewise honoured by the award of a wide range of honorifics, e.g. the title *šāhriw framadār* 'chief executive' for the emperor's chief counsellor and minister; *Mahīgī* 'the greatest [of the ruler's servants]'; *hazārmar* '[with the strength of] 1,000 men' for military commanders; and various compounds including the sovereign's name, e.g. *Zhīyēdhan Khuraw* 'eternal Kh.'. Hormuzd Vardē 'wild boar of H.', and many with *tahm* 'strong' like *Tahra Shāpūr* or *Tahm Yazdagird*. These honours were usually completed by the grant of robes of honour, the later Islamic *ḥabīṣa* (q.v.) (see Nöldeke-Tabari, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, 89, 443 and n. 2; F. Justi, *Iranisches Namenbuch*, 318; A. Christensen, *L'Iran sous les Sassanides*, Copenhagen 1944, 113-14, 326, 409-11).

2. The period of the caliphate. The wide dissemination of honorific titles in the Islamic world began at the top, with the adoption of regal titles by the caliphs. Later historians, projecting backwards what had become common practice in their own time, attributed the use of such titles to the Umayyads and even to the Orthodox caliphs. Al-Mas'ūdī, in his *K. al-Tanbih*, 333, tr. 431-3, cites pre-Umayyad traditions to the effect that the Umayyads had honorifics of the theocratic type which had by two centuries later become familiar from 'Abbasid practices, e.g. al-Nāṣir li-ḥaqq Allāh for Mu'āwīya, al-Kāhir bi-'awn Allāh for Marwān b. 'Abd al-Malik and al-Muta'anna bi'llāh for Ibrāhīm b. Walīd b. 'Abd al-Malik; but he rightly rejects these traditions as weak and uncorroborated by the historians and biographers (cf. E. Tyan, *Institutions du droit public musulman. I. Le califat*, Paris 1954, 486-7). Similarly, the epithets attributed to the Orthodox caliphs, such as al-Siddīq 'he who testifies to the veracity of the Prophet's mission' for Abū Bakr, al-Fāriḡ 'the just' for 'Umar and Dhū l-Nūrayn 'possessor of the two lights' for 'Uthmān, are probably of early growth (cf. al-Kharrāzmi, *Mafāḥiṣ al-'ulūm*, ed. van Vloten, 105), but must nevertheless have been applied only after the deaths of their owners.

Honorifics of a theocratic nature, expressing dependence on God, reliance on Him, or participation with Him in the work of ruling, are really an innovation of the early 'Abbasid period. B. Lewis has stressed the importance of the atmosphere of messianic expectation around the time of the 'Abbasid revolution, when the worldly *Realpolitik* of the Umayyads and their animus against the Prophet's kinsfolk, the 'Alids, was replaced by what it was

hoped would be the reign of divinely-guided justice; and these feelings favoured the adoption of religious-based titles by al-Manṣūr and his successors. The first 'Abbasid caliph, Abū 'l-'Abbās al-Saffīh, had no formal regnal title, though his partisans may well have attributed to him various names with messianic implications. His successor Abū Dja'far formally adopted the *laqab* of al-Manṣūr bi'llāh 'he who is helped by God to victory', and the christlike tone of early 'Abbasid titulature is especially clearly seen in the *alīb* of his successor al-Mahdī bi'llāh 'the divinely-guided one' and then of al-Hādī li'l-faḥk 'the one who directs towards the divine truth' (cf. Lewis, *The regnal titles of the first Abbasid caliphs*, in Dr. Zakir Husain presentation volume, New Delhi 1968, 13-22; F. Omar, *A note on the laqabs (i.e. epithets) of the early 'Abbasid caliphs*, in 'Abbasīyāt, studies in the history of the early 'Abbasids, Baghdad 1976, 147-7). In subsequent 'Abbasid usage, the apocalyptic element is less prominent, but the honorifics still express reliance upon and submission to the deity, or confidence in His guiding power, e.g. al-Waḥīd bi'llāh 'he who puts his trust in God' and al-Matīn bi'llāh 'he who shows himself obedient to God' (cf. Tyan, *op. cit.*, 483 ff.).

It is notable that the 'Abbasid honorifics up to the later 4th/10th century and the period of Buyid control in Baghdad are formed essentially with participles or adjectives of a passive or reflexive character, thereby emphasising the supremacy of God's controlling power and the vital securing of His favour for the business of ruling in conformity with the *Shari'a*, the ideal, if not always the practice, of the 'Abbasids. A. Abel has noted that the 'Abbasids' great rivals in North Africa and Egypt, the Fāṭimids, had, in order to press their superior claim, as they saw it, to the caliphate and imamate, to adopt a more aggressive and active form of titulature (*Le khālifé, présence sacrée*, in *Stud. Isl.*, vii [1957], 38 ff.). This new type of titulature reflected the role assigned in *Isma'īlī* cosmogony to the *Imāms* in the hierarchy of intelligences emanating from the god-head, and it actively associated the holders of these titles with God's direct working in the world. Thus we have al-Kā'im bi-'amr Allāh 'he who takes charge of the execution of God's command' for the Mahdī 'Ubayd Allāh's successor Abū 'l-Kā'im Muḥammad; and from the time of al-Mu'izz's accession onwards (341/953), the honorifics of the Fāṭimids are all active participles or adjectives emphasising the ruler's decisive part in the implementation of God's will in this world, e.g. al-Hākīm, al-Āmir, al-Zāhir, etc., usually with a complement like... li-dīn Allāh or... bi-'amr Allāh.

Not surprisingly, the 'Abbasids strove from the latter years of the 4th/10th century onwards to emulate these activist forms of titulature, in order to emphasise their own position as upholders of the Sunna; whence titles like al-Kā'im bi-'amr Allāh appear in the middle years of the 5th/11th century and ones like al-Nāṣir li-dīn Allāh and al-Zāhir bi-'amr Allāh in the early 7th/13th one. In all these cases, the *laqab* might be adopted as a new regnal title on the caliph's accession; but increasingly, the *wali* 'l-*shah* or heir to the throne was given a *laqab* as soon as he was invested formally as heir to the reigning monarch, with his own *ḥusayn* and/or honorifics thereafter appearing on the coinage side-by-side with those of the actual caliph. This *laqab* usually remained with the heir once he acceded to the caliphate proper, but occasionally, the *laqab* adopted by such an heir-apparent was exchanged

for a different, often more grandiloquent one on his obtaining the throne. Thus al-Mutawakkil's original *lakab*, during the period when he was his brother's heir, was al-Munfar, but this was changed on the second day of his succession to the caliphate (232/847) by the chief *hajib* Abi Du'ad to al-Mutawakkil (al-Mas'udi, *Musaddat al-Ghahab*, vii, 189 = ed. Pellat, 5872; cf. Tyan, *op. cit.*, 280, 486).

If the caliphs could assume splendid and sonorous honorifics themselves, it lay also within their power to confer titles on their servants and supporters, in the first instance to their viziers and secretaries and to their military commanders. The process dates from the early 3rd/9th century, and at least until the following century it was practised comparatively sparingly by the 'Abbasids. The Persian secretary al-Faḍl b. Saḥb [q.v.], former protégé of the Barmakids and eventually vizier to the caliph al-Ma'mūn, exercised the functions both of waṣī and *amīr*, and by 296/811-12 he is found with the honorific *Ḍhu 'l-Riṣṣatayn* 'possessor of the two executive functions', sc. of civil administration and military leadership. Around the same time, the Persian general Tahir b. al-Ḥusayn [q.v.], founder of the line of Tahirid governors in Khurasān and 'Irāq, received the *lakab* of *Ḍhu 'l-Yamīnayn* 'possessor of two right hands, the ambidextrous' (various explanations for this phrase are in fact given in the sources, it had already been used in the earliest Islamic times as a synonym for 'liberal, open-handed', e.g. by the great poetess al-Khaṣṣā' [q.v.] when elegising her brother Saḥbī; al-Faḍl b. Saḥb's cousin 'Alī b. Abi Sa'īd received that of *Ḍhu 'l-Kalamayn* 'possessor of the two pens' (either alluding to the two principal government departments of finance and the army, or else to 'the two modes of writing', sc. Arabic and Persian); whilst later in the century, in 269/885, the vizier Sa'īd b. Muḥallad was granted by al-Muwaffak the title *Ḍhu 'l-Wisratayn* 'possessor of the two vizierates' (treasuring either to the two spheres of power, civil and military, or recognizing Sa'īd's role as servant both of al-Muwaffak and the titular caliph al-Ma'tamīd) (see D. Sourdel, *Le vizirāt 'abbāside*, i, 202-3, 319-20, ii, 678, 681).

This type of *lakab* containing a dual expression was, however, one known before this time, as is attested by the name *Ḍhu 'l-Nūrayn* for the caliph 'Uthmān and *Ḍhu 'l-Shahādātayn*, applied to the Companion and partisan of 'Alī, Ḥusayma b. Ḥabīb al-Anṣārī (because the Prophet had promised him double the normal martyr's rewards; see Ibn Hishām, *Ṣaḥāb*, i, 495, and Ibn al-Athīr, *Usd al-ghāba*, ii, 214). The type was, indeed, to enjoy a long life in Islamic titulature, just as dual forms of the simple *ism* (Muḥammadayn, al-Ḥasanayn) have been current in the Islamic world until the present day. The 'Abbasid successors in western Persia and 'Irāq, the Būyids, continued the usage of the caliphs for their own ministers and secretaries; thus we find Rukn al-Dawla's great vizier Abu 'l-Faḥ b. al-'Amīd with the *lakab* of *Ḍhu 'l-Kifāyatayn* 'possessor of the two capabilities' (i.e. of the sword and pen), though this title was in fact awarded directly by the caliph (see *ism al-'Amīd*). In the following period of the Saljuqs, titles in *al-Hadralayn*, referring to the separate courts of the 'Abbasid caliphs and the Saljuq sultans, occur, e.g. *Ḍhu 'l-Hadratayn* 'confidant of the two courts', and *Nizār al-Hadratayn* 'support of the two courts', the title held by the *Nāṣib al-Nukabā'* 'Alī b. Tawīd al-Zaynabī in Baghdad during the

latter decades of the 5th/11th century (Ibn Khallikān, ed. Iḥṣān 'Abbās, Beirut 1968-72, iv, 454, n. de Slane, iii, 151). See for all these types of dual titles, I. Goldziher, *Ueber Dualitt*, in *WZKM*, xiii (1899), 321-9 = *Gesammelte Schriften*, Hildesheim 1967-73, iv, 295-303, and Caetani and Gabrieli, *Orientalism arabicum*, i, 167-9.

An interesting fact of usage has recently been highlighted by P. Balog. Pious invocations after names are familiar from the early use of the *lughyān* after the name of the Prophet, the *lughyān* after those of earlier prophets, the *lughyān* after the names of the early caliphs, etc. From the latter Umayyad period (from the time of Yazīd II b. 'Abd al-Malik [102-5/720-4] onwards, in regard to the evidence of inscriptions on glass weights and measure stamps from Egypt) onwards, pious invocations like *allāhu Allāh* 'may God set him in the way of righteousness', *abāhu Allāh* 'may God grant him long life!' and *ahlu'ahu Allāh* 'may God honour him!' are consistently appended to the names of caliphs and of high officials and governors. It seems that a particular formula like those just mentioned remained with an official or governor throughout his career, unless he was awarded a fresh invocation of higher prestige. Such *ad'iyā* (sing. *ad'iyā*) may accordingly be approximated to *lakab* as expressions of particular honour awarded by the ruler to a faithful servant, and in the manuals of secretarship from the Ayyūbid and Mamlūk periods (see below, section IV), the two types of honorific are often treated together. See Balog, *Pious invocations: probably used as titles of office or as honorific titles in Umayyad and 'Abbasid times*, in *Studies in memory of Gaston Wiet*, ed. M. Rosen-Ayalon, Jerusalem 1977, 61-8.

Characteristic of the 4th/10th century was the appearance and then the growing popularity of compound honorifics including as their second elements the terms *dīn* 'faith' and *dawla* or *mulk* 'secular power', or less commonly, compounded with *umma* 'religious community' and *milla* 'religion'. These titles have been studied in detail by M. van Berchem, *Une arabeische Inschrift aus dem Ostjordanlande mit historischen Erluterungen*, in *ZDPV*, xvi (1893), 84-105; Caetani and Gabrieli, *op. cit.*, i, 190 ff.; J. H. Kramers, *Les noms musulmans composés avec Dīn*, in *AO*, v (1927), 53-67; and A. Dietrich, *Zu den mit additio zusammengesetzten islamischen Personennamen*, in *ZDMG*, cx (1960), 43-54. The last three of these studies contain extended lists of these types of *lakab*, for they were to enjoy a popularity which ran for almost a millennium, and Dietrich puts the total of *dīn* titles enumerated by Kramers and himself at 186. The *dawla* titles were the earliest to appear, but in the first place, were titles of great honour granted only exceptionally by the caliphs. Thus when al-Muktadī honoured his vizier al-Ḥāsim b. 'Ubayd Allāh of the Banū Wāḥb (vizier 289-91/902-4) by giving to him one of his daughters in marriage, he also awarded him the title *Wāḥ 'l-Dawla* 'friend of the state' as a special mark of intimacy (Sourdel, *Vizirāt*, i, 356). In 330/942 the Hamdanīd of Mawṣil Abū Muḥammad al-Ḥasan received from al-Mutadī, as a reward for his services against the *amīr al-umayyad* Muḥammad b. Rāḥī, the *lakab* of *Nāṣir al-Dawla*, whilst his brother Abū 'l-Ḥasan 'Alī of Aleppo obtained that of *Sayf al-Dawla*. Shortly afterwards, in 334/945, the Daylamī Būyids entered Baghdad and took over the office there of *amīr al-umayyad*, and the three Būyid brothers Aḥmad 'Alī and Ḥasan b. Thā'ir received the honorifics of *Mufīz*

al-Dawla, 'Imād al-Dawla and Rukn al-Dawla respectively. All the subsequent Būyid *amirs* obtained from the caliphs titles of this type, sometimes with a greater degree of elaboration, e.g. the 'Aḡud al-Dawla wa-Tāḡ al-Milla al-Fanā-Khusraw, the Shārah al-Dawla wa-Zayn al-Milla conferred on Abū 'I-Fawāris Shāhrazī by the caliph in 376/986, and the Bahā' al-Dawla wa-Diyā' al-Milla wa-Ḡhiyāḡ al-Umma of Abū Naḡr Firūz b. 'Aḡud al-Dawla (see Mez, *Die Renaissance des Islams*, 133, Eng. tr. 135; L. Richter-Bernburg, *Amir-malik shāhanshāh: 'Aḡud al-Dawla's titulature re-examined*, in *Iran, Journal of the BIPS*, xviii [1980]; and BAHA' AL-DAWLA in Suppl.)

It may be noted, in connection with the mention of Mubarrak b. Rā'ik (see run Rā'ik), that it is in the first half of this century that we have the formal constitution of the office of *amir al-umara'* [q.v.] as the concomitant of caliphal decadence. In fact, this title, or a similar form like *kabir al-umara'*, appears in the later years of the 3rd/9th century in reference to the commander-in-chief of the caliphal armies; but only with the caliphate of al-Rāḡi (322-9/934-40) did the holder of the *imārat al-umara'* achieve a commanding grip on affairs, so that it seemed natural for the Būyids to step into the office a few years later (see Tyan, *op. cit.*, 531-41).

Especially interesting, in the light of the significance of the Būyids and the *dawlat al-Daylam* or 'reign of the Daylamis' for an attempted reconstruction, in Islamic form, of the ancient kingship of Iran, is their assumption of the ancient imperial title *Shāhanshāh* 'emperor of emperors'. 'Aḡud al-Dawla used it widely and with great pride in his titulature and protocol, and indeed the title became so characteristic of the Būyids that the Ghaznavid historian Bayhaḡī actually refers to them as the *Shāhanshāhiyān* (*Ta'riḡ-i Mas'ūd*, ed. Ḡhāni and Fayyāḡ, 41, 400, 438), but it seems possible that use of the title goes back to the very beginnings of the Būyids' seizure of power in western Persia and 'Irāq, and was begun by 'Aḡud al-Dawla's father Rukn al-Dawla or even before that by his uncle 'Imād al-Dawla. Its assumption without caliphal permission clearly indicates a claim to temporal power by the Būyids independent of any caliphal act of delegation; but after 'Aḡud al-Dawla's death, his weaker and squabbling successors were compelled to seek caliphal support and hence pay more respect to the 'caliphal fiction' by seeking validation for the title *Shāhanshāh* directly from the 'Abbasids. As is well-known, al-Kāḡim complied over this when asked by Dhāḡal al-Dawla, but when in 429/1038 the title was introduced publicly into the Baghdad *ḡhazna* for the first time, a near-riot ensued, and the approval of the *fuḡahā'* of the three law schools of the East, the Hanafis, the Maliballs and the Shāfi'is, had to be sought before this ostensibly blasphemous (at least in the eyes of the pious) title could safely be re-introduced from the pulpits (see H. F. Amédro, *The assumption of the title Shāhanshāh by Buwayhid rulers*, in *Num. Chron.*, Ser. 4, vol. v [1905], 393-9, and the detailed and important study of W. Madelung, *The assumption of the title Shāhanshāh by the Būyids and 'The reign of the Daylam* (Dawlat al-Daylam)', in *JNES*, xxvii [1969], 84-108, 168-83). Until approximately the time of the Mongol invasions, *Shāhanshāh* remained an exalted regal title, e.g. the Ismā'īlī Grand Master of Alamūt 'Ala' al-Dīn Muḡammad III (618-53/1221-55) is called al-Mawla al-A'zam Shāhanshāh al-Mu'azzam in one inscription (van Berchem,

Épigraphie des Assassins de Syrie, in *JA*, Ser. 9, vol. ix [1897], 453-504). Subsequently, however, it declined from being a *lahab* into an ordinary *ḡlam* amongst Persian princes and those Turkish ones who at times adopted ancient Iranian nomenclature. As we have seen above in regard to dual titles, the Būyids likewise secured imposing honorifics for the great viziers and secretaries who served them. Notable here is the use of the element *kāfi* 'capable one', and al-Bīrūnī singles out such *alāḡā* of Būyid officials as Kāfi 'I-Kufāt, al-Kāfi al-Awḡad and Awḡad al-Kufāt as 'nothing but one great lie' (*al-Aḡḡar al-Būyīya*, 134, tr. Sachau, *The chronology of ancient nations*, 131).

The Sāmānids [q.v.] in distant Transoxania and then Khurāsān were abstemious in the use of honorifics, and al-Bīrūnī, *op. cit.*, praises them for this, comparing them favourably with the Būyids. The epithets of al-Sa'īd, al-Sadīd, al-Hamīd, al-Rādī, etc., seem to have been applied to them retrospectively after their deaths, and the only clear instance of a *lahab* used by one of the Sāmānids in his own lifetime is that of the last of the line, Ismā'īl b. Nūḡ (d. 395/1005), who styled himself al-Muntaḡir 'the one rendered victorious [by God]', perhaps as a hopeful omen—vainly, as events turned out—for the restoration of his dynasty's fortunes. Yet although the Sāmānids, in practice independent, were usually punctilious in their deference to the 'Abbasids, they did in the second half of the 4th/10th century confer *alāḡā* unilaterally on their great commanders; thus Nūḡ b. Manḡḡr (369-87/976-97) gave the title of Nāḡir al-Dawla to the commander of the Bukḡhārā *ḡhāḡis*, and the Sāmānids' Turkish commanders in Khurāsān received similar titles, e.g. Husām al-Dawla for Tāḡh Ḥāḡḡib and 'Amlid al-Dawla for Fā'ik Ḥāḡḡya (see Bosworth, *The titulature of the early Ghaznavids*, in *Oriens*, xv [1962], 214-15).

The successors of the Sāmānids in eastern Persia and Afghanistan, the Ghaznavids [q.v.], departed, on the other hand, from the path of Sāmānid simplicity, and from the time of the line's founder, Sebūktḡin, onwards, regularly sought from the caliphs numerous honorifics. Those of Sebūktḡin were Mo'īn al-Dawla and Nāḡir al-Dawla or Nāḡir al-Dīn wa-'I-Dawla, perhaps commonly abbreviated to Nāḡir al-Dīn (cf. S. M. Stern, in *Paintings from Islamic lands*, ed. R. Pinder-Wilson, Oxford 1969, 14-16; the question of the exact form of the *lahab* is of some importance for the first appearance of the compound *ḡlam*-type honorifics, see below). By the time of Ibrāḡīm b. Naḡḡḡd (451-92/1059-99), the sultans bore a dazzling array of honorifics, in this case Zāḡir al-Dawla and some twelve others, as well as the ceremonial designation (e.g. for the coinage) of al-Sulṡān al-Mu'azzam al-A'zam 'highly-exalted sultan', a designation probably adopted under Salḡḡḡik influence (details in Bosworth, *op. cit.*, 215 ff., and *idem*, *The later Ghaznavids: splendour and decay, the dynasty in Afghanistan and northern India 1040-1186*, Edinburgh 1977, 55-6).

Compound honorifics in *ḡlam* appear at a slightly earlier date than the *ḡlam* ones, and the award of Nāḡir al-Dīn wa-'I-Dawla to Sebūktḡin would appear to be the earliest instance of a *ḡlam* title; it is certainly the only *lahab* of this type listed by al-Bīrūnī in his *Aḡḡar*, 133-4, tr. 130-1, under the heading 'the holders of *alāḡā* granted by the caliphal court', the remainder being mainly compounded of *ḡlam*, *milla* and *umma*. (Kramers thought that the linking of *ḡlam* and *ḡlam* in titles—see further on this coupling, below—stemmed from a long Islamic tradition

in which these two strands of human existence were regarded as interdependent in this temporal life and their fortunes inextricably interwoven; he also thought that the combination of ideas came 'inevitably' from Persia, see *Les noms musulmans composés avec Din*, 67.]

In the 5th/11th century, usage of the two types of *lakab*, in *dawla* and in *din*, fluctuates, but the coming of the Saljuqs gave a great impetus to the spread of those of the second type. According to the Saljuq historical sources, when Toghril appeared in Baghdad in 449/1058 for the second time, the caliph al-Kā'im bestowed on him the honorifics of Rukn al-Dawla 'pillar of the states' and Malik al-Mashriq wa'l-Maghrib 'king of the east and west' (see Bosworth, in *Cambridge history of Iran*, v, 47); but in practice, Toghril was generally referred to, for the short period of life remaining to him and also retrospectively, as Rukn al-Din. *Dawla* titles seem to have fallen into disuse under the Saljuqs, for the subsequent sultans of the 6th/12th century favoured titles with *din* or, instead of the frequent alliterative coupling of *din* and *dawla* in a title, a further alliteration of *din* and *dhawī*; Malik Shihāb had the honorifics *Dhāl al-Dawla* (whence the name of the *Dhālī* era [q.v.]) and Mu'izz al-Din wa'l-Dunyā, whereas his son Muhammad had that of *Ghāyūth al-Dīn* wa'l-Dunyā. Whether the overshadowing of the *dawla* titles had any theological significance, as Kramers suggested—a preference for those in *din* stemming from the strongly orthodox religious atmosphere of the Sunnī reaction against political Shi'ism, and an avoidance of the non-Kur'ānic term *dawla*, with its connotations of the changes and vicissitudes of blind fate—is unproven, but seems unlikely. But if *dawla* titles became less popular, the Saljuqs had no hesitation in the use of compound titles with *malik* for their viziers and high military commanders (e.g. 'Amīd al-Mulk for Abū Naṣr Kunderī [q.v.] and Niḡām al-Mulk [q.v.] for Abū 'Alī Tūṣī); and the 'Abbāsids themselves came to imitate the Saljuqs in the bestowal of titles expressing the idea of secular power, e.g. al-Maḥtaf's award of the title *Salṭan al-'Ilk*, Malik al-Djuyūsh to his vizier 'Awn al-Dīn Ibn Hubayra [q.v.] in 549/1154 as a reward for expelling the Turks from Wūst. Saljuq practice was also the model for the Khwārazm-Shāhs of the 6th/12th and early 7th/13th centuries; see L. Richter-Beraburg, *Zur Titulatur der Hūwāzīm-Sāhe aus der Dynastie Anūštegin*, in *Archaeologische Mitteilungen aus Iran*, N.F. ix (1976), 179-205.

The Shī'ī Fātimids, the Saljuqs' great opponents in the struggle for influence in the Syrian Desert region and its fringes of Syria and al-Djazira, did not have this reluctance to use *dawla* titles, at least for their viziers and officials. A standard formula for their viziers was al-Wazīr al-Aḡlāl 'most exalted vizier', awarded for instance to Ya'qūb b. Killīs by the caliph al-Mu'izz in 368/979, but at this same time, compound *dawla* and other titles appear for the Fātimids' viziers, e.g. Amīn al-Milla for Abū Muhammad b. 'Ammār, and for their commanders, governors and vassal princes, e.g. Sayf al-Dawla for the Zīrid Yūsuf Bulghma in 361/972, and similar titles for Yūsuf's successors Bādis and al-Mu'izz b. Bādis (see H. R. Ldris, *La Berbérie orientale sous les Zirides X-XII^e siècles*, Paris 1959, 3, 509, when al-Mu'izz in 433/1041 transferred his allegiance to the 'Abbāsids, the Fātimid caliph al-Mustansir awarded the *lakab* of his former vassal, Sharaf al-Dawla, to al-Mu'izz's kinsman, the Hammāmid

al-Kā'id, who returned to the Fātimid allegiance); and Murtaḍā 'l-Dawla for the Hammāmid commander Luṭlu's son Maṣūd in Aleppo in 399/1008 (see M. Canard, *Histoire de la dynastie des Hammāmid*, 1, 710). An individual feature of Fātimid titulature for their viziers was the use of compound titles in *amīr al-mu'minīn*, e.g. Sa'īd Amīr al-Mu'minīn wa-Khāṣṣah for Abū 'l-Kāsim Ahmad al-Dharrārī, and Muṣṭafā Amīr al-Mu'minīn for Abū Maṣ'ūd Saḍāḡa b. Yūsuf al-Falāḥī. Very soon the titulature of these Fātimid officials became remarkably luxuriant and pompous, heralding the later verbosity of Mamlūk titulature in Egypt; thus in 447/1050-1 the vizier Abū Maḥmūd al-Huṣayn al-Yāsi' enjoyed the titles of al-Wazīr al-Aḡlāl al-Awḥad al-Maktū, Sayyid al-Wuzarā' wa-Tāḡī al-Ashyā' wa-Raḡī 'l-Rudāt wa-Dhī 'l-Da'ir, 'Alam al-Maḡd, Khāṣṣat Amīr al-Mu'minīn, to which were later added al-Nāṣir li'l-Dīn, Ghāyūth al-Minshīn, the ensemble denoting the wide extent of his powers, not merely as a vizier but also as chief *ḥāfi* and chief *dhī*.

But in general, Fātimid procedure over the grant of honorifics was on similar lines to that of the 'Abbāsids, as is attested by the texts of such awards (called technically *Amāb al-famā* 'documents conferring eulogy') quoted by al-Kalkashandī from the *Mawā'id al-bayān* of the Fātimid author 'Alī b. Khālaf (a work which was long believed lost, but which has recently turned up in Istanbul, see A. H. Saleh, in *Arabica*, 22 [1973], 192-200, and *ten* [1974] in Suppl.). Here a stereotyped formula is set forth, in which the grant of titles is accompanied by other favours such as the gift of a standard, a sword and a fine mount (*ṣubḥ al-aḡḡḡ*, viii, 341). As in the Sunnī world, the awarding of honorifics was often proclaimed *waḥī* or *orbi* by the Fātimids in Cairo, either before the caliphal palace or from the amroque pulpit; thus al-Husayn b. Dhawānī was in 399/1000 honoured by al-Hākim, receiving a robe of honour and having his newly-acquired title of Kā'id al-Kuwā'id 'supreme commander' read out from the *miḥrāb* [al-Makīd, *Khaṣṣat*, ii, 15; see further on Fātimid titulature in general, Hasan al-Dhahab, *al-Iḥḡāb al-ṣamīyya fi 'l-ta'rikḥ wa'l-maḥāḡir wa 'l-aḡḡḡ*, Cairo 1958, 651., 921.).

After the Saljuq period, i.e. after the 6th/12th century, the dominance of *din* titles was firmly established, not only for rulers and their servants, but also, by what must have been unilateral adoption or else by the general consensus among religious groups, for outstanding spiritual leaders, Ṣūfī shaykḥs, etc., e.g. Naḡm al-Dīn Kubra, Muḡyī 'l-Dīn Ibrā' al-'Arabī, Dhāl al-Dīn Rūmī and Mu'īn al-Dīn Chishtī [q.v.]. In any case, by this time all pretence at the caliph's being the sole dispenser of these honours had been abandoned. A consequence of this was that honorifics began to be adopted according to a method of rough conformity with a person's original *ism*. Al-Kalkashandī has a passage on this custom in *Ṣubḥ al-aḡḡḡ*, v, 483-90, under the heading of *Fi 'l-ḡalāb al-muḡarrar'a 'alā 'l-asmā'*, and the practice clearly dates back to early Mamlūk times, if not before. Thus among the Turkish mamlūks, 'Alam al-Dīn went with the name Saḡḡar, Dhāmāl al-Dīn with Ak Kugh, Huṣām al-Dīn with Hasan or Husayn, 'Alā' al-Dīn with 'Alī, Tāḡī al-Dīn with Ibrāhīm, etc. Even eunuchs had their characteristic combinations of *lakab* and *ism*, e.g. Shudjā' al-Dīn with 'Anbar, as had the Coptic officials of the administration in Egypt, e.g. Tāḡī 'l-Dīn with Wahba (cf. a similar list in al-Suyūṭī's

Risāla fī naṣr al-ḥalā wa 'l-kunā wa 'l-asnā' wa 'l-sibā, ed. Ṣalāḥ al-Dīn al-Munajjid, *Une importante Risāla de Suyūṭī*, in *MFOB*, xlviii (1973-4), 352-4, and also Ḥasan al-Balghā, *op. cit.*, 103-5). This type of usage was carried over into the Ottoman empire, especially amongst the *ḥalās* and *ṣubḥān*, e.g. Badr al-Dīn with Maḥmūd, and the already-mentioned couplings with Ḥasan or Ḥusayn, 'Alī and Ibrāhīm; the alliterative effect often achieved was obviously a factor favouring the adoption of several of these (cf. F. Babinger, in *Isl.*, xi [1923], 20 n. 3).

Whilst the 'Abbāsid caliphate was still a living organism (i.e. till the Mongol sack of Bagdād in 656/1258), the granting of honorific titles remained, at least in theory, a jealously-guarded privilege of the caliphs. Local rulers or provincial governors who maintained the 'caliphal fiction' of Sunnī constitutional theory, that all executive authority derived ultimately from the caliph, sedulously sought a grant of honorifics at the outset of their reigns of governorships; and titles expressing personal closeness or a special relationship to the caliph, such as *Mawla Amīr al-Mu'minīn*, *Walī Amīr al-Mu'minīn* and *Kasīm Amīr al-Mu'minīn*, were especially sought after (early examples of the designation *mawla amīr al-mu'minīn*, say before the beginning of the 3rd/9th century, probably simply expressed a relationship of subordination and dependence, clientship or *walā'*, between the caliph and its bearer, rather than being the grant of an official title; O. Grabar thinks that the attribution of this phrase to the governor of Egypt Ahmad b. Ṭāḥī (q.v.) in 265/878-9 still expressed dependence rather than a title of honour, cf. his *The coinage of the Fatimids*, *ANS Numismatic Notes and Monographs* no. 139, New York 1957, 39-40).

Recognition by the caliph, involving an investiture charter (*ṣahā*, *manshūr*), plus the other insignia of power such as honorifics, a richly-caparisoned charger and banners, might give a contender for power in a disputed succession the edge over his opponent. In 421/1030 the Ghaznavid prince Mas'ūd b. Maḥmūd hurried eastwards from western Persia to Afghanistan in order to confront his brother Muḥammad, who had been proclaimed sultan by the army in Ghazna. At Nišāpūr he received from the caliph al-Kādir an investiture diploma for the Ghaznavid empire plus a strong of honorifics, *nuṣṣa-i sulṭānī* as Bayhaḳī calls them, *Nāsir Dīn Allāh*, *Ḥāṭir 'Ubbād* (or 'Ubbād) *Allāh*, *al-Muntakim min 'Adā' Allāh* and *Zahīr Khālīf al-'Umarī* *Amīr al-Mu'minīn*. Mas'ūd ordered that details of the award should be proclaimed and publicised in the towns of Khurāsān, and it proved to be a valuable propaganda weapon in his successful wresting of the sultanate from Muḥammad later that year (Bayhaḳī, cited in Bosworth, *The sultans of the early Ghaznavids*, 224-5, and idem, *The Ghaznavids, their empire in Afghanistan and eastern Iran 944-1040*, Edinburgh 1963, 54).

Not surprisingly, the 'Abbāsids held on their privilege of granting these titles in the Sunnī world for as long as possible. The caliph personally was the fount of honours, and the precise form in which they were granted had to be rigorously observed; the Mamlūk author Ibn Faḍl Allāh al-'Umarī (see *Faḍl Allāh*) states, concerning the correct form of address used by kings for governors and lesser rulers, that there was an inflexible rule in ancient times 'that no king was ever addressed except by the precise honorific granted to him from the caliph

al-ḥalā, with no addition or omissions', *bi 'l-maṣṣa min ḡayr ṣayda waḥd naḥṣ' (al-Ta'rif bi 'l-maṣṣa al-sharīf*, Cairo 1312/1894-5, 86-7). Conversely, the unilateral and unauthorised assumption of *alḥā* by a person was an act of *lā-majāzī*, a virtual declaration of rebellion against the caliph or sovereign, as happened in Khurāsān during the late 4th/10th century; the ambitious military commander of the Sāmānids, Abū 'Alī Simjūnī, in 381/992 rose against his master Nūḥ b. Manṣūr, appropriated all the revenues of Khurāsān and styled himself (*ṣalḥabā*) *Amīr al-'Umarī*, *al-Mu'ayyad min al-Samā'* 'the heavenly-guided supreme commander' (*Uṭbī-Manṣūr, al-Ta'rif al-Yamīnī*, Cairo 1286/1869, i, 125).

Since the granting of such titles and honours created status and prestige for the recipients, it was natural that the 'Abbāsids, in the period of penury into which they had fallen by the early 4th/10th century, should expect a return for this service; during the Būyid period in particular, when the caliphs were reduced to subsisting in straitened circumstances as pensioners of the Būyids, this sale of honours, normally in return for presents, became all the more vital for them. The grants seem to have become in time regulated by something like a fixed tariff. In Bayhaḳī's *Ta'rif-i Mas'ūd*, 293, there is an account of the detailed discussion at Mas'ūd of Ghazna's court in 422/1031 about the presents to be sent to the new caliph al-Kā'im, from whom the sultan expected confirmation of his territories plus a grant of fresh *alḥā* and other insignia of royalty, much of this discussion revolved round what was the usual *raṣ* or practice here, with the adducing of precedents from the Sa'fīd period.

Inevitably, voices were raised against the over-lavish granting of honours and titles, with a consequent cheapening in their value. Already the poet and litterateur Abū Bakr Muḥammad b. al-'Abbās al-Khārazmī (d. 383/993 or 393/1003 (q.v.)) had complained in a satire.

What do I care that the 'Abbāsids have thrown open the gates of *ḥalā* and *alḥā*?

They have conferred honorifics on a man whom their ancestors would not have made doorkeeper of their privy.

This caliph of ours has few *dirhams* in his hands, so he lavishes honorifics on people.

(*al-Ḥaṭībī, Yaḥyā al-dahr*, Cairo 1375/1956-8, iv, 230; cf. Mez, *Die Renaissance des Islāms*, 78-9, Eng. tr. 86-8). *Ḥalā al-'Abbā'* (d. 448/1056) has a long passage in his *Kiṭāb al-Waṣanī*, ed. 'Abd al-Sattār Farājī, Cairo 1958, 166 ff., lamenting the changes between the time of the viziers Ibn al-Furāt and 'Alī b. 'Isā (the latter of whom had refused to increase the designation of a certain governor above the simple wish 'May God exalt him'), although threatened for his obduracy), and even between the time of the viziers of 'Aḍud al-Dawla and Šams al-Dawla, and the position at the end of his own lifetime. His main grievance is that social and functional differentiation becomes impossible when titles lose their real meaning, and his conclusion is that 'Inevitably, official positions have declined in status where they have been reduced to one level (in titulature), and have become cheapened when they have all been made equal. They no longer possess any glory which one can admire, nor any splendour to be prized. Indeed, I have heard our master the caliph al-Kā'im bi-*al-*Ḥalā—may God prolong his reign!—say that there is no designation

left for a deserving person". Hülal's contemporary al-Bīrūnī likewise moralisingly observes that when the 'Abbāsids started rewarding their adherents with vain *dawla* titles, extending even to tople ones, their empire foundered: "In this way, the matter became utterly opposed to common sense and clumsy to the highest degree, so that he who mentions them gets tired before he has hardly begun, he who writes them loses his time and writing, and he who addresses [people] with them runs the risk of missing the time for prayer" (*al-Aḥḥād al-bāḥiyya*, 132, tr. 129). By the end of the 5th/11th century, the process of debasement had gone even further in the Muslim East, and the Saljūq vizier Nizām al-Mulk complains volubly, in the section of his *Siyāsat-nāma* on titles (ch. XI, ed. H. Darke, Tehran 1340/1962, 189-200, tr. idem, *The book of government or rules for kings*, London 1960, 130-63) that "There has arisen an abundance of titles, and whatever becomes abundant loses value and dignity", and that "In these days, the meanest official gets angry and indignant if he is given less than seven or ten titles". In particular, Nizām al-Mulk denounces the confounding of *dawla* titles, formerly reserved for military commanders and the Turks, with the *malik* and other titles used by viziers, governors and other civilian and religious officials and dignitaries, so that there results the absurdity of a Turkish general, illiterate, tyrannical and totally ignorant of the *Shari'ā*, being given titles like *Tāj al-Dīn* "crown of the faith" or *Mufīd al-Dīn* "succourer of the faith". He places the time when the floodgates were opened in the Saljūq empire to the indiscriminate and incongruous granting of honorifics as being the years after Alp Arslan's death (so. after 465/1072 and the accession of Malik Shihāb; these strictures on the trends of the latter sultan's reign must be regarded as from a later hand than Nizām al-Mulk's, perhaps from that of his copyist Muḥammad Maghribī).

3. The Muslim West. Most of what has been said so far relates primarily to the central and eastern lands of Islam, so. Egypt and the lands further east. The vogue for honorifics followed a rather different course in the Muslim West. In general, their use was less developed in the more puritanical West, where there was a tendency to regard elaborate and fancy names and titles as effete and Persianising phenomena. Hence the term *al-kibā maghribiyya* is not infrequently used by Maghribī writers in disparaging references to them, e.g. by al-Makhḥarī and by the Maghribī traveller to Egypt and Syria just before the Ottoman conquest, 'All b. Maymūn al-Idrīsī. This last shows himself, in his opusculum *Bayān ghurba al-Islām bi-wāṣiṭat gurfay al-mulafāḥḥina wa 'l-mulafāḥḥina min al-Maghrib wa 'l-Shām wa nā yallihā min bilād al-'Adnam* (written in 916/1510, see Brockelmann, I, 152, S II, 153), as particularly severe against the habit of the religious scholars (the first of the two classes mentioned in the title of his work) of taking honorifics like *Shams al-Dīn* and *Zayn al-Dīn*, which he stigmatises as *bid'ā* "heretical" and *ghayyāt* "devilish", in preference to the plain good old *aswā* names Muḥammad and 'Umar, and of insisting on the use of these honorifics in addressing them (see Godtāher, *Alt b. Mejmūn al-Maghrib und sein Sittenbild der östlichen Islam*, in *ZDMG*, xxviii [1874], 306-10 = *Gesammelte Schriften*, vi, 12-18).

Already the Idrīsī *gharifs* of Morocco, with their claims to 'Alid descent, had styled themselves *imāms*, and the Kharrigī Rustamids of Tahart

utilised not only this last designation but those of "caliph" and *asrār al-mu'min* also; these powers, of course, rejected the legitimacy of 'Abbāsid rule, whereas the Agghābids of Ifrīqiya, faithful in theory at least to the Baghḍād connection, never took such liberties in matters of titulature. The rise of the Fāṭimid *dawla* in North Africa during the early years of the 4th/10th century nevertheless introduced fully to the Maghrib a titulature with messianic implications and one wholly opposed to the 'Abbāsid moral and constitutional position (see above, Section II), and the new trend inevitably had repercussions in Muslim Spain. A dynasty like the Spanish Umayyads, which had to defend itself on the cultural and ideological planes against both the distant 'Abbāsids in Baghḍād and, more pressingly, against the aggressively Shi'ī Fāṭimids (on the propaganda offensive of the Fāṭimids directed against the Spanish Umayyads and its effects, see M. Canard, *L'imperialisme des Fatimides et leur propagande*, in *Afrique Alg.*, vi [1942-7], 162-9), could not but be influenced by the political and religious propaganda value of honorific titles. When the greatest sovereign of the family, 'Abd al-Rahmān II, adopted after his victory at Bobastro over Ibn Ḥafṣūn in 315/927 the *laqab* of al-Nāṣir li-dīn al-Fīṭh, together with the designations of "caliph" and "commander of the faithful", he thus placed himself firmly within what had now become the mainstream 'Abbāsid tradition of theologically-oriented caliphal titulature. His lesser successors studiously followed his example till the end of the dynasty in 422/1031, so that we find e.g. *Hiḥām II al-Mu'ayyad*, *Sulaymān al-Musta'īn*, etc., as did the Hammūdid rulers who alternated with the last lamānat Umayyads, e.g. al-Ḥāsim al-Ma'mūn (see Lévi-Provençal, *Hist. Esp. musul.*, i, 132-3, ii, 21, 115-16). The *mulūk al-tawā'if* who followed them during the period of the disorder and fragmentation in the middle decades of the 5th/11th century followed suit, with a disparity between the actual extent of their authority and the grandiloquence of their titles which attracted the satirical or ironic comment of contemporaries. Thus Ibn Khaldūn in two places in his *Prolegomena* quotes verses of the panegyrist of the Zirids, Ibn Rashīk (q.v.).

What makes us feel humble in Andalus is the use of the names "Mu'tasim" and "Mu'taqid" there. Royal epithets (*al-kibā mamlaka*) not in their proper place, like a cat that by pulling itself up imitates the lion.

(*Muḥadditha*, ed. Quatremère, i, 281, 418, tr. Rosenthal, i, 316, 470, attributing the verses to Ibn Sharrāf (q.v.); al-Mu'tasim and al-Mu'taqid were honorifics adopted by princes of the Hammūdids of Málaga and the 'Abbāsids of Seville respectively), in matters of titulature, the Nasrīds of Granada "demeantled" titles as in the tradition orientale adoptée par les Umayyades de Cordoue, fondée sur l'autorité absolue du souverain et sa caractère semi-religieux" (R. Arié). Like their contemporaries amongst the rulers of the Muslim West, they used the title of Amir al-Muslimīn, known from Ahnorauid times (see below), although the Maṣlūḥī chancery in Egypt simply addressed them in official documents as *Shah Ḥamrā* (Ḥamrā, according to Ibn Naṣr al-Dīnīyāh, cited by al-Kalkasandī in *Subḥ al-a'ghā*, vii, 413. Certain Nasrīd rulers assumed, as Arié implies, *al-kibā* of the usual theocratic pattern, such as the dynasty's founder, Muḥammad I, called al-Ḥafīḍ bi'l-lāh, and on returning from a successful expedition against Castile, Muḥammad V assumed that of al-Ḥafīḍ

b'ilāh (Ard, *L'Espagne musulmane au temps des Nasrides* (1232-1492), Paris 1973, 185-7).

Yet although the trends of the last filtered through to the Iberian peninsula in considerable measure, the effect of these trends tended to operate at the highest level only, that of the monarchs themselves. The Spanish Muslim sovereigns were much more careful over the bestowal of honorifics to their servants, ministers and generals than were the eastern dynasts. Ibn Abī 'Amir of course assumed the title of al-Manṣūr (q.v.), for which his role in the state at the end of the 4th/10th century befitted him, on his return from the expedition against León in 374/981, and he was followed by his son 'Abd al-Malik, styled al-Muṣṭafī (q.v.). Other isolated instances occurred, such as the award by al-Nakām II of the title *Ḍhu 'l-Sayfayn* in 363/974 to the general Ḡhālib on his victorious return from a campaign in the Maghrib, and the bestowal of the title *Ḍhu 'l-Wizaratayn* in 367/975 to both Ḡhālib and Ibn Abī 'Amir, one borne previously only by the general charged with defence of the Spanish frontier against the Christians; and over three centuries later, the great vizier of the Nasrīds, Ibn al-Khaṭīb (q.v.), was to enjoy the *alḥāb* of *Lisān al-Dīn* and *Ḍhu 'l-Wizaratayn* (see Lévi-Provençal, *Hist. Esp. musul.*, II, 194, 213, 215-16, 228-9).

North Africa remained faithful for a longer period to the pontifical ideals of an equalitarian, earlier form of Islam, in its disapproval of pompous titles, once the interlude of the rise of the Ismā'īlī Tātimids was over and the domination of Mālikī orthodoxy was re-established under the Almoravids. The Almoravids originally recognised 'Abbāsid authority, but to mark the reality of their own power in North-West Africa adopted—whether of their own accord or with the approval of Baghdād is unclear—the title of Amīr al-Muṣlīmīn. Thus there was created, from the constitutional point of view, what van Berchem conveniently called a "sub-caliphate", whose rulers recognised an authority higher than their own and did not therefore adopt a titulature proclaiming their total independence and non-recognition of any superior power. The Almohads, however, came to power in the middle years of the 6th/12th century on a wave of messianic enthusiasm and under a charismatic leader, the Mahdī Muḥammad b. Tūmart (see VAN TŪMART), and took up again in some measure the pattern of titulature instituted in the Maghrib two centuries before by the Fātimids. During Ibn Tūmart's lifetime, his lieutenant 'Abd al-Mu'mīn was styled the Mahdī's *ḡhā'if* and Amīr al-Mu'mīnīn, ac. of the Almohad faithful, and on Ibn Tūmart's death, he became the *imām* of the community, with the title of al-Kā'im bi-amr Allāh; from the reign of Abū Yūsuf Ya'qūb al-Manṣūr (380-95/1184-99) onwards, the Almohad sultans are found with honorifics of the familiar theocratic pattern (see van Berchem, *Titres califaux d'Occident, à propos de quelques monnaies Mérinides et Zayyanides*, in J.A. Ser. 10, vol. IX (1907), 263-79, and the important section on the title Amīr al-Mu'mīnīn in Ibn Khaldūn, *Muqaddima*, I, 408-14, tr. I, 405-75).

The pattern of titulature was in this way established for the sovereigns of the three successor-states in the Maghrib and Spain to the Almohads, sc. the Nasrīds (for whom see above), the Marinīds of Morocco and the Hafsīds of Ifrīkiya. The Hafsīds' eponymous ancestor was the Mahdī Ibn Tūmart's celebrated companion and partisan, Ṣhaykh Abū Ḥafṣ 'Umar, and the Hafsīds continued to use in

reference to themselves the term al-Muwahhidūn "those who proclaim God's unity" (an assumption admitted by the secretaries of the Mamlūk chancery in Cairo, who used the titles *Za'īm al-Muwahhidīn* "chief of those proclaiming God's unity" and *Kudwat al-Muwahhidīn* "exemplar of those...") in addressing them, *Ṣubḥ al-a'ṣā*, VI, 31, 65). The most significant factor in the pattern of Hafsīd titulature, as it evolved in the 7th/13th century, was their claim to the caliphate, put forward by the second ruler of the dynasty, Abū 'Abd Allāh Muḥammad (647-75/1249-77) in 650/1253. This was buttressed firstly by the attempts of the family's apologists to impute to them a Kurashī descent from 'Umar b. al-Khaṭīb (whose *awṣay* had been Abū Ḥafṣ), so that the sultans proudly termed themselves *imn al-ḡhulafā'* *al-awṣay* *al-nabhiya*; and secondly by the recognition of the Sharīf of Mecca and, briefly, of the Mamlūks of Egypt even, after the extinction of the 'Abbāsid caliphate in Baghdād by the Mongols and before its revival in Cairo, whence also the Hafsīds' adoption of the characteristically caliphal designation of Amīr al-Mu'mīnīn (although their rivals, the Mamlūks, would only allow them the "sub-caliphate" one of Amīr al-Muṣlīmīn), and of theocratic *alḥāb* on the exact 'Abbāsid pattern (al-Mustanṣir and al-Mutawakkil being especially favoured by various members of the dynasty), in order to demonstrate the genuine nature of their caliphal claims and the continuity of their titulature with the older 'Abbāsid practice.

Looking forward to what will be said below about the Ayyūbīd and Mamlūk usage of such titles, we may also note that the Hafsīds, deeply involved in struggles with Christian powers such as Spain and France, seeking a foothold in North Africa, assumed titles reflecting their roles as leaders in the holy war, such as al-Muḡāhīd li sabīl Allāh "he who fights in God's way", and allowed themselves to be addressed impersonally by titles of respect like al-Maḡām al-*alī* *al-ḡhā'if* and al-*ḡhā'if* al-*ḡhā'if* (the latter expression being used by the Bey of Tunis until the proclamation of the republic there as the equivalent of the European diplomatic forms "His Majesty", "Son Altesse", etc.). See on all these questions of Hafsīd usage, van Berchem, *Titres califaux d'Occident*, 283-93; R. Brunschwig, *La Berbérie orientale sous les Hafsides des origines à la fin du XVI^e siècle*, Paris 1940-7, I, 40, II, 7-17.

The Marīnids for long accepted the supremacy of the already-established Hafsīds, hence they (and also their neighbours of Tāmenen, the 'Abd al-Wādīd or Zayyanids) normally used the lesser title of Amīr al-Muṣlīmīn rather than the fully caliphal one of Amīr al-Mu'mīnīn; many of the Marīnid sultans also bore theocratic-type *alḥāb* like the Hafsīds. But there were episodes when certain sultans did assume the higher title. For a short period of 9 months in 708/1308-9, Abū 'l-Rabī' Sulaymān adopted it on the coins which he issued conjointly with his Nasrīd ally Muḥammad III, apparently as an act of defiance to the Hafsīds. Furthermore, Abū Inān Fāris al-Mutawakkil (749-59/1348-59) seems to have employed the title as a lever to secure the deposition of his father 'Alī, who had already styled himself in his official documents Amīr al-Mu'mīnīn and *ḡhā'if* al-Muwahhidīn, Almohad titles par excellence (and also *Rakīyyat al-Salaṭ al-Karīm* in allusion to the Berber Marīnid's pretensions to an Arab genealogy). The mention in Ibn Khaldūn, *Muqaddima*, I, 474, tr. I, 472, of the "Zanāta rulers", sc. the Marīnids, using the title Amīr al-Mu'mīnīn must be a reference to this episode, though subsequent

sultans reverted to the lesser title *Amir al-Muslimin*. The whole question of this alternation of titles was examined in great detail by van Berchem in his *Traité califien d'occident*, 245-335.

With the decline of the Marīnids and their khusmen the Wattāsids, the Saʿīdī Sharīfs from southern Morocco rose to power in the early decades of the 10th/16th century on a wave of Moroccan enthusiasm for the expulsion of Turkish Algerian influence and of renewed Islamic maraboutist fervour for *jihād* against the Portuguese encroachers on the Moroccan coastlands. In an atmosphere which was thus fed on religious enthusiasm and popular messianic expectations of a new defender of the Muslims, it is not surprising that the first of these Sharīfs of the Sūs, Muḥammad (d. 924/1517-18) assumed the caliphatic titles of al-Mahdī and al-Kāʾim bi-amr Allāh, reminiscent of Fatimid and then Almohad usage. Similarly religiously-motivated honorifics were adopted by several of his successors, e.g. Muḥammad al-Mutawakkil, Ahmad al-Mansūr, etc. One should also note the very characteristic forms of address used by both the Saʿīdī sultans and their ʿAlawī successors, those of *Mawlāy/Mulāy* "my master" and *Sayyidū/Sidī* "my lord", as also by other high dignitaries, princely and religious, in the Maghrib. The form *Mawlānā* "our master" had been used by the Nasrids during the 8th/14th century, and the Christians of Spain in the 9th/15th century often referred to the ruler of Granada as *Muley* (Ardé, *L'Espagne musulmane au temps des Nasrides*, 1871 whilst both *Mawlānā* and *Sayyidunā* had been early used by the Hafsids in their official documents. The form with the first person singular pronoun affix, *mawlayyid* > *mawliy* apparently appeared amongst the Hālsids in the course of the 8th/14th century, but is only at first attested in Christian sources, e.g. the "Muley Bolabab" = Abu ʿl-ʿAbbās Ahmad II al-Mustansir of a Latin document of 1391 (cf. Bronschwig, *Hafsides*, II, 15-16).

4. The post-caliphate period. With the strengthening of the grip of Turkish and Kurdish dynasties over the central and eastern lands of Islam from the 5th/11th century onwards, regal, military and ministerial titulature increased in complexity and grandiloquence. After the extinction of the Baghdad caliphate and the establishment by the Mamlūks of a puppet line only of ʿAbbāsids in Cairo, the granting of titles became in practice the responsibility of the Mamlūk chancery or *Dīwān al-Inṣāʾ*, so that this office became the concentration-point of a great deal of expertise in these questions. In any case, the correct ordering and recounting of all the various components of the titles of rulers and dignitaries had always been vital in epistolary and other official usages. The various manuals for secretaries and officials, stretching back to Fātimid times but reaching their full florescence in a great document-producing civilisation like that of the Mamlūks, devote much space to forms of address and titulature. In the most monumental of these manuals, al-Kalkashandī's *Subḥ al-aʿshā*, the first bāb of the third *makhḍa* (v, 423-506, vi, 1-188, cf. W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 110-13) is devoted to the topic of names of all kinds, but with special reference to *al-kāb*, which are traced from the origins of Islam to the author's own time, the 9th/15th century. Al-Kalkashandī has several lists of titles, e.g. of those which he calls "honorifics of more recent times", *al-kāb mawḍūʿāt*, such as *nāʾib*, *ṣāḥib*, *mushrif*, *awḡāʾib*, *ustād al-dar*, *hukmāʾidār*, *darwāḡid*, *amir al-akḥḥur*,

etc.—this last class of titles being descriptive of offices rather than *al-kāb* in the true sense of honorifics as we have been discussing them.

Of greater interest for our present purpose are al-Kalkashandī's numerous pages on the protocol of correct address, when addressing the caliph or sultans downwards. Many delicate and subtle distinctions are stressed here: thus *al-maʿjlis al-salmī/al-salmayy* (with *yāʾ mawḥaddada*) is a higher designation than *al-maʿjlis al-salmī* (with single *yāʾ*); *al-maʿjlis al-kādī* is higher than *al-maʿjlis al-ḥāḍi*, and *al-maʿjlis al-ḥāḍi* higher still (*Subḥ al-aʿshā*, vi, 121 ff.; cf. M. Gaudelroy-Denomyne, *La Syrie à l'époque des Mamelouks d'après les auteurs arabes*, Paris 1923, introd. LXXXII ff.). Even heathen rulers and notables were not to be denied their honorifics, though these were naturally on a lower level than those accorded to Muslim equivalents; the Mamlūk chancery had, of course, a sphere of diplomatic contacts embracing many non-Muslim powers, from the Christian empire of Byzantium and the Latins of the Western Mediterranean to the still-pagan Turkish and Mongol rulers of Inner Asia. As an example, we might cite the titles used in addressing the Doge of Venice (Dök al-Bunduk-lyyal): "al-Dök al-Djallī, al-Mukarram, al-Mubajjal, al-Muwakkar, al-Bajal, al-Humām, al-Dughām, al-Ghadanfār, al-Jhaṭr, Maḍj al-Milla al-Nasrāniyya, Fakhr al-ʿIṣābiyya, ʿImād Banī ʿl-Maʿmūdīyya, Muʿizz Papa Rūmiyya, Sādk al-Mulūk wa ʿl-Salāṭīn N.". It such titulature was used for infidels, the luxuriance of contemporary practice for Islamic addressees may be judged!

Only some of the salient features of Ayyūbīd and Mamlūk honorific titulature can be mentioned here; the existing documentation is so rich that a whole monograph could easily be written on the topic, and indeed, much of the material used by Hasan al-Bāghā for his book derives from these two periods and from the Syrian and Egyptian milieu; such material from the Mamlūk period has further been used to good effect by Muḥammad Bakr al-Futayrī in his study, based in the first place on coin legends, *al-Kawāʾim wa ʿl-kāb ʿalā suḥab al-Mamlūk al-Bahriyya wa ʿl-Burḡiyya ʿl-Mīr wa ʿl-Shām*, in *al-Maʿrūd*, IV/1 (1975), 55-104.

All the Ayyūbīd sultans, and following them the Mamlūk ones, bore honorifics of the *al-Dunyā* wa ʿl-Dīn pattern—continuing here Saljūq practice—and these appear in inscriptions and official documents, although for less formal usage a shorter form in *al-Dīn* only seems to have been current. Especially characteristic of the Ayyūbīds was the use of an honorific composed of *al-Maḥk* plus a laudatory epithet (e.g. al-Malik al-Kāmil, al-Malik al-Muʿazzam) beginning with *Salāḥ al-Dīn*'s title of al-Malik al-Nāsir bestowed on him by the Fātimid caliph al-ʿAdil when he appointed *Salāḥ al-Dīn* as his vizier in succession to Shīrkāh in 564/1169. Titles like these had been known in the Fātimid caliphate for some time, and al-Ḥāfi's vizier Ridwān b. Walakshī had already in 531/1137 borne the titles of al-Sayyid al-ʿAdil al-Malik al-Aḥḍaf. The inscription on the Khān al-ʿAkāba to the south-east of Lake Tiberias by its founder, ʿIzz al-Dīn Aybak, describes him as al-Malik al-Muʿazzam "connected with al-Maḥk al-Muʿazzam", etc. with *Sharaf al-Dīn* ʿIzz b. al-Malik al-ʿAdil Sayf al-Dīn, at that time (610/1213-14) governor of Damascus for his father and not yet an autonomous Ayyūbīd prince; these titles were not therefore confined under the Ayyūbīds to reigning princes only (van Berchem, *Une ara-*

busche Inschrift aus dem Ostjordanlande, 89]. from the Ayyūbids, titles of this type spread to the Mamlūks, and were used by the sultans, e.g. al-Malik al-Mu'izz for Aybak and al-Malik al-Kāhir and then al-Zāhir for Baybars. Such titles were also adopted unilaterally by presumptuous, often rebellious, *amirs* and governors, e.g. that of al-Malik al-Muḍḍahid assumed by 'Alam al-Din Sanjar al-Halabi after the murder of Kutuz in 658/1260, and the fashion spread to powers dependant upon or culturally influenced by the Ayyūbids and Mamlūks, such as the Rasūlids of Yemen, whose rulers, from al-Malik al-Manṣūr Nūr al-Din 'Umar onwards in 626/1229, all had honorifics of this type (see al-Baḥā, 498 ff.).

The titulature of the Mamlūk rulers and of their *amirs* was particularly complex. The title Sultan [p.v.], though certainly known in the Ayyūbid period, had not been widely used by the Ayyūbid monarchs, but was now extensively adopted by the Mamlūk ones. Each of the sultans bore honorifics of the characteristic Ayyūbid type compounded with al-Malik, as discussed above, and also titles in al-Dunyā wa 'l-Dīn (see also above). But because of their military slave origin, the Mamlūk sultans and *amirs* usually further bore special *nisbas* relating to their ethnic or local origins, their early professional training or their affiliation to the household of their masters. Thus sultan Barḳūk [p.v.] had the *nisba* of al-Yalbughāwī because he had been the *mamlūk* of the general Yalbughā al-'Umari, and Baybars [p.v.] that of al-Ṣāḥibī from his original master, the Ayyūbid al-Malik al-Ṣāḥib Naḍm al-Din Ayyūb; the general Ḥusām al-Din Ḍardamī was called al-Muḍḍih from the slave dealer who had sold him; and both the sultan Kāḥwūn [p.v.] and the *amir* Ḥamā al-Dīn Soukūr were called al-Aḥf because they had been bought for 1,000 (*al*) *dīnārs*. Although these names are in form technically *nisbas*, they were not regarded as in any way derogatory, but were, rather, a source of pride to the holders and may in this wise be regarded as honorific titles.

One class of *laḳāb* borne by some early Mamlūk sultans may be characterised as "quasi-territorial" or "quasi-ethnic", i.e. those titles in which the ruler claims lordship over particular regions and/or peoples. Already al-Malik al-Ṣāḥib Naḍm al-Din Ayyūb had grandiloquently styled himself *Shahriyār al-Sha'm* Sultan al-'Arab wa 'l-'Aḡamī Ṣāḥib al-Haramayn al-Sharifayn Malik al-Barraiyn wa 'l-Baḥrayn Malik al-Hind wa 'l-Sind wa 'l-Yaman Malik Ṣan'a' wa Zabīd wa 'Adnan Sayyid Muḥūk al-'Arab wa 'l-'Aḡamī Sultan al-Maghārik wa 'l-Maghārib (RCEA, xi, no. 4308), and in certain inscriptions of the Mamlūks Baybars and Kāḥwūn we find headship over al-'Arab wa 'l-'Aḡamī extending to al-Turk and even al-Daylām (= the Mongols here?) (ibid., xii, no. 4817, etc.).

A notable feature of the Mamlūk age was the strongly orthodox Sunni atmosphere, now that the very seat of the 'Abbāsid caliphate had been transferred to Cairo and the Mamlūk rulers had become the principal defenders of Islam. This stress on orthodoxy appears naturally in the Mamlūks' external policy, against such assailants of the *Dār al-Islām* as the Mongols and the Christian Franks and Armenians, and in their internal policy as repressions of Muslim sectaries like the Nuṣayris and Ismā'īlīs. Under the stimulus of an increased religiosity, both in official theological circles and in the sphere of popular religion and mysticism, the duty of *ḡalāḍ* was exalted. Whence the frequency in Mamlūk titulature of designations like al-Muḍḍahid,

al-Muthāḡḡir, al-Murāḡib, al-Ḥāḡib, al-Muḡḡid, etc., though these had already appeared under the Salḡuqs, the Atabegs and the later Fāḡimids as a reaction to the landings of the Frankish Crusaders (cf. al-Muḡḡid as a title of the Būrid Atabeg Tuḡḡigin in a Damascus inscription of 524/1130, RCEA, viii, no. 3034, and also as a title of 'Izz al-Din Aybak in the *Khān* al-'Aḡabe inscription, van Berchem, *op. cit.*, 104). The proximity now of the seat of the caliphate and this atmosphere of religious exaltation and bellicosity probably gave an impetus also to the increased popularity of a type of *laḳāb* already well-known, that compounded with one of the titles of the caliph or sultan, and expressing close dependence on the supreme ruler, the enjoyment of his favour or support for him and the furtherance of the faith. Thus Ṣāḡib al-Dīn, at the time of his recognition as ruler by the 'Abbāsid caliph, adopted the title of *Khān* Amīr al-Mu'minīn, and others of this type include *Thiqat* Amīr al-Mu'minīn, 'Umdat al-Mulūk wa 'l-Salāḡin, Nuḡrat al-Islām wa 'l-Mushmīn, etc. Those titles which included as one of their elements the calphal title *par excellence*, Amīr al-Mu'minīn, were naturally the highest-regarded, and al-Kāḡyashandī arranges the different forms which this class of title took in a hierarchy of status. *Kāḡim* Amīr al-Mu'minīn is the highest, and may only be borne by the sultan's sons or used in correspondence with certain neighbouring Muslim princes; 'Adud Amīr al-Mu'minīn is the highest title which can be used for the sultan's provincial governors; *Wālī* Amīr al-Mu'minīn can be used by high civil officials and by religious scholars, and ranks above Ṣāḡib/Safwat Amīr al-Mu'minīn; and so forth (Ṣāḡib al-'a'ḡā, vi, 108-9).

The type of honorifics classified by al-Baḡhā, *op. cit.*, 83 ff., as "those indicating place and status", *alḡāb makhāḡyḡa*, were used as indications of reverence and humility in addressing or referring to the great. They had already been used in the heyday of the 'Abbāsids, for in the vizierate of Ibn al-Furāt there had arisen the practice of addressing the caliph indirectly as *al-Ḥāḡama*, in effect, "the one to whom service is due", and Hīal al-Ṣāḡp states that what had originally been just a formula of *ḡarba*, ingratitude, soon became a *swama*, compulsory practice (cf. Tyan, *Institutions du droit public musulman*, i. *Le califat*, 488). By the time of the later 'Abbāsids, we find the calphs regularly referred to in epistolary style (e.g. in such sources as Abū Ḥāḡma and the *Kāḡf al-Pādī*) by such circumlocutions as al-Ḥāḡab al-Sharīf, al-Mawḡḡid, al-Sharīf, Naḡām al-Rahma, etc. The Būyid and Salḡūḡ usage of al-Ḥāḡra (see above) is clearly a precursor of these expressions, although by the Mamlūk period, al-Ḥāḡra had declined from being a form of address suitable for caliphs, as in al-Ḥāḡra al-Sāmīya, into being used in addressing civil officials, infidel foreign rulers and the Coptic Patriarch in Egypt, according to al-Kāḡyashandī, Ṣāḡib al-'a'ḡā, v, 498. These "honorifics indicating place or status" enjoyed a great expansion in Ayyūbid and Mamlūk times. That of al-Maḡḡis spread under the former dynasty downwards from the sovereign to the great men of state, so that by al-Kāḡyashandī's time it was regarded as essentially a title for the "neo of the sword and the pen", but somewhat below al-Ḥāḡab. Hence towards the end of the Ayyūbid period, the ruler tended to adopt instead the form al-Maḡām al-'Āḡī or al-Maḡām al-Aḡḡarī. This usage was followed by the Mamlūks, so that Ibo Ṣhīḡh, for instance, says in

his *Ma'dim al-ḥabāb* that al-Maḥām and al-Makarr are the highest *alḥab* and are exclusively royal (*shih*, vi, 495-6, where it is also stated that the reference in such titles is to the seat of the ruler's power or his capital).

Van Berchem's opinion was that the study of mediaeval Islamic honorifics was only of value for the study of administrative institutions, and that these titles only had historical significance in so far as they were linked with specific offices—"Iose Ehren-titel haben so gut wie keinen Werth" (*op. cit.*, 105). As already noted above, Kramers combined this negative view, suggesting that the nature of these honorifics reflected the religious and cultural atmosphere of their time, e.g. that the later predominance of *shih* titles over *ḥabāb* ones coincided with the Sunni reaction against political Shi'ism and against external Christian pressure. Whether certain *shih* honorifics did owe their popularity in the Iranian world to the fact that they resembled traditional names, e.g. Farid al-Dīn and Farīdūn/Āfrīdūn, Bahā' al-Dīn and Bahdā, and Kiyām al-Dīn and Kāmdīn (*Les noms musulmans composés avec Dīn*, 63-5), seems impossible to prove or disprove.

5. The period of the great empires. The use of honorifics continued in the great empires of later mediaeval Islam, i.e. those of the Indo-Muslim sultans, the Ṣafawids and the Ottomans, almost down to modern times.

The titulature of the first Muslim dynasties to be permanently established in the northern Indian plain, the Slave Kings of Dhill and their successors, inevitably followed *grasso modo* the pattern set by their original master, the Afghān Ghūrids (q.v.), who had in their turn continued in the ways established by the power which they had overthrown in the later 6th/12th century, the Ghaznawids (for Ghaznawid titulature, see above, 3, and for that of the Ghūrids, the information given in the *Tabaḥat-i Nāṣiri* of Minhāḥ-i Shāḥī Dīrāzādī (q.v.), who is always careful to detail the titles of his Ghūmī forebears, as also those of the Dhill sultans contemporary with him).

The Slave Kings, essentially the Turkish military commanders of the Ghūrid sultan Ṣulḥāb al-Dīn or Muḥḥ al-Dīn Muḥammad (d. 604/1206 [see GÖRÖS]), followed their old masters in favouring on the whole *alḥab* in *shih*, whence Kutb al-Dīn Aybak, Shāḥ al-Dīn Itutmush (q.v.), etc. However, as both Dīrāzādī's information and the contemporary inscriptions show, there were many variants and elaborations. Thus Aybak appears in an inscription of the Kuwwat al-Islām mosque in Dhill as Kutb al-Dawla wa 'l-Dīn, Amīr al-Umarā', whilst Dīrāzādī gives Itutmush's *laḥab* in full as Shāḥ al-Dunyā wa 'l-Dīn. Ranking in the glory of their extensive military conquests, various sovereigns of this period conceived of themselves as following in the footsteps of Alexander the Great. Already the Ghūrid Muḥḥ al-Dīn Muḥammad is described on the Kutb Minār (q.v.) as Iskandar al-Thāfi, a title imitated e.g. by 'Alā' al-Dīn Muḥammad Shāh Khaljī of Dhill (699-713/1296-1316) on his coins, with such variants as Iskandar al-Zamān "the Alexander of the age". The geographical and ethnic extent of the empire ruled by these Turkish commanders is indicated by Itutmush's adopting later in his reign (in an inscription of the Hānd mosque) the title Mawla Muḥḥ al-Turk wa 'l-'Adjam, whereas previously he had styled himself (on the Kutb Minār) by the conventional, but by then obsolete title for an eastern Islamic potentate of

Mawla Muḥḥ al-'Arab wa 'l-'Adjam. Like other Turkish ruling dynasties of the East, being newcomers into the Islamic society and polity and as yet uncertain of their place within these last, the Indo-Muslim rulers sought to validate their rule by expressing their loyalty to the 'Abbasid caliphs (who were of course after 659/1261 puppets under the control of the Egyptian Mamlūks). Itutmush, in the last decades of the independent 'Abbasids of Baghdad, usually styled himself Naṣir or Nāṣir Amīr al-Mu'minin, but in one instance at least, Kasim Amīr al-Mu'minin, the title favoured by the Ghūrids to demonstrate their fidelity to Baghdad. Later in the century, Ghīyāth al-Dīn Balban (664-86/1266-87 [q.v. in Suppl.]) followed the same tradition when he styled himself Yamīn Khallāt alḥab as well as Nāṣir Amīr al-Mu'minin. See J. Horowitz, *The inscriptions of Muhammad ibn Sām, Qutbuddin Aibak and Itutmish, in Epigraphia Indo-Islamica*, 1911-12, 12-34; G. Yazdani, *The inscriptions of the Turk Sultans of Delhi Muḥḥ al-Dīn Balban, 'Alā' al-Dīn Muḥḥ, Naṣir al-Dīn Muḥḥ, Ghīyāth al-Dīn Balban and Muḥḥ al-Dīn Kaiqubād*, in *ibid.*, 1913-14, 13-46; Z. A. Desai, *The inscriptions of the Mamlūk Sultans of Delhi*, in *Epigraphica Indica, Arabic and Persian Supplement*, 1966, 4-18.

The Turco-Mongol successors of these first Turkish and Afghān Indo-Muslim rulers, the Mughals, brought to India Timurid traditions in using the grant of titles and other marks of honour to strengthen the loyalty of their own Turkish commanders and to win over other groups, such as the great Afghān chiefs. Babur mentions that, in India, permanent designations (*mukarrari khilāfat*) were given to highly-favoured amirs, such as Aḥmad Humāyūn, Khān-i Dīshān and Khān-i Khānān (*Bābur-nāma*, tr. Beveridge, 537). Babur's son Humāyūn followed a careful policy in the award of titles appropriate to services rendered or expected; thus the supreme distinction of Amīr al-Umarā' was bestowed on Amīr Hindū Beg, an old commander of Babur's who had fought at Pānīpat (q.v.) in 912/1526 and who was, moreover, allowed the signal honour of sitting with the emperor in formal court sessions. Under Babur's immediate predecessors in India, the Lodīs, the titles of nobility had been (in ascending order) Malik, Amīr and Khān. In the course of the 16th/16th century, the title of Malik fell out of fashion and that of Beg, one of prestige under the first two Mughal rulers, subsequently declined in favour of Khān, so that under Akbar, Beglar Begi was a lower title than that of Khān-i Khānān. This fact was the highest title of all, held e.g. by the young Akbar's *alḥab* or guardian Bayram Khān (d. 968/1561 [q.v.]), together with that of Amīr al-Umarā'. Other titles tended to be associated with specific affairs or functions; thus that of *Amīr Khān* was mostly conferred on civil officials acting as *amīr* or as *amīl* of the royal household, hence mainly on Persians; whilst Akbar conferred the Hindu title of *rājā* not only on the hereditary successors to princely power but also on faithful Indian servants like the master-gunner Sabbahar. See Nadbey Shyam, *Honours, marks and titles under the Great Mughals (Bābur and Humāyūn)*, in *IC*, xlvii (1972), 101-17, and *idem*, *Honours, ranks and titles under the Great Mughals (Akbar)*, in *ibid.*, xlviii (1973), 335-53.

As the political and military power of the Mughals shrank in the post-Aurangzeb period, the conferring of titles became more and more widespread by the

emperors and by provincial Muslim dynasties, so that their social value declined; hence today, old titles like *Mirā*, *Khān* and *Beg* have in the modern subcontinent become nothing more than the equivalents of western surnames.

In Safawid Persia, one notes first of all, in connection with the strongly *Shīʿī* basis of the state and the theocratic nature of the early *Shāh*'s authority, a fondness for names and titles expressing devotion to or dependence upon either some venerated figure of *Shīʿism*, such as 'Alī or his sons al-Hasan and al-Husayn, or upon the sovereign himself, considered as the vicar on earth of God or the *Imāms*. In pre-Safawid times, there had occasionally been used by rulers in Persia names compounded with the Persian word *bānda* "slave, devotee", e.g. the Mongol Il-Khān al-Muhammad Khādabāndeh Ūjeytū (the *lahab* being assumed when Ūjeytū became a Muslim; his pro-*Shīʿī* sympathies should perhaps be noted here). Under the Turkmen Safawids, the equivalent Turkish word *hul* was commonly used, as in 'Alī-Kulī, Imām-Kulī, Tahnāsp-Kulī, Saif-Kulī, etc., especially in regard to military commanders and governors, although the *Shāhs* themselves retained simple regnal names. The usage of these titles in *hul* was imitated in Muslim India by certain of the South Indian sultans who were *Shīʿī* in faith and strongly under Safawid cultural influence, e.g. the ruler of the Kutb-Shāhs (c. 1500) in Golkonda, Muhammad-Kulī b. Ibrāhīm (988-1004/1580-1612).

Whilst the *Shāhs* themselves remained modest over the use of personal *alāqā*, their subordinates enjoyed a rich titulary. It is under the early Safawids, apparently towards the end of *Shāh* Tahnāsp I's reign ca. 976/1568-9, that the characteristic Safawid title for the *vazir*, that of *ʿImād al-Dawla* [p.r.] "trustworthy support of the state" appears; this title is much distorted in the travel accounts of contemporary western visitors to Persia, e.g. the "Athenodoulai" of Du Mans and the "Emudowlett or prime minister" of John Bell. The late Safawid administrative manual *Tadhkirat al-mulūk* (ca. 1137/1723) gives detailed information on this latter official and on the other important figure of the Kurdi-Bāghī [see KOCALI] (who was, in early Safawid times, before the establishment of a regular, standing army, virtually the commander-in-chief, with the title of *Amīr al-Umarāʾ*), here called the Rukn al-Saltāna al-Kābir, and on a host of lesser officials. The top fourteen officials of the administration had the title of *ʿālī-dār* "exalted in rank", and there were groups of officials with the title of *muḥarrab al-khān* "confidant of the supreme ruler" because of their special closeness to the throne, and with that of *muḥarrab al-kāfir* "confidant of the royal presence". The first group included the head of the palace eunuchs, the royal physician (*ḥakīm-bāghī*), the court astrologer (*munadījīm-bāghī*), the controller of assay (*muḥarrir al-mamadīk*), the state secretary, who drew the royal *ḥuḡa* [p.r.] (*munadī ʿi-mamālik*), the keeper of the seal (*muḥrār*) and the keeper of the inkholder (*dawūd-dār*). The second group, somewhat lower in status, included senior harem attendants, aides-de-camp (*ḡasawān*), the heads of various departments of the royal household and workshops (*duyūlāt*), including the master of the mint (*ḡarābī-bāghī*), etc. (*Tadhkirat al-mulūk*, II, 86, 22b, 30a-35a tr. Minorsky, 44, 46, 55-60).

Under the Kājār, the title of *ʿImād al-Dawla* for the *vazir* declined in currency, being replaced by that familiar in Ottoman usage also (see below), *Ṣadr-i Aʿẓam*. There was also a great expansion of

honorifics in *dawla*, *mamlaka*, *salṭana*, etc. for the numerous princes of the Kājār family and for other great officials, a process which the *Amīr Kabīr* [p.r. in Suppl.] endeavoured in the mid-19th century years to check, but one which continued with little abatement till the end of the Kājār in 1925. This rich array of titulature, with by now elaborate forms of address extending down the social scale as low as mere village headmen, inevitably came under fire from the reforming *Riḡā* *Shāh* Pahlavī. Muhammad Riḡā had indeed already in the Fifth *Majlis*, as *Sardār Sēpāh* and before he had overthrown the Kājārs, abolished the honorific titles which had been sold for the personal enrichment of the *Shāh* and court officials, even though this act had been an infringement of the monarch's prerogative. On 2 August 1905 there was issued a decree on the abolition of titles and on the terminology of social intercourse. The royal family was to receive new titles, with the *Shāh* himself to be *ʿAlā-ʿi Madrat-i Humāyūn Shāhangāhī*; high officials were to be addressed just as *ḡandā*, and the old titles of *amīr*, *beg*, *ḡāis*, *mirzā*, etc. were to be abolished. In fact, although these reforms were honoured in the press and in public announcements, the old titles continued very much in common and spoken usage (see P. Avery, *Modern Iran*, London 1965, 267, 273; D. N. Wilber, *Riḡā Shāh Pahlavī the restoration and reconstruction of Iran*, Hicksville 1975, 167, 171). When western-type surnames were introduced, some people turned the old *alāqā* which went back to Kājār days into family names, e.g. in the cases of Dr. Muhammad Mawaddīk, Prime Minister 1951-3, formerly Mawaddīk al-Saltāna, and his contemporary the statesman and former Prime Minister in 1929 Abmūd Kawlān, formerly Kawlān al-Saltāna.

A centralized and bureaucratic institution like the Ottoman empire, with from the late 8th/14th century onwards extensive diplomatic contacts, firstly with the Muslim beyliks of Anatolia and the Turkmen powers of the East, and then with the Christian states of the West, increasingly affected by Ottoman expansionism, evolved a complex and elaborate chancery procedure in which the careful recounting of honorific titles played a vital role. The immense bulk of surviving Ottoman diplomatic and administrative documents would make feasible a highly detailed study of this titulary, a task which remains however to be done. For the moment, it may be noted that Feridun Beg devotes the opening pages of his great collection of correspondence to an exposition of the *alāqā* of the various classes of addressee, from the sultan at the top down to civil and military officials and members of the religious institution within the empire, and also of the *alāqā* to be used in communicating with dependent rulers such as those of the Trans-Danubian principalities and with foreign potentates like the Doges of Venice (*Münṣir al-ʿalāqān*, Istanbul 1274/1857, I, 8-13). Also, L. Fekete devoted a section of his *Einführung in die Osmanisch-Türkische Diplomatie des Türkischen Botensystemes in Ungarn*, Budapest 1926, pp. XXXII-XXXVI, to an exposition of honorifics as found in administrative and diplomatic documents of the 16th/16th and 17th/17th centuries concerning relations between the Porte and local officials in Hungary or between the sultans and the Christian monarchs in adjoining lands. The turbanate of the titulary of, for instance, Süleyman the Magnificent is seen in a letter of this sultan from 972/1565, where in the *intitulation* of the document

Şeyfman describes himself as Sultân-i Salâtin-i Şark wa Şarh, Şâhib-i Kirân-i Mamlûk-î Rûm wa 'Adjam wa 'Arab, Kahramân-i Kawn wa Makân, Nartmân-i Mayân-i Zamân wa Zamân, Ak Dehîdî wa Kara Dehîst wa Ka'ba-yi Mi'arrama wa Madîna-yi Numanawarânî wa Kudû-i Şarîfî wa Tahîr-i Mîr Nâdira-yi 'Asîr wa Wilâyet-i Yamaa wa 'Adan wa San'ânî wa Dîr al-Saddâ Baghdâd wa Bayr wa Lâsânî wa Madâ'in Anûşîn-Rawâlî wa Dîyâr-i Dîzârî wa Âhûbîyyânî wa Dağî-i Kîpâk wa Dîyâr-i Tâîrî wa Kârdîstân wa Lâristânî wa Kulîyyî. Rûm fî wa Aûlîyya wa Karamân wa Afîk wa Bîghdân wa Augarîs memleketlerind iv bunlordan ghayrî nîkê namûlek wa ghyr 'azm al-İkûdîrî Pîdîghîfî wa Sultân Sultân Süleymân Khân b. Sultân Seîm Khân (*ibid.*, p. XXXII).

The honorifics of the sultan's subordinates were naturally less florid, but considerable rare was taken to differentiate nobles of rank, so that a *hîdî* with a stipend of less than 150 *akçe* was addressed as *Kudwat al-Kudât al-Islâm* [*sic*], 'Umdat Welât al-Anâm, whereas a *hîdî* of 150 *akçe* or more could add to the above titles that of *Mumayyaz al-Halâl 'an al-Harâm* (*ibid.*, p. XXXIV). The grand vizier was from the time of Süleymân onwards awarded the designation of *Sadr-i A'zam* "most illustrious of the high dignitaries", and this title remained in use all through the Ottoman sultanate's existence, surviving the reforms in the bureaucracy of the *Tanzîmât* [q.v.], the last Sadr-i A'zam being Dâmâd Ferîd Paşa [q.v.] (1111 October 1920) and his successor Abnûd Tewfîk Paşa (11 November 1922) who served Mehemmed VI Wahîd al-Dîn. The vizier had several other epithets of distinction, such as *şâuf*, *şâfi* and *şîf*, and he was entitled to the same form of address as the Khedives of Egypt in the 19th century, *devletli fîrhâmetî* (see further SAUR-i A'zam).

It was during the *Tanzîmât* period of the mid-19th century that some attempt was first made at rationalising and restricting the unchecked growth of titulature, as part of the institutionalisation on western lines of the old Ottoman bureaucracy. It seems that the traditional titles were now bureaucratized. Thus Redhouse in his *Turkish and English lexicon*, s.v. *bey* (373a), has "5. The title given [to] the sons of Pashas, and of a few of the highest civil functionaries, to military and naval officers of the rank of colonel or lieutenant colonel, and popularly, to any persons of wealth, or supposed distinction"; s.v. *paşa* (434a) he has an explanation of the modern military and naval positions, of general officer and flag rank, entitled to use this designation; and s.v. *vezîr* (2136a) he has the definition "a civil functionary of the highest rank, with the title of pasha". Hence in the biography of Fu'îd Paşa [q.v.] given in İbûleîla Mahmud Kemal İnan's *Osmanlı devrinde son sadrazamlar*, İstanbul 1969, I, 159, he is referred to merely as Efendi in all official documents until he achieved the rank of vizier in Şahân 1271/May 1955 and thereby acquired the title of Paşa. See for this period, S. Keltz, *Über Titel, Ämter, Rangstufen und Anreden in der offiziellen osmanischen Sprache*, Halle 1892, and the entries in M. Z. Pakalın's *Tarih devrinde ve terimleri sözlüğü*, İstanbul 1946, s.v. *şâhî*, *resmîye*, *rûb*, *mülkiye*, *vezir*, etc.

It seems that these bureaucratic gradations in titulature introduced under the *Tanzîmât* continued under the Young Turk régime in the early 20th century, but, as in the parallel case of Persia under Rîdâ Şâh Pahlavî, Kemal Atatürk's secularising

and reformatory policies did not allow these titles to continue in official and public usage. According to the Law no. 2590 of 26 November 1934 "Concerning the abolition of appellations (*âkâp*) and titles (*unvan*) such as Efendi, Bey and Paşa", these modes of address were swept away, and religious titles such as Hacı, Hafiz and Molâ were also banned (Kazım Öztürk, *Sen deçalıştırilerle gerekteli anayasa*, Ankara 1975, 406, Bülent Dâver, *Türkiye anayasasında değişiklik*, Ankara 1975, 175). Instead of Bey and Hamm, Bay and Bayan were introduced for "Mr" and "Mrs". But as in Persia, old conventions and speech habits die hard, and in popular speech, the old title survives: Paşa for generals, whether active or retired; Efendi for artisans and non-Mushras; Östad for craftsmen, artists, etc.; Hoca for teachers, secular and religious; and so forth (cf. G. Lewis, *Turkey*, London 1965, 110-11).

LAĞANT, the name of two places in al-Andalus. The first, which has now disappeared, was situated some 60 km. to the south of Mérida [q.v.] in the district where la Puente de Cantos is at present to be found, on or near to the road connecting Mérida with Seville and followed by Mâsî b. Nuşayr, and on the left bank of the Guadiana (see F. Hernandez Jimenez, *Raqel y el linaje de Mâsî, de Algeciras a Mérida*, in *al-And.*, xxvi [1961], 100-13, and *La kîra de Mérida en el siglo X*, in *ibid.*, xxv [1960], 320, 361, 368). Yâkût (iv, 363) speaks of two fortresses dependant on Mérida, Lağant al-Kubrâ and Lağant al-Sughrâ, but this seems highly improbable, for one might more feasibly conclude that *al-kubrâ* refers to the place mentioned above or the alternative, and that *al-sughrâ* corresponds to Alicante (or the alternative) on the Mediterranean coast to the south of Dâniya [q.v.] or Dania.

Alicante, classical Lucentum, formed part of the *kûra* of Tudmir [q.v.]. It was one of the six towns included in the pact with Theodoric, on the journey from Orihuela to Elebe, six miles from the latter according to al-Uğhrî. Al-Fîrîd (*Maghrîb*, text 193, tr. 235), copied by al-Hîmîyârî (*al-Road al-mi'âr*, text 170, tr. 205), says that there was here a little town (*madîna saghîra*) which was fairly prosperous, with a market, a great mosque and a *miḥḥar*. The earth produced in abundance fruits and vegetables, figs and grapes, and the town was a port for shipping apart to the Mediterranean lands, and a centre for the construction of shipping for commercial purposes and for fishing. It had a *ḥayḥa* well-garrisoned with troops, on the summit of a mountain, Benacutîl, which was difficult of access. At the time of Muḥammad I, it seems to have become an anchorage used by the seafarers of Peñísula. In 316/928, the lord of Callosa de Ensarriâ (Kalyuḥ-sha) and of Alicante and its strongholds, Muḥammad b. 'Abd al-Rahmân al-Shayḥ al-Astâmî, was subdued. In the 35th/11th century, Alicante became part of the *ḥiḥḥa* of Denia, whose fortunes it followed. After the Almoravids had passed by there, it came within the possessions of Ahmad b. Hûd Sayf al-Dawla and was governed by Ibn 'Iyâḡ. Subsequently, it fell under the domination of Ibn Mardânish [q.v.] and of the Almoravids. After having recognised for some period of time Ibn 'Iyâḡ's authority, and having known several confused years, whose history deserves to be studied more thoroughly, it passed under the control of James I of Aragon, on condition that the local Muslims might retain their lands.

LAKHM, an Arab tribe, especially influential in the pre-Islamic period. With the exception of the Lakḥmid family [see LAGḤMIDS] in 'Irāk, so frequently celebrated in the old Arab poetry, the pre-Islamic history of this family is not well-known and is full of legend. According to the traditional genealogy, Lakḥm was of Yemeni origin and was the brother of Dujdhām and 'Amila (q.v.). Yemenis and Ma'addis claimed descent from the powerful Lakḥmid dynasty of 'Irāk.

Of the three sister-tribes, Lakḥm was undoubtedly the most illustrious and the oldest also. Legend connects it with the descendants of Abraham. A Lakḥmid is said to have taken Joseph out of the well into which his brothers had thrown him. But by the eve of the *hijra*, the vigour of the Lakḥm had been sapped, while the 'Amila and notably the Dujdhām, who under the Umayyads played a leading part, had increased in importance. Two centuries before the *hijra*, the surplus Lakḥmid population had spread over the lands in the north of the peninsula in Syria and Palestine and in 'Irāk where they established the Lakḥmid phylarchate of al-Hira (q.v., and also *Ḥaḥḥima*), continually at war with the Ḥassānids of Syria. In Syria we find the Lakḥm settled in the same districts as the Dujdhām. Like the latter, they adopted Christianity, which also became latterly the official religion of the Lakḥmids of al-Hira.

However, the al Namāra inscription, dated A.D. 528, has thrown much light on the history of Lakḥm. It fully explains the presence of Lakḥm or part of it in Syria after it emigrated from 'Irāk with its king, Imru' al-Kays, who went over to the Romans. It was after its emigration to Roman Syria that Lakḥm became associated with the "sister-tribes", Dujdhām and 'Amila, and so the genealogy that related the three tribes to one another as descended from one ancestor is fictitious, and is merely the reflection of geographical and political conditions that obtained after the emigration of Lakḥm to Roman territory and its settlement in the southern part of Syria, not far from where these two tribes had settled. The separation of Lakḥm from the two "sister-tribes" genealogically tips the scales against Lakḥm's being

a non-Yemeni or South Arabian tribe and suggests a Mesopotamian origin. The re-appearance of the tribe in 'Irāk, and what is more, in al-Hira, after a long interregnum may be explained by the possible return of part of it to 'Irāk after its disappointments with the Romans, or by the fact that part of Lakḥm had not accompanied its king Imru' al-Kays when he went over to the Romans but had stayed on in al-Hira.

When Islam appeared, the Dujdhām had practically absorbed their relatives, the Lakḥm of Syria, a peaceful absorption by mutual agreement. In the 1st century A.H. the two tribes were usually named together as forming one group, and even when reference is made to a "chief of Lakḥm", we can hardly be wrong in thinking that he also ruled the Dujdhām. The name "Lakḥm" becomes rare in comparison with "Dujdhām". In the wars of Islam, during the conquest of Syria, at the Yarmūk, at Ṣiffīn, and later in the course of the campaigns under Yazīd I against the sacred cities of the *Ḥijāz*, the two tribes fought under the same chiefs and under the same banner. "Lakḥm" became practically reduced to little more than a title of honour. Its archaic flavour, the glorious memories which it recalled of the phylarchs of 'Irāk, was socially impressive, but the tribe of Lakḥm no longer had a separate existence from the Dujdhām. When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Dujdhām, and it is the latter that the chroniclers usually have in mind.

Only a last echo of the aristocratic connotation of the name "Lakḥm" is seen in the claim of the 'Abbāsids (q.v.), *muḥḥab al-jawā'if* in al-Andalus during the 5th/11th century, to be of Lakḥmid stock.

(H. LAMMENS [IRAN SHAHID])

LAKHMIDS, a pre-Islamic Arab dynasty of 'Irāk that made al-Hira (q.v.) its capital and ruled it for some three centuries from ca. 300 A.D. to ca. 600 A.D. Strictly speaking, the dynasty should be called the Nasrids after their eponym, Nasr, Lakḥm (q.v.) being the tribe to which they belonged. As semi-independent kings and as clients of the Sāsānids, the Lakḥmids were the dominant force in the political, military, and cultural history of the Arabs during these three centuries before the rise of Islam.

2. **History.** The founder of the dynasty, whose *floruit* may be assigned to the last quarter of the

3rd century, was 'Amr b. 'Adī, the nephew of the Tanūkhid king Diadphna [q.v.]. It was he who made al-Hira the Lakhmid capital, whence he conquered far and wide in the Arabian Peninsula and, according to the Arabic tradition, warred successfully against Queen Zenobia of Palmyra. He appears as the protector of Manichaeism after it was outlawed in Persia. He was succeeded by his son, Imru' al-Kays, described in the famous al-Namira inscription as "king of all the Arabs". He, too, was a warrior king who after conquests in Arabia went over to the Romans, died in A.D. 328, and was buried at al-Namira in the province of Arabia. The defection of Imru' al-Kays to the Romans resulted in the last interregnum in the history of the Lakhmids. The sources speak of a certain Aws b. Kāsim in the sixties of the 4th century, and he is given various tribal affiliations, but it is almost certain that the interregnum began long before the sixties and that the Ghassānids played an important role in the affairs of al-Hira, now that more light has been shed on their early history. Certainly cannot be predicated of the names and reigns of the Lakhmid kings assigned by the Arabic tradition to this obscure period in their history, ac. the 4th century.

The 5th century is much better documented in the Greek and Syriac sources as well as the Arabic ones, which yield important data on three Lakhmid kings. The first is al-Nu'mān, nicknamed al-A'war ("the one-eyed"), and also al-Sā'ib ("the wanderer"); according to the Arabic tradition he earned the latter for his having renounced the world. This is not improbable, since he is known to have visited the Syrian saint, Simeon, between 413 and 420. His name is associated with the building of the famous palace, al-Khawarnak [q.v.], and with the two divisions in the Lakhmid army known as al-Shahbā' and al-Dawwar. He was succeeded by his son al-Mundhir, who is said to have reigned forty-four years, possibly 428-52. He took part in the Byzantine-Persian war of 421-2 and played an even more important role in the internal affairs of Persia by his support of Bahrām Gōr for the throne. Little is known about the Lakhmid kings that followed him, al-Aswad and al-Mundhir II, but such is known about the warrior king al-Nu'mān II. He took part in the Byzantine-Persian war of the period. In 498 he was beaten by the Byzantine commander Eugenius at Bithrapsos; in 501 he advanced against Harrān, where he was first beaten by the Romans and then triumphed over them, but shortly after died of a battle-wound in the vicinity of Ctesiphon. A second short interregnum takes place in this period, ca. 500, associated with a certain Abū Ya'fur.

Of the three centuries of Lakhmid rule in al-Hira, the last is the best documented and the most important. It is dominated by al-Mundhir III, who reigned for a half-century, 503-54. Firstly, during his reign the Arabian Peninsula witnessed a reassertion of Persian power and al-Mundhir III made his presence felt in it, both as an Arab king and as the vassal of Khusrav Anōshīravan, who entrusted him with the entire Persian sphere of influence in Arabia. He warred continually with the South Arabian kings; ca. 520 he received an embassy from the South Arabian king, Yūsuf Dhū Nuwās [q.v.] and ca. 540 he sent one to the new ruler of South Arabia, the Ethiopian Abrahā [q.v.]. During his reign, probably in the twenties, took place a third interregnum, that of al-Hārith of Kinda [q.v.]. Secondly, throughout the Byzantine-Persian conflict he was the spearhead of raids and expeditions against the

border provinces, especially in the twenties, ca. 520 he attained international fame when he received an embassy from the Byzantine emperor Justin; in 531 he conceived and in part executed the Persian campaign which ended in a great victory against Byzantium at Callinicon on the Euphrates; in 539 he engaged in a dispute with the Ghassānid al-Hārith, which was one of the causes for the outbreak of the Byzantine-Persian war of 539-41; in the forties he continued to war with the Ghassānids, but in 554 he was killed in an engagement with al-Hārith near Kinnasra, probably the Yawm al-Hayr of the Arabic tradition.

He was succeeded by his son 'Amr (554-68) whose mother was Hind, the Kindi princess and daughter of the same al-Hārith who ruled al-Hira during the Kinda interregnum in the twenties, and it is by his matronymic, son of Hind, that 'Amr, the son of the most famous of all the Lakhmid kings, is known to the Arabic sources. The Lakhmids and their adversaries, the Ghassānids, are mentioned in the treaty of 561 between Persia and Byzantium; according to one of its clauses, both were expressly forbidden from waging wars against each other which would involve the two world powers, and yet 'Amr continued to make raids against the Byzantine frontier in the sixties as did his brother Kābis, who appears associated with him as his general. In 569 'Amr died a violent death, killed by the poet 'Ann b. Kulthūm [q.v.]; and was succeeded by his brother Kābis, who reigned for some four years (569-73). It was during his reign that the Ghassānid al-Mundhir scored, ca. 570, a victory in Lakhmid territory not far from al-Hira itself, probably the battle of 'Ayn Ubāhā, but it was also in the same reign that the Persian occupation of South Arabia took place in 572; this turned the tide against Byzantium, and resolved in favour of Persia what might be termed the struggle for Arabia.

The short period that intervened between the death of Kābis in 573 and the accession of the last Lakhmid king in 580 was punctuated by two interregna, that of the Persian Subhā may be assigned to 573-4, while the other, during which most probably ruled Kabṭa, an Arab from the tribe of Tayy, lasted for a few months in 580, before the accession of al-Nu'mān. Between the two interregna there ruled the unpopular al-Muadhīr IV, during whose reign his namesake, the Ghassānid al-Mundhir, scored a decisive victory over the Lakhmid, thus capturing al-Hira itself, ca. 578, and setting it afire.

The last Lakhmid king was al-Nu'mān, the son of al-Mundhir IV, who ruled for some twenty years (580-602). He is the Lakhmid best known to the Islamic Arabs and the post-Islamic Arabic sources through the panegyrics of al-Nabīḥa al-Dhubyānī [q.v.] and through his relations with 'Adī b. Zayd [q.v.]. Unlike the reign of al-Mundhir III, his is not memorable for his international relations but for those with the Arabs of the Peninsula and with his Sāsānid overlords. In his Peninsular wars he was unfortunate in a battle (the Yawm Tikhla or Takhlā) with Ḥarbā', a subdivision of Tanūkh. His relations with the Sāsānids varied. Hormuzd gave him a splendid crown, while Khusrav Parvīz fell out with him, possibly because he was intolerant of Lakhmid pretensions to independence. After wandering among the Arab tribes seeking refuge, he surrendered himself to Parvīz, who had him killed in 602, and with his death the Lakhmid rule over

al-Hira came to an end. In so doing, Parviz destroyed the shield that protected Persia's flank against the Arabs of the peninsula. Some two years after the death of al-Nu'mān, the battle of Dhū Kār (q.v.) was fought, in which the Arab tribe of Bakr scored a victory over the Persians, a foretaste of more dramatic victories to the thirties by the Muslim Arabs. Dhū Kār foreshadowed al-Rādiyya (q.v.), both of which were splendid justification of Lakḥmīd al-Hira as a bulwark for Persia against the Arabs of the Peninsula.

After the death of Nu'mān, al-Hira was ruled by an Arab from Tayyā, Iyās b. Kabīṣa, assisted by a Persian, al-Nahragān, for some nine years, 602-12. After this it became a Persian possession directly ruled by the Persians until it fell to Khālid b. al-Walīd in 633. The last Lakḥmīd prince known to the sources in this period is al-Nu'mān, nicknamed al-Ḥarūr ('the deluder'), who took part in the *riḍā* war in Baḥrayn and was defeated by al-'Alā' b. al-Maḍraḥ in 633.

2. *Culture.* The geographical location of their capital al-Hira and their special relationship to Sāsānid Persia determined for the Lakḥmīds the direction that their history took. In spite of a certain independence which they enjoyed, they were vassals of the Sāsānids, for whom they performed the following important functions: (a) they were their shield against the incursions of the nomads from the Arabian Peninsula; (b) they watched over their sphere of influence in Arabia, especially the Arabian littoral of the Persian Gulf, including Baḥrayn and 'Umān, which they ruled for them; (c) they were their spear against Byzantium and the latter's client-kings, the Ḥassānīds; and (d) they protected their trade interests in the Peninsula, especially the caravan route that connected al-Hira with South Arabia.

Their fruitful association with Persia is reflected in the various forms of their military, political, and social life, and in their material culture: (a) the sources speak of five units in their army—al-Shahbā, al-Dawar, al-Wadān, al-Ṣanā, and al-Rahān, the first of which are said to have consisted of Persian troops; besides, there was the *Khanday Sabār*, 'Shahbā's Ditch', rebuilt by Khuraw Anūshīrvān, a *himn* of some sort protecting al-Hira and extending down to where al-Baḡra was to be in Islamic times; (b) the crowns of the Lakḥmīds were apparently bestowed on them by the Persian kings and with the crown came the word itself for crown, *tāq*, as a loanword into Arabic from Persian; and (c) the various aspects of their material culture must also have been dominated by the Persians in such areas as architecture, dress, food, drink, and music.

Zoroastrian Persia was also the determining factor in the attitude of the Lakḥmīds towards Christianity. The Sāsānids understandably frowned on their adoption of a missionary religion with universalist claims, especially after the conversion of their secular enemy, Rōms, to that religion. The second Lakḥmīd ruler, Imrū' al-Qays, adopted Christianity, which fact must at least partly explain his defection to the Romans. Only the last Lakḥmīd king, al-Nu'mān, adopted it openly, but since it was the Nestorian form of it, in opposition to the Chalcedonian one adopted by Byzantium, it was acceptable to the Sāsānids. And yet their capital, al-Hira, became the great centre of Arab Christianity and of its transmission to the Arabs of the Peninsula. The city was adorned with churches and monasteries, was the seat of a bishopric, and the refuge for many a persecuted ecclesiastic.

Important as their role was to the political and military history of the Arabs and of the Near East, it was their development of al-Hira itself as the great Arab urban centre in pre-Islamic times that must be considered the major and enduring contribution of the Lakḥmīds. In the 3rd century A.D., the Arab cities of Hatra, Edessa, and Palmyra fell in rapid succession, and the rise of al-Hira as the capital of the Lakḥmīds, almost immediately after the fall of Palmyra, ensured a certain continuity in Arab urban life in the Fertile Crescent.

For almost three centuries, al-Hira stood almost alone as a metropolis radiating higher forms of culture to the Arabs of the Peninsula; and of all the elements of culture that mattered, the most important was undoubtedly the development of the Arabic script and of written Arabic, called for by the demands of an organised and stable urban life in al-Hira [see 'ARABIYYA, A, The Arabic language (ii) (1)].

Bibliography: the main source for the history of the Lakḥmīds is Tabarī's *Ta'riḥ*, masterfully translated and commented upon by Th. Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, Leiden 1879, repr. 1973; [see on this now, I. Shahrī, in *JMES*, viii (1977), 217-22]; the standard work on the Lakḥmīds is still G. Rothstein, *Die Dynastie der Lakḥmiden in al-Hira*, Berlin 1899. In both these two works the scattered references to the Lakḥmīds in the Syriac and classical sources are discussed. Other important Arabic sources are: Mas'ūdī, *Murūḡ*, III, 182-214 = §§ 1036-75; Hamza al-Isfahānī, *Ta'riḥ*, ed. Beirut 53-97; Ibn al-Aṭṭar, I, 340-51, 400-3, 480-11, 434-5, 437-9, 482-91, 540-7. For the monasteries of the Lakḥmīds and of al-Hira, see Yakkū, *Mu'jam*, ed. Beirut II, 495-543; Bakrī, *Mu'jam*, ed. Cairo II, 570-607. On the al-Namāra inscription, see Babi, to LAEKIM. For further studies on the Lakḥmīds, see F. Altheim and R. Stiehl, *Die Araber in der alten Welt*, Berlin 1904-8, II, 313-28, VI, 358-73; I. Shahrī (Kawar), *The Arabs in the Peace Treaty of A.D. 562, in Arabia* (1956), 181-213; Klein, *Procopius and Arabus*, in *BZ* (1957), 39-67, 362-82; Idem, *Ghassan and Byzantium: a new terminus a quo*, in *IsI*, xxxv (1959), 232-35; Idem, *Byzantino-arabica the Conference of Ramla, A.D. 524*, in *JNES* (1964), 115-31; Idem, *The Martyrs of Najran*, Brussels 1971, 269-72; M. J. Kister, *Al-Hira. Some notes on its relations with Arabia*, in *Arabica*, xv (1968), 143-69; C. E. Bosworth, *Iran and the Arabs before Islam*, in *Cambridge history of Iran*, VI, Cambridge 1982. (IRFAN SHAHMO)

LAKHNAW, conventional English spelling Lucknow, the capital city of the Indian state of Uttar Pradesh (the United Provinces of British India). It is situated on the south bank of the winding Gumti river at lat. 26° 32' N. and long. 80° 52' E. It is the eleventh largest city in the country (population, 1972 census: 750, 512) and the second largest town of the State. Besides being the seat of the State government, the city also serves as the administrative headquarters of Lakhnaw district and division.

1. *History.* Though legend connects the origin of Lakhnaw to a mythical local mound called Lakḥman Thā, a pre-historic stronghold built by Lakḥjoana, brother of Rama, king of Ayodhya, the known history of the city can be traced to the beginning of the 13th century A.D. when it was colonised by the *Shaykhs*, one of whose descendants *Shaykh Muḥammad*, better known as *Shāh Miān*, attained

great saintly renown, and his shrine, located within the confines of the historic Maabhi Bhawan, is a place of pilgrimage for devotees all the year round, apart from being the oldest epigraphic monument of the city. During the Dhilli Sultanate [q.v.] period, Lakhnaw figured prominently in connexion with the revolt of Ā'īn al-Mulk, son of Māzhar, governor of Awadh, against Sultān Muḥammad b. Tughlūk. Between 1394 and 1476, Lakhnaw became part of the Shārkī kingdom of Dīawnpur [q.v.]. After changing hands several times between different occupants of the Dhilli throne, Lakhnaw finally passed into the Mughal dominion under Humāyūn, after suffering from frequent Afghan incursions. The Emperor Akbar, under whom the district of Lakhnaw formed part of the *tarkāb* of that name in the *suba* of Awadh, had a special fascination for Lakhnaw, whose delightful surroundings, pleasant climate, flowers and fruits and different varieties of rice are highly spoken of by his court chronicler, Abū 'l-Faḍl. During Dīawnpur's reign, Lakhnaw blossomed into a *magnum opus*. Aurangzib's visit to the place is commemorated by a mosque which he built on the top of the said Lakhman Tili, the oldest site of the city.

As the fortunes of the Great Mughals dwindled, those of Lakhnaw rose, until a new and independent kingdom sprang up as an offshoot from the decayed tree of the Empire. The governors henceforth paid only nominal allegiance to the titular Dhilli king. Sa'adat Khān, who was appointed *subadar* by the Emperor Muḥammad Shāh in 1734/1732, became the founder of the dynasty of the Nawwābs of Awadh, with whose régime most of Lakhnaw's glorious past is intimately connected. The period of the fourth ruler, Nawwāb Āṣaf al-Dawla, marks the greatest height of Lakhnaw's prosperity. The extravagance and munificence of his court passed into a byword, and could be rivalled only by the Imperial court of Dhilli. Along with the Rūmī Darwāza and the adjacent mosque, the great Imāmbarā, whose central hall is one of the largest vaulted rooms in the world, forms the apotheosis of his building achievements. Lakhnaw was raised to the rank of a royal city in 1819 when Lord Hastings transformed the seventh and last Nawwāb Wazīr, Ghāzī al-Dīn Ḥaydar, into the first king of Awadh. The puppet monarchy came to an end in 1855 when the territory was annexed to the East India Company territories and Wazīd 'Alī Shāh, the last king, was exiled to Calcutta, where he lived a pensioner's life under British supervision till his death in 1887.

To the Englishmen, however, Lakhnaw is best known as the city where a regiment of British troops under Sir Henry Lawrence, joined by the local English inhabitants, put up a gallant defence of the Lakhnaw Residency for twelve weeks against heavy odds during the Sepoy Mutiny of 1857, when the city witnessed some of the fiercest fighting. The history of the Lakhnaw district after its annexation by the British is a history of a long chain of administrative changes caused by the exigencies of situations obtaining at different times. Later on, Lakhnaw had a conspicuous role to play in the political movements of British India, for the famous Lakhnaw Pact resulting from meetings held there in December 1916 between the Indian National Congress and the All-India Muslim League led to the Hindu-Muslim co-operation in the *khilafat* movement and the Non-co-operation movement launched by Mahatma Gandhi in 1920.

With gilded domes and graceful minarets rising above its many mosques, *imāmbarās*, palaces and

tombs, Lakhnaw gives the impression of fantastic splendour, characteristic of the capital of an eastern potentate. The fine Dīāmī Maḥal, the handsome Chattr Manzil and the glittering Shāh Nadaf mausoleum are, apart from Āṣaf al-Dawla's buildings, some of the finest specimens of the architectural glory of the prodigal Nawwābs. La Martinière, an impressive Christian landmark of Lakhnaw, symbolises the zeal and influence of General Claude Martin (1735-1800), a French soldier of fortune who amassed great wealth and position during the days of Nawwāb Āṣaf al-Dawla. The building is an exquisite memento of the synthesis of European and Indo-Saracenic architecture. "As regards learning" says Abū'l Ḥalīm Sharar, the noted contemporary Urdu writer, "Lakhnaw was the Baghdad and Cordova of India and Nishapur and Bokhara of the East". The world famous *chāw* embroidery, the hallmark of Lakhnaw's craftsmanship since the days of the fastidious Nawwābs, has developed as the most flourishing industry. Another legacy of the Nawwāb era is the manufacture of good-quality *ghunna* tobacco used for smoking and the *zarda* for chewing, which have acquired a reputation of their own.

With Lakhnaw's name is indissolubly associated a particular school of Urdu poetry which developed there under the benign patronage of the Nawwābs. Cultivation of delicacy and refinement, which characterised the city's social life, left an indelible mark on the Urdu poetry produced there. The Urdu language was purified almost to the point of perfection. The intensive interest of the Lakhnawi Muslims in *Shī'ism* brought about the sophistication of the poetical genre known as *marthiyā* [q.v.] (biographical epic mourning the tragedy of Karbalā), of which Auls and Dabir were the two great exponents.

Modern developments have made Lakhnaw a leading city of northern India. It occupies a central place in a rich farming region, producing and marketing wheat, barley, grain, mustard, mangoes and sugar cane. Paper and carpet, chemicals and pharmaceuticals, cigarettes and shoes, gold and silver wares, wood carving and leather goods, embroidery and perfumery are among the chief commercial and industrial products of Lakhnaw. It is a very important centre of the country's railway system. For its numerous parks and avenues, Lakhnaw is called a "garden city". There is a residential University founded in 1927, with a large number of boys' and girls' colleges, several private and technical schools and the provincial museum. A University of Indian music and two national research institutes, viz. the Central Drug Institute and the National Botanic Garden, are housed there. Nadwat al-'Ulum, popularly known as Nadwa College, is universally regarded as the leading centre of Islamic studies in India.

2. Monuments. The most noteworthy of the older sites is the tomb of *Shayikh* Muḥammad, known as *Shāh Minā*, dated 884/1479 (though biographies of saints give 890/1465-6). The tomb of *Shayikh* Ibrāhīm *Qāṣṣī*, near the 'Ayn-bāgh, dated 961/1553-4 is a square limestone cell surrounded by blind arcades and a hemispherical dome set on a octagonal drum; the plain doorway arch, flanked by two small superimposed niches on each side, resembles Sultanate work at Dhillī. Two Mughal mausolea in the same area are close to work at Faṭhpūr Sīkri [q.v.] in character, but undated. One, the *Nadīnā* Maḥallī, apparently the tomb of *Shayikh* 'Abd al-Rahmān *Khān*, was built as a twelve-pillared open pavilion, but this was converted to a square cell with *darīl* lattices, and surrounded with a verandah of twenty pillars whose elaborate brackets, including elephant and birds, support a *chadīda* pent. The parapets of this verandah, the cell, and the base of the dome carry brilliant tile mosaic ornament in dark blue, turquoise and yellow set in red plaster; a confirmation of detail to be seen on some contemporary book paintings (e.g. *Āḍar-nāma*, V & A, IS 2-1896 113). The *maḥabādma* final base is extended by a petal-like network of tilework lines. The red sandstone *Solā Khambā* preserves the open form, here rectangular, with sixteen columns surrounding a line of five cenotaphs, and supporting a florally carved ceiling above a finely paneled plinth. The details indicate the transition from the Akbarī to the *Djahāngīrī* style. The Mosque of Awrangzīb with three frontal arches to its prayer hall, and three domes, is flanked by massive octagonal minarets engaged to the front corners like the larger *Djāmi'* Masjid at Dhillī, and lanterns at the rear; its *piśtāk* however incorporates new Baroque curvatures in the upper storey, with an arching *chadīda* and flanking *chabīs*. Following his transfer of the administration of Awadh from Feydābād [q.v.] in 1189/1775, Āṣaf al-Dawla built a complex including the Āṣafī Masjid within the Maḥl Bhawan or Old Fort (Kū'a) to relieve the families in 1198/1784. This mosque follows the lines of the earlier one, but with a prayer hall of eleven bays, still with three domes, here bulbous, gadrooned,

and reeded. The facade of plain arches set within engrafted arches on tapering engaged pillars is crowned with a deep foliated frieze, and a continuous register of delicate arches surmounted by tiny bulbous domes, a device already used in the mausoleum of the Nawwāb Saīdār *Djāng* (d. 1168/1754) at Dhillī. The prayer court, flanked by arcaded ranges with octagonal pavilions, is approached by a long surge of steps. The same tradition is resumed in the *Djāmi'* Masjid founded by Muḥammad 'Alī Shāh (1837-42); there the *piśtāk* is no longer rectangular, but rises into a pointed arch, and within its *iwān*, where aquinch nets are reduced to waving lines, there are three arched entrances. Secondary *piśtāks* are introduced at the centre of each wing, rising in taller arcades. Luxuriant leaves spring round the dome bases, and the same foliation pervades the interior, where the *mihrāb*, matching the entry, is tripartite. *Guldastas* of differing length are clustered on the skyline.

The *ta'niya* ceremonies [q.v.] required large halls, of which the greatest, the *Bātī* imāmbāzā is in Āṣaf al-Dawla's complex of 1784 (see Fig. 2). The long range of the facade is handled like that of his mosque, but with niched piers, and triads of arches at each end marked off by domed octagonal pavilions in two storeys. The arches and domes of the parapet are reiterated in a second range above, set back with two more pavilions on the flat roof. The hall within, ca. 49 m by 16 m by 15 m high has a solid concrete vault carried on successive coivings of converging groins, and the founder's tomb lies in the middle. The architect was Kifāyat Allāh. The third building of the complex, the Rūnī Darwāza, possibly so-named after its triple gateway, shares the rapid change of rhythm and the recession in levels, but the river elevation unexpectedly reveals a giant *iwān* framed within an arch with radiating *guldastas*, and capped by a *chātrī*. The Husaynābād imāmbāzā of Muḥammad 'Alī Shāh again contrasts arches of different sizes with parapet arcades and *guldastas*, though in a light, lacy manner culminating in a gilded dome. The Maḥrutgandī imāmbāzā of Anjād 'Alī Shāh (1842-47) is comparatively plain, but its interior, like the other two, was once

[Plan of the Bātī Imāmbāzā, Lakhnaw (after J. Ferguson).]

splendid with crystal chandeliers and precious shrines.

Besides the *imambara* burials, the tradition of mausoles continued with those of Sa'adat 'Ali Khān (1798-1814) and his wife Ghuriyān-āda, built by his successor Ghāzi al-Dīn Haydar (1814-27). Both follow the organisation of Saldar Jhang's monument with corner turrets capped by *khattis* around the main dome, but the *pištāk* and *hādā* are absent, replaced in the former by a tetrastyle portico on each face [R. Smith, *Journal* 1832, V & A. III 15/58-1915, pp. 581-2]. Both have domes of a strongly European profile, with prominent finials and salient angles around a tall drum suggesting a derivation from Les Invalides (1693-1706); the accumulation of lesser domes and *banglā* vaults around the Queen's tomb also recalls Hindu *maṇḍap*. Ghāzi al-Dīn built his own tomb, the *Shāh Najaf* (Najaf Agha) dominated by a white, steep-like dome and flinal within an arcaded precinct. The garden at Husaynābād contains two supposed replicas of the Tāqī Mahall for a daughter of Muḥammad 'Alī Shāh and her husband, which however demonstrate complete lack of its classical balance.

The origin of European influences is apparent in domestic buildings. Initially Sa'adat Khān had taken over the Panā Mahall built by the Shaykh-rādas in the Fort; the buildings were improved on a grand scale by Shujā' al-Dawla (1754-75), but by 1775 they still lacked unity (Modave, *op. cit.* 183). Both palace and fortifications were destroyed in 1857 and after, Aṣaf al-Dawla transferred the court to a new Dawlat Khāna including the Aṣaf Kothi, probably commissioned from Claude Martin, in 1782-9. Martin, who had arrived in Lakhnaw in 1776, rose to become advisor to the Nawwāb, whose taste he influenced, creating fine buildings for them and obtaining furniture from Europe. These included Mūsā Bāgh (Barowen) (1780-1804), a classical house with a bow front to the river, and a landward court sunk for coolness, and Bibiyapuri Kothi, a much plainer building. His own town house, Farhat-baghsh (1781) shows the same combination of classical ingenuity, strong defences, and wit; it was bought in 1800 by Sa'adat 'Ali Khān, who used it as his residence at the centre of a new palace complex. Constantia (La Martinière) (1795-1800) though influential was, as Martin's tomb, unsuitable for adoption, and continues in his endowment as a school Dil-kushā (ca. 1805), built by Sir Gore Ouseley as a reinterpretation of Seaton Delaval back home in Northumberland (1729) became a favourite hunting lodge of Sa'adat 'Ali, and provided the portico model for his tomb. By 1803 the Nawwāb had bought all the English houses but three, and himself constructed a fine new street of such houses, radically different from the Indian model, in *Madrat-ganj*. The building of palaces continued with his domed Moti Mahall and Lāi Bārādārī (Nāz al-Sultān), a three room with *ghālis* as fine as the Nāḍim Mahall. Ghāzi al-Dīn built the Chāttar Maṭail, incorporating the Farhat-baghsh, for his harem, blending Martin's classicism with the local tendency to culminative recession, and domes with *chāḍḍi* eaves, carrying gilded parasols. That these allusions were deliberate is confirmed in the Darḡān Bilās, of whose four façades two are taken from Barowen, one from Farhat-baghsh, and one from Dil-kushā, much as the images in Urdu poetry [Jones, *op. cit.*, 224]. The borrowing of Western motifs remained superficial, and even the use of such houses was not fully grasped. Such stylistic variety could be realised with ease in the local

medium of stucco on brickwork. This was fully exploited in the vast palace of Nāyaz Bāgh built for Wāḍid 'Alī Shāh by Chōḡā Miya in 1848-50; the final, Rococo phase of Mughal architecture is cocooned with the garnet of Western elements with a splendid and theatrical disregard for rule, but little now remains.

Sharma, U.P. Revenue Dept. 1959, 391-405. For specific descriptions of buildings see G. Sanderson, *The Nāḍim Mahall, Solah Kāmā, and the tomb of Imād-ud-Dīn Chāḡī*, *Lucknow*, in *Archaeological Survey of India, Annual Report 1912-13*, Calcutta 1916, 132-5 (with excellent plates); Ziyauddin Desai, *Mosques of India*, New Delhi 1971, 69-71; *Gazetteer of the province of Oudh*, 1877, II, 373 ff. Of the more recent guidebooks, H. A. Newell, *Lucknow*, Bombay (?) n.d. (before 1928), is useful. (P. A. ANDERSON)

LAKHNAWTI (shortened form of Lakhnawati, "home of Lakhnaw"), which is a derivation from Lakhnawand, son of Dasarata and half-brother of Rāma Candā, and *wati*, meaning "home" or "habitation", the name of an ancient city which served as the principal seat of government in Bengal under Muslim rule for nearly four centuries. Its ruins are still found spread over a narrow and deserted channel of the River Ganges in lat. 24° 52' N. and long. 88° 10' E., 10 miles/16 km. south-west of the modern Mālda town (administrative headquarters of Mālda district in the State of West Bengal, India), from which it is reached by a macadamised road.

Though the date of the foundation of the city is shrouded in obscurity, tradition has it that it was built by one Sangalāḍib of the Cooch Behar area of north Bengal, who had become unchallenged master of Bengal and Bihār after defeating Rājā Kedar Brahmin of the same region. But the recorded

history of Lakhnawi does not begin until the Muslim conquest of western and northern Bengal in 594/1198 by Muhammad Bakhtiyar Khalji, the military general of Kutb al-Din Aibak of Delhi, who surprised and defeated Lakhan Sen, the ruling Hindu king, at Nadia (represented by the present Nabadwip town). After the fugitive king escaped into eastern Bengal, Bakhtiyar Khalji established his capital at Lakhnawi, which thenceforth became the centre of Muslim power till the end of the 16th/17th century. The most ancient name of the city was Gaur, afterwards changed to Lakhnawi, and subsequently called Gaur again. The city was also known by various names at different times, such as Fathabad, Husaynabad, Nusratabad and Djanatabad, the last name, meaning "paradise", being given to it by the Emperor Humayun when he stayed there for three months in 1558. The earliest numismatic mention of Lakhnawi as a mint town occurs in a coin of Sulayman Raziyya dated 634/1236. The nearest contemporary account of this early period is the *Taba'at-i Nisari*, whose author Minhaj-i Siraji visited Lakhnawi in 641/1245 within fifty years of its conquest by the Muslims. Under the Emperor Akbar, Lakhnawi was one of the nineteen *sarkars* in which Bengal was divided for administrative purposes. Abu 'l-Fadl states in his *A'in-i Akbari* that the city was known in his time both as Lakhnawi and Gaur.

After the lapse of three decades of the Khalji oligarchical rule, the Lakhnawi kingdom passed under slave governors, during which it acquired so much influence and status that its governors used to be called *Malik al-Sarkar*. But soon the palace intrigues and political squabbles of the Delhi Sultans emboldened the viceroys of Lakhnawi to revolt against the central imperial authority, the distance from Delhi being a greatly-contributing factor here. The greatest of these revolts took place during the reign of the strong-willed Sultan Ghiyath al-Din Balban (g.v. in Suppl.), who personally led a large army to Bengal to crush the rebel governor Sultan Mughth al-Din Tughra, who was mercilessly put to death. Bughra Khan, Balban's youngest son, became governor of Lakhnawi in 683/1282. Balban, the author of the *Ta'rikh-i Firuz-Shah*, gave Lakhnawi the name of "Bulghakpur", meaning "place of sedition", in view of the insurrections which frequently occurred there ever since the inception of the Muslim rule.

With the passage of a century, the small principality of Lakhnawi expanded into a redoubtable Muslim kingdom, embracing in its fold Sunargaon (the present Dacca area), Satgaon (present Hooghly area), the Bhahmaputra valley and the marshy lands of southern Bengal. The founder of the Ilyas-Shahi dynasty, Shams al-Din Ilyas Shah, used to be called "Shah-i-Bangala". The process of the cultural identification with the Bengali people which had begun during 140 years of Ilyas-Shahi rule culminated during the next half-century's reign of the Husayn Shahi Sultans, who were particularly noted for their active patronage of arts and literature. The fame of the Lakhnawi kingdom spread far and wide, and its sultans exchanged ambassadors with the potentates of China and Khurasan. Sultan Ghiyath al-Din Azam Shah (795-813/1392-1419) established *madrasas* in the holy cities of Mecca and Medina and invited the famed Persian poet, *Farid Shirazi*, to visit his court and elicited from him a celebrated panegyric ode. The writ of the Sultan of Lakhnawi was respected even beyond the frontiers of

Bengal, within Orissa, Kamrup, Tippera and Assam.

The prosperous condition of Lakhnawi in the medieval times attracted the attention of foreign travellers. The Portuguese traveller, de Barros, writing before 1540, speaks of broad and crowded streets with trees planted in rows along the walls to give shade to the passers-by. Faria y Souza, visiting the city around 1640, describes the capital city lying on the banks of the Ganges as being three leagues in length, and well-fortified, and containing 1,200,000 families. Rennell, the cartographer, who visited Lakhnawi in the third quarter of the 18th century, portrays the city as "not less than fifteen miles in length and from two to three in breadth".

On account of changes in the course of the Ganges, the capital was removed from Lakhnawi to other nearby places several times in its long history. Twenty-six rulers from Bakhtiyar Khalji (1198) to Kadir Khan (1325) ruled from Lakhnawi, while six kings of the Ilyas-Shahi dynasty had their capital at Fandua, 20 miles/32 km. away in the north-easterly direction, till 1414, when it was transferred back to Lakhnawi in the reign of Sultan Djalal al-Din Muhammad (818-36/1415-32). In 1564, Sulayman Karrari subsequently removed the capital from Lakhnawi to Tanda, lying still further to the south-west near the present village of Mahdipur. The capital was again shifted back to Lakhnawi in 1575 by Murfin Khan Khan-i-Khana, the first viceroy of Akbar, but excessive rains in that year caused a pestilence in which thousands of inhabitants perished, the viceroy himself falling a victim to the contagion. The few people that survived the epidemic left the deserted city, which never regained its old glory. The capital was hurriedly shifted to Tanda, from where it was later changed to Rajmahal in 1589 by Raja Man Singh, and then to Dacca in 1608 by Islam Khan, and finally to Murshidabad in 1704 by Murshid Quli Khan.

Though Lakhnawi was finally deserted towards the end of the 16th/17th century, its magnificent buildings withstood the ravages of time for another century, for as late as 1685 when William Hodges, governor of the East India Company, visited the place, the architectural remains of the historic city were fairly intact. But systematic human spoliation caused irreparable damage to the monuments, whose bricks and stones were carried away to adorn the palaces and houses of distant Rajmahal and Murshidabad. According to Grant (*Fa'ih report*), the *nizam-dafar* of Murshidabad received Rs. 8000/- annually from the local *almshouses* of Lakhnawi as fees for the privilege of demolishing the ruins and stripping from them their highly-prized enameled bricks and basalt stones. Early in the 19th century, many carved stones, found in the ruined city, are said to have become prey of the Calcutta undertakers and others for ornamenting graves in Calcutta. Some of the important relics which are still extant are as follows:

The Sona Masjid or Great Golden mosque, a massive rectangular mosque, built by Sultan Nusrat Shah in 922/1516, is the largest as well as the finest of all the monuments of Lakhnawi. It is called golden because its domes were actually gilded, and *Baridari* (meaning "audience hall") because it has a spacious court-yard resembling an audience hall. The Chota Sona Masjid, built during the reign of 'Ala' al-Din Husayn Shah (899-925/1494-1519) is situated in that portion of Lakhnawi which now forms part of the Rajshahi district of Bangladesh. Of the historic Fort of Lakhnawi, which lay on the

banks of the Ganges and extended for about a mile from north to south, only the Main Gate, called the *Dārūd Darwāza*, and the Royal Entrance, commonly called *Laka Ārī*, are in existence today. The *Firūz* or *Firūz Shāh Minār* is a sort of a victory tower, 84 ft. high and 62 ft. in circumference, popularly supposed to have been built by Sayf al-Dīn Firūz Shāh (1486-90). The *Kadām Rasūl* is a single-domed square building, constructed by Sulṭān Nusrat Shāh in 937/1531 and situated within the enclosure of the Fort. The actual relic, which comprises a small carved pedestal of black marble containing a stone representation of the footprint of the Prophet, is said to be preserved in a private residence nearby for reasons of security. Of the remaining important mosques, there are the *Tāntipārī Masjid*, erected around 1180, the *Lāṭan Masjid*, built in 1475, and the *Chaukātī Masjid* constructed by Sulṭān Yūsuf Shāh in 880/1475. In a spot known as *Banglākūt* there existed the tomb of Sulṭān Husayn Shāh (d. 925/1519), but it was destroyed in about 1846. The tomb of *Shaykh Akhī Sirāj al-Dīn Ḥimāmī*, the famous saint who visited Lakhnawī in the early 8th/14th century, is located in the north west corner of the *Sāgaridighī*, the enormous cistern, nearly 7 miles/10 kms. south-west of Mālda town.

LAKĪT [A.] "foundling", according to the definition of Mālikī law, a human child whose parentage and whose status (free or slave) is unknown.

It is a collective duty (*wağīb*) to pick up an abandoned or exposed child. A person finding such a child may not, having taken it up, replace it in the place where found. If two persons wish to take up the child, preference is given to the one finding it first; if they have both found the child together, it should go to the one best fitted to rear it, but if both are equally qualified, then lots may be drawn for it. The child's finder must swear in the presence of witnesses that he has found it, so that he may not subsequently claim that it is his own son or slave. The child's paternity must be established by regular means. A slave, even if liberated through *ummiyaba*, and a married woman, may not pick up a child unless with the master's or husband's consent. A person who has picked up a child must be free, a Muslim, sui iuris (*raḥīḡ*) and of good character.

The foundling is presumed to be of free status until proved otherwise, and is presumed to be a Muslim if found by a Muslim in a place populated by Muslims. If the local people are, however, all infidels, the child is presumed to be non-Muslim.

Looking after the foundling is the responsibility of the finder; the collective obligation (*fard kifāyā*) is converted for him into a personal obligation (*fard 'ayn*). Nevertheless, certain authorities set the child's upbringing as a charge to the public treasury (the revenue derived from the *jay*), or to special endowed foundations (al-Ya'qūbī, *Ḥusnīn*, ii, 172). The finder administers the child's possessions, represents him in civil law and is responsible for the expenses of his upbringing, but he may have a remedy against

the child's father for the cost of these expenses if it can be proved that the father voluntarily exposed the child and not through necessity. The child's upkeep is due until the end of puberty if it is a boy and until marriage if a girl. If the child dies, its inheritance belongs to the public treasury as representative of the Muslim community, but the *imām* may nevertheless make over the inheritance to the child's finder.

LAKĪT AT-İYĀDĪ, pre-Islamic Arab poem. The name *Lakīṭ* does not necessarily mean that the person bearing it was a foundling, but in the present instance, whilst the genealogists know all the poet's ancestors (see Ibn al-Kalbī-Casquel, *Dīwānara*, Tab. 174 and Register, ii, 377), the *duḥḥ* of his father's name has given rise to divergent readings; MA'NAD (Ibn al-Kalbī, loc. cit.; al-Djābir, *Bayān*, i, 42, 43, 52; Ibn Durayd, *Ḥayāt*, 104; al-Aṣmīdī, *Muḥṣan*, 175); MA'NAR (Ibn Kutayba, *Shīr*, 150-4; *Lā*, s.v. *l-ḥ*); and YA'NAR/YA'NVA (al-Shammūṣī, *apud al-Mubarrad*, *Kāmil*, 829; Ibn al-Shajjārī, *Muḥṣan al-ḥādī*, al-'Arab, 1-7; al-Bakrī, *Mu'jam anṣ ṣiḡḡāt*, 71-3; *Alghāṣī*, xx, 235, ed. Berrut, xxii, 394-5; Ibn Khayr, *Fahrasa*, 398; Yāqūt, *Buldān*, iii, 125). This last reading seems to be the most correct; it even appears in the mss. of the *Dīwān* whose recension is attributed to Ibn al-Kalbī, for whom, in his *Dīwānara*, the poet was Ma'nad's son (see above). Such variation is easily explicable, but one nevertheless wonders whether two distinct persons have not been confused (see Ibn al-Kalbī-Casquel, Register, n, 377; amongst Kuṣāna, there was moreover a Lakīṭ b. Ya'mar, cited by Ibn al-Kalbī, Tab. 361).

Ibn Kutayba, loc. cit., says that the *İyād* (q.v.) established in 'Irāq had to flee for refuge in al-Ḥazira under pressure from the troops of Anūshīr-vān (531-79 A.D.), who wanted to put a stop to their depredations. These last continued, and Lakīṭ, who happened to be in al-Hira (or, according to Ibn al-Shajjārī and al-Bakrī, loc. cit., was allegedly secretary for Arab affairs in the Sāsānid king's chancery), placed his fellow tribesmen on guard against an expedition which the Persians were preparing, in a poem in -iḍī. But the *İyād* remained deaf to this warning, persisted in their ways, and were scattered; it was then that Lakīṭ wrote a long poem in -'ā exhorted them to take seriously the new threats against them and to choose a valiant chief to oppose their enemies.

The *Agzāṣ* (loc. cit.) places these events in the same sovereign's reign, after the battle of Dayr al-Dīwānī, during which the *İyādīs* repelled the Persian cavalry sent against them (see Yāqūt, *Buldān*, s.v. Dayr al-Dīwānī); naturally, this was not the famous battle of 83/202 (q.v.), and makes the poem in -iḍī the prelude of the poem in -'ā. Al-Bakrī (loc. cit.) also speaks of Dayr al-Dīwānī, whilst for Ibn 'Abd Rabbihī, the incidents in question were contemporaneous with *Ḥāḡ Kār* (q.v.); hence later, which seems very unlikely.

Al-Mas'ādī (*Murādī*, ii, 176-7 = §§ 601-2) tells palpably the same story, but places it much further

back in time, since, for him, the poet was serving in the army (var. in *Tamhīd*, ed. Sāwī, 175: was languishing in jail) of Sābūr II (370-79 A.D.); this last exterminated the Ivād, and it was the late wrought on the prisoners which, according to this tradition, gave Sābūr the sobriquet of *Abū 'l-Aktāh*.

From all these pieces of information, the personality of Lakīṭ remains highly confused, and it is hardly possible exactly to fix the period when he was living, though it was probably during the second half of the 6th century A.D. Thanks to his two poems, the poet passed into posterity; in the 6th/12th century indeed, Ibn al-Shāḍī (d. 542/1148) thought highly enough of the poem in '4 to place it at the beginning of his *Muḥāsana*, where it has 35 verses. It was set to music, and the passage in which the ideal war commander is sketched was especially famous (see al-Mubarrad, *Kāmil*, 497, 1166; Ibn Nubāta, *Ṣawā' al-ayyūn*, 203). Lakīṭ is placed on the same level as Kuss b. Sa'īda (q.v.) in some verses of Zayd b. Ḍundab al-Ivādī in praise of his tribe (al-Djāzī, *Bayān*, i, 42), and as a result, considered as the glory of Ivād. One editor of the *Diwān*, Mu'īd Khān (see below), makes him "the first nationalist poet of pre-Islamic Arabia". This *Diwān*, which contains no more than these two poems, is preserved in several mss. of a few leaves: Aya So'ya 3933, Fāth 1665, Chester Beatty 5474 and Berlin 1123, 1176, 1130. It was made the subject of an edition and German tr. by Th. Nöldeke (in *Orient und Occident*, i [1869], 689-718), an edition by Khallīl Ibrahim al-'Atīyya (Baghdād 1390/1970) and an edition and English tr. by M. A. Mu'īd Khān (Beirut 1391/1971).

LAKĪT b. ZURĀRA b. 'Uḍus b. Zayd b. 'Aḥd ALLAH b. DĀRIM, ABU NAḤḤAL, poet and sayyid of the second half of the 6th century A.D.

His name apparently appears for the first time in a tradition concerning the assassination by his brother-in-law Suwayd b. Kaḥḥa b. Zayd (see Ibn al-Kalbī-Caskel, *Ḍamḥara*, Tab. 60, and Register, ii, 521) of a son (or of a young brother) Mālik, of al-Mundhir b. Mā' al-Samā', who had entrusted him to Zurāra, and the vengeance of 'Amr b. Hind (q.v.). In the first place on the seven sons of the murdered man and then on the Banū Ḥanzala b. Mālik (Ibn al-Kalbī-Caskel, Tab. 59), from whom he is said to have had about a hundred tribesmen burned; in a piece of verse, Lakīṭ reproaches these last for having remained in the service of the king of al-Hira (*Naḥā'id* *Ḍarīr* on 'l-Farādaḥ, ed. Bevan, 1084-7 *Aḥḥān*, ed. Beirut xxii, 196). In his article devoted to a mountain in the Ḥijāz infested with lions and called Tardj, Yāḥūt (*Bulḍān*, i, 835-6) alludes to a "famous" *yamaṣ Tardj* (cf. al-Maydānī, ii, 409, E. Meyer, *Der historische Geßalt der Aijām al-'Arab*, Wiesbaden, 1970, does not mention this), in the course of which Lakīṭ is said to have been captured by a certain Kumayt b. Ḥanzala. Nevertheless, it is in the traditions about the "days" of Raḥḥān (see Meyer, *op. cit.*, 47-50) and of Shī' b. Ḍabalā (see *Ḍabalā* and Meyer, 65-71) that he is most often mentioned. In the course of the first battle, which took place after the death of Zurāra, the latter's son, Maḥḥad chief of Dārim, was captured by a section of the 'Amir b. Ṣa'ḥḥa commanded by al-Aḥwaḥ b. Ḍa'far

(Ibn al-Kalbī-Caskel, Tab. 93). Lakīṭ, now chief of Dārim, then offered his enemies 200 camels as the purchase price for his brother, alleging that Zurāra had forbidden his sons to go beyond that number so as not to incite their enemies to obtain large ransoms. Despite the prisoner's supplications, in which he offered 1,000 camels from his own herds, Lakīṭ remained immovable and left Maḥḥad to die of hunger and thirst in captivity (*Naḥā'id*, 227; al-Mubarrad, *Kāmil*, 424; Ibn 'Abd Rabbihī, *ʿIḥd*, ed. 1346/1928, i, 306; etc.).

As *sayyid* of Dārim, Lakīṭ decided to avenge the death of his brother, and assembled a force of warriors from Tamīm (with the exception of the Banū Sa'd b. Zayd Maḥḥad, according to Ibn Ḥabīb, *Muḥabbir*, 247, who accounts him one of the war leaders worthy of the title *ḥarārī*), from Ḍhabyān and Asad, as well as a contingent said to have been sent by al-Nu'mān b. Mundhir, against the coalition of the 'Amir b. Sa'ḥa and the 'Abs. Exactly a year after the "day" of Raḥḥān, ca. 580 according to Meyer, *loc. cit.*, the "day" of Shī' b. Ḍabalā took place; during the clash, accompanied by the usual exchange of verses, Lakīṭ, who was mounted, for the first time among the Arabs, on a horse caparisoned with brocade provided for him by the king of Persia, was leiled by the blows of an opponent variously named in the sources (see e.g. al-Mubarrad, *Kāmil*, 194; Yāḥūt, *Bulḍān*, ii, 24) but who must have been Shurayḥ b. al-Aḥwaḥ (*Naḥā'id*, 663-5; *Aḥḥān*, xi, 135-7). He died the next day, not without having uttered once more some verses, and the leadership passed to his brother Ḥāḍib (q.v.). Since his enemies had yet again struck him after his death, this gratuitous action inspired some verses of his daughter (or his sister, according to *ʿIḥd*, iii, 309) Dukhtānīs, wife of his cousin 'Amr b. 'Amr b. 'Uḍud (*Naḥā'id*, 665; *Aḥḥān*, xi, 137-9; Yāḥūt, *Bulḍān*, ii, 24).

Although al-Djāzī, in a rather obscure passage (*Ḥayyārīn*, ii, 93), seems to consider Lakīṭ as a tyrant, the sources cite an anecdote in which one has his widow (a daughter of Ḥāḍib b. Kaḥḥa according to al-Mubarrad, *Kāmil*, 493, and al-Maydānī, *Awḥād*, ii, 231-2, or else a certain Miskarīḥḥaḥa bint Kays b. Khālī according to Yāḥūt, *Bulḍān*, ii, 372-3), who had remarried, eulogising Lakīṭ and telling her new husband that he was certainly as [sweet as] water, though not however as sweet as that of the famous spring of *Ṣaddāḥ—ma'* *ma' la-ḥa-Ṣaddāḥ*, an expression which became proverbial.

Al-Djāzī (*op. cit.*, iv, 382) considers that all the sons of Zurāra (Ibn al-Kalbī-Caskel, Tab. 60, cites ten of them) were poets, but their output hardly appears prolific, and only a small number of verses attributed to Lakīṭ survive; these are brought together by Abū Kuryūs in *Kawā'id al-adab*, 258-9.

Bibliography: (in addition to references given in the article): Ibn Sallām, *Talāḥāt*, 138; Ḍāḥir, *Bayān*, ii, 170, iii, 220; Ibn Kutayba, *Shī'r*, 662; idem, *ʿUyūn*, iv, 17; Amīdī, *Muḥāsif*, 175; Rotheimer, *Lahmīn*, index; Blachère, *HLA*, ii, 257 and index; Sezgin, *GAS*, ii, 194. (CH. PELLAT)

LĀLĀ [Owing to circumstances beyond their control the editors are unable to supply the article planned under this entry. They intend to publish it in the Supplement.]

LALA MEHMET PASHA, grand vizier under Ahmad I. He was a Bosnian by origin and a relation of Mehmed Sokollu Paşa. The year of this birth is not given. After having had higher education

in the palace, he was *sultân-şâhîr*, and became in 1603/1595 *âgha* of the Janissaries. In the next year he took part in the Austrian war as *beglerbegi* of Rumeli and was commander of Esztergom (Gran, Turkish: *Usturghon*) when this town capitulated to the Austrian army in Muharram 1004/September 1595. During the following years, Lala Mehmed was several times *asker* in Hungary and when, in Şafar 1013/July 1604, the grand vizier Yavuz 'Alî had died in Belgrade on his way to the Hungarian theatre of war, the sultan sent the imperial seal of office to Lala Mehmed. Although peace negotiations were continually being resumed, the new grand vizier took in that year Wartau (Turk. *Wâk*) but besieged in vain Esztergom. During next year's campaign, Esztergom was taken by Lala Mehmed (29 September 1605), and in November he crowned the Hungarian Borsány as king of Hungary (excepting the regions occupied directly by the Turks) and Transylvania. In that same year, the Turkish eastern army under Çiğale Paşa was beaten by the Persians, while the troops sent to subdue the revolt in Anatolia were routed at Bolvadin. After his return, it was decided that the grand vizier should remain next year in the capital and lead the war on the two fronts and, if possible, bring to a successful end the long-drawn peace negotiations with Austria. The young sultan, however, changed his mind in keeping with the wishes of the Kapudan Paşa Derwish, who was intriguing against Lala Mehmed. Accordingly, the latter was ordered to take command of the army against Persia. He had already put up his tent in Üsküdar, when overcome by sorrow because of the frustration of his plans, he was seized with an apoplexy and died three days afterwards (23 May 1606). He was buried near the *türbe* of Sokollu Paşa.

Bibliography: The *tevârih* of Felevî who, as scribe, had served Lala Mehmed on several occasions (cf. Bâtıncı, *GÖV*, 192), Naîmî and Hasan Beyzâde; 'Othmân-zâde Tâib, *Hadikat al-anzarî*, 52 ff., *Sigill-i Şehinşahi*, iv, 140; von Hammer, *GÖR*, iv. (J. H. KRÄMER)

LÂLE DEVRI, "The Tulip Period", the name given to one of the most colourful periods of the Ottoman Empire, corresponding to the second half of the reign of Ahmed III (1703-30 [g.v.]) and more precisely to the thirteen years of the vizierate of Nevşehirli İbrahim Paşa [g.v.]. The tulip which gave its name to this era had been exported from Turkey to Austria by Ogier Ghislain de Busbecq, the ambassador of Ferdinand I of Habsburg (1593-64) at the court of the Sultan, but it was in Holland that its cultivation was developed, through the efforts of the botanist Charles de l'Écluse (C. Clusius) (Arras 1526-Leyden 1609), who occupied the Chair of Botany at the University of Leyden. The predilection for tulips spread rapidly throughout Europe, but the mania for this plant adopted its most extravagant forms in Turkey. In fact, imported back to Turkey from Holland in the 17th century by the Austrian ambassador Schmid zum Schwarzenhorn during the reign of Ahmed III, this flower became the object of extraordinary enthusiasm. The tulip fashion gave birth to an architecture, of which the elegant Lâle Dîvânî mosque, in Istanbul, is an example; to an art form, Ottoman baroque, inspired by French "rococo"; and to a literary genre, the poet Nedim [g.v.] being the prototype here.

The promoter of this fashion was the Grand Vizier İbrahim Paşa of Nevşehir, son-in-law of the Sultan. Coming to power at the beginning of 1718, he showed great diplomatic skill in the negotiations

over the Treaty of Passarowitz (21 July 1718), putting an end to a state of continual war which had disrupted the economic structure of the Empire and devastated its rural areas. After Passarowitz, the Grand Vizier applied himself to pursuing the objective of peace, and his vizierate was to be marked by an initial period of absolute peace, followed by a period of euphoria induced by victorious campaigns in Iran, which was then in a state of anarchy as a result of the Afghan invasion. Agreeable and peace-loving by temperament, Ahmed III had a strong hedonistic streak. He was a cultured man, a poet and calligrapher, but also a man of exceptional greed. İbrahim Paşa was himself refined and cultured, an extrovert personality and a lover of peace and pleasure. Having similar tastes, the two men were well-suited to each other. İbrahim Paşa was at pains to satisfy both the hedonistic nature and the avidity of the Sultan. By anticipating the latter's desires, he simultaneously reinforced his own status and ensured the relaxation and well-being of his master. The Sultan took no interest in any aspect of government and left all the responsibility of state to his vizier, who surrounded himself with close relatives and rid the court of all hostile elements. Until 1730, the entire administration of the state was under his control and all important posts were held by his appointees; this nepotism caused much resentment and earned him numerous enemies.

Overtures to the West. The Grand Vizier was a man of enlightened sympathies, and the years of his vizierate were marked by a series of approaches to the West. For the first time in the history of the Ottoman Empire, attempts were made to benefit from the political, economic and cultural structures of Europe. Diplomatic relations were fostered, especially with France: an ambassador, Yirmisekiz Çelebizade Mehmed Efendi, was accredited to the court of Louis XV, and was instructed to study those French institutions which might be adapted to the requirements of Ottoman lands (1719). Commercial relations with France were developed; each year, five hundred trading ships operated between France and Turkey.

Policies of progress, construction and innovation. In 1724, the first printing-press was installed in Istanbul, through the good offices of İbrahim Müteferrika [g.v.], a Hungarian converted to Islam, aided by the son of the Sultan's ambassador to the court of Louis XV, who had accompanied his father to Paris. A French officer of engineers, de Rochefort, was invited to prepare plans for reforming the army on the Western model, while another French convert to Islam, Khumbaracı Ahmed Paşa [see AHMED PAŞA SONNEVAL], organised a corps of artillery. Yet another French convert to Islam, Gerçek Dîvânî Âgha, was responsible for the foundation of the first team of fire-fighters. A lover of arts and literature, the Grand Vizier surrounded himself with poets, musicians and artists. He prohibited the export of rare manuscripts and founded a society for the translation of Arabic and Persian texts. He established five libraries, in addition to that of the Sultan, of which the poet Nedim was curator. He gave a fresh impetus to the manufacture of porcelain and earthenware, restoring the workshops of İznik and Kütahya and founding a new one in Istanbul, that of Tekfir Sarayı. He founded a textile-mill, in the context of municipal engineering, the projects that he instituted include the construction of a dam to bring water from the Forest of Belgrad to the capital and the building of roads and

of harbour installations; he supervised the markets personally, regulating the sale of bread and the importation of coffee. He encouraged progress in medicine, Lady Mary Wortley-Montagu, the wife of the British ambassador to the court of the Sultan, states in her *Letters* that certain maladies were, better treated in Turkey than elsewhere and, in particular, she mentions the existence of a vaccine against small-pox. The Sultan was an enthusiastic promoter of construction projects: fountains, mosques and mausoleums sprang up in every corner of Istanbul; palaces, pavilions (*hâşhâ* [p.v.]) gardens and places of recreation adorned the Golden Horn and the Bosphorus. Architects were brought in from Europe, and on his return from France in 1721, Yirmesekir Çelebiade Mehmed Efendi brought with him the plans of palaces and gardens. The most famous of these palaces, that of Sa'dâbâd, was built at the base of the Golden Horn, at Kâğıthane. Given this name on account of an ancient paper-mill dating from the Byzantine era, it was to become a favourite place of promenade; the palace was erected in two months, according to the plans brought from France; the French ambassador, the Marquis de Bouasse, presented the Sultan with the forty oranges which adorned the façade; and the first feast was held there on 31 July 1722, of which Nedim has left us an account. The Tulip Period was an era of progress and increased interest in art and culture, poetry and music being pre-dominant; in poetry, Nedim was an innovator, introducing music into verse and popularising ballads (*ghazâlî*).

Entertainment. When wearied with affairs of state, Ahmed III sought rest and recreation. Over a period of almost thirteen years, Ibrahim Pasha procured for him an ambience of continuous festivity, symbolised by the tulip. Gardens and window-frames were decorated with tulips; different varieties proliferated; 839 were enumerated in 1726. Competitions were organized. Bulbs became so expensive that the government was obliged to control prices in order to prevent speculation (*Yirmisik* of Muharrar 1140/September 1722). A bulb in the possession of an ambassador went missing; town-criers appealed in vain for its return and houses were searched. At times when the flowers were in bloom, Ahmed III used to change his place of residence, proceeding majestically to his *yaldi* (palaces built on the edge of the water). The people resorted *en masse* to the tulip promenades, and barges sailed to Sa'dâbâd and other places of recreation. Festivities were also held at night, and these were renowned for the spectacles, in the gardens of the Palace of Çerâğhân, "Palace of Candles", at the mouth of the Bosphorus, of burning night-lights or candles under every tulip, hence the name given to this palace; in the illuminated gardens, tortoises were to be seen meandering over the beds of tulips, bearing night-lights on their shells. Nedim has left us a reminiscence of these festivities in the lines: "Let us laugh, be glad, make merry! . . . Come, slender cypress, let us set our course for Sa'dâbâd." When the tulip season was at an end and the rigours of the winter arrived, the round of entertainments continued unabated. The cold and the unpleasant weather were forgotten at the "feasts of *kelâh*"; poets, men of letters, musicians and singers were invited to these occasions, and the most intemperate nights of the winter were passed in convivial company, enlivened by a profusion of choice viands and confections; the banquet came to its climax with the arrival of the *kelâh*, brought in on copper plates and prepared in the presence of the guests, to the ac-

companiment of music and song. Besides the tulip feasts and the *kelâh* banquets, the ceremonies associated with the circumcision and marriage of the thirty-one princes and princesses, the children of Ahmed III, were the occasion for interminable festivities. Such feasts sometimes lasted for as long as a week or ten days (for example, in April 1719, April 1720, May 1721). In 1727, there were *kelâh* banquets which lasted for a whole month, that same year, the month of Ramadan fell in May, giving rise to further festivities; between 1726 and 1730, the month of Ramadan fell in the spring, and was celebrated accordingly each year.

With the passage of time, the festivities became ever more extravagant: the Sultan's palace was crammed with tulips and punks at the height of winter and also with odiferous shrubs; thousands of birds sang in gilded cages; pleasure was the sole purpose of living; the Sultan and the Vizier, both of them poets and calligraphers, wrote love-poems addressed to each other. Under the influence of the court, a change in public morals was discernible, and a love of luxury and the pursuit of pleasure became more marked. In her *Letters*, Lady Mary Wortley-Montagu declares that Turkish women are more liberated than their English counterparts. Lines by Nedim are an indication of the moral freedom of the time: "Ask permission of your mother, say that you are going to the Friday Prayer! . . . Come, slender cypress, let us set our course for Sa'dâbâd." Wishing to rival the people of the court, the middle class also embarked on schemes of reckless expenditure, thus causing the ruin of numerous households. As a means of restraining such expenditure, the Grand Vizier was obliged to pass a law regulating clothing according to social class, especially in regard to decorative dress worn by women. But this moral laxity scandalised the public; the Sultan had swings built for the people's amusement, and the sight of swinging women pushed by young men was an affront to public opinion; in addition, members of the nobility, including the Grand Vizier himself, were accused of amusing themselves, during barge-trips on the water, by tossing gold coins into the corsages of the ladies; there was even an accusation levelled against the Grand Vizier that he had made continual advances to the attractive wife of the *Kâğı* of Istanbul, Zülâli Hasan Efendi.

The end of the festivities. The unbridled expenditure by the court, the relaxation of morals, the taxes levied by the Grand Vizier to pay for ever more costly entertainments, caused discontent among the people, in particular the fanatical and reactionary class of the *Sülemî*. The people felt that they had been let down. Although the Grand Vizier had made great efforts in the interests of cultural growth, he had done nothing to combat the fanaticism of the *Sülemî* and the ignorance of the masses. The Janissaries, ignorant and fanatical, whose income depended on pillage in time of war, felt themselves threatened by the military reforms advocated by the Grand Vizier. The latter had imposed new taxes on commerce, taxes which caused discontent both among the artisans and among the Janissaries, who engaged in small-scale trading during their leisure time. The *Sülemî* took it upon themselves to fan these grievances. However, the revolt was caused by political factors.

The foreign policy of Ibrahim Pasha consisted in the avoidance of war; however, the Tulip Period saw a temporary extension of Ottoman sovereignty, on account of the Afghan invasion of Iran. In the

anarchic conditions which prevailed, a new rivalry brought the Turks and the Russians into confrontation in the Caucasian provinces. Thanks to the mediation of the French ambassador, the Marquis de Bonnac, this tension was resolved in an amicable fashion and a Russo-Turkish treaty, signed 23 June 1724, divided the Iranian spoils between the two powers: the Turks occupied Tiflis, Erzerum, Tabriz and the territories to the west of a line from Ardabil to Hamadan, while the Russians took possession of Derbend, Bakû and Dagestan. This treaty was the occasion for fresh festivities, with exchanges of gifts between Turks, Russians and French, then control of affairs was delegated into the hands of the *şeyhs* of the frontier regions, and the festivities continued. However, in Iran, the situation was soon reversed: Nâdir Şâh succeeded in seizing power having overthrown the Afghân dynasty and, in 1730, he compelled the Turks to restore the Iranian territory that they had occupied. There was news of the capture of Hamadan and the massacre of its Turkish garrison. The Grand Vizier tried to keep the defeat a secret and to settle matters peaceably through diplomacy, but Nâdir Şâh refused to negotiate. In order to stifle public unrest, it was necessary to prepare a campaign. On 17 July, the Ottoman army paraded at Üsküdar, where until 3 August it awaited the arrival of the uncommunicative Sultan. The latter finally joined his troops to conduct a grandiose procession which was nothing more than a show-off, all the soldiers returning to their homes at the end of the parade. But on 12 August, it was heard that the Iranians had taken Tabriz and brutally massacred the Turks who had been stationed there. Again, İbrahim Paşa tried to suppress the news, but Janissaries returning from the frontier regions spread the news of Iranian atrocities through the *hamams*. Discontent mounted, and the Grand Vizier was held responsible for the setbacks. Janissaries and *'ulemâ* fanned the fanaticism of the artisans. In his report dated 17 September 1730, the Marquis de Villedieu, the French ambassador, speaks of hesitation to act on the part of the Sultan's court. This indecision was to prove crucial to the success of the revolt, which broke out on the morning of 28 September. The leading officials of the State were on holiday at the time: the Sultan and the Grand Vizier at Üsküdar, the governor of Istanbul, Kaymak Mustafa Paşa, son-in-law of İbrahim Paşa, was busy tending his garden beside the Bosphorus, as was the Kapudan Paşa, another son-in-law of the Grand Vizier. The insurgents were able to act with total freedom. Their leader was Patrona Khânî, an Albanian, formerly a *legend* (q.n.) on the Sultan's flag-ship *Patrona*, of whom we have a portrait painted by the artist of the Tulip Period, the Dutchman Vaumour (1656-1738); he was a man between thirty-five and forty years old, already an active veteran of numerous rebellions, a skilled demagogue and inciter of crowds, who made a precarious living, sometimes as an itinerant trader, sometimes as a town-crier or *hamamcı* masseur. The crowd which assembled at the Hippodrome Square (At meydanı) consisted of some thirty artisans, mostly Albanians, who were joined by the tradespeople from the bazaar and about three hundred Janissaries whose *Agha* had made his escape with great difficulty and had reached Üsküdar in disguise. Towards evening, the number of rebels had risen to 2,000 persons. The revolt was the work of a handful of ignorant artisans: Patrona Khânî, Muslu the vegetable merchant and 'Alî the coffee stall owner, but in fact it was skillfully directed by two individuals

belonging to the *'ulemâ* class: the preacher of Aya Sofya, İspirîzâde Ahmed Efendi, and the *Kâdî* of Istanbul, the Albanian Zulfî Hâsân Efendi, who had personal reasons for hating the Grand Vizier. According to the report of the Marquis de Villedieu, dated 7 October, the tragic outcome was caused by the indecision of the Sultan. The court did not return to Istanbul until the night of 29 September, two days after the outbreak of the revolt. On the morning of the 30th, Ahmed III sought to negotiate with the rebels, feeling themselves in a position of strength, the latter demanded that the Grand Vizier and his two sons-in-law, the Kotkâddî Saymak Mustafa Paşa and the Kapudan Paşa, be handed over to them. The Sultan tried in vain to rescue his favourite; in the night of 30 September, fearing for his own life, he ordered the strangling of İbrahim Paşa and his two sons-in-law, and at dawn their bodies were surrendered to the rebels, on three ox-drawn hearses. But the insurgents, who had pillaged and sacked the palaces of the viziers, now insisted on the abdication of the Sultan. Zulfî Hâsân Efendi and İspirîzâde, acting in the name of the rebels, communicated the decision to Ahmed III. In the night of 2 October, having received the guarantee that his own life and those of his sons would be spared, he abdicated in favour of his nephew Mahmûd who was immediately enthroned. Soon afterwards, Mahmûd I had the ringleaders of the revolt assassinated.

The age of festivity had come to an end, the tulip gardens, the palaces and the places of recreation had been destroyed. The tulips had gone: they left behind a sumptuous but tragic memory.

LÂLEZÂRÎ, ŞAYYH MEHMET, Ottoman author of a work on tulips, the *Misân al-anâr* "Balance of flowers". This treatise on the cultivation of tulips was composed in the reign of Sultan Ahmad III (1135-43/1703-30), who had given the author the title of *Shukhiyî-perverân* "cultivator of blossoms" on the suggestion of the grand vizier Ibrahim Paşa between 1716 and 1730.

Hss. Berlin*, 303, no. 232. See also LÂLE DEVRI. (TH. MENGES)

LÂLEZÂRÎ, ŞAYYH MEHMET TÂHİR, Ottoman *hâdî* and author of several theological works, often known as Kâdî Mehmed.

The date of his birth is unknown, but he was born in İstanbul and was presumably connected with the Lâlezârî quarter near the Fâtih Mosque. He became a *molla* and a *muderris*. In 1202/1786-7 he was *hâdî* at Eyyûb, and then on 30 Muharram 1204/30 October 1789 he died at his house in Rumeli Hâsîr. None of his extant works has been printed, but these all exist in manuscript in İstanbul libraries. They include a series of theological commentaries, such as the *Misân al-muḥîm fi ma'rîfat al-hikm al-mustahîm*, the *Daḡ' i'tîrâd Râkibî Paşa fi ḥakḥ al-fusûḡ*, and one on the *Kasîde-yi nâmîyye*, and various others on works of leading Sûnî scholars like al-Mâturkîdî, al-Gharâlî, 'Abd al-Kâdir al-Djîlânî and al-Bîrgewî.

(Eo.)

LÂLISH, a valley some 30 miles/50 km north-west of Mawil in 'Irâq, in the *ḡadq* of Shaykhân and in a largely Kurdish mountain area, famed as the principal pilgrimage centre of the Yazîdî sect (see varîḡ). The *ḡamâ'ḡyya* of the Yazîdîs is held from the 23th to the 30th September O.S. (6th to the 13th October N.S.) each year, and revolves round the shrine of the founder, Shaykh 'Adî b. Muḡâfir (s.v.) and the tombs of other early saints of the sect. The first European to attend and

describe the festival seems to have been Sir Henry Layard in 1846 and 1849; a valuable description of the ceremonies as they were held in the 1940s is given by C. J. Edmunds, *A pilgrimage to Lalish*, London 1967.

Bibliography: given in the article. (Eo.)

LALITPUR, the name of a town in the Bundelkhand region of Central India, administratively in the southwards-protruding tongue of the former United Provinces, Uttar Pradesh of the Indian Union. It is situated in lat. 24° 42' N. and long. 78° 28' E. on the Great Indian Peninsula Railway and on the Kânpûr (Cawnpore)—Saugor road. Tradition ascribes its foundation to Lalitâ, wife of a Deccan Râjâ, and till the early 16th century it was held by the Gond. In the 17th century it fell within the Bundelâ state of Candêr. In the first half of the 19th century, it passed from Marâṭhâ control to that of the British, and in 1844 the District of Candêr was formed, with its name changed in 1861 to that of Lalitpur; in 1891 it was absorbed into Jhânsi District. The Candêr and Lalitpur Districts were centres of fighting, under the leadership of Râjâ Mardâia Singh of Bâmpûr during the Indian Mutiny of 1857-8, and Lalitpur town was temporarily abandoned by British troops. The antiquities of Lalitpur include several Hindu and Jain temples, and there is an inscription of Sultan Firûz Shâh Tughlâq dated 739/1358.

Bibliography: *Imperial gazetteer of India*, xiv, 138-9, xvi, 133-4; D. L. Drake-Brockman, *District gazetteers of the U.P. of Agra and Oudh*, xiv, Jhânsi, Allahabad 1909, 213 ff., 286-93. (Eo.)

LALLUḢ LÂL, the most important translator of Sanskrit works into Brajî-bhâṣhâ prose at the Fort William College, Calcutta. Born at Agra in 1763 of a family of Brahmin priests, in 1786 he sought employment with Nawwâb Muḡarrâf al-Dawla of Muḡhaddâd and then settled in Calcutta, where he died in 1835.

In 1802 John Golechrist, the Professor of Hindustânî (later known as Hindi and Urdu) at the Fort William College, appointed Lalluḡ as an assistant in Brajî-bhâṣhâ. His primary duties were to help the Professor in his publications of a Hindustânî grammar and dictionary. Lalluḡ also collaborated with the senior Muslim translators of Hindustânî in their works. Based on Lalluḡ's interpretation, Kâṣim 'Alî ḡawwân translated *Shâhnamâ*, the celebrated Sanskrit drama of Kâlidâsa (ca. 375-455 A.D.). Lalluḡ also translated a book on Hindî polity and wrote an elementary manual of Brajî-bhâṣhâ, but became infinitely more famous for his *Prasânḡar*. This is a translation of the tenth book of the *Bhâgavata Purâna* or *Srîmad Bhâgavatam*, containing the life story of Kṛishṇa, especially of his boyhood. The original Sanskrit was first translated into Brajî-bhâṣhâ poetry by Caturbhūḡdâs in 1510, and Lalluḡ translated it into lucid Brajî prose, which even the Muslims of that century praised highly, both for its content and its language.

Bibliography: In addition to references in the article HINDI, see T. Roebuck, *Annals of the College of Fort William*, Calcutta 1829; *Proceedings of the College of Fort William 1801-1805*, National Archives, New Delhi. (S. A. RASVI)

LÂM, the 23rd letter of the Arabic alphabet, transcribed as *l*; numerical value 30 (see *arḡḡad*).

Definition: *fricative, lateral, voiced*. It is called a *liquid* (H. Fleisch, *Traité*, i, § 3 b) because of the fluidity of its emission. This act of emission comes

normally from the two corners of the mouth, *l* bilateral; it can be made from one side only, with unchanged acoustic results, *l* unilateral (M. Grammont, 71 penult). This last was probably the case with the *lām* (a lateralised consonant [see Dānā]), called *al-lā'ifa*, which was made from the right or left side of the mouth (Sibawayh, ed. Paris, II, 452, ll. 17-18). J. Cantineau has placed *l* amongst those "consonants outside the classification scheme" (Esquisse, 183, and *Consonantisme*, 288), see A. Martinet's observations in *BSL*, xlix/1 (1953), 77. According to Arabic tradition, it is *bayyaya*, *ḥamḥayya*, *maḥḥayya*, and also called *munkariya* "incubated" (see Fleisch, *op. cit.*, § 47 d, 4, § 48, e, f, § 49, i, and Cantineau, *Cours*, 50).

The articulation described above is for the phoneme; for the phonological oppositions which define the phoneme *l*, see Cantineau, *Esquisse*, 172, and for the incompatibilities, *ibid.*, 200.

Lām is emphatic *l* in the word *Alfāḥ* when it is preceded by the vowels *u* or *a*, so that one says 'inda /fḥa, but *h-wāḥ* (see references in Cantineau, *Cours*, 51 n. r; for a study of its articulation, references in Fleisch, *op. cit.*, 224 n. 1). The treatises on *laḥqāḥ* set forth the rules according to which *l* may be found in other words (Cantineau, *Cours*, 51).

Lām seems to continue an articulation which was similar to it in common Semitic (Cantineau, *Esquisse*, 172 n. 1); indeed, one may go further and add that "La liquide latérale *l* se trouve en correspondance régulière an sémitique, berbère et couchitique" (M. Cohen, *Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique*, Paris 1947, 182).

Alterations: (a) Exchange of phonemes: *l* > *n* in a fairly numerous groups of doublets. In several of these, the phenomenon does not seem to be conditioned, e.g. *ḥillat* and *ḥunnat* 'mountain peak', and *l* > *r* in 'ad *mutaḥaffil* and *mutaḥaffar* 'a piece of split wood' (Fleisch, *op. cit.*, § 9 f, g).

(b) Assimilation. The *l* of the definite article is assimilated when in contact with the 'sun' consonants, i.e. the dentals to the prepalatals (except for *ḡ*). For *l* when it is final in a word, assimilation of the initial following consonant is especially notable in the case of the interrogative particle *hal* and of *hal* 'nay, on the contrary' (*ibid.*, § 12 k); for the variations of the Kurān readers, see *loc. cit.* For the position in the dialects, see Cantineau, *Cours*, 53-4, to be completed for Egypt by the material in N. Tomiche, *Le parler arabe du Caire*, Paris/The Hague 1964, 27; and for Mount Lebanon by that of D. Cohen, *Le dialecte arabe Hassaniya*, Paris 1963, 23-4. In regard to Lebanon one might add *milā* > *milā* 'well', *ḥār-ḥna* > *ḥār-ḥna* 'has been for us', and *-ḥna* > *-anna* 'for us' (Fleisch, *Études*, 398), and for Aleppo (A. Barthélemy, *Dict. ar.-fr.*, Paris 1935-54 and 1960), assimilation at a distance, as in *laḥḥāḥ* (750) and *raḥḥāḥ*, *raḥḥāḥ* and also *raḥḥāḥ* and *raḥḥāḥ* (773) 'other' or 'another'.

(c) Dissimilation. For this see Cantineau, *Cours*, 51, and for the dialects, *ibid.*, 53. To the nouns cited there one might add for Lebanon *karakol* > *karahon* and *karahūn* 'police station' (Fleisch, *Études*, 361 and 188 l. 3, and the examples of J. GrandHenry in his *Le parler arabe de Chércheh, Algérie*, Louvain 1972, 42; see also W. Fischer, *Die Sprache der arabischen Sprachinseln in Usbekistan*, in *Isl.*, xxxvi (1961), 238.

Bibliography: Fleisch, *Traité de phonologie arabe*, I, Beirut 1961; and *Études d'arabe dialectal*, Beirut 1974; Cantineau, *Cours de phonétique arabe*, *Esquisse d'une phonologie de l'arabe classique* and *Le consonantisme du sémitique*, in *Études de linguistique arabe*, *Mémoires Jean Cantineau*, Paris 1960;

M. Grammont, *Traité de phonétique*, Paris 1933; Zaḡhājī, in his *K. al-Lāmā*, ed. Māzin Mubārak, Damascus 1389/1969, has gathered together all the uses of *lām* as a particle *l*, *la-* and *li-*.

(H. FLEISCH)

LĀM, BANŪ, a numerous and formerly powerful Arab tribe living on the borders of Iran and 'Irāq, principally on the plain between the foothills of the Puḡhāt, Kāh mountains and the river Tigris. The easterly limit of the main tribal territory follows the course of the Rūd-i Karḡa southwards from Pā-yī Pul to the area north of Hawza where the river peters out into salt flats. The course of the Tigris between Shāykh Sa'd and 'Amāra forms the westerly limit of that territory. Small and isolated groups of Banū Lām have been observed outside the main area—as far afield as Mandali to the northwest and in the Rīm Humma district to the southeast.

The tribe is divided into numerous sub-groups which have varied over time in their size and relative importance (A. H. Layard, *A description of the province of Khuzistan*, in *Journal of the Royal Geographical Society*, xvi [1846], 45; J. G. Lorimer, *Gazetteer of the Persian Gulf, 'Omān and Central Arabia*, Calcutta 1908-15, II, 1081-4; Max Freiherr von Oppenheim, with Werner Caskel, *Die Baduien*, Wiesbaden 1952, II, 471-3, and H. Field, *Contributions to the anthropology of Iran*, Chicago 1939, *Anthropological Series of the Field Museum of Natural History*, xxix/1, 195-8). According to Lorimer (II, 1085), all members of the tribe spoke Arabic, but a minority also knew and used Persian. The great majority of the tribe was, and remains, Shi'ite. In the past, different groups have followed sedentary, semi-nomadic and nomadic ways of life, but in the 20th century, particularly since the Second World War, the former has come to predominate. The Banū Lām have long had a reputation for being very good pastoralists. In former times they raised a wide range of animals—sheep, goats, cattle, horses, donkeys and camels. Demand for some of the latter animals has declined sharply in recent decades, and most attention is now devoted to sheep. The Banū Lām also grow crops, chiefly for their own consumption; these include wheat, barley, oats and maize, but little attention is apparently given to rice.

It is impossible to give accurate figures for the population of the tribe either now, or in the past. One estimate made in 1840-1 put the total number of families at about 30,000 (Layard, *op. cit.*, 46). Some seventy years later Lorimer (II, 1084) estimated the total population to be about 45,000. After fieldwork in 1934, the number of Banū Lām living in Persia was estimated to be about 5,700 families (H. Field, *op. cit.*, 196). Another source put the number of families in Persia at 18,650 in 1945 (Admiralty [Great Britain] Naval Intelligence Division, *Persia*, Geographical Handbook Series, London 1945, 379). A similar source for 'Irāq noted that the Banū Lām were the most powerful tribe on the Tigris, but no figures were quoted (Admiralty [Great Britain] Naval Intelligence Division, *Iraq and the Persian Gulf*, Geographical Handbook Series, London 1944, 371).

The origins of the tribe remain obscure (see von Oppenheim, II, 459-69, for a summary history of the tribe). Tradition relates that the name of the tribe derives from a certain Lām b. Hāriḡa, a leader of the Kaḥḡān tribe in the Hīdīz; and that one of his grandsons, Barak, led a migration to the Hawza area of 'Irāq. Later, Hāfiḡ al-Lām, a son of Barak, is reported to have quarrelled either with his father,

or with the *wāḥī* of Hawka, who was also a leader of the Banū Rabiʿa. Hāḍir is then said to have taken control of the land between Shaykh Saʿd and ʿAmāra which had previously belonged to the Banū Rabiʿa and to have become the founder of the Banū Lām (S. H. Longrigg, *Four centuries of modern Iraq*, Oxford 1925, 8, and H. Field, *The anthropology of Iraq. The Lower Euphrates-Tigris region*, Chicago 1949, *Anthropological Series of the Field Museum of Natural History*, 211/1 no. 2, 329-30). A putative date for these events would be about the end of the 10th/16th century (von Oppenheim, iii, 460 states that the Banū Lām were already living on the east bank of the Tigris in 1573).

The Banū Lām were reluctant to accept Ottoman control, and the Pasha of Baghdad, ʿUmar (who was in office 1088-92/1677-81) ordered the first of many Turkish campaigns which tried to compel their submission. ʿAlī Pasha (in office 1107/1695-6) personally led a punitive raid against them, and Hasan Pasha (q.v.) (in office 1116-16/1704-23) also mounted a series of expeditions against them beginning in 1116/1704 (Longrigg, op. cit., 93-4, 124, 126). The Banū Lām sometimes acted in concert with other tribal groups in rebelling against Ottoman rule; for example, in 1135/1726 they joined with various groups of Lurs to attack Baghdad.

The rise to power of Tahmāsp Kūfī Khān (later Nādir Shāh (q.v.)) provided further opportunities for insurgency on the part of the Banū Lām. In 1145/1733 Tahmāsp Kūfī Khān laid siege to Baghdad and the leader of the Banū Lām, ʿAbd al-ʿAlī, joined forces with the Persians. He apparently agreed to cooperate with the Arab *wāḥī* of Hawka in launching an attack on Basra, but the decision was not implemented (L. Lockhart, *Nādir Shāh*, London 1936, 68). After the defeat of the Persian army by Ottoman forces under Topal ʿOthmān Pasha (q.v.) in Safar 1146/July 1733, the Banū Lām helped many of the survivors to return to their native country; for this, a Turkish force led by Ahmad Pasha later inflicted punishment on the tribe.

The destruction and chaos brought about by the Persian invasion and retreat provided conditions in which tribal rebellion could flourish, and the Banū Lām were not slow to take advantage of them: "Les Muntafiks et les Beni Lames avoient donné plus de peine que les autres aux Paschas" (M. Otter, *Voyage en Turquie et en Perse*, Paris 1748, quoted in Longrigg, *Four centuries*, 256). In 1156/1743 Nādir Shāh's forces again invaded Turkish territory and they were joined by the Banū Lām, who this time did take part in the siege of Basra (*A chronicle of the Carmelites in Persia*, London 1939, i, 646-7). During the next century and a half, the pattern of rebellion followed by punitive Ottoman military expeditions was often repeated. Important Turkish campaigns were mounted against the Banū Lām in 1763, 1800, 1806, 1849, 1879 and 1911. In 1841 the Persian ruler Muḥammad Shāh sent an expedition to collect arrears of taxation from Muḥammad Taqī Khān, the *khāḥā* of the Bakhtiari. During this campaign, which was led by the governor of Isfahān, Muḥammad al-Dawla, the Banū Lām were plundered by the Persian troops (Layard, loc. cit.). But in later years the tribe had relatively little to fear from Tehran; it seldom paid taxes to the Shāh (Lorimer, ii, 1083), and it retained a position of autonomy between the Ottoman empire and Persia.

The Banū Lām were often in conflict with their neighbours, particularly with the Lurs, the ʿAl Bā Muḥammad and the Muntafik (q.v.). De Bode, who

visited the area in 1841, reported that it was only the existence of strife between the Banū Lām and the Muntafik which prevented Diālā from being attacked (C. A. de Bode, *Travels in Luristan and Arabistan*, London 1845, ii, 198-9). At other times, the tribe was riven by internal feuds, and these too led to bloodshed and the intervention of Turkish forces.

Raids by the tribe not infrequently interrupted traffic on the Tigris, and this was seen as a serious menace to British lines of military communication during the First World War. The Banū Lām attacked both boats on the river and military outposts at this time, and British forces were involved in minor actions against them (A. T. Wilson, *Loyalists: Mesopotamia 1914-1917*, London 1930, 46, 79, 145; idem, *Mesopotamia 1917-1920: a clash of loyalties*, London 1932, 66). In the years immediately following the First World War, disputes between the Banū Lām and the *wāḥī* of Puṣṭ-i Kūh were again frequent—particularly during the summer months when members of the tribe moved into Persia for better grazing (S. H. Longrigg, *Iraq 1900 to 1950*, London 1953, 107, 158). The rise to power of Rida Shāh Pahlavi and the establishment of effective central government in Iran reduced both the degree of migration and the incidence of such skirmishes.

Bibliography: substantially given in the article. Von Oppenheim provides many useful references to Arabic, Persian and Turkish works, as well as to the accounts of European travellers. Longrigg, *Four centuries of modern Iraq*, also has a useful survey of both types of sources. There are references to the tribe in Ahmad Kasrawī, *Tārīkh-i jāmiʿ al-salā-yi Khānīdān*, Tehran 1311/1934-5.

(V. MINORSKY [R. M. BURKILL])

LAMAK, the Biblical personage Lamech. In Gen. iv, 21, the invention of music is attributed to Jubal, son of Lamech, but various Arabic sources give primacy here to Lamech/Lamach, of Cain's posterity. Bringing together the origin of the *ʿūd* with the invention of music, the story goes that Lamech had an only son in his old age, who died at the age of five, leaving his father full of grief. Not wishing to be separated from him, Lamech hung the corpse up until it decomposed. There then came to him the idea of making from his foot an *ʿūd*, on which he could accompany himself in his lamentations. The most detailed, and perhaps the oldest, version of this story occurs in the *K. al-Lahw wa ʿI-mālāt* of al-Mutaddī aḍ-Ḍabbi, who in fact cites a lost source going back to the historian Ḥishām b. al-Kaʿbī. With variants, the story comes up again in several authors, notably la ibn al-Khurraḍādhbih (*K. al-Lahw*), al-Bayhaḳī (*Mahāsīn*), al-Dhahabī (*Tarīḥ*), al-Masʿūdī (*Murūʿ*), Ibn ʿAbd Rabbihī (*ʿIḥṣā*) and al-Adhīmī (*al-Intāʿ bi-ahḥām al-samāʿ*). Elements of Hebrew legends and of the universal myths concerning the origins of music can be found in these stories.

On the other hand, al-Ḥaḥābi retails in his *Kisāḥ al-ashjād* (q.v.) the Hebrew legend about Lamech, how the latter, when blind, inadvertently killed his father Cain and then his own dear son who was accompanying him out of hunting; after these events, he recited the first Biblical lament (Gen. iv, 23). This source, together with others, emphasises the connection of music, invented in the bosoms of the posterity of Cain, with the excesses and trickery of Satan.

Bibliography: See A. Shihab, *The theory of music in Arabic writings* (RISM, BX), Munich 1979, index, s.v. Lamech. (A. SHILOAN)

LAMAS-ŞÜ, a small river of Southern Anatolia, descending from the Eastern Taurus and flowing into the Mediterranean, about 60 km. in length, whose canyon, carved deep in Miocene limestone, constituted in antiquity the border-line between lowland Cilicia and Trachoen Cilicia. Muslims and Byzantines often assembled on its banks for exchanges of prisoners, in the 3rd-4th/9th-10th centuries (see below). The flanks of the upper river, above Kızılcı Çeği, are totally uninhabited; along the lower reaches a series of ancient ruins marks the edge of the plateau. At the mouth, the small township of Lamas retains the name of the ancient settlement of Lamos (a simple village according to Strabo, xiv, 6, not to be confused with the town of the same name situated much further to the west, between Gazi Paşa and Anamur; cf. W. M. Ramsay, *The historical geography of Asia Minor*, London 1890, 382, 455-6). Nearby are the important ruins of an aqueduct which carried the waters of the river as far as Ayas (Elaeüsa-Sebaste) at a distance of 14 km., and of a mediaeval fortress, held for a long period by the Armenians (Lamas Kalesi).

Bibliography: Among the numerous descriptions by travellers, see in particular F. X. Schaffer, *Cilicia*, Gotha 1903 (*Petermanns Mitteilungen*, Ergänzungsheft 121), 64-5; J. Th. Bent, *Explorations in Cilicia Trachina*, in *Proceedings of the Royal Geographical Society* (1890); L. M. Ali-shan, *Suzusan ou l'Arménie-Cilicie*, Venice 1899, 413-14. (X. DE PLANHOL)

On the banks of the Lamas Şü there took place, on numerous occasions, payment of ransoms and exchange of prisoners of war with the Byzantines.

The first of these arrangements, in the reign of the caliph Hārūn al-Rašīd and that of the emperor Nicephorus I, was effected in 189-90/805, in the name of al-Qāsim b. al-Rašīd, by a eunuch of the caliph named Abū Sulaymān; the exchange lasted 12 days, and 3,700 Muslims were freed. The second (*fida*? *Ṭāḥir* b. Naṣr) took place under the same sovereigns in 192/808; it lasted 7 days, and 2,500 Muslims of both sexes were exchanged. The third (*fida*? *Kāḥḥān*), in the reigns of al-Wāḥid and of Michael III, in Muḥarram 231/September 845, lasted 10 days and involved some 4,000 prisoners; the chief *fida* Ahmad b. Abī Doʿād (q.v.) sent an emissary to interrogate them on the question of the creation of Kurʿān, with instructions to leave in the hands of the Byzantines those who refused to comply with official doctrine. The fourth (*fida*? *Shunayy*) was effected in the reigns of al-Mutawakkil and of the same emperor, in Shawwāl 241/February-March 856; it lasted 7 days and allowed the liberation of 2,000 men and 200 women. The fifth (*fida*? *Naṣr* b. al-Aḥbar wa-ʿAlī b. Yaḥyā) took place in the reigns of the same sovereigns, at the beginning of Ṣafar 246/April-May 860; it lasted 7 days and involved 2,357 Muslims of both sexes. The sixth (*fida*? *Ibn Tuḡḡān*) was effected in Šheʿbān 283/September-October 896, in the reigns of al-Muʿtaḍid and of Leo VI; it lasted 10 days and allowed the liberation of 2,500 or 3,000 Muslims of both sexes. The seventh took place in Dhū l-Kaʿda 292/September 905, in the reigns of al-Muʿtaḍid and of the same emperor; it lasted 4 days and 1,155 Muslims of both sexes were freed; Rustam conducted the negotiations, but this exchange is usually known by the name *fida*? al-ḥadī "the ransom of treachery", because the Byzantines reneged on their guarantees and took several thousand prisoners. The eighth, also effected by Rustam, took place in Shawwāl 293/July 908, and 1,842 prisoners

of both sexes were released; it bears the name *fida*? al-tandī ("the ransom of completion") because it supplemented the preceding. The ninth (*fida*? *Muʿnis*) was negotiated in Rabīʿ II 305/September-October 917 in the reigns of al-Muʿtaḍid and of Constantine II; it lasted 8 days, and 3,336 Muslims of both sexes were the beneficiaries of it. The tenth (*fida*? *Muḥḥīl*) was effected under the same sovereigns, in Rajab 313/September-October 925; it lasted 19 days, and nearly 4,000 Muslims of both sexes were freed. The eleventh, in Dhū l-Hijja 326/October 938, in the reigns of al-Rašīd and the same emperor, was negotiated by Ibn Warḡāḥ; it lasted 16 days and 6,300 Muslims of both sexes regained their freedom, but 800 prisoners remained in the hands of the Byzantines and were subsequently freed in small groups. The twelfth was effected in Rabīʿ I/October 946, under al-Muʿtī and the same emperor, by Naṣr al-Thamāl, but in the name of Sayf al-Dawla (it also bears the name of *fida*? *Ibn Ḥamdan*); 2,482 Muslims of both sexes were exchanged, and 230 remained in the hands of the Byzantines. Subsequent exchanges do not figure in the lists, since they cannot have taken place on the Lamas-Şü, henceforward situated in Byzantine territory; we may note in particular that of which Abū Firas (q.v.) was the beneficiary, in 353/966, at Samosata.

Bibliography: Tabarī, iii, 706, 707, 1339, 1353, 1426, 1449, 2153, 2233-4, 2280; Masʿādī, *Murūʾī*, § 3383, 3369; idem, *Tanbih*, 189-96 (ed. Šāwī, 161-6; tr. Carra de Vaux, 242, 255 ff.); Makrīzī, *Kāḥḥān*, ii, 192 ff.; A. A. Vasiliev, *Byzance et les Arabes*, i-II, index; M. Canard, *Hamdanides*, 759-60, 823-4. (CL. HUERT)

LAMASAR [see LANBASAR].

AL-LAMAŢI, an ethnic designation stemming from Lamala, a quarter of the Moroccan town of Sijilmāssa, borne in particular by two mystics:

1. AHMAD AL-HABIB b. MUHAMMAD AL-ĞUMAMĪ e. ŠALĪḥ AL-ŠUDDĪ (since he traced his genealogy back to ʿAbd al-Rahmān b. Abī Bakr) al-ŠIRĠIM-MAṢṢĪ, who belonged to the Šāhshāhiyya order (q.v.); he had numerous pupils, including Abū l-ʿAbbās al-Hikhl [see AL-HILĀL in Suppl.] and his cousin through his female relatives, Aḥmad b. al-Muḥarrak (see below). He died in the odour of sanctity at Sijilmāssa on 4 Muḥarram 1265/23 November 1751.

Bibliography: Kādirī, *Naṣr al-maḥḥānī*, Fās 1310/1892, ii, 253; Marrākūshī, *al-ʿAlīm bi-man ḥalla Marrākūsh* ... Fās 1355-8/1936-9, ii, 187-9; M. Lakhdar, *Vue littéraire*, 200-1.

2. ABU l-ʿABBĀS AHMAD b. AL-MUḤARRAK b. MUHAMMAD b. ʿALĪ AL-SIRĠIMĀSSĪ, born at Sijilmāssa ca. 1090/1679, settled at Fās in 1110/1698-9 and died there on 12 Djumādā I 1156/4 July 1743 after having acquired the title of *shaykh al-ğamad* given to the doyen of the professors. He was buried in the mausoleum of the Fāsī saint ʿAbd al-ʿAzīz al-Dabbāgh (1095-1131/1684-1719; see Lévi-Provençal, *Chorfa*, 309), with whom he had been connected and whose fame he had helped spread by devoting a work called *al-Dhahab al-ʿarīṣ fi manāḥib al-Shaykh ʿAbd al-ʿAzīz* (lith. Calco 1278/1861-2; printed Būlāq 1292/1875, Calco 1304/1886) to his mausoleum. He was furthermore the author of several treatises, commentaries and glosses of a religious, grammatical, etc. nature (see mss. detailed in Lakhdar), of an *uṣūl* containing some of his epistles and of a short work called *Djumād al-ḥamman ḥalla bi-biādhim fāṣṣa: kal yaḥḍu lahum al-ḥurūf minhu firdaʾ am lā?* (ms. Rabat D 1348).

Lakhḡar, *Vie littéraire*, 185-7 and bibl. cited. (En.)

LAMBADIS, a name of unknown origin designating in general a group of tribal peoples, ancient nomads, who were active in western and southern India as salt carriers, cattle herders and porters of general merchandise. They were known by different names in different parts of southern India: Lambani, Brinjari, Bopari, Sugali and Sukali, as well as Lambadi.

The origins of the Lambadis are obscure, but appear to be similar to those of groups like the Koravar and Yerukale. All are ancient nomadic tribal groups, who maintained their freedom of movement by securing a place in the economic structure of pre-modern India as carriers, herdsmen and porters in an age when modern modes of transport and adequate roads were non-existent. Apart from their occupation as carriers, members of such groups were often found on the fringes of villages as hucksters and distillers of toddy.

Edgar Thurston (see Bibl.) indicates that the Lambadis were mainly Hindus, and clung to their tribal rituals and mixed Hindu-animalistic religious practices. However, some Lambadis, in the Telugu coastlands and the Mysore highlands, claimed to be Muslims and aspired to the title of *Shaykh*. Their numbers were very small, but nevertheless they represented a very basic level of Hindu-Muslim interaction within the Indian subcontinent. At one end of the spectrum were the orthodox Urdu-speaking Muslims of northern India, at the other end odd tribal groups caught in the transition from tribal identity to something more distinctly Muslim. Some groups of Lambadis fell into this category, as did the Abir cowherds of the Andhra highlands and the Dudekula and Panjuvetti cotton cleaners of coastal Andhra and Tamil Nadu.

Such groups were generally despised by the main body of Muslims, and possessed few overt signs of being followers of Islam. The Muslim Lambadis spoke a dialect of Telugu strongly interlarded with Tamil and Kanarese words, followed no Muslim marriage rites and practiced circumcision. In dress, daily life-style, names and casual worship, however, they retained many tribal and Hindu rituals. Like the more numerous Dudekula, who were also of Telugu origin, the Lambadis were endogamous and rarely mixed with other Muslim groups, who regarded them with scorn.

The only settled groups of Muslim Lambadis found in southern India were located in the Anantapur district of the old Madras Presidency and in the region of Mysore. There are three recorded groups, all Telugu-speaking, with bards or priests known as Tamburani (or Thamburi), who appear to be the equivalent of the Hindu Lambadi priests or *Mus*. Most of these Lambadi Muslims claimed to have been forcibly converted by the Mysore Muslim prince Tipu Sultan (q.v.) in the late 18th century, who found the nomadic Lambadis ideal espionage agents in his wars against the British in Madras. However, some in Anantapur also claimed descent from carriers who had accompanied Mughal generals in their invasions of southern India.

Until the 19th century, nomadic tribal groups

like the Lambadis had a distinct function in the economic life of India: but with the evolution of modern modes of transport their status and fortunes declined. The Hindu Lambadis (and Koravars and Yerukale) probably suffered more than their Muslim counterparts, as the jāt system made the changeover to alternative occupations very difficult. Many in fact took to brigandage and petty crime, and were officially classified as problem groups and habitual criminals. The Muslim Lambadis were far fewer in number, and appear to have made the transition to sedentary occupations, though generally they were ones of low social and economic status.

The Dudekulas, a similar Muslim marginal group, were more fortunate in that their traditional occupation—cotton cleaning—facilitated their absorption into the economy of modern India. By the early 20th century, they were merging into the mainstream of Islam in the subcontinent, with overtly Muslim practices and names replacing those of their pre-Islamic past.

By the middle of the 20th century, the Muslim Lambadis appeared to have all but vanished. They were no doubt absorbed into the surrounding body of Muslims, and probably can still be traced amongst the more impoverished and illiterate Muslims in remote areas of Andhra Pradesh in India.

Bibliography: The most detailed description of the Lambadi group can be found in E. Thurston's *Ethnographic notes on Southern India*, Madras 1906, and vol. IV of his *Castes and tribes of Southern India*, Madras 1909. Thurston, however, concentrated on Hindu Lambadis, with only an occasional reference to the Muslim ones. The same is true of the District Gazetteers, especially G. A. Grierson, *North Arcot*, Madras n.d., and W. Francis, *Bellary*, Madras 1904; W. Francis, *Anantapur*, Madras 1903, does mention the Tamburani priests. J. Dupuis, *Madras et le Nord du Coromandel*, Paris 1960, puts the Lambadis in their tribal and occupational perspective, whilst L. Dumont, *Une sous-caste de l'Inde du Sud*, Paris 1957, further explains the painful transition from portage to crime for the nomadic tribal peoples in an excellent case study. G. A. Hickey, *Islam in India*, London 1832, makes a brief reference, perhaps the earliest, to Muslim Lambadis. In addition, there are a few isolated references scattered through the records of the British administration of the Madras Presidency.

In official publications and in Thurston's *Castes and tribes of Southern India*, the Dudekulas and Panjuvettas are far more prominent than the Muslim Lambadis, and references to them can be found in the following District Gazetteers: W. Francis, *Anantapur*, Madras 1903; Idem, *South Arcot*, Madras 1906; F. R. Hemingway, *Godavari*, Madras 1907; C. F. Brackenbury, *Cuddapah*, Madras 1914; *Guntur* (statistical appendix), Madras 1913; A. F. Cox and H. A. Stuart, *North Arcot*, Madras 1895; W. Francis, *Bellary*, Madras 1904; F. R. Hemingway, *Trichinopoly*, Madras 1907; W. Francis, *Pilappalam*, Madras 1907. See also references in *Census of India*, 1901, xv, 1911, xii, 1921, xiii. Brief references occur in T. W. Arnold, *The preaching of Islam*, repr. Lahore 1964; I. H. Qureshi, *The Muslim community in the Indo-Pakistan subcontinent*, The Hague 1962, and Murray's *handbook of the Madras Presidency*, London 1879. (K. McPHERSON)

LAMENTATION (see *ḤAYYĀ*).

LAMCHĀNĀT, a district of eastern At-

ghānīstān, thus designated in the Islamic sources of the later mediaeval period, deriving its name from its urban centre Lamghān (later form, Laghman). It comprises the fertile plain of the middle course of the Kābul River, much of it lying to the north and east of Kābul city (q.v.) itself. It is bounded on the north by the mountains of Kāfiristān (q.v.), modern Nūristān, and includes the lower reaches of the Aīnjar and Aīghang Rivers; on the south and east, it adjoins, and was sometimes considered (e.g. by Bābur) to include the region of Nangrahar and the comparatively recent town of Dīlālībād (q.v. in Suppl.). Ethnically, the region includes Pushtūns and Tadjiks, and also a considerable proportion of Dardic-speaking Peshāwāns [see DARDIC AND KĀFIR LANGUAGES], who are probably descended from the ancient Hindu and Buddhist population of pre-Islamic Kapīśā and Nangrahar; the ancient Iranian Parāzi language also lingers on in a few villages of the region [see AFGHĀNISTĀN, II. Ethnography, and III. Languages].

The town of Lamghān was already a flourishing one in the 4th/10th century. The *Hudūd al-ʿĀlam* (371/982) describes it as being situated on the middle stretch of the Kābul River (which the anonymous author in fact calls "the river of Lurākān" [sic], regarding this, plus "the river of Dūmpūr", Bābur's Aīnāpur, as constituting the modern Kābul River), and as a residence of merchants and an emporium for the products of India (tr. Minorsky, 72, 92 = §§ 6, 10, comm. 209, 252). Until the advent of the Turkish adventurer Sebüktagin and the Ghaznavids (q.v.) towards the end of that century, Lamghān was still part of the Indian cultural and religious world, and the *Hudūd al-ʿĀlam* specifically mentions the presence of idol temples there. It lay on the western marches of the extensive kingdom of the Hindūshāhis (q.v.) of Wayhind, which spanned the middle Indus and lower Kābul River basins; 'Uthbī's Yamaul describes how Sebüktagin twice defeated the Rājā Jaypāl in the Lamghān region, annexed it to his dominions and implanted Islam there (M. Nizām, *The life and times of Sulṭān Mahmūd of Ghazna*, Cambridge 1931, 30, 36, 86, 194). Islam was still however precarious there for some time to come, and the Muslim settlements were vulnerable to attacks by the pagan Pashā's and Kālīs to the north of the Kābul River. An anecdote in Nizām al-'Arūdī Samarqandī's *Chahār maqāla* describes how the infidels raided and despoiled Lamghān during the reign of Sebüktagin's son Mahmūd of Ghazna (388-421/998-1030), so that the vicer Ahmad b. Hasan Maymandī had to remit that year's taxes (ed. Kāzwinī, 18-19, revised tr. Browne, 20-1). Yet a century or so later Lamghān was producing Muslim scholars, for Yaqūt mentions a family of Lamghānī Hanafī ḥadīth and *faḥḥ*s who had settled in Baghdād during the 6th/12th century (*Iḥṣān*, ed. Beirut 1374/1955-7, v, 8, s.v. *Lamghān*; Barbier de Meynard, *Dict. géographique, historique et littéraire de la Perse*, Paris 1861, 503).

During the early years of the 10th/16th century, the Mughal prince Bābur (q.v.) spent much time in this region, and in the *Bābur-nāma* he expatiates on the beauty of the forested hillsides (cypress, holm oak, etc.) and on the fertility of the valley bottoms (corn, rice, oranges, citrons, mulberries, and in one favoured spot, even date palms). If it is in this source that we find the name given as Lamghānāt, and the area described as containing administratively five *nūmans* and two *būḥās* of cultivated land; a "greater Lamghānāt" included the Muslim-settled parts of the lower Kāfiristān valleys, including the easterly one

of the Kunār River (*Bābur-nāma*, tr. A. S. Beveridge, London 1922, 206 ff., 227, 424, 494, 570-1; cf. also G. Scarcia, *Şifāt-nāma-yi Darvīš Muḥammad Ḥān-i Qānī, cronaca di una crociata musulmana contro i Kafiri di Laghman nell'anno 1582*, Rome 1965, introd. pp. cxxxviii-cxli). Lamghān was doubtless the base for many expeditions of ḡhāzīs against the Kālīs, and as such is frequently mentioned in the Kābuli Persian account of the crusade led by the Mughal Emperor Akbar's younger brother Muḥammad Ḥakīm, governor of Kābul, in 990/1582, cf. Scarcia, *op. cit.*, index to text, s.v.

The district of Lamghān is today an important food-producing area, supplying Kābul, Dīlālībād and other centres with rice, cereals, fruit, etc., and it further produces textiles (J. Humlum *et alii*, *La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 173-3, 327-8). Since the administrative reorganisation of 1964, a province specifically called Laghman has come into being, and this comprises essentially the central part of Nūristān, with its centre at Meh Talam.

Bibliography: Given in the article.

(C. E. BOSWORTH)

LĀMIʿ, ABU ʿĀ-ḤASAN b. MUHAMMAD s. ILMĀʿIL, Persian court poet, born about 402/1011, died some time after 460/1067, who left a *diwān* of *ḥapidas*, only some 1,100 *bayts* of which have survived.

Although Lāmiʿ was a contemporary of, and panegyrist to, such major historical figures as Tughrl Beg, Alp Arslan and Nizām al-Mulk, very little reliable information about his life and work has come to light. From his *Diwān* we learn only that he was a native of Gurgin and that he went to Baghdād in the train of Tughrl Beg in 447/1035. The *taḏākiras* of Dawlat-Shāh, Aḡharbīdī and Rūdā Kulī Hidayat state that he was a student of Muḥammad al-Ḡhazālī and a disciple of the poet Sūzani, but Naṣīf has shown that these statements are fabrications (cf. *Lughāt-nāma-yi Dīlāghūda*, s.v.).

Stylistically, Lāmiʿ was an enthusiastic but unexceptional imitator of the great Ghaznavid court poets, 'Uzumi, Farrukhī and Manūčīrī, particularly the latter. His poems reflect none of the stylistic innovations that may be seen in the works of his contemporaries Anālī and Abū ʿI-Farāj Rūmī (q.v. in Suppl.).

Bibliography: Lāmiʿs *Diwān* has been published twice, by Saʿīd Naṣīf in 1319/1901 and by Muḥammad Dabir-Siyāqī in 1353/1974, both times in Tehran. The only studies of his life and work are to be found in the introductions to these editions, the substance of which is repeated in the article on Lāmiʿ in the *Lughāt-nāma-yi Dīlāghūda* already cited. There is a brief chapter on Lāmiʿ' s use of metaphor and simile in Muḥammad Ridā Shāfīʿī-Kadkani's *Saww-i khūshī dar ghīr-i Pārs*, Tehran 1350/1971. [J. W. CLINTON]

LĀMIʿ, SHAYKH NAHWUD s. ʿOTHMĀN s. ʿALĀ AL-NAWAKHḤ s. ILYAS, a celebrated Ottoman *sofī* writer and poet of the first half of the 10th/16th century. He was born in 877/1472-3 at Bursa, where he spent all his life. His grandfather, Nakkaḥ ʿAlt Peshā, teacher of Fawrī (q.v.) and one of the great painter-curveds (*nakkaḥ*) of his time, had in his youth been taken by Timur to Samarqand, where he perfected his art; after his return, he contributed masterly decorations to the Yeşil Dīlāmī and the Yeşil Türbe in Bursa.

As the son of ʿOthmān Çelebi, the *defterdār* of Sultan Bāyezid II's treasury, Lāmiʿ learnt Arabic and Persian, and received an excellent *madrassa*

education from the *mollâs* Akhawayn and Muhammad b. Hâdîdj Hasan-zâde. He aspired to the career of a jurist and theologian, but his father's death created difficulties (preface to *Farhâd-nâme*, see A. S. Levend, *Lâmî'nin Ferhâd u Şîrin'i*, in *TDAY Edisleri* 1964, Ankara 1965, 67). He seems to have written worldly poetry and prose, until he became aware of his preference for the mystic path, *tarîka*, and took as his spiritual guide the Nakşibendî Shaykh Amr Akşad al-Buhârî, who exerted a decisive influence on his life.

Lâmî's success as a writer began when two of his works attracted the attention of Sultan Selim I, who awarded him a pension of 35 *akçe* a day, and bestowed on him the revenues from a village. Sultan Süleymân, whose accession he celebrated in a chronogram, kept up this patronage; to his Grand Vizier İbrâhîm Paşa (q.v.), who showed him the greatest favour, Lâmi dedicated several of his *mathnawîs* as a mark of gratitude. Already in 928/1512 Lâmi was able to found a *makf* of 4,000 *akçe*.

Occasional complaints over lack of money did not go unanswered: İbrâhîm Paşa awarded him a stipend of 20 *akçe* daily which Lâmi needed for the education of his children. He had married early and had three sons and one daughter; among his descendants, his son Derwish Mehmed Çelebi, known as Lem'i, a *mudarris* and author of a work on prosody, and a grandson known as Lâmi-zâde, are mentioned. In his private life, Lâmi was described as outspoken, persistent in his opinions, witty and fond of literary jests. He died in 938/1532, and was buried in the graveyard of the (no longer extant) mosque built by his grandfather on the Citadel of Bursa.

The fact that Lâmi, who never went to court, owed his livelihood to Ottoman sultans and one Grand Vizier, allows us to surmise that he conformed to the expectations of his patrons. Their declared aim was to blend the refinement of Persian poetry with the vigour of the Turkish style cultivated in Anatolia, while welcoming the best of Eastern Turkish poetry.

Significantly, Lâmi took as his models two great near-contemporary poets of Timûrid Herat, the Persian Djâmî (q.v.) and his Turkish friend, the minister Mir 'Alî Şîr Nawâ'î (q.v.), both Nakşibandîs like himself.

In a literary age which restricted any poet, Turkish or Persian, to conventional forms (allegory being the prevailing fashion), Lâmi was encouraged by his Ottoman patrons to turn his efforts at originality in the direction of the themes. Passing by such well-known stories as Laylâ and Majnun (q.v.) or Yûsuf and Zuleykâ, Lâmi concentrated his talent in introducing into Turkish literature fresh themes such as *Şam's* *parvâne*, *Salâmân u Abdâl* and *Hafî paykar*, incidentally preserving two themes that had virtually sunk into oblivion in Persian literature: *Wîs u Râmân*, for which one of the rare Gurgînî (q.v.) manuscripts could only be found after a long search, and *Wâmîk u 'Ađârî*, of which the Persian original by 'Ungurî (q.v.) is now lost.

Lâmi developed the *munâzara* genre and experimented, as had become customary for poets, with Çaghalay Turkish. It was Lâmi's diversity and originality, and not only his renderings of works by Djâmî, which earned him the honorary epithet "the Djâmî of Rûm".

Lâmi's "reasons for writing", *sabab i tevîf*, and additions to his translations, are worth a special study (cf. Babinger, 264); this would reveal the independent and lively intellect of this writer, whose

originality was achieved not by breaking out along new lines but by fusing new themes with the traditional conventions. About thirty of his works are known. He wrote eight *mathnawîs* and a great deal of other poetry, but is better known for his prose works. Viewed chronologically, his major works are as follows: (1) The *Lâfâ'if-nâme*, a collection of facetious and partly scandalous stories in prose, probably written from the time of his youth and continued over the years; the unfinished book, which contains valuable information such as that on the old poet Shayyîd Hamza (see S. Buluç in *JA*, s.v.), was completed in 928/1512 by his son Lem'i (P. N. Borial in *Pis T Fundamenta*, II, 53); — (2) *Şarh-i Ebîdâg-yi Gulistan* (according to the *Farhâd-nâme*, Lâmi commented on the whole *Gulistan*, A. S. Levend, *op. cit.*), a commentary on the preface to Sa'dî's (q.v.) "Rose garden", completed in 920/1504; — (3) *Hün u dil*, ("Beauty and the heart"), a translation in prose of Fâtihî's (q.v.) allegorical work, dedicated to Sultan Selim I, studied by R. Dvořák, *Hün u dil, persische Allegorie von Fâtihî aus Nîşâpûr*, Vienna 1889; — (4) *Şavâhid al-mubînna* ("Distinctive signs of prophecy"), an expanded and commented prose translation of the treatise of Djâmî, completed in 915/1500-10, printed 1295/1876 Istanbul, ed. 1958 Muzaffer Özak; — (5) *Gây u cânşân*, ("Ball and bat"), Lâmi's first *mathnawî*, for which, inspired by a religious dream, he made use of 'Amî's (d. 853/1449) allegorical poem, studied by N. Tescan, *Lâmî'nin Gây u Cânşân metnecisi*, in *Ömer Atım Aksoy armağanı*, Ankara 1978, 202-25; — (6) *Farhâd-nâme* or *Farhâd u Şîrin*: interestingly enough, Lâmi used for his second *mathnawî*, written in honour of Selim I, the Eastern Turkish version by Mir 'Alî Şîr Nawâ'î, who had introduced radical changes in the old theme, especially by replacing *Ekşar* as hero by Farhâd (see *Farhâd wa-Şîrin*), Lâmi, who undertook the work on the request of Fenârî (q.v.) Djâmî al-Dîn Mehmed Şâh, who had just acquired a *khança* by Nawâ'î, claimed only to have altered the style (*usûl*), but he made also alterations in the story (A. S. Levend, *op. cit.*, 88, 220 f.), cf. von Hammer, Stuttgart 1822; — (7) *Abdâl u Salâmân*, his third *mathnawî*, dedicated to Selim I, is the first Turkish treatment of Djâmî's allegorical work with considerable additions; — (8) *Furûk al-muđâhidîn li-tarâfih* *huld al-muđâhidîn* ("Conquests of the champions of Islam giving rest to the hearts of the spectators"), better known as *Tarâfima-yi Nafahât al-uns* ("Translation of the Breath of divine intimacy"), a translation of Djâmî's *Şîf* biographies with important additions on more than thirty Anatolian *Sûfis*, in prose, begun in 927/1512 and finished in Rajab 927/April 1521, on the eve of Süleymân's Belgrade campaign; the book was printed in Istanbul 1270/1853-4 and 1289/1872; — (9) *Şam's* *parvâne* ("The taper and the moth"), his fourth *mathnawî*, written in honour of Süleymân after the conquest of Rhodes 929/1522, but sent to him later; it seems that Lâmi used for this allegorical poem not the accepted Persian version of Ahi-Yî Şîrâzî, composed in 894/1480-9, but that of a certain Niyâzî ('Abd Allâh Şabûsîzî; G. K. Alpay, *Lâmî Çelebi and his works*, [see *Bibl.*, 88 ff.], a second-rate author whom he need not mention in his preface; — (10) *Wâmîk u 'Ađârî*, his fifth *mathnawî*, translated at the request of Sultan Süleymân from the no-longer-extant Persian version of 'Ungurî; parts were very freely tr. by J. von Hammer, *Wâmîk und Asra, das ist der Glühende und die Blühende*, Vienna 1833; — (11)

Makel-i İmâm Husayn ("Martyrdom of the Imâm Husayn"), his sixth *mathnawî*, for which no specific source is named; Lami' reacted here against the warnings of some 'ulamâ' concerning the recital of these martyrdom narratives in public; illustrated copies have survived; — (12) *Shahrangiz*, a poem in praise of Bursa in expectation of a visit of Sultan Süleyman, published at Bursa 1288/1871, tr. A. Füzûmâr, *Die Verherrlichung der Stadt Bursa*, Vienna 1839; — (13) *Mundîrara-yi bahâr u şîrî* ("Controversy between spring and winter"), an extensive poem using Bursa and the Keshîsh Daghl as a stage-setting, İstanbûl 1290/1873; — (14) *Munke'sâ's mukâbîb* or *Nipâh al-hâkîkâ*, Lami's letters; — (15) *Manâhîb-i Hafîd i Umays al Karand*, a prose legend; on the few mss., see G. K. Alpay, *op. cit.*, 82 no. 9; — (16) *Yâsâr-nâmâ* or *Yâsâr-nâmâ* ("The exemplar") written after the battle of Mohács (937/1526), a prose work in two parts, legendary accounts of holy persons, and stories with moral significance, their agreeable literary style procured a wide popularity for this work, printed twice in 1273/1856-7 and 1327/1909; — (17) *Sâraf al-imân*, ("The nobility of man"), perhaps Lami's best-known prose work, written in 933/1526-7. The theme, the contest of man with the animals, is taken from the *Rasâ'id al-fahwân al-nafâ*; — (18) *Wîs u Râmîn*, his seventh *mathnawî*, in honour of Süleyman, appeared in the same year; Lami' uses Gurgânî critically and changes the tone drastically; "instead of expressing the intensity of human passions, Lami' tries to amuse and edify. The end of this poem is tinged with mystic reflections..." (V. Minorsky, who had not seen Lami's work, in *Wîs u Râmîn*, a *Parthian romance*, in *BSOAS*, xii [1947], 32-4). — (19) his *Dîwân* of about 10,000 verses, compiled in 936/1529; — (20) A work on the *mathnawî* *Hafî paykar* ("The seven effigies") based on Hâfî's (q.v.) *Hafî manzûr*, was interrupted by Lami's death and completed by his son-in-law, Rûghend-zâde.

A comprehensive description of Lami's works, with reference to the manuscripts, is contained in G. K. Alpay, *Lami' Celebi and his works*, in *JNES*, xxxv (1976), 73-93, to which should be added N. Tezcan's article *Lami'înin Gîy u Çeyiz mecmu'esi* (see above). (B. FLEMING)

LAMLAM, a generic name given by mediaeval Arabic authors to the animistic African peoples, considered to be cannibals, living to the south of the Muslim sultanates of the Sndanese zone; other versions are Dahdam, Damdam, Iamiam, Limyyia, Nannam and Temiam.

Al-Mas'ûdî (before 356/957) places the Dahdam

upstream from Gao and says of them "They fight amongst themselves. They eat people. They have a paramount king who has other kings under his authority. In his land there is an important fortress in which there is an image in the shape of a woman which they venerate and to whom they make pilgrimages" (tr. in Cuq, *Recueil*, 61). This passage is repeated by al-Bakî (460/1068), who speaks of the Damdam, and by al-Idrîsî (548/1154), who speaks of the Lamiam who are raided by the slave merchants of Takrîr and Ghâna. Ibn Sa'îd (before 685/1286) speaks of, as well as the Lamiam of the west, the Damdam to the south of Ethiopia and Nubia, and his information is repeated by Abu 'l-Fidâ' (721/1321). Al-Dimashqî (before 727/1327) mentions the lakes of the Tarmîr and the Damdam, a name also borne by a river emptying into the Indian Ocean, and equally speaks of the Lamiam to the south of Ghâna. According to al-'Umari (before 749/1349), the Damdam are a people employing horses and hostile to Maṣṣa Nisâ (Mossi?). Ibn Khaldûn (784/1382) and al-Makrîzî (816/1442) repeat the information of Ibn Sa'îd that the Damdam invading Ethiopia and Nubia. Leo Africanus takes over from al-Makrîzî the name of Tamim in order to make up a kingdom of Tenam, and it is under this form that knowledge of it came to European writers of the 16th century, such as Marmol 1573, Belleforest 1575 and Anania 1582 (Iamiam).

The 19th century explorers speak of them mainly in the form Yemem or Niamnam (see Cooley, *loc. cit.*, below).

Bibliography: W. D. Cooley, *The Negroland of the Arabs...*, London 1841, repr. 1966, 111-16; J. Cuq, *Recueil des sources arabes concernant l'Afrique occidentale du VIII^e au XIII^e s.*, Paris 1975. (R. MAUNY)

LAMT, a word of obscure origin which denotes the oryx of the Sahara (see MAHAR). Now the word is obsolete and occurs only in a proverbial expression inspired by the speed with which it runs: "he runs like a lamt" (see M. Hadj-Sadok, *Description du Maghreb et de l'Europe au III^e-IX^e siècle* Algiers 1949, 103, n. 159). It is also used in northern Algeria, where Beauséjour (*Dict.*, s.v.) found it applied to a mythical animal which, even though it had only one foot, was very swift.

Arab geographers of the Middle Ages referred to the lamt in association with the tribe of the Lamta (q.v.), who were particularly famous for the shields they made from the skin of this animal (*daraba lamtiyya*). In this expression, the adjective could just as well have been derived from *Lamta* as from *lamt*, so the two terms may only be apparently related and the connection may be an arbitrary one.

The earliest mention of these shields (*darab*) may be found in al-Ya'qûbî (*K. al-Buldân*, 345, tr. Wiet, Cairo 1937, 206, n. 1), who says simply that they were white in colour, or in Ibn al-Fakîh al-Hamadhânî (*Muḥajjar K. al-Buldân*, 81, tr. H. Nassif, Damascus 1973, 99; ed. tr. Hadj-Sadok, *op. loc.*, 33, 35), who is more explicit. He describes how the inhabitants of Anbiya and the Lamta soak them in milk for a whole year with the result that "a subic rebounds off them, and if it does manage to penetrate, it sticks so hard that no-one can pull it out". Curious leather in milk makes shields (not only those made by the Lamta) better than those from India, where elephant hide is used. That was the opinion of al-Mas'ûdî, (*Murâdj*, ii, 18 = § 859). Al-Zuhri (*K. al-Dharrif*, ed. Hadj-Sadok in *BEQ*, Damascus (1968), §§ 314-15, in his description of the *lamt*,

records that lamjyya shields were offered to the kings of the Maghrib and al-Andalus. It is in this last country that E. Lévi-Provençal (*Hist. Esp. mus.*, li, 95) says that "the most desirable shields were those made from lamj leather". The name of the animal was certainly well known, especially in Portuguese; it was called *lamé*, *dant*, etc. Another point is made by al-Bakrī (*Description de l'Afrique septentrionale*, ed.-tr. de Slane, 1963¹, 171-231), who says that the best (and most expensive) shields were made from the hides of old females. The place where they were made is said by al-Idrīsī (*Opus geographicum*, Naples-Rome iii, 224, ed. H. Péron, Algiers 1937, 37) to have been at Nūl (see Yāqūt, r.v.), a centre for the Lamta near Joullimīn; he says that "the Maghribis use them in battle because they are light yet solid". More information is provided by the Egyptian Ibn Zūnab al-Nahāṣī (10th/16th century), who also describes the lamj (*Tuhfat al-mulūk*, tr. E. Fagnan, *Extraits inédits relatifs au Maghreb*, Algiers 1924, 179-80) and says that these shields "are special, because holes made by arrows or spears close up again by themselves and so they never lose their value as defensive weapons". Leo Africanus (*Desc. de l'Afrique*, tr. Épaulard, Paris 1936, 359, see also 452-3) has a paragraph devoted to the lamj, and says that in the summer it is easier to catch the animal because the heat of the sand affects its hooves. As far as the targes (lamjyya) are concerned, he provides more up-to-date information additional to the earlier accounts and says: "Nothing except bullets from fire-arms can pierce them, but they are very costly."

These defensive arms are probably no longer made except for tourists, but until recently the Touareg (at least, the Touareg nobility who had the sole right to carry them) still used them and they were "escutcheon-like in shape and significance; the decorative motifs have magical qualities associated with them." (H. Lhote, *Les Touaregs de Hoggar*, Paris 1944, 325-6, with illustrations; see also H. Blisset, *Les Touaregs de l'Ouest*, Algiers 1889, 95). When P. de Foucauld was writing, the targe of Ahaggar had the same name as the animal, the hide of which was used to make them, *them*, pl. *thammen* (*Dict.*, ii, 602-3).

Bibliography: in addition to the sources already cited, see P. de Cénival and Th. Monod, *Description de la ville d'Afrique de Ceuta au Sénégal par Valentin Fernandes (1506-7)*, Paris 1938, 159-61, n. 90; G. Ferrand, *Tuhfat al-mulūk*, in *JA* (1923), 43-4, 248-9; H. Lhote, *La chasse chez les Touaregs*, Paris 1931, 75-82; R. Mauny, *Tableau géographique*, etc., Dakar 1939, 236. (P. VINÉ)

LAMTA, a large Berber tribe of the Barāmīs family. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Ṣanhājīa, Haskūra and Gazālā; others give them a Hīnaryārite origin like the Hawwāra and the Lawīta [q.v.].

The Lamta were one of the nomadic tribes who wore a veil (*mulathāmān*). One section lived on the south of the Mzāb, between the Massāfa on the west and the Tārga (Touareg) on the east; they even seem to have extended as far as the Niger. In the south of Morocco, in al-Sūs, where there were Lamta who led a nomadic life, in company with the Gazālā, the Lamta occupied the territory nearest to the Atlas. On the coming of the nomadic Arabs of the Ma'qal family, the two sections of the Lamta were absorbed by the Dhawī Ḥassān; the remaining sections then joined the Ṣhābānāt, another Ma'qal

tribe, to oppose the Gazālā who joined the Dhawī Ḥassān.

In the territory of the Lamta of al-Sūs at the mouth of the Wādī Nāl (now Wād Nūn) lay the commercial town of Nāl or Nāl of the Lamta, the first inhabited place one reaches on coming from the Sahara. Several Moroccan dynasties have struck coins there.

The jurist Ugg'ag b. Zallā of Sijjilmāsa, a pupil of Abū 'Imrān al-Fāsī [q.v. in Suppl.], was a member of the tribe of Lamta; one of his pupils was 'Abd Allāh b. Yāsīn al-Gazālī, founder of the Almoravid empire [see AL-MURĀṢIṬŌN].

The country of the Lamta was noted for the shields made at Nāl with the skin of the lamj antelope [q.v.].

Bibliography: Ibn Khurādādhbih, Ibn al-Falgh, Ibn Hawqal, Ya'qūbī, Bakrī, Ibn Khaldūn, *K. al-ʿIbar*, indices, s.vv. Lamta and Nāl; Idrīsī, *Opus geographicum*, Naples-Rome, fasc. iii, 22-3; Leo Africanus, *Description de l'Afrique*, tr. A. Épaulard, Paris 1936, index (esp. 452-3, where H. Liote's long note should be regarded with care).

(G. S. COLIN*)

LAMTUNA (in Leo Africanus: Luntuna or Luntuna), a great Berber tribe belonging to the branch of the Ṣanhājīa who led a nomadic life, and like other tribes of this branch forming part of the *Mulathāmān* or "wearers of the veil" [see *ARTICLE*].

The Lamtuna nomadised over the western Sahara, where between the 2nd/8th and 5th/11th centuries they played a considerable political role. According to al-Bakrī (439/1047), the region covered by them stretched from the lands of Islam (i.e. the Maghrib) to those of the blacks. This is what this geographer says of the Lamtuna's way of life: "They are strangers to any manual work, to agriculture and even to bread. Their riches consist wholly of their herds. They live entirely off meat and milk". According to Ibn Khaldūn (d. 808/1406), the Lamtuna already formed a considerable kingdom at the time of the reign of 'Abd al-Rahmān al-Dākhilī, founder of the amirate of Cordova (158-72/756-88). This author plus Ibn Abī Zar' (d. between 710-20/1320-30) give the names of several kings of the Lamtuna from that time onwards. The first of these was a certain Talakkākin; the period of his power is unknown, but it is very probable that he lived towards the middle of the 3rd/8th century. His successor was Tūlātān or Taywalātān b. Tūlātān b. Talakkākin, who died aged 80 in 212/826-7. He was a great ruler, and if Ibn Abī Zar' is to be believed, he reigned over all the desert (i.e. all the western Sahara), and the territory under his control stretched for three month's journey in both length and breadth, as far as the borders of the land of the blacks, of whom more than twenty of their kings were subject to him. Tūlātān's successor was his nephew al-Aḡlī b. Bāṣin (also called Yalattān) who died aged 65 in 237/851-2, or according to another source, in 287/900. The fourth king of the Lamtuna was Tamūn (or Rāmūn) b. al-Aḡlī who reigned over the tribe until 300/912-13; he was killed by the Ṣanhājīa notables in a rebellion. His death heralded a time of troubles which lasted 120 years, i.e. until ca. 420/1029.

It seems that the state (or rather, the confederation of Berber tribes) created by the Lamtuna and which endured down to 306/918-19, was actually the state or rather confederation called Anbilya by the mediaeval Arabic writers. This existed already in the time of the astronomer al-Fazārī (ca. 172/788), who locates it as between the kingdom of Sijjilmāsa (in the western

Maghrib) and that of Ghāna in the western Sudan. We also owe a few details about the Anbiya to Ibn al-Fakih al-Hamadī (ca. 100/503), whose information on Africa goes back to the middle of the 2nd/8th century. He relates that "the land of Anbiya is part of the Sūa al-Aksā (in the extreme south of present-day Morocco) and extends over seventy nights' march across the plains and deserts". One may further add that the historian and geographer al-Ya'qūbī (d. 278/891) says as follows about the people of Anbiya: "It is by setting off from Sijilmasa southwards that one arrives in the land of the blacks ... It is reached via empty regions and deserts stretching for about fifty days' march. En route one meets a people called Anbiya, a part of the Sanhāja (who live) in the desert; they have no fixed abodes. They veil their faces, according to one of their customs. They do not wear a tunic, but cover themselves with pieces of cloth. Their food comes from camels, and they have no cereals or corn". On al-Ya'qūbī's evidence, the Anbiya confederation was not, in the 3rd/9th century, the only great Berber power in the western Sahara. Indeed, he mentions also as existing in this desert and on the fringes of the land of the blacks a land (or a town) called Ghāst, identical with the Awdaghast of the geographers of the 4th-5th/10-11th centuries and situated in south-eastern Mauritania. According to al-Ya'qūbī again, there was in this country a king who had no religion, who raided into the land of the blacks and who possessed numerous kingdoms.

It seems that the king of Awdaghast contributed to the fall of the confederation of the Lantūna (or of Anbiya), and it may be in reference to him that Ibn Abī Zar' speaks when he mentions the revolt of the Sanhāja notables against the fourth king of the Lantūna in 306/918-19. Hence the king Tanarwā b. Wānshik b. Bīzār or Barūyān b. Wānshik b. Isār, who ruled, according to Ibn Khaldūn, over the Lantūna and all the Sahara in the 4th/10th century, in the times of 'Abd al-Rahmān III al-Nāsir (300-30/912-68) and his son al-Hakam II (350-66/961-76), belonged to the dynasty of Awdaghast and not to that of the Lantūna. This name Barūyān b. Wānshik b. Isār appears merely to be a deformation of that of Tanarūn b. Wānshik b. Nāzār attributed to the king of Awdaghast (who reigned between 340/951 and 350/961) by the geographer al-Bakrī. It is the same person who is mentioned by Ibn Hawkal (d. ca. 372/983) under the name of Tanbarūn b. Isfīghar and who was his contemporary; he says of him "Tanbarūn b. Isfīghar ... was at that time king of all the Sanhāja ... He governed these last for twenty years ... Power belonged to this man's family in that tribe from time immemorial".

It appears that towards the end of the 4th/10th century or at the beginning of the next one, the kingdom of Awdaghast was destroyed by the king of Ghāna, who incorporated its capital (now the ruins of Tegdaoust) in his own kingdom, whilst leaving the tribe of Lantūna their freedom. It was at this time, at the end of a period of 120 years during which "power was divided up amongst the Lantūna", as Ibn Abī Zar' says, that there appeared amongst the Lantūna a new king called 'Abd Allāh (or Abū 'Ubayd Allāh) b. Tūfāt, who brought about a union of all the Lantūna. According to Ibn Abī Zar', he was a man of religion and piety who made the Pilgrimage. He was killed, at the end of three years' reign, during a raid; al-Bakrī calls him Muhammad Tāreghna and says that he carried on the holy war, in the course of which he was killed at a place called

Kankāra (Gangara, the Mandingos) in the land of the blacks. Tāreghna (or Nāreghī) al-Lantūnī seems to have reigned between 416 and 429/1034-5, at the head of a confederation of Sanhāja tribes whose members included, as well as the Lantūna, the Djūdāla and perhaps the Massāfa too.

At the outset, the Lantūna were pagans, and according to Ibn Khaldūn, only became Muslim during the 3rd/9th century. But most of the tribe's members were only nominally Muslim, apart from the *amirs* and probably a section of the notables. Because of this fact, Yahyā b. Ibrahim al-Djūdālī, the successor of Nāreghī (Tāreghna) as head of the Lantūna confederation, decided in the course of his Pilgrimage to Mecca, to bring from the Maghrib into the Sahara a pious and learned Muslim *shaykh* called 'Abd Allāh b. Yāsīn, who was to work at the conversion of the Djūdāla and Lantūna to a genuine form of Islam. 'Abd Allāh b. Yāsīn soon discovered that most of the people he was working amongst lived in ignorance; hence he quickly surrounded himself with true believers and declared holy war against the infidels of the two tribes, which he managed to convert to Islam after several raids. In this way came about the origins of the kingdom of the Murābiṭūn or Almoravids [see AL-MURĀBIṬŪN].

After the death of Yahyā b. Ibrahim al-Djūdālī (ca. 434/1042-3), 'Abd Allāh b. Yāsīn, by now the spiritual head of the new community, appointed as his successor the *amir* Yahyā b. 'Umar b. Talākākin, who reigned until 449/1056-7. Then the latter's brother, Abū Bakr b. 'Umar, also appointed by 'Abd Allāh b. Yāsīn, reigned over the western Sahara. Abū Bakr b. 'Umar was content to rule over the desert and to leave Morocco, whose conquest he undertook, to his nephew Ibn Tāghlān. However, he kept the title of *amir* of the Almoravids till his death. Apparently, after Abū Bakr's death (he was killed in 480/1087 during one of his raids against the blacks in the western Sudan) the Lantūna still retained for some time their supremacy over the people of the western Sahara. Towards the middle of the 5th/11th century al-Zuhri speaks of a Yahyā b. Abī Bakr, *amir* of the Massāfa ('Lantūna) who lived towards the year 490/1102-3 and who seems to have been the son of the *amir* Abū Bakr b. 'Umar al-Lantūnī. During this time there took place the conquest of Ghāna by the Lantūna and the conversion of that city to Islam. Later, the power of the Lantūna grew feeble, but nevertheless, we know, thanks to the anonymous author of the *Kutub al-Ishār* (ca. 584/1192), that the Lantūna always possessed, at this period, an independent king as well as their own *shaykh*. Subsequently, like the Massāfa and other Berber tribes of the south-western Sahara, the Lantūna were compelled to recognise the supremacy of the Sudanese kings of Mālī. If al-'Umari (743-50/1342-9) is to be believed, the Lantūna came under their control in the first half of the 8th/14th century; however, they still had their own *shaykh*. The later Arabic sources are silent about this people, whose importance became at that time almost nil.

A word should finally be said about the boundaries of the Lantūna territories in the period from the 2nd/8th to the 5th/11th centuries. Originally, they extended, according to al-Bakrī, to the south of the mountain of Ayzal (Kedyet El Jell or Fort Gouraud on our maps), occupying all the eastern part of what is now Mauritania, as far as the fringes of the Sudan. They were separated from the Atlantic by the lands nomadised over by the Djūdāla, who occupied western Mauritania and the south-western part of

that country (al-Bakrī, Ibn Sa'īd) to the north of the lower Senegal and as far as the fringes of the [J]abal al-Lamānā (modern Cap Blanc). Towards the middle of the 5th/11th century, the Lamtūna occupied the Mauritanian Adrar previously inhabited by a non-Muslim Berber tribe. They built there a fortress called Azukki or Azukli (Azougl near Atar on modern maps), which then became their capital and a very important stage along the commercial route connecting Sijilmāssa with Ghāna. From the Mauritanian Adrar, the lands traversed by the Lamtūna stretched as far as the Sudan, more exactly to Tagant. In the second half of the 5th/11th century, the Lamtūna occupied the district of Nāl al-Aḥsā in the south-west of modern Morocco and that of Tāzughāt (Saguēt El Hemra on modern maps = al-Sakya al-hamra'), both of which belonged to the tribe in al-Firdā's time.

(T. LEWICKI)

AL-LAMTŪNĪ, ABD BAKR b. 'UMAR b. TAGLĀGĪN AL-ŠANHĀGĪ, war leader of the Almoravids [see AL-MUSĀBĪṬŪN] and above all, the real founder of one of the historic capitals of Morocco, Marrakesh (Murrāksh [q.v.]). He was the brother of Yahyā b. 'Umar who became, at the death of the pious ḥādīqī Yahyā b. fbrāhīm al-Garūll, amir of the Berber confederation of Šanhāgī nomads of the parts of the Sahara bordering on the Atlantic (Lamtūna, Gūdāla and Māssūfa). The two brothers were the first to rejoin, after his ḥidra, the Mālikī reformer 'Abd Allāh b. Yāsīn in his ribḍ [q.v.] of Nā (?) situated on an island or a peninsula of the Atlantic coast of modern Mauritania. It was from this ribḍ that the powerful movement which cul-

minated in the establishment of the Berber Almoravid dynasty was launched.

In 428/1036 Yahyā b. 'Umar was killed fighting the infidels in the western Sudan, and the imām 'Abd Allāh immediately replaced him, as head of the armed forces, by his brother Abū Bakr, who was celebrated for his courage, religious enthusiasm and experience. The new amir had his position legitimised by the people of Sijilmāssa and struck coins of his own, and was then charged with the task of conquering, by word and by sword, the region of the Moroccan Atlas. In 449/1057-8 his successful campaign ended in the capture of the town of Aghmāt [q.v.], the Māssūfa capital. With the support behind him of this urban centre, at the time an enjoying considerable prestige, the imām 'Abd Allāh directed his troops against the Barghawāta (q.v.), the heretics of the central Moroccan Atlantic coast region; but having injudiciously rushed into the battle, he was killed in 451/1059. Abū Bakr now became the sole head of the Almoravids; he buried 'Abd Allāh b. Yāsīn on the spot, went on to crush the Barghawāta and returned, laden with booty, to Aghmāt. There he established his centre of power and married the rich widow of the former governor of the town, the Tunisian lady Zaynab bint fāhik al-Nafzāwiyya, whose beauty was only equalled by her political astuteness.

Being probably now largely occupied with the administering of his native land and of his conquests, Abū Bakr at this point gave command of the army to his nephew and cousin, Yūsuf b. Tāghfīn [q.v.], who had come to prominence through his outstanding qualities, confirming him in this office and directing him to the conquest of northern Morocco.

However, life in Aghmāt became more and more difficult for everyone. Both the persons and the possessions of the local people suffered from the presence of their unpolished conquerors, and these latter, as Saharan nomads, felt little at ease within the walls which they had conquered but which were suffocating them. In the end, Abū Bakr was persuaded to found a new town, one better situated in all regards than the double city of Aghmāt. Following the advice of his expert counsellors, he decided to establish the new centre on the actual site of Marrakesh. The process of transfer took place, according to the Moroccan historian Ibn al-ʿIdhārī in his Bayān, on 23 Raddjāb 462/7 May 1070 and not in 1062 as indicated by Ibn Abī Zar' [q.v.] in his rather un dependable *Raṣad al-kirfā*. The initial works, directed by the amir personally, were concentrated on the construction of a ḥaṣaba [q.v.], the renowned Kaṣr al-baḡlāq "stone fortress", where the ruler's harem, treasury and armory were deposited in safety over the following three months.

Soon afterwards, on a date which the Bayān fixes within Rebl II 462/January 1071, Abū Bakr received some alarming news from the desert. In order to fly to the aid of his tribe, he left to Yūsuf b. Tāghfīn the administration of the Almoravid conquests, the town in course of construction, a large part of the army and even his wife, who had herself urged him to divorce her so that she might, at the end of the waiting period required by Muslim law, legally marry Yūsuf and give him the benefit of her great experience of the Moroccan situation. The great role played by women in Almoravid society is of course well-known.

After having restored order within the desert, Abū Bakr did not return to Morocco till 464/1072-3. Well aware of what was happening at Marrakesh, he prudently installed himself at Aghmāt. He had

quickly learnt and realised that Yūsuf, strongly backed by Zaynab, would not give back to him the command entrusted to him earlier nor the town of Marrakesh, now expanding rapidly. After a pathetic interview between the two men, seated together on a burnoose in the open countryside, Abū Bakr had the sense to accept the very impressive presents offered to him, and with his face thus saved, returned to the laud of his people in order to resume the holy war against the infidel blacks. This doughty hero of the faith, and founder of one of the great capitals of the Islamic world, was killed in 468/1075-6 in the massif of Tagant to the north of the Senegal River, where his grave-stone and epitaph have been found.

His son Ibrāhīm then went to Morocco to reclaim his father's heritage of leadership, but wise counsels of prudence and substantial presents discouraged these ambitions and led to his definitive disappearance from Almoravid history.

LAMU, a town, island and archipelago, in lat. 2° S, off the Kenya coast, together with Pate and Manda Islands [q.v.] and some smaller islands, probably to be identified with the Pyralae Islands mentioned in the *Periplus of the Erythraean Sea* of ca. A.D. 106 as an established resort of Arab and Egyptian sea traders. Nevertheless, the first archaeological evidence found on Manda does not antedate the 8th or 9th century A.D., nor on Lamu before the 13th century. The first reliable literary evidence is that of Ibn Taghribirdī (later 9th/15th century), but the Swahili traditional history *Khabar Lamu*, and likewise the Swahili traditional histories of Pate, assert that it was founded in 77/695 by Syrians sent thither by the caliph 'Abd al-Malik b. Marwān, and reinforced by a further contingent sent by Hārūn al-Rashīd in 170/786. Although not in themselves impossible, there is no contemporary literary or archaeological evidence to sustain these 19th century traditions. Syrian traders are not known to have penetrated farther south than the Ethiopian ports, and such late traditions are to be regarded with the greatest caution, if not scepticism. At the end of the 9th/15th century the island and the adjoining landfall are mentioned briefly by the celebrated pilot, Aḥmad b. Māḍid.

Ibn Taghribirdī, quoting al-Makrizī, makes only the curtest mention. The king is entitled to umbrellas found on the beach. There are large banana trees, from which a kind of honey is made, and various preserves. The town is almost buried under the sands. This suggests that in the later 9th/15th century the town was in decline. Its fortunes seem to be aptly illustrated by a sequence of dedicatory inscriptions, all but one in the mosques. The earliest is dated 1370-1 A.D.; the next, with a remarkable wooden *mishrab* unique in eastern Africa, where stone alone is used for this purpose, was not built until

1311-12. The 18th century saw the construction of four mosques, in 1733, 1753, 1760 and 1797. In this interval, from ca. 1506 to 1698, the town was under nominal Portuguese control, and the first tribute of 600 *mithqals* of gold was paid in Venetian *meçengos*. In 1585 the town acknowledged Turkish suzerainty in the person of the Amir 'Alī Bey, for which the Portuguese deposed the sultan in 1587, hanging him in Gax on Christmas Day, 1589. Lamu supported the Mombasa rising of 1632 (see *MOBASA*), for which the town was punished in 1634. Following another rising in 1678, the sultan of Lamu and four other neighbouring sultans lost their heads.

Lamu came under the nominal control of 'Umān after the 'Umānī capture of Mombasa in 1698, but this was not affectively exercised until 1822-13, in which year an inscription dates the building of the fort as a residence for the Bā Sa'īdī governor, always a member of the royal family until about 1901 (see *AL SA'ID*). Under them the town grew considerably because of the expansionist trading policy of Sayyid Sa'īd of 'Umān and Zanzibar and his successors. Lamu was an important centre for trade in ivory, mangrove wood (used universally at this epoch throughout southern Arabia for roofing) and, for a period, slaves. New mosques were dedicated in 1823, 1824 (two), 1845, 1849, 1865, 1876, 1877 and 1880-1. To the same period we may ascribe the pleasant two- and occasionally three-storyed houses with their verandahs (*Swa. šarāas*), which form the greatest part of the older town, so reminiscent of southern Arabia, but with a distinctive architecture which may be called 'Zanzibarī'. Particularly attractive are their doors of carved teak. These and the so-called Lamu chests (*Swa. šandakūs*), camphorwood clothes chests, used because that wood is resistant to the omnipresent white ant, were important local manufactures. Elaborate beds and chairs, of ebony inlaid with ivory, give some indication of the luxury of the merchant notables. This is echoed in poetry, and especially during the 19th century Lamu was celebrated for its numerous Swahili poets and literary men (see *SWAHILI, Literature*). These included poetesses, of whom Mwana Kuponu was the most famous. The poetry is written in the local dialect of Swahili, Ki-Amu. During the 1960s J. W. T. Allen identified no less than 30,000 pages of Swahili poetry in private hands in Lamu town, all in manuscript. Of these 10,000 pages have been photographed and the record deposited in the University Library, Dar es Salaam. It is estimated that as many pages were found of Arabic manuscripts, but at the present these have neither been photographed nor catalogued: they remain a challenge to the present generation of scholars.

With the growth of Mombasa as a deep-water port, the diminution in importance of the mangrove and ivory trades, and the disappearance of the slave trade, Lamu receded in importance, although recently it has achieved a certain popularity as a tourist centre. But more than anything it has been saved by emerging as the most important Islamic religious centre in eastern Africa. The Ribā' al-Riyāḍa, or Madrasat al-Riyāḍa, also commonly called the Mosque College of Lamu, was founded in 1319/1901-2 by Ḥabīb Šāḥ b. Ḥabīb 'Alawī b. Ḥabīb 'Abd Allāh Djamāl al-Layl, the word *Ḥabīb* being used as an alternative to *Sayyid*. Of a well-known Ḥafṣī family of sayyids, an ancestor had settled at Siu town on the neighbouring Pate island: from there another ancestor migrated to the Comoro Islands (see *KUWA* and *PATE*). There Ḥabīb Šāḥ was

born and brought up as a Swahili speaker: although his was a learned family, Arabic was not spoken in the home. There and from family connections he became learned in the religious sciences and in traditional Arab medicine, although he never left eastern Africa. Migrating from the Comoros to Lamu, he began to teach, and soon acquired a band of followers. Following quarrels with the more conservative Muslims in the town, and especially because of the use of the tambourine to accompany the reading of the Baszaji *musahifs* to celebrate the birth of the Prophet, Habib Šāhib first built a hut for use as a *masjid*, and subsequently the present mosque. This became a centre for the dissemination of the 'Alawiyya *fatwa*, which soon attracted students from neighbouring African peoples, mainly the Pokomo, the Galla and the Bajun. By the 1950s the influence of the mosque had made itself felt throughout the eastern littoral of Kenya and the present Tanzania, and its pupils could be found teaching in numerous small Kuar-Kuar schools. In eastern Africa, all Sunni mosques hold *mušāhid* in honour of the Prophet during the month of his birth, the authorities in each neighbourhood arranging not to clash with each other's celebrations. The most important *mušāhid* is that of the Ribāṭ al-Ryāda, attracting visitors from throughout Kenya and Tanzania, even as far as the border with Mozambique. Apart from the strictly religious ceremonies and the solemn procession to Habib Šāhib's tomb, Africans of different tribes also celebrate it with dances that are generally frowned upon as impious, if not heretical, by those of Arab descent. The tomb itself is in a flimsy wooden hut. If this is surprising, such simplicity in a holy tomb has its parallels not only in Tanzania but also in al-Shīr, the port through which the potent influence of the Hadramawt has chiefly percolated into eastern Africa.

LAMBASAR (thus in Rashid al-Din and Mustawfi), popular pronunciation with assimilation Lam(n)asar < Lambasar, the name of one of the Isma'ili

fortresses in northwestern Iran taken over from a local chief by Hasan-i Sabbah's lieutenant and eventual successor Kiyā Buzurg-Ummid, according to *Diwān* in 495/1103 (see ALAMUT, ISMA'ILIYA). Its still-extensive ruins lie on a site sloping at 30°, whose surface resembles in shape a truncated cone and which measures some 1,500 ft./480 m. by 600 ft./190 m., with easily defensible slopes, in the Rūdāb district of the upper Šāh-Rūd, tributary of the Sarīd-Rūd (q.v.) in what was the mediaeval region of Daylām (q.v.), now in the central *astān* of modern Iran. Its precise location is 30 miles/43 km. north-east of Kāzin and 2 miles/3 km. north of the village Shāhrastān-i Bālā, on the Nāyin-Rūd stream, in lat. 36° 33' N. and long. 50° 13' 30" E. The fortress's position guarded the approaches to Alamūt from the Šāh-Rūd valley, and it was accordingly an important unit in the network of Isma'ili castles in Daylām. In recent times, the site and ruins have been visited and described by Freya Stark (1931), W. Ivanow (1958) and P. J. E. Willey (1960).

Lambasar was besieged in vain in 511/1117 by the forces of the Saljūq sultan Muḥammad b. Mūlik-Šāh (q.v.). At the time when the Il-Khān Hülegü overran northern Persia, the last Isma'ili Grand Master Rukn al-Din Kwar-Šāh submitted to the Mongols, and some forty Isma'ili strongholds passed into the invaders' hands. Lambasar, however, held out against Hülegü's general Dayir-Buka for a year after the beginning of 655/1257, and another fortress, Girdkūh, for considerably later: it was presumably after its capture that Lambasar was abandoned as a military centre.

LANGA (see LAS BELA, 2 Ethnography).

LANKORAN (LENKORAN), the chief town of the district of the same name in the region of Bākū. Lenkoran is the Russian pronunciation of the name, which was at one time written Langarkunān ('anchorage'), or perhaps Langar-kānīn ('place which pulls out the anchors'), which is pronounced Lānkārān in Persian and Lankon in Tāligī. The ships of the Bākū-Lāzūlī (q.v.) line used formerly to call at Lankoran, which has an open roadstead, but at 8 miles north-east of the town is the island of Sarā, which has an excellent roadstead which shelters the ships in bad weather.

In the district of Lankoran, de Morgan found monuments of very great antiquity (dolmens, tombs, cases of exposure of bodies in the Mazdean (?) fashion), but it is not known at what period the town of Lankoran was founded. Certain statements (cf. *Ta'rikh-i 'Ālam-ārā* under the year 940/1533 in Dorn, *Ausgabe*, iv, 283; and *Shaykh al-'Alī Hazin* [about 1733 A.D.], *Ta'rikh-i 'Āmūd*, ed. Balfour, 157) suggest that the capital of Tāligī was originally at Astārā, towards the end of the 18th century, Lankoran be-

came the capital of this khānate. The whole district was annexed by the Russians under Peter the Great (treaties of 1723 with Tahmāsp II, and 1729 with the Afghan Asghar), but returned to Persia by the treaty of 1732. Retaken by Count Zubov in 1796, Lankoran was retaken in 1812 by the Persians who fortified it. On 9 Mubarram (488/1) 1220/1 January 1813, Lankoran was taken by storm by General Kotliarevski after a brave resistance of the Persians. This event hastened the conclusion of the Treaty of Gulistan (1813), by which Persia ceded to Russia part of Tāligh to the north of the river Astārā. From 1846 Lankoran was the capital of the district. The fortress was dismantled in 1865. Since 1921 Lankoran has formed part of the Adhār-bāydjān S.S.R. in Soviet Transcaucasia.

The population of the town, which was 3,972 in 1867, had reached 11,300 in 1897. The district of Lankoran has an area of 5,000 sq. miles and in 1840 had 30,206 inhabitants and in 1861 99,082. Later, the district was reduced to 2,000 sq. miles; in spite of this, its population in 1897 was 123,895, of whom 46.5% were Azeri Turks, Iranian Tāligh 45.2%, Russians 6.9% (in the north) and Armenians (0.2%). The district is composed of three zones, to the north, an eastern continuation of the steppes of Mūghān; to the east, a marshy littoral intersected by lagoons and covered with a rich subtropical vegetation; whilst to the west are wooded mountains running from 5,300 to 7,500 feet above sea-level which rise from the Russian frontier, forming the boundary with the Persian province of Ardabil. The district is rich in forests and had good fishing.

The figures for the 1926 and 1931 censuses showed little change from the above figures, but by 1973 the town alone had a population of 42,300. The town has a number of schools and colleges, libraries and clubs, as well as a museum of local lore. During the 1930s, a newspaper was published in Adhār-bāydjān and Tālighi. The majority of the population of the province are Shi'ā, though there are substantial Sunni communities in the south. The tomb of Shāykh Ibrāhīm Zāhid, teacher of Shāykh Saif al-Dīn, eponymous ancestor of the Šafawī dynasty, is situated a few miles to the south of the town of Lankoran.

The chief local industries are associated with the processing of agricultural products (tea, fish, vegetables, wine).

LĀR and LĀRIDJĀN. Broadly attested outside southern Iran, the toponym Lār is applied to a characteristic region of northern Iran known by the name of Lāridjān. Lār itself is the name of a watercourse, of its valley and of the pasture-lands

which surround it. In different forms and local variants, it also refers to other steppes or urban settlements of the Iranian lands.

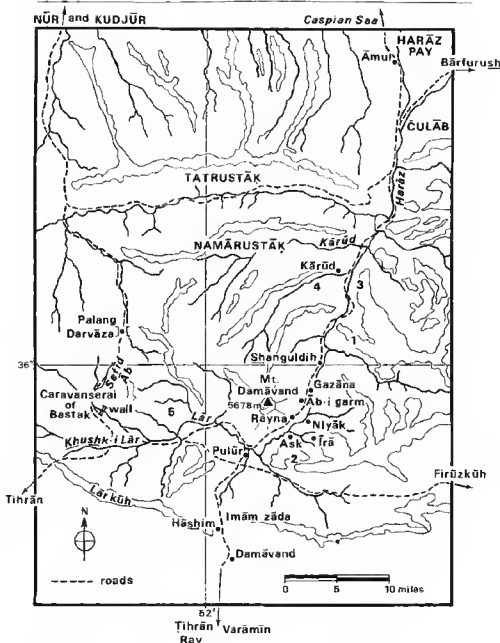

1. The high valley of the Lār.

On the barren slope of the Elburz, not far from the conurbation of Tehran, the valley of the Lār constitutes one of the high points of nomadism. Situated at the foot of Mt. Damāvand—at 5,676 m (de Planhol), the highest peak of the Elburz and Iranian range—between the valleys of Nūr, Karadā, Džādi: I Rūd and Harāz, populated by Gilaki peasants, today it supports no permanent settlement. Highly appreciated over a long period, not only by the nomads but also by the neighbouring village communities and by members of the royal household, its summer pastures have been the object of complex apportionments between these three contenders. Since the decade of the 1950s, the balance has been largely upset in favour of the nomads or semi-nomads, threatened in their turn by the process of modernisation.

Between its source in the vicinity of Kulām (Kulūn-i Bastak and the elbow of Pulār where it changes its name to that of Harāz, the Lār takes in the waters of numerous tributaries (names supplied by Rabinov, 41-2; Karakān, *Kāzān*, 120-1). It flows between mountains which, to the north as in the south, rise beyond the 3,000 m. mark; to the south, the peak of the Lār-kūh is at an altitude of 3,901 m. (23,797 feet according to an American map printed in 1957; *ibid.*, 116). On either side of the banks of the Lār, the pasture-lands extend over some 60 km. and over a breadth of 6 to 7 km. (*ibid.*, 122). The winters are long and extremely cold. The altitude does not fall below a level of 2,500 m.; even in summer, the temperature seldom rises above 24°C. At the eastern extremity of the valley, at Pulār (see Lāridjān, below), situated at 2,130 m., average temperature over the year is 5.8°C, rainfall is 547.7 mm. (Adle, chart; 569 mm. according to de Planhol, 23, n. 52, after Péguy).

Near the confluence of the Seifid Āb and the Lār, a wall of dry rock blocks the entire valley. Situated, close by the so-called caravanserai of Shāh 'Abbās, at a crossroads of caravan routes between Tehran and the north, in a locality dominated by the ruins of Kāfay-i Dukhtar, according to oral tradition this wall separates two villages (Hourcade, 42 and map). Indications of the existence of permanent settlement in the valley of the Lār are quite numerous; besides the remains observed by certain travellers (Wells, 2; Von Call-Rosenburg, 121; Stahl, 10), there is the oral tradition current among the Hedāvand nomads (Brugsch, I, 265, quoted by de Planhol, 21-2) among the Gilaki villagers of the valley of Irā (Hourcade, 42, n. 6) and most notably the tradition attested at Lāridjān as in the villages close to the valley of the Lār, according to which under a king of ancient Iran, the villagers of the Lār, unable to endure the rigours of the winter, are supposed to have emigrated to Lār of the Fārs (Fasā, II, 28 ff.; Kotschy, 51). This popular tradition should not be regarded as "quite fantastic" (de Planhol, 21) since numerous toponyms (Lār, Lārak, Elburz, Bastak etc.), are current in the north as in the south.

Although it is impossible to follow the evolution of relations between nomads and settlers until after the beginning of the 19th century, it seems that the settled territory covered a greater area then than it does today. According to de Planhol, the "wall" across the valley separated nomads from

Lāridjān (after Rabino) Sub-districts: * 1 Amūl or Pā'in Lāridjān, 2 Bāh Lāridjān, 3 Būhrūstāk, 4 Dīkrūstāk, 5 Valley of the Lār. * on 4 and 5, see our reserves and remarks in the article.

scitlers. Since the decade of the 1830s, the encampments of the nomads and semi-nomads of the Lār have been amply described by travellers, diplomats, soldiers etc. These accounts describe to us the stability of these tribes (itineraries of migration, places of summer pasturing, etc.) of which the majority were transferred to the region of Tehran from the

18th century onward, for political reasons (Hourcade, 39). For at least a century, and until quite recently (1976), approximately 200,000 head of small livestock (sheep and goats) belonging to the nomads of the south slope of the Elburz have summered at the Lār. But the terms "tribes" and "nomads" are quite inappropriate to designate populations whose origins

remain obscure. Briefly, one encounters Hediwand who speak the Lori language (having arrived in the 18th century); Koti Arabic speakers (originally from *Khuzistān*?); the 'Arabs, poor and Persian speaking; the Kalnur or Kallur, Gilaki speakers, whose chiefs lived in Tahrān (descended from the Kalnuk Mongols?); the Persian speaking Pāzūki ('Turks of *Khuzistān*', Kurds?); other small tribes or diverse groups: Turks (Sayi Sepur, 'Ali Manjūr, Kal'at, shepherds of the Turkish villages of Rūdehān); Kurds; 'great nomads' ('*Ali Kāp*', Gilaki speakers; Hasanlu, Turkish speakers; Sangseri, who speak an Iranian dialect from the North-West). Numerous details on these tribes (number of tents, migrations, summer pasturing etc.) in Hourcade, 40 ff.; de Planhol, 33 ff.; Hourcade and Tsai, 23.

The use of Tarco-Mongol terminology in nomadism reflects the acceleration of the process of bedouinisation in the region following the Mongol invasion. The term *yāzi* refers to the tent as well as to encampments (Stack, I, 98) or pastures and summer settlements (Rabino, 113). The summer pasturing (*yaylāq*) of the Lār was frequented by the Il-Khānids, the Timurids, the Safavids and the Qājārs. Under Nāṣir al-Dīn Shāh (1848-96), the pastures were grazed in summer by horses from the Shāh's stables (de Planhol, 21). He often set up his summer camp there, to be followed by all the dignitaries and their families, military men, ambassadors (numerous references to the camp of Lār in the diplomatic archives in London, Paris etc., in the stories told by travellers, soldiers, sportsmen, etc.). Under the Pahlavis (1925-79), the pastures to the west and south of Damāvand remained for the most part the property of the crown or of public services (national education, army, agriculture, etc.), who leased them to the nomads.

While profiting from the decline of sedentary mountain life, nomadism has recently suffered the impact of the expansion of the Tehran conurbation. Semi-nomadic groups adapted with varying degrees of success to the re-organisation of the milk and meat markets, becoming the salaried shepherds of large societies, 'city-dwelling' nomads or villagers. But the trend towards sedentary living, utilisation of the motor-car, etc. have modified migratory practices. In some cases, nomadism has been replaced by pastoral migrations of the Alpine type (Hourcade, 44-5). Other factors have contributed to the decline of nomadism. The development of tourism and of sporting activities (mountaineering, trout fishing, also practised by the nomads, spa facilities and skiing activities in neighbouring areas) has led to the creation of cottage-industries and of construction projects; inevitable measures for the protection of the environment have brought about the extension of natural reserves to the detriment of the pasture-lands. But it is the construction of the dam of the Lār, designed to improve the water-resources of Tehran, which has had the profoundest impact on nomadism. With its foundations laid in 1975, this huge dam (105 m. in height; 1,000 m. long; reservoir of 30 square km. containing 960 million cubic m. of water) was due to become operational in 1980. Ecological constraints—particularly the erosion of the banks and terraces as a result of over-grazing—brought about the expulsion of the nomads from 1976 onward (*ibid.*, 45 f.). The abandonment of major industrialisation projects should in principle favour the renewal of the traditional economy and of nomadism which had been tending towards modernisation and self-destruction (*ibid.*, 47f.)

Rivalries between the nomads, the villagers and the state over the appropriation of pasture-lands are reflected on the administrative level. Originally belonging to the Ustān-i Markazī (*ḥāḡh* of *Alḡi*, *Shahriyān* of Tahrān; *DC*, I, 196), the Lār has seen its southern area attached to the villages of the southern slope (Ustān-i Markazī) and the rest shared between the *shahistān* of Nūr and Lāridjān (Ustān-i Mīzandārān), the properties of the crown and the state lying between these two spheres of ownership (Hourcade, 36). Until the 19th century, its history is intermingled with that of Lāridjān (see below), of which it often forms an integral part.

2. *Lāridjān*

Geographical setting. Lāridjān takes its name from the Lār (see above), a perennial river which flows down the southern flank of the Damāvand and constitutes the principal branch of the headwaters of the Haraz. The change of name takes place towards the elbow of Pulūr where the Haraz is swollen by the addition of the Delāṡy; in places where it crosses inhabited territory, the river is called *Chāzān-dāy* (from the Turkish 'river which bores', according to de Planhol, 17, n. 13; perhaps also in memory of the Il-Khān Chāzān; see below).

Constituted of volcanic rocks thrown up in the Pliocene and Quaternary periods (clear trachytes and coloured andesites), the cone of Mt. Damāvand (400 km²) offers on its eastern slope—dissected by the Haraz and its tributaries and a multiplicity of deep valleys—conditions more favourable to human settlement than exist on its western slope, which is made up of a compact and inhospitable mass of andesites. The high valley of the Lār does not fall below a level of 4,500 m., although the more deeply excavated valleys descend towards a level of 1,300 m., the farthest limit of permanent settlement currently being in the region of 2,300-2,400 m. On the eastern periphery, the soil produced by the decomposition of volcanic deposits engenders a stretch of fertile and well-watered ground. These natural conditions explain the human dissymmetry of this volcanic massif, which gives to Lāridjān its physical shape and its individuality (de Planhol, 17 ff.; on the morphology and physical geography of the Damāvand, see P. Bout, M. Derruau, J. Dresch and Ch. P. Péguy, *la Mémoires et Documents*, viii, CNRS, Paris 1961, 39-63; see also *CHI*, I, 44 ff., 189, 413).

Socio-economic outline. A remnant of one of the most ancient provincial nuclei of northern Iran, Lāridjān is characterised by an exceptional density of villages, in contrast to the remarkable void existing upstream of the Lār towards Pulūr as well as in the down-stream valley, on the Caspian side. Life in the settled areas, in the main valley, is closely linked to that of the high pastures of the Lār and of Lāridjān. The traditional equilibrium is based on a minute system of balance between intensive agricultural exploitation of tiny plots, the pastoral life and complementary resources supplied by the winter emigration (on land use and irrigated and pluvial cultivation—corn, barley, lucerne, vegetables etc.—the agrarian structure and rustic landscape, the pastoral life and exploitation of the mountain—raising of small and large live-stock—see de Planhol, 22-8; also Hourcade and Tsai, 34 ff.). The rigours of the climate and the lack of winter resources are the cause of the significant migrations. In winter, only the peasantry and the stock-breeders remain on the mountain. Some farmers possess arable land on the Caspian plains. Traders and artisans (manufacturers of felt) traditionally

emigrated towards the Caspian. Conversely, the people of the plain of Āmul used to spend the winter on the Lār. Some important resources were drawn from the transit of merchandise and from mule-traffic along the traditional highway axes: the Harāz valley route (Tehran-Āmul) by way of the col of Imān-rāda Hāshim; the route of Nūr and Kudjūr through Afdje, via the valley of the Lār (Hourcade and Tsal, 25 f.).

Having witnessed an expansion at the beginning of the century, sedentary rustic life has experienced a constant decline as a result of this migration towards the Caspian and towards Tehran, a new focus of attraction. In the decade of the 1930s, new migratory patterns are seen to emerge; in ever increasing numbers, the nomads establish themselves in the high altitude cultivated lands abandoned by the villagers (de Planhol, 32 f.). The improvement of roads, the reorganisation of the production and marketing of dairy and meat products, have transformed the pastoral life and nomadism (see above). The tourist excursions undertaken by a great many city-dwellers are capable of "rendering marginal" the migrations of villagers. Centres of seasonal commerce have been established along the major routes (Hourcade and Tsal, 29 f.).

The uneven settlement of the land and the social contrasts are reflected in the appearance of dwellings (large houses belonging to farmers/stock-breeders; the small houses of the emigrants; more recently, summer resort chalets). Cave-dwelling is an ancient practice; caverns excavated in the calcareous rock are currently used for sheltering live-stock and fodder (de Planhol, 26, nn. 35, 36). Study of the system of ownership reveals a predominance of small properties. Quite complex contrasts exist between small holders and exploitative farmers/stock-breeders. Although the standard of living is fairly low, it is possible to regard Lāridjān as "a rural democracy, with a hierarchy, but without glaring inequalities" (de Planhol, 29 f.).

Lāridjān is the point of departure for the ascent of Damāwānd [q.v.] (Dumāwand/Dunbāwand/Dubāwand, etc.), a mountain which plays a significant role in the myths and legends of Iran (Ibn Isfandiyyār, tr. Browne, index; Schwarz, 285 ff.), and in local folklore (Miaorsky, *Lār*, in *EP*). Nāṣir-i Khusrāw (11th/12th century) relates that sulphur extracted from the crater was wrapped in the skins of cattle which were then rolled down the slopes (*Ṣafar-nāma*, ed. Dabk-Siyāḳī, Tehran 1344/1963, 7). Ibn Isfandiyyār (writing in 613/1216) describes—following the *Firdaus al-ḥikmah*—how the ascent could be made in two days, starting from the village of Ask (4, 82-3; tr. 35-6). In the 19th century, two scientific ascents were made within a few days of each other in September 1837 (W. Taylor Thomson and E. d'Arcy Todd); subsequently, it became fashionable for Europeans (travelers, diplomats, explorers, mountaineers, etc.) to make expeditions to Mt. Damāwānd (de Planhol, 29 ff.). Ascent by the north face being something of an exercise for experienced climbers, it is more easily accomplished by the south face starting from the village of Rayna/Rene (to the south-east, 2,200 m. in altitude) with the aid of mule-drivers well acquainted with the mountain (see de Planhol, in *Iran*, Nagel's Guide, Geneva 1973, 128 ff.).

As warriors of repute, the Lāridjāns have had occasion to defend their territory or to support the claims of local chieftains. After having fought against the Kūdjūrs, they supplied them with appreciable help in the maintenance of order in the north as well as in the south of Iran (see below).

Administrative framework and demography. Although Lāridjān has been able to extend its influence over the neighbouring regions, its borders have changed little in the course of time. They have probably not gone beyond those that it had in the Kādjār period. This is how Rabinow delineates them (174-15, with the names of villages and pastures; names given here in parentheses are those of the main places of permanent settlement):

(a) Āmul or Pā'in Lāridjān (*Shāh-kadešt*, *Shan-guldāh*)

(b) Balā Lāridjān (Ask, Āb i garm, Gaynā, Gzanā, Gazānak, Irā, Mādr, Lāsim, Navā, Niyāk, Pulūr, Raynā)

(c) Bihrustāk (*Bāy-gjān*, Nawar/*Nāsar*)

(d) Dīlkrustāk (Fīrā, Hājdūt Dūk, Kahr-rūd/*Kuhrūd/Kārō*, Kurf, Nāndal/*Nunnal*, Tīhna/*Tīna*)

(e) The valley of the Lār; besides the caravanserais of Surghak, Baṣtak and Sefid Āb on the road from Tehran to the Nūr via Layhkarak, there are no pastures (see Hourcade, chart of the summering-sites of the Lār).

Although Dīlkrustāk, on the northern slope of the Damāwānd, has been capable of definition as "a separate regional subdivision" (de Planhol, 17), it is historically a part of Lāridjān. With the exception of the valley of the Lār—which now depends to a large extent on the Ustān-i Markazī (see above)—Lāridjān has preserved its other administrative divisions (see below).

The demographic evolution of the region is hard to trace. Having apparently benefited from the development of Māzandarān in the Safawid era, the population of the region seems to have declined in the 18th century. The improvement and then the decline of the 19th century is reflected in the population of the regional centre, Ask: 1,000 to 1,500 houses in 1837 (d'Arcy Todd); 2,000 in 1860 (Brugsch); 300 in 1874 (Napier). Recent information indicates a decline at Ask (approximately 700 inhabitants in 1950, 424 in 1956) and a relative expansion at Rayna (200 houses in 1874 (Napier), 400 in 1956 (de Planhol)).

Attached to the Ustān-i Māzandarān, Lāridjān constitutes a *dahkhā* of the *shahristān* of Āmul. It is divided into four *dahkhā*s, as follows (DG, iii, 266; data from about the year 1950):

<i>dahkhā</i>	inhabited places	inhabitants
Balā Lāridjān	18	7500
Bihrustāk	7	900
Āmul	10	2000
Dīlkrustāk	10	1500

The censuses of 1956, 1966 and 1976 indicate a demographic decline, the inhabitants being progressively less numerous than the migrants (see Hourcade and Tsal, 26 ff.).

Historical evolution. The toponym Lāridjān is quite widely attested in Islamic sources. It derives from Lāridj: Lār + ig (a suffix which, in Pahlavi, serves to form adjectives of relation; however, its use in proper names in Pahlavi remains problematical; see Ph. Gignoux, in *Pad nām-i yadsān*, 63 f.). It should therefore be written with a long *i* although, as in the case of Lāhidjān, both ancient and modern authors most frequently write it with a short *i*. The use of Pahlavi, especially in coinage, epigraphy, seals, etc. was maintained for a long period in the Caspian region (on the Arabo-Sāsānid coinages of Tābaristān, see R. Curjel in *Pad nām-i yadsān*, 151-8).

The precise localisation of the urban settlement or the district known in ancient times by this name

remains uncertain. Its origin is lost in the myths and legends of ancient Iran which cannot easily be explicated from a historical point of view. Briefly, "Lārījān is the most ancient region of Tabaristan. Firidūn (i.e. Thraetona/Frētōn) was born in the 'village' (*āhā*), which can have a broader sense of War which is the principal town (*kasaba*) of this region (*nāhiya*) and where the cathedral mosque (*ḡimāʿī*) and the oratory (*muṣallā*) are situated" (Ibn Isfandiyyār, I, 37). Waraka for War is an incorrect reading by Browne (tr of Ibn Isfandiyyār, 13), followed by Rabino, 40; Minorsky, art. *Lār* in *ET* (who identifies Waraka/Warak/Varema with the village of Wāna in Lārījān); de Planhol, 20, etc. According to Amulī (13), the birth-place of Firidūn is Lārījān, *kasaba* of the region of the same name. According to Marʿashī (77, 4), Gurgān Mišād, the "founder" of Gurgān, possessed the region of Ray: "In winter, his *ḡishāḡ* [g.u.] was at Karadī Rūd, in summer his *yaylāḡ* was at Lār (77, 4; on Lār-i Kāsrān, see below). More easily identifiable is Šimlabī Čalabī/Čalaw, at Dīfārūstāk, at the northern foot of the Dambāvand/Damāvand, an area of rich pastures where Firidūn was brought up, went hunting mounted on a cow and devoted himself to training oxen as saddle-animals, and whence he set out to conquer ʿIrāk (Ibn Isfandiyyār, I, 57 ff.; according to de Planhol (20, n. 34), there is in this myth an echo of the ancient mountain practice of riding oxen).

The fact that Lārījān designates sometimes an urban settlement, sometimes a district, does nothing to facilitate the toponymic study of the region. Lārījān is the mountainous frontier zone where the Harhaz flows (*Hudūd*, 77). Probably because of the fairly late Islamization of the region (by the ʿAlids), Lārījān is rarely mentioned by geographers who wrote in Arabic. In addition, their works contain ambiguities. Thus Lārus (supposedly the ancient form of Lārījān), named as a village or a district of Tabaristan (Marquart, 127, 535) is not the present day Lārījān (on Lār and Marquart's interpretation, cf. below, 31).

According to Yāqūt (IV, 340-1) "Lārījān is a small town (*bulayda*) between Ray and Amul in Tabaristan; it lies at a distance of 18 *farsakhs* from each of these two towns, it is protected by a fortress often mentioned in the chronicles of the Buwayhids and of Daylam". Villages, fortified points, places allegedly situated in Lārījān are mentioned by various sources. The village of Irā is mentioned under the name of Bāra/Yara (al-Isṭakhri, 210; Ibn Hawkal, 271, quoted by Schwarz, 789; does this refer to Irā near Ask, or to an ancient permanent village to the south of the valley of the Lār (see above); Ask (Ibn Isfandiyyār, I, 83); Fūlū, Fūlū-i Lārījān, Kāra-yi Fūlū (Marʿashī, 77, 186; TG, 284); Kālā-i Lawādar (near Raynān) (Marʿashī, 77, 213-14); the *ḡāḡa* or the urban settlement of Kohrūd/Kahrūd/Karu/Karūd (Amulī, 135; Ibn Isfandiyyār, II, 78, 99; Marʿashī, 77, 54, 813). This or the *ḡāḡa* of Lār, without further definition, are also mentioned (Ibn Isfandiyyār, I, 497-9; Amulī, 109; Marʿashī, 77, 222). In the Sāsānid period, Lārījān must have formed part of the Padagāḡh-kh "argar, of which the sovereign was Māh guḡhāsp (or *Dhughānashāh*) at the end of the Arsacid period. Subsequently, this region belonged to the Sāsānid Kawād, then to his son Kāwās. Later it came under the control of the Sāsānid family of the Kārināda (g.u.) (Marquart, 130 ff.; Karīmān, *Kāsrān*, II, 632). In a broad sense, Kūh-i Kārin or Dībāh-i Kārin designated the eastern Elburz. According to Rabino (2), it included present-day Lārījān, the Sawād

Kūh and the Hazār-ḡarīb. But according to the *Dībāh-i Kārin*, the Dībāh-i Kārin is also called Dībāh-i Rūnāḡ/Rūnā (Rūyān) and the Dambāvand/Damāvand does not form a part of this mountain (Muḥammad b. Naḡīb Balūristī, *Dībāh-i Kārin*, ed. Tehran 1342/1963, 51). At the time of the Arab invasion, the situation in the region is unclear, especially as regards the Lār (Wāḡy of the Lār), the southern limit of Lārījān, where ancient occupation is attested most notably by the presence of remains of sanctuaries dedicated, it is said, to Nāhid/Anahita (Karīmān, *ap. cit.*, 189, 632). The mountainous region to the north of the Ray was called Kāsrān (Kāsarān), and was divided into Kāsrān-i dākhil (or Kāsrān-i darīn) and Kāsrān-i būrūn (Karīmān, *ap. cit.*, 3 ff., with reference to al-Isṭakhri, Ibn Hawkal, al-Mukaddasī, Zahariyā al-Kawālī, Yāqūt, etc.). The Lār presumably belonged to the Kāsrān-i dākhil. Lārī Kāsrān is found in various sources (Ibn Isfandiyyār, I, 56; Marʿashī, 77, 112, 124; Amulī, 162 f., etc.). But reference to Lār ō Kāsrān (e.g. Ibn Isfandiyyār, I, 223) is also found, which gives grounds for supposing that one part of the Lār belonged to Kāsrān and the other part to Lārījān. Furthermore, the mountains to the north-west of the Lār whose waterways flow towards the north, form part of the Rūd-bāra-i Kāsrān (Karīmān, *op. cit.*, 20 f.). It also appears that the Lār, endowed with at least one fortress, at times exercised a certain independence between Lārījān, Lawiān and Kāsrān. It may also be noted that—at least on the geographical level—the mountains of Rūyān formed a frontier with the mountains of Ray (Ibn al-Fakih, 304, and Ibn Hawkal, *Sārat al-aḡar*, 320, quoted by Karīmān, *op. cit.*, 18).

At the time of the conquest of Ray (which al-Ṭabarī locates in 22/643), the Maṣmughān (Mas-i Mughān, Grand Master of the Magi) who exercised jurisdiction over Dambāvand, Khawār, Lāric and Shuruz, agreed conditionally to the payment of the *ḡuys* and *ḡharāḡ* (Karīmān, *RE*, II, 487, after al-Ṭabarī and Ibn al-Aṭhrī). According to H. Karīmān (*Kāsrān*, I, 71 ff.), the north of Kāsrān and a part of Lārījān were in the hands of the Maṣmughān, but this is not stated clearly in the sources. The possessions of the Maṣmughān were conquered by Abū Muṣṭafā in 129/748 (Marquart, 127, after Ibn al-Aṭhrī).

In the absence of indications in the sources which would permit an appraisal of the economic worth of the region, it may be said that, in mediaeval Iran, Lārījān exercised—as a result of its geographical position—control over a military, commercial and pastoral route, i.e. the Ray-Amul axis towards the Caspian Sea and the transversal routes towards Kānis and Khurāsān via Frās-kūh to the east, towards Kāzwin and Aḡharbāyḡjān to the west. A highway also connects Ārim, in the Hazār-ḡarīb, to Lārījān (Rabino, 115). Other transversal routes were added later (see below). This function would pre-suppose the existence of a stable local power. The latter was exercised by governors usually bearing the title of *marzbān* (the term Lārījān seems also to have had a patronymic connotation). Ibn Isfandiyyār supplies us with a list of these *marzbāns* beginning with Faḡl b. al-Marzubān in 352/866 (the list has been partially reconstructed by Rabino, 547, up to the 7th/13th century). In the final third of the 3rd/9th century, Saḡl b. al-Marzubān constructed across Lārījān the route which, in earlier times, had been impracticable both in winter and in summer, and he took steps to ensure its security (Ibn Isfandiyyār, I, 122).

Like other chieftains of Tabaristān, the governors of Lāridjān accorded a warm welcome to the 'Alids. The chieftains of Lāridjān and of Kaṣṣān rallied to the support of the brother of Ḥasan b. Zayd known as al-Dā'ī al-Ṣaghīr (Ibn Isfandiyyār, i, 233; Mar'ashī, 77, 232). In 372/885-6, the 44th Muḥammad b. Zayd, brother of Ḥasan b. Zayd, attempted to take possession of Ray; on being defeated, he sought refuge in Lāridjān (Ibn Isfandiyyār, i, 232; Ibn al-Aṭhār, vi, 59). In the Saljuq period, the phase of disorder which followed the deaths of Nizām al-Mulk and of Malik Shāh (485/1092) had an effect on Lāridjān. Having ordered his governors of Lāridjān, of Rōyān and of Āmul to help him in the fight against the Ismā'īlīs, Muḥammad b. Naḥk Shāh nominated as governor of Ray and of a vast area, including Lāridjān, his young son Malik Ahmad, whom he entrusted to the care of an amir named Sunghūr-i Kulik. This Saljuq policy, aimed at maintaining control of pro-Seljuq regions, spread consternation among the Bāwandid Ispahbads (Ibn Isfandiyyār, iii, 35). Nevertheless, Lāridjān benefited—as did other regions of Iran before the Mongol ravages—from the decline of Saljuq power. After a period of conflict with the Ispahbad Shāh Ghāzi Rustam I Bāwandī (534-58/1140-53) (see Ibn Isfandiyyār, ii, 77; Āmull, 126), Manūchehr, marzbān of Lāridjān, turned Kāfa's Kūhrūd (in the down-stream area, later known by various names, including Kārū/Kārūd) into a place so prosperous that people of all professions, natives of India, of Egypt and of Syria, came and settled there (Ibn Isfandiyyār, iii, 77 ff., 99); this kār'a was destroyed in 783/1381-2 and later rebuilt (Mar'ashī, 77, 213 ff.). Other fortified points are mentioned. The kār'a of Lāridjān (without further definition) is named in connection with various events (Ibn Isfandiyyār, i, 297, 299; Āmull, 109); Mar'ashī mentions the kār'a of Fūlūd (77, 19). Manūchehr allied himself, with other chieftains of Tabaristān, to Shāh Ghāzi Rustam Bāwandī; his troops formed a part of the army which conquered Bīstūn/Bastūn and Dāmghān (Ibn Isfandiyyār, iii, 94; Mar'ashī, 77, 19; Āmull, 131).

Abū Harb, the eldest son of Manūchehr, was a violent and irreligious man. He killed his father and his brothers (through trickery), renewed the alliance with Shāh Ghāzi Rustam, and fought alongside him against the sāmānīd Kay Kāwūs; after having defeated the latter went to war against the rebel Gurgānī. At the last military parade conducted by Shāh Ghāzi Rustam, Abū Harb was among his army commanders (Ibn Isfandiyyār, iii, 99 ff.; Mar'ashī, 77, 22-3). Eventually, the people of Lāridjān lost patience with Abū Harb and his misdeeds, and killed him. His one-year-old son, Kūnūkh'ār or Kūnūkh'ār (i.e. "Avenger") was put into power by 'Alī Lāridjānī, the commander of Abū Harb's army and of that of his father Manūchehr. 'Alī Lāridjānī appointed himself *atabeg* and towards the end of his career he collaborated at Ray with the Saljuq *atabeg* Ildigiz (see *al-Nabīḥ*) in carrying off "the treasures" of Lāridjān (Ibn Isfandiyyār, iii, 110-11; Mar'ashī, 77, 107). The Lāridjānīs rallied to the cause of the Ispahbad 'Alā' al-Dawla Ḥasan (surnamed "al-Malik al-Shahīd", 558-67/1163-71), maternal uncle of Kūnūkh'ār. Shāh Ghāzi Rustam I and 'Alā' al-Dawla controlled Kaṣṣān, and, especially after the misconduct of Abū Harb, Lāridjān had practically lost its independence. Furthermore, "Amir Lāridjānī" incited the Saljuq *atabeg* to recapture from 'Alā' al-Dawla the *miyāyat-i Lāridjān* "which had always been a part of [it]" (Ibn Isfandiyyār, iii, 112). Un-

der the Ispahbad Ḥusām al-Dawla Shāh Ardashīr, a sizable portion of Lāridjān formed part of the "darūn Tarmīnā" (ibid., 124). Ḥusām al-Dawla entrusted the government (*sardārī*) of Lāridjān to the Ispahbad Abū Dja'far Āsārī (Mar'ashī, 77, 116).

At the turn of the 6th-7th/12th-13th centuries, the history of the region is poorly attested; the chronicles mention numerous journeys that passed through Lāridjān, of which the kār'a also constituted a refuge (for example for the mother, the wives and the children of Djalāl al-Dīn Muḥammad Khwārazm-Shāh when he fled before the armies of Čingiz Khān; see Djuyaynī, *Tārīkh-i Djalālīn-gushā*, ed. Kazwīnī, GMS, xvi, ii, London 1916, 199). The relations between the Lāridjānīs and the Ismā'īlīs (energetically fought by Shāh Ghāzi Rustam I) and, in general, the politico-religious situation in the region on the eve of the Mongol invasion, remain obscure. It may also be noted that, according to Mustawfī, the kār'a of Lār was included among the Jamā'at fortresses conquered by Hūlāgū Khān in 654/1256 (*Tārīkh-i gurīdā*, ed. Nawā'ī, Tehran 1339/1960, 527).

Following the Mongol invasion, the weakening of local power resulted in the loss to Lāridjān of part of its strategic importance (later Saljuq, Mongol and Timurid sources refer to the region by the name *miyāyat-i Lār*). It is, however, unknown to what extent the presence of the Mongols, experienced in operating in high-altitude areas, and the extension of nomadism which rained the neighbouring districts, affected Lāridjān (on these problems, see J. Aubin, *Réseau pastoral et réseau caravanier, in Le Monde iranien et l'Islam*, i, Paris-Geneva 1971, 109-30, at 115 ff.). It seems that the pastures of the Lār were appreciated by the Il-Khāns. Arghūn Khān "had caused a fine palace (*kūsh-i 'ālī*) to be built at the summer resort of Lār, at the foot of Mount Damāvand; this place is now known by the name of Kūsh-i Arghūn" (Raghd al-Dīn, iii, 226). This was no doubt the place where Ghāzān Khān solemnly adopted the Muslim faith in Shābān 694/June 1295 (at least, this is the version given by some authors: d'Ohsson, *Histoire des Mongols*, Amsterdam 1852, iv, 231-2; 'Abbās Iqbāl, *Tārīkh-i Maḡhālī*, Tehran 2536/1977, 256; J. A. Boyle, in *CHI*, v, 378). But details as to the site, the date, the number of Mongols converted on this occasion, etc., remain poorly defined in the sources. According to the leading chroniclers, it was at Firūz Kūh that, following the advice of his amir Nawrūz, Ghāzān Khān was converted to Islam at the beginning of Shābān 694/mid-June 1295 in the presence of the ghayāṭ Ṣadr al-Dīn Ibrāhīm (Raghd al-Dīn, *Djāmī' al-tawārīkh*, ed. Alzade, Baku 1957, iii, 294 ff.; Wasef, *Tārīkh*, Tehran 1338/1959, 316-17; *Shā'and-Amā*, *Ḥabīb al-siyar*, Tehran 1333/1954, iii, 144; Mir Khān 'And, *Rawzat al-safā*, Tehran 1339/1960, v, 380). According to local tradition, it was in the valley of the Lār, at Kūsh-i Arghūn, that this conversion took place (Fauvrey, 239). It may also be noted that on numerous occasions Ghāzān Khān frequented the "Yāylak-i Damāvand" (see Raghd al-Dīn, *Tārīkh-i Raghdī*, ed. K. Jahn, GMS, London 1940, index).

The Timurids also thought highly of the pastures of the Lār. It was in the valley of the Lār that the Spanish ambassador Clavijo came, in June-July 1404, to visit the son-in-law of Timur, Sulaymān Mirā, whom he found in the middle of his encampment of some three thousand tents (fr. *Le Strange*, London 1928, 169). Some days previously, on his way from Ardabil, Timur had broken his journey at the *miyāyat-i Lār*, in Kūsh-i Arghūn, which he

left for Frūz-kōh on 29 June (Yazdī, *Zafar-nāma*, ed. Calcutta, ii, 59r, ed. Tehran 1336/1957, ii, 417).

As elsewhere in Iran, and especially in Māzandarān, Lārījān was affected in the 8th/9th/14th-15th century by the increasing power of socio-religious movements and of the *sayyids*. In 734/1333-4, Amīr Mas'ūd Sarbadār forced the Ḥ-Khān Tuḡhā Tīmūr, governor of the Kaṣrān-i dākhil, to take refuge in the summer resort of Lār-i Kaṣrān (Annāl, 182-3). In this period, the Mar'ashī *sayyids* (q.v.) were still powerful in Māzandarān. In the years 783-4/1381-2, Sayyid Fakhr al-Dīn, brother of Sayyid Kamāl al-Dīn, took possession of Kal'a-yi Nūr; in two years, he took all the ḥaṣas from Tālikān to Lawāsān, including the ḥaṣa of the Lār and of Lārījān (Lawandar, near Rayna; Kārūd). Lārījān was then in the hands of Kiyā Ḥasan Kiyā Damāndār, Namārustāk, Daylārustāk, Tarīta Rustāk and Kārūd were under the control of Māzandarān (Mar'ashī, TT, 213-14). In 795, Tīmūr exiled Sayyid Kamāl al-Dīn to Transoxania with his brothers and his sons. After his death, Shāhrūkh allowed them to return to Māzandarān (Kh'and-Amīr, *Ḥabīb al-siyar*, ii, 22). In 821/1418, Sayyid Murād b. 'Alī seized power in Māzandarān. He entrusted Namārustāk, Daylārustāk and Tarīta Rustāk to his son Malik Kāwūs and gave him authority to wrest Lārījān from the hands of Kiyā-i Damāndār (Mar'ashī, TT, 268). But other local potentates disputed control of the region with the *sayyids*, notably the Pādusbānds or Rustamdāriyya (who bore successively the titles of Ispahbād, Utundār and Malik) and the Kiyā of Culaw/Caṭāb (see Rābīn, 141 ff.). After the death of the Pādusbānd Malik Gayūmārth (857/1453), Rustamdār was shared between his sons Kāwūs and Iskandar, founders of the Banī Kāwūs (Nūr branch) and of the Banī Iskandar (Kudjūr branch). Under Malik Gayūmārth, Iskandar had been in control of Lārījān, Namārustāk and Kārūd. Conflicts between Kāwūs and Iskandar were numerous and prolonged; Khān Shāh Karī Koyūnlū intervened on a number of occasions, calling upon Amīr Kiyā Sayyid Muḥammad Gūlāi to settle the dispute between the adversaries (Mahdūrī, ii, 75 ff.; Kārtmān, *Kāprān*, 397-8).

In the 10th-16th century, the region remained under the control of the Pādusbānds. Under the Ṣafawid Shāh Tahmāsp I, it was shared between three cousins: Malik Bahman held Lārījān (formerly a dependency of Kudjūr), Malik 'Azīz held Nūr and Malik Sulṭān Muḥammad held Kudjūr. At the beginning of the reign of Shāh 'Abbās, Rustamdār was divided into three *adhiyas*: Malik Bahman holding Lārījān, Malik Dījāngīr b. Malik 'Azīz holding Nūr, and Malik Dījāngīr b. Malik Sulṭān Muḥammad holding Kudjūr (AAA, ii, 399, tr. 696; 334, tr. 713). Malik Bahman was constantly at war with his neighbours, whom he endeavoured to dominate by force or by trickery. These internecine struggles inevitably gave encouragement to Shāh 'Abbās I in his scheme to assert his power over the whole of Māzandarān. In 1000/1599, Malik Bahman welcomed to the summer resort of Lār a Ṣafawid expedition on its way to Khurāsān (Yazdī, fol. 58a). In 1001/1599, he laid siege to the ḥaṣa of Lawāsān, captured and then put to death the brother of Malik Sulṭān Husayn Lawāsānī who was a favourite of Shāh 'Abbās, and led away his wives and children to captivity in Lārījān (AAA, ii, 320-1, tr. 697, 714-15; Yazdī, fol. 63a). In the course of the second campaign in Māzandarān which Farīd Khān undertook on the orders of Shāh 'Abbās I, he succeeded in capturing

Malik Bahman (in 1005/1596-7), who was put to death (by Malik Sulṭān Husayn Lawāsānī to avenge the blood of his brother, according to AAA, ii, 322, tr. 698, by 'Abd al-Kahhār Beg, son of Malik Sulṭān Husayn, according to Yazdī fol. 73b; on Malik Bahman, see also Mir Tīmūr Mar'ashī, 273 ff.). Realising the futility of resistance, Malik Kay Khuzaw, eldest son of Malik Bahman, surrendered. Shāh 'Abbās had commanded Muḥammad Beg Begdīn Shāmlū to take possession of the ḥaṣa the brothers and the children of Malik Bahman, who were subsequently delivered to Malik Husayn Lawāsānī; then he entrusted Lārījān as a *ḥaṣa* to a Kāshbāgh *khān* (AAA, ii, 334-5 tr. 713-14). But the two Dījāngīrs of Rustamdār who had capitulated to Shāh 'Abbās at the summer resort of Lār retained important functions: the Malik of Nūr was appointed governor of Sāwa; the Malik of Kudjūr at first retained his possessions as suzerain and became one of the trusted officers of Shāh 'Abbās. Later, he rebelled as did other *malikān* of Rustamdār; their conspiracies were foiled and all were put to death. Thus was extinguished the power of the Pādusbānds (*ibid.*, 335-4, tr. 715 ff.).

The Kaṣrān-i dākhil and the summer resort (yāy-lūh) of the Lār were favourite haunts of the Ṣafawids. At the time when the Kāshbāgh amirs enthroned Shāh Tahmāsp I (931/1524-5), the waḥī Dīw Sulṭān Rūmlū established his summer quarters at Lār, before marching on Khurāsān which had been invaded by the Uzbeks (AAA, i, 45, tr. 78). On many occasions, Shāh 'Abbās visited the *yāy-lūh*-i Lār (*ibid.*, ii, 399, 452, 854).

Although the history of Māzandarān and of Kaṣrān is relatively well-documented from the time of the Ṣafawids to the present day, points of reference concerning the Lār and Lārījān do not become plentiful until the Kājār period. Tahmāsp II lived for two years in Māzandarān (1137-9/1724-6), in particular in Lārījān where he was joined by Fath 'Alī Khān Kudjūr, who became his *siḥab-sālār* (Mahdūrī, 110 ff.; I'ṣmā' al-Saltāna, *Mir'ās al-buldān-i adiri*, i, 321). The chieftains of Lārījān and the potentates of Māzandarān took the side of the Zands against Muḥammad Ḥasan Khān Kudjūr Koyūnlū. Sadr 'Alī Khān, leader of the dignitaries of Lārījān, prevented him from going to Āmol; the misconduct of Wālī Khān, the envoy of the Kājār chief, led to that revolt of "the people of the mountain and of the plain", under the command of Muḥim Khān Sārawī, Afghānī governor of Māzandarān (Mahdūrī, 123-4). After the death of Karīm Khān Zand (1203-1279), numerous Lārījānis and Māzandarānis allied themselves to Muḥammad Kūllī Khān Kudjūr, estranged brother of Āghā Muḥammad Khān (*ibid.*, 131). After defeating 'Alī Murād Khān Zand and his coalition of Lārījānis, Afghāns and men from the Lur, Āghā Muḥammad Khān controlled the whole of Māzandarān and of Astarābād (end of 1194/1780). But in the conflicts in which he was continually at odds with his brothers, the Lārījānis fought on the side of his enemies (Rīdā Kūllī Khān, Nihdī Kūllī Khān; *ibid.*, 132-3). Captured and then set free by Āghā Muḥammad Khān, Rīdā Kūllī Khān again rebelled. With his Lārījāni *tuḡangīrs* (musketiers), he captured Āghā Muḥammad Khān, who was set free on the intervention of Murādāz Kūllī Khān (*ibid.*, 133, Faṣāḥ, i, 229; according to Spīghr, *Nādirī al-tawārikh*, i, 20-1, it was Dī'ā'ar Kūllī Khān who liberated Āghā Muḥammad Khān). Beaten once more by the army of Astarābād, Rīdā Kūllī Khān rallied to the cause of Sāḍīk Khān Zand. But

in 1296/1782-3, the Lāridjāns remained in the camp of the Zands. They joined forces with Amīr Gūna Khān, sent by 'Alī Murād Khān to Māzandarān, on whom Āghā Muḥammad Khān inflicted a crushing defeat at Sabze Maydān: the cruelty of the Kādjār Khān towards the Lāridjāns has remained proverbial in the region (Fasāḥ, I, 223; Mahdǔrī, 134). But in 1298/1783-4, Shaykh Wāys Khān Zād, son of 'Alī Murād, asserted his control over the whole of Māzandarān, Fīrūs kūh, Lāridjān and Rustamdār (i.e. Nūr u Kudǔr), Fasāḥ, I, 224-5. The following year, Āghā Muḥammad Khān was obliged to recapture Māzandarān before proceeding to take possession of Tehran.

Under Muḥammad Shāh (1834-48), the Khān of Lāridjān enjoyed a quasi-independence. This semi-autonomy was founded upon control of the principal economic thoroughfare between Māzandarān and Tehran "in a fairly subtle equilibrium of forces and of services rendered with the sovereign who ruled not far from there" (de Planhol, 19, with reference to Aucher Eloy, Thompson, d'Arcy Todd). Ask was at that time the local capital of the province. 'Abbās Kulī Khān Lāridǔjān Sarīp (later Sardār) possessed a fine palace there (Bukse 229-30). This prince of Lāridjān set about maintaining order in the region. He made himself a valuable ally of the Kādjār authority and of the 'ulama' by quelling the Bābī insurrection (see also) of Mullā Husayn Dījāb-i Bāb al-Bāb at Shaykh Tabarī/Tābrīz in 1265/1849 (see Mirzā Husayn Ḥamādī, *Ta'riḥ-i Dījādī*, tr. E.G. Browne, London 1893, 52-3, 67 ff., and index, Mahdǔrī, 265 ff.). 'Abbās Kulī Khān at that time occupied the highest rank among the officers of Māzandarān (Mahdǔrī, 176). The following year, he helped to re-establish order in Fārs with his Lāridǔjān horsemen; he entrusted the government of Kūhǔyā and of Bībāhān to his Lāridǔjān officers and acted himself in the role of administrator (Yusuf: Fasāḥ, I, 306-7. The prosperity of Lāridjān is again indicated in 1860 (Brugsch, I, 295) and in 1862 (de Philippi, 256-9). At the start of the journey of Nāṣir al-Dīn Shāh to Māzandarān, in 1283/1866, 'Abbās Kulī Khān presented himself to the *istiḥbāl* with all the officers of Māzandarān (Mahdǔrī, 177). Although the decline of the town of Ask became a constant process, at the time of Nāṣir al-Dīn Shāh's second visit to Māzandarān (1292/1875-6), Lāridjān retained a degree of prosperity and still had its dignitaries (including 'ulama' and sayyids): Mahdǔrī, 181 ff. But in 1875 an Italian general had under his command in Tehran a regiment recruited in Lāridjān (von Coll-Rosenburg, 142, quoted by de Planhol, 19, n. 23).

The last important figure of Lāridjān in the Kādjār period was Mirzā Muḥammad Khān, son of 'Abbās Kulī Khān. Surnamed Amīr-i Mukarram, he was a senior functionary at the court of the Kādjārs. Outside Lāridjān, he exercised jurisdiction over numerous villages of Āmul. During the upheavals of the Constitutional Revolution (1905-11), he was appointed governor of Astārābād and encountered hostility from members of the local *andjuman* (Mahdǔrī, 249). At the time of the dismissal of Muḥammad 'Alī Shāh (1327/1909), he was obliged to confront his kinsman Amīr-i A'ṣam Sangsarl and his coalition of religious activists and of Balḥīyārīs. Amīr-i A'ṣam plundered the treasures of Amīr Mukarram at Ask and carried them off to Tehran. In the course of a second expedition of Amīr-i A'ṣam to Lāridjān, a large number of Balḥīyārīs were killed (including their leader Imām Kulī Khān), *ibid.*, 238 ff. Although succeeding

in retaining some of his influence, Amīr Mukarram Lāridǔjān was exiled to Kirmānshāh by Wu al-Dawla in 1337/1918-9 (*ibid.*, 293). Under the Shāh Pahlavī, his possessions as well as some villages of Kāsrān and Māzandarān became property of the crown (*amlāk-i ḥakūya*), pl. under the jurisdiction of officers who, in their turn, oppressed the villagers (*ibid.*, 326-7).

The predilection of the Kādjārs for the summer resort of the Lār led to the development of especially transversal routes linking the winter and summer palaces of the Tehtan region. Modernisation of arterial routes towards Lār Lāridjān was pursued by the Pahlavīs (Karī Kāsrān, 165 ff.).

3. Other Lārs.

Besides Lār in Fārs (Lāristān) and Lāridjān, toponym Lār and its variants are widely attested in the Iranian lands. Within the present-day front the following are to be noted (after DG):

village	ṣakhrastān	DG
Lār	Sāwa	I, 196
Lāridǔjān	Mahallāt	I, 197
Lār	Zandǔjān	II, 268
Lār-i Muḥammad		
Husayn Khān	Zandǔjān	II, 269
Lār-sar	Fāmīn	II, 268
(Lārmā)	Sārī	III, 266
(Lārlā)	Shāhī	III, 267
Lār	Bībāhān	VI, 325
Lār	Čāh Bahār	VIII, 381
(Lār-hang)	Sabzawār	IX, 374

Lārak is alleged to be the name of a locality, Hazārdǔrī (Rabino, 124).

The gorge (*sang*) of Lāridǔjān on the northern slope of the Elburz in Māzandarān is known for its deposits of iron ore (*Lughat-nāma-i Dihlīwādī*, after Kayl *Dīngardīwā-yi iḥṣāṣī*, 259-60). A Lārān exists in Badakhshān (Minorsky, *Hudūd al-'ulam*, n. 1). A gorge called Lār is mentioned in Kashg. (n.) (Mirzā Muḥammad Haydar Duḥlāt, *Ta'riḥ-i Rāḥīdī*, tr. Elias and Ross, London 1895, repr. 1923, n. 34).

According to Minorsky, Lāridǔjān/Lāridǔjān, Lāridǔjān are variants of Lār (Lāridǔjān, in *ET*; *Hudūd*, 297 ff.). Lāridǔjān and its variants are widely presented in Gilān and elsewhere, (in *Ādharbayd* in Fārs, in Daghīstān, etc.: Minorsky, *ibid.*; also W. Eilers in *Ar O*, XII [1954], n. 174).

Variants of Lār have led to some confusions. T. although Yāskūt (iv, 340-1) has established a distinction between "Lāridǔjān" and "Lāriz", attention has been made to discern in the latter toponym the arabised form of Lāridǔjān (Marquart, 127, n. 1). Lāriz is presented sometimes as a district of Turān (Ibn Khurrādādhbih, 119; Ibn al-Fakīh, 3, sometimes as a village provided with a fortress, two days' distance from Āmul, on which it is dependent (Yāskūt, iv, 341); its prominent cities are known by the *nishā* of al-Lāriz (Yāskūt, Sam. According to Rabino (130), Lāriz is probably Lār, a village in the district of Āmul, better known by the name of Kāfa Lāriz.

(J. CALMARD)

LĀR, LĀRISTĀN, a Persian toponym which, in various forms (Lār, Lār, Lārjān, Lār, Alār, etc.)

denotes an important town of Fārs and its surrounding region (Lār and Lāristān), an island and an islet in the Persian Gulf, and various villages and a region of pastures in southern Persia (Lār and Lāridjān).

1. The town of Lār (lat. 27° 42' N., long. 54° 20' E.) is the chief-lieu of a *shāhristān* (which has become a *fārmārdārī*; see *Lāristān*, below) of the province of Fārs (*istān-i Fārs*). It is situated on one of the roads connecting Shirāz [q.v.] with the Persian Gulf ports and the Sea of 'Omān (Dayū-yi 'Umān), 366 km. from Shirāz, 306 km. from Bandar Lānga [q.v.] and 259 km. from Bandar 'Abbās [q.v.]. Lār is an old station on the caravan route (9th-12th/15th-18th centuries), and lies at a height of 909 m. in a moderately mountainous region (ca. 1,000 to 2,000 m. high). Because of the region's aridity, the town's drinking water comes from wells and from cisterns for collecting rain-water (*barkas*). For irrigation, a network of *kanāts* [q.v.] is used. Unlike other towns in Fārs, and despite earthquakes, Lār has retained relatively well its former appearance, e.g. in its wind-towers (*bād-gir* [q.v. in Suppl.]), its labyrinth of streets, alleys, etc. Only a single new avenue, the *Khiyābān-i Himmāt*, crosses the town from north to south. The most interesting monuments comprise:

(1) The stone-built fortress *Aghdāh* Paykar ("having a dragon's body") which dominates the town from a rocky spur. According to legend, its wall contains an army and treasures belonging to the Kā'im-i Āl-i Muḥammad (see the extracts from the *Tuḥfat al-gharā'ib*, ms. of the B.L., Or. 10993, ed. J. Aubin in *Fāshang-i Irān-nāmā*, vii-3 [1337/1958], 177). The ancient castle of the kingdom of Lār is said to have been destroyed by an earthquake in 1593 (the ruins are mentioned by 17th century European travellers; see Calmard, 150). The region is full of fortified places, in particular, at Garāsh, most of them in ruins (on the *baḥās* of Lār, see the *Muḥḥasār-i Maḥdī*, ed. Aubin, in *ibid.*, 174).

(2) The Bāzār-i Kayyariyya ("imperial market") which forms, with the caravanserais surrounding it, a remarkable architectural ensemble. This is a covered bazaar of the *ḥāḍir* *ṣāḥ* type (i.e. cruciform, with four streets for merchants and artisans, or four sides), with an almost-square plan (117 m. E.-W., 124 m. N.-S.). It is built out of dressed masonry covered with stucco. Its dome (*qāḍ*, *qāḍān*) is 28 m. high, and has a *bād-gir* providing fresh air and ventilation. Inscriptions indicate various dates of building or reconstruction: under Shāh 'Abbās in 1014/1605-6, by Ḥādījī Kanbar 'Alī Beš 'Dhu 'l-Kadr (see *Fāshā'i*, ii, 283), and under Nāṣir al-Dīn Shāh in 1300/1882-3, by Faṭḥ 'Alī Khān, governor of Fārs. This bāzār was allegedly the model of the Bāzār-i Kayyariyya of Isfahān (built 1029/1620) and of the Bāzār-i Wakīl of Shirāz (see *Alīsh Kūl Isfahān*, *Bāzār-i Kayyariyya* y: Lār, in *Ḥamān va Māsanderān*, no. 139 [1353/1974], 70-3; this article makes no mention of the evidence from European travellers of the Sāfawid period, for which see Calmard, 154, and below).

(3) The Masjid-i Djam'a, for which we have no exact, historical description. Ibn Battūta mentions a dervish convent (*ṭabīya*, i.e. *ḥadnākhā*) of the famous Shāykh Abū Dulaf Muḥammad. At the opening of the 17th century, there was situated near the Kayyariyya bāzār "a very great mosque, the only one of the town"; it contained the marble tomb of a saint constructed "in a fine court outside the mosque" (Rebello, 109). A marble *mihrāb* of Gūghrāfi style, allegedly dating from the 8th/14th century

Map 1. The routes from Shiraz to the Gulf via Lār (1635-1706). (After Jacqueline Calmard, *Les routes de Chine au Golfe Persique*.)

and coming from Lār, is preserved in the Fārs Museum at Shirāz. This *mīhrāb* poses an historical problem; was it brought to Persia in 'its present state? And were the inscriptions on it added in Persia? (see R. Howard, *The Lār mīhrāb*, in *Ari and Archaeology Research Papers*, ix [April 1976], 24-5, with a photograph which does not permit the decipherment of the inscriptions).

Lār is divided into 14 quarters (*hasy*). Like most modern Persian towns, it now takes in several suburban areas. It has all the organs of civil administration, a military garrison, schools (a *dabīristān* and four *dabāstāns*) and an airport (to the south-east of the town). Although the climate of Lār is relatively more tolerable than that of the Gulf coasts, various illnesses are rife there, in particular trachoma and filariasis, both for long endemic in the region. The demography of the town has followed the evolving of the natural conditions and the historical and

economic vicissitudes of the region (see below).

a. *Lāristān. Geographical sketch.* As a province of southern Persia on the Shirāz-Bandar 'Abbās axis, Lāristān is generally reckoned as part of the *garmshad* or warm regions of Fārs, with which it was integrated at the opening of the 11th/17th century. Since its influence spread over the neighbouring regions (see Map 2), its natural borders have fluctuated. In general, they may be fixed as follows. In the north-east and north, the old regions of Sabā'a (centred on Furg) and of the *Shabānkāra* (centred on Idj, now *Istāhānāt*; Lāristān takes in Dīūyūm, to the south of the Dārāb). In the east, along a line passing half-way between Dīahūm and Dīūyūm and connecting with the Gulf littoral in the region of Gawband (embracing the lands of Bīd Shahr, Khundj, 'Alīmardūsh and Gailādār). In the south, the Gulf littoral (ports and islands of the Gulf of 'Umān, embracing Laḡhātān, from Cape

son, in *Camb. hist. of Iran*, I, 179 with map). These marginal folds are closed on the south by the Kūh-i Khāmīr (opposite the island of Kighm [q.v.]), which is made up of calcareous rocks described as "foetid or putrid" (hippuritic limestone) belonging to the structure bearing the special name of the "Khāmīr series" (see Pilgrim [1924], 15, 60). The "Hormuz series", conglomerates of rock found on the peripheries of most of these salt domes, stretch as far east as Tārum and Kirmān and possibly further in to Lāristān (Pilgrim classifies them as Jurassic, *ibid.*, 16, and Harrison as Cambrian, *ibid.*, 115).

The topography of the region is characterised by a relief which is lower than elsewhere in Fārs (especially along the axes Shīrāz-Bushire and Shīrāz-Bandar Tāhīr) or further to the east in Makrān. Along the Dījahrum-Lār road, the highest point is 2,100 m., and only along the edges of Lāristān is the 3,000 m. mark passed (Kūh-i Furgūn, 3,280 m.). Elsewhere, heights are more usually between 1,000 and 2,000 m. Lāristān suffers from frequent earthquakes, some of which have been described or noted by chroniclers and travellers; six have been counted between 1953 and 1960. In 1960, one of them caused much destruction and numerous casualties at Lār and Gīrāgh (see photographs in the *National Geographic Magazine* [Jan. 1961], 68-9). The hydrography of Lāristān is very clearly marked by sand. Except along the margins, snow does not remain long in winter, and the rainfall is feeble (at the most, 100-300 mm. per annum). The water intended for consumption or for irrigation is frequently brackish (see below). The rivers with a regular flow are very erratic; rainstorms gouge out ravines across crossing routes, and floods are often the cause of catastrophes. The most important river—known, with local variants, as the Rūd-i Qhānāyī Shīr Mūhrān runs from west to east, from the *shīstān* of Farāmāzān to Bandar Khāmīr. It is totally useless for agriculture, its flow is very feeble, and it can be faded at all seasons (Rāzmārd, *Farhang-i dughrāfiy-i Irān*, vii, 208).

The region has a sub-tropical climate, hot and humid along the coasts, arid and torrid in the interior (see A. H. Adle, *Régions climatiques et végétation en Iran*, Tehran 1960, Persian text 40-1, Fr. text 8-9). Although certain traces of a continental climate may be felt at Lār (untouched by the monsoons), the variations of daytime and nocturnal temperature are small, and towards the Gulf, the temperatures become torrid (Calmard, 94 ff.). Winter cold is only met with along the Lār-Dījahrum route. In Lār, the houses are cooled by *bād-girs* (*ibid.*, 95), and beyond Kawrīstān, a drying wind called *bād-i samūm* ("poisonous") blows (*ibid.*, 97). There is a great contrast between the plains of the littoral affected by the monsoons (with a hot and humid climate) and the upland regions (mountains, elevated plains and desolate plateaux) of the interior which have a dry climate, with mild winters and very hot summers. The palm-groves of the interior offer, however, shelter for the coastal peoples at the period of greatest heat.

Socio-religious aspects. The story of the population of Lāristān is an extremely complex one. Heterogeneous groups have been subsequently added to an ancient Iranian stratum of agriculturists and pastoralists. Elements described as Mongol were still in course of sedentarisation in the Kurbāt district at the end of the 7th/13th century (Aubin, *Lār médiévale*, n. 24). The presence of Turkmens, who intervened in the affairs of Lār at the beginning

of the 14th century, presents an historical problem (*ibid.*, 426, and below). From the 10th/16th century onwards, travellers mention the presence of numerous nomads. Kāshkādī groups spent the winter in the Khundī district (*Le Fars*, 17, 21). Some Bahārī had become sedentarised and lived in tents on the plain of Yazd-i Khāst (*ibid.*, 27). Some Bāshīr spent the winter in the districts of Sarwīstān and Kurbāt, and some Naīfar occasionally passed the winter in Lāristān (*ibid.*, 31-2). Some nomadic or semi-nomadic families (*šīra*) of Turkish origin have been recorded at Durz, Sāyibān, Karmūstā(dj), Šabrā-yī Bāgh, Aghkānān, Bīd Šahr and Dījūm, and some Arabs and Bāšīr at Dījūm, Harūn, Kārīyān and Bīd Šahr (see the names in Rāzmārd, *Farhang*, vii, 209; Ikhtidār, Lār, 15). There are sedentary Arab elements along the coasts, at Bandar 'Abbās, at Bandar Līngā (Kawāšīm [q.v.] known locally as Dīhawāsim) and in the interior (notably the Dījahngīryyā/Dūghīngīr, cf. the *ghayyā* of Bastak). The Banyāns, Hindu merchants also called Mūlānīs (numerous at Bandar 'Abbās and at Bandar Kīng in the Šāfawīd period), used to play an outstanding commercial role, and there are still residual groups of Hindus in Lāristān. There used to exist an important Jewish community at Lār, Gīlār, Dījahrum and Hormuz, and Lār was a centre of Hebrew learning. At the beginning of the 13th/17th century, a Jew from Lār became a convert to Islam, assumed the name of Abū 'I-Hasan Lārī and secured from the Shī'ī 'ulamā' the putting-into-force of discriminatory measures against the Jews. These measures were incorporated in a code to be applied to all the Jews of Persia, who had to wear special, distinctive clothing (a hat or piece of coloured cloth), and they underwent various persecutions under 'Abbās I and his successors. In the 19th century, there were massacres, forcible conversions, expulsions, etc., and the Jews of Lār, Dījahrum, Fāzā, etc. emigrated to Šīrāz (the main items of bibliography about the Jews of Lār are to be found in L. Loeb, *The Jews of Southwest Iran, a study of cultural persistence*, diss. Columbia University 1970, 31 ff., with translations of the "restrictive codes", Appx. I, and chronological lists of injunctory measures, Appx. II; on Abū 'I-Hasan Lārī, see also Habīb Līwī (Lewy), *Tārīkh-i Yāndān-i Irān*, Tehran 1339/1960, III, 224 ff.).

Islam in Lāristān was notable for the preponderant influence of the Sunnī *farīḡas* or dervish orders: the Ishākiyya/Murghidīyya, the Dānyāliyya (at Khundī and Lār), the Bānī 'Abbāsī (at Bastak), etc. The Twelve Shī'īs imposed by the Šāfawīds only succeeded in implanting itself in Lāristān to a partial extent, and numerous troubles broke out in the post-Šāfawīd period, in the 18th and 19th centuries (see Aubin, *Les sunnites du Lāristān*, and below). The dichotomy thus created remains very apparent today, since the greater part of the urban and village communities are in majority Shāfi'ī Sunnīs. The sedentary Arabs of southern Lāristān are Sunnīs. Amongst the tribal groups, it appears that today, only the Turkish tribes are both nomadic and Shī'ī (Aubin, *op. cit.*, 157 n. 8). Non-Islamic practices have been noted among the peoples of African origin along the coasts and in the islands (see below, on Lārak).

The population structure has been heavily affected by natural factors: earthquakes, floods, droughts, polluted water sources, locust-plagues, etc. These last have been the cause of deaths and illnesses: ophthalmia (from the sand storms), malaria, dysentery,

and above all the filiarous peculiar to Lārīstān, caused by a parasite present in particular in the stagnant water of cisterns, the guinea worm or *Fiaria medinensis*, *payam/payāk* in Persian and *pus* in Lārīstān (see *Iktidārī*, *Farhang*, 67). Accidents of history have also been the cause of depopulation (destructions, sackings, massacres, exoduses, deportations, etc.). Despite the relative economic florescence of the region during the 14th-18th centuries, the Lāris have continued to emigrate, above all towards Muslim India, where they have served in the army and in the administration.

Taking into account the lack of preciseness in the evidence, the demography of the region as a whole is difficult to delineate. The only data which are even a little sure concern the town of Lār itself, and those are given below (unless there is an indication to the contrary, these items of information pertain to the town or the urban agglomeration of Lār; one should reckon 6 persons per family or household): 4,000 heads of families in 1523 (Tenreiro); 4,000 households in 1638 (Mandelstam); 30,000 inhabitants at the beginning of the 18th century (English estimate); 15,000 inhabitants in 1808 (a figure given to Dupré, who found it exaggerated); 1,200 households in 1881 (information given to Stack, who estimated the population at 6,000 inhabitants); 2,500 families (1913); 11,656 inhabitants (ca. 1950); 14,160 inhabitants (1956); 27,000 inhabitants (1960 estimate). In 1966, the *shahrīstān* comprised 137,303 inhabitants and the town of Lār 37,198. The preliminary results of the 1976 census (the only information so far published) deal only with the *shahrīstān* of Lār, and give a population of 183,369, 52,465 being urban and 130,904 rural dwellers.

Language and literature. In addition to Persian, Arabic (spoken on the coasts) and Turkish, Lārīstān has its own particular dialect, which has been used by popular poets of the region; their verses have been partly gathered together in written form and studied (see the references in Murovsky's *EP* article). Some proverbs in Lārīstān have been published (*Iktidārī*, in *FIZ*, xi/2-3 [1333/1954], 233-53), as well as vocabularies, K. Kamloka and M. Yamada, *Laristan studies*, 1. *Lari basic vocabulary*, Tokyo 1979 (not seen). Some works in Judeo-Persian have been written at Lār, which must have been the centre for a school of scribes, translators, copyists, etc. (see Loeb, *op. cit.*, 49 ff.). The fate of the Jews of Lār has been put into Persian verses (mixed with dialectal terms) by the Jewish poets (on whom see Habib Livor, *op. cit.*, 270-1), notably by Bābā'ī Luṭī Kāshānī and Bābā'ī Farhād Kāshānī (cited at length by Livor, 224 ff.).

Numerous literateurs originally from Lārīstān have written in Persian in all the literary genres: poetry, grammar, philosophy, mysticism, *fiqh*, historiography, etc. [see the lists cited by Rāst, *Haft shim*, ms. India Off. Libr., cat. Ethé, 1, 397, fol. 111a-b; Fasā'ī, in 264 ff.; *Iktidārī*, *LK*, 135-403. To these one should add Nimdihl, a writer of the 9th/15th century, on whom see Aubin, in *REI* (1967), 61-81; Karamatī [idem, *Les savantes de Laristan*, 133]; Shēykh Ahmad Faḥrī (ibid., 170 n. 1), etc.).

Economic aspects. Though generally considered as one of the poorest regions of Persia, Lārīstān is not without natural resources. Sulphur is found in many places, and is fairly easily exploitable: in the coastal regions, at Bustān (to the west of Bandar Lūng) and at Khamīr (to the east of Bandar Lūng); in the interior, at Karmāsta(dj), to the south-east

of Lār, etc. In the 19th century, the sulphur mines of Lārīstān were quite productive (see Pilgrim [1908], 155 ff., [1921], 343 ff.). Gypsum (*gac*) is frequent everywhere, and is easily exploitable along the littoral (Pilgrim [1908], 157-8). The iron ore and the salt of the "Hurmuz series" are more difficult to exploit. There is also some copper, unexploited, at "Karmoussah" = Karmāsta(dj), see Dupré, 1, 431. Salt-petre, taken from nitrous lands and abundant in the region of Lār, yields material for gunpowder (at Gīrīsh, to the east of Lār; Dupré, *loc. cit.*). On the minerals of Lārīstān, see also Fasā'ī, ii, 338-9. After having been famous for its bows (see below), Lār was also famed for its firearms (Calmeid, 157). Various manufactures existed at Evaz (ca. 30 km. north-east of Lār; see Dupré, *loc. cit.*; Karamatī, 48-9).

The natural vegetation covering is fairly meagre. However, Lārīstān is relatively well-wooded. There are to be found varieties of tamarisk, acacias, conifers (Adle, *op. cit.*, 10), and the jujube tree (*jujūb*) is also to be found. The gas wood, which is very hard and solid, is used for cabinet-making and for timber framing. Various spiny shrubs, such as the *ahār*, are enjoyed by camels. The region falls completely within the date-palm zone, which is cultivated in the oases of the interior. The date harvest occupies a seasonal work-force, and as well as dates, cotton, tobacco (of good quality) and mustard are grown and exported (*Le Fars*, 163). In some places, opium poppies, sesame, etc. are cultivated. On the stony plains between Lār and Bandar 'Abbās, *asafetida*, the exudation from the roots of certain varieties of *Ferula* *fetida*, used in the pharmacopeia as far as in Europe, is gathered (Calmeid, 115-16). Amongst products of an animal origin, the "bezoar" has been noted (see below). One should also note the raising of and trafficking in camels (Dupré, 1, 441; *Le Fars*, 163); a similar trade in horses, exported to India (see below); and one in sheep, whose skins were the subject of an extensive trade throughout all of Lārīstān (Dupré, 1, 453).

The basic problem remains that of water-supply. The water from wells and watercourses is most often brackish. Cisterns for rain water (*bīrhasht*, in various patterns (hexagonal, circular, etc.), are to be found in all the inhabited spots and at road stages. Except in certain regions of the north, in particular at those of Dījūm and Khundī, where irrigation by *qanāts*, wells (*gāvāns*) and springs is found, dry farming is generally done (*daymī*, see Rasmāzī, *Farhang*, vii, 206). In the date-palm oases of the interior, these are often consumed on the spot. In addition to dates, the food supply comes, according to local possibilities, from cereals, products of market-gardening, citrus fruits, specimens of the goerd family, milk products (cows, goats, sheep), poultry, etc. Travellers have noticed the abundance of game (ibexes, mouflons, partridges, quails) and the excellent truffles of Lār. On occasion, grasshoppers are also appreciated (Calmeid, 120-1). Along the coasts and elsewhere in Lārīstān, fish is fed to animals, including to camels, asses and even to bovines and sheep (*ibid.*, 124). There is a condiment, peculiar to the region, made from a fish base and spices (*madkhāba* or *māyāba*, called *māris* in Lārīstān; see *Iktidārī*, *Farhang*, 203-4, and Fasā'ī, ii, 283, where its making is described).

As well as the making of arms, local products include cotton cloths and carpets (*ghūnas*, *hājis*). Except in period of disturbance, the agro-pastoral sedentary and the nomadic economies complement

each other (i.e. exchange of agricultural products and manufactured goods for the products of stock-rearing, carpets, etc.).

The economy of Lārīstān was relatively prosperous in the 9th/15th to the 12th/18th centuries, but suffered in the post-Safawid disturbances and the interruption and ending of international trade (see below). The profession of caravaner (coupled with the rearing of camels, mules, asses, etc.) used to occupy an important proportion of both the town and rural population. From this economic activity in the past, the people of Lārīstān have retained an interest in the commercial life; one meets, above all along the Gulf shores, numerous peddlers (*yāwārān*). Also, the profession of arms (cf. the famous *tuḡāgān*) has continued to attract a good number of Lārīs.

Historical evolution. Lārīstān or the land of Lār does not emerge clearly in Persian history till the 7th-8th/13th-14th centuries. Until then—apart from a few sparse items of information about the neighbouring regions or about certain small places (Yāzūt speaks of "Djuwaym Abi Ahmad", i.e. Djuwaym)—its past belongs almost exclusively to the little-known history of the kingdom of Lār. There are doubts concerning the localisation of this last according to mythical or legendary history. Minorsky (*ET* art. *Lār*) proposed to equate it with the land of the dragon Hāltān Boht for the *Ḥafṣid* of Firdaws's *Shāh-nāma* which Ardāshīr Pōpākān killed. This dragon is said to have lived in the village of Alār in the *rūstāh* of Kōjārān, one of the *rūstāh*s bordering on the Gulf of the province of Ardāshīr Khurra (al-Tabarī, I, 820). The variants Gūlār (*Nārnāmah*, tr. Nöldeke, 30), Kōfārān (*ibid.*) or Kūjārān (*Shāh-nāma*, ed. Mohl, v, 308) do not help in identifying it. Alār is the name of an island (see below); Kūjār, in the *bulāq* of Gallaḍār (Fasāʾ, *Fāhris*), borders on Lārīstān (of which it forms part, in the large sense). At the present day, one finds several villages in Lārīstān whose names might well be variants of Gūlār (Ikhtidār, *LK*, 46 n. 2; Gūlār belongs to the *baḡhā* of Djuwaym, Razmārā, *Farhang*, vii, 202). But there is also a Kūlār in the *shahrīstān* of Bō-shāhr (*ibid.*, 187), a Kūlār in the *bulāq* of Čāh Bahār (in the old *waḡā* of Kirmān wa Makrān), populated by Sumd Balūča (pop. 220 in ca. 1950, see Razmārā, *Farhang*, viii, 383).

Thus the localisation of the land of the dragon Hāltān within the imprecise borders of Ardāshīr Khurra (also called Irānistān) remains problematical. Moreover, a legend which could have some basis of genuine places the house of Hāltān in the region of Bam (Aubin, *Lar médiévale*, n. 3). The place-name Marāk-i Lārān appears in the *Bundahish* (D. Monchizadeh, *Topographisch-historische Studien zum iranischen Nationalepos*, Wiesbaden 1975, 141). A village called Lār exists in the *shahrīstān* of Čāh Bahār (in the old *waḡā* of Kirmān wa Makrān), populated by Sumd Balūča (pop. 220 in ca. 1950, see Razmārā, *Farhang*, viii, 383).

According to a *bayt* attributed to Firdaws (lacking in the known editions of the *Shāh-nāma*, but cited in the *Burhān-i kāsh*, whence Vullers, *Lexicon*, s.v. *Lār*; Fasāʾ, II, 283, etc.), the town or region of "Lār" was allegedly "given" to Gurgān Mīlād by the Kaykūd Kay-Khusraw when he renounced the world and distributed the Persian lands to his dignitaries. The passage from *d* to *r* is found in Armenian, in Tātī (Minorsky, *ET* art. *Lār*; J. Darmesteter, *Études iranienne*, I, 79) and in various Iranian dialects (see G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 136). Previously, Lār seems to have had another name (*AAA*, tr. Savory, II, 807).

According to a legend as generally current in southern Persia as in Lārīstān, the people of Lār in Fārs are said to have come from Lār at Damāwād (see Lār and Lārīdjan), whose cold climate in winter they were unable to endure (Fasāʾ, II, 281 ff.). Although one can hardly use this legend as historical material, there are toponymical resemblances between the two places: Kūh-i Albuz in both places (to the south-east of Dījārum in Lārīstān); a defile (*gardan*) Kūltā-i Bastak of Lār at Damāwād (Lārīdjan) and the settlement of Bastak in Lārīstān (Ikhtidār, *LK*, 47, n. 4; Muwabbid, *Bastak*, 6).

According to another tradition, the foundation of Lār came from one Balagh (Valakhsh), son of Firuz (Pārōs), see Razmārā, *Farhang*, vii, 209, and Dībkhudā, *LN*, s.v. *Lār*.

Archaeological information gives us only very imprecise material on the past of Lārīstān. Investigations have revealed numerous "Sāsānid" traces, above all in the western border district. On Gallaḍār (formerly Khundjūtāl, see Sir Aurel Stein, *Archaeological reconstructions in North-Western India and South-Eastern Iran*, London 1937, 213-25, on the *shahr*-*īk* of Kārīyān and of Mahālkā, near Pishwar, see L. Vanden Berghe, in *Iranica Antiqua*, I (1961), drawing, 196, and maps; Aubin, *Lar médiévale*, n. 3; *idem*, *Surveys de Shīlā*; and for an archaeological survey in southern Lārīstān, see Stein, in *GJ*, lxxxiii (1934), 130 ff.

The list of princes of Lār, from Gurgān Mīlād up to the 16th century, has been partially reconstructed by J. Aubin from the Safawid sources (above all, from Ghaffārī, *Dīkhān-nāma*, ms. B.L. Or. 141, Add. 7659/1; Rāzi, *Ḥaṭṭ nām*, ms. I.O.L. cat. Ethé, I, 397) and ms. B.N. Paris, Suppl. persan, 357; Hasan Beg, *Aḥsan al-andrāk*, ms. B.L. Or. 2649; Mūnedsjīn-Baḡh's *Shāhīy al-ashbār* (cf. Ikhtidār, *LK*, 69-71) add nothing to this list, which replaces that of Minorsky in *ET* art., based on a single ms. of the *Dīkhān-nāma*. Information on this princely family only becomes reliable after 994/1596. Between the 7th/13th and 10th/16th centuries fifteen *amīrs* followed each other, son succeeding father. But the list has some vague points; Ibn Baṭṭūṭa's evidence (according to him, the sultan of Lār was a Turkmen and not a descendant of Mīlād) and that of other sources does not tally. Also, the chronology becomes uncertain for the last five reigns, in the 15/16th century, *Lar médiévale*, 496 ff.).

As Aubin has pointed out, the problem of the "rise" of Lār in the 13th and 14th centuries can only be approached indirectly, as a reflex of the establishment of a new route Hurmuz-Lār-Shīrāz (op. cit., 491). This particular problem is connected with the more general one of the evolution of the maritime outlets of Fārs and Kirmān. The ruin of Shīrāz (5th/11th century) and its problematical survival linked to the development of the island of Kays/Kūsh (see KAYS) (6th-8th/12th-14th centuries) caused an eastwards displacement of the ports and routes of the Persian Gulf. New towns grew up in the *garmsīr* of Fārs: first of all Fāz/FEZ, a place to which the Shīrāz, menaced by the Gulf pirates and the tribes of the interior, could fall back, and then Khundj, situated at the crossroads of the *garmsīr* routes, on the Kays-Shīrāz axis and the transversal axis towards Lār and Hurmuz. In the 7th-8th/13th-14th centuries, a complicated play of interests brought the various socio-economic small groups and local powers into conflict. Around 700/1300, the *dervīsh* of Khundj secured from the Tīm merchants the cession of the *īla* of Dījārān to the princes of Hurmuz,

and these last acknowledged them till the time of the Portuguese domination (Aubin, *Proces d'Ormuz*, 94-5; *Surveys de Shīlāu*, 26). Around 700/1300 also Kays was occupied by the Ormuzis, and henceforth, the international transit trade via Hormuz and the Kays-Shīrāz route was abandoned.

Although Lār is described in the 8th/14th century as a prosperous town (by Ibn Baṭṭūṭa, see below), it does not seem to have played any important political role nor to have excited the envy of its neighbours in mediaeval Persia. The sole exception to this state of affairs seems to have been the annexation in the 7th/13th century of Lār by the Shāhānkāra, its northern neighbours who controlled eastern Fārs and who had spread into Kirmān. According to Aubin (*Lār médiévale*, 499-500), this involved an episode in the fight between the Shāhānkāra and Saighurid Fārs. From the beginning of his reign, the Saighurid Abū Bakr b. Sa'īd (628/1231-60) began a policy of dominating the Gulf. In this kind of race to the sea, he clashed with other local powers: Muzaffar al-Dīn Shāhānkāra¹ and, over control of the island of Kays, the prince of Hormuz. It was probably in 628/1230-1 that Muzaffar al-Dīn seized Lār; the territories annexed extended to the Gulf shores (not precisely delimited in the west, but to Kāwristān, the frontier with the kingdom of Hormuz, in the east, see Aubin, *op. cit.*, 500). Lār's orientation towards the Gulf and its prosperity in the 8th/14th century are confirmed by various sources. Mustawfī—who does not use the term Lāristān but that of *valāyat-i āsār-i daryā* "region along the sea-coast"—says that most of its inhabitants are merchants who travel by sea and land, and corn, dates and cotton are grown there (Nuzhā, 139, tr. 138). Ibn Baṭṭūṭa's words, who visited Lāristān (probably in 748/1347), pose certain problems, especially in regard to dating (see J. Hrbek, in *AsO*, xxx [1962], 446 ff., and Aubin's remarks, *Surveys de Shīlāu*, 23, n. 20, 29, n. 68, 31, n. 92). He describes Lār to us as "a large town with springs, considerable streams and gardens". It had large, well-built bazaars. He lodged in a *dhawā* of Shāfi'ī dervishes, who welcomed travellers. Not only the dervishes but also the brigands of Lāristān were organised for trading (Aubin, *Lār médiévale*, 500; Ibn Baṭṭūṭa, II, 240-1, tr. Gibb, II, 405-6).

We know from other sources, complementing Ibn Baṭṭūṭa's information, that the hereditary *shaykh* of the *dhawā* of Lār came originally from Khundj (Aubin, *Surveys de Shīlāu*, 32, n. 98). The religious situation at Khundj in the 8th-9th/14th-15th centuries is unclear. In the 7th/13th century, this little town became the seat of a *shāhnaḥāsh* [g.w.] whose *murshid* was Shaykh Dāniyāl, affiliated to the Ishākiyya or Murghshāhiya order. In addition to the rich *sāniya* of Shaykh Abū Dulāf Muḥammad (Sh. Dāniyāl's successor), Ibn Baṭṭūṭa saw at Khundj another Shāfi'ī *sāniya* of an imprecise nature. It seems that in the 9th/15th century the *shāhnaḥāsh* of Sh. Dāniyāl fell into decline, whilst that of Abū Naḥḥāl (that visited by Ibn Baṭṭūṭa? In 1347? was more flourishing (Aubin, *op. cit.*, 30 ff.). According to Mawāhibid, *Bastak*, 29-30, the one visited by Ibn Baṭṭūṭa was that of the *shaykh* of the Banī 'Abbās, Khundjī Shaykh 'Abd al-Salam Khundjī, known under the *laqab* of Kutb al-Awliyā² (d. aged 83 in 746/1345-6).

According to various sources, two Indian princes are said to have invited the poet Hāfiz Shīrāzī [g.w.] to their court. At the invitation of the Deccani sultan Maḥmūd Shāh of the Bahmanids, Hāfiz proceeded to Hormuz via Lār with the intention of setting sail for India by ship; but since a storm

blew up at the time of his departure, he is said to have abandoned the plan (see Browne, *LHP*, III, 285-7). Some coins struck in Lār (a gold piece of the Muṣaffarid Shāh Shuḥrāb³, and some Tīmūrid (and Chaghatayid?) coins) testify to the interest of certain princes in the town during the 8th/9th/14th-15th centuries (references given by Minorsky in his *EP* art.).

In the 8th/14th century, the *garmisā* of Fārs were divided into two antagonistic politico-administrative groupings, the *bilād Lār* and the *bilād Khundj-i-Fal* (cf. Ibn Baṭṭūṭa: "de structure interne différente et de visées extérieures opposées" (Aubin, *Surveys de Shīlāu*, 23). Khundj-i-Fal had amicable relations with the principality of Hormuz, whilst the principality of Lār employed an aggressive policy towards this last and even tried to annex it (see below). Although Khundj-i-Fal possessed—in the same manner as Shīrāz or Hormuz—a class of numerous, experienced notables, one only finds there, at a late date, a powerful family (that of the *ra'īs* Fāfīs) who, well after the decline of Khundj-i-Fal, became viziers at Hormuz at the end of the 9th/15th century and remained there till the end of the period of Portuguese domination (Aubin, *op. cit.*, 36). As for the principality of Lār, despite its feeble resources, its lack of an intellectual elite and the emigration of its traders and its soldiers to India, it had a family of *maliks* who assured to the town a continuity of princely power during the 8th-9th/14th-15th centuries. Gradually, in the course of the second half of this latter century, a class of educated notables took shape there (*ibid.*, 32).

The causes of the decline and then of the defection of the Khundj-i-Fal route remain little known (political upheavals, the loss of influence by a certain group or family and natural catastrophes have been suggested, *ibid.*, 35). The ruin of Kārdā (on the Khundj-Shīrāz axis, earthquakes and floods ca. 1440), the development of Dīshūm as an intellectual and religious centre in the second half of the 9th/15th century and the founding nearby of a community of dervishes (by Kutb al-Dīn Muḥammad b. Nuḥyī al-Dīn Kuṣhkanārī, called Kutb-i Muḥyī, at Khwānshād or Kuṭshād, at the crossroads of the routes from Shīrāz, Basā and Lār, favoured the use of the Hormuz-Lār-Dīshūm-Shīrāz axis (see Map 2). At the end of the 8th/14th century, Dīshūm was a stage on the Shīrāz-Lār road (Aubin, *Lār médiévale*, 301). Whilst the Hormuz-Shīrāz route via Tārum, Farg and Basā continued to be used, that via Dīshūm was regularly employed from the second half of the 9th/15th century onwards (Aubin, *ibid.*, and *Surveys de Shīlāu*, 33-4).

In the *garmisā*, only the family of the *ra'īs* Fāfīs—who held Shīlāw and retained some influence in the Gulf—succeeded in maintaining Fāf as a petty urban centre, despite the growing pressure of the princes of Lār. The latter in fact drew benefit from the new position of their town-staging post on the Hormuz-Shīrāz axis by extending their power towards the coast and the intervening high valleys (*ibid.*, 35-6). The inevitable conflict between Lār and Hormuz—which had become economically complementary through their dependence on the Indian trade—broke out in 904/1508-9, when the prince of Lār tried to exploit an outbreak of discontent amongst the Bedouins of Dīshūm. The naval expedition against the island of Dīshūm led by Abū Bakr Lārī was checked by Khundjī 'Aḥṣā, a *ghāzīm* of Saighur Shāh (Aubin, in *Mare*, I, 102-3). The intrusion of the Lārīs in the affairs of Hormuz revived

alter the death of Salghur Shāh (1505) with a further attack on Dīārūn. But the new lord of Hurmuz, Kh̲wādja 'Alī, put an end to this, at the same time removing the young ruler issued from a union between Salghur Shāh and a princess of Lār (*ibid.*, 104-5). Nevertheless, the princes of Lār continued to expand towards the shores. Their vassals, the *awlad* of Hūd, brought pressure to bear on the Laghtān region (the land behind the island of Kijhān at Nāband); one of them seized the district of Laghtān in 1546 (Aubin, in *Mars*, II, 142-3; on Hūd, see *ibid.*, n. 367 and *Lar mūdāla*, n. 22). Yet despite the decline of Fāl, Lārīs and Fālīs followed parallel paths in their relations with Hurmuz even after the advent of the Safawids.

At the end of the 9th/15th century, commercial traffic was enough to stimulate Lār's prosperity. The prince levied no taxes on goods in transit. At the beginning of the next century, at the time when the Portuguese appeared, Lārī merchants and mercenary soldiers took an active part in affairs of the Deccan. The famous silver coin of Lār, the *lārī* or *laris* (g.w.), circulated through all the markets of the Indian Ocean shores (Aubin, in *Mars*, II, 142; Steensgaard, 420-1). Like Lārī warriors, the bows of Lār were celebrated, and were exported to 'Irāk and India (Aubin, *op. cit.*, 177-8). After Fāl (*Dār al-Safā* 'abode of purity') and its twin Khundj (*Dār al-Awliyā* 'abode of saints'), Lār could boast the *lakh* of *Dār al-Mūdāla* 'abode of equity'.

In 914/1508 envoys from Hurmuz and Lār came to give allegiance to Shāh Ismā'īl at Shīrāz (A.A.A., tr. Savory, I, 57-8). The prince governors of Lār became tributary to the Safawids with the title of *Awir-i Dīwān* (*ibid.*, II, 806). Around the turn of the 15th-16th century, pieces of information on Lār become more numerous. The travellers who passed through it in the 15th century did not give any details on their itinerary (Atanasiy Nikitin, *Khogenye za tri morya*, Moscow 1938, 89; Girolamo S. Stefano, see Aubin, *Servie de Shāhān*, 33, nn. 106-7). Gā Simões, secretary of the Portuguese embassy to Shāh Ismā'īl who, in 1515, returned from Shīrāz to Hurmuz via Lār, tells us nothing further. Other Portuguese, however, were more informative. The embassy of 1533-4 passed through Lār. Though sometimes difficult to trace, the itinerary of this embassy is described in detail by António Tenreiro (*Itinerário*, Lisbon 1977, 16 ff.), for a critical study of this text and of the parallel account of Fernão Lopes de Castanheda, see Aubin, in *Arquivos*, II (1972), 230-32, with 245-6 on Lār itself. Tenreiro gives us some important information about Lārīstān, especially on Kewristān/Kawuristān, the frontier region between Lār and Hurmuz (cf. Aubin, in *Mars*, II, 104), on the caravanserais and cisterns constructed along the road by pious donors, on the town of Lār (its protective wall built from stone and with plaster decorated with tiled squares; the Lārī clothing; the Lārī bows; the agricultural products (dates and barley); the local Jews; the money there (the *laris*); the multi-teners-caravaneers; etc.), on the date-palm groves, the rearing of mares and the export of horses to India via Hurmuz, and on the mountain goats which produced the *basar* (bezoar, i.e. *basak* [g.w.], this famous antidote to poisons of which there existed spurious imitations, was produced in Persia in Khurāsān and in the land of the Shabānkāra, see C. Elgood, *A medical history of Persia*, Cambridge 1951, 369 ff.). Tenreiro also describes the road from Khundj to Kīrūn at a time when it had become a secondary track (Aubin, *Servie de Shāhān*, 33-4).

In 1540, under Shāh Tahmāsp I, the Venetian Michela Membré travelled from Shīrāz to Hurmuz via Lār, giving a description of the latter (*Relazione di Persia* (1544), IUDN Naples 1960, 53-4). According to him, the town was surrounded in two halves by stone walls. It had a higher part, that with the citadel, and a lower part, and "outside the town there are other houses which are not walled". Membré and his retinue lodged in a caravanserai outside the town walls. He noted the numerous cisterns for collecting rain water built by pious Lārīs both in the town and at two-league intervals along the Lār-Hurmuz route. At Lār, there were even some fountains for the prostitutes. The gold and silver smiths were "gentles from India", "all gathered together in one street". At Lār, both Turkish and Persian were spoken. The king, a vassal of the "Sofī", was called "Soprato" (?), and wore the "cap" of the Sofī (the external sign of adhesion to Twelver Shī'ism, according to the Kātibagh). The shops, piled high with merchandise, hardly needed protection at night against thieves "because the said king of Lār exercises great justice".

Soon after Membré's passage through Lār, the prince [Anūshīrwan] b. Abī Sa'īd b. 'Alī al-Mulk, called Shāh 'Adil, was assassinated (29 Safar 948/14 June 1541; see Aubin, *Lar mūdāla*, 495). Under his successor Ibrāhīm Khān, the relations of Lār with the Safawid authority deteriorated. He omitted to go and give allegiance to Shāh 'Abbās I when he went to Shīrāz, ill-treated the Shāh's tribute-collectors and levied extraordinary taxes on merchants and travellers. The Shāh's anger was aroused, and he sent two punitive expeditions against Lār in 1010-11/1601-2 under the command of Allāh-Verdī Khān, the *beglar-begī* of Fārs. In the course of the second one, the latter seized Lār, carried off Ibrāhīm Khān and his entourage back to Shīrāz and confiscated their possessions. Ibrāhīm Khān and the "treasures of Lār", including the famous crown of Key Khuraw, were then taken off by Allāh-Verdī Khān to Shāh 'Abbās's court, then engaged on a campaign in Bādgīs near Harāt. In the course of the expedition against Bādgīs, Ibrāhīm Khān died of an epidemic which affected a large number of the troops. The administration of Lār was entrusted to Kāfī Abū 'I-Kāsim Lārī, a devoted Shī'ī (A.A.A., tr. Savory, 807-8; cf. Yazdī, fol. 99a ff.).

During the whole of the 17th/18th century, until the decline of the Safawids, the Persian Gulf routes via Lār were followed by numerous traders, diplomats, travellers, men of religion, etc., who have left us lively first-hand accounts. A few months after Allāh-Verdī Khān's seizure of Lār, the Augustinian friar António de Gouvea passed through the town, where he mentions the recent destructions (on Gouvea's mission as mediator in the conflict between the Portuguese and Shāh 'Abbās, see Steensgaard, 230-1; on Lār, 231). In a parallel version to the *Itinerário* of Gaspar de S. Bernardino, Nicolau da Otta Rebelo gives us a long description of Lār and Lārīstān dated August-September 1606 (on S. Bernardino's narrative, see Aubin, in *Arquivos*, I [1969], 208-15; on Lār, *ibid.*, Lisbon 1841, 136-47). Rebelo noted the numerous charitable works (cisterns and caravanserais), the security of the roads (the Hurmuz-Lār road and above all the entry into Lār was very well policed "because of the war between the Sofī and the king of Ormuz") and the freedoms and the liberalities which the Persians and the travellers enjoyed (see below). He further noted the

abundance and low price of the *bāzār* products (fruits, textiles, poultry such as partridges, and sheep) and the rebuilding works undertaken after the Safawid conquest, in particular, the fortress dominating the town and the bazar (i.e. the *Bāzār-e Kayyāsiyya*, see above) rebuilt at that time by Kanbar 'Alī Beg, who also erected a sumptuous caravanserai on the Lār-Shīrāz road (Rebulo, ed. Serrao, 101-12).

After the Safawids achieved direct control of Lār, its affairs were continuously affected by the question of Hurmuz, which brought into play the colonial rivalries (essentially those of Spain and Portugal, now united under one crown, against the English), the Persians' own interests, those of the Arab merchants and the Gulf pirates, etc. (Steensgaard, 253 ff.). After the conquest of Lār, the Persians had—at least temporarily—taken off the protection payments ("mocarreries", i.e. *mukarrari*) made by the ruler of Hurmuz to that of Lār (*ibid.*, 249). Kanbar 'Alī Beg tried to reimpose these taxes on Hurmuz and occupied the island of Kish (ibid., 250 ff.). The *khān* of Shīrāz, the *beglar-beg* of Fārs Imām Kūlī Khān, seized the port of Gombroon/Combroon (Portuguese Conomor) in December 1614 (ibid., 252 ff.), and in spring 1622 Persian troops commanded by Imām Khān were helped by an English naval force (A.A., tr. 1100-4; Steensgaard, 305 ff.). The negotiations begun by the second "Spanish" embassy of Sherley (1617-22) and the presence of a Spanish ambassador at the Persian court and a Persian one at the Spanish court since 1617 were unable to prevent the Portuguese from losing "the key to the Land of India". Much held back in his mission (cf. Steensgaard, 312 ff.), the Castilian ambassador Figueroa has left behind for us an itinerary (lacking details) of his journey through Lāristān in 1618.

After the fall of Hurmuz, the English, and then the Dutch, and then later the French, were authorised by the Safawid government to set up their factories at Gombroon, now renamed Bandar 'Abbās. In 1630, the Portuguese gained the same permission to use Bandar Kung (8 km. to the east of the modern Bandar Līng), which began to fill up with Arabs and Persians (and then with Banyans and Portuguese) and became an important town in the years 1630-40 (Steensgaard, 337-8). Despite the difficulties of the routes into the interior, Dīsh/Dīshak and Bandar Kung became significant rivals of Bandar 'Abbās (on the rivalry of Bandar Kung and Bandar 'Abbās, see Calmard, 86-7).

From this time onwards, the routes through Lāristān are described in detail by the travellers. We have important items of information from Sir Thomas Herbert about the embassy of Sir Dodmore Cotton to Persia in 1628-9 (tr. Paris 1663, 205 ff.; Calmard, Illustration 1), and the parallel account of Robert Stodart (ed. Denison Ross, London 1935; on Shīrāz-Lār-Combroon, see 28-35). Mandelslo, a member of the Duke of Holstein's embassy, passed through Lār in February 1638, and he gives us a fairly detailed description of his route from Shīrāz to "Camron" (tr. Wicquifort, Paris 1659, Book 1, 91 ff.). With the development of the commerce of the trading Companies, journeys and accounts of them abound. Putting together a synthesis of all the items of information from 1638 to 1706, a map is here given showing the chronological divisions of the routes from the Gulf to Shīrāz via Lār (Map 1; the travellers who only describe Bandar 'Abbās, Bandar Kung, etc., have not been included here). As this chronology shows, the dates of movements

across Lāristān were a function of the movements of ships, hence of the monsoons, and the climatic conditions in the interior of the country: there were few journeys in mid-summer, because of the extreme heat and the "poisonous winds" (*bād-i samūm*), or in winter, because of the snow along the route Lār-Shīrāz (Calmard, 23 ff.). The travellers give us first-hand information on the routes followed (which varied little from the 17th to the 19th centuries, except on the Lār-Shīrāz section), on travelling conditions (state of the roads, bridges and fords; the security provided by the *rah-dars*, "road-guardes"; tolls, customs-dues; etc.), on the natural habitat and the populations (climate, plants, animals, local inhabitants, habitats, illnesses and urban communities), on the political rivalries in the Gulf and in Persia between the central and local powers (including the topic of pirate activity) and between the different European Companies, etc. (see the *Bibl.* for travellers of the 17th-18th centuries).

Although the Dutch remained the most firmly-implanted group along the Hurmuz-Lār-Shīrāz-Isfahān axis (they had factories or "houses" in each of these towns) and derived great profits (above all, from the illegal trade in gold which weakened the Persian economy), the Portuguese continued to strengthen their presence at Bandar Kung (used by the Portuguese, Italians and other travellers). At the turn of the 16th and 17th centuries, an attempted Portuguese-Persian alliance against the "Arabs" (i.e. Muscat or 'Umān) was cut short because of its internal situation in Persia (see Aubin, *L'ambassade de Gêorgio Pereira Fidalgo*, introd.). This did not prevent the taking shape of threats from the 'Umānīs (aided by the Rawḥān [q.v.] and Arabs from Kāfar) against the islands and the ports along the Lāristān coast (see L. Lockhart, *The fall of the Safawid dynasty*, Cambridge 1958, 125-16, and below, on Lārak). During this period of troubles, the Lāristān government was a kind of family enterprise: the *ghāibkhan* of Bandar Kung was the brother of the Bandar 'Abbās one and the *khān* of Lār's one (Calmard, 187). According to Pereira Fidalgo, the *khān* of Lār had under his jurisdiction Bandar Gombroon, Bandar Kung and Bandar Rīg (Aubin, op. cit., 36-7).

Despite the repeated attacks of Arab pirates and of the Belūchīs (who seem to have allied with the 'Umānīs in their threats to the ports and to Lār; see Aubin, op. cit., 79), Lāristān resisted longer than the Isfahān-Shīrāz axis against the Afghan invasion. In practice, when Shī'ism became implanted along the Shīrāz-Lār-Bandar 'Abbās commercial route, the south and part of the north of Lāristān (except for the town of Lār) had remained Shī'ī. Certain lines of *ḡhayḡās*, in particular at Evar and Bastak, occupied the dominant places of Sunnī Lāristān. Despite the support of the *tufangīs* or musketeers of the Sunnī garmisrāt, the Afghāns were unable to establish an effective control over Lār, which was held in turn by a Batūlī chief, a local notable, a Safawid general and the *sardār* of Fārs Muḥammad Khān Balūč (see Aubin, *Les souldes du Lārestān*, 139 ff.). In the latter's rebellion against Nādir the later Nādir Shāh, Muḥammad Khān Balūč was supported by the Sunnīs of Lāristān. Nādir's revenge there was merciless: the executions of Muḥammad Khān and Shāykh Ahmad Madādī, fines, extensive deportations, etc. (*ibid.*, 166 ff.).

Taking advantage of this period of troubles and its aftermath, the brigand chief Naṣr Khān Lārī was able to establish—in the first place with the

help of his brother Hādījī Khān—control over the Buṭūk-i Sab'a (i.e. the region between Lāristān and Kirmān), and then over Lār. After an abortive expedition against Shirāz in 1163/1750, in which Hādījī Khān died en route, Naṣr Khān extended his jurisdiction over the Gulf littoral (i.e. over the Arab *shaykh*s) and his expensive protection over the East India Company at Bandar 'Abbās. Nevertheless, he had difficulties in controlling this latter port, and moreover, fell inevitably into conflict with Karīm Khān Zand. During the years 1754-66, he fought on two fronts, against the governor of Kirmān on the north-east and against the penetration of the Zands on the west. He even planned joint attacks against Karīm Khān in Shirāz in concert with the Kādjār chief, Muḥammad Ḥasan Khān (in 1756 and 1758). It was Šādiq Khān Zand who in the end captured the town of Lār and reduced Naṣr Khān's fortress there in 1769/1766 (on these events, see Perry, 117-22, based on the English and Dutch archives and on the main Persian sources; add to these Rustam al-Hukamā', *Zuslaw al-tawriq*, Tehran 1348/1969, 373-4; Muwabbid, *Bastak*, 38-9).

It seems that, contrary to what Fāsā' asserts (followed by Minorsky, *EP* art, and Perry, 122), the administration of Lāristān did not remain in a more or less autonomous fashion in the hands of Naṣr Khān's family (till 1845, according to Minorsky, till 1855 according to Perry). This same family adopted towards the Zands and then towards Agha Muḥammad Khān Kādjār an at least rebellious attitude (Fāsā', I, 229; Dupré, I, 369). Furthermore, Karīm Khān Zand and Latī 'Alī Zand handed over the government of Lāristān and the ports of the Gulf to the *shaykh*s of Bastak (now promoted to *khans*). Under Fath 'Alī Shāh, the government of Lāristān and the Buṭūk-i Sab'a reverted to this same family; it was given to three sons of 'Abd Allāh Khān (at Fūz, Tārum and Lār respectively), with 'Abd Allāh himself residing at Shirāz at the side of the Kādjār prince-governor (Dupré, I, 361 ff.). Having become *beglar-begi* of Lāristān, one of his sons, Naṣr Khān Lārī, was in 1247/1831-2 deposed from office and the governorship of Lāristān entrusted to Ahmad Khān Bastakī (Fāsā', I, 280). In the next year, Naṣr Khān was re-appointed *beglar-begi* of Lāristān and the Sab'a (*ibid.*, I, 281). In 1262/1845, after discussions had arisen amongst the *khans* of Lār, the *wall* of Fārs put an end to this and appointed at Lār a mere *khān* (*ibid.*, I, 284). Karbalā'ī 'Alī Ridā Girāshī, and then his son (Fāsā', *ibid.*, I, 284). Naṣr Allāh Khān Lārī, jailed in Shirāz for his misappropriations, managed to escape and to stir up a revolt in the region of Sab'a. He could not be suppressed by force, but hid in the mountains; in the end, he went to Shirāz and was in 1275/1858 granted a pension (Fāsā', I, 318-19). In 1276/1859-60 the governorship of Lāristān was given to the Kādjār prince Mahdī Koll Mirzā, who put down the revolt of Mustafā Khān-i Bastakī (*ibid.*, I, 321).

In view of the extreme difficulties of the Kādjārs in keeping control of Fārs and the Gulf ports (in particular, Bandar 'Abbās, the governorship of which had to be handed over to the Imām of Muscat (Muscat) until 1284/1868), the governorship of Lāristān kept its considerable importance. In 1284/1868 and in 1293/1877, it included the regions of Sab'a and Bandar 'Abbās, to which were joined (in 1297/1880 and 1299/1881-2) jurisdiction over the Five Tribes (Khamasa [see WILAYAT-i KHAMSA]) and over Dīrāb (*ibid.*, I, 326, 335, 340, 345). Towards the end of the Kādjār period, Lāristān found itself

more and more under the control of the Kawmī, a powerful viceroy family of Fārs stemming from the descendants of Hādījī Ibrāhīm Khān 'Atīmīd al-Dawī Shīrāzī. In 1294/1877-8, Ibrāhīm al-Dawī and Mirzā 'Alī Muḥammad Khān Kawmī al-Mulk restored order in the coastal districts of Lāristān (*ibid.*, I, 337-8). In 1299/1882, the governorship of Lāristān, Sab'a, Dīrāb, Khamasa and Fārs was entrusted to Kawmī al-Mulk, who in fact died the next year. The plan for the administrative reorganisation of Fārs in 1293 proposed no longer to attach "Lāristān and 'Abbās" to the Kawmī sphere of influence nor to the *wilāyat* of the Khamasa tribes (*Le Fars*, 161). Under the Pahlavī, Lār became a *khāristān* comprising five *bahāḡ*s: Markāz, Bastak, Līnga, Gawbandī, and Dījūm and Bunkrāya (the result of the administrative reform of 1317/1938-9, see Razmārā, *Farhang*, vii, 209). With the reform of 1334/1955-6, the Farmāndārī-yi Lāristān comprised the following *bahāḡ*s: Evaz, Lamard, Dījūm and Humī. The coastal districts and their hinterlands now form part of the Ports and Islands of the Persian Gulf. Bastak, shorn of two *shāḡ*s, is one of the five *bahāḡ*s of Bandar Līnga (Atwāshīd, 8-9).

The fighting between Karīm Khān Zand and Naṣr Khān Lār for control of the ports and the routes through Lāristān accelerated the economic ruin of the region (Perry, 152 ff.). Already rather little-used in the Šafawīd period (over and above the Gulf routes via Lār), the Shirāz-Bandar Rīg route (facing the island of Khārg) was envisaged by the East India Company as an alternative to the Shirāz-Bandar 'Abbās one (*ibid.*, 259). The troubles in Lāristān amongst the local powers led to the Companies moving further north up the Gulf: the English to Bushīr (Bū-Shahr) and the Dutch to Khārg (*ibid.*, 154 ff.; Stiffe, in *GJ*, xvi [1900], 211-15). Hence Lār retained henceforth only a regional importance.

Lāristān once again suffered from *beigandaga* (the pillaging expedition of the Bahā'ī Mahrūb Khān, *sardār* of Bampur, at the opening of the 19th century, see Pottinger, *Travels in Beloochistan*, London 1816, 163, Fr. tr. Paris 1818, I, 325 ff. (on the Bahā'ī raids of 1810, see Sykes, *Ten thousand miles in Persia*, London 1902, 105). Around 1251/1834, Lār seems to have been occupied by Ākā Khān Mahallātī, head of the Nizārī Ismā'īlīs in revolt against the Shāh (Houtum-Schindler, *Eastern Persian Irak*, London 1897, 94; on Ākā Khān's revolt, see H. Algar, in *SI*, xxix [1966], 55-12). Despite its comparative isolation, Lār continued to trade with the Gulf ports (in particular, with Bandar 'Abbās, Bandar Līnga and Bandar Tāhīrī (the former Shīrī), see Stiffe, in *GJ*, vi [1895], 166-73).

In 1881, Stack found Lār in a fairly wretched condition (I, 133-45). But the action of its governor Fath 'Alī Khān (a person whom he describes at length) and his son allowed the town's buildings to be restored (see above, on the *Kāṣṣariyya bāde*), acted as being in excellent condition in 1907. Bandar Līnga was at that time the main port of Lār (via Bastak; see A. T. Wilson, in *GJ* [February 1908], 152-70). The comparative development of Bandar Līnga under the Kawmī/Djāwāsim Arabs favoured the hinterland, and notably Bastak. At the end of the Kādjār period (ca. 1900-15), the Gulf ports, including Bandar 'Abbās and Bandar Līnga, were increasingly controlled by Belgian officials (Lorimer, *ibid.*, 14). In 1355/1916-17, Bandar 'Abbās was considered to be wholly under British influence (Khabābī, 541-).

3. The island of Lār (see Map 2). This Gulf island is generally considered as being that called

Abū Shu'ayb (Bū Shu'ayb, Shaykh Shu'ayb or *Diḥlat al-Shaykh*, situated to the south-east of Bandar Nakhūl and belonging to the Shīb-i Kūh-i Lāristān (at 3 *farsakhs* distance from the coast, according to Fasāḥ, II, 315). Since the identification of this island is not made easy by utilising the classical and early Islamic sources, one finds numerous errors in both old and modern writers, and some of them have mixed up the island and the kingdom of Lār (Ikhtidār, *LA*, 128-9). Nearchus must have touched on it in the course of his periplus. It could possibly be the island of pearls (Nesos Margaritis) of Orthogoras (see Tomaschek, in *SB AA. Wien*, cxix [1890], 55, and Munosky, *EF* art. s.v.). The geographers writing in Arabic give it various names. Lāwān (Ibn Khuradādhbih, *al-Istakhrī*); Lār (Yāqūt, *Abu'l-Fidā*); whilst the variants Alār, Lār, Alār (Lāristān) are given by Schwarz, 87, Le Strange, 267, and Minorsky, *loc. cit.* Ibn al-Balkhī (*Fāris-nāma*, ed. Le Strange, 241) connects the island with *Ardashir Khurra* (Iranistān). Muḥammad b. Naḍīb Belkīn calls this island *Lāgh* (*Djāgh-nāma*, ed. Muḥammad Amin Ryzāhī, Tehran 1342/1963, 43). The toponym *Lāgh* (cf. *Lād*, the ancient name of the town or the kingdom of Lār) could be applicable to the place called *Laz/Laza* or to *Lār/Lāra/Lazā*, the most important settlement in the eastern part of the island. The Portuguese called it *Ilha de Lazão* or *Laracoar* (Lār-Shatwār, from the name of the islet *Shatwār/Shitwār* Citwār at its eastern extremity, see Aubin, in *Mare*, II, 97, n. 215).

According to Yāqūt (iv, 342), Lār is a large island situated between *Sirāf* and *Kays*, lacking any settlement or village; there were pearl fishers, i.e. divers, its circumference was said to be 12 *farsakhs* round. Because of the insecurity from Gulf piracy, the island was thinly peopled. According to Duarte Barbosa, it formed part of the dependencies of Hormuz (Aubin, in *ibid.*). It is situated, in relationship to the coast, which makes an outward salient at Ra's Nakhūl, 14 to 15 miles from the coast; from east to west it is about 25 miles long, and about 3 miles wide. It is 120 feet high at the centre, and low plains of one to two miles extend towards each extremity. It has virtually no vegetation, but the water from its well is of good quality (Lorimer, *ib.*, 1813). Its geological formation is identical with that of the island of *Kays* and *Hindarīm* (Pilgrin [1908], 142).

Shaykh Shu'ayb is attached to the *diḥlat* of Badawī in the *shahristān* of Bandar Līng (Razmārā, *Farhang*, vii, 62, which places it 23 km. to the south-east of Bandar Makām and gives its dimensions as 24 x 5 km., with its highest point ca. 37 m.). Drinking water comes from wells and from cisterns to catch rain-water. There is cultivation of dates, cereals and some market-garden produce. Fishing, for fish and for pearls, is carried on. At the beginning of the 20th century, it had 20 villages or hamlets, the most important being *Laz* (70 houses). It had a total of ca. 300 houses for 1,500 inhabitants, Shīfī and Sunnī Arabs of various tribes (Lorimer, *ib.*, 1814-15). In ca. 1950, it had 7 small settlements and 730 inhabitants, both Sunnī and Shīfī, speaking Arabic and Persian (Razmārā, *Farhang*, *loc. cit.*, which mentions its liability to malaria). The population seems to have varied little (800 in ca. 1976, according to the *Farhang-i Mu'īn*, v, 948).

4. The island of Lārak (see Map 2). This is an island of the Gulf 20 miles south of Bandar 'Abbās and partially closing the approach to this port between Kishm and Hormuz. The channel between Lārak and Kishm, to the north-east, is 6 miles wide;

between Lārak and Hormuz, to the north-north-east, it is 11 miles. Slightly smaller than Hormuz, Lārak is oval in shape, measuring 6 miles (from east-north to west-south-west) by 4 miles. It is surrounded by deep water except at the western side. The interior is a mass of sharp, sandstone hills mixed with salt domes and domes of red iron oxide (a typical formation of the "Hormuz series", see Pilgrin [1908], 141, [1924], 26). Except for a few date-palms, it is almost bare of vegetation. The highest point reaches 510 feet. Except for the well of Salmī (in the west), water comes from cisterns (Lorimer, *ib.*, 1806; see also Fasāḥ, II, 317). There are many gazelles and rabbits, the former living off a spiny plant called the *khaz* which stays green in winter as well as summer (Kabābī, 98, who states that the island is 13 miles in circumference, 18 miles from Bandar 'Abbās, 28 miles from Kūh-i Musadām, 8 miles from Shahr-i Nīghm, and 16 to 17 miles from Hormuz).

The apatry and the vagueness of the older sources has given rise to many hypotheses. Lārak, literally "little Lār", has been taken—by Kabābī, 99—for the ancient island of Lār (wrongly, because the depths do not allow pearl-fishing). The island seems to have occupied, made useful and cultivated by a fairly important (to judge by the remains of buildings and irrigation works) non-Muslim population (according to the orientation of numerous tombs, see Lorimer, *ib.*, 1807, and Kabābī, 698). Amongst the ruins, the latter author mentions those of a rectangular fortress like the one of the island of Kishm. Lorimer records two ancient forts: a ruinous one at the place called *Kharābistān*, in the interior of the island (i.e. Lārak-i Kūhī), and the other, in a better condition, at *Labyāz* on the northern coast. According to this same authority, the fort is said to be Portuguese, but according to Curzon, II, 413, Dutch. According to Ikhtidār, the *kafes* of Lārak and Kishm are Portuguese, whilst that of *Khamr* is possibly Dutch. The Lārak *khāṣ* is made from dressed stone covered with mortar, with three floors, four towers and a look-out walkway (*Āthār*, 740 ff., with photographs). Only the foundations remain of the East India Company's telegraph house. Among the remains of the cemetery have been found lamps for the dead from baked earth (*ibid.*, with photograph at 742).

The anchorage of Lārak was much appreciated by sailors, especially the Portuguese, who called it *Lareka/Lareca*. They sheltered there in February 1623 when making an attempt to recover Hormuz (see Steensgaard, 332). The ambassador Pereira Fidalgo stopped there in 1696 (ed. Aubin, 29). In 1717, Lārak was captured by the Imam of Maskat, aided by the *Kawāsīm* and Arabs from *Kajar* (Perry, 158).

According to the *Muḥṭasab-i Mu'īn* (17th century), Lārak was inhabited by Arab fishermen. The boat from Bandar Kig called there sometimes (ed. Aubin, in *FFZ*, vi/2-3 [1337/1958], 175). At the beginning of the 20th century, the population of ca. 200 was made up of *Dhābūriyyīn* linked by marriage with the Banū *Shatayr* Shībūh of Kumār (the region of the Ru'ās al-Jihāl in 'Uman) who spoke *humārī* (Lorimer, *ib.*, 1806). In addition to the *Kumārīs*, Kabābī notes 30 heads of families, five of them from *Bustūnū-yi 'Abbās*, and he states that the soil of the island is good for agriculture. The people live by extracting salt (exported to the 'Umanāt and Kishm), fishing and a little bit of stock-rearing (sheep and goats). In summer, most of them migrate to the cass-palm-groves of *Mīnab* (Kabābī, 96). Formerly, the island depended administratively on

the *halāntas* of Kīshm. Persian authority was only established after 1905-6 with the building of a customs post (Lorimer, *ibid.*, 1087; Kabābī, 97). One of the interesting peculiarities of Lārāk is that its possessors—in company with other places of the coasts and islands of Lārāstān—*asf* [q.v.] adepts and practitioners. Called locally the *ahl-i kausd* 'people of the wind', they have as the officiating persons men (the *ahls*), women (the *maḥals*) and some *ghayḥs*, most of them of African origin (see Ṣubūḥī Ḥusayn Sā'idī, *Ahl-i kausd*, Tehran 1345/1966, index s.m. Lārāk).

LARACHE [see AL-'ARĀṢH].

LĀRĀNDA, Lārānde or Karaman in modern Turkish usage, earlier Turkish Karamān or Dīrānde, a provincial town in Anatolia, is the seat of one of the thirteen districts of Konya [q.v.]. The district of Karaman is the largest (4,647 km²) *ilçe* in Turkey. The town lies outside the earthquake zone at lat. 37° N, long. 35° 10' E, at an elevation of 2,038 m., on the plateau at the northern end of the pass leading through the Taurus Mts. to the Göksu (ancient Kalykadnos, or Saleph) river valley. The main road from Konya (at 110 km.) to Silifke (at 148 km.) passes through the district. The town has a station on the railway line from Konya to Eregli, a stretch of the former Istanbul-Baghdād railway. The population grew from 8,182 in 1927 to 28,113 in 1965 and to 51,208 in 1980, when the *ilçe* counted 113,408 inhabitants.

1. HISTORY

Excavations at prehistoric sites in the Konya-Lārānda area, especially at Çatal Hüyük and Çan Hasan, have revealed an advanced Neolithic culture and substantial towns dating from ca. 7000 B.C. (See J. Mellaart *et alii*, in *Cambridge ancient history*; *idem* and D. French, in *Anatolian Studies*, x (1960); U. B. Alkum, in *Anatolia* I (1968); D. Mages, *Roman rule*; W. Ramsay, *Hist. geogr.*, 45; F. Taeschner, *Wagenaar*).

The Byzantine Lārānda (τὸ Λάρανδα, cf. Pauly-Wissowa, xi, col. 793) fell to the Saljuqs after the battle of Manzikert (463/1071), and Islamisation must have taken place early. After having been under Dānišmendīd [q.v.] rule, it was retaken around 560/1165 by the Saljuq sultan Kılıdī Arslān II [q.v.]. Taken briefly in 586/1190 by emperor Frederick Barbarossa, and in 1210 by Leo II of the Armenian kingdom in Cilicia, it was regained by the Saljuqs in 1216 and used as a frontier fortress against the Armenian kingdom. In 623/1226 the area was organised as the *vilāyat-i Arman* (*Histoire des Croisades*, *Doc. Arm.*, I, 360; *Cambridge history of Islam*, I, Cambridge 1970, 234 ff.). Around 623/1228, the family of Mawṭān Dīāl al-Dīn Rūmī [q.v.] settled in the town. Dīāl al-Dīn was married there and extols its delights in his poetry (A. Göl-

penari, *Meslana Celaleddin*, Istanbul 1959, 4, 41 ff.). It is claimed locally that the great folk poet Yunus Emre [s.v.] is also buried there (idem, *Yunus Emre*, *Ayaz*, Istanbul 1963; M. C. S. Tekin, *Proc. of the 1971 Istanbul Symposium on Yunus Emre*). Läranda also claims as its native sons the chronicler Neşri [s.v.], the Grand Vizier Karamânî Mehmed Paşa [s.v.], the medical writer Lärändelî Sîyâhîzâde Dervîş, and others (Gibb, *Ottoman poetry*, index; Babinger, *Geschichtsschreiber*, index; V. L. Ménage, *Neşri's History of the Ottomans*, London 1964; A. A. Adıvar, *Osmanlı Türklerinde İlim*, Istanbul 1943). In 826/1228 the Türkmen dynasty of the Karamân-oghuzlar [s.v.] emerged in the Ermenek-Läranda region, and in 828/1231 the town was given as a temporary *sikâ* to Kughlu Sanıkm, a *Kh*-İrazman chief. In 854/1256 Läranda became the capital of the Karamânids under Karamân-oghlu Günerî Beg and was able to maintain itself against the combined forces of the Saljuqs and their supporters, the Dîkhânid Mongols. In 887/1288 Läranda was burned by the İ-Khânids, and lost temporarily again to them in 891/1292, but heavy destruction and loss of population did not stop the Karamânids from rising to great political power. The town grew in importance and was enriched with many buildings. (See section 2, below). After 1300, the name Läranda was replaced by the new name Karamân. Even when the Karamânid princes expanded their dominions and were able to make the prestigious royal city of Konya their capital in 732/1332, the old residence remained important as a seat of lesser members of the dynasty. The town remained somewhat distant from the battle front during the Karamânids' struggle with the competing powers in Anatolia, including the Mongols and later the Ottomans, the heirs of the Saljuq sultans. According to F. Sümer (art. *KARAMAN-OGHULLARI*, Vol. IV, 621a), İbn Battûta's account of his visit to Konya and Läranda, and of his meeting the Karamânid begs, is based on hearsay. In 797/1397 the Ottoman sultan Bâyezîd I Yıldırım [s.v.] occupied Läranda and conquered nearly all the dominions of the Karamân-oghlu amir 'Alî al-Dîn, who was himself killed. The amir's widow, the Ottoman princess Neîse (Melek Khâtûn), and her two sons Mehmed Beg and 'Alî Beg, were deported to Bursa in 800/1398. This was seemingly the end of the principality. Timur, however, restored the Karamânids to power after the battle of Ankara (804/1402), and they maintained themselves in the face of the Ottoman restoration in 817/1414 and 823/1415. Next to Konya, Läranda remained the main centre of the Karamânid state and flourished greatly. At this time, however, the Mamûks invaded the country and occupied Läranda in 828/1418-19 for a short time, the region becoming tributary to them. The town's leads then changed several times because of civil warfare. In 826/1423, Mehmed Beg was killed at the siege of Antalya and buried in Läranda. The town saw its last decades of glory as a capital under Karamân-oghlu İbrâhîm Beg (827-69/1424-64). When de la Broquière traversed the lands of "the Grand Karamân" in 836/1432, he attended an audience with sultan İbrâhîm in his court at Konya after having visited Läranda. He remarked on the great extent of the Karamânid domains, the dignity and wealth of the court and flourishing trade of both towns. Another conflict brought the Mamûk army to Läranda again, and it was set on fire (861/1456-7). After Konya was lost to the Ottomans, the Grand

Vizier Mahmûd Paşa took Läranda in 873/1468, the last Karamânid chiefs continuing their resistance against the forces of Sultan Mehmed the Conqueror. Part of the inhabitants, especially the craftsmen, were deported in 1471 to be settled in Istanbul in the so-called Büyük Karamân quarter (the present Çarşamba). In Läranda a number of monumental buildings, sacred and profane, were destroyed by the new Ottoman rulers (including by Gedik Ahmed Paşa [s.v.]). The castle was repaired with the architectural debris. In 887/1496 the first Ottoman registration of land, property and pious foundations took place, and the town's tithe tax (*şahîr*) was made into a *waqf* for the benefit of al-Madîna. By this time, the rule of the Karamân-oghuzlar in Läranda had virtually come to an end (Tekin, *op. cit.*, 61; Konyalı, 100-2, 405). The town became the first Ottoman *şahîzâde* (prince's) *sandjak*, governed from Konya under princes Mustafa and Dîm [s.v.]. In 888/1483 Bâyezîd II had the Karamânid territory organised as a regular Ottoman province as the *eyâlet* of Karamân, with Konya as capital and seat of the *beglerbeg*.

From now onwards, Läranda was of only secondary importance. With its castle, it must have played a role in the Ottoman campaigns to suppress revolts fomented by Karamânid chiefs and Şatawîd agents till ca. 1500. The rebel Kull Şâh seized the town briefly in 916/1510, while in 927/1511 the area was taken by prince Ahmed in his fruitless effort to succeed Bâyezîd II. Turmoil was caused in 933-5/1526-8 by the Kalandar [s.v.]. Until 923/1517, the town was part of the fortified frontier with the Mamûk dominions, and it became a *şahîr* in the *sandjak* of Konya. During a short period in the 11/17th century, it probably held the rank of *sandjak* itself. The name of Karamân came now more and more in use. The importance of the trade route passing through Läranda was probably reduced by the extension of the Ottoman empire to the east. The tax registers dated ca. 929/1523 show that the population of Läranda counted 664 *hâkimes* = 464 *nefers* or tax payers (Konyalı), or 493 *hâkimes* = 693 *nefers* (Jenning), or 596 *hâkimes* = 693 *nefers* (Faruqi). The registers of 991/1584 and 995/1587 show 2,027 *nefers* (Konyalı), 2,048 *nefers* (Jenning), and 1,423 *hâkimes* = 2,048 *nefers* plus 625 *muâfferreds* (Faruqi). The number of *mahalles* had increased in 1587 from 34 (Konyalı: 33) to 39. Thirteen of these quarters still exist at the present. The growth of population seems to point to secure living conditions. From other sources it is known, however, that Läranda was one of the centres of the well known *seffa* or student revolts against the central government's financial policy in the years 985/1602-1577-94. In 1596 the Dîvlîllî (see Dîvlîllî in Suppl.) revolts ravaged the province of Karamân. Läranda's population seems to have remained loyal to the government during the following years, at least till 1012/1603. The presence of the Janissary garrison must have had an influence here (cf. M. Akdağ, *Coldîl isyanları (1559-1603)*, Ankara 1963, index s.v. Karaman (Lärändelî). Kara Yazdîllî [s.v.], one of the Dîvlîllîs, was bought off by the office of *muâffir* of Karamân.

From the taxation data of the 10th/16th century, Läranda appears as a flourishing interregional market town in an important agricultural region. The building activity during the same century seems to bear this out. The town contained, around 991/1523, 1 *hamam*, 1 *gimnâz*, 25 *mosques*, 7 *medreses*, 1 *dar al-hadîth*, 10 *tekkes*, 7 *hamams*, 264 *dişhânes*

and 65 *sandık* ("trading booths"). The castle was manned by a garrison of 39 men under a commander (*dişdar*) and a *kâğıd*. Its armament must have included some pieces of artillery (Konyalı, 176, 176). Tenth/seventeenth century Läranda is described by Evliya Çelebi (*Seyahatnâme*, ix, 311-15) and Kâtib Çelebi (*Dîvân-ı şîmâ*, 1145/1732, 614 f.). In 1867, Läranda/Karamân was incorporated in the new *vilâyet* of Konya as a *hâdî* in the central *sandjak*.

Traditional economy, based mainly on dry farming, live-stock, textiles and the production of the well-known *Karamân-bulguru* (wheat), has been diversified and enlarged. Lead, zinc and chrome are in limited production and there are minor iron ore deposits in the area. In the early 1960s, 400 workers from Karaman went to Germany in the first group of Turkish labourers. For further details, see İbrahim Rifika Boyunakulu, *Karaman'ın iktisadî ve sosyal gelişimi*, İstanbul Üniversitesi Edebiyat Fakültesi, İstanbul 1968.

2. MONUMENTS

The archival sources for the monuments of Läranda/Karamân—the *maâf* review of Şihâ'dîja Müslib al-Din dated Muḥarram 881/January 1477 (= Ankara, Kuyadî kadime 665; facsimile and commentary, Feridun Nafiz Uzluk, *Fâtih devrinde Karaman eyaleti vakıfları fihristi*, Ankara 1958); and *maâf* reviews of Bâyezîd II, dated 906/1500-1

(= Ankara, Kuyadî kadime 563, old number 253) and Süleymân I, dated 929/1522-3 (= Başvekilat Arşivi 387)—give a more varied picture of the 14th-16th century monuments of Karamân and can be used to supplement the data of those still extant, though the unusually diverse nomenclature of the monuments makes some identifications subject to caution. The present review is, therefore, concerned primarily with standing buildings. In one respect, however, the sources are significant: they provide singularly little evidence for the 13th century architecture of the town.

Sherd finds from the Citadel or içkale are evidence for 13th century habitation, though the existence of a Salgûk palace remains to be demonstrated. Salgûk blue and white tiles were also reused in the Hatuniye Medrese (see below), and two fragments in the Victoria and Albert Museum (355-6, 1906) have been shown (M. Neizecke, *Fayencedekorativen Seldschukischer Sakralbauten in Kleinasien*, i-ii [= Deutsches Archäologisches Institut Istanbul Mitteilungen, Beiheft 13], Tübingen 1976, ii, 483-4) to have Karamân as their likely provenance. But there is no architectural evidence for major buildings in the 13th century, and the only surviving 13th century monument is a small *maşâid* * (Monuments marked with an asterisk bear dated inscriptions), much restored in 645/1247-8 by Sa'd al-Din 'Alî b. Abû (sic) Bakr (Meinecke, *op. cit.*, ii, 483-4; I. H. Konyalı, *Abideleri ve kâhabeleri ile Karaman tarihi*, İstanbul 1967, 347-50), a domed square with an adjacent flat-roofed *imâm*. It contains multiple burials, but the only dated tombstone is that of Sa'd al-Din Muḥammad b. Majdî al-Din 'Alî, dated Dîlmâdâ II 700/March 1307. The area was evidently a cemetery at the time it was built.

Fortifications. Of the original triple enceinte, little remains. The outermost walls have disappeared entirely. The middle enceinte, to which Evliya Çelebi attributed nine gates and from which Christian and pre-Christian spoliae have been retrieved, is now reduced to a single gate and a few fragments of rubble walls. The Citadel or içkale (Fig. 1) which, doubtless by mistake, he describes as surrounded by a deep moat, is rectangular, with eight round, faceted or rectangular towers. The walls contain many heterogeneous re-used Islamic blocks (Fig. 2), perhaps from the monuments which, Şihâdî states (M. Koman, *Şihâdî'nin Karaman şifârları tarihi* [= Konya Halkî Tarih ve Müze Komitesi Yayınları, I.a], 1946, 112), were destroyed by Gedik Ahmed Paşa [see AHMAD PAŞA GEDİK] on the Ottoman occupation of Karamân (*inter alia* the Dîlmâdî-i Sultân, the Dîlmâdî-i Kâşh and the Dîlmâdî-i Nizâmîşâh); and from the Great Mosque, the mosque of the Karamîndî 'Alî al-Din Beg and the mosque of Karamân Şâh. None of the reused fragments bears a foundation inscription, so that Şihâdî's assertion is difficult to evaluate. However, since all are fairly near ground level, the Citadel was evidently rebuilt shortly after the Ottoman conquest. It was radically restored in 1965.

The pre-Ottoman fortifications cannot be identified, though the Citadel mound is evidently man-made and the fortress played an important role as late as the end of the 15th century. Nor can the water supply be traced; in the absence of wells or aqueducts, the Citadel must have been supplied by cisterns. However, their presence remains to be established.

Mosques. The Great Mosque, now restored out of all recognition, was a flat-roofed aisled construct-

tion with wooden columns and stalactite capitals (Konyalı, *op. cit.*, 359-63). No Great Mosque is mentioned in the *wakf* register of Mubarram 881/January 1477, which thus indirectly corroborates Şihkâr's assertion that it was destroyed in or after the Ottoman capture of Karamân. The only evidence, moreover, for the existence of a Great Mosque in the 16th century is the foundation inscription of a *mahab* * associated with it dated 940/1533-4. The façade of the Hacıbeyler Camii (Konyalı, 294-8), a rectangular building now with a pyramidal gabled roof, has also evidently been substantially rebuilt, save for the entrance in a projecting rectangular moulded frame bearing a foundation inscription dated 902/1496-7 (cf. the anonymous foundation inscription of the heavily restored Arapazade or Araboglu Mosque dated 899/1493-4). However, a block built into the wall to the left of the porch bears the foundation inscription of a mosque dated 757/1356. This is evidently a re-use, and it is unclear whether the present building occupies the site of an earlier mosque.

The Dikbasan Mosque in the bazar (Meinecke, ii, 275-7), identified by Konyalı, [282-8] with the Faah Camii of the *wakf* registers of the reigns of Bâzâid II (906/1500-1) and Süleymân I (939/1522-3), is a flat-roofed, four-aisled construction with a carved stone *mihrab* in the central bay. The brick minaret is rebuilt. The interior contains a two-line chronogram, read variously as 899/1493-4 (Konyalı, *loc. cit.*) and 920/1514-15 (E. Diez, O. Asianapa and Mahmud Mesut Koman, *Karaman Serri savols*, İstanbul 1950, 40), and a re-used fragment of relief tile on a cobalt ground with traces of gilt dated Djuşâd II 840/January 1437, perhaps from an earlier building on the site which was then rebuilt about 1500. The most imposing Ottoman mosque, however, is that of Noh Paşâ, a native of Karamân, built while he was governor of Konya and dated 1005/1596-7. Against the inside wall of the three-domed narthex is a wooden gallery, the soffits of which have an applied revetment of gilt and painted wooden strapwork, probably contemporary.

Madrasas. The madrasa of the Amir Nûsâ (Konyalı, 455-60; Asianapa-Dier-Koman, 50-4; Meinecke, ii, 151-64) was destroyed in 1927 (Fig. 3). The building was, however, photographed by both Sarre and Van Berchem, and Sarre was able to draw a plan of the building (F. Sarre, *Konya. Selâschukische Denkmäler* [= *Denkmäler Persischer Baukunst*, IV], Berlin 1910, Plate 30, misidentified as that of the Hatuniye Medrese). This shows a central dome on pendentives, lateral ranges of four cells fronted by arcades or re-used marble columns, and an axial *iwân* flanked by domed chambers with a *mihrab* housed in its side wall. To either side of the shallow recessed entrance and inner porch were rectangular corner rooms and annexes, that to the right housing the stair-well of the minaret. This was cylindrical on a square base, with a shaft, divided, like that of the *Imâra* of İbrâhîm Beg (see below), by projecting mouldings into registers, and a single stone balcony on a corbelled stalactite base. The porch was a barely-decorated moulded frame with a shallow stalactite canopy on corner pilasters with doubled polyhedral capitals. The foundation inscription, which has now disappeared, occupied the course above the doorway and was flanked by further pilasters and capitals. The *wakf* review of Mubarram 881/January 1477 gives the madrasa of the Amir Nûsâ in seventh place. Its precise designation is problematic. Musâ Beg (d. 758/1356-7) is buried in

the Tol Medrese * (740/1339-40) which he built at Ermenak (q.v.). The present foundation was also funerary, however, and Konyalı (*loc. cit.*) has identified the tombstones of Fakhr al-Dîn Ahmad Beg b. İbrâhîm b. Mahmut b. Karamân (sic) (d. 7 Dhu'l-Kâda 750/17 January 1350) and his brother Şhams al-Dîn Beg (d. 753/1352-3) from it. These give a terminus for its construction, and a third burial, of Durk'and Khâtûn bint Badr al-Dîn Beg (d. 12 Djuşâd 183/13 September 1420), testifies to its later frequentation by the Karamânids.

The Hatuniye Medrese * (783/1381-2) (Fig. 4), the finest decorated building of Karamân, was founded by Sultân Khâtûn, daughter of Murâd I Khudawandgîr and wife of the Karamânid 'Alâ' al-Dîn Beg (Asianapa-Dier-Koman, 55-66); Konyalı, 461-82; Meinecke, ii, 165-70). The building is symmetrically planned, with small domed rooms to either side of the entrance block, side ranges of three domed cells and a rectangular vaulted *dar-ı şâhne*, and an axial *iwân* flanked by domed chambers, one a mausoleum. The entrances to these have high relief-carved limestone frames (Fig. 5). The projecting entrance block has been heavily restored several times: the entrance is recessed in an elaborately-carved and profiled bi-coloured marble frame, continuing a tradition of Saldjûk porch decoration—the Çifte minare Medrese, Erzurum (sa. 1242), the Gök Medrese, Sivas * (670/1272-3) and the Eşrefoğlu Camii, Beyşehir * (669/1300)—and although on a smaller scale than these, is particularly close in conception and execution to the Gök Medrese at Sivas (cf. S. Ögel, *Bir Selçuk portelleri* (sic) grubu ve Karaman'daki Hatuniye Medresesi portali, in *İlahiyât Fakültesi Dergisi. Yükk Araştırmaları Dergisi* 1957 [Ankara 1958], 175-9 and Figs. 6-7). It bears a craftsman's signature, Kh'adja Ahmad b. Nu'mân b. Ahmad (Meinecke, *op. cit.*, ii, 166, correcting the "Muhammad" in Mayer, *Architects*, 112), which also continues the Saldjûk tradition of signed façades. The remarkably exact copying on a smaller scale of both profiles and decoration suggests strongly that forms of projection were known to the builders of 14th century Anatolia, though there are no literary attestations for the popularity of the prototype, and the other cases of parallelism have not been established beyond the Saldjûk period (cf. K. Erdmann, *Das Anatolische Karanensaray des 13. Jahrhunderts*, ii-iii, Berlin 1976, 248). The marble revetment of the façade, like the columns inside, is entirely re-used.

There is no trace of any tile mosaic *mihrab*, but Meinecke, *loc. cit.*, has established that the *iwân* and the mausoleum both had dadoes of dark turquoise-green hexagonal tiles. The cenotaphs have disappeared but these also may well have been tiled. The Hatuniye has also yielded a re-use Saldjûk tile inscription, evidently from a pious foundation, in white relief *naşâh* on a cobalt ground, in the name of Abû'l-Fatîh Kaykhusraw ... b. al-Sa'id Khidj Arslân (= RCEA, 4817), now in the Islamic Museum in East Berlin (No. 1. 563). The inscription is defective and the ruler, therefore, indeterminate, but Meinecke, *loc. cit.*, has argued for Kaykhusraw I (second reign 602-7/1205-11) or for Kaykhusraw II (634-44/1237-46) (q.v.). Kaykhusraw III (663-81/1266-84) (q.v.) may be eliminated, since from 1268 the amirate of Karamân was independent, and the titulature of a Saldjûk Sultân would not have appeared unmodified in foundations at Karamân of the later 13th century.

The foundress has been identified with Malak Khâtûn, whose *wakfiyya*, appointing herself as

madrasa with her descendants after her, dated Rabi' I 787/May 1385, is resumed by Konyalı, 473-82, and appears in *precis* above the entrance to the mausoleum. This designates the foundation as a *ḥanaḥ madrasa*, to which the family mausoleum was to be attached, with the provision that a *ḥanaḥ medaris* might be appointed if no-one better was available. On the foundation there were two *muḥids*, five *ḥafīḥs*, a *nāṣir*, a *mu'adḍin*, a sweeper and a porter. The endowments are almost exclusively agricultural property and the national income therefore fairly small. No students on the foundation are mentioned; and the *madrasa* is so small that some of the staff, anyway, must have lived out.

Khaṅkīk. The *tekke* of Sıyahsır or Karabaş Veli, otherwise known as the *khaṅkīk* of Şaykh or Sultān 'Alī al-Dīn (Konyalı, 316-22; Aslanapa-Diez-Koman, 85-7) consists of a flat-roofed, three-sided covered mosque with transverse arcades and a minaret of Ottoman type, possibly a later construction, at its north-east corner (Fig. 8). On its north-west side is a symmetrically-planned building, following Anatolian custom in not being *ḥibla*-oriented, with a central sunken area with a large fountain and roofed by a dome on pendentives. Of the three *imāns*, each has lateral annexes, while on the south-east side an arcade or loggia serves as a narthex to the mosque. The masonry and plan suggest a foundation date of about 1460. Both *tekke* and mosque have entrances on the east. Outside is a cemetery with late burials and a ruined undated octagonal canopy tomb (Fig. 9).

The complex no longer bears a foundation inscription, but has been associated with a *Khalwat* *ghayyā*, known variously as *Mawlānā* or *Şaykh* or Sultān 'Alī al-Dīn Rūmī or Aswad, whose tombstone (Konyalı, 316), dated Shawwāl 870/June 1466, was recorded in the canopy mausoleum in 1943. The confusion of names suggests that the monument was colonised by later *ghayyās*. The mosque was evidently ruined by the end of the reign of Mehmed II, since it does not appear in the *wahf*-register of Muḥarram 881/January 1477; and in the register of the reign of Bayazid II dated 906/1500-1, the *waḥfs* are stated to be at the disposal (*dar tasarruf*) of another, unidentified *admiya*, that of *Şaykh* *Fir* *Khalifa*.

A building, known variously as the *Aktekke*, *Mevlevi tekke*, *tekke* and tomb of 'Mader-i Mevlānā' and the Valide Sultan Camii, seems to be an adaptation of a 14th century Ottoman mosque plan, consisting of a large, partially-domed rectangular area containing twenty-one undated cenotaphs, with an exterior portico preceded by a narrow courtyard with ranges of cells to either side (Konyalı, 229-33; Aslanapa-Diez-Koman, 44-9). The foundation inscription records the foundation by the *Ḳaramānīd* 'Alī al-Dīn Beg of a *admiya* for a *ghayyā*, whose *lokāhs* are given as *Djāḥid al-Milla* wa 'I-Hakk wa 'I-Dīn, in Rabi' I 772/October 1370. The foundation was evidently associated with another *admiya*, the *waḥfiyya* of which in the name of 'Alī al-Dīn Beg and dated 769/1367-8 (Konyalı, Yusuf Aḡa Kütüphanesi No. 10389) has been resumed by Konyalı, 252-3. This is in favour of the descendants of a *ghayyā*, *Djāḥid al-Hakk wa 'I-Sha'fa* wa 'I-Milla wa 'I-Dīn, whose *nishā* is not given. The conclusion that the *ghayyā* in question was *Djāḥid al-Dīn Rūmī* is unwarranted; there is no evidence in either foundation inscription or *waḥfiyya* that a *Mevlevi* foundation was envisaged; and the popular association of the *tekke* with the *Mevlevi* order must, therefore,

be based on a late colonisation of the *tekke* by *Mevlevi* devisions.

Though the details of its organisation are obscure, the so-called *Ḳimdrat* of İbrāhīm Beg (Konyalı, 405-52; Aslanapa-Diez-Koman, 67-84; Meinecke, II, 170-5) belongs architecturally among the *tekkes* of *Ḳaramān*. It was a multiple foundation, enclosed by a wall of which there is now no trace, consisting of the *Ḳimdrat*, a mausoleum attached and a fountain opposite (Fig. 10). The *Ḳimdrat* has a domed, central courtyard surrounded on three sides by two storeys of rooms, with a *ḥibla*-oriented axial *iwan* flanked by domed chambers. The minaret salient and traces of the springing of arches on the façade show that originally the building was intended to have an arcaded exo-narthex. The *Ḳimdrat* plan has several remarkable features, including the fan-pendentives below the dome which derive from the brick architecture of 13th century Konya, though with the exception of re-used marble blocks for the lintel and consoles of the main entrances and the tympana of the outside windows the building is entirely of local stone. The upper storey consists of long galleries, evidently store-rooms or places of assembly. The central area is poorly lit and barely decorated in a style deriving from the internal stone carving of the Çifte Minare Medrese at Erzurum (ca. 1242) and the Hospital at Divriği (626/1228 onwards), and the decoration is concentrated on the exterior: gridded windows and their tympana, soffits, door frames and a cylindrical minaret shaft divided by projecting mouldings into registers sparingly decorated with bi-coloured stone (*abak*). The main entrance is framed by mouldings of Anatolian *Saldjuk* origin, but without concern for their canonical disposition, and their carved decoration, particularly the markedly chincieric foliate elements in the spandrels of the porch, is more indebted to the decorative renaissance of the 1420s at Bursa than the *Saldjuk* tradition. The Bursa style is also apparent in the carved marble hood of an exterior window, a single carved block with an arabesque-palmette design, deriving from the marble hoods of the Green Mosque at Bursa.

The tomb, at the southern corner, is also *ḥibla*-oriented, a domed square surmounted by an eight-sided pyramidal canopy on an octagonal drum (Fig. 11). Inside there are two floors: a crypt or burial chamber just below ground level and an upper chamber with a curved porch reached by a double staircase. The porch has a shallow stalactite canopy and carved frame with marble jambs, and a lintel with *vossairs* set as a flattened broken arch of Bursa type. The upper chamber contains three damaged moulded plaster cenotaphs (Fig. 12), of İbrāhīm b. Muḥammad b. Ḳaramān (d. 868/1463-4), 'Alī al-Dīn b. İbrāhīm (d. 870/1465-6) and Şāh Ḳāsim b. İbrāhīm (d. 888/1483-4). Meinecke, *loc. cit.*, remarks that the first two are evidently from the same mould and that the third may well be contemporary. The plaster shows traces of gilding and may also have been painted.

The interior of the *Ḳimdrat* still contains traces of hexagonal turquoise tiles alternating with cobalt triangles set directly on the rubble walls. The most important decorative feature, however, was a monumental tile *mihrāb*, now in the Çiğallı Köşk in Istanbul, old number 136 (H. Köhnel, *Die Sammlung Türkischer und Islamischer Kunst im Tschamli Kösch* [= Meisterwerke der Archäologischen Museen in Istanbul III], Berlin-Leipzig 1938, Fig. 24). It is of polychrome tiles, partially gilt after

firing, with black or red contours of earth colours to prevent the glazes from running. Though not identical to the tile-work of the Green Mosque and Tomb at Bursa (823/1419-20) or the Muradiye at Edirne (ca. 1433), it is markedly similar. Meisner, *loc. cit.*, considers the *majlās* to have been a special order, while assigning comparable fragments in Konya, Berlin and the Victoria and Albert Museum to a reflection of the tomb of Djalāl al-Dīn Rūmī at Konya in 763/1381-2. Also from the 14th cent., doubtless from the main entrance, is a wooden door, now in the Türk ve İslâm Eserleri Müzesi, İstanbul (Çamlı Köşk, old number 16; not No. 238 as in Aslanapa-Dier-Koman, *loc. cit.*), carved by a craftsman, 'Umar b. İlyas al-Karamânî (Mayes, *Woodcarvers*, 68), combining high-relief foliate motifs and silhouette carved lions and gryphons, in a style much closer to stone carving than was Anatolian woodwork of the Selçuk period.

The *imaret* and mausoleum are rich in inscriptions. That over the main entrance is dated Muharram 836/August-September 1432. Over the entrances to the domed chambers flanking the axial *iwān* are two undated extracts from the *waḥfiyya*. The basic *waḥfiyya* text, dated Shawwāl 835/July 1432, bears two addenda of the same year and further addenda of 843/1439-40, 849/1445-6, 851/1447-8 and 870/1465-6 (facsimile and commentary by İsmail Hakko Uzunçarşılı, *Karamanlıların devri mevkârlarından İbrahim Beyin Karaman şerâhi waḥfiyesi*, in *Belleten*, I [1937], 63-164). The richest foundation of Karaman, was it endowed as *waḥf al-kāfi* according to the Hanafi *madhhab*, with a staff of twelve *kur'ân* readers, from among whom the officials of the foundation were to be appointed with appropriate supplements to their basic stipends of 225 silver *dirhams*, and servants to work in the kitchens to provide three days' free food and lodging for reputable visitors. Its designation is slightly ambiguous. Uzunçarşılı describes the foundation as *dār kur'ân*, *maḥabbah* and *maḥṣud*. However, the foundation inscription and the first of the two extracts from the *waḥfiyya* inscribed inside describe it merely as *hādhihi 'l-'imra al-mubāraka* (non-descript "foundation"); while the *waḥfiyya* also mentions a *dār al-ḥuffās*. None of this is sufficient to characterise the foundation as a novelty in institutional organisation. The *maḥabbah* was to be İbrahim Beg during his lifetime, and thereafter his descendants. Nothing is said of the disbursement of surplus revenues; but the express conditions that one-quarter of the income should go to the upkeep of the foundation and that *waḥf* property be kept in good repair look forward to the terms of Ottoman *waḥfiyyas*.

Mausolea. The distinction between attached and unattached mausolea is probably artificial, since the cemeteries have suffered considerably from recent urban expansion. Photographs, for example, taken prior to the restoration of the 'Alā' al-Dīn Türbe (Fig. 13), close to the no longer extant *madrasa* of Mūsā Beg (see above) show the springing of the arches of an adjoining building on its south east side; while a tomb, probably early 15th century, popularly associated with the Zeyn al-İm and Fakih, Shams al-Dīn Mehmed Fenārī, who was actually buried at Bursa (see FENARİ-ZADE) (d. 834/1430-1), was also attached to a *shaykh* or *maḥṣud*. Of the tombs in the cemeteries, only three are now of architectural importance. The 'Alā' al-Dīn Türbe (designated as such in the *waḥf* survey of Muharram 881/January 1477) is an undated octagonal con-

struction of the 14th century with a fluted pyramidal roof following a brick prototype (cf. the mausoleum of Sayyid Mahmūd Khayrīdī at Alqahir [621/1224-5], RCEA, 3900) with a recessed entrance and diminutive stalactite canopy (Fig. 14). A ruined octagonal tomb with a set-back octagonal transitional zone and a recessed entrance in a shallow, broken-arched niche, known (Konyalı, 499-501) as the Demirgözülek Turbe and identified on the basis of the 861/1477 *waḥf* survey as the mausoleum of a late Karamanid official, Amin al-Dīn, appears to be a development of a tomb type characterised by the Hüdavend Turbe at Nigde (712/1312-13). Comparable is the Kutur Türbe, an undated construction of cut stone with bi-chrome (*ablak*) designs on alternate facets and a recessed entrance set in an arched canopy. The evidence (despite Konyalı, 504-77) that the tomb of Yunus Emre—fervently believed by the local population to have died at Karaman—is in the Kırşıl Baba Mosque is inconclusive.

Baths and fountains. Most of the baths of Karaman were seriously damaged in an earthquake in 1299/1881-2. None is dated, but the plan of a bath given by Aslanapa-Dier-Koman, 49, which, they suggest, might have been founded by the Karamanid Süleyman Beg, is of recognisably traditional type. There are no recorded double baths, so the buildings must have been used alternately by men and women. Many must occupy the sites of baths mentioned in 16th century Ottoman *waḥfiyyas* and may well be older, since Sauvaget has remarked that waterworks, for obvious reasons, tend to persist even though the superstructure is rebuilt. However, there is a clear relation between the construction of new baths in the outlying quarters of the town and the building of fountains in the 18th-19th centuries.

The numerous fountains of the quarters of Karaman (Konyalı, 625-35) are of uniform type, with the outflow inset in an arched, normally undecorated, recess, with small *maḥabbas* or seats at the sides. Those in the centre of Karaman have, like the baths, been the object of frequent, mostly unrecorded, repairs and restorations, often re-using stone from other constructions. Thus the foundation inscription of a *dār al-ḥuffās* dated Rabī' I 855/May 1451 built into the Hoca Mahmud fountain (Konyalı, 637-8) is no evidence that the fountain was associated with any *dār al-ḥuffās* founded by Khwāja Mahmūd. Likewise with the marble foundation plaque of an *imra* of the Karamanid 'Alā' al-Dīn Beg's Supervisor of Waterworks (*ma'r-a dh-dj*), dated Rabī' II 777/October 1375, built into the so-called Şahrūh Çeşmesi (Konyalı, 351). The earliest standing fountain is thus that opposite the main entrance of the *imaret* of İbrahim Beg (836/1432), set in a well-decorated, carved frame. The fountains of the Ottoman period, except for the Kadibudak and Kile Çeşme (both 958/1551), are mostly associated with mosque foundations. To judge from the surviving inscriptions, few were built in the 17th century. However, the large number of construction or restoration inscriptions covering the period 1790-1850 on the fountains of the peripheral quarters is evidence for considerable urban expansion in the late Ottoman period.

Conclusion. Despite the disappearance of important monuments over the past hundred years, the surviving monuments (of which only the most important have been considered) seem a typical sample of the original constructions of the Karamanid

and Ottoman period. To judge from the earliest Ottoman waqf registers, many buildings were already *hazır* and their waqfs appropriated by other foundations. Calculation of the revenues of the major Karamanid constructions is difficult, since the scale of the endowments is not recorded. However only the largest foundations, the *madrasa* of Mūsā Beg (ca 1340, no longer extant) the Hatuniye Medrese (1783/1381-2) and the *ʿimāret* of İbrāhīm Beg (1356/1432), have whole villages specified among their waqfs. Even allowing, therefore, for the decay of Saljuqid foundations and their endowments through the 14th century and their tacit absorption by the later Karamanid foundations, the waqf registers tend to show that even at the height of the Karamanids' power, building was no more extensive at Karaman than at other centres of the amirate—Niğde, Ermenek, Ereğli and Aksaray—and considerably less than at Konya, Akşehir, Beyşehir and Aksaray under the Saljuqs.

LÄRİ (see LARIN).

AL-LÄRİ, MUHAMMAD B. ŠALĀH B. DĪJĀLĀL B. KAMĀL AT-ANŠĀRĪ (or al-ANŠĪRĪ), known as Muṣṭafī al-Dīn al-Lārī, Persian scholar and historian, was born ca. 1510 in Lār, to the south of Šīrāz. Following his family's tradition, he entered upon a scholarly career and studied under Muḥammad Šadr's son Mir Ghayāth B. Šādi al-Dīn Šīrāzī and Mir Kamāl al-Dīn Husayn, a pupil of Dījāl al-Dīn (see AL-DAWĀNĪ). It is transmitted that Lār's father proceeded openly against the Šāfi'i heretics (*isāfiq*).

During his later journeys, al-Lār was at first received honourably by the Mughal emperor Humāyūn (1530-56), who granted him the title *ustād* and became his pupil. Because of the unrest after Humāyūn's death, he left the country to go first on a pilgrimage to Mecca. According to the Persian source quoted below, four hundred of his books were lost at a shipwreck. After the pilgrimage, from 964/1556-7 (rather 1557) onwards, he stayed for a while in Aleppo, where he apparently tried to establish himself as a merchant. His erudition stood out in discussions with learned men, among whom was Ahmad Karwīnī, who did not dare to answer Lār's objections against his recently-composed (*ḥikāyat al-majāzib*). It is not known how long Lār stayed in Aleppo; he probably lacked there means of subsistence. His next station was Istanbul, where he obtained admittance to the Mufti Abū 'L-Šu'ūd (see AḤD 'L-ŠU'ŪD). But he declined the offer of a professorship, endowed with 30 aṣṣ daily; he

might have thought that such a position was rather unimportant in comparison with his previous situation at the Mughal court. In this connection, the Ottoman historian 'Alī speaks of breach of faith of the Mufti 'us-š-šū'ūd Lārī (H. Sohrweide in *Isl.*, xiv (1970), 286). Disappointed, he left Istanbul and found his final home in Amid (now Diyarbakır), where Iskender Paṣha, the Ottoman governor, appointed him professor at the Khorev Paṣha *madrasa* and teacher of his children. After being accepted among the *meṣdī-yi Rūm*, he then also met with recognition by the Porte. He died over 60 years old in Dhu 'l-Hiǧǧa 979/April-May 1572.

He was originally a follower of the Šāfi'i *maḥāzib*, becoming later a Ḥanafī; also, he had a certain inclination towards mysticism. He wrote numerous annotations and commentaries of well-known works on philosophy, astronomy, *tafsīr* and *ḥadīth*. His few experiments as a poet met with no approval, but his *Mi'āl al-šādūr wa-mi'āl al-šādūr*, a universal history in Persian, dedicated to the Ottoman sultan Selīm II (974-82/1566-74) on the occasion of his accession to the throne, became widely known. The work consists of ten chapters, and is a compilation from fifty Arabic, Persian and a few Turkish works, which are mentioned in the preface. Possibly between 974/1566-7 and 978/1570, Khūǧda Šād al-Dīn (d. 1008/1599 [see KHŪǧDA FZENDI]) undertook, at the order of the Grand Vizier, an adaptation in Turkish of the first nine chapters. He left out the tenth chapter, on the Ottomans; as is well-known, they were the subject of his own work, the *Tāǧ al-šadr*. In the 19th century, the official historiographer Es'ad Eilandī (see 'ES'AD FZENDI, SAHĀ'ILAR-ŞEYKHI-ZADE SEYYID MEHMET) also made a partial translation.

(H. SOHRWEIDE)

LÄRIDA, name denoting, in Arabic texts, the former Ilerda, an episcopal see, currently Lérida, provincial capital in Spain, to the west of Barcelona, on the Segre.

It was a district (*ʿamal*) centre of the Upper March (*al-Ṭaǧar al-aʿlā*) to which other towns and a large number of fortified strongholds were subordinate. Situated on a fertile plain, it is surrounded by numerous gardens and orchards. One of its main sources of wealth was constituted by the plantations of fine quality flax which were farmed commercially throughout the March. There used to be gold in large quantities in the river of Lärída. The district included rich farmlands on the banks of the Cinca (*nahr sayṭūn*) with olive-groves and vineyards. There were numerous agricultural estates (*ḥiṣṣ*) comprising cereal and pasture land. Al-Ḥimyarī notes as a special feature the fact that each rural grouping (*ḥay'a*) had at its disposal a fortified look-out tower (*burǧ*), or underground galleries (*siḍḍ*) where the farmers could take refuge in the event

of attack. Situated on the main strategic route of the Upper March, Làrida was an obligatory transit point of armies and a site of the utmost importance in the defensive system of the Merches. Conquered by the Muslims at some time after the capture of Saragossa and Tarragona (whose inhabitants capitulated without resistance, if al-Rāzī is to be believed), the territory of Làrida underwent pillage and destruction, in the 2nd/8th century, at the hands of Franks—the armies of Louis—and of Cis-Pyrenean Christians and renegades. Governed by militarily granted prerogatives on account of its distance from Cordova, it succeeded on many occasions in eluding the authority of the *amīrs*. The Banū Kašī, the Banū Mūsā or Banū Lubb on the one hand, the Banū 'Amrūs, and the Banū Shabīb or Banū Tawil, on the other, as well as the Banū 'l-Muḥājīr or Tudjībīs [s.v.], dominate the entire history of Làrida and its region in the 3rd-4th/9-10th centuries.

The name of Ismā'īl b. Mūsā b. Mūsā b. Kašī who, in 270/883-4, reconstructed and fortified Làrida and its surrounding territory, deserves a special mention. His sons were obliged, in ca. 277/890, to fight against Muḥammad al-Tawil of Huesca, who vied with them for possession of the Barbitania (Barbastro and Lituza, in the Ribagorza). The *wālis* of Làrida, with their own troops or with reinforcements from Cordova, fought on more than one occasion with the Christians of Pallars and of the Barcelona region. The superb Grand Mosque built by Lubb b. Muḥammad b. Kašī in the upper part of the fortress dates from the beginning of the 4th/10th century. In the final third of the 4th/10th century, the role of *ḥāḍid* appears to have been occupied by Raḥd al-Barghawāṭī, who was instructed to restore to Ḥāshim b. Muḥammad b. Ḥāshim al-Tudjībī the district of Làrida, which continued to be controlled by his family for a number of years. In the 5th/11th century, the fate of Làrida and its region was linked to that of the Arab family of the Banū Hūd [see s.v.], who in 431/1039 replaced the Tudjībī family in controlling the valley of the Ebro and in the *ḥāḍifa* of Saragossa and Làrida. Yūsuf b. Sulaymān b. Hūd al-Muẓaffar—like the *ḥāḍid* Muḥājir at a later stage—governed the town, from a time prior to the death of his father (438/1046) and was in disagreement with his brother Aḥmad al-Muqtadir of Saragossa, who held him responsible for the loss of Barbastro in 456/1064 [see BARBASTRO]. Under the control of members of the family of the Banū Hūd, sometimes dependent on Saragossa and in a precarious state in the 6th/12th century in the face of the Christian advance, the town survived under the authority of *wālis*. It was compelled, when the fortresses of the defensive perimeter were taken, and Arctengol VI of Urgel and Ramon Berenguer IV of Barcelona entered into alliance with other Catalan chieftains, to capitulate on 29 Djumādī II 544/24 October 1149, when it was at that time being governed by the *wālī* al-Muẓaffar b. Sulaymān.

LARIN (s.v. *lārīn*), a silver coin current in the Persian Gulf and Indian Ocean in the 16th and 17th centuries. It takes its name from the town of Lār [s.v.], the capital of Lāristān at which it was first struck; cf. Pedro Teixeira (*Travels*, Hakluyt Soc., London 1902, 347): "There is also the city of Lar... whence are called *laris*, a money of the finest silver, very well drawn and current throughout the East"; and Sir Thomas Herbert speaking of Lār in 1627 (*Some years' travels*, London 1665, 230): "near this byzar the *larres* are coined, a famous sort of money." The *larin* weighed about 74 grains (4.9 grammes) and had a high reputation for the purity of its silver. It was worth ten pence in English money (Herbert) or one-fifth of a French crown (Tavernier) or 60 Portuguese reis.

The *larin* is in shape quite unlike any other coin. It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with inscriptions from dies like any other coin. It is admirably described by William Barret in his account of the moneys of Baḡra in 1594 (Hakluyt, *Principal voyages*, Glasgow 1904, vi, 12): "The sayd *larin* is a strange piece of money, at being round like all other current money of Christiantie, but is a small rod of silver of the greatness of the pen of a goose feather where with we use to write and in length about one eighth part thereof, which is so wrested that the two ends meet at the juste halfe part and in the head thereof there is a stamp Turkesco and these be the best current money in all the Indies and six of the *larines* make a ducat".

The kingdom of Lār ceased to issue these coins after its conquest by Shāh 'Abbās the Great of Persia (Chardin, *Voyages*, Amsterdam 1735, iii, 128), but its popularity led to this type of coin being adopted by other states of the Indian Ocean. The kings of Hormoz of the latter half of the 16th century issued *larins*, as did the Shāhs of Persia at Shirāz and the Ottoman Sultans at Baḡra. In India, they

were struck in the 17th century by the 'Adil Shāhī dynasty of Bīghāpūr and other rulers, and the frequent finds of larins in Western India show how extensive was their circulation there. In the Maldive Islands in the early 17th century, the king struck his own larins, as we know from the *Voyage* of F. Pyrard de Laval (Hakluyt Soc., 1887, I, 232-3). In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscribed or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the 18th century. A degenerate descendant of the larin existed till recently (H. St. J. Philby, *The heart of Arabia*, London 1922, II, 319) on the Arabian side of the Persian Gulf, in Hasā, where it is known as a *lawla*, i.e. the "loag" [loia]. It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Palgrave (*Narrative of a year's journey through Central and Eastern Arabia*, London 1865, II, 179) who adds that there is a proverb "like a Hasā lawl!", applied to any one who, like the local currency, is of no use away from home. H. R. P. Dickson, *The Arab of the desert*, London 1949, still registers in his *Glossary*, 643, the *lawl* as a copper bar coin current in Hasā.

LARISSA (see VENIZIOURIA)

LAS BĒLA, a former native state of the British Indian empire. It lies in the south-east of Baluchistan, along the coast to the west of Karachi, between lats. 24° 34' and 26° 39' N. and longs. 64° 7' and 67° 29' E. It is bounded on the west by Makrān [q.v.] (of which western Las Bēla forms indeed a part), on the north by the Jhalawān district of the former Kalāt native state [see KALĀT] and on the east by the former province of Sind; its area, both as a former native state and as a modern District of Pakistan (see below) is 6,441 sq. miles.

1. **Geography.** The central part of the state is a flat, arid plain (las = "plain"), but in the western part of the state there is the Makrān coastal range running parallel to the sea, and ranges like the Mor and Pab ones run north-southwards in the eastern part of the state and separate Las Bēla from the lower Indus plains. The central lowland area is drained by the Porālī, Tiliyān and other streams, and it is here that the main settlements lie. Much of the terrain of Las Bēla is desolate and scrub-covered, and because of the eviguous rainfall (77/17.5 cms. per annum), agriculture depends essentially on irrigation from floods coming down from the hills after the summer rains; this water is collected by dams across watercourses, and *kīrlas* (see KALĀT) are used for conveying water to fields. The coastal population depends on a small amount of coastal navigation, and especially on fishing, the whole Makrān coastland being known in classical times as one inhabited by Ichthyophagoi; with the suppression of piracy in the Persian Gulf and the Arabian Sea during the 19th century, these fisheries expanded considerably, and salted fish was exported from the Makrān

coast as far as Zanzibar, Bombay and the Malabar coast.

2. **Ethnography.** The main Las tribes claim descent from the Sāmā and Sammā former rulers of Sind, and seem from their names (cf. the frequent element *patra*) to be of Indian Rājput origin, Las Bēla being the only part of Makrān where an originally Indian ethnic element has apparently maintained itself against the Balūč Incomers. There are five principal tribal confederations, of which the Rindhī held the chieftainship of Bēla before 1742, and the Dāmots after them. A group called the Qadrīs, of negroid features, clearly descend from an imported slave population, and another low-caste group is constituted by the Langes, mainly employed as domestic servants. The overwhelming majority of the population is Sunni Muslim in faith, with some *Khōdja* Ismāʿīlī traders in the towns. The worship of local *pīrs* or saints is widespread, with especially important shrines, formerly visited by Hindus from quite distant parts of the subcontinent as well as by Muslims, at Hinglāj, Shāh Bīkāl and Lāhōtī Lānkān. Three-quarters of the population speak the Djadgāl or Djamdāl (lit. "Djat language") form of Sindhi, but Makrānī Balūčī is spoken generally in the west and Brahūī in the extreme north.

3. **History.** Las Bēla has virtually no separate history before the 18th century; for the history of the region before then, see in general MAKRAṆ. Alexander the Great must, however, have passed through what became Las Bēla when in 326 B.C. he left Pattala on the lower Indus and marched westwards via the land of the Orastae to Gedrosia or Makrān and then Persia.

Various local tribes exercised power in Las Bēla until in 1742-3 Džām 'Alī of the Dāmōt tribe (see above) established his authority there with the help of a Brahūī force from the ruler of Kalāt Mābabbat Khān; the chieftainship henceforth remained with this family, who were known by the Rājput title, formerly used in Sind, of Džām but who came to claim a spurious descent from the Arab tribe of Kinzayh. Las Bēla thus became a dependency of Kalāt, whose Khān at first drew half the revenues of Bēla as his share and later required on occasion a troop contingent in lieu; also, Las Bēla's northern frontier adjoining Jhalawān remained for long undefined. Henry Pottinger passed through Bēla in 1810 and found that town enjoying considerable prosperity under the benevolent rule of Džām Mir Khān I (1776-1818), a colony of 250-300 Hindu merchant families carried on trade there (*Travels in Beloochistan and Sindh; accompanied by a geographical and historical account of those countries*, London 1816, 12-29). It was during this Džām's reign that conflict arose over the Makrān port of Gwadar [q.v. in Suppl.], which had been transferred to the sultans of 'Uman in 1784 by Mir Nasir Khān of Kalāt, but captured at one point by Mir Khān I. In the middle decades of the 19th century, Džām Mir Khān II (1830-69), who was beginning his reign as a child when Charles Masson was in Bēla in the 1830s (*Narrative of various journeys in Baluchistan, Afghanistan and the Punjab*, London 1842, II, 17-18, 25-30), came to covet the territories of his father-in-law Shudhād Khān of Kalāt, and allied on various occasions from 1865 onwards with the Khān of Khārān [q.v.] in north-western Balūčistān and the Brahūī *sardars* or chiefs of Jhalawān. After 1869 he lost the chieftainship of Las Bēla, however, and was an exile in British India; his son and ultimate successor as Džām 'Alī Khān III in 1876 recognised the suzerainty of Kalāt

in the general settlement at Masung arranged by Sir Robert Sandeman (T. H. Thornton, *Col Sir Robert Sandeman, his life and work on our Indian frontier*, London 1895, 46). Irreconcilable disputes within Las Bela broke out between father and son, with Dham 'Ali Khan exiled to Quetta in 1880. When Dham Mir Khan II died in 1888, Sir Robert Sandeman, then Agent to the Governor-General in Baluchistan, in 1889 installed Dham 'Ali Khan III in Bela (ibid., 199-203). After this latter ruler's death in 1896, there were disputes among his sons, but Dham Mir Kamal Khan assumed the chieftainship, and in the ensuing decades, events in Las Bela were less eventful.

After British India was partitioned, Las Bela, like Kalat and Khairpur, acceded to Pakistan (1948), and after 1952 became part of the Baluchistan States Union, with the Dham no longer an independent ruler but receiving a privy purse from the central government. In 1955 all the provinces of West Pakistan were merged into one unit, with Las Bela as a District of Kalat Division under a Deputy Commissioner; but after 1960 Las Bela District was transferred to Karachi Division. According to the 1961 census, Las Bela District had a population of 90,826, excluding non-Pakistanis, and the town of Bela one of 3,139 (*Population census of Pakistan 1961, District census report, Las Bela, Karachi* 14).

(C. E. BOSWORTH)

LASHKAR, the Persian equivalent of the Arabic *ashkar*, *ghund* [q.v.], or *ghaysh* [q.v.], and the term normally used by the Indian Muslim rulers for army. Though armies were generally organised according to the Perso-Turkish military traditions of the Ghaznavids and the Saljuks, Mongol traditions were also assimilated later into the subsequent plans for the reorganisation of the *lashkar*.

Composition and organisation. The *lashkar* of the Delhi Sultans, that of the 9th/15th century provincial dynasties, and that of the Mughals was divided into the cavalry, infantry and the elephant corps, the cavalry forming its backbone. Following the Ghaznavid, Ghurid and Saljuqid traditions, both the Sultans and the Mughal emperors maintained a multi racial professional cavalry, not neglecting to include even the leaders of the Hindu racial and ethnic groups.

In the 7th/13th century, the Delhi cavalry, or the standing army at the capital, was variously known as the *ashk-i halab*, *ashk-i halab*, *halab-i sulh*, or simply *ashk-i halab*. Some Sultans also recruited a slave corps personally loyal to themselves, but they invariably proved disastrous to their successors. The *ghandars* (king's body-guards) performed both military and police duties and were counted as members of the military force. Apart from the *ashk-i halab*, the *shih-i* [q.v.]-holders also recruited cavalry from the regions in which they were posted, or from the garrisons under their command. The army of the *shih-i* holders was known as the *ashk-i al-shih*, or later, as the *ashk-i shih-i mamalik*.

A separate army was kept at strategic points, both in old and newly-bust forts along the River Indus in order to stop the Mongol incursions. Sultan Balban [q.v. in Suppl.] built strong forts even at Djalali, Patiyali, and in other predominantly Hindu areas east and north of Delhi, in order to open up roads

and communication with Oudh or Awadh [q.v.]. He manured these forts with Afghans, who were given fertile land to farm. The commanders of the forts remained as *shih-i*-holders, but the soldiers were encouraged to develop a personal interest in the land as landowners.

Bughra Khan, a son of Balban, is said to have informed his own son Kaykubad, who succeeded his grandfather Balban as the Sultan of Delhi, that a *shih-i* should be in control of ten horsemen; a *shih-i* should command ten *shih-i*-holders; an *amir* should be a commander of ten *shih-i*-holders; a *malik* should have authority over ten *amirs*, and a *shih-i* forces should control contingents of ten *maliks* (cf. Durr-i al-Din Barani, *Tarikh-i Firuz Shahi*, Bibl. Ind., Calcutta 1860-2, 145). This is not to say, however, that the armies were organised according to a decimal system, but it was an ideal which the Sultans wished to implement, because of their growing awareness of the decimal chain into which the Mongol army was divided. Sultan 'Alai' al-Din Khilji, however, did re-organise his army on that basis, and the Tughluks are known to have continued the decimal system, for we are told by al-Umari's *Masalik al-ansar fi mamalik al-ansar* that, in Muhammad b. Tughluq's reign, the *shih-i* commanded 10,000 horsemen, the *malik* 1,000, the *amir* too, and the *shih-i* *shih-i* less than 100.

The head of the military administration was known as the *shih-i mamalik*, or the *shih-i din-i* *ard* [see 1571-80, 'ard']. As a minister, he was second only to the wazir or the Prime Minister. In the reign of Balban, the *shih-i mamalik* was known by the title *shih-i* *ard*, the first word being of Hindi origin. Amir Khusrav's maternal grandfather, 'Imad al-Mulk (pillar of the state), was Balban's *shih-i* *ard*, and had a very keen sense of his responsibility. Later, in Firuz Shah's reign, the *shih-i mamalik* was given the title 'Imad al-Mulk.

The *shih-i mamalik* was the principal recruiting officer for the Sultan's standing army (*ashk-i halab*): he inspected the armaments and horses of the cavalry at least once a year, kept their descriptive rolls (*daftar*), and recommended promotions or punishments accordingly. The *shih-i mamalik* was also responsible for the internal organisation and the discipline of the *ashk-i halab* and the commissariat. The leading *shih-i*-holders appointed their own personal *shih-i*.

Fakhri-i Mudabbir [q.v. in Suppl.] tells us how the *shih-i* assistants were required to note down the names and *hijab* of both the troopers and the foot-soldiers. As an inspection of the army was invariably held before its march to a campaign, the *shih-i* on such occasions was not expected to be too harsh, for disheartened troopers, according to Fakhri-i Mudabbir, were not very dependable (Fakhri-i Mudabbir, *Adab al-harb wa 'l-hakm*, ed. A.S. Khan, Tahrir 1346/1966, 276-8).

It would seem that the system of *shih-i* (branding of horses) which was known in the reign of the Ghaznavids had been abandoned by Ilutmish. It was reintroduced by Sultan 'Alai' al-Din Khilji, but Sultan Firuz Tughluq abolished the practice, as well as that of recording *hijab*. The latter was reintroduced once again by Sikandar Lodi, while Shih Shah also made *shih-i* compulsory (see *DAIR* v *TASLIMA* in Suppl.).

A remarkable change took place in the military organisation when Akbar introduced his monolithic military and civil service organisation, known as *mansabdar*. Although the system became more complex in

the reign of Shāhjahān, the basic framework of the *mansabdarī* system as instituted by Akbar endured. According to the *ʿĀmir-i Akbari* of Abu 'l-Faḡl, the Emperor divided the *mansab* (rank) of the *mansabdars* from the *daḥ-bāghī* (commander of ten) to *daḥ-hasārī* (10,000), reserving commands of 5,000 and above for his own sons. He intended to limit the *mansabs* to sixty-six, representing the value of letters in the name of Allāh, but in fact there were only over thirty-three grades. Akbar himself relaxed the rule about higher ranks, promoting Prince Salim to a *mansab* of 12,000 and two nobles to the ranks of 7,000. All *mansabdars* were required to maintain horsemen, horses, elephants, camels and carts, as fixed by their respective *mansabs*. By 1600/602 the *mansabs* were divided into *ghātī* and *sawār* and the institutions of *yak-aspah*, *dū-aspah* and *sh-aspah* were also introduced. *Mansabdars* of the rank of 500 were called *amirs* and those holding higher ranks were given other appropriate titles. Later in Shāhjahān's reign, only those who held the rank of 1,000 were known as *amirs* (referred as *Omrahs* by Bernier and other foreign authors).

The personal rank of *mansabdars* called *ghātī* was meant for calculating one's salary according to the sanctioned pay scale, and the *sawār* rank indicated the number of troopers and horses the *mansabdars* were ordered to maintain; for example, a *mansabdar* with a *sawār* rank of 5,000 was ordinarily required to produce 1,000 horsemen at muster. Troopers who were required to provide one horse were called *yak-aspah*, while those who undertook to provide two horses were called *dū-aspah*. Those obliged to provide three were known as *sh-aspah*. The *mansabdars'* and *amirs'* contingents contained all three types of troopers proportionate to the salaries they drew. Salaries were not allowed for the full twelve months; some drew them for much shorter periods. For example, a *mansabdar* with a *sawār* rank of 5,000 drawing his salary for twelve months was required to muster a contingent of 1,000 troopers, of whom 300 were *sh-aspah*, 600 *dū-aspah* and 100 *yak-aspah*, i.e. a contingent containing 2,000 horses. If, on the other hand, he were to draw his salary for only five months in a year, he would need to muster only *yak-aspahs*.

The contingents of the *mansabdars* were multi-racial, the number of recruits of different martial races being predetermined. Only the Rājapūts and Mughals were allowed to recruit troopers exclusively from their own racial groups and tribes.

Troopers wishing to enter the army had first to find a patron who generally belonged to the same race as himself, but as the empire expanded, the racial exclusiveness in the *mansabdar's* contingents broke down. The candidates had to furnish their own horses of a standard breed, as well as armaments, but the patron *mansabdar* also gave them horses for which deductions were made from the troopers' salary. The *mansabdar's* troopers were known as the *jāidārān* ("followers").

The appointments of the *mansabdars* from the lowest to the highest rank were approved by the emperor, and all of them were technically speaking directly subordinate to him. The head of the military administration was called the *mir-bāghī*, the Mughal name given to the *ʿamir-i mamūlik*. The *mir-bāghī* also held the status of a minister, and in that capacity was next to the prime minister. However, even the ministers' contingents were examined by the *mir-bāghī's* department and, the fact that their salary depended on the maintenance of those contingents meant that even the prime minister's salary was de-

pendent on the *mir-bāghī's* approval. The *bāghī's* department also recorded the descriptive roll (*ḡāra*) of the *mansabdars*, their troopers and horses. The breeds and the quality of their horses were examined and those that were approved were branded with different marks (*ḡāz*). A muster of troopers and horses was held periodically for physical checking and verification (*ḡāḡā*). Those who failed to muster their troops forfeited their pay or were heavily fined. The *mir-bāghī* was assisted by two other *bāghīs* who helped to check the evasion of rules, and to prevent fraud. The Mughal government, which depended mainly on the troopers of the *mansabdars* for their conquests and for the suppression of rebellions, remained efficient only so long as the monarchs were strong. Unfortunately, under the incompetent Mughal emperors who succeeded Aurangzīb, the government began to disintegrate.

There was a second group of troopers, superior to the *jāidārān*, who were known as *ahads* (from *ahad*, "one"). An *ahad* was commissioned especially to introduce suitable candidates for the *ahad*-ship, and a separate *bāghī* was assigned to examine their horses, brand them, and compile their descriptive rolls. The *ahads'* salaries were some 75% higher than those of the *jāidārān*, and their horses and arms were thus of a superior kind. During Akbar's reign, the *ahads* acted as his immediate servants. They were also assigned to non-military duties. The *ahad ghāī* ("belonging to the exalted king"), referred to as the "emperor's slaves" by Manucci, worked as bodyguards or defenders of the imperial person, and were also picked from amongst the *ahads*.

Another category of horsemen were known as *bagir-sawars*. They neither owned horses nor were enrolled as *jāidārān*. However, as they were fit for cavalry service, in times of emergency they were provided with horses and went into action. They were not, however, part of the regular cavalry.

Abu 'l-Faḡl also makes mention of a large army consisting of 384,558 cavalrymen maintained by the *zawāidārān* [q.v.]. Some *zawāidārān* made their contingents available to the emperors for suppressing rebellions; they also kept their localities free from robbers, and performed police duties in the villages, but in no way did this big army form a part of the Mughal regular fighting forces.

The foot-soldiers who were maintained within their infantry contingents by the Delhi Sultāns were known as *pāyaks*, and were mostly Hindus. They were good archers and were generally arrayed in front of the lines of horses, or around the elephants in order to prevent them from fleeing. As bodyguards and palace-guards of the emperors and princes, the *pāyaks* were deeply loyal to their masters and are known to have rendered singular services to Sultān 'Alā' al-Dīn Khaldī and Kūṭb al-Dīn Muḥammad Ghāī. Shū Shāh presented them with matchlocks, and Akbar's infantry contained 12,000 matchlockbearers (see *AKBID*, vi. India). They were divided into four grades with different salaries. Akbar also recruited into the infantry a caste of Hindu highway robbers called *mūṣā*, and named them *khidmatīyyas* (serving men). Their officer was called the *khidmat Rāy*. The *khidmatīyyas* were required to guard the palace and to control highway robbery. Members of many other hill tribes and Hindu martial clans were also induced to join the Mughal infantry. The matchlockmen and the archers formed a formidable corps of the Mughal army. For administrative purposes, Akbar used to assign contingents of foot-soldiers, paid by the imperial treasury, to some high *mansabdars*. They were

known as *piyāda-i dāghūl* and were classified as *nīm-nawārān* (half-troopers) in the descriptive rolls. One-fourth of the *dāghūl* foot-soldiers, used matchlocks, and the rest were archers.

Auxiliary tradesmen such as carpenters, blacksmiths, cotton-carders, stonemasons, leather workers, firework-makers, turners, diggers, miners, axemen, farriers, and *kāḍās* (bearers of different kinds of litters) were also classed as infantry. Indispensable as they were for constructing defensive works, postern bridges and helping in siege operations, they were also included in the infantry and trained in swordsmanship in order to defend themselves in times of need.

Elephants imported from India formed a formidable corps of the Ghaznavid army (see vii. As beasts of war, and *BARB. v. Persia*). The Dhill Sultans were also highly impressed with the utility of elephants in war. Balban considered each elephant as equal to 500 horsemen, and the Dhill Sultans lost no opportunity in obtaining the choicest elephants for their *piḥāḥna* (elephant stables). They also strove to keep those areas that supplied the best elephants, such as Bengal and Deccan, in their possession. One hundred and twenty war-elephants arrayed against Tīmūr's army by the feeble Tughluq Sultān are known to have struck panic even into that world-conqueror's army (see also *BARB. vi. India*).

Elephants were an asset to the army in battering the gates of strongholds. The warriors shot arrows or matchlocks from their positions on the elephants' back; the commanders who were seated on the elephants could be seen from a distance by the rest of the army and were able to instil confidence into their soldiers. However, when panicked, or severely wounded, the elephants became uncontrollable and would often trample their own array underfoot.

The Muslim rulers in India did not neglect the artillery (see *BARB. vi. India*). The Deccan Sultān of India, who had close contact with the Ottoman Turks, were pioneers in establishing firearm factories. The Gujjarāt Sultāns followed their example, and Sulṭān Mahmūd and Bahādur Shāh made good use of the Turkish gunners in their service. Bābur, the founder of the Mughal empire in India, secured a decisive victory over Ibrāhīm Lōdī, mainly due to the efficiency of his artillery. In India, he took a keen interest in having heavy guns cast by those gunners trained under the Ottoman Sultāns who were now in his service. Akbar also took a personal interest in casting guns, and recruited even Portuguese to develop his artillery. Many new types of guns were lavished by the Persian Faṭḥ-Aliḥ Shīrāzī in Akbar's reign. From the middle of the 15th/16th century, European adventurers drawing exceptionally high salaries began to hold superior positions in the artillery of the Mughals and other rulers. In the 16th/17th century, the British and French gunners made radical improvements in the casting of cannons and heavy guns, but the blacksmiths invariably remained Indians.

All the heavy guns were given pompous names, and some of them were so heavy that it took as many as twenty oxen to haul and several elephants to push them. Naturally, they could not cross boat-bridges and were only with great difficulty transported along the rugged routes. The light artillery consisted of several types of guns, variously known as *gāḍīnāl* or *ḥāḥādī* (guns transported on elephants), *shīfarnāl*, *ṣamḥārāk* and *shāhin* (swivel-gun or wall-piece). A special type of light artillery known as the "artillery of the stirrup", which François Bernier mentions, consisted of "fifty or sixty small field-pieces, all

of brass; each piece mounted on a well-made and hand somely painted carriage, containing two ammunition chests, one behind and one in front, and ornamented with a variety of small red streamers" (*Travels in the Mogul empire*, ed. A. Constable, Oxford 1841, 217-18).

The *Dārūgha-i iṭp-ḥāna*, or *mir diagh* ("head of the artillery department"), performed duties similar to those of the *baghāḥī*, insofar as the recruitment of artillerymen and the supervision of guns were concerned. With the growing importance of artillery, the *mir diagh* in the 12th/18th century became one of the most influential officers of the empire.

The Indo-Muslim rulers did not, however, take any interest in developing their navy. Mahmūd of Ghazna is known to have fought against the *ḍjāls* in 418/1027 by launching a flotilla of 1,400 boats on the River Indus. The Dhill Sultāns used boats provided by Hīndū chieftains only for transporting goods and men. The Gujjarāt Sultāns fought naval battles against the Portuguese. Bābur had enormous boats constructed and Akbar also constructed an impressive flotilla of huge boats some being shaped in the forms of different animals. Bengal, Kashmir, Thatta, Lahore and Alāḥābād were the main boatbuilding centres. Akbar also employed seamen, had pilgrim ships built, but was unable to establish a genuine navy. Early in Aḥrangzāb's reign, Mīr Djumla (q.v.) fought successful river battles against the races of Kāf Bihār and Aśānā, who had complete mastery over their rivers. The only navy that the Muslims possessed belonged to the *Ḥabshīs* who ruled the rocky island of *Ḍjandjira* (q.v. in Suppl.), 45 miles south of Bombay. They were most daring seamen, and until 1730 were victorious both against the English and the Marāṭhās (see further *BARB. vi*).

Numbers. The strength of the army of the Dhill Sultāns can only be roughly estimated and many of the figures in the sources seem to be exaggerated. We are told by Muḥādḍ-i Sirāj-i *Ḍjūdajjal* (q.v.) that in 658/1260, Sulṭān Nāṣir al-Dīn Mahmūd had collected 50,000 troopers and 200,000 foot-soldiers from Dhill and its vicinity to demonstrate his strength before Hōlāgā's ambassadors. Balban recruited a considerable number of trained soldiers into the corps of the *ṣawāḥir-i ḥāḥ* and made his standing army very strong. Troopers in 'Alā' al-Dīn *Khālajī*'s army numbered 475,000. Muhammad b. Tughluq's cavalry is said to have consisted of 900,000 troopers, some being stationed in the capital and the others in the provinces. In 730/1329-30 he is known to have recruited 570,000 troopers for his *Khurāsān* expedition. The army he sent against *Karājīl* consisted of 100,000 troops and a large infantry. On his first Bengal expedition in 754/1353-4, Firūz Tughluq commanded 90,000 troopers. Again, Firūz Shāh marched against Bengal with 80,000 troopers, 470 elephants and an exceedingly large number of foot-soldiers.

According to Bābur, Ibrāhīm Lōdī had resources enough to have brought into the field 500,000 men, but actually took only 400,000 men and 2000 elephants with him. Bābur's army, on the other hand, consisted of only 12,000 men. Humāyūn fought the battle of Kanawaj against Shīr Shāh with 100,000 troopers, while Shīr Shāh commanded only half that number.

The total strength of the army of Shīr Shāh consisted of nearly 300,000 horsemen and 100,000 infantry, comprising matchlockmen and archers. Of this army, 150,000 troopers, 25,000 horsemen and 5,000 elephants were commanded by the king himself, the

rest serving at cantonments and in strategic places. The contingents of *shāh*-holders were also requisitioned whenever needed.

The Persian sources do not help us in calculating the number of Akbar's *mansabdārs*, but their number at the Emperor's death, given by De Laet as 2,967, seems approximately correct. According to Father Monserrate, there were "forty-five thousand cavalry, five thousand elephants and many thousand infantry, paid directly from the royal treasury" (J.S. Heyland and S. N. Banerji (trs.), *The commentary of Father Monserrate, S.J.*, Oxford 1922, 89).

Bernier says that the total number of cavalry in India was incredible, but he considered that the effective cavalry commonly about Awrangzib's person, including that of the *rājās* and Afghāns, amounted to 35 or 40,000 which, added to those in the provinces, formed a total of more than 200,000 troopers.

In 1057/1647, Shāhjihān's army consisted of 8,000 *mansabdārs*, 7,000 *shahī* and *barī-andāz* troopers, and 185,000 troopers (*ghulāmān*) belonging to the princes, important *amirs* and *mansabdārs*. This army did not include the troopers under the *pargana* officers. Of the infantry of Shāhjihān, which included matchlockmen and others who discharged heavy and light artillery, 10,000 were always with the Emperor.

Training and physical exercises, and uniforms. Before their admission into service, both the troopers and foot-soldiers had to pass a severe test of their competence. Fakhr-i Mudabbir gives the rules for training horses and for horsemanship in considerable detail, and works on archery as well as swordsmanship have also survived. This same author further discusses the advantages of different kinds of sports, such as wrestling, boxing, weight-lifting, disc-throwing and fencing for military training, and gives a detailed account of the advantages which the manoeuvring of stick, ball and horse in polo offered to the troopers. After entering into service, the soldiers had to maintain rather than improve their military skills through regular physical exercises, horse-racing (see *ḥusn-i ṭayr*) and polo (see *ḥawāṣ*). Balban took with him 1,000 horsemen and 1,000 foot-soldiers, expert in archery, during his regular hunting expeditions; Firūz Tughluq used to array his army in battle formation, even on his hunting expeditions. These expeditions and polo were an indispensable part of the life of the Mughal soldiers, officers, princes and emperors. The military parades and proper battle array were not possible without some training in combined movements, but regular drills of the soldiers do not seem to have been common.

The troopers are not known to have worn any uniforms. In the miniatures depicting the reign of the Mughals, they are seen wearing clothes of different colours, but in the 12th/15th century, some nobles seem to have introduced uniforms. The contingents were generally identified by the special marks with which their horses were branded.

Pay. Naḥmūd of Ghazna and his immediate successors paid their army in cash, but in the 7th/13th century the Delhi Sultāns assigned *shāh*'s (assignments of revenue of different regions) to their commanders for their personal maintenance and for that of the troops (*ḥaṣm-i aṭaf*) under them. Sultān Shams al-Dīn Iltutmish assigned the revenue of the villages around the capital and in the Doāb to the *ḥaṣm-i ḥab*, and the latter were also called *shāh*-holders. By the time of Balban, the surviving

troopers of the *ḥaṣm-i ḥab* and their descendants had become the hereditary owners of the villages. Balban ordered the resumption of the *shāh*'s of old men, widows and orphans into the *shāh* (*g.v.*) (= territory whose revenue was reserved for the Sultān's treasury), but later abandoned the scheme for emotional reasons. However, Balban's own *shāh* had expanded, and he was able to pay his own body-guards and troopers a handsome salary in cash.

The *shāh* and the Tughluqs reorganised their revenue system and determined the salary of the commanders and their troopers in cash. They then assigned its equivalent in the form of the revenue of territories in lieu of the salary. Al-'Umari states that the Syrian and Egyptian *shāh* system differed from that of India in the mode of making payment to the troopers. In Egypt and Syria, commanders assigned land directly to their troops instead of salaries, while in India the troopers were paid in cash. 'Alā' al-Dīn Shāhjihān resumed all the smaller *shāh*'s into the *shāh* and paid cash to his large army, recruited to meet the Mongol threat to his kingdom and to ensure further conquests. Two hundred and thirty-four *tankas* (*g.v.*) were paid annually by the Sultān to a well-trained and equipped trooper with one horse, 75 *tankas* extra being granted to troopers with two horses. To ensure that the troopers lived satisfactorily on their low salaries, he fixed the prices of all commodities, from horses to articles of daily use, making sure that supplies were not withheld.

Sultān Ghiyāth al-Dīn Tughluq also paid his large standing army in cash, and issued strict orders to the *shāh*-holders to refrain from reducing the salaries of troopers fixed by him. Sultān Muḥammad b. Tughluq made his commanders further dependent upon the local treasuries for their salaries, sometimes by appointing his own officers, and sometimes revenue farmers to collect the revenue from the *shāh*'s. Firūz Tughluq made all civil and military posts hereditary and paid them by assigning *shāh*'s, the revenue from which was known as *waḥḍ*.

The Afghāns found Firūz's policy highly compatible with their own tribal system, and assigned hereditary *shāh*'s to their commanders, who in turn sub-assigned smaller areas to their subordinates, who then paid the troopers by making similar sub-assignments. However, the monthly salary of ordinary troopers was fixed and the *shāh*'s were granted to the commanders on the basis of the total number of troopers and their monthly salary. Shāh Shāh, who in his youth had managed his own father's sub-assignment, was fully conversant with the abuses of the system. He reverted to the system of 'Alā' al-Dīn and paid his standing army in cash, personally supervising the recruitment and the fixation of the soldiers' salaries, which were paid in cash. Fraudulent practices were eradicated by making payment only to those whose horses were branded. The big *shāh*'s corresponding to provinces were managed by the Afghān tribal chiefs, but they were also ordered strictly to enforce the central government regulations in their respective administrative charges, including monthly cash payments to the troopers and the branding of horses.

Akbar and his successors paid their *mansabdārs* mostly by assigning them revenue from territories, called by the Mughals *ḡajir* (*g.v.*), although the term *shāh* was also used. Some *mansabdārs* were paid in cash, others partly in cash and partly in *ḡajir*. The salary schedules of *mansabdārs* were carefully prepared on the basis of their *shāh* and *sawār* ranks

(including *di-aspaḥ* and *sik-aspaḥ*) [see further *MANŠABDĀR*]. The available pay certificates of the *manṣabdārs* of Shāh-jahān's reign explicitly mention the amount of salary which they were allowed to draw to maintain themselves, their families and their personal establishments (*khāṣṣ*), and the amount meant to be paid to the *jibānān*. For example, in 1609/1650, Rā'o Karan was allowed to draw 4,700,000 *ḍāms* for his *ghāt* rank of 4,300 and 16,000 *ḍāms* for *jibānān* in his *shūbr* rank of 8,000. His fixed salary totalling 20,700,000 *ḍāms* was to be drawn from the revenue of *parṣandā* (q.v.) mentioned in the certificate (*Selected Documents of Shāh-jahān's reign*, *Deftar Diwān Haydarābād* 1950, 176-7). In Shāh-jahān's reign, the *manṣabdārs* from 5,000 to the lowest rank were subdivided into three grades in their *ghāt* rank, the *manṣabdārs* of the first grade drawing the highest salary.

The salary of the troopers was fixed according to the breed of horses they maintained. According to the *Al-faṣ-ḥ Akbarī* a *yak-aspaḥ* trooper was paid according to the following rates. If his horse was an 'Irāḳī, he received 30 rupees *per mensem*: if *murgannās* (nearly equal to 'Irāḳī, half-breed), 25 rupees; if Turkī, 20 rupees; if a *yābā* (the Indian-bred offspring of Turkī horses), 18 rupees; if a *Tād* (Indian cross-Arab breed inferior to *yābā*), 15 rupees; and if a *ghangā* (Indian-bred, inferior to *Tād*), 12 rupees. According to Bernier, early in the reign of Aurangzib the troopers with one horse did not draw a salary of less than 25 rupees per month. However, the *manṣabdārs* could pay an even higher salary, and in order to attract efficient troopers into their service, many *manṣabdārs* did so. Manucci strongly criticises discrepancies in payments to troopers, some of whom received 20 to 30 rupees, others forty, fifty, or a hundred. This inconsistency can be ascribed partly to the fact that Manucci's comments relate to the last years of Aurangzib's reign, and partly to the fact that he does not appreciate the fact that troopers maintaining more than one horse naturally received a higher salary.

The *manṣabdārs* were authorised to deduct 5% from the salary of the *jibānān* for miscellaneous administrative charges. A further deduction of one month's salary was made annually for the cost of horse and equipment supplied by the government to the troopers until the amount of the loan was paid off. The price of a trooper's horse charged by the government used to be 50% higher than their cost price, but since the government bought horses at competitive prices, the troopers did not suffer any loss, according to Abu 'l-Faḍl.

The *manṣabdārs*, *jibānān* and other government servants received rewards for their good work in the form of increments in salaries, cash prizes and additions to the *ḡiḡra*. Akbar introduced the system of granting loans to officers for their urgent needs. A rate of interest which doubled the original loan in ten years was charged. This usury was known as *mas'ūdāt* ('assistance'). The *manṣabdārs* who violated the rules and neglected their duties, for example by failing to muster horses of the breed for which they drew salaries, or by omitting to produce the number of horses stipulated for their *shūbr* rank, were fined according to a fixed schedule. Checks and counterchecks were introduced to prevent defalcation of government money through a machinery of rules and regulations requiring close co-ordination between the state departments and the department of the *mir bakhshī*.

Since the armies of both the Dillī Sultāns and the Encyclopaedia of Islam, V

Mughals were paid by the state, they were not entitled to receive the four-fifths of the *ghanimas* (booty) sanctioned by the *Shari'a*. Fīrūs Tughlūk is known to have distributed this portion of the *ghanimas* taken at Dillīnagar and Akbar took only one fifth into the imperial treasury, requesting the officers (*faṣṣḍārs* (q.v.)) to distribute the rest equitably amongst the army. However, as the booty gained by the *faṣṣḍārs* in local wars was never very great, the amount received by the troops was minimal.

Horses and elephants. The Indian Muslim rulers maintained the superiority of their cavalry, not only by acquiring superior breeds of horses through sea and land routes, but also by devoting their full attention to improving Indian horse breeds. From the Persian Gulf, Bahrain and the ports of the coast of southern Arabia were imported 'Irāḳī, Persian, Syrian and Arab horses. Overland trade brought in Tāṭār or Central Asian horses from the territories lying between the steppelands of southern Russia and the Oxus. The horses from Ghazna to Peshāwar compared favourably with these animals. The territories between the eastern Panjāb to north-western India, and from north-eastern India to upper Burma, contained the best horse-breeding grounds, although horses from these areas were considered inferior to those imported from foreign lands, and were sold at a lower price. Ibn Baṭṭūṭa says 'The people of India do not buy them [horses] for [their qualities in] running or racing, because they themselves wear coats of mail in battle and they cover their horses with armour, and what they prize in these horses is strength and length of pace. The horses that they want for racing are brought to them from al-Yaman, 'Uḡma and Fārs, and each of these horses is sold at from one to four thousand [silver] *ḍinārs* (*Riḡla*, ii, 374, tr. Gibb, ii, 479). This same author states here that the price of the cheapest Tāṭār horse in Muḥammad b. Tughlūk's reign was 100 silver *ḍinārs*, while the exceptional ones were sold for 500. Racehorses were therefore very dear.

Akbar reorganised the purchase of horses of foreign breeds by providing improved living conditions for the merchants and the horses they came to sell. Horses from 'Irāḳ, Arabia, Persia, Turkey, Turkistān, Badakhshān, Shīrwān, the lands of the Kirghiz, Tibet and Kashmir were acquired for the imperial stables. Soon, Indian breeding techniques were so greatly improved that the Indian horses could hardly be distinguished from 'Irāḳī or Persian breeds. Among the new horse-breeding regions, Kačch began to produce horses which exceed the Arab imports. Horses from the region between the Indus and the Jhelam were similar to those from 'Irāḳ. The horses in Akbar's stables numbered 12,000; the imperial stables were classified into several categories and the quantity of the beasts' fodder, the quality of their outfits, and the salaries of officers and servants appointed to look after them were fixed.

Under the Dillī Sultāns, the superintendent of the royal horses was known as the *khāṣṣbēg*, there being one for each wing of the army. Under the Mughals, this officer was known as the *shibēg* or *akhshibēg*. Akbar appointed a noble of 'Abd al-Rahīm Khānī Khānān's (q.v.) status as the *shibēg*. *Manṣabdārs* from the rank of 5,000 down to the senior *ahadis* were appointed as the *darūghas* (superintendents) of different stables. A big staff, which included senior officers on the list of *ahadis*, was appointed to carry out miscellaneous duties related

to the maintenance and improvement of the stables [see further, 1972a]. v. India].

The Ghūrid conquest of India was achieved by the exploits of the cavalry. The elephants in the *piṭhāna* [elephant stables] were acquired mainly as booty. However, it was after the Deccan conquests that the *piṭhāna* of Sultan 'Alā' al-Dīn Khwājā came to consist of ca. 2,000 war-elephants. The numbers increased during the reign of Muḥammad b. Tughluq, and the elephants seem to have been bought even from Ceylon. Firz also added to the number of elephants in his stable, but under his successors they were rapidly lost, to the extent that the last Tughluq Sultan faced Timur with only 200 war-elephants. In Akbar's reign, elephants were hunted in the forests of Āgra and Aḥmadnagar provinces, besides being acquired from Bengal and Orissa. The best elephants were to be found in the forests of Panma, near Būndī in Rājasthān. Dīshingir seized 69 elephants from Gujjarāt, but they could be bought from all over India; in Shāhjahan's reign, the first white elephant was bought from Pegu. Akbar introduced the breeding of elephants, abandoning the ancient superstitious belief that to do so was unlucky, and his successors continued to follow his lead. He also classified elephants into seven categories, and framed rules for their feeding and general improvement.

Under the Dīlī Sultāns, the *khāna-yi āl* was the supreme head of the *piṭhāna*. Again, there was one for each army wing, and the *khānas* were each assisted by a large staff. From the reign of Akbar, the elephants were classified into *khāṣas* "curries" or "rings" of tens, twenties and thirties, and placed under the control of superintendents known as *faṣḥdars*, who were also ordered to train them to stand firm at the sight of fire and in the noise of artillery. Several *khāṣas* of elephants were placed in the care of some important nobles, and 102 chosen elephants known as *khāṣa* elephants were placed in the care of one such person, with the expenses being met from the imperial treasury.

Bibliography: See the bibls. to such articles on Indo-Muslim history as *THE SULTANATE AND ARMY* and those on military topics such as *ARMS*, *WAR*. As boasts of war, *ghazāl*, *ghazāl*, *ghazāl*, *ghazāl*, *ghazāl*, etc. Material on army organisation in India can be derived from almost all the general historical sources, principally in Persian (for which see Storey, I, 68-157, 433-780, and Storey-Bregel, 294-309). Some particularly useful manuscript sources are as follows: Chātrāmāl, *Dīwān-i ḥisāb-i al*, Aligarh: University A.S. LASHKAR-I BĀZĀR, the name given to a complex of military encampments, settlements and royal palaces in southern Afghanistan which apparently flourished in the 5th/11th and 6th/12th centuries. The site (lat. 31° 38' N. and long. 64° 20' E.) is an extensive one, stretching along the left bank of the Helmand River [see HELMAND] near its confluence with the Arghandāb with the mediaeval Islamic town of Bust [q.v.], modern ruins of Kal'-yi Dist. at its southern end, and the modern, new town (named after the mediaeval complex of buildings) of Lashkar-gāh at its northern end. The western edge of the complex is thus bounded by the river and also protected by a cliff running down to the water.

1. **History.** The existence of ruins on this site was vaguely known to H.W. Bellow in the mid-19th century, probably from hearsay when he was travelling in the region; but its existence was only made known to the academic world through the discovery in 1945 and the subsequent five seasons of excavations in 1949-52 by the Délégation Archéologique Française en Afghanistan.

The complex is not mentioned in mediaeval geographical and historical sources. Al-Mukaddasī, 304/5, says that "ḥaṭṭ-i farasakh [from Bust], in the direction of Ghazna, there is something like a town, called al-'Askar, where the ruler (al-sulṭān) resides". Since al-Mukaddasī completed his *Aḥsan al-takdīm* in 375/985, although later additions may have been made to it, it seems that Lashkar-i Bāzār was an early creation of Sebuktigin, built to secure his newly-

acquired province of Zamin-Dāwar and Bust—the founder of the Ghaznavid line had seized this from the Turkish *ghulām* ruler there, Baybars, in 367/977-8 (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 950-1040*, Edinburgh 1953, 37)—but it is not excluded that Baybars himself had buildings on this site, and a coin of his dated 359/969-70 has been found there, see Gardin, *Lashkari Bazar*, II, 170-1. Whether Muḥammad's al-*Askar* is responsible for the form of y.o. of the *Ḥudūd al-Ṣalām*, 110, § 24.11, "a small district between Bust and Zamin-Dāwar", as suggested by Minorsky, *comr.* 343, is uncertain. However, our site must be that mentioned by the Ghaznavid historian Bayhaḳī, *Ta'rikh-i Mas'ūdī*, ed. Ghānī and Fayyād', Tehran, 1324/1945, 149, Russian tr. Azenda', Moscow 1969, 221, when he speaks of the building operations of sultan Mas'ūd b. Mahmūd (421-32/1031-41): "At Bust, by the polo-ground of the military encampment (*laghkar-gāh*) of his father the *amir*, he had several additional constructions made; some of these are still visible today" (sc. in ca. 431/1059).

The main, or southern palace, shows signs of two successive burnings; after the first one of these, there was a general restoration, but after the second, the whole palace was definitely abandoned. It seems reasonable to assume, with Schlumberger, that the first conflagration was the work of the vandalistic Ghūrīd sultan 'Alā' al-Dīn Husayn b. 'Alā' al-Dīn Husayn, called Dīshān-sūg, in ca. 545/1150, when he sacked Ghazna, temporarily expelled the Ghaznavid sultan Bahram Shāh to India, and then marched back to Ghūr via Zamin-Dāwar and Bust; Dīshān-sūg states that he devastated the palaces and public buildings of the Ghaznavids at Bust (see Bosworth, *The later Ghaznavids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1206*, Edinburgh 1977, 118-19). When, soon after these events, the last Ghaznavid sultans abandoned their Afghan possessions and retreated to the Panjab, the Ghūrīs or their governors doubtless restored the buildings at Lashkar-i Bāzār and installed themselves there in the Ghaznavids' stead. Schlumberger dates certain alterations even to the post-Ghūrīd period, that of the *Khawārazm-Shāh*s. The second and fatal burning thus probably dates from the ravages of the Mongols in southern Afghanistan in spring 617-18/1221; Nasawī, *Surat al-Sultān Jalāl al-Dīn*, ed. Houdas, 64-5, tr. 109-10, speaks of a siege by the Mongols of Kandahār at this time (doubted, however, by Barthold, *Turkistan down to the Mongol invasion*, 438). Yet undeniably, life no longer continued on any discernible scale at Lashkar-i Bāzār.

2. The buildings. Lashkar-i Bāzār includes three palace buildings along the cliffs of the Helmand, the most impressive of which is the southernmost one, constructed of unbaked brick on foundations of fired brick and with wooden bonding; fired brick was also used in the reception hall and for doorways. The palace is built round a vast central rectangular courtyard with four *iwān*s. After the first burning of the palace, modifications and repairs were made to the palace and the fire-blackened remains of the original main entrance were masked by a new entrance with decoration of geometric panels and epigraphic bands, on one of which are the remains of a date, 552/1155-64, probably indicating a reconstruction by the penultimate Ghaznavid sultan, Khusrāw Shāh, the last of his family to reign in Afghanistan, or by his Ghūrīd successors.

At the north of the palace, backing on to the

Helmand, is the very interesting reception hall of the palace, the most monumental of the rooms in style and the most richly decorated, including with panels of brick ribbon work with stucco insets. But especially important from the viewpoints of cultural and artistic history is the fact that the friezes running round the inner faces of the brick piers in the hall contain mural paintings (these have now been removed, for safety, to the Kabul Museum). The remains of 44 figures are visible, and with those probably to be found on the missing north side, must have numbered some 60 all told. They depict frontal views of the bodies of what must have been the royal guards, the corps d'élite of Turkish military slaves of sultans Mahmūd and Mas'ūd [see *ghulām*, II, Persia]. These warriors wear rich tunics and boots, and bear the shafts on their left shoulders of what may well have been maces, the mace (*gura*) being a favourite weapon of Mas'ūd himself, according to Bayhaḳī, and a weapon of heroes in the *Shāh-nāma*. The faces are unfortunately badly damaged, but a painted fragment found elsewhere in the palace shows a beardless, smooth-faced youth with what are generally regarded as "Mongolian" (here, of course, "Turkish") features. The appearance of these figures accords remarkably well with the literary descriptions in e.g. Bayhaḳī of the rich uniforms, jewelled weapons, etc. of the royal *ghulāms* when paraded on ceremonial occasions such as the reception of envoys and ambassadors.

Leading to the southern palace was the street of the army bazaar, 500 yds./half-a-kilometer long and lined with shops, judging from the absence of post-Mahmūd coins found there, this bazaar may well have been abandoned after that sultan's death. Also to the south of the palace was the great mosque (the southern palace itself contains a small, richly-decorated mosque, obviously for the private use of the sultans and their entourages), constructed originally from good-quality fired brick, but rebuilt, like the southern palace, after the first burning in a less careful manner. Schlumberger places the original mosque within the early Ghaznavid period, and it is of obvious interest as one of the very few pre-Mongol period mosques in Afghanistan.

The placing of all these buildings of the Lashkar-i Bāzār complex in their proper architectural and art historical contexts raises many problems, and a full evaluation can only begin to be made now that we have the long-awaited volume in the DAFA *Mémoires* series on the architecture of Lashkar-i Bāzār (see *Bibl.* below). Schlumberger was reminded of the plans of Sāmarrā palaces ("l'architecture de Lashkar-i Bazar apparaît, à plus d'un égard, comme un représentant provincial et tardif de celle de Abbadides"), but noted eastern Iranian features, such as courtyards with four *iwān*s and the ornamental use of brick (Syria, xxix [1952], 268-9). J. M. Rogers has noted the early appearance in the southern palace (the early Ghaznavid construction) of the angular, interlacing strapwork in stucco characteristic somewhat of Seljuḳid decoration (*The 11th century—a turning point in the architecture of the Mashriq*, in D. S. Richards, ed., *Islamic civilisation 950-1150*, Oxford 1973, 221-3). The mural paintings reminded Schlumberger again of Achaemenid representations, but he observed also that the heritage of the Buddhist art of Gandhara and northern India, much nearer in place and time to 5th/11th century Zamin-Dāwar, should clearly be taken into account. Finally, it should be noted that the pottery finds at Lashkar-i Bāzār give a valuable conspectus of

local artistic trends in this field for the period ca. 1000-1200.

(C. E. Bosworth)

AL-LĀT, name of one of the three most venerated deities of the pre-Islamic pantheon, the two others being Manāt and al-'Uzzā [q.v.].

The deep attachment felt by the Thaqif towards al-Lāt, the Aws and the Khazraj towards Manāt and the Quraysh towards al-'Uzzā, constituted the greatest obstacle in the path of the peaceful implantation of Islam in the regions of the Hijāz. This obstacle was so difficult to overcome that the Prophet seems, for a brief period, to have consented to the continuation of the cult of these three deities, called al-ghharibāt al-'ulā (see T. Fahd, *Pantheon*, 38-90, but cf. al-Kur'ān, B, in *four*).

The cult of al-Lāt, the deity of the Thaqif, descendants of the Thamūd (*Aghāni*, iv, 74, 76; al-Tabarī, I, 957), is attested over a vast area of the pre-Islamic Near East. She was at the same time the goddess of shepherds, from the Hijāz to Šafā, and that of caravan-travellers, from Mecca to Petra and to Palmyra. Her name is recorded in the most remote antiquity, and it is to be found, in various forms, in the works of Herodotus (cf. *EP* s.v. *Alilat*), also in Akkadian texts (*Al-la-tum*: Tellqvist, *Götterepitheta*, 259; J. Bottero, in *Le antiche divinità semitiche*, 56). Sabaite texts (R. Dussaud, *Pénétration*, 56 ff.), Palmyran texts (D. Schlumberger, *La Palmyrène du Nord-Ouest*, 63, 71, 73), Nabataean texts (M. de Vogüé, *Palen*, 119. W. R. Smith, *Kinship*, 295 ff.; J. Wellhausen, *Reste*, 33), Aramaic texts (Pognon, in *AFOB*, v [1912], 77-8). The Arabic form of her name dates back, at least, to the time of the Khuzā'ī 'Amr b. Lubayy, the reformer of the seditious cult in Mecca at the beginning of the 3rd century A.D., a period for which there is evidence of the cult of al-Lāt in Nabataea, in Šafā and in Palmyra. Now it is known that this reformer spent some time in the land of Moab, whence he would have brought back statues of various divinities, including that of Hubal [q.v.].

The precise meaning of the name of al-Lāt remains unclear. Two interpretations deserve consideration.

The first derives it from the root l-l-l Arab lex-cographers are unanimous in considering that al-Lāt is derived from the verb *lala*, "to mix, or knead, barley-meal (*sawīḥ*). It has been shown, in *Pantheon* (112 ff.), that this interpretation emerges from a revealing association with the "idol of jealousy" erected in the temple of Jerusalem (*Ezekiel*, v, 75), which can be none other than Astarte (cf. *II Kings*, xxi, 7; *xxiii*, 6-7, 13-14; see Dussaud, in *Syria*, xxi [1940], 359-60; Ch. Virolleaud, in *JA*, cxxxiv [1943-5], 478-79). The "oblation of jealousy", offered by the husband who suspected his wife of infidelity, was made with barley-meal. Now Ibn al-Kalbi, *K. al-Aḡnām*, 10, speaks of a *lāt al-sawīḥ*,

"kneader of barley-meal", who was a Jew and after whom was named the square rock of Tā'if, symbol of al-Lāt. From this it may be deduced that a ritual similar to the Hebrew ritual of the "oblation of jealousy" was practised in the vicinity of the sacred stone, symbolising al-Lāt, and that the latter was regarded as one of the multiple incarnations of the Semitic Ba'la of which Astarte was the most eminent. This is further evidence of the Semitic tradition of the anonymity of gods, to whom epithets were given reflecting the sites or the forms of worship dedicated to them.

The second, treating al-Lāt as consort of Allāh or of his prototype Il or El, simplifies the problem, taking al-Lāt to be a feminine form of Allāh or al-Ilāh, unnamed god of the pre-Islamic Arab pantheon (*Pantheon*, 41-4).

Either of these etymologies is possible: the first responds best to Arab traditions, the second is more in line with Semitic tradition in general (cf. details in *Pantheon*, 111-10).

Al-Lāt is seen at Tā'if displaying the most primitive attributes of the Semitic Ba'la. Originally, she was represented by a white stone, in contrast to the black stone of Mecca; subsequently, she was associated with a sacred tree; then a sanctuary was erected for her, and this became a place of pilgrimage. But the rivalry between Tā'if and Mecca and the commercial and economic predominance of the latter prevented the goddess of the Thaqif from making Tā'if a centre of assembly for all the Arabs. The Mecca of Quraysh, the reformer of the pilgrimage and architect of the Quraysh confederation, rapidly eclipsed the other metropolises of the Arabian Peninsula. Thus al-Lāt was unable to preserve anything of her former prestige other than the epithets *rabba* "mother of the gods", in her role as goddess of fertility, after the manner of Ba'la, of whom she is an incarnation, and *qāḥiya*, "pre-eminent goddess", an epithet still reflecting the important cultic role that she had played among the Arabs of the Nabataean, Sabaite and Palmyran regions, as goddess of war (see refs. in *Pantheon*, 111, n. 2).

In order to consolidate the economic power of Mecca and to reinforce its role as holy city of the Arabs, Quraysh brought together in the Ka'ba all the divinities of Arabia. The triad which emerged, namely Manāt, goddess of the northern Arabs, al-Lāt, goddess of the Arabs of the Najd, and al-'Uzzā, goddess of the Quraysh confederation, represent the three political forces which co-existed in central and northern Arabia, from the period of Quraysh (5th century A.D.) to the advent of Islam. These three deities correspond to the theophanies of Venus, morning star and evening star, very often confused with the Semitic Ba'la and worshipped by the Arabs since time immemorial.

Although al-'Uzzā was the last-born of the triad, she soon became the most important, in her role as tutelary goddess of the sanctuary of Mecca (see details in *Pantheon*, 118 ff.). In a parallel development, the three sacred trees (*sawwāt*) which stood before the sanctuary of al-'Uzzā at Naḥla, on the road leading towards 'Irāq and Syria, were assimilated to the three divinities (*Pantheon*, 164).

The predominance of al-'Uzzā over Manāt and al-Lāt is expressed by the dual al-'Uzzatān, "the two 'Uzzās", which designated them (*Hamāsa*, 190, l. 15; *Pantheon*, 118, n. 3). This predominance is also apparent in the Nabataean region, where al-Lāt had been a favourite goddess, as a result of the

expansion of Meccan commerce inside Nabataea, the birthplace of Kusayy.

LATİFİ, 'ABD AL-LATİF ÇELEBİ, a Turkish biographer, litterateur and poet who lived in the 16th/17th century. Born in Kastamonu in 953/1541, according to his own statement (*Taḡhkirā*, Istanbul 1314/1896 7, 135, 297), he belonged to an old and a noble family called the *Khawāṭib*-*adels* and his forefather, Hamdī Celbi, was a poet who lived in the time of Mehemmed II, the Conqueror. He states in his *Taḡhkirā* (198) that he started writing poetry when he was seven years old. He began to receive his education in Kastamonu, but soon gave it up ('Aḡhlik Celbi, *Muḡdīr al-ghuḡarā'*, ms. Istanbul Üniversitesi, TY. 2406, I. 130b), and worked as an accountant and a secretary. But at the same time, he spent much effort to educate and train himself, and acquired a considerable reputation in poetry, and especially in the high culture of his time. He came to Istanbul in his youth, and was at once appointed secretary to the *Imāret* (i.e. the public kitchen for the poor) in Belgrade. After a long stay in Rumelia, he returned to Istanbul (950/1543), and served again as a secretary for some *imārets*. At that time Sehī had written his *Taḡhkirā*, which had aroused great interest among the literary circles, and with the encouragement of his friends (*Taḡhkirā*, 129) and following 'Aḡhlik Celbi's ideas, Latīfī completed his *Taḡhkirā*, clearly his most important work. In 953/1546 Latīfī presented this work to Süleyman the Magnificent, and as a result was appointed secretary to the *ṣawf* of Abū Ayyūb al-Anṣārī, the trustee of which was Taḡhīdīllāh Yaḡhī, the famous Turkish poet, and in 960/1553 he was occupying this post ('Aḡhlik Celbi, *Kūnk al-akhbār*, Ist. Üniversitesi, TY. 9359, f. 416a). Later he worked in similar jobs in Rhodes and Cairo. 'Aḡhlik Celbi, who completed his own work in 974/1566-7, relates that Latīfī spent his time composing poetry and belles-lettres, and above all in religious duties. Having changed the introduction of his *Risāla-yi awḡāf-i Istanbul*—which in fact had been composed in his youth—he presented it to Murād III in 982/1574, expecting some gifts, but it is not certain whether he was recompensed. Latīfī spent his declining years in Istanbul (Hasan Celbi, *Taḡhkirā*,

ms. Ist. Üniversitesi, TY. 1737, ff. 865 b, 866a). He must have died on 25 Ramadān 990/23 October 1582, probably on his way to Mecca for pilgrimage. He had been in Egypt, and his ship was wrecked on its way to Yemen (Kafawī, *Ras-nāma*, ms. Ist. Üniversitesi, TY. 4098, I. 105a, and a letter written to Masīḥ-zāde, who arrived at the disaster). Latīfī says in his *Risāla-yi awḡāf-i Istanbul* (f. 60b) that he was 35 years old when he finished this book, i.e. this was in 951/1544-5; hence his birth date must have been 896/1490-1, making him 94 lunar years old when he died.

All through his life Latīfī complained that he had never been appreciated properly. He did not have a comfortable life, for he had never been pushing and synophantic; but he expected that others would have realised his literary ability.

Although Latīfī mentions in his *Taḡhkirā* that he composed twelve books, treatises and literary compositions, only the following seem to be extant: (1) the *Taḡhkirāt al-ghuḡarā'*; his most important work, generally considered as the second finest biographical work (after 'Aḡhlik Celbi's) in Ottoman literature. He states that ten biographical works were composed in his time, but none of them received attention and fame or were widely read (*Taḡhkirā*, 302). Probably they were all incomplete, pioneering attempts in this field. The *Taḡhkirā* consists of an introduction, three chapters and a conclusion. In the first chapter, he mentions poet *ṣawāḡs* of Anatolia who were brought up in or emigrated to Anatolia. In the second, he speaks about Ottoman sultans who engaged in poetry. In the third, the main part of the work, Latīfī mentions, in alphabetical order, the names of 300 poets (*Taḡhkirā*, 372) who lived from the reign of Murād II (824-55/1421-31) until 950/1543. The book is arranged alphabetically (*awḡḡam*), a method which Latīfī indicated in Turkish biographical works, whereas Sehī's and Nawāḡ's had been arranged by *ṭabaqāt* or generations, so that Latīfī's *Taḡhkirā* became the bridge between the two types. Latīfī took this idea from 'Aḡhlik Celbi, but applied it in his book before him. Some criticisms were, however, made about his work. One was that Latīfī did not include poets of his own time in the *Taḡhkirā*. From the early copies of the work (e.g. Kayseri, Rūḡd Efendi Libr. 1160, copied before 957/1550, and another one which stems from the above, Ist. Üniversitesi, TY. 2564, copied in 968/1561), it can be deduced that two redactions of the work were in existence and that the early copies did not have Latīfī's autobiography. The author later included it, as well as notices of some other poets not previously included. By doing so, he improved the text and also replied to the criticisms of those whom he calls *ikhḡmā-i fihd u hasad*, "the hateful and the jealous ones". 'Aḡhlik Celbi relates that Latīfī's work also became nicknamed the *Kastamonu-nāma* (f. 133a), for the author found ways to connect some poets to Kastamonu, whether or not they had been born in the city; but he adds that Latīfī's *Taḡhkirā* is most valuable and quite different from Sehī's one. Hasan Celbi regarded the style as rather dull (Hasan Celbi, *Taḡhkirā*, f. 263b); hence 'Aḡhlik took it upon himself to answer all unfair criticisms (*op. cit.*, 415b). The work is undoubtedly important, not only because of its form, but also because of the fact that, with this work, for the first time literary criticism and assumptions were dealt with in this Ottoman poetic biographical genre. It accordingly soon became a very popular reference book, considered to be reliable. It was edited by Ahmed *ḡhawet* under

the title of *Taḡhkirā-yi Latîfî* (Âḫr-i aslîf series, no. 9, İstanbul 1314/1896); H. Theodor Chabert summarised it in German (*Latîfî oder biographische Nachrichten von vorzüglich Türkischen Dichtern nebst einer Blumenlese aus ihren Werken*, Zürich 1800); another translation into German was done by O. Rescher (*Latîfî Taḡhkirā*, Tübingen 1950; this last translator referred to 9 old mss. of the work, together with the edited text. (2) *Risâla-yi aṣafî-i İstanbul*. As the title indicates, the work is a brief description of the natural beauties, the historical buildings and monuments, etc. of İstanbul, in short, a physical description of the city and its spiritual life in the 10th/16th century, written in an artistic style. The work is quite valuable in that Latîfî's observations reflect the thoughts and the feelings of his youth. As he says in the *ḥakāma* or conclusion, he was then spiritually in confusion; at times acting like a vagabond and at others behaving piously. The text is adorned with poetry, and Latîfî claimed that he had invented a new style in prose writing; İstanbul was the most proper topic for such a purpose, in order to display a successful sample of his creative style (*Taḡhkirā*, 300-1). He later revised the work, and with a new introduction, presented it to Murād III. (3) *Fuṣṣat-i arba'a* (*Musṭafā; Muḥāsara?*), an artistic description of the specialties of the four seasons, written in a mixture of prose and poetry. It was first published in the *Asiye* newspaper in instalments and then as a book under the title *Musṭafā-yi Latîfî* (İstanbul 1287/1890). (4) *Şehzade al-ḥakīm*, a Turkish translation of 100 *ḥadīṭs*, composed in verse. (5) A Turkish translation of 40 *ḥadīṭs*, also in verse, having much subject-matter in common with the previous one (ms. in Şehid Ali Paşa Libr. 272, f. 99b-103a). (6) *Naps al-faṣāḥiye* (*Latîfî-i maḥṣara wa-ḥamāḥiye maṣnū'a*), a versified Turkish translation of 207 speeches of 'Alī b. Abī Ṭālib (İstanbul Arkeoloji Müzesi Libr., 342, ff. 40b-66b). (7) *Asma' suvar al-Kur'ān*, a poem giving the names of the stars of the Kur'ān in 29 couplets (ms. 1st. Üniversitesi, TY. 902, f. 115b-126a). The following works are now known only by name: (8) *Dīwana* (*Taḡhkirā*, 300). (9) *Raḥīyya-yi arḥe* ('Aḫliḳ Celāli, op. cit., f. 133a, 'Alī, op. cit., f. 145b), very likely the first chapter of the *Fuṣṣat-i arba'a*. (10) *Asma' al-furāḥin* Fāḫa ('Aḫliḳ Celāli, loc. cit.), possibly the same work about the grand vizier Furāḥin Fāḫa, *Wāḳ-i Aḫṣa-nama*, which 'Alī enumerates. (11) *Asis al-fuṣṣat* (*Taḡhkirā*, 301).

From the contents of his works, Latîfî was apparently not a first-class poet, but a very good critic who had the power of discernment, wide knowledge in his field and, above all, a fine literary taste. As he states in the *Taḡhkirā* (300-1), he brought into being a new style in prose by adorning the text with proverbs, parables and phrases, etc., just as Naḡḡālî had done in verse a century before. His works are in fact good examples of rhymed prose, displaying a mature style, with balanced sentences, ordered thoughts and fluent language, without such defects as *taḥkīd* or obscurity, *taḥḥīd* or concatenation and *ḡayr-i ma'nās* or unaccustomed words.

LATITUDE AND LONGITUDE [see *ḡURRAḤ-ATYA*, KURRAT AL-ARD]

LAWATA, an important Berber ethnic group belonging to the family of Buṭr and whose eponymous ancestor was Lawā the Young, son of Lawā the Old. They are distant descendants of the Lebu (Leboi) of the Egyptian documents of the 13th century B.C., of the Lubin or Lehabit of the Bible, the Libuans (Libyans) of the ancient Greeks, of the Laganant of Corippus and the Leuathae of Procopius (5th century A.D.). It is probable that the Lebu (Leboi) of the Egyptians lived on the Mediterranean coast of Africa, between Egypt and the Gulf of Syrtis. As for the Libuans, they were for Ptolemy (2nd century B.C.) natives of Cyrenaica, but later their name became among the ancients a name for all the indigenous peoples who lived in the littoral zone of North Africa, from Egypt as far as the Atlantic coast inclusive. However, it appears that the real Lebu (Leboi) survived in the tribe of the Libuarkhae who lived, according to Ptolemy (2nd century A.D.), in the north of Marmarica, immediately to the east of Cyrenaica. Another section of the Libuans properly so-called, apparently Egyptianised, were the Libuegyptii whom Ptolemy places in Mareotis, i.e. in the region of Lake Marsia in Egypt, Mariut (Masyout) on our maps. It should further be added that some Greek and Latin authors, such as Polybius, Diodorus, Strabo, Pliny and Ptolemy mention still another branch of the Libuans, namely the people of the Libyphoenicians who were probably Libyans mixed with the Punic people, and who lived most probably, if one is to believe Pliny, in the province of Byzacena in present day Tunisia. Later on in the 6th century A.D. the Libuans properly so-called appear under the name of Laganant ('Lawatani, Ilagans ('Ilawa-s), Hilagnas ('Ilawa-s) or Leuathae ('Lewalae) in Tripolitania and in Tunisia. Procopius speaks of the massacre of the chiefs of the Leuathae at Leptis Magna (Lebda) in 543 by Sergius, Byzantine governor of Tripolitania, and he speaks of the penetration of this people from Tripolitania into Byzacena and of its alliance with the Berber king of this land, Antalas. This time, the Leuathae advanced as far as the town of Lares (Larbus on our maps), which they besieged. Procopius also speaks of a second invasion of this tribe into Byzacena in 548. On this occasion, the Leuathae occupied southern and central Tunisia, as far as the confines of the Proconsulate.

According to the ancient Arabo-Berber traditions, the Lawāts first established themselves after their arrival from Palestine in the Maghrib, in the period of Biblical David (sic), in the territory of Barḳa (Cyrenaica). It was this land which they occupied at the time of the invasion of the Arabs (in 21/642-3), at the time when the Islamisation of the Maghrib began. The Arabic sources tell us of the peace treaty that 'Amr b. al-Ās concluded in this year with the Lawāts of Barḳa. However, it is certain that some sections of this people, distant descendants of the ancient Libuarkhae and Libuegyptii, also lived in

this period in Egypt, and it is very probable that other Lawātān sections, who were descended from these Laguantan or Corippus and the Leuathae of Procopius and were established in the 6th century A.D., in Byzacena, continued to live, in the 7th century, in the southern part of Tunisia. Later on, from the 8th century A.D., branches of the Lawāta expanded into some regions of Algeria and Morocco.

It was set aside the powerful peoples of Mazāta and Sadriāta, to whom some Berber genealogists attribute a Lawāṭi origin, but who already constituted, in the 9th century A.D., separate ethnic groups, the Lawāta properly so-called were subdivided in the Middle Ages into several branches of which we know the names, thanks especially to the works of al-Yaʿqūbī and Ibn Khaldūn. They are as follows: 1. Māṣila or Māṣala مَاصِلَة (al-Bakrī writes this name by error مَاصِلَة Fāḍila); 2. Kaṭāfa; 3. Maḡhāḡa; 4. Wāhila; 5. Marāwa (this name might be identifiable with that of the Libyan tribe of the Marcote living in the south of Lake Mariut in Egypt); 6. Masʿūba مَسْعُوبَة (to be corrected as Maḡhūna; Ibn Hawkal, Maḡhūna); 7. Zanāra زَنَارَة; 8. Zakūda زَكُودَة; 9. Maḡarta مَاجَرْتَة; 10. Akūda أَكُودَة; 11. Dīādāna دِيَادَانَة (this tribe was a branch of the Lawātān group of Kaṭāf or Kaṭāfa). It is also highly likely that the following Berber tribes of Barka belonged to the Lawāta: 12. Faṭṭa فَاطَّة (Ibn Hawkal, فَاطِيَة Faṭṭa); 13. Siwa (al-Makrī, Siwa) and 14. Masūsa مَسُوسَة. This constitutes the evidence concerning this collection of Lawāṭi groups and their geographical situation, going from east to west, evidence which the medieval Arab authors, of the 2nd to the 9th/8th-15th centuries, have bequeathed to us.

Egypt. The numerous Lawāṭi groups dwelt in a nomadic fashion near to Alexandria and Cairo, to the west of these cities. Among these groups who paid the *ghharāḡ* to the Egyptian government, Ibn Hawkal mentions, in the 4th/10th century, a branch of the Lawāṭi group of Māṣila (Māṣala). It was apparently these Lawāṭa whom al-Idrīsī mentions as a tribe who ravaged the western banks of the Nile to the north of al-Bahnāsī. Later on, in the 8th/14th century, the plains extending from Alexandria to Cairo which constituted the province of al-Buḡayra were inhabited by another branch of the Lawāta, the Zanāra, a people who were nomadic, but who stopped in al-Buḡayra to sow their seeds at the approach of winter, as they passed through the environs of Barka. The Zanāra themselves paid a tax to the Egyptian government; Ibn Khaldūn says that, in a slightly later period (probably towards the end of the 8th/14th century), the chief of the Zanāra of al-Buḡayra called Badr (or more likely بدر Yedderi b. Salīm revolted against the Egyptian government, but after having been beaten by the Mamlūks, he took refuge in Barka. According to Ibn Khaldūn, some remnants of the tribe of Lawāta were also to be found, in his own time, i.e. towards the second half of the 8th/14th century, in Upper Egypt, where they pastured their flocks and cultivated the land. One should also note that the present locality of Maḡhāḡa situated on the road leading from Cairo to Asyūt, 180 km. south of Cairo, probably owes its name to the Lawāṭi tribe of Maḡhāḡa. A numerous Lawāṭi population occupied, in the 4th/10th century, the oases of Egypt, where the Lawāta created a state. According to al-Masʿūdī, the Lawātān master of the oases in 339/943-4 was called ʿAbd al-Malik b. Marwān; he had under his command several thousand

riders on horses and camels. According to Ibn Hawkal, who wrote at a slightly later period than that of al-Masʿūdī, the kings of the oases who belonged to the tribe of Lawāta, mistress of this region, traced their origin to the dynasty of ʿAlī ʿAbdūn (= ʿAbd al-Malik). Al-Bakrī also speaks of the Lawāṭi tribes established in the Egyptian oases. It appears that these Lawāṭi tribes of al-Buḡayra and the oases were distant descendants of the Libusēgypt of the ancients. It is perhaps due to this Lawāṭi branch that Ibn Haṣm attributes to the Lawāta a Coptic origin. Moreover, to the west of Alexandria, in Marmarica, al-Bakrī mentions the existence of about a thousand tents belonging to the Māṣila or Māṣala (al-Bakrī writes this name by error Fāḍila) and to the Banū ʿAlīdān, a Berber tribe who probably belonged to the group of Lawāta. A section of the tribe of Siwa or Siwa who probably belonged to the group of Lawāta lived, in the 9th/15th century, in the oasis of Siwa, the oasis of Ammon of the ancients and Santariyya of al-Idrīsī. The oasis of Siwa owes its name to this people.

Barka. This land was inhabited, in the 1st-4th/7th-10th centuries, almost exclusively by Lawāṭi groups. One of these groups, namely the tribe of Māṣila (Māṣala), was placed by al-Yaʿqūbī in the eastern part of Barka; they lived, in the 4th/9th century, alongside other peoples, probably Berbers. They were also to be found in the coastal region, mixed with other Lawāṭi groups, such as Zanāra, Maḡhāḡa, Marāwa and Faṭṭa (Faṭṭa), in the great *marṣa* of Wādī Maḡhūl, which resembled a town and which may be identified with El-Mechili on our maps. The dwellings of the Maḡhāḡa and some other groups of the Lawāta, such as Marāwa, Maḡarta and Zakūda, were also to be found near the road which linked Wādī Maḡhūl to the town of Barka, el-Merdj on our maps. The tribe of Marāwa left its name to present-day Marāwa, a locality situated about 30 km. to the east of el-Merdj. Further to the south-west, in the Djabal al-ḡharbī (probably Dahar al-Aḡmar and Dahar al-Abyad on our maps), al-Yaʿqūbī also places Berber groups of the tribe of Lawāta. In the second of these chains of mountains lived, according to this geographer, the Lawāṭi tribes of Zakūda, Maḡarta and Zanāra. It is also in this region that there lived a section of the tribe of Kaṭāfa which gave its name to Kaṣr Ketof, a locality mentioned by H. Barth (*Wanderungen*, 356). Farther to the west, in the environs of Bernik (ancient Berenike, Benghazi on our maps) lived three Lawāṭi tribes, namely Maḡhāḡa, Wāhila and Dīādāna, as well as the tribes of Siwa and Masūsa, who themselves traced their origin from Lawāta. The territory of the tribe of Masūsa extended from Benghazi towards the south and south-east. Indeed, the name of this tribe is to be connected with the Wādī Masūsa mentioned by Qudāma b. Dīaʿfar (d. 337/948-8) and by al-Bakrī who wrote a century later. According to the latter, there are in this valley "several ruined vaults and cisterns, to the number, it is said, of three hundred and sixty." In our opinion, it is to be identified with Mūsūs (Mūsūs) on our maps, a centre of encampments situated near an homonymous wādī, about 80 km. east of Sidi Barrani. A section of the Masūsa also lived in the town of Adjdābiya (Adjedabia on our maps), alongside Lawāṭi groups of Zanāra, Wāhila, Siwa and Dīādāna. The latter constituted the majority of the inhabitants of this town.

Tripolitanian. The inhabitants of Adjdābiya constituted in the second half of the 3rd/9th century, if one can believe al-Yaʿqūbī, the westernmost group

of the Lawāta of Barka. However, it appears that the ethnic situation of this part of Libya was a little different a century earlier, under the domination of the Ibādī Imām Abu 'l-Khaṭṭāb 'Abd al-A'ālā b. al-Samī al-Ma'āfirī who, in 140/757-62, was master of the whole of eastern Barbary. Indeed, it is known that an Ibādī chief belonging to the tribe of Lawāta, one named 'Umar b. Inkatān al-Lawāṭī, lived at first near the great road which led, following the coasts of this country, to the town of Maḡmadās (ancient Maconadas Syrtis or Maconades Selorani), i.e. in eastern Tripolitania properly so-called. Then he went to settle in the Djabal Nafsa, in western Tripolitania. It is also known that he became governor of the province of Surt (Syrtis) in eastern Tripolitania on behalf of the Imām Abu 'l-Khaṭṭāb and that he commanded a Lawāṭī brigade, the only one in the army of this imām. It may be supposed that these Lawāta of eastern Tripolitania constituted, in the 1st-2nd/7th-8th centuries, the remnants of the Leuathae, whose chiefs had been massacred at Leptis Magna in 543 A.D., by Sergius, Byzantine governor of Tripolitania, and whose main body then retired towards the south of Tunisia.

TUNISIA. Al-Ya'qūbī mentions the Lawāta (who are descendants of the Leuathae of Byzacena) in the town of Kābis (Gabès). According to al-Bakrī, the Lawāta were also found, in the 5th/11th century, in the environs of this town. Ibn Khaldūn places, in the 8th/14th century, some Lawāṭī groups in the mountain called Djabal Lawāta situated to the south of Kābis. It is to this branch of Lawāta that the family of Banū Mukhl, who were rulers of Gabès in the 8th/14th century, traces its origin. Another group of the Lawāta lived in the district of Nafzāwa, whose Ibādī population remained, towards the middle of the 3rd/9th century, under the government of Mīyāl b. Yūsuf al-Lawāṭī. We know it thanks to al-Shammākhī (10th/16th century), who also mentions the existence of a section of the tribe of Lawāta in the town of Turra (probably the ancient Turris Tamalensis) in the district of Nafzāwa. Another section of the Ibādī Lawāta lived, according to the same author, at Kaurīr in Bulād al-Djārid. The Lawāta were also found among the Berber tribes who were exterminated, in 224/838-9, by the Aghlabid general 'Isā b. Ray'ān al-Azī. This took place between the towns of Kaṣīliya (Tozeur) and Kaṣba (Gafsa). Another branch of the Lawāta of Tunisia, probably the descendants of this branch of the Leuathae who appear alongside the Lares (Lorbous) from the 6th century A.D., were found among the Berber-Ibādī tribes who followed, in 144/761-2, 'Abd al-Rahmān b. Rustam, the old Ibādī governor of Ifrikiya, in his flight from al-Kayrawān (Kairouan) to the central Maḡrib, before the army of the 'Abbāsid general Muḥannad b. al-Ash'ath.

ALGERIA. An important section of the Lawāta lived, if Ibn Khaldūn is to be believed, in the vast massif of the Auris (Aurès on our maps), alongside other semi-nomadic, semi-sedentary populations of shepherds and cultivators. They were already mentioned in the period of the Ibādī Nukkārī chieftain Abū Yazīd Maḡlād b. Kaydād (d. 335/947), who rebelled against the Fāṭimid dynasty. Hence the Lawāta of the Auris rallied to this chief. They continued to live in the Auris until the 8th/14th century at least and, at this period, they kept in subjection the Berber groups of the Hawwāra and Ketāma who lived alongside them. At this time, they were able to put into the field a thousand cavalry and a large number of infantry. The Lawāta of the Auris

preserved their independence, apart from two sections of this branch, namely the Banū Rīḥān and Banū Badīs, who for several years paid tribute to the dynasty of the Banū Mūsmī of the Zab. Later on, the Banū Badīs seized plains in the environs of the town of Nūḡrus (Ngaous or N'Gaous in the plain of the Hodna, north-west of the Aurès). It is very probable that the Lawāta of the Aurès were simply the remnants of the Lawāta of southern Tunisia who succeeded in retiring to this massif after the extermination of the Berber tribes of this latter region by the Aghlabid general 'Isā b. Ray'ān al-Azī which took place, as mentioned above, between Tozeur and Gafsa in 224/838-9.

Another section of the Algerian Lawāta occupied, according to al-Bakrī, the surroundings of the town of Maḡdīlāa (Medlanas of the ancients) which was situated near Wādī Maīlāk (Malleque, south of the ancient town of Madaura (Mdaourouch on our maps), on the road which led from Kayrawān to Baḡḡāya. The history of this group is unknown to us; however, it is not impossible that we are concerned here with descendants of these Leuathae who besieged the town of Lares (Lorbous) in 543 A.D.

Ibn Khaldūn mentions a branch of the Lawāta settled in the plain of Tagrert, in the environs of Bouge. This branch cultivated the land and pastured its flocks. In the 8th/14th century, it was subject to the government of Bouge.

There was no lack in the 4th-6th/10th-12th centuries, if one can believe al-Shammākhī, of small groups of Lawāta in the oasis of Sūf (Souf) and in that of Rīḡh. According to this author, a Lawāṭī settled in this latter oasis had come from Barka. However, it appears that the majority of these Lawāta traced their origin to Nafzāwa and the Bulād al-Djārid in southern Tunisia.

An important group at Lawāta who accompanied, according to Ibn Khaldūn, the Ibādī governor of Kayrawān 'Abd al-Rahmān b. Rustam in his flight from Ifrikiya to the west in 144/761-2, settled to the south of Tāhert, capital of the Ibādī state founded by this emigrant. If Ibn Saḡhūr is to be believed, the Lawāta already lived there towards the end of the 2nd/8th century and at the beginning of the 3rd/9th, in the reign of his successor, the Imām al-Aḡlāb b. 'Abd al-Wahhāb. They owned a fortress there and often involved themselves in the affairs of the Rustamid Imāms. According to al-Bakrī, the Lawāta inhabited, in the 5th/11th century, the region situated to the south of Tāhert and also the fortress of Izmāma situated on the road which linked this latter town with the town of al-Masūra. Ibn Khaldūn supplies us with several details on this section of the Lawāta. According to this historian, they frequented the valley of Mīnas. At the beginning of the 4th/10th century, the chief of this Lawāṭī section was in the service of the Fāṭimid 'Ubayd Allāh, but later these Lawāta revolted against al-Manṣūr, the third Fāṭimid caliph, who defeated them and drove them out into the desert. There were also wars between the Lawāta of Mīnas and a Zanāta tribe who lived on the other side of this valley. Following these wars, the Lawāta of Mīnas went to settle on the mountain called Darraḡī, where they extended their settlements towards the interior of the tell and as far as the mountain which dominates the Mitidja. According to Ibn Khaldūn, this branch of the Lawāta was, in the 5th/11th century, liable for tax.

MOROCCO. According to the early Arabic sources, there were also some Lawāta in Morocco. It is possible that they may have come from eastern

Barbary towards the middle of the 2nd/8th century, probably with the Ibādī and Sufī chiefs who took refuge in the west of the Maghrib before the 'Abbāsid armies. In any case, when Idrīs I b. 'Abd Allāh founded the state of the Idrīsids in the Maghrib al-Akṣā, among the Berbers of the north of Morocco who rallied to his cause (in 172/788-9) there was also a section of the Lawātā. This people probably lived to the south and west of Fās. Ibn Saʿīd al-Ġarnāṣī notes there, in fact, the territories occupied by this people. These are probably the Lawātā settled on the Sebou River who owned the fortress called Lawātā Madyan. This fortress was situated on the road which linked the town of Sijilmāsa to Fās. Another group of Lawātā lived in the north-west of Morocco, south of the town of Ajlā (Arcila), the territory of which also belonged formerly to this people, in the province of Tādā, south of the Oued Umm al-Rabi', there lived, among the Arabs of the tribe of the Banū Ḥābir, the Lawātā tribe of Zanāra, Mauritania. A certain number of people belonging to the tribe of Lawātā, probably merchants, lived in the south of Mauritania, in the town of Awdaghat which was an ancient centre of commerce. It is possible that they may have come from Tāher, or more likely from southern Tunisia.

Sicily. According to Amari, the Berbers of the tribe of Lawātā appear in the Middle Ages in the diplomas of Palermo as amongst the inhabitants of this town. There was also in Sicily a colony of the Lawātī sub-tribe of Maḥāghā. It is, indeed, from the name of this tribe that the name of the town of Magāgi is derived (in Arabic al-Maghāghī), mentioned in a Sicilian diploma of 1182.

AL-LAWĀTĪ, ABŪ MUHAMMAD 'ABD ALLĀH b. MUHAMMAD a. NĀṢIR b. MUYĀL a. YŪSUF, noted Ibādī-Wahhābī historian, traditionalist and biographer. He was descended from Yūsuf al-Lawātī, the vizier of al-Adah b. 'Abd al-Wahhāb, the third Ibādī ṣāḥib of the Rustamīd dynasty (208-50/823-71). According to the biographical notices about him given in the works of al-Darḡinī and al-Shammālī, he was born in the last half of the 5th/11th century in the province of Barka (Cyrenaica). His *nasab* indicates that he was from the Berber tribe of the Lawātā [s.n.], of which several sections were adherents of the Ibādīyya. In 450/1058-9, when he was 18 years old, he left his natal Barka and went to settle at Aḡḡe, a town situated on the oasis of Arīgh (modern Oued Righ), and he apparently died there in 528/1133-4 at an advanced age. Nothing is known of his life, except that he travelled to the Ḥaḥa of the Banū Hammād and that he had visited two places not very far from the Oued Righ, sc. Waghlāna (modern Ourlana) in the north, on the road from the Oued Righ to Biskra, and Wārdjāna (Ouargla) to the south of the Oued Righ. One may also note that his family had connections with the town of Sadrāta (the modern ruins of Sedrata) in the Ouargla oasis. Indeed, his maternal uncle, the learned ḡayyih Abū Muḥammad 'Abd Allāh b. Muḥammad al-Sadrātī, was probably a native of that town.

Ibādī tradition rightly accords al-Lawātī a place of honour. He was not only an eminent historian and traditionalist, but also a remarkable poet. He wrote a work on the history of the North African Ibādīyya which was used by the anonymous author of the *Sīyar al-maghāyirih*, who used al-Lawātī's autograph. He also taught Ibādī history and *siyar* to numerous pupils. One should mention three of these, who are accounted amongst the most celebrated historians and biographers of the 6th/12th century: Abū 'Amr 'Uḡmān b. Khalīfa al-Sāfī, Abū 'l-Rabi' Sulaymān b. 'Abd al-Sulām al-Wisyanī and Abū Nuh, all of whom took from al-Lawātī many narratives, to be used in their own works or else to be transmitted to the traditionalists of the following generation. Amongst other works, whose authors used al-Lawātī's traditions and stories, may be mentioned, in addition to the *Sīyar al-maghāyirih*, the *K. Tabakāt al-maghāyirih* of al-Darḡinī and the *K. al-Sīyar* of al-Shammālī.

It is interesting to remark that Abū Muḥammad also devoted time to the explanation of collections of Ibādī traditions written in Arabic for adherents who were only Berber speaking. Thus for instance, in the course of an academic session at Aḡḡe in the Oued Righ, he gave an exposition of the Arabic text of the *Āḡḡar* of al-Rabi' b. Ḥabīb, an Ibādī traditionalist of the East who flourished in the second half of the 4th/10th century.

Al-Lawātī was also a poet, and al-Shammālī speaks of his poetic *ḥimā*.

biographies et traditions des sages-sages de l'Afrique du Nord du VIII^e au XVI^e s., in *Folia Orientalia*, III (1962), 52-4. (J. LEWICKI)

LAWH (A.), board, plank; tablet, table. Both ranges of meaning are found in other Semitic languages such as Aramaic, Hebrew, Syriac and Ethiopic, and Jeffery thought that, whilst the sense "board, plank" might be an original Aramism, the second sense was almost certainly from the Judaeo-Christian cultural and religious milieu (see *The foreign vocabulary of the Qur'ān*, Baroda 1938, 253-4).

The word occurs five times in the Qur'ān. The first meaning is found in sūra LĪV, 13, where Noah's ark is called *al-ḥaṭḥ al-muḥī*. The second meaning is that of *lawh* as writing material, e.g. the tablets of the *lawh* (sūra VII, 142, 149, 153, where the plural *al-lawh* is used; see *L.A.*, III, 421). *Al-lawh* ma *ṭ-ṭawh* (Bakḥārī, *Tafsīr al-Qur'ān*, sūra IV, bāb 18) correspond to our "paper and ink". The expression *mā bayn al-lawḥayn* "what lies between the two boards" is found in *Ḥadīth*, to describe the whole Qur'ān (Bakḥārī, *Tafsīr*, sūra IX, bāb 4; *Lihāḥ*, bāb 84); cf. *mā bayn al-lawḥayn* (Bakḥārī, *Faḥṣ al-ḥikm*, bāb 16). In modern Arabic, *al-lawh* also means a school-child's slate and a blackboard.

Al-lawh thus means the tablet kept in heaven, which in sūra LXXXV, 22 is called *lawh mahfūz*, usually translated as the "safely preserved" tablet. But it is not certain whether the words in this passage are really syntactically connected. If we read *mahfūz*, the word does not go with *lawh* but with the preceding *Qur'ān*, and the translation is: "Verily it is a Qur'ān, famous, preserved on a tablet" (see the commentaries), "safely preserved", i.e. against alteration.

In the commentaries on sūra XCIV, 1, the tablet is again mentioned: "We sent it down (sc. the Qur'ān) in the night of the decree"; this refers either to the first revelation made to Muhammad or to the descent of the Qur'ān from that tablet which is above the seventh heaven, to the lowest. The tablet as the original copy of the Qur'ān is thus identical with *sum al-kitāb*.

The decisions of the divine will are also written on the *lawh* with the pen, *qalam* [q.], and the particulars contained as a whole in God's consciousness are transmitted by this last, so that on the *lawh* are inscribed the archetypes of all things, past, present and future. The popular mind represented the *lawh*, following as *ḥaḍīth* of the Prophet given by al-Bayhaqī, as created from a white pearl, with its upper and lower surfaces of jacinth. We have therefore to distinguish two quite different conceptions.

a. The tablet as the original copy of the Qur'ān. This idea is found in the pseudepigraphical literature. In the *Book of Jubilees*, III, 10, it is said that the laws relating to the purification of women after childbirth (Leviticus XII) are written on tablets in heaven. Jub. XII, 28-9, says the same of the law regarding the "feast of booths" (Lev., XII, 40-3) and Jub., XII, 15, of the law of tithes (Lev., XXV).

b. The tablet as the record of the decisions of the divine will is also found in the *Book of Jubilees*. In Jub., V, 13 it is said that the divine judgement on all that exists on earth is written on the tablets in heaven. Enoch prophesies the future from the contents of these tablets (Book of Enoch, xciii, 2; lxxxi, ciii, 2, cvi, 19). The "scripture of truth" is mentioned as early as Daniel, x, 21, the contents of which Daniel announces in prophetic form. These ideas are connected with the Babylonian conception of "tablets of fate".

From these passages, it is evident that in the pseudo-epigraphical literature also, the tablets in heaven are also regarded as the originals of revelation, sometimes as tablets of fate. This is sufficient to explain the double meaning of *lawh* in Muslim literature.

For other passages, cf. the index to Charles, *The apocrypha and pseudepigrapha of the Old Testament*, s.v. "Tablets"; it cannot always be said definitely to which of these two conceptions a statement belongs.

In Sūfī mysticism and in esoteric philosophy and cosmology, the *lawh* has an important place. The pantheistic mystical writer 'Abd al-Kārim al-Djīlī [q.v.] (d. in the first half of the 9th/15th century) explains in his *al-Insān al-kāmil* how God's creation is first given shape exactly in the divine knowledge, and only later given objective individualisation by the pen or divine intelligence, which distinguishes the created from the Creator and imprints its form of existence on the tablet as the mind imprints ideas on the soul (R. A. Nicholson, *Studies in Islamic mysticism*, Cambridge 1927, 111-12 n.). Esoteric works identified various forms of the tablet with the primal intelligence (as above), the *ḥaḍī al-anwāl*; with the expressive, universal soul (*al-naḥs al-nāḥiḥ al-kulliyā*) = the preserved tablet; with the particularising soul; and with the *lawh al-ḥayūl* or material tablet, which receives the forms of the supersensory world (cf. al-Djurdānī, *Taḥṣīl*, ed. Flügel, Leipzig 1845, 204). Mystically-inspired persons, it was held, might have glimpses of the entirety of God's decrees inscribed on the tablet and normally hidden from human comprehension, either by dreams or by a sudden flash of divine revelation (*ilḥām*), removing the veil (see D. B. Macdonald, *The religious attitude to life in Islam*, Chicago 1909, 253-4, 264-5). Finally, it may be noted that the 19th century Persian religious leader Bahā' Allāh [q.v.] promulgated, at different points in his career, various "tablets" containing homiletic counsels and prophetic instructions for his followers, such as the *lawh al-amr* "tablet of command" issued in 1280/1863 and ostensibly from the divine pen, giving an exposition of his mission (a document which contributed to the schism with his rival Mirzā Yahyā Subḥ-i Asād); the *lawh-i baḥrī* "tablet of good tidings"; etc. (see E. G. Browne, *Materials for the study of the Bahā'ī religion*, Cambridge 1918, 17, 21-2, 29-31, 187).

AL-LAWH AL-MAHFŪZ [see AL-LAWH]

LAWN (A.), "colour". One of the distinctive features of the Arabic language is the great richness of its chromatic vocabulary. It is as if the smallest detail, the most minute nuance, was deemed to require a nomenclature *sui generis*.

In the first part of this article, we shall undertake a morphological and semantic analysis of the names of colours. Subsequently we shall see how Muslim thinkers, theologians and philosophers, have analyzed perception of colours. The final part will be devoted to the symbolic dimension of colours.

For a proper understanding of the subject, some clarifications and definitions are required, however: the colour of an object is observed, on the purely perceptive level, with its three sensory variants of tonality ("colour" in the strict sense), luminosity (the "quality", the extent to which the object reflects or transmits light) and saturation ("vividness", "intensity" of the colour). White is an achromatic colour, as is black. Just as, in physics, a white body diffuses equally all the visible radiations that it receives, so a perfectly black body, for its part, absorbs all radiations totally and transmits none. The achromatic colours have a zero saturation. The complementary colours are those which neutralise each other and which when combined produce white: indigo/yellow, blue/orange, violet/yellow-green, red/blue-green. Finally, of the seven colours of the spectrum, only three, blue, yellow and red, are truly asexual: they serve to elaborate the other colours.

Morphological study. The morphology of adjectives of colour is characterised by the fact that they are, in the majority of cases, formed on the diptote paradigm *aḥal* in the masculine, *faḥla* in the feminine. The *aḥal* theme is a theme of intensity, which also supplies the elative; this common formulation of the intensive and of the adjective of colour is apparently not coincidental, and it is asserted that, semantically, the latter may have been regarded, at a certain stage in the evolution of the language, as an intensive, that which we translate as "red" may, originally, have signified "more red than...". The evolution of the language would have led to the eclipse of the second term of the comparison. (In this context see L-4, ed. Beirut, II, 122-3, root *b-y-d*. As M. Guillaume has commented (*Problèmes de la couleur*, 345), "it is a fact that in Semitic, there is a particularly narrow line separating names of colours and intensive themes. In Aramaic, names of colours are specifically formed on the pattern *fʿl*. In Hebrew there also exists a series of names of colours formed on an intensive pattern characterised by the doubling of the last two radicals (*fʿlʿl*)..."

Alongside this *aḥal/faḥla* construction, which is not only that of the majority of adjectives of colour, but also that of all the fundamental colours, other forms are encountered, admittedly rare, to which we nevertheless, draw attention, while not forgetting that some of them are doublets of the form *aḥal*, or combine to form doublets of their own. We may mention the following themes: *faḥl* (*ḥaḥl*), *maḥaḥal* (*maḥaḥal*), *faḥl* (*ḥaḥl*), *faḥl* (*faḥl*), *faḥal* or *faḥl* (*ḥaḥal*), *laḥl* and *muḥl* (*muḥl*). Less common are adjectives of the patterns *faḥl*, *faḥl*, *faḥl*, *faḥl*, *faḥl*, *faḥl*, *faḥl*, *faḥl*, *faḥl* and *faḥl*. There exists an undoubted link between certain of these themes and a certain chromatic nuance: *faḥl* and saturation, *maḥaḥal* and mixture, *faḥl* and blending. Others of these themes are in fact relative adjectives terminating in *i*, in an indirect manner of denoting colour to which Arabic frequently has recourse. Some adjectives of colour (often borrowed words) are defined by relation to an object which represents this colour and which serves as a support. Thus *ward* derives from *ward* "rose", *ḥanaḥḥadī* from *ḥanaḥḥadī* "violet", *ḥaḥl* from *ḥaḥl* [p.c.] "collyrium". It is most probable that there exists a connection between the form of the adjective and its meaning. Thus, from the one root *f-ḥ-l*, the following are derived: *faḥl* "of a simple yellow", *faḥl* "very red" (of human complexion), *faḥl* "red or white", and *aḥa* "very white"—no many bright nuances.

Nouns of colour are *maḥḥar* which generally have the form *fʿaḥa*. This is the only abstract element in chromatic terminology. By *ḥawra* or *ḥawra*, Arabic expresses "the state of being red", "the state of being yellow". As with the adjectives of colour, but within a less varied spectrum, the nouns of colour, although being *maḥḥar*, are capable of borrowing the following themes: *faḥl*, *faḥl*, *faḥl* (the last applying, apparently exclusively, to white and black, of which the roots are "holow"), *faḥl*, *faḥl*, *faḥl*. For nouns of colour of the theme *faḥl*, and for these alone, it seems that these *maḥḥar* cannot be called "verbal substantives", since, as we shall see, the verbs of colour which correspond to these *maḥḥar* are denominative in origin.

Of the derived forms of the Arabic verb there are two—those of the paradigm *fʿaḥla* and *fʿaḥla*—which have a particular quality: they express states (colour or deformity); they do not derive from the "bare form" *faḥla*, but are denominative in origin, formed from adjectives of the paradigm *aḥal* expressing the states cited above; and they denote an intensive aspect which is illustrated by the doubling of the final radical. The Nith form (*fʿaḥla*), less common than the IXth (*fʿaḥla*) seems to be a doublet of it, still more intensive. Thus we have, besides *ḥaḥḥadī* and *ḥaḥḥadī*, meaning respectively "to become white", "to become black", *ḥaḥḥadī* and *ḥaḥḥadī*, for "to become pure white", "to become black as ebony". All verbs of the IXth and Nith forms are verbs of colour or of deformity. It does not, however, follow that all verbs expressing a notion of colour belong to one of these two forms. Besides the latter, which could be described as "essential verbs of colour", we encounter others which borrow all the verbal forms, "bare" or derived, and which in general express colour through derivation of sense.

Finally, attention should be drawn to non-trilateral forms and loan-words. The following paradigms are encountered: *faḥl*, *faḥl*, *faḥl*, *faḥl* and *faḥl* among the former. As for loan-words, the most used are: *arḥamī* "purple", *ḥayḥ* "yellow", *arḥamī* "red and gilt", *ḥayḥ* "violet", *ḥaḥḥadī* "sky-blue", and *ḥaḥḥadī* "indigo"; these are terms derived from Persian or Greek.

Semantic study. To express the concept of "colour", Arabic uses the general term *laḥn* which, besides this precise sense, also denotes "shade", "aspect", "type", "dish (of food)", etc. In addition to this general term, we also have the following words: *ḥayḥ* (stressing a notion of brightness, of clear colour), *ḥayḥ* (liquid colour or tincture, also applied to the object which it colours) *ḥayḥ* (applied to the colour of the complexion), *ḥayḥ*, *ḥayḥ* (applied to a dirty colour, a mixture of two blended colours); *ḥayḥ*, *ḥayḥ* and *ḥayḥ* (all three referring to a mixture, a combination of two colours sometimes regarded as opposites).

It would seem useful, as preliminary to a semantic survey, to discover how the Arabs perceived the colours of the rainbow [see *ḥayḥ*], and how they subsequently transcribed their perceptions. Since this atmospheric phenomenon displays a very wide spectrum of colours, it is of the utmost interest to determine, for each people, the names that they have given to what they have seen. We know that the Greeks and Romans attributed three colours to the rainbow. In his *Meteora* (II, 4, 373) Aristotle lists red-brown (*alourgon*), green (*prasinon*) and purple (*phoinikon*) in which he sees a progressive weakening of the light. Plato shows, in the *Timaeus*, that it is possible to reconstitute all shades with

that the Arabic *arghaḍa* is a loan-word from Persian. *Fīfīrī* and *buḥfīrī* obviously derive from the same etymology as the Greek *porphyra* and the Latin *purpura*. For lessened colours other than brown, the terminology often relies on variants of terms designating dust, ashes and earth.

The vocabulary of mixtures and blendings of colours is very extensive. One is struck by the frequency of the consonant *ḥ* in the formation of terms designating flecked, mottled, striped, spotted colorations. In addition—which is scarcely surprising—the hues of horses and camels are differentiated, down to the slightest nuance, by dozens and dozens of terms (see the articles by Hess and Shihābī, cited in the *Bibl.*). The striking fact, in this context, is the large number of terms (*adhas*, *adḥyan*, *adḥham*, *adḥaʿ*, *adḥas*, *adḥaḥ*, *adḥam*, *adham*, *adhas*, *adham*, etc.) with *ḥ* as the first radical.

We close this brief survey of the semantics of colour with the remark that doublets and loan words are particularly frequent here.

Tonality, luminosity and saturation. The three psycho-sociological components which were cited at the beginning of this study are three unevenly-perceived sensory variants. It does not appear that tonality, in its sense of specific colour, was of fundamental importance to the Arabs when they evoked, in their literature, the colour of a landscape, a garment or any object belonging to their regular lives. It was rather a case of indistinct touches conferring a general impression. On the other hand—and this feature is determined by that mentioned above—luminosity, and saturation even more so, impressed them particularly. This is to be expected of a people living in a sun-drenched environment. These two notions of luminosity and of intensity seem in addition to be confused in the semantic quality of the innumerable adjectives which the Arabic language possesses, and which could be called "intensives of colour". The latter are used to qualify a "classical" adjective of colour, such as *abyaḥ*, *aswad*, *aḥḍar* and *aḥmar*, and to indicate that this colour has attained its highest degree of luminosity or of intensity. While the substantives, *al-ḥab*¹, *al-laḥrīb*, *al-tahkīḥ* and *al-yuḥī*², specifically denote saturation; and while, on the other hand, brightness has the names *al-barīḥ*, *al-tarīf* and *al-raʿfī*³; it is nonetheless true that the intensives *fāḥ*⁴, *nāḥ*⁵, *ḥāḥ*⁶, *nāḥir* and *ʿāḥ*⁷, previously encountered in this survey, and all of them active participles: (a) imply, when they govern an adjective of colour, the notions of saturation and luminosity, indicating that the colour is intense and striking; and (b) are capable of being applied—originally at least—to any colour whatsoever. Apparently it was at a later stage that Arab grammarians assigned to each of these intensives a specific adjective of colour to qualify.

Colour in the works of Aristotle and his Arab translators. The Arab philosophers, in their analysis of the problem of colour and of its perception, were, to differing degrees, influenced by Aristotelian theory on the subject. It is important therefore to identify the major themes of the theses expounded by Aristotle, especially in his *De anima* (II, 428a-429a) and his *De sensu et sensib.* 437b-440b).

The Greek philosophers were struck by the indissoluble link between light and colour on the one hand, and transparency on the other. The eyes, the most transparent part of the human body, are the meeting point of light or of external colour, and of their interior equivalent, a fact which favoured the theory

of emanations. What is visible, says Aristotle, is colour; and colour is that which is on the surface of what is visible by itself. The basis of all the phenomena of colour is the transparent. The latter, represented especially by air and water, carries and determines colour, and colour is not visible without the aid of light, since it is only in the light that the colour of any object may be perceived. Where transparency is only potential, there is darkness. Light is like the colour of what is transparent, when the latter is realised in entelechy. The receptacle of colour must be what is colourless. The quiddity of colour is the ability to move the transparent in fact; and the transparent has the property of transmitting, instantaneously, the colour of the visual object to the eye, independently of any notion of time or space. One sees it; it is a qualitative and not a quantitative transmission. Aristotle rejects categorically the theory of emanations, developed by Empedocles, revised by Plato in his *Timaeus* (45E ff.) according to which we see by means of "rays of the nature of fire", which issue from the eye and meet the luminous emanation from the object perceived. Aristotle and all those who followed him, including the *falāsifa* (p.u.), insisted on the aqueous and non-igneous nature of the eye. All the same, the Master rejected the idea, propounded by Democritus, Leucippus and Epicurus, that vision is only the reflection of an object, as in a mirror. Every object, even opaque, contains, in varying proportions, air and water; and to the extent to which bodies contain transparency, they are susceptible to being coloured. The colour of a solid body is the limit, the surface, not of the body itself, but of the transparency that is within it. The nature of transparency extends, in addition, throughout the whole of the body. Colours are the defined transparencies which reside in bodies and which approximate, more or less, to white or to black, according to whether they contain more or less fire (luminosity and active transparency), or earth (the opaque in the absolute), the thinning element or the obscure element. The essence of colour is the act of determining a qualitative change in the light, which is, itself, active transparency. The intermediate colours—that is, those other than black and white—exist neither through juxtaposition of a white and black particle, nor by superimposition of one colour perceived over another. They result from a total, effective blending, of bodies entailing the blending of their colours. Such is the determinant cause for the existence of a multiplicity of colours. But their number is limited, since it is confined within the two extremes of white and black. Finally, Aristotle distinguishes between darkness and blackness. Darkness is the absence of actualisation of the transparent. It has no existence *per se*.

Some eminent Arab authors and translators, like 'Alī b. Rabban al-Ṭabarī (d. 240/855) and Hunayn b. Isḥāq (d. 260/873) were influenced by Greek theories of colour, as they became known to them through the medium of the commentators of the early Middle Ages. According to al-Ṭabarī, white is evidence of the predominance of the dry element over the humid within bodies; the exact converse applies to black. For him, red results from the synthesis of heat with dryness and humidity. Such are the three fundamental colours from which the others derive. Yellow is the intermediary between red and black, green the intermediary between red and white. In the former, humidity is greater than in the latter. Other chromatic nuances are determined by varying quantities of dryness, humidity and heat. Hunayn,

for his part, is complimentary towards Aristotelian theories regarding the perception of colours. He insists on the fact that light is neither a form of fire nor a rarified body, as some of Aristotle's predecessors had claimed, but a contingency borne by a body. Colour is the perfection (entelechy) of limpid and diaphanous bodies—namely, water, air and all other similar substances—which receive the real colour of the objects surrounding them. The transparent body has no colour *per se*; but it absorbs the colour of the object which it envelops: it thus has potential colour. Colours transform the transparent: from being potentially coloured, it becomes actually coloured. Light, by its presence in the air, renders it capable of receiving colour.

Colour according to the Mu'tazilis. In its defence of the articles of faith by means of rational argumentation, the theologico-political school of the Mu'tazilis was led to take an interest in the problem of physical bodies and of their perception; but they took divergent views on the problem of colour. While al-Nazzām (d. ca. 230/845), starting with the postulate that accidents cannot be visible, classed colours among the substances, the corruptible bodies, Bishr b. al-Mu'tamir (d. ca. 220/835), his contemporary Mu'ammār and the majority of the disciples of the school, considered colours as accidents due to the action of men alone, or produced by the very nature of the things that they affect. Thus they are not subject to divine creation, but God remains the determinant cause of the accidental determination of substances. God created substances (bodies, atoms), capable of producing, by their own nature, well-determined accidents, and colour is one of these. Directly following this reasoning, Hishām al-Fuwa'ī (beginning of the 3rd/9th century) declared that colour does not constitute proof of the existence of God, but is a summa form of physical bodies. Mu'ammār, the theoretician of *ma'na* ('entity'), 'nature', according to which 'God creates a thing by virtue of a cause which, itself, derives from another cause, which is the fruit of another cause...', postulated that it is through the effect of a *ma'na* that blackness differs from whiteness, and through another *ma'na* that a certain body is black and another white. In fact, according to him, every 'accident' (movement, colour, taste), requires the existence of an infinite chain of determining *ma'nas*, of which the initial cause is the Creator. 'If God colours a body, it is because this body is by nature susceptible to colour. The same applies for other accidents' (Nader, *Syzygies*, 161). Abū Hāshim al-Dhubbālī (d. 321/933) classed colouration (*al-lawniyya*), like substantiality, corporality, and accidentality, among the real things which do not actually exist. He considered that substance is not coloured necessarily, but that any substance endowed with colour is incapable of losing it. Abū T-Kāsim al-Baḥḥālī (d. ca. 319/931) declared, for his part, that substance has always been endowed with colour. But the two masters agreed in stressing the fact that substance and colour are two distinct things: the first depends on divine action, while the second is engendered by the substance which bears it.

In fact, the *Maqālāt* of al-Aḡḥārī (392-3) echo the controversy which developed within the school concerning these questions. From the perception of a coloured object, can one abstract the colour, knowing that the latter cannot be perceived, but only known? Or indeed, can one at the same time perceive whiteness and white, blackness and black? Or again,

does one see only the colour and not the object, as al-Nazzām suggested? Opinions differed on the above points. As regards sensible awareness of the exterior world, al-Nazzām borrowed from the pre-Aristotelian philosophers their sensualist thesis, and their theory of 'pores' and 'emanations'. According to him, colour, form, flavour, taste etc., are each perceived only through the medium of an opening of a certain kind, by which the senses are affected. Each of these sensations is a rarified body: it emanates from a sensible object, penetrates through the specific apertures of the sensory organs, and thus reaches the consciousness of the being that senses it. Al-ʿAllāf (d. after 226/840) spoke of a divine intervention in the operation of man's awareness of sensible objects; but other Mu'tazilī theoreticians, like Mu'ammār, regarded the perception of sensible objects as a natural act of the sensory organs, as an engendered act (*muṣallaf*), free from any divine initiative.

Colour according to the *falsafa*. At the meeting-point of Mu'tazilism and of *falsafa*, of which he was one of the major initiators, al-Kindī (d. ca. 259/873) was greatly interested in the 'physical sciences' and, consequently, in the theory of light, of colour, and of their articulation. In his work, as in that of his most eminent successors, the influence of Aristotelian theories, as they had been transmitted to the Arabs through the contemporary Neo-Platonism, is manifest. For 'the philosopher of the Arabs', colour is a 'general accident, since it affects numerous things'. An accident perceived by the first of 'the two noble sensory perceptions' (*al-hassayn al-gharīḡayn*), sight and hearing. Just as the active intellect has the function of actualising potential intelligibles, the light which strikes opaque objects transforms potential colours into actual colours. The truly diaphanous body has no colour of its own, since it is the vehicle of the colour of the objects situated behind it. Of the four elements of the universe, only earth is not transparent: it is thus the only bearer of colour in this sublunar world. For an object to be affected by light and thus, a bearer of colour, it must be circumscribed, not fluid, compact, and it must form an obstacle (*yaʿḡarūf*) to visual rays. The colours which we believe that we perceive in fire are in fact the colours of terrestrial particles which are mixed with the fire. The latter—like air and water—is totally colourless. At the same time, our senses give us the illusion that the sky is azure (*lawḥawdī*) in colour, although it is not so at all. In fact, the colour that we believe we see in the sky is an artificiality: it is the colour of the vaporous and terrestrial particles of which the air is full. The stars, on the other hand, are circumscribed and compact bodies, as is proved by the fact that they eclipse one another. That is why they may be coloured.

Al-Fārābī (d. 339/950) was also interested in colours. The latter, he tells us, occur on the surface of bodies, under the effect of a luminous source, since they do not exist in themselves. They are thus accidents provoked by this source of light. The chromatic differences are provided by the different dispositions of the lighted bodies. Colours only affect the sublunar world, the world of generation and of corruption. The heavenly bodies, the primary elements (*asfāḡas*), the simple bodies, have no colour. The colour of terrestrial bodies derives from the fusion of the elements composing each one of them. The presence of the fire element brings a tendency towards white, that of the earth element a tendency towards black. The intermediary colours result from the proportions in which these two primary elements are blended.

Repeating an Aristotelian formula, al-Fārābī defines colour as "the surface of the diaphanous body, in the measure of its transparency". White is not the negation of black, nor black that of white: these opposites do not annihilate each other.

The *Liḡwān al-Salāḡ* (c. 10th half of the 4th/10th century) authors of a collective encyclopaedia clearly influenced by Neo-Platonic emanationism, considered colour one of the complementary attributes of the body. It is a "spiritual accident", a "form which the soul puts into the body". Light is bound up with the souls and spirits that circulate within it. While traversing diaphanous bodies ("the purest bodies are diaphanous") in the same way in which the soul circulates in the human body, light carries colours up to the pupil, preserving their purity intact. At the level of the pupil, the visual faculty perceives the colours, then transmits them to the imaginative faculty. Light and darkness are "spiritual colours". On contacts with bodies, they transform themselves, respectively, into white and black, which are "corporeal colours". Colours, defined as "the brightness of the rays of bodies" appear only on the surface of the latter. There exist seven simple colours: white, black, red, yellow, green, blue and "the dull colour" (*al-ʿaḍra*, violet?). Black derives from an earthy humidity which prevents light from reaching vision. Black is the absence of light. It causes convergence of the visual cluster. At the opposite extreme, white is the manifestation of light in its full purity. For its part, it entails a divergence of the visual cluster. The other colours are intermediaries between these two extremes; each one being characterised by the respective part played by the quantity of white and of black which it contains. An object appears yellow when an obstacle prevents light from appearing pure. Red can derive from "putrefactive causes" (through excess of humidity) or from "liquefactive causes" (through excess of heat). Green draws near to black, in the sense that, here too, an earthy humidity is dominant, constricting the passage of light and of the visual rays. Blue belongs to the chromatic family of green. God made the air blue and the plant green to accommodate the interests of His creatures. In fact, these two colours possess the virtue of being salutary for the vision. The colours of the rainbow are four in number: red, yellow, green and blue: each of these colours corresponds to one of the four primary qualities, namely, heat, dryness, humidity and cold; and to one of the four elements, namely, fire, air, earth and water. Finally, these authors reject the theory of emanations. Such a thesis, they declare, could only be supported by people having no "experience of the things of the spirit and of nature".

Ibn Sīnā (d. 428/1037), like Aristotle, classed the psychology of the sensory apparatus among the physical sciences. He devoted an entire chapter of his *Ṣifāt* to the problems of vision and of colour. Light is a quality affecting diaphanous bodies and colour, opaque bodies. The latter are coloured potentially. Colour can exist without being visible; but actual colour occurs only by virtue of its clarity. Colours do not exist, in fact, in bodies. A black, dark body, is potentially coloured. An object that is coloured when it is lit up, will be colourless in the dark: it is deprived of actualised colour. The actively transparent (air, water, the celestial sphere) is a diaphanous medium, and at the same time a vehicle. The illuminating body approaches the coloured body, without any change, any alteration, affecting the diaphanous medium. The existence of light makes

the potential transparent an actualised transparent. As light increases, so the manifestation of colour increases also. Ibn Sīnā followed the views of Aristotle in regarding as absurd the theory of emanations, in rejecting the theory that assimilated vision to a reflection similar to that transmitted by a mirror, and in distinguishing between darkness and blackness. He rejected the theory according to which only whiteness is a colour, and blackness is darkness, since, he tells us, black is illuminated, and it gives light to things other than itself. Consequently, colour is not whiteness alone. Absolute, generic colour, is not light; but the latter is the cause for the apparition of the former, and the cause of its transmission. Light is thus a constituent part of the visible entity which we call "colour". Effective colour results from the encounter of light with potential colour. The intermediary colours result from the blending of black and white. White can turn into black in three different ways: (a) through grey of increasing darkness; (b) through red tending increasingly towards brown, and (c) through green and indigo. These diverse processes are the reflection of the diversity of composition of the intermediary colours.

Ibn al-Haytham (d. 430/1039), in his *Optics*, took issue with those scholars who denied the real existence of colour, and declared that it was only an apparition situated between the eye and the source of light. According to him, if it is true that the appearance of colour is affected by the quality of the light which carries it, and that the same colour can be transformed according to the degree of light which it is given, it nonetheless remains a fact that colour has an existence of its own. His commentator Kamāl al-Dīn al-Fārisī (d. 730/1320) explored the fundamental connection between light and colour. In darkness, colours are presented, potentially, in coloured bodies. They are transformed into actual colours when light affects these bodies.

Ibn Ḥazm (d. 456/1064) devoted a paragraph of his *Fisal* to colour. Here we read that the air is invisible, because it has no colour; whereas water is visible, because it is white. Similarly, fire also is colourless in its sphere; the colour that we see in burning wood, in the wick of a lamp or in any other body that is consumed by fire, derives from the measure of humidity contained in these bodies. In burning, the latter is transformed into igneous air; and the colour which each of these burning bodies adopts is determined by the materials of which it is composed. It is also particles of humidity which give rise to the rainbow. The scholar of Cordova subsequently sets out to refute the theses of the "Ancients", according to whom white results from a divergence of the visual cluster, and black from a convergence of this cluster. According to him, black is invisible, because perception exists only through an extension of vision. Since the eye sees only that which is coloured, black is not a colour. It is, in fact, only darkness, the non-being, privation of colour and eye sight. When we believe that we "see" black, we are subject to an optical illusion. It is purely a matter of convention and metaphor when we describe a person, a crowd or a garment, as black. In fact, each of these bodies has its own colour, which is not black. As for the difference between a matt black and a shiny, bright black body, this derives not from the black itself, but from the lustre, the brightness and the scintillation, which are distinct and constitute a colour in its own right, which affects all the chromatic nuances. We may recall that Plato counted

"the colour of light" among the four fundamental colours. One could, says Ibn Haṣm, just as well say that the dull is a specific colour, since the vision perceives it. Such is also the case with brightness, with luminosity. It is evident that the Ṣāḥirī master was particularly aware of the sensory variants of colour. He goes on to establish a hierarchy in the vividness of perception of colours, whose order is as follows: white, yellow, red and green. It is to be noted that he shows a great deal of circumspection in the declaration of his statements, since he is careful to follow them, invariably, with the formula "God alone knows!", or even "May God assist us!"

Ibn Bāḡdīja (d. 535/1139), elaborated a whole doctrine of colour in his *Treatise on the soul*. The influence of Aristotle, in particular of his *De sensu et sensib.* is evident; a fact which the author makes no attempt to conceal, as he quotes from the latter work on more than one occasion. The postulate is that the primary sensory element of vision is colour. The seeing soul (*al-nafs al-bāṣira*) is the faculty which exists in the eye and which enables it to perceive colour. It is localised in the vitreous humour, which the Arab philosophers called the glacial humour (*al-rigīb al-ḡalīḍiyya*). Colour is, in substance, a form. It is perceptible only through the intermediary of the air; and when a coloured object is placed directly before the eye, the latter is incapable of perceiving it. The air only discharges its function as a vehicle for colour when it is lit by a luminous source. Two hypotheses could thus be formulated: (a) colours, in darkness, are potential only, and have no effective existence; (b) the air absorbs colours only through the influence of the optical image in which these colours reside. For Ibn Bāḡdīja, the potential existence of colour in darkness is in no doubt. Proof of this existence lies in the different tonalities of the same colour, depending on the quality of the surrounding light, which includes penumbra. He adds that this was demonstrated well by Aristotle (see *De sensu et sensib.*, III, 440a, 7-13). As for the phosphorescence and the sheen of certain objects and animals, these are determined not by colour but by impressions affecting the eye. The property of colour, endowed by the fact that it derives from the blending of the lighted with the coloured body, is that of being, itself, a dispenser of light, and of moving the air. Colour therefore contains light. It promotes a movement in the lighted body, in that it is lighted; for this body is, itself, a vehicle for colour. In addition, colour puts the diaphanous into effect, by reason of the fact that the latter only accepts colour because it is lighted. Democritus was mistaken in declaring that vision in a vacuum would be purer than through the diaphanous. Just as colour cannot be perceived in the absence of light, so the latter is only perceptible when associated with colour.

The eminent commentator on Aristotle, Ibn Ruḡḡd (d. 595/1198), also undertook to expound a theory of light and of colour, as far as possible consistent with the spirit of the Ptolemaic science, as transmitted through the intermediary of Alexander of Aphrodisias, Theophrastus and Jean Philoponus. He sets out his theory in his Great Commentary on *De anima* and his *Epitome on Parva naturalia*. Colour exists on the surface of a certain body. It is the entelechy (actualisation) of a limited transparency, in that it is a limited transparency, while light is the entelechy of an unlimited transparency. Resulting from a blending of fire with diaphanous body, colours find in the light, not the cause of their transmission of the visual organ, but a genuine

essence and existence. We have seen that Ibn Bāḡdīja supported the theory according to which colours exist, in potentiality, in bodies, whether the latter are lighted or not. Unlike his compatriot from Saragossa, the master of Cordova claims that they can exist effectively, even when they are not perceived. They only become visible under the effect of light. "It is evident that light is necessary for colours to be visible; whether because it gives to colours the form and the manner of being (*malaka/habitus*) by which they impinge upon the transparent; or because it gives the transparent the form by which it receives the action of the colours; or else both can be achieved" (*apud* L. Gauthier, *Ibn Ruḡḡd*, 133).

For his part, Averroes maintains the following connection: light gives to the transparent the manner of being which enables it to be influenced by colour. Light and colour coexist in the diaphanous milieu. They derive, the former from a body which is luminous in itself, the latter from a body which is coloured in itself. Light brings about the actualisation of potential colour, in such a way that it is capable of moving the diaphanous; which is transformed from the potentially diaphanous to the effectively diaphanous; and can, as a result, absorb colour and transmit it to the eye. Thus the objective existence of colours, and their effect on the eye, depends on light. But visibility is not a condition for the existence of colour. It follows that, contrary to the view of Ibn Bāḡdīja, colour as such does not contain light. When light acts upon the diaphanous, then, according to the intensity of this light, and its degree of transparency, different colours are produced. White derives from a blending of pure fire, that is, solar light (in its capacity as a luminous element) with air (in its capacity as the most diaphanous element). Black derives from a blending of turbid fire (that which is located above the elements and below the spheres) and earth (in its capacity as the most opaque element). The two absolute colours are thus "the primary elements" (*al-ṣifāt al-awwalīya*) of the colours. All the other colours are situated between these two extremes. They result from an infinity of proportioning of the chromatic pair white/black. To the extent to which an intermediate colour (green, red, yellow, etc.) tends towards white, it loses, in proportion, the ingredient of black which it contains, and vice versa. In common with Aristotle, his Arab commentator believes that the blending of colours consists, not in a juxtaposition or a superimposition, but in a total union of constituent elements, in the event, of fire and diaphanous bodies.

It is evident that, while the Arab theologians and philosophers did not neglect the subject of colour, they were concerned essentially with the manipulation of theories inherited from the Greeks and formulated, since the 3rd/9th century, by men like Yaḥyā b. al-Bitīqī, Hunayn b. Isḥāq, Isḥāq b. Hunayn or Bishr b. Mattā. There was, strictly speaking, no Arab-Muslim doctrine of colour, and, as far as we know, no monograph devoted to this question.

A mystical vision of colour. It is hardly necessary to stress the universal nature of the spiritual experience of colours. In this context, the works of H. Corbin enable us to appreciate the interest which certain Muslim mystics, like Naḡm al-Dīn Kubrā (d. 618/1226) and al-Sumrānī (d. 737/1336) took in the phenomenon of colours, and in the synchronism between them and the interior vision. Taking up the theory of "physiological colours" dear to Goethe, which the German master espoused in his *Farbenlehre* (1808), to refute the hitherto un-

challenged these of Newton, the Iranian theosophist al-Kirmānī (d. 1870) laid stress on the difference to be established between the existence (*wuǧūd*) and the manifestation (*maǧhūr*) of colour, a difference which has nothing to do with the classic distinction drawn by the *falāsifa* between potential and actual existence. His hermeneutic of colours "sets in motion ... a symbolism based on an integral spiritual realism" (Corbin). Colour is the language of souls. The eye—the meeting point between exterior light and interior light—does not reflect passively the world which is presented to it; it participates in the perception of things, and produces its own colour. Deriving support from certain verses of the Qurʾān which, like XIII, 16 and XXXV, 20, make forceful statements such as "Are the blind man and he who sees equal; are darkness and light equal...?", al-Kirmānī considers that the colours perceived by our eye are those of bodies, not those of rays of light, and that they exist in the supra-sensible worlds. "Light is the abstract of colour, or colour in the abstract state ... Light is the spirituality of colour; and colour is the corporality of light ... It is through the medium one of the other that they enter our field of vision" (Corbin). Without light, colour is still present, but is similar to a body deprived of its spirit. Every compound, whether it belongs to the sensible or to the supra-sensible world, therefore has a colour. The colour of the world of Intelligence is white; that of the world of Spirit is yellow; that of the world of the Soul is green; that of the world of Nature is red; that of the world of Matter is an ashen colour; that of the Imaginary world is deep green; that of the material body is black. In the same spiritual context, we may recall the famous formula of Novalis: "Colour is an attempt by matter to become light"; and this comment by Rudolph Steiner: "Colour is not only a quality applied to the surface of objects, but a light flashing from the soul of things to reveal itself to our soul".

These reflections lead us on to the symbolism of colour.

The symbolism of colour. Colours are capable of acting on the human being, independently of the optical system; and the sensation of colour, essentially, is an individual thing before it is a collective thing. The link between human perception, power of evocation and psychism, does not need to be proved. Also, since time immemorial, peoples have used colours as a system for the communication of thought, and as "signs" and symbols of abstract ideas. Although each colour does not denote, incontrovertibly, a universal quality, a number of invariants have been isolated by comparative study. Colours have played a role of considerable importance in ritual, in magic and in superstition. Nor are the psychological, physiological and physical effects of colour to be ignored: this "language of colour" in which is expressed, in art, the ineffable role of the chromatic nuances, whose faculty of interaction is essential for painting.

One quotation from the Qurʾān will suffice to prove that this was also the case with the Arabs. In XVI, 13 we read: "... in that He has disseminated various colours upon the Earth, here, truly, is a certain sign for a people that is edified ..." (see also XVI, 6; XXX, 22; XXXV, 27, 28; XXXIX, 21).

One of the most striking manifestations of the symbolic connotations of colours among the Arabs, is the phenomenon of opposites (*al-ʿadās* [q.v.]). We have seen, in studying the semantic value of certain adjectives of colour, that they were sometimes capable

of embracing two diametrically opposite meanings. This phenomenon is particularly to be noted in the case of white and black, which have common adjectives. To signify wine, the Arabs used a number of euphemisms, of the type "the fair drink", "the golden one", etc. It seems to have been the same reasoning that led them, superstitiously, to avoid the use of certain terms, and to evoke them either by sufficiently eloquent imagery, or by antiphrasis, in cases where the context rendered the sense unequivocal. Even today, in certain parts of the Orient and the Maghrib, in order to avoid pronouncing the word "black" (the accursed colour, the colour of Hell), opposites are used. In Morocco, *al-abyad* sometimes denotes tar or coal. It has been observed, in addition, that some adjectives occasionally qualify two colours which, while being different, nonetheless present certain affinities. In the collective unconscious where humanity's roots are laid, it does not seem that our ancestors felt the need to establish a tight partition between colours which may be regarded as being close, as they offer similar attributes of luminosity or of intensity, such as blue and green in the former instance, yellow and red in the latter. The same conclusion holds good for the Arabs. For them, the symbolic value of white, does not seem to have been much different from that which it was for the majority of peoples, for certain latent associations are universal. The colour of brightness, of loyalty, of royalty, etc. white, most often symbolises purity, joy, chastity and virginity in popular psychology. White, the confusion of all the colours, is unity, the very image of divinity. The body of the archangel Gabriel is snow-white. The white bird is the emissary sent from Heaven to tell good news. The white cock is held to be the incarnation of an angel. It was a white cock that Allah sent to indicate to Aram the times of prayer (Kasas, 13, 66-7, 126, 200). By reference to the white hand of Moses, when he accomplished the miracles recounted in the Qurʾān, the expression *yad bayḍāʾ* symbolises potency, power, authority. In the colloquial speech of Syria, "a white heart" designates a person of good companionship, of noble nature; "a white standard", a good reputation; "white tidings", a joyful message. In Egypt, a fine day is compared to milk or to a white flower. But, as in the Far East, and as in Europe for a long time, white can also be the colour of grief and of mourning. Death is livid and white in contrast to the redness of life. The shroud is white. White hair is the forerunner of death. In Spain, in Morocco, in eastern Persia, white was also the colour of mourning (cf. Péters, *Poésie andalouse*, 298-9). The popular subconscious has, furthermore, also been aware of this affinity between white and death, and the end of life is characterised by rhetorical figures such as "white death", sudden and natural death, death in which human knowledge is powerless towards the unknowable.

Awad and *sayyid* present an etymological relationship that is loaded with meaning. The Arabs sensed that black was a dominant colour, exercising over them a fascination that was mingled with fear. Black, darkness, the night, mystery—all of these demand respect. The Black Stone of the Kaʿba is a pillar of spiritual influence. Black is the coat of "the unknown journey", of mourning and of all sadness. It is also the joint symbol of vengeance and revolt (cf. the black flag of the 'Abbasids). In the history of superstition in the lands of Islam, black occupies a privileged position. By a kind of homeopathic magic, it is used as a charm against "the evil eye". The black

cat is endowed with enormous magic power; it is a creation of Satan, and anyone who eats its flesh is immised against illness; its spien, when applied to a woman, stops menstruation. For the Muslims, as for so many other peoples, the black crow exercises a baleful influence; meeting the bird is an unfavourable omen, since the bird is the herald of separation; is it not assumed that the Prophet said that the crow must be killed, since it is wicked and perverse? The chains of Hell are black. A black cloud is a sign of divine wrath. Cain killed Abel with a black rock (*K'as*, 8, 108, 121, 126-7, 193-4, 298). *Al-sawda'* is the black bile, source of sorrow and fear. "Black liver" is a term applied to a sworn enemy; "black heart" is a degenerate and vulgar personality; "black news" denotes a calamity; "black life" is unfortunate; a "black face" belongs to a discredited person; "black death" is reserved for that caused by strangulation.

Blue, at the opposite extreme from red, is a cold, fleeting, profound, immaterial colour. The sky and the sea are blue; anyone who plunges into them is lost to infinity, since their depth is immeasurable. Metaphysical fear is a "blue fear". The Arabs considered this colour magical, inauspicious and disturbing. Blue eyes are a source of bad luck; and miscreants are depicted with them in the *K'as al-anbiya'* (127, 121, 193). In Egypt, as a defence against the "evil eye", blue-coloured grains of alum (*ghabla*) are hung at the neck of children and adults. Blue stone possesses a share of the sacred force, by virtue of its celestial colour. The magical power of blue is at the same time the dispenser of ill fortune and a defence against it. The "blue enemy" is an inveterate and mortal enemy. In Syrian parlance, when it is said of a person that "his bones are blue", this means that he is of cunning, vindictive nature. Blue is the colour of haggard, illid, frightened people. In the only Qur'anic passage where the root *z-lz* occurs (*XX*, 101), it is used to describe the guilty ones on the Day of Last Judgment. This is why, as with black, the Arabs took pains to avoid mentioning this colour. In certain regions of Egypt, one says "green" rather than "blue". A disagreeable or hateful day is also described as "a black day" or "a blue day". We may note that in Sanskrit, the term *nila* serves to denote both blue and black, two colours regarded as maleficent. In Egypt, *nila* (Indigo) is a sign of misfortune, of failure.

Equidistant between infernal red and celestial blue, green has a medium role, a form of equilibrium dear to Islam. For the Arabs, as for many other peoples, it is the symbol of good luck, of natural fertility, of vegetation, of youth. For Islam, the green standard of the Messenger of Allah and the green cloak of 'Ali have become the very emblems of the Religion. As a beneficent colour, green belongs so naturally to the popular spirit of the Arabs that their colloquial language is full of expressions where this colour symbolises joy, gaiety or success. In Syria, a "green hand" is used in describing a lucky person. To wish somebody a good year, one uses the expression "green year", and when one takes up residence in a new dwelling, green leaves of beet are hung there as a token of good luck. In Morocco, the expression "my struts are green" means "I bring the rain when I travel into an area where it is awaited". Muhammad himself declared: "The sight of green is as agreeable to the eyes as the sight of a beautiful woman" (cf. *al-Fakhri*, *Tarikh*, 137). The archangel Gabriel has two green wings. The Heavenly Throne is carved from a jewel green in colour. Abraham is clothed, in

Paradise, in green garments. The Preserved Tablet [see *LAWN*] is made of emerald (*K'as*, 7, 13, 139, 220). The title "Green Bird" is the name given to a number of saints. One should not ignore the special place reserved by the doctrine of *ghibda* to the *ghabla*, "the martyr is the Way of Allah"; while the corpses of these martyrs remain in their tombs, their souls, on the other hand, are entitled to privileged treatment: "Allah puts their souls into the bodies of green birds, which quench their thirst in the rivers of Eden, and eat of its fruits", says a famous *hadith*. In symbolism and the occult sciences, the emerald, a beautiful green stone, is seen as endowed with an esoteric significance and a regenerative power. The *Emerald table* is the title of a work, which appeared in the Middle Ages, containing all the laws of occultism and the Kabbala, and attributed to Hermes Trismegistus. "The colour green", said al-Simnani, "is the most appropriate to the secret of the Mystery of Mysteries". In Islamic cosmology, *Kaf* (q.v.) the mountain encircling the terrestrial world, is made of green emerald, whose colour is reflected by the celestial vault. The image "green death" refers to the action of clothing oneself in rags or patched garments, as do the dervishes and the Sufis. It is thus the most gentle of deaths, accepted willingly and endowed with spiritual worth.

The colour of gold and of the sun, of butter and honey, but also that of sulphur and the flame that consumes, yellow presents a wide ambivalence on the symbolic level, and not only for the Arabs. It can, according to the nuances applied to it, refer just as easily to cowardice or treason as to royal power and glory. The sight of the Angel of Death gives to Adam sweat "the colour of saffron". At the time of the "descent of Jesus" and the Last Judgment, the guests of Paradise will have white faces, those of Hell black; as for the people condemned to undergo "the ordeals of the tomb" their faces will be "the colour of saffron" (*K'as*, 75, 308). The link between bright yellow and youth, love, waiting, separation, is widespread in human psychology. For the Andalusian poets, the yellow of the narcissus is the symbol of the lover who pines away for unrequited love. The colour yellow symbolises the pain of separation. *Al-yafra'* denotes bile. In the parlance of the Levant, "a yellow smile" denotes a smile full of envy. On the other hand, we may note that in the 'Abbasid period, the Muslim East displayed a definite predilection for yellow. Even food was coloured yellow through the use of saffron.

Red is the colour of fire and of blood, of passion, of impulse and of danger. It is fundamentally linked to the vital force, and to the warlike qualities. It is a gushing colour, hot and male, unlike blue and green. The name of the first man, Adam, signifies "red" in Hebrew. As with yellow, its symbolism is ambivalent, both divine and infernal. The Burning Bush has its equivalent in the Furnace. The red sulphur (*al-hafir al-hamr*) of Islamic esotericism denotes Universal Man, the product of the action of hermetic red. It is said that at the battles of Badr and Hunayn, the angels who assisted the faithful against the infidels wore red turbans or belts. But, on the other hand, when the Eternal decreed the destruction of Saba and of its dam, He sent red rats to undermine the edifice (*K'as*, 280, 286). The Arabs qualified with "red" the form of death caused by the emission of blood. In popular speech, an unlucky year is called "a red year". In Syria, the expression "his eye is red" applies to a cruel person; and "his wool is red" means that he is accursed.

We see that the problem of colours, of their transmission and their perception, is quite complex. There has been a delicate evolution in chromatic perception since the origins of humanity. In early antiquity, man was, apparently, above all sensitive to the light, and very little to colour as strictly defined. Gradually, psychiatrists—and, consequently, semantics—learned to distinguish the nuances and to designate them. The infinite richness of the colours entered slowly in the course of the centuries. The apprenticeship of colour took place in the milieu surrounding each people. Language and perception have interfered, without ever totally covering all aspects of the question. Symbolism has entered into the element of subjectivity and ambivalence inherent in every perception of colour, while the human brain has extended its field of reflection, the range of its thought, and rendered its transposition more flexible, by learning how to nuance it.

LAWSHA, Spanish Loja, a small town of al-Andalus, 35 miles to the south-west of Granada, on the left bank of the Genil at the foot of an imposing limestone mountain, the Perduquest. It has now rather less than 30,300 inhabitants, but was probably more important during the Arab period. It was the birthplace of the famous Līḥān al-Dīn Ibn al-Ḥatīb (q.v.), who wrote an enthusiastic description of it. The walls of the town which commanded the town during the Arab period can still be seen. It was repopulated in 280/893 during the reign of the amīr 'Abd Allāh b. Muḥammad. Thus "key of Granada" was besieged in 1486 by the Catholic kings, who captured it on 25 Dhu'l-Ḥiǧga 891/29 May 1486.

(E. LÉVI-PROVENÇAL)

LAYL and **NAHĀR** (Ar.), two antithetical terms which designate respectively night and day, but do not have exactly the same status and are not parallel.

Layl is treated as a collective noun without dual (except in poetry where the use of this incorrect form is justified by the requirements of metre), or plural; it possesses, as would be expected, a noun of unity, *layla* "one night", of which the plural *layalāt* and the seldom used diminutive *layyāṣ* are something of an embarrassment to philologists, who are inclined to consider them as formed either on **lay-layāt* or on **laylāt*. *Nahār*, for its part, applies to the "day" which extends from sunrise to sunset; like *layl*, it has neither dual, nor plural (since the forms *nahār*, *nahār* and, in dialect, *nahārāt*, are secondary and judged inadmissible by the grammarians, who can only account for them as an aberrant transfer from the generic to the particular, from *ghayn* to *hāw*), but it is not a collective and, for this reason, it has no noun of unity and cannot itself supply this function. Thus the correlative of opposition to *layl*, *nahār*, cannot be opposed to *laylāt*, of which the antonym is *yawm* (pl. *ayyam*), signifying "day" (of twenty-four hours). So one says *laylāt wa-nahār* "night and day, by night and day" (e.g. *Qurʾān*, LXXI, 5), but *yawm wa-layla*, "a day and a night" is twenty-four hours and not thirty-six; the famous battles of the pre-Islamic Arabs, which did not take place at night, are known by the expression *ayyam al-ʿArab* (q.v.), generally translated as "the days of the Arabs". On the other hand, *nahār* is sometimes a substitute for *yawm*, as in Moroccan dialect where, in stories, "one day" is always *wahd an-nahār* and one even encounters *wahd an-nahār... f-l-ih* (e.g. G. S. Colin, *Chrestomathie marocaine*, 87). On the other hand, *ayyam* and *laylāt* are, in certain cases, interchangeable. While the "borrowed days", each one of which effectively lasts twenty-four hours, are known in Arabic as *ayyam al-ʿajūb* (q.v.), the very cold period which begins in December and ends

forty days later is always called *al-layālī al-sūd* "the black nights", while the forty "mottled" days which, in two series of twenty, immediately precede and follow it and during which the cold is less severe, are sometimes called *al-ayyām al-buḥ* [e.g. in the *Calendrier de Cordoue*, sometimes *al-layālī al-buḥ* (especially by al-Kalkashandī, *Ṣubḥ*, II, 384)].

Similarly, the distances which we express in "a day's journey" are measured by the Arabs in stages (*marṣala*, pl. *marāḥil*), translated either as "days" (*ayyām*) or as "nights" (*layālī*, even in reference to a country where day-time travel is practicable). While the day of the month can be expressed by means of *yawm* followed by an ordinal number up to 19, an ordinal and a cardinal from 20 upwards (*al-yawm al-ḥadīth wa 'l-yūm al-ṣafar* = 23 *Ṣafar*), a calculation based on nights is used in preference, most often with elision of the word *layla* or *laylī*, but with the feminine form of the numerical noun (whereas *yawm* or *ayyām* would demand the masculine), for example: *h-arba'ūn 'aṣṣayrāt ḥadīthahāna min Muḥarram* = "fourteen (nights) having elapsed of Muḥarram = the 14th of the month (not the 15th, since the official day begins at sunset), or: *al-ʿaṣr ḥadīth/bakīna min Muḥarram* = "ten (nights) remaining of Muḥarram" the 20th of the month. (In this context, in calculating correspondence with the Julian or Gregorian calendars, it is important to know if an event dated on a certain day happened before midnight, in which case the corresponding date indicated by the tables should be put back one unit.)

Being accustomed to look to the sky for guidance while travelling at night, and to use the stars (see *ANWĀʾ*) and the phases of the moon (see *NAHĀR*) for the measurement of time, the ancient Arabs divided the lunar month into ten periods of three nights bearing names chosen for the most part as references to the different shapes of the moon or to the degree of its brightness: 1-3: *ghāṣar* (or *gharr*, *ḡarḥ*); 4-6: *nafal* (or *ḡuḥar*, *ḡuḥḥ*); 7-9: *ḡuṣaʿ* (or *zakar*, *buhḥ*); 10-12: *ḡuḥar*; 13-15: *biḡ*; 16-18: *ḡuraʿ* (or *ḡurʿ*); 19-21: *ḡuṣaʿ*; 22-24: *ḡuṣaʿ* (or *naḡḡ*, *ḡuṣaʿ*); 25-27: *ḡuṣaʿ* (or *ḡuṣaʿ*); 28-30: *maḡḡuḡ*. These three last nights were qualified with, respectively, *ḡuṣaʿ*, *ḡuṣaʿ* and *ḡuṣaʿ*, but the 30th also bore the names *ṣafīr*, *sarar*, *naḡḡ*, *ḡuṣaʿ*, *falla*. The first and the last days of the month, in historical works and correspondence, are also designated by terms connected with the moon: *ḡuṣaʿ* for the first and *ḡuṣaʿ* or *ḡuṣaʿ* for the last. There also exists a different nomenclature in which nights from the 13th to the 21st bear the same names as those detailed in the scheme above, but the others are: 1-3: *ḡuṣaʿ*; 4-6: *ḡuṣaʿ*; 7-9: *ḡuṣaʿ*; 10-12: *ḡuṣaʿ*; 13-15: *ḡuṣaʿ*; 16-18: *ḡuṣaʿ*; 19-21: *ḡuṣaʿ*; 22-24: *ḡuṣaʿ*; 25-27: *ḡuṣaʿ*; 28-30: *ḡuṣaʿ*. For all these names, see Ibn Kutayba, *ḡuṣaʿ*, § 139; al-Masʿūdī, *Murūḡi*, III, 429-31 = § 1316-18; *Calendrier de Cordoue*, 26; al-Bīrūdī, *Chronologie*, 63-4. Ibn Sīdūh, *Muḡḡaṣṣa*, IX, 30-1; Ibn al-ʿAdībī, *al-Aḡḡaṣṣa wa 'l-ʿaḡḡaṣṣa*, 85-7; M. Rodinson, *La lune chez les Arabes et dans l'Islam* in *Sources orientales*, *La lune, mythes et rites*, Paris 1962 163-4).

The ancient Arabs possessed a host of epithets to describe a dark night but it is scarcely possible to establish a gradation between them. The majority of these terms, some of which are quite expressive (e.g. *muḡḡaṣṣa*, *muḡḡaṣṣa*), have fallen into disuse; we shall mention only the following: *layla ḡuṣaʿ* *naḡḡ*, *muḡḡaṣṣa*, *ḡuṣaʿ*, "very dark"; *muḡḡaṣṣa*, *ḡuṣaʿ*, "where one can see nothing"; *ḡuṣaʿ*, *ḡuṣaʿ*, "overcast and moonless"; *ḡuṣaʿ*, *ḡuṣaʿ*

"*muḡḡaṣṣa*"; *layl muḡḡaṣṣa* or *muḡḡaṣṣa*, "long night" (see Ibn Sīdūh, *op. loc. cit.*, IX, 37-41).

From the whole of this rich vocabulary, attested in ancient poetry or compiled by *ḡuṣaʿ* and reproduced scrupulously, though without much enthusiasm, by lexicographers, only the most current elements (in particular those derived from the root *ḡ-l-m*) figure in the *Kurʿān*, where day and night are items of considerable importance; we may in fact count a total of 57 occurrences of *nahar*, 79 of *layl*, 7 of *layla* and 4 of *layālī* (compared with 36 of *yawm*, 27 of *ayyām* and 69 of *yawmaḡḡaṣṣa*). The day and the night, naturally created by God and put at the disposal of mankind (XIV, 37/33) are signs (XVII, 13/12, XL, 37) of divine power; they are mutually concurrent (XXXI, 28/29, XXXIX, 7/5, LVII, 6), and God brings forth the day from the night (XXXVI 37; see also VII, 52/54); complementary (VI, 13, 60, XXV, 49/47, XXVII, 88/86, XXX, 22/23, XXXIV, 32/33, XXXVI, 40, XL, 63/61), they succeed one another regularly, with emphasis placed on this succession (*ḡuṣaʿ* *al-layl* *wa 'l-nahar*, II, 159/164, IV, 187/190, X, 6, XXXIII, 92/80, XLV, 4/5), which is sometimes treated by translators as a contrast between two creations which renew themselves constantly (hence the term *al-ḡuṣaʿ*, "the two new ones"). The two words appear together in a total of 24 verses.

The word *ḡuṣaʿ*, which occurs 47 times in the *Kurʿān* (in 33 cases to designate the [Last] Hour) meant nothing more than "a moment, a brief lapse of time", for the ancient Arabs apparently did not divide the day in 24 hours; this usage, a perfectly understandable one, is retained in the classical language, where expressions are encountered such as *ḡuṣaʿ* *ḡuṣaʿ* "instantly fatal poison". The concept of the hour was, however, introduced into Arab culture at an early stage, for it was indispensable to astronomers, who distinguished between equal or average hours (*ḡuṣaʿ* *ḡuṣaʿ*) and unequal or true hours (*ḡuṣaʿ* *ḡuṣaʿ*), and Islamic civilisation was at quite an early stage familiar with various types of clock (see *NAHĀR*, in Suppl.) which were evidently not at the disposal of the majority of peoples. However, references in historical texts to events which took place, for example, at the third hour of the day or of the night, lead one to suspect that this notion was more widespread than is generally thought; it is thus possible that in a period which cannot be precisely identified, the day and the night were divided into twelve hours, the relative proximity of the equator making fluctuations in their duration according to the seasons a matter of small account. This method of reckoning is still in use in Arabia, where, now that the possession of watches is widespread, it causes a certain amount of confusion.

The night begins immediately after sunset, which marks the start of the official day; this is why, when one talks of the previous night, the Arabic expression is *al-layla* "this night", if the time is before midday (but *al-layla* "[the night] that has passed" if the time is after midday). The divisions of the night were not precisely defined, in spite of the rich vocabulary which is to be found, for example, in the *Muḡḡaṣṣa* (IX, 44-5) of Ibn Sīdūh who mentions, following *Kuṣṣa* (IX, 37) five parts (*ḡuṣaʿ*) named respectively: *ḡuṣaʿ*, *ḡuṣaʿ*, *ḡuṣaʿ*, *ḡuṣaʿ* and *ḡuṣaʿ*; these expressions do not seem to have been in widespread use and, in any case, they are not defined in a satisfactory manner. However, the need to fix the hours of the three canonical prayers which take place during the night obliged the Muslims to interpret precisely

the meanings of certain ancient terms and to establish with accuracy the times to which they apply. Among the many words denoting the beginning of the night, *ghafāh* has been sanctioned by usage; in the Qur'ān (LXXXIV, 16), Allāh swears by the *ghafāh*, interpreted as meaning either "twilight" or "day", as opposed to the night which figures in the oath contained in the following verse, but it is agreed that this term designated "the evening twilight", the time at which the *maghrib* prayer should be performed [see *maghrib*]. Some authors distinguish two twilights, of which the first is characterised by the redness of the sky and the second by its pallor (e.g. Ibn al-Aḍḍārī, *op. laud.*, 128), but this distinction is secondary. The astronomic twilight lasts for as long as it takes the sun to descend 18° below the horizon (for 1 hour, 12 minutes, since 15° = 1 hour), and Muslim scholars adopt the average figure of 17°; it is however quite certain that the real duration of the *ghafāh* varies according to latitude, season and meteorological conditions; this is why the calendars indicate it regularly to enable the faithful to perform the prayer within the required time; one might naturally ask on what observations are based the figures supplied for example by the *Calendrier de Cordoue*, where this duration (and that of the morning twilight, the *faḍr*, which is reckoned to be identical) varies from 1 hour 17 on the 1st of January to a hour 1/8 on the 22nd of June. As regards the *maghrib* prayer, it is said in the Qur'ān (XVII, 50/77): *qāmā 'l-ḥaḍā'atā 'l-awwalā 'l-ghāwī' alā 'gharabī 'l-layl*, and the end of the *ghafāh* effectively marks the start of the *gharab* (which was also known by other names: *palām*, even if the moon was shining, *sharḥām al-layl*, etc.); the beginning of the latter period is the time for the prayer of 'iḡā'ā, which some call incorrectly *al-iḡā'ā 'l-ahḥā'ira*, as opposed to a 'iḡā'ā *ūla* = *ḡā'ā 'l-maghrib*, and which the Bedouins were reproached for calling *ḡā'ā 'l-ahḥā'ira*, after the first third of the night during which they customarily performed the milking (*iḡā'ā*) of their camels. Although we know of a considerable number of terms designating any part of the night (see *Muḥḥaṣṣaṣ*, ix, 45), only a few words seem to be of all precise, in spite of differences in interpretation; thus, 'aḡḡa, *si'w*, *haḍ* and variants = 1/4 of the night; *ḡa'ā* and variants = 1/3; *ḡa'ā* and variants = 1/3 or 1/4; *haḍ*, *kaḍ*, *ḡhaḍ*, *maḡḡam* and variants = 1/4 approximately. The middle of the night was called *ḡa'w*, *ḡa'wam*, *ḡa'w*, but astronomers rendered "midnight" simply by *niḡf al-layl* (in the same way they called "midday" *niḡf al-naḥār*) and the modern language uses the expression *minṭaqaf al-layl*. The 'aḡḡa precedes the third third, the *saḡar* or *saḡr*, which matches the *gharab* and is immediately followed by the morning twilight, the *faḍr*; for the Muslim astronomers, this twilight begins at the moment that the sun is 19° below the horizon, but the real duration of it is indicated, as has been seen above, in the calendars. It is during this final part of the night that the morning prayer (*faḍr* or *ḡaḡ*) is performed. Since their territory did not extend as far as latitude 48°, the Arabs did not know that at the summer solstice there is no complete night (the *layl alayal* of the astronomers) at this latitude.

Night travellers experienced a certain relief when they observed the first lights of dawn, and they tended to include the *faḍr* in the *naḥār*; a reflection of this conception is also found in the works of lexicographers who normally place the *ḡaḡ* (or *ḡaḡa* or *ḡaḡ*) at the end of the night and are furthermore inclined to make it the beginning of the day, calling

ḡaḡa or *buḡra* the time which elapses between the *faḍr* prayer and the sunrise (see *Muḥḥaṣṣaṣ*, ix, 48-52). Although the prayers which punctuate the Muslim's life obliged the *ḡaḡa* to fix with a degree of exactitude the time of the *ḡaḡ* and of the 'aḡr (let alone the *ḡaḡ*), the divisions of the day lack precision. The *naḥār* begins at the moment that the upper edge of the sun appears on the horizon, just as the night and the official day begin when the opposite edge, now uppermost, disappears. The first part of the day, up to the moment when the sun has traversed a quarter of the diurnal arc, is called *ḡaḡ*; the period corresponding to the sun's progress over the second quarter of the arc is known as *ḡaḡ*; it comes to an end at midday (*ḡaḡ*), which is marked, for the astronomers, by the sun crossing the meridian and, for the simple faithful, by the displacement of the shade which moves from the west (where it is called the *niḡf*) to the east (where it takes the name *foḡ*). It is at this moment that there begins the period, varying according to the judicial schools [see *maghrib*], during which the midday prayer (*ḡaḡ*) must be performed. A number of terms referring to the heat which then reigns are employed (*ḡaḡa*, *ḡaḡa*, *ḡaḡa*, *ḡaḡa*), without designating a precise lapse of time. Some calendars indicate, at the beginning and the end of each month of the solar year, the altitude (*iriḡā'*) in degrees of the sun at midday (e.g. the *Calendrier de Cordoue*, or, to enable the faithful to calculate for themselves the hour of the *ḡaḡ*, the length of the shadow either in feet, as in the *Risāla* of Ibn al-Bannā', or in height (*ḡaḡa*), once again as in the *Calendrier de Cordoue*, where the shade varies from a quarter of the height of an object on the 16th of June and the 1st of July, to one and five-sixths on the 16th of December. The period which follows that of the *ḡaḡ* and also extends between limits determined by the length of the shadow, but variable according to the *ḡaḡa*, is that of the 'aḡr (see I. Goldziher, in *Archiv für Religionswissenschaft*, ix, 293 ff.; transl. in *Arabica* vi/2 [1960], 26 ff.); this term is thus precisely defined in Islam, although diverse and much less definite interpretations are retained. *ḡaḡ* was used in reference to the time which elapses between the 'aḡr and sunset, but this word tends to be employed, in the contemporary language, for the evening twilight; *ḡaḡ*, which had the same meaning, is today applied to the evening, as opposed to *ḡaḡ*, "morning", and also comes to designate the period which begins at noon and encroaches upon the night; the word 'aḡḡa (and variants) is also taken in the sense of "evening", although it used to be as precise as *ḡaḡ* and *ḡaḡ*, designated the end of the *naḥār* and was the opposite of *ḡaḡ* (e.g. Qur'ān, LXXIX, 46: *ḡaḡ 'aḡḡa' wa ḡaḡaḡ*).

The calendars to which reference has been made often attach importance to the length of the day and of the night, which some of them indicate twice a month, either in degrees of the sun's arc, or in hours. Since the authors who supply these figures are not usually astronomers, they give the impression of borrowing these numerical data from their predecessors, without perhaps taking account of differences in latitude, especially in view of the fact that, when addressing themselves to their fellow-citizens, they do not take the trouble to establish the name, and the position relative to the Equator, of the place concerned. It would nevertheless be possible to calculate the latitude of this place if one could rely on the accuracy of the data relating to the length of the longest and shortest days and nights of the year, but in this

respect great uncertainty remains. It is furthermore to be noted that the geographers, heirs to the Ptolemaic tradition, divide the zone reckoned to be inhabited in the northern hemisphere, as far as approximately latitude 50°, into seven climates [see *KUṬUB*], of which the lower and upper limits are constituted by parallels separated one from the other by a distance corresponding to a difference in half-an-hour in the length of the longest day of the year.

[CH. PELLAT]

LAYLĀ AL-AKHYALIYYA, Arab poetess of the 1st/7th century of the tribe of the 'Ukayl ('Āmir b. Sa'ā'a group) whose *nishā* came to her from an ancestor, Akhyal, or from several of the Akhā'ū. Literary tradition attributes to her an elegy on the murder of 'Uthmān and speaks of her as having been familiar, late in life, with the caliphs Mu'āwiyā and 'Abd al-Malik, and the redoubtable governor al-Hajjāj; it follows that the pinnacle of her career should be placed at around 650-60 A.D. She is well-known for her romantic saga, of 'Uthirite type, concerning her relationship with the bandit-warrior Tawba b. Humayyir, also of the 'Ukayl tribe. He loved her, and although he was prevented from marrying her, he always maintained a chivalrous devotion to her. When he was killed in the course of one of his raids, Laylā mourned him in a number of touching elegies, fragments of which are available to us from literary sources (as far as is known, they were never collected in a *diwān*) which show Laylā resembling a Muslim al-Kharrāṭ? [q.v.]. In fact, these funeral elegies, like those of the most famous poetess of the *Ukhayliyya*, are still imbued with a purely pagan spirit, lauding the warlike and beneficent virtues of their heroes (for al-Kharrāṭ, her two brothers; for Laylā, her sweetheart Tawba), without any hint of faith or Muslim piety. The genre of the *nishā*? [see *MAṢNŪIYA*], was henceforth perpetuated in an established form in the new milieu of Islam. As with the poetess of Sulaym, the sincerity of Laylā's sorrow and her fidelity to a long and unrequited love come through the conventional *topoi* of the elegy, as in the accounts of her conversations with the caliphs.

Besides these *marṣi'ī*, there is attributed to Laylā a poetic exchange in *hiǧlī* form, fairly coarse as is typical of this genre, with the poet al-Nābiḡa al-Djādī. This is all that is known of her life (she was married to a certain Sawwār b. Awl al-Kuḡayrī). On the date and place of her death, there is conflicting evidence. According to a highly romantic tradition, she died very close to the tomb of Tawba, in circumstances which would corroborate certain well-known verses of her friend in this respect; more plausible perhaps are other traditions which put her death in *ḥiān* (at Sāwa or Rayy), in the course of a journey which she had undertaken in her old age through the *barīd* of al-Hajjāj, to visit her cousin Kutayba b. Muslim [q.v.], who was then campaigning in Khurāsān. In any case, the date would be in the early years of the 8th century A.D. (end of the 1st century of the Muslim era). Her historical authenticity is not in any doubt, unlike that of her more famous namesake, Laylā of Maḡnūn.

LAYLĀ KHĀNĪM (?-1847), Turkish poetess of the first half of the 19th century. Very little is

known about her life. Born in Istanbul the daughter of the *hādī-nāser* Morall-zāde Hāmid Efendi, she was educated by private tutors, particularly by her maternal uncle 'Izzet Mollā [q.v.], whom she eulogised in an *ezgi*. Her short-lived marriage and her gay and unscrupulous way of life gave rise to gossip about her being a lesbian. Her poems, not particularly original, are written in a comparatively simple and unadorned style avoiding the artificialities and affectation of many of her contemporaries. She excelled in *münāẓāt* and *meṭhīyes*. Her *diwān* was printed at Būlḡ in 1844, with second and third editions made in Istanbul in 1851 and 1883 respectively. Laylā Khānīm was a Mewlewī adherent, and is buried in the garden of the Galata Mewlewī convent.

İnal, *Son asrı Türk şairleri*, v, Istanbul 1938, 875-9 (with further bibliography); İbrahim Aleittin Gövsa, *Türk meḡnâları muhtelası*, Istanbul n.d. [1946], 5 v. (FASMA 12)

LAYLĀ KHĀNĪM (Modern Turkish LEYLA SAZ 1850-1936), Turkish poetess and composer. She was born in Istanbul, the daughter of Dr. İsmâ'il Paḡha (1812-71), originally a Greek from Chios, who served as imperial surgeon under Mahmūd II and as governor, minister and Palace physician under 'Abd al-Mecīd and 'Abd al-'Azīz I from early childhood. Laylā Khānīm frequently lived in the imperial harem or in close association with it. She was privately educated and was married to a civil servant from Crete, Sırrı Hāndī (later Paḡha, 1844-93), who served as a governor in various parts of the empire. Laylā Khānīm, who accompanied him, included interesting travel notes in her famous memoirs (see below). She died in Istanbul on 6 December 1936.

As a composer, she followed the classical Turkish tradition, although the influence of Western music which had entered the Ottoman Palace in the mid-1800s is noticeable in her works. She is the composer of over 200 works to which she wrote the words, including some famous and very popular *şark* and marches.

Her early poems published in the *Khānīne-yi zerāb* in the 1880s are in the *diwān* tradition. Later, she wrote in the manner of the *Tanzīmī* modernists, particularly of 'Abd al-Hakīm Hāmid. She occasionally used syllabic metre and a simple language for her *türkân*. Only a small portion of her compositions and poems survived the fire which destroyed her villa in Bostānḡī near Istanbul (see Mustafa Rona, *Yerminci yuray Türk musikisi*, Istanbul 1950, 25-31, where 45 of her compositions are given). Her scattered poems were collected and edited by her son Yūsuf Rāḡī in 1928 as *Sohmāḡ iḡkter* ("Faded flowers"). They seldom rise above the average.

Laylā Khānīm's most important contribution is her invaluable memoirs, which mainly cover her experiences in the harem. This is a unique first-hand report of Palace life from the inside. The memoirs describe in great detail everyday life in the Palace, its décor and furnishings, and particularly the harem, its customs, fashions, ceremonies, special occasions, training and life of princes, princesses and slave girls, etc., together with character studies and sketches of interesting types. She began to write her memoirs in 1897 and completed them in 1920 at the age of 70; and she published the first part, on the harem, in the daily *Wakf* (beginning 20 January 1921) and the second part, on women's life, in the 19th century, in the daily *İleri* (from 25 April 1921). At Istanbul

was under Allied occupation at this time and the press under strict control, some passages were omitted by the censor. The memoirs were translated by her son and published under a pseudonym, that of Mme. Adriana Piazzi (Delcambre), *Le Harem impérial et les suites au XIX^e siècle; souvenirs*, adaptés et français par son fils Youssef Razi. Préface de Claude Farrère, Paris 1925. Both parts of the memoirs have now been edited in one volume by Sadi Borak as *Layla Sa'a, Harem'in içyurdu*, İstanbul 1974.

LAYLĀ Ō MAJNŪN (BNE MAJNŪN WA-LAYLĀ)

LAYLAT AL-BARĀ'Ā (see BĀMADĀN)

LAYLAT AL-ḲADR (see BĀMADĀN)

AL-LAYTH a. AL-MUẒAFFAR, Arab philologist and jurist, grandson of the Umayyad governor of Khurāsān Naṣr b. Sayyār al-Khānī al-Laythī (d. 131/748, 85 years old [q.v.]). Sometimes he is identified as the son of the latter or even as the son of an alleged third son of his grandfather, Rāfi', who might be confused with the well-known Rāfi' b. Layth b. Naṣr b. Sayyār (see KHĀRŪN AL-RASĪD).

The biographical information about al-Layth (or Layth) is meagre. He studied grammar and lexicography under the versatile scholar and *ḥāfi* of Kūfa, Ḳāsim b. Ma'n (d. 175/791?), and was held in high repute as a secretary with the Barmakids. It seems that his relationship with the master of the *ʿarabiyya*, al-Ḳhālī b. Abmad (d. 175/791? [q.v.]), who was not much older than himself, was trustful and close. We learn that from traditions, some of which are embellished by anecdotes, and we furthermore learn that he revised and completed the *Kutāb al-ʿAyn* of al-Ḳhālī, according to some sources after the latter's death. Al-Layth may have finished this work at the beginning of the eighties of the 2nd century A.H. (about 800 A.D.) and died soon afterwards, in other words, just before the fall of the Barmakids in 137/803. Later philologists consider him as the actual author—and recent investigations confirm this view, especially in regard to the bulk of the material—or else they leave this question undecided, speaking of the *ṣūḥūf* *Kutāb al-ʿAyn*; whereas others attribute the misunderstandings and the mistakes which they thought to have discovered in the first Arabic dictionary mainly to that revision. (Concerning the works which have been written before the background of such criticism, cf. J. Kraemer, *In Orieus*, vi [1953], 208 f.)

(R. SELLEHEIN)

AL-LAYTH b. SA'D b. ʿAD AL-RĀḤMĀN AL-FARḤĪ, Abu ʿI-Ḥārith, traditionalist and jurist, belonging to the class of the great *ṣāḥḥ*ūn. He was born and died in Egypt (Karkashanda, Shaʿbān 94/May 713—Mizz, 14 Shaʿbān 175/16 December 791. At the cemetery in Cairo, may be seen the tomb of "El Imam El Less"). This "scholar of Egypt" (of Persian origin) is ranked unanimously among the leading authorities (*ṣakāhī*? *al-amsār*) on questions of religious knowledge in the early years of the Islamic empire, these being: Abū Ḥanīfa, Sūfyan al-Thawri and Ibn Abī Layth (Kūfa), Ibn ʿUjurayh (Mecca) Mālik and Ibn al-Madīnī (Medina), al-Aẓẓāʾ (Syria), and finally, al-Layth b. Sa'd (Egypt). With his vividly critical attitude towards the law schools (the Mālikī one in particular), the Ṣāḥīḥ Ibn Hazm regards all these individuals as the worthy successors of Mālik in respect of erudition, intelligence and moral severity (*al-Iḥḥām fī ʿulūm al-ahkām*, ii, 138). Al-Layth is also held in high esteem by the *imām* al-Shāfiʿī, in whose opinion the study of tradition rests, essentially, on the authority of these three masters Mālik, Sūfyan al-Thawri and al-Layth b. Sa'd.

Only fragmentary information is available concerning the career of al-Layth (cf. the article devoted to him in *Taʾrīkh Baghdad*, xii, 3-14). His training in the discipline of *ḥadīth* was both Meccan (with Ibn Shihāb, Nafi' and 'Aṭṭā' b. Rabāb among others) and Medinan (Mālik). He travelled to Baghdad in Shawwāl 161/July 778, where his teaching of *ḥadīth* was an outstanding success and earned him the patronage of Hārūn al-Rashīd. His humility is said to have prevented him from soliciting honours and appointments of state. On returning to Egypt, he devoted himself to teaching and also to the management of what seems to have been a considerable fortune. He was credited with an annual income of the order of 25,000 *ḍinārs*, which he utilized with such generosity that he was left with practically nothing which could justify the payment of *ṣadd*. Al-Layth was, throughout his life, a much-courted and honoured man (no doubt because of his fortune). According to a man familiar with him over a period of twenty years, he was never seen lunching or dining unaccompanied by numerous associates. He lived in a grand scale and knew how to enjoy his wealth. If such a life-style allowed him a certain amount of leisure for participation in public life, or for daily sessions of *ḥadīth*, it was hardly compatible with long and exacting periods of work. In addition, the written work of al-Layth seems to be less than prolific (see *Bibl.*) in comparison with that of Mālik (93:179/21-95) who was able, in the rustic setting of Medina, to lead a much more productive scholastic life.

The biographers of al-Layth often compare him with Mālik, with the object of attributing superiority in numerous areas to the former. Without doubt, subjectivity plays a major part in these judgments, when dealing with an individual whose special success and significance inspired much respect. In the doctrinal sphere as such, the personal contribution of al-Layth is far from comparable with that of the *imām* Mālik. It is significant in this context that classical authors discussed the legitimacy of whether al-Layth should be accorded the title of *imām*, taking into account not only his piety and his virtues, but also the importance and impact of his doctrine as measured on the scale of the *imām* (Tāʾrīkh Baḡhdād,

xiii, 13). The verdict of posterity is negative on this point; all that need be quoted here by way of a tribute is the opinion recorded by al-Khatib al-Baghdadi (d. 463/1071): "If Mālik had not existed, the superiority of al-Layth would have been universally recognised" (*Ta'rikh Baghdād*, xiii, 7). Having been a pupil of Mālik, al-Layth was in a position to assert his independence with regard to his eminent contemporary, while maintaining a relationship with him marked by courtesy and a willingness for intellectual co-operation (cf. his *Risāla ilā Mālik b. Anas*, in Ibn Kayyīm al-Djawziyya, *ʿIlm al-muwaḥḥidin*, iii, 94-100). If in the sphere of religious law (*fiqh*), the influence of al-Layth is decidedly slight, his name nevertheless remains connected with the discipline of *ḥadīth*, where the classical authorities unanimously attribute to him a well-proven competence and integrity.

Bibliography: Sergin, *GAS*, i, 320, no. 7, where the work of al-Layth (1. *Ḥadīth*; 2. *Madfūʿ min fauʿid al-Layth*; 3. the above-mentioned *Risāla*) is to be supplemented by *Kutub masūʿil fi ʿl-fiqh*, cited in the *Fihrist* of Ibn al-Nadīm (199); al-Khatib al-Baghdadi, *Ta'rikh Baghdād*, Cairo-Baghdād 1349/1931, xiii, 3-14 (article no. 6960); Muḥammad b. ʿAbd Allāh al-ʿUmari al-Tabrizi, *Miftāḥ al-masābil*, Damascus 1380-2/1961-2, iii, 765; R. G. Khoury, *al-Layth ibn Sa'd* (947/13-175/792), *grand maître et médecin de l'Égypte, vu à travers quelques documents islamiques anciens*, in *Festschrift Nabia Abbou*, JNES, xli/3 (1981), 189-202. (A. MERRAS)

LAZ, a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeastern corner of the shores of the Black Sea, in the region called in Ottoman times Lazistan.

1. History and geography. The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units (or groups). The fact that the name Phasis was applied to the Rion, to the Corokh (the ancient Akampsh), and even to the sources of the Araxes, also creates difficulties.

The earliest Greek writers do not mention the Laz. The name Λαζοί, Λαζοί is only found after the Christian era (Ptolemy, *Nat. Hist.*, iv, 4; *Periplus of Arrian*, xi, 2; Ptolemy, v, 9, 5). The oldest known settlement of the Lazoi is the town of Lazos or "Old Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Novorossiisk) and 1020 stadia (100 miles) north of Pityus, i.e. somewhere in the neighbourhood of Tsupse. Kießling sees in the Lazoi a section of the Kerketai, who in the first centuries of the Christian era had to migrate southwards under pressure from the Zygoi (i.e. the Čerkes [q.v.]) who call themselves Adighi (Adighi); the same author regards the Kerketai as a "Georgian" tribe. The fact is that at the time of Arrian (2nd century A.D.), the Lazoi were already living to the south of Sukhum. The order of the peoples living along the coast to the east of Trebizond was as follows: Colchi (and Sanni); Machelones, Hendochi; Zydritae; Lazai (Λαζαί), subjects of King Mithras, who owned the suzerainty of Rome; Apislae; Abacsi [cf. *Avghaz*]; Sanigae near Sebastopolis (= Sukhum).

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous *Periplus*, *Fragm. Hist. graec.*, v, 180). According to Constantine Porphyrogenitus, *De administrando*

imperio, ch. 33, in the time of Diocletian (284-303), the king of the Bosphorus, Sauromatus, invaded the land of the Lazoi and reached Halys (N. Marr explained this last name by the Laz word meaning "river"). Among the peoples subject to the Laz, Procopius (*Bell. Got.*, iv, 2, 3) mentions the Abargoi and the people of Suania and Skymnia (= Lechhum). It is probable that the name Lazica referred to the most powerful element and covered a confederation of several tribes. The Laz were converted to Christianity about the beginning of the 6th century. "In the desert of Jerusalem" Justinian (527-65) restored a Laz temple (Procopius, *De aedificiis*, v, 5), which must have been in existence for some time before this. The Laz also sent bishops to their neighbours (Procopius, *Bell. Got.*, iv, 2). In Colchis the Laz were under the suzerainty of the Roman emperors, who gave investiture to their kings, and the latter had to guard the western passes of the Caucasus against invasions by the nomads from the north. On the other hand, the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchis. In 458 King Gobases sought the help of the Sāsānid Yazdagird II against the Romans. Between 339 and 362 Lazica was the scene of the celebrated struggle between Byzantium under Justinian and Persia under Khosrow I Anōshirwān.

According to Procopius, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis, but their towns (Archaeopolis, Sebastopolis, Pitius, Skanda, Sarapaus, Rhodopolis, Mochrestis) all lay to the north of the river, while on the left bank, which was desert land, the lands of the Laz only stretched for a day's march to the south. Nearer to Trebizond were the "Roman Pontics", which only means that the inhabitants were direct subjects of the Roman emperor and not of the Laz kings; from the ethnic point of view, the "Roman Pontics" could not have been different from the Laz. This strip of shore continued longest to shelter the remnants of the Laz.

In 1204 with the aid of troops lent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is very closely connected with that of the southern Caucasus. Nicephorus (v, 7) says that the founder of the dynasty had seized "the lands of Colchis and of the Lazoi". In 1282 John Comnenus received the title of "Emperor of the East, of Iveria and of the lands beyond the sea". In 1341 the princess Anna Anakhatlu ascended the throne with the help of the Laz. The lands directly under the authority of the emperors of Trebizond seem to have extended as far as Makriali, while Gonia was under a local dynasty (cf. the *Chronicle of Panaretos*, under the year 1326).

In 865/1461 the Ottoman Sultan Mehmed II conquered Trebizond, and as a result the Laz came into contact with Islam, which became their religion in the form of the *Shāhī madhhab*. The stages of their conversion are still unknown. The fact is that, even in the central regions of Georgia (Akhaltsikhe), Islam seems to have gained ground gradually from the 13th century onwards (N. Marr, in *Bull. of the Acad. of St. Petersburg* [1917], 415-46, 476-506).

In 926/1519 Trebizond, with Batuna, was made a separate *eyālet*. According to Ewliya Celebi, who went through this region in 1050/1640, the five *sandjaks* of the *eyālet* were: *Djankh* (*Djankh* = Samsun?), Trebizond, Guniya (Gonia) and Lower and Upper Batum. The modern Lazistan was governed from Gonia, for among the *ḥafiz*'s of this fortress we find Atina, Samla, Witze/Bide (= Witse) and Arghowl

(Ewliya and the version of the *Dishan-nâmâ* in Falkmayer, *Original-Fragments*, in *Abh. d. Bayer. Akad.* [1846]). Hâdjî Khallîfa and Ewliya Çelebi, deceived by the similarity in sound of Caucasian names (as also was Vivien de St. Martin), proposed a theory of the identity of the name *Lezgi* and *Laz*. Ewliya calls Trebizond the "former *Lezgi wâliyet*". Hâdjî Khallîfa, after enumerating the peoples of the district of *Lezgi* as Mingrelians (Megreli), Georgians, Abkhaz (Abaza), Çerkes and *Laz*, adds that the latter are those who live nearest to Trebizond. To the south-east of Trebizond in the Çepni mountains he mentions the Turks who "worship as their God (*ma'bad*) the *Shâh* of Persia (i.e. extreme Shi'as) and are associated (*maghtarik*) with the *Laz*". Hâdjî Khallîfa and Ewliya do not agree on the number of theiefs of Trebizond; Ewliya only says that the value of the *eyâlet* has depreciated through the untrustworthiness of many of its 41 *wâliyes* (*Dishan-nâmâ*, 429; Ewliya, II, 81, 83-5).

The first serious blow to the feudal independence of the *derbeks* of Lazistan was only struck at the beginning of the 19th century by the Ottoman Pasha of Trebizond; but Koch, who visited the country after his expedition, still found most of the hereditary *derbeks* in power, although shorn of some of their liberties. He counted fifteen of them: Atina (two), Bulep, Artashin, Witse, Kapiste, Arghawe, Kisse, Khopa, Makila (Makrieli), Gonis, Batum, Maradit (Naraditli), Perlewan and Cat. The lands of the three latter lay, however, on the Çorolîh behind the mountains separating this valley from the river of Lazistan in the strict sense. On the other hand, among the *derbeks* of Lazistan was the lord of Hamshin, i.e. of the upper valleys of Kalopotamos and of Fortuna, inhabited by Muslim Armenians. According to the Armenian historian Levond, tr. Chahazarian, Paris 1826, 162, the latter with their chief Hamam of the Amatuni family had settled in the district in the time of Constantine VI (780-97) (the old Tambur was given the name Hamshin < Hamaun-shen, "built by Hamam"). It is evidently this region that Clavius (1403-61, ed. Srezniewski, St. Petersburg 1881, 383, calls "terra de Arraqueil". He adds that the people, dissatisfied with their king Arraqueil (Arakel?), submitted to the Muslim ruler of Ispir. The Hamshin are now Muslims, and only those of Khopa have not forgotten Armenian. A Hamshin lexicon was published by Kipshidze.

With the institution of the *wâliyets*, the *sandjak* of Lazistan became part of the *wâliyet* of Trebizond. Its capital was at first Batum but, after the Russian occupation of Batum in 1878, the administration of the *sandjak* was transferred to Rize (Rhiszon), detached for this purpose from the old central *sandjak* of Trebizond. That part of Lazistan lying to the west of the Ottoman-Russian frontier occupied a strip of coast 100 miles long and 15 to 20 miles broad. The *kadâ's* of the *sandjak* were: Khopa, Atina and Rize, subdivided again into 9 *wâliyes* (Sâmi-Bey, *Kamûs al-awlam*, v, 3966). Cuinet, *La Turquie d'Asie*, I, 118-21, mentions Of as a fourth *kadâ* and gives 8 (7) *wâliyes* (Hamshin, Karadere, Mapazari, Wakt, Kurî-yi sab'a, Witse, Arghawe). In 1880 there were in the *sandjak* 364 inhabited places with 138,467 inhabitants, of whom 689 were Orthodox Greeks and the rest Muslims (Laz, Turkified Laz, Turks and "Hamshin"). The number of true Laz cannot be more than half the total population.

The term *Laz* is used in the west of Turkey to designate generally the people of the country round the south-east of the Black Sea, but in reality the

people calling themselves by this name and speaking the Laz language now live in the two *kadâ's*, modern *ilçes*: Khopa (between Koprugh and Gurup) and Atina (between Gurup and Komer). Laz is spoken in 64 of the 69 villages of the *kadâ* or *ilçe* of Atina. To these should be added the very few Laz who used to live in Russian territory to the south of Batum. These Laz were incorporated in Turkey by virtue of the Turco-Soviet treaty of 16 March 1921, which moved the Turkish frontier to Sarp (to the south of the mouth of the Çorolîh). Rize and Batum are now outside the Laz country proper.

Due to its remoteness and to its proximity to the Russian frontier, Lazistan has only been marginally affected by the modernisation of Turkey in recent years. Communications are poor, and roads largely unmade. The ancient port of Hopa, which is the end of the line for passenger and mail steamers from Istanbul, has been equipped with a modern harbour which includes two massive artificial moles. At Sarp, which is only about 20 miles from the important Soviet port of Batum, there is a flourishing tea factory surrounded by the highly-productive plantations of this bush.

The Laz have traditionally been regarded as very conservative in their Islamic religion, and the old Turkish shadow theatre (Karagöz (q.v.)) and popular theatre (Orta oyuna (q.v.)) often portrayed the Laz as slow-witted rustics; a Turkish proverb stated that "a Muslim does not eat Laz jelly", *Lazların termonu muselman yemez olur* (termon < Greek *τέγος*). In fact, despite a long-established reputation for brigandage and for smuggling goods across the Turco-Russian frontier, the modern Laz are highly intelligent. They are skilled tillers of the soil, and were in the past often to be found in the towns of eastern Turkey as gardeners. Today they are to be found in towns all over Turkey in their traditional calling of bakers and pastrycooks; before the First World War many Laz went to Russia to work as bakers, and often returned with Russian wives who became converts to Islam. They are shrewd and enterprising businessmen, and have secured a large portion of the real estate market in Istanbul. When modern educational opportunities are available to them, they readily respond to this stimulus. They are also excellent sailors, and form a large proportion of the crews of many Turkish vessels.

a. Language. The Laz language is closely connected with Mingrelian (which is a sister language of Georgian), but N. V. Marr found in it sufficient peculiarities to consider it a Mingrelian language rather than a dialect. In the Lazo-Mingrelian group he believed that he could find resemblances to the more Indo-European elements in old Armenian (Grabar). There are two Laz languages, eastern, and western with smaller subdivisions (the language of the Çhûlala). Laz is very full of Turkish words. It has no written literature, but there are local poets (Rashîd Hilâl, Pehlîwân-oghlu, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Pisarev in *Zapiski VOIKAO* [1901], xii, 173-201, in which the harmony of the vowels is much neglected (cf. a specimen in Marr, *Teksti i razishaniya*, St. Petersburg, vii, 55).

The Georgians call the Laz Ç'an, but the Laz do not know this name. "Ç'an" is evidently the original of the Greek name Sannici/Tannoi, and it survives in the official name of the *sandjak* of Samsun (Samsûn). From the historical point of view, the separation of the Laz and Ç'an seems to have taken place, in spite

of the close relationship between the two of them. In the time of Arrian, the Sannoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of C. Müller, in *Geogr. graeci minores*, ad *Arriani Periplus*, 8), he places on the river of the frontier between the Colchians (Laz?) and the *Θαυσινοὶ* (?). Koch mentions the interesting fact that the people of Of speak a "language of their own", and according to Marr, the people of Khoshniglin (near Atina) speak an incomprehensible language. Procopius places the "Sannoi who are now called the Trannoi" on the area adjoining the mountains separating Corodhi from the sea (the Parayadres range, the name of which survives in the modern Pakhar/Balkhar). Marr's researches showed that the Č'an (Trannoi) had at first occupied a larger area, including the basin of the Corogh and its tributaries on the right bank, from which they were temporarily displaced by the Armenians and finally by the Georgians (K'art'li). The chronicles of Trebizond continue to distinguish the Laz from the Tatarids (Γαυριδῆς). The latter in alliance with the Muslims attacked the possessions of Trebizond in 1348, and in 1377 were punished by the Emperor. At this period the Tatarids must have been in the southwest of Trebizond (besides, the *σαγγαὶ* of Lian'k is to the west of this port). Thus the Georgian application of the name Č'an to the Laz may be explained by the confusion of the two tribes one of whom (the true Č'an living to the south and west of the Laz) was ultimately thrust to the west of Trebizond.

[V. MINORSEV (D. M. LANG)]

LAZARUS, the name in the Gospels of (1) the poor man who finds compensation in Abraham's bosom for the misery of this world (Luke, xvi, 19-31); and (2) the dead man whom Jesus raises to life (John, xi). The Kur'an mentions neither the one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (III, 43/49). Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Al-Tahari in his *Ta'rikh* talks of these miracles in general. According to him, Hām b. Nūh is revived by Jesus (I, 187). Al-Kisā'i only mentions Sām son of Nūh amongst those restored to life by Jesus. Ab-Tha'ālibi relates, closely following St. John's Gospel: "al-ʿĀsir died, his sister sent to inform Jesus, Jesus came three (in the Gospel, four) days after his death, went with his sister to the tomb in the rock and caused al-ʿĀsir to arise; children were born to him". In Ibn al-Aʿthir the resurrected man is called "ʿĀsir", the al of ʿĀl-ʿĀzar was taken for the article, as in al-Yāsaʿ (Elisha) and Alexander (al-Iskandar) or in ʿĀzar, the father of Abraham in the Kur'an, whose name Frankel derives from Elizer. In Ibn al-Aʿthir we find Muslim legend endeavouring to increase the miracle; Jesus raises not only ʿĀsir (Lazarus) but also his wife (children are born to them), and Sāra (son of Nūh), the prophet ʿĀsāyir and Yahyū b. Zakariyyā (John the Baptist).

Fraenkel, in *EDAF*, Ivi (1902) 72-3; J. Horowitz, in *Hebrew Union College Annual*, II (1925), 157, 161; idem, *Koranische Untersuchungen*, Berlin 1926, 12, 85, 86. (B. HELLER)

LEBANON (see **LUENAK**)

LEBARAN, the name generally used in Judonasta for the ʿĪd al-Fiṭr (q.v.), originally means "end" or "close", in this case specifically the end of the fast (Indonesian phrase). Combining it with the Javanese word *garibṭig* ("procession"), people in Java also use the term *garibṭig pṭasa*, the court festival at the end of the fast. Ignoring the original meaning of the word *Waranan*, the expression *lebaran haji* is sometimes used for the ʿĪd al-Aḡḡā (q.v.), the "major festival" according to Islamic law.

Just as in other Islamic countries, the festival after the month of fasting is also celebrated in Indo-

nesia as the greatest festival of the year. The way of celebrating it does not differ greatly from other countries (see 'In and 'Id al-Fitr). An exception must be made for the principalities of Central Java, where this festival has a special character because of its connection with the court and the influence of elements from pre-Islamic Hindu culture. For a description of the background and meaning of the ceremonies and practices surrounding the *garibis prias* in Yogyakarta, the reader is referred to the literature mentioned below.

As a result of Islamic reformism, as well as the independence of Indonesia (with the Ministry of Religious Affairs trying to influence religious developments), Muslims have been encouraged to participate in Islamic observances in conformity with Islamic law, whereas ceremonies and practices such as those connected with the *garibis* in Yogyakarta are relegated to the sphere of custom and folklore.

Bibliography: Besides the passages on *Lebaran* in the books by Juynboll and Snouck Hurgronje mentioned in the bibliography to 'To mention must be made of two monographs on the festivals in Yogyakarta, namely J. Groenman, *De garibis te Nyajogyakarta*, The Hague 1895, and R. Soedjono Tirtokoesomo, *De Garibis in het Sultanat Jogjakarta*, [Yogyakarta 1912.

(B. J. BOLAND)

LEFF, an Arabic term used in the Berber-speaking regions of central and southern Morocco (a different term is used in a similar way in Berberophone regions of northern Morocco, and the term *soff* appears to be its equivalent in Kabylia) to denote a kind of political alliance or party.

The term or the notion acquires its importance, however, from its prominence in the literature on the social and political organisation of the Berbers, notably in the work of R. Montagne, who extended it to the totality of North African, and eventually also to Middle Eastern societies, including even urban and minority ones; thus he later claimed to find similar institutions amongst urban Jewish communities in Morocco, and also in Arabia.

In Montagne's hands, the word in effect became a technical term of political analysis, though with the definite suggestion that the theory formulated by means of the *leff* (leff in Berber) or by an equivalent was already present in the minds of, and above all put in practice by, the indigenous users of that word. According to this theory, and to the associated explication of the indigenous significance of the term, *leff*s were alliances with the following properties. They were very stable over generations. The units which entered into them were themselves communities, whether genealogically or territorially defined. They were binary: in a given region there would be two and only two such *leff*s. They were invoked, like military alliances, when violent conflict occurred: members of the same *leff* were expected to give support to each other, when any one of them became involved in conflict with opponents from the other *leff*. These alliances were hereditary, and transitive, in the sense that membership of the same *leff* by A and B, and by B and C, implied that A and C were likewise of the same alliance. Finally, these *leff*s were supposed to be arranged in a kind of chess-board pattern on the map; a community (say a village or valley) would belong to an alliance other than that of its immediate neighbours but the same as that of its neighbours-but-one.

The significance of the notion of *leff* arises above all from the great importance of the theory based

on it. The problem which this theory attempts to solve is that of the nature of the maintenance of order in areas in which central government is absent or ineffective, notably in the *bidd as-siba*, the dissident regions of pre-colonial Morocco (see WAGHEEN), though also in other similar areas. The *leff* theory maintains that the crucial institution for furthering the maintenance of order in such conditions was, precisely, the balanced opposition of two moieties, deployed chequerwise over the countryside. This theory has a certain affinity to that of 'segmentary opposition' as developed by E. Evans-Pritchard (and foreshadowed by E. Durkheim, partly on the basis of Algerian material), but differs from it in various important respects. Segmentation, as understood by Evans-Pritchard, was not necessarily binary, but it was of its essence that it operated at a number of levels of size: the 'opposition' of 'balanced' segments operated simultaneously between, say, intra-village lineages, entire villages, and clusters of villages grouped as 'clans', etc. Conflict at one level did not preclude co-operation at another. By contrast, the *leff*s of Montagne were, in any one region, articulated at one level of size only. In Montagne's hands, the theory was combined with another important thesis: that this balance-of-moieties mechanism occasionally broke down, and was replaced by ephemeral tyrannies such as those of the 'great eads' of the Moroccan South, but that these temporary crystallisations of personal power in turn gave way to a re-establishment of the original system, in a kind of cyclical pattern.

The theory of the *leff*s has been subjected to various criticisms, both empirical and theoretical. Subsequent researchers have not always found them even in areas where Montagne claimed they were most at home (e.g. J. Berque), or have doubted whether they in fact contribute to the maintenance of peace (e.g. A. Adam), or they have pointed out that the problem posed, that of order-in-anarchy, is only solved by the theory for those units which are of the size at which these leagues are articulated, whereas in fact the problem also arises at all other levels of size at which conflict is liable to occur (and at those other levels, the theory offers no solution). There is also reason to suppose that in regions where groups were less stable, and territorial units less well-defined than in the Western High Atlas and Anti-Atlas which inspired Montagne, *leff*s were more fluid and opportunistic than his work would suggest. Nevertheless, his work, which is heavily centred on the notion of *leff*, remains one of the high points of the political sociology of North Africa.

LEFKOSHA, Grk. Leukosia, the town of Nicosia in Cyprus (see *glossary*).

The town was under joint Arab-Byzantine rule from 658 A.D. to 965 when Nicephorus Phocas seized it (R. J. H. Jenkins, *Cyprus between Byzantium and Islam*, A.D. 658-965, in *Studies presented to D. M. Robinson* . . ., St. Louis 1953, ii, 1006-14). The Venetians occupied it in 1489, the Ottomans in 1572, the British in 1878, annexing it in 1914. The town was sacked by Mamluk forces of Sultan Barsbay in 1426. The Ottomans captured the town after a fifty-day siege in 1570, after much suffering on both sides and thousands of casualties. There is a good account of this conquest in *Türk idâkâtı kütüpleri tarihî*, iii, *Kıbrıs seferi (1570-1572)*, T. C. Genelkurmay Harp Tarihî Başkanlığı Resmi Yayınları, Seri no. 2, Ankara 1971.

Western visitors to Lefkōsha during the Ottoman period report the town as being severely underpopulated and devoid of evidence of its former wealth and luxury. They attributed that plight to the tyranny and extortions of Ottoman officials whom the Porte would not or could not control, to plague, virulent fever, and hordes of locusts, and to the fatalism and lethargy of Muslim and eastern Christians. Few knew that the town had reached the peak of its wealth and population late in the Lusignan period. Never under the Venetians or the Ottomans did it regain that fame and splendour, though both made sporadic efforts to revitalise and repopulate it.

By 1211 the Lusignan capital had become a first-class town. W. von Oldenburg said "It has inhabitants without number, all very rich, whose houses in their interior adornment and paintings closely resemble the houses of Antioch" (C. D. Cobham, *Excerpta Cyprica*, 14). By the end of the 13th century the town had fallen behind Maghōsha [g.u.] or Famagusta in wealth and trade, although the simple Westphalian priest Ludolf (1350) saw Lefkōsha as "another great city . . . in a fine open plain with an excellent climate", where lived the king, bishops and prelates, princes and nobles, barons and knights who in Cyprus "are the richest in the world" (Cobham, 20; *Archives de l'Orient Latin*, ii, 336. Cf. Jacobus de Verona [1335] in Cobham, 17; *Revue de l'Orient Latin*, ii [1895], 276 L.). The pilgrim Martoni (1394) judged the town larger than Aversa, with many gardens and orchards, some six acres in size (Cobham, 26; *ROL*, iii [1895], 634).

In 1435 the astute Pero Talur attested that Lefkōsha again surpassed Maghōsha: "This is the greatest and most healthy city of the kingdom where the kings and all the lords of the realm always live" (Cobham, 31; *Andanças e Viagens* . . ., Pt. 1, 67, in *Colección de Libros Españoles raros o curiosos*, VII, Madrid 1874). Lefkōsha had become the trading emporium of the eastern Mediterranean: the Dominican monk Felix Faber (1483) admired the "... great city . . . surrounded by fertile and pleasant hills . . . Here are merchants from every part of the world, Christians and infidels. There are stores, great and precious, for the aromatic herbs of the East are brought here raw, and are prepared by the perfumer's art" (Cobham, 41; *Evagatorium in Terrae Sanctae*, ed. C. D. Hassler, in *Bibliothek des Literarischen Vereins in Stuttgart*, iv [1849], 250).

The Venetian patrician Fra Francesco Suriano (1434) saw the town, "twice as large as Perugia", with palaces, houses, and churches, destroyed by a disastrous earthquake of 1480 (Cobham, 46; *Il Trattato di Terra Santa*, ed. P. G. Golubovich, Milan 1900, 229 n.), but by then it had passed its economic

and demographic peak; to Peter Mésenge (1507) only a quarter of the town appeared occupied (C. Enlart, *L'art gothique*, ii, 523).

Savonarola (1562) found empty tracts and dusty disordered streets with no good houses (Sir George Hill, *A history of Cyprus*, iii, 822, 844 ff., 852 f.). However, the nobles had not given up their prerogatives, as the pilgrim Furer (1566) perceived: in that town, "of some size and beauty", lived the French nobles who "... keep their vasaals, who are called *Paries*, in the state of slaves. . . The nobles are greatly given to amusements, especially hunting and hawking . . . [with] solemn games and banquets with great cost and splendour" (Cobham, 78-9, C. Furer von Haimendorf, in Cobham, 78-9; *Reiss-Beschreibung*, Nuremberg 1646, 302).

The Lusignans had fortified their capital expertly. Early in the 13th century, walls 4, 7 or 9 miles in circuit were built high to resist attacks in the style of Crusader warfare. In 1567, to resist the heavy pounding of Ottoman cannon, the Venetians had large sections of the walls dismantled and rebuilt them thicker and lower, with a circumference of only three miles, yet apparently still large enough to accommodate the existing population. A deep moat was excavated around the circular walls; all structures outside the new walls were methodically levelled, the rubble being used as fill for the new walls. Writing in 1572 just after the Turkish conquest, the priest Étienne de Lusignan celebrated a town he remembered with 250 to 300 churches, 80 of which had been destroyed completely when two-thirds of the town was levelled. "In this city lived all the nobility of Cyprus, Barons, Knights and Feudatories, nearly all of whom died in this attack [i.e. its fall], with townsfolk to the number of twenty thousand: all men devoted to the service of God most High, and of their sovereign. The remnant of the souls . . . were all made slaves." (Cobham, 120-1; *Description*, 32, 262).

Local agriculture and commerce, as well as local and international trade, boosted the economy of the town. In good times it produced a marketable surplus of cotton, wool, and silk, which were sold raw or processed or manufactured into a variety of cloths. As long as Cyprus remained close to the terminals of the silk and spice trades as the easternmost outpost of the western Christian world in the Mediterranean, Lefkōsha would remain a centre of trade. Nevertheless, the town could not escape the changes in the international socio-economic order which saw the Mediterranean world gradually lose its commercial and cultural pre-eminence to northwestern Europe.

Forcacci (1576) reported that great quantities of camel and cotton cloth were made in that "very pleasantly and beautifully situated" town "healthfully and pleasantly" supplied with running water. The camlets were good and the "cotton wools" "the best of the Orient", according to Sandys (1610) (Cobham, 164-5; *L'Isle* . . ., Venice 1572, 221; Padua 1620. Cobham, 208; *A relation of a journey*, London 1615, 220).

Pococke (1738), a careful observer of Cyprus, found the trade of Lefkōsha still substantial. "There is a great manufacture of cotton stuffs, particularly of very fine dunnets, and also half sattins of a very coarse sort: they have here the best water in Cyprus . . .". Cottons were sold to Holland, England, Venice and Livorno and "a great quantity of yellow, red, and black Turkey leather" to Istanbul (Cobham, 260, 268-9; Pinckerton, ed., *A general collection of . . . voyages*, London 1811, x, 582-3). According to

Mariti, the covered market (*bodestân*), the former church of St. George next to Aya Sofia, was the gathering place of the chief Turkish, Greek and Armenian merchants, of whom the last were the richest. At large bazaars and *hâms* local villagers as well as townspeople sold the cotton that they had spun; dyeing skins and stamping cloth were other major industries (*Travels in the Island of Cyprus*, tr. C. D. Cobham, 42-5). W. M. Leake (1800) was completely negative: "The flat roofs, trellised windows, and light balconies of the better order of houses, situated as they are in the midst of gardens of oranges and lemons, give together with the fortifications, a respectable and picturesque appearance... at a little distance, but, upon entering it, the narrow dirty streets, and miserable habitations of the lower classes, make a very different impression upon the traveller; and the sickly countenances of the inhabitants sufficiently show the unhealthiness of the climate"; but W. Turner (1815) reported that every house had a well-cultivated garden with fig, olive, mulberry, orange, lemon and pomegranate trees; all the houses were of mud and the streets, though clean, were unpaved (Cobham, 330, 430-7).

Since the Lusignan period, Aya Sofia, as cathedral and mosque, had been the centre of the city, with the main bazaars adjacent. In the 19th century the entire road from Tahta Kale and Bai gate to Baghōgha gate was lined with merchants' booths; the Friday bazaar of women has existed at least since then. In the 1870s there were 25 quarters inside the walls, 14 Muslim, 7 Greek Orthodox, 3 Armenian, 1 Latin and 2 mixed (Bazar and Phaneromenē) (Jeffery, *Cyprus monuments*, 32-3, with map).

Lefkōgha, located near the centre of the island, lies on the Pedyas, the longest and largest seasonal "river" in Cyprus, only 12 miles from the perennial springs of Deghirmenlik, the largest on the island, from where water is easily brought by aqueduct. The immediate hinterland is fertile grainland; its villages produced grain adequate for the town's needs except when drought or, more frequently, hordes of locusts appeared. The Lusignan rulers built summer palaces in the northern mountains for relief from the intense summer heat; many Latin nobles took refuge in the Trodos mountains, just as the British colonial government did later. Spring and fall are long and pleasant, while winter is short and mild. Lefkōgha was by no means free of the malaria and plague which long decimated the island's population, but those diseases were less severe there than along the marshy littoral. Stoeckhove (1631) said the town had the best air in Cyprus, although Turner (1815) observed that even there "fevers" occurred constantly in the summer (Cobham, 216, 430, 436). According to J. Bramsen (1824), the fever season was June to October (*Letters of a Prussian traveller...*, London 1828, 304).

In 1571 Lefkōgha, with a *hâdî* of the third class, was made the capital of a large *beglerbeglik* which included all of Cyprus and the Anatolian sandjaks of 'Alaiyya, İbel, Silifke, Tarsûs, and Sis on the south side of the Taurus. Originally, Farâbulul el-Shâm was included too. Despite several changes in administrative organisation which greatly reduced the importance of the province, Lefkōgha always remained the administrative centre. Foreign consuls lived at Larnaka or its port Tuzia, where they served foreign merchants at a comfortable distance from the *pagha*.

A study of the Lefkōgha judicial records (*sijillî*) surviving from the period 1580-1640 reveals some

urban activities. Lists of official prices (*narh*) indicate a busy market in commodities. The rich and varied agricultural produce of Cyprus found its way to the bazaars of Lefkōgha, including yoghurt, cheese, meats, grapes and other fruits, and olives. Cotton cloth and raw cotton were the leading goods in commercial transactions, but wool and woollen cloth were important too. Lending and credit were an integral part of the town's economic life, both for Muslims and for the *dhimmis* (i.e. Greek Orthodox). In intercommunal credit, the Muslims were disproportionately the lenders. Interest was openly charged (*karâ-i hasaa*, or *karâ-i şahrî*), although bankruptcy (*iflas*) seems to have been uncommon. Muslims and *dhimmis* interacted frequently. They worked in the same quarters, bought and sold food and even houses from one another, and made business partnerships. About one-third of the judicial cases involved *dhimmis*, and 20% of the cases were intercommunal. Conversion to Islam was very common, probably increasing in frequency between 1580 and 1600 but then falling off considerably; there is no evidence of wholesale conversion. Converts had to declare their conversion publicly in court. Besides the Greek Orthodox majority, a handful of Armenian Gregorians and of Maronites had churches, and there was a very small community of Jews. Women used the court very frequently (almost a quarter of all cases), where their property, inheritance, and domestic claims were apparently handled like those of men. More than 20% of the property mentioned belonged to women.

Although Lefkōgha has been the residence of the autocephalous archbishops of Cyprus since the Lusignan period, the office has never been associated with a particular town. Ottoman rule relieved the Orthodox clergy from their long subordination to the Latin hierarchy (cf. R. Jaan, art. *Cypre*, in *Dictionnaire d'histoire et de géographie ecclésiastiques*, xii, 791-819, J. Hackett, *A history of the Orthodox Church of Cyprus*, London 1901).

Most estimates of the town's population between 1510 and 1550 range between 15,000 and 20,000 people (Hill, ii, 875). Visitors to Lefkōgha during the Ottoman period often remarked about the population of the town. According to A. M. Graziani, 30,000 people were put to death in eight days of plundering when the town fell to the Ottomans; Porcacchi reported that all the people were "cut to pieces" and Sandys wrote of "an incredible slaughter" (Cobham, 170, 207). Dandini, who visited there in summer 1596 and spring 1597, estimated that the large, well-built town had at least 30,000 inhabitants, of whom only 4,000 or 5,000 were Turks (Cobham, 182). J. Colovicus (1597-8) reported the town full of robes, Sandys (1610) "delaced by the Turks"; for the latter, the town, once equal in beauty to the chief towns of Italy, is now half-destroyed (Cobham, 195, 207). In 1683 de Bryon observed that the population was almost half-Greek (Cobham, 230; *Reizen van Cornelis de Brayn*, Delit 1698, 372). Cyprianos gives a fairly official estimate of 753 Christian families for 1777 (Cobham, 306). In 1806 'Ali Bey estimated the town's population at less than 1,000 Turkish and 2,000 Greek families, although Lefkōgha could easily hold 100,000 people within its walls (Cobham 393; *Voyages*, Paris 1814, ii, 82 ff.). J. M. Kinnear (1814) reported on the authority of the archbishop 2,000 Muslim families, 1,000 Greek Orthodox families, 40 Armenian, and 12 Maronite (Cobham, 417; *Journey*, London 1818, 190 ff.). An estimate of 12,000, including 8,000 Turks, 3,700 Greek Orthodox and 50 Armenians was attributed to the governor

Tal'at Efendi in 1841 (L. Lacroix, *L'Univers. Histoire et description des tous les peuples. Îles de la Grèce*, Paris 1853, 88). A census just before the island was handed over to the British in 1878 reportedly found 10,879 people, of whom 5,628 (52%) were Muslims [correspondence respecting the Island of Cyprus, No. 3. Sir G. Wolsley to Marquess of Salisbury, 1879].

A census held in the third year of British rule (4 April 1881) showed the population of Lefkoşa at 11,513, of whom 5,853 were Greek Orthodox (49%), 5,397 Muslims (47%), 481 Roman Catholics, 78 Maronites, 88 Armenian Gregorians, 94 Church of England and Protestants, and 22 Jews. Although the population of the town had increased 9% to 12,515 in 1891, the number of Muslims declined slightly to 5,351, 43% of the population [*Cyprus Gazette*, 26 October 1891].

A census of 1902 shows a population of 14,752, a 28% increase over 1881. The Muslims numbered 6,023, up only 22% in two decades, while the Greek Orthodox had increased 41% to 8,739 [*Cyprus Gazette*, 26 April 1902; 30 August 1902]. Almost 40% of the population of the six leading towns lived in Lefkoşa. The town contained only 6% of the population of the island, although 12% of the Muslims lived there.

Initially, British policy in Cyprus was to preserve the existing Ottoman political, social and economic systems, except in a few specific areas of public health; extensive official English translations of recent Ottoman *mukayyimes* and cadastral records were prepared. In 1893, £662 of the £1,520 municipal revenues from Lefkoşa were from slaughter house fees, £352 from market tolls and rents, and £246 from weighing and measuring taxes. The municipality established in 1884 even had a "censor of markets". *Auckāf* still provided the water supply: 390 measures from the Arab Abmet and 270 measures from the Sāliktar aqueduct were sold annually, while another 200 measures were donated to mosques, churches and schools [*Cyprus Blue Book*, 4 January 1895]. See also *Statute laws of Cyprus, 1878-1923*, 633-42, "Nicosia water supply". Eleven Muslim schools, supported by *auckāf*, mosque funds and grants from the Porte, had 574 students in 1889-90 and 633 students in 1892-3, about 23% of them girls [*Cyprus Blue Book*, year 1889-90]. Cotton and silk remained the major industries. Nearly every village in the district had cotton looms, and many houses in the larger villages had hand looms for manufacturing cotton and silk stuffs. In 1889 the town also had a tannery, 3 tobacco factories, 3 steam-powered flour and cotton mills, cotton printers, copper, silver, and goldsmiths, and 3 distilleries [*Cyprus Blue Book*, 1889-90, 1892-3]. The proposed railway between Lefkoşa and Larnaka was never attempted, but in 1906 a railway connected Lefkoşa and the new harbour of Meghōsha.

In 1946, 10,330 of the 34,485 inhabitants were Muslims, including 9,314 of 24,967 within the walls and 1,016 of 9,518 outside them. Besides 20,768 Greek Orthodox, there were 2,252 Armenians, 160 Maronites and 30 Jews; each of the 24 quarters was mixed.

Monuments. The Venetians levelled much of the Lusignan town in rebuilding the walls. Although the town walls are essentially the creation of the Venetians, the Ottomans repaired them extensively in the 1570s. Virtually all the monumental buildings date from the brilliant Lusignan period; neither the Venetians nor the Ottomans added religious or other public buildings, for many already stood empty after the population began to decline (these are discussed with illustrations by C. Enlart, 67-187,

and pls. 1-12). Cf. G. Jeffery, *Description*, 18-100, and *Cyprus monuments*, No. 7. *Historical and architectural buildings. The mosques of Nicosia*, Nicosia 1935; F. Çuhadaroglu and F. Oğuz, *Turkish historical monuments in Cyprus*, in *Edöce ve Restorasyon Dergisi*, II (1975), 2-76; Oktay Aslanapa, *Kıbrıs'da Türk eserleri*; Cevdet Çağdaş, *Kıbrıs'ta Türk dinî eserleri*, Lefkoşa 1965. The finest Ottoman constructions are the Mawlawi *tekke* inside Girne gate (pre-1800), the Büyük Han (pre-1600), and the small 'Arab Ahmed Paşa mosque. Many aspects of the Ottoman town are preserved within the walls of the Turkish quarter: narrow streets, overhanging balconies, stone-walled houses and gardens, and bazaars. A very few stone-out houses, or their foundations, survive from the Venetian period, as do several fine houses from the Ottoman period. Sadly, there is little appreciation of this cultural heritage, and they are gradually being eliminated.

Until this century, the town has been confined within the walls. The main buildings of the Ottoman period, like the Büyük Han and the so-called Kumardjilar Han, date from early in the Ottoman occupation. Occupation of the town has been a conservative one, with few changes in the main centres and a preservation of old quarter names and locations from earliest times.

LEGACY [see *MLA* 21]

LEGEND [see *MLA* 21, *MLA* 22, *MLA* 23]

LEGISLATION [see *TAS* 11]

LEH (ل or لہ), the ancient Ottoman Turkish term for the Poles and Poland (from *Lech*, Polish tribal name later extended to comprise all the nation, with the original nasal *ę* ousted by *e*, as in Byz. Λεχον "the Poles" and Λεχία "Poland"). In Turkish, Poland was also called *Leh wîlayeti* (*menâkahi*), the Poles *Lehli* and the Polish language *lehçisi*. From the 12th/13th century, the Turks also called the country *Lehistan* (Pers. *Lahistân*, from which is derived Pers. *al-i Lahistân* "Poles" and *zabân-i Lahistân* "the Polish language") in the hitherto unpublished Crimean Tatar documents from the late 16th/17th century, the word for Poland is *Lehli* (the Ukrainian-Russian form of the Polish *Lech*) or *i-Lehli* (لخ and لایخ; Archwum Głównie Akt Dawnych, Warsaw, Arch. Koronne, D2. tatarski, kartony 60, 65). The term *Köni*, which is attested in the same sources (كول or كورال; from the Ukr.-Russ. *konol* "king"), means "the kingdom"—Poland, including her southeastern provinces, i.e. Rethenia and the Ukraine (قول كورال as it occurs in Ewliya Celebi, *Seyhül-nâme*, VI, 360, 368 et passim, wherever the lands, the Ruthenians-Ukrainians and their language are mentioned). (On *Köni*, see also K. Schütz, *Eine armenische Chronik von Kaffa aus der ersten Hälfte des 17. Jahrhunderts*, in *AÖH*, XLIX (1975), 164-5; this term is not so clear there as in the said documents.) The mediaeval Islamic authors called Poland by names derived from Lat. *Polonia*: Ar. *Bulāniya* (T. Lewicki, *Polska i Arja tatarskie w świetle "Księgi Rogera" geografii arabskiego z XII w. al-Idrisiego*, I, Łódź 1945, 125 and 1); Pers. *Poloniya* (M. D'Ottavio, *Les peuples du Caucase ou voyage d'Abou al-Casim*, Paris 1828, 269). The latter name was equally used by the Ottoman author Remmî *Khâṣṣa* (d. 975/1567-8) in his *Ta'riḥ-i Şahîdî Girey Khân* (A. Muchinski, *Zdania sprawy o Tatarach kłaniasz...*, Vilna 1858, 9). Since the 13th/14th century, the terms *Poloniya* (Ital. *Polonia*), *Poloniak* and *Poloniya* *duh* are in use in Turkey. In modern Arabic, Poland is called *Bulanda*, *Bulandî* (Eng. *Poland*) and *Bulāniyya* (Ital. *Polonia*), the Poles *Bulāni* and Polish *al-bulgha al-bulāniyya* (*al-bulāniyya*, *al-bulāniyya*).

Poland was known to Islamic peoples from the account written by Ibrāhīm b. Ya'qūb (if not earlier) about the Slavonic lands (354/963-6), which, however, contained no reference to the name of the country, mentioning only the Polish ruler *Męsko* (from Pol. *Mieszko*). Poland has been long since connected with Islamic countries by animated trade relations, the numerous early Islamic coins found

now on her territory bearing an undeniable witness to the fact.

With regard to political relations between the Polish-Lithuanian monarchy and the world of Islam, they appear to have been established first with the break-up of the Golden Horde and the *khanates* which arose from their downfall (see *SATU* 105). After a period of peaceful and friendly contacts with the Crimean *khan* Hājjī Girey I and his successor Nūr Devlet, the long years under Mengli Girey I were a period of unrest and strife. The *khan* vacillated between support for Poland-Lithuania and for Moscow, which challenged the Jagellons in disputes over the regions of western Russia, Belorussia and the Ukraine. Poland-Lithuania emerged successfully from this period, but it was under an obligation to the *khanate* to pay specified sums in return for military aid against Moscow (see K. Pulaski, *Słownik z Mendi Güreim chanem Tatarów perehopskich*, 1469-1575, Warsaw 1881; L. Kolankowski, *Problem Krymu w dziejach jagiellońskich*, in *Kwartalnik Historyczny*, XLIX [1953], 295-300). But the Tatar attacks into the Polish region were endless, invasions by the Tatar Cossacks (*Tatar kaszubi*, *bisim kaszubi* of the Crimean sources) drew revenge from the Zaporozhians (*OsiŃski kaszubi*). The Crimea, which since 1475 had been a vassal state of the Porte, was often used in the political battles of the Porte against the Poles; the Tatars took part in Turkish invasions of Poland in 1498, 1521-4, 1620, etc. In 1628 *khan* Mehmed Girey III and *yalgha* Şahin Girey Süllü took an oath of allegiance to Poland for her help in their struggle against the Porte and *khan* İsmet Girey. The next year, however, Poland's striving to gain away over the Crimea finally failed. The refusal of king Władysław IV to give the "presents" to the Crimea because of the Tatar violations of the peace led Islam Girey III into an alliance with the Zaporozhians and to the Crimean-Tatar-Ukrainian united war against Poland, 1648-54 (Halzy Mehmed Semai z Krymu, *Historia chana Islam Gireja III*, ed. Z. Abrahamowicz, Warsaw 1971). The treaty between B. Chmielnicki and Moscow in 1654 made the Tatars change their standpoint radically. With renewed Tatar support for Poland in her war in the Ukraine, Mehmed Girey IV was to undertake diplomatic intervention in Denmark in her favour after the Swedish invasion into Poland in 1655 (J. Metz, *Krimtatarske Urkunden im Reichsarchiv zu Kopenhagen*, ... Freiburg 1976), and in 1656 his troops fought successfully in Poland against the Swedes. Pursuing them, the Tatars advanced as far as Eastern Prussia. These events are the historical roots of the "journey" narrated by Ewliya Celebi, *op. cit.*, VI, 364-78, to Denmark, Sweden, etc., with 40,000 Crimean Tatars after the Turkish conquest of Ujjain-Neuhäusel (Nové Zámky, in Slovakia) in 1663; there, he must have met some of the Tatar expedition against the Swedes fighting in Poland (see *Księga podróży Ewliji Celebiego*, Włódy, Warsaw 1973, 193-208, 423-7—a collective work by several authors, foreword by J. Reychman, translation of the relevant text and commentary by Z. Abrahamowicz). The Tatars took a part in the Turkish war against Poland in 1672, sometimes acting as mediators between Poland and Turkey. The plans of King John III Sobieski for a Polish-Russian war against the Crimea and for a joint division of the *khanate* proved impracticable. The danger presented by the Tsarist empire to Poland and the Crimea in the 12th/13th century reconciled the two countries once again.

Witold (ca. 1352-1430), Archduke of Lithuania, who played a prominent part in the domestic struggle which was going on within the Horde, then undergoing a process of disintegration, on his return in 1397 from an expedition to the banks of the Don brought a large number of Tatar families and settled them in his land. This gave rise to a strong Tatar colonisation in Lithuania, since 1385 united with Poland, and on Polish territory as well [see LITKA].

The diplomatic ties between Poland and the Ottoman Empire extend back to 1410. When King Ladislas III of Poland (I of Hungary) disregarded the warnings of his Polish advisers, the tragedy of the Battle of Varna (1444) ensued; it was to be a terrible event for Poland to remember, and a pointer to her future association with the Turks. By this time, she was no longer disposed to engage in elaborate plans for a papal-imperial attack on Islam; she was at peace with the Turks and had a good defence against the territorial ambitions of the hostile Hapsburgs. After the Turkish attack on Kaffa (see KAFFA) and the Khānate of the Crimeans (1475) and the Turko-Tatar conquest of the Black Sea ports of Kilia and Akkerman (1484), which were so vital to Poland, a ceasefire was arranged between King Casimir IV Jagiello and Sültān Bāyezid II (22 March 1489). The Moldavian campaign of King John Albert (1497) and the subsequent Turko-Tatar attacks on Poland (1498) had shown that there was a military equilibrium between the two powers, and peace was again restored between them in 1499. Following the armistice of 1525 and that of 1528, Süleymān the Magnificent made in January 1533 a life-long peace treaty and alliance with King Sigismund I and his son Sigismund Augustus who, in 1529, was crowned as his father's successor. This treaty, which Sigismund Augustus had renewed in 1533 with the old sultan, in 1564 with Sültān Selīm as the heir to the throne, and in 1568 had renewed with the Pādīshāh Selīm II, was the basis of relations between Poland and Turkey in the 16th/17th century. During this period, these relations were on the whole favourable, but not without certain difficulties (C. Backvis, *La difficile coexistence pacifique entre Pologne et Turcs au XVII^e siècle*, in *Mélanges d'islamologie dédiés à la mémoire de A. Abel*, ii, Brussels 1975, 13-31). Poland did not concur with the insinuations made by Süleymān and his Ruthenian wife Jihrem Sültān (q.v.) against the Hapsburgs, and in 1569 Sigismund Augustus also rejected the Turkish plan for a Polish-Turkish alliance against Moscow. During the first two elections of kings after the death of the last Jagellon king, the Porte intervened vigorously to prevent the choice of a Hapsburg. Moreover, Süleymān already appeared to be favourably disposed to Poland when he heard the false news of the death of both Polish kings in 1535 (Z. Abrahamowicz, *Katalog dokumentów tureckich*, Warsaw 1959, no. 39; K. Beydill, *Die polnischen Königswahlen und Interregnen von 1572 und 1576 im Lichte osmanischer Archivalien*, Munich 1975). The Polish-Turkish War of 1620 (Poland was defeated at Cecora) and 1621 (the victory for Poland at Chocim [see CHOCIM]) was not only caused by Poland's attempt to force the Ottomans out of Moldavia but also by the strife stirred up by the excesses of the Tatars and Zaporozhians (R. Majewski, *Cecora. Rok 1620*, Warsaw 1970). It ended with the peace of 1623. The self-willed assault on Kaniëniec undertaken in 1633 by Abās Mehmed Paşa (see KANIEC) did not lead to a deterioration of mutual relations. However, the borderland skirmishes

steadily grew in number. This even led King Ladislas IV to construe, beginning from 1645, plans for joint Polish and Venetian attack against Turkey, with the support of the Zaporozhians (W. Czermak, *Plany wojny tureckiej Władysława IV*, Cracow 1895). These plans did not come to be fulfilled, as Ladislas IV died in 1648, and the war of the Cossacks and Tatars against Poland broke out the same year. The Porte very much valued Poland's role in maintaining the balance of power in their struggle against the Hapsburgs, and in 1648, when Poland was defeated in the war with Islam Girey III and the Zaporozhians, it intervened on Poland's side, thus provoking the anger of the Tatars (Abrahamowicz, *Katalog* . . ., nos. 339-47; Senal, *op. cit.*, fol. 25-26). In view of her agreements with Poland, the Porte was also rather reluctant to adopt the plan suggested by B. Chmielnicki of placing the Ukraine under the sultan's patronage, even though this plan seemed to promise the liberation of Turkish lands from the threat of Cossack attacks. The theory of an alliance of the Porte with the Hetman in 1648 (O. Friksa, *Das erste türkisch-ukrainische Bündnis (1648)*, in *Oriens*, vi [1952]) cannot be supported, considering the carefully-guarded attitude of the Turks towards him in 1651 (J. Rypka, *Weitere Beiträge zur Korrespondenz der Hohen Florie mit Bohdan Chmelnytskyi*, in *ArO*, ii, and Abrahamowicz, *Katalog* . . ., no. 344). Even when in 1665/1665 Sültān Mehmed IV had taken the Cossacks formally under his patronage, he hastened to declare to King John Casimir that he nevertheless wished to maintain his good relations with Poland (A. N. Kurat and K. V. Zettersteen, *Türkische Urkunden*, Leipzig 1938, no. 1). In the years that followed, the period of the "Flood", Turkey lent Poland also considerable support against the threat to her by Carl X Gustavus of Sweden (1656) and George II Rákóczi (1657).

The balance of power was first destroyed by the Grand Vizier Köprülüizāde Fāzıl Ahmed Paşa (see KÖPRÜLÜ) in 1669, he granted the Cossack Hetman P. Doroshenko, who since 1666 was in revolt against Poland, the supreme authority of the Pādīshāh; as a result, the Grand Vizier directly attacked Poland in 1672. The splendour of his success included the capture of Podolia, compelling Poland to pay tribute, etc. But this lasted quickly with the defeat of the Turks at Chocim in 1673 (J. Sobieski was still only Royal Chief Hetman) and then again at Zbarazno in 1676 (Sobieski was then King; the attack was repelled, the tribute imposed in 1672 was repealed and it was never paid by Poland).

The Porte was now involved in a difficult war with Russia over the Ukraine. The successor of the Grand Vizier, Merzifonlu Kāse Mustafā Paşa (q.v.), adopted an inflexible attitude to his next treaty with Poland (1678), and an additional threat to Poland came from the south in consequence of his 1680 alliance with E. Thököly. He had occasion to deplore his rash step when, at the battle for the relief of Vienna on 12 September 1683 and in the subsequent war in Hungary, the Polish king "was the first one to drive his horse against the Muslims and then to draw his sword" and "caused so much harm that it was he who gave the greatest help and support [for the Emperor Leopold I] and had many Muslims taken prisoner" (Djebedji Hasan Esfiri, and eyewitnesses of the events of 1683, in *TOEM*, iii, 1016; in general, see Z. Wójcik, *King John III of Poland and the Turkish aspect of his foreign policy*, in *Bulletin*, xlv, no. 276 [1980]). The fruits of the victory of John

114, the commander-in-chief of the allied Christian armies in this battle, fell to Austria alone, and the territory taken from Poland in 1672 was only restored by the Porte in 1699.

The turning point in the relations between the two neighbours was the Treaty of Carlowitz (see KARLOVÉ). Poland, who had once been so proud of her epithet *antemurale christianitatis*—against Islam—was now, in the face of the common threat of Russia, drawing nearer to Turkey, particularly after the partitioning of the country by Catherine II with the help of Austria and Prussia (W. Konopczyński, *Polska a Turcja. 1683-1792*, Warsaw 1936). A marked featation of the Turkish sympathies towards the Poles at this time can be found in the *Sefâret-nâme-yi Fransa* by Mehmed Emin Vahid Paşa, the Porte's envoy to Napoleon I in 1807. Turkey never recognised the division of Poland, but offered Polish patriots continuing protection after the failure of their national uprising in 1831, and they supported Polish efforts to attack the empire of the Tsar from the south. The greatest Polish poet, A. Mickiewicz, had gone to Constantinople to organise the Polish Legion, and he died there in 1855. Countless Polish refugees performed all kinds of work there to further the modernisation and europeanisation of the country and of Ottoman society and the army. K. Borzecki-Musłafa Dželâl al-Din Paşa was the first to rouse a spirit of national identity within the Ottomans (B. Lewis, *The emergence of modern Turkey*, Oxford 1908, 28, 339). S. Chlebowski, court painter to Sultân 'Abd al-'Aziz, painted a series of scenes from Ottoman history for the new Dolmabahçe Palace (A. Lewak, *Życie emigracji polskiej w Turcji (1832-1878)*, Warsaw 1935). Polish specialists and advisers even penetrated the intimate society of Kemâl Paşa Atatürk. This resulted in friendly relations between the new Poland and the Turkish republic from its inception. In spite of its complicated political situation, Turkey gave Poland vital help during the Second World War. After the war, both countries developed their co-operation in economic and cultural fields. An active link between the two is Polonezköy, founded in 1835 by Prince Adam J. Czartoryski, and thereafter called *Adamów* in Polish. It is a colony of Polish immigrants on the Asiatic side of the Bosphorus near İstanbul, who still maintain their national character.

Venetian-Persian attempts to win over Poland to the idea of an anti-Turkish coalition in 1474 and 1475 faded under the careful direction of King Casim IV (J. Długosz, *Historiae Polonicae libri XII*, v, Cracow 1878, 601, 602, 626). Sigismund III Vasa (1550-1632) also remained deaf to similar suggestions from Shâh 'Abbâs I, the dispute with Sweden and later with Muscovy was more important to him. The first delegation from the Shâh led by Sir Anthony Sherley had not been, incidentally, allowed by the Tsar Boris Godunov to enter Poland because of his hostile attitude to the king. Afterwards, in 1605, Sefer Muratowicz, an Armenian merchant from Warsaw, travelled to Kâhân to buy carpets for the king (T. Mańkowski, *Wspomnienia o kobierce do Persji w roku 1602*, in *RO*, xviii [1951]). In doing so, he came into personal contact with 'Abbâs I (see his travel narrative in A. Welaszek (ed.), *Treść relacji z polskich podróży na Wschód muzułmański w pierwszych połowie XVII wieku*, Cracow 1930, 35-47), and then other Polish envoys travelled to Persia, though sometimes for the purpose of trade. Serious plans for an anti-Turkish alliance with Persia were cherished by the Polish Kings Ladislas IV and John III, but

proved impossible (St. Chrowaciewicz, *Z dziejów polityki Jana III na Bliskim Wschodzie*, in *Kwartalnik Historyczny*, xi [1926]). In the 11th/17th century the kings of Poland supported the Catholic Mission to Iran, vainly hoping to convert her to Christianity. In the 13th/19th century, Poles also came to Persia, some as refugees from the army of the Tsar in Central Asia and some as political agents from Paris to work among them, and some came as merchants and industrialists from the Russian-occupied regions of Poland. Friendly alliances between Poland and Persia after 1918 won the help of Shâh, Muhammad Rida, who favourably received numerous Polish military and civilian personnel in Persia during the Second World War. This also led to active agreements between the two states after the war.

In May 1551 a legation from Bukhârâ was staying in Cracow. The business discussed there probably included the provision of experts in the production of gunpowder and also artillery advisers for these Sunni allies of the Ottoman Empire which was peacefully co-existing with Poland. This was a difficult time for Poland, because the king was mourning the death of his beloved wife. The fact that there is no mention of any later similar delegation suggests that there was no favourable outcome for this mission (AGAD, AK, Rachunki poselskie, and information obtained from Professor B. Baranowski; the documents referring to this episode were partly destroyed in Warsaw during the last war).

At the beginning of the 11th/17th century, there was Polish intervention in Moscow concerning the impostor Dmitri, and on this occasion a temporary rapprochement between the Poles and the Kâimov [i.e.] Tatars took place. During the 13th/19th century, there was contact between those Poles who had been deprived of their state and the Islamic peoples of the Russian Empire; on the one hand, there were scientists and technologists, etc., employed by the Russians, and on the other hand the political outcasts, victims of Tsarist administration. Polish patriots from Paris had contacts, through Constantinople, with the anti-Tsarist insurgents in Daghistan under the leadership of Shamil (L. Widorski, *Sprawy kaukaskie w polityce europejskiej w latach 1832-1864*, Warsaw 1934).

Polish relations with Arabic countries had begun with pilgrimages to the Holy Land. In 1545 King Wladyslaw IV made an endeavour to reach an agreement with Morocco. The reply by Shâh Muhammad II, extant in an Italian translation only, the unique piece of evidence for these contacts, is too scanty a record to establish their purport. In any case, Poland's attempts, if there had been any, to gain Moroccan support in the struggle against Turkey, proved fruitless (B. Baranowski, *Próby nawiązania stosunków polsko-marokańskich w połowie XVII wieku*, in *RO*, xvii [1953], 215-19). It was not until the 13th/19th century that the contacts with the Arab nations grew closer. After 1918, those contacts had attained the status of diplomatic ties which again, after the Second World War, developed into a lively co-operation in economic, technical and cultural spheres with different states of that region.

Under the strong influence of Islamic culture, Poland was shown to be a borderland between the Christian West and the Islamic East. This was particularly evident in material culture, for the products of these Islamic craftsmen (Turkish, Persian and to some extent Crimean Tatar) reached Poland either by trade or as the spoils of war. They shed an oriental

influence on Polish national costume, domestic furniture, the conduct of war, and arms and equipment. These artifacts spread beyond Poland to other countries (e.g. Persian carpets were known in the West as "tapis polonais"), and they were later imitated in Poland (T. Mańkowski, *Seluka islamu w Polsce w XVII i XVIII wieku*, Cracow 1935; idem, *Le tapis persan du cracovien-parisien de la cathédrale de Cracovie*, in *RO*, xvi [1953]). This attracted a number of Oriental words and terms into Polish (A. Zajączkowski, *Studia orientalistyczne z dziejów słownictwa polskiego*, Wrocław 1953). Polish museums contain authentic art treasures from Islamic countries, especially weapons, Ottoman standards and tents. There are Persian carpets bearing the Polish eagle which S. Muratowicz brought from Kishan for the Royal Castle in Warsaw in 1808 and which are now in the Residenzmuseum, Munich. The activities of the art-loving Stanisław Augustus, the last Polish king (1765-95), of many Polish magnates in the 18th century as well as various Polish emigrants to the East in the 19th century, led to the formation of rich collections of Islamic art in Poland.

Moreover, Poland was not averse to the intellectual culture of the Islamic East. The most important work in this connection is the translation by Samuel Otwinowski of the *Gulistan* by Sa'di in the mid-17th century (following an Ottoman version; it appeared in print only in 1879). The 18th and 19th centuries, the Romantic Period, brought new oriental influences to bear on Polish literature. These traditions are maintained by modern Polish orientalists of the post-war period, who translate into Polish the literature and historiography of the Islamic world.

The travel descriptions by many a Pole journeying to the Islamic East of the 16th/17th century have contributed much to the knowledge of that world in Europe (A. Bronkowiec, J. Leski, Michelo Litvaanus, A. Taranowski, M. Radziwiłł). Similarly, the career of Fr. Mesquita-Meninski as an Ottoman scholar in part stemmed from his stay in Poland where, for some years, he was engaged as court-interpreter.

LEMNOS (see LEMNI)

LEO AFRICANUS, the name by which the author of the *Descrittione dell' Africa* is generally known, who was in fact originally called al-Ḥasan b. Muḥammad al-Wazzān al-Zayyāṭī (or al-Ḥisī). He was born in Granada between 894 and 901/1489 and 1495 into a family which had to emigrate to Morocco after that city's fall (see GHARNĀTA), and was brought up in Fās, where he received a good education and very soon entered the service of the administration there. Whilst still a student, he was employed for two years in the mental hospital, which he describes in detail (*Descr.*, II, Epaulard, I, 188 (see al-MĀSTĀRĀN, II)). He then accompanied to Timbuctū one of his uncles, who had been sent there as an ambassador (*Descr.*, I, 136), travelled across Morocco on various diplomatic and commercial missions on behalf of the sultan of Fās, Muḥammad al-Burtukūll (see WATTĀSĪS), and already displayed a precocious intellectual curiosity by collecting, in the course of his travels, funerary inscriptions, of which he made a collection (*Descr.*, I, 231). He later returned to Timbuctū, and from there, crossed by the land route to Egypt, whence he returned home by sea. In 921/1515 he undertook a last mission, which took him to the East, via Debdī, Tiemcen, Algiers, Bougie, Masla, Tunis (where he gathered information on economic and social life there, see R. Brunschvig, *Hafsidæ*, p. xxxv) and Tripolitania. From Cairo, where he found himself in 1517, he travelled up to Aswīn, made the Pilgrimage to Mecca, and even claimed to have gone to Constantinople. During his voyage homewards by sea, he was captured at Djārta by Sicilian corsairs, who took him to Naples and then Rome, where they presented him to Pope Leo X, Giovanni de' Medici. By the end of the year, the Pope had persuaded him to become a Christian; he baptised him on 6 January 1520 and gave him his own name, Johannes Leo de Medicis (the latter rendered his name in Arabic as Yuhanna al-Asad al-Gharnāṭī; the editor of the

Descrittione calls him Giovanni Leone Africano, and current usage generally refers to him by the second of these Christian names).

Apart from the autobiographical details which can be gleaned from the *Descrittione*, we know little of his life, all that is known is that, before 1530, he went to Tunis, and probably spent the last years of his life in his ancestral faith.

During his stay in Italy, he learnt Italian, taught Arabic at Bologna and, in addition to his *Descrittione of Africa*, conceived the further plan of describing similarly the part of Asia which he claimed to have visited, and also Europe (see *Descr.*, II, 337-8). He certainly put together in 930/1524, for the physician Jacob ben Simon, an Arabic-Hebrew-Latin vocabulary, of which the Arabic part is preserved in the Escorial (no. 598; see H. Dorenborg, *Cat. des manuscrits arabes de l'Escorial*, Paris 1882, I, 410). He also left behind a treatise on prosody (see A. Codazzi, *Il trattato dell' arte metrica di Giovanni Leone Africano*, in *Studi orientalistici in onore de Giorgio Levi Della Vida*, Roma 1956, I, 180-98), and there is attributed to him a biographical work completed in 1527 and translated into Latin under the title *Libellus de viris quibusdam illustribus apud Arabes* (ed. J. H. Hottinger, 1664, and then by J. A. Fabricius, 1817). Nevertheless, his main fame rests on his *Descrittione dell'Africa*, completed on 10 March 1526; written in poor Italian on the basis of notes in Arabic, it was edited and published by G. B. Ramusio, in *Navigazione e viaggi*, Venice 1550, I, 1-1302 (and several later editions). It was translated, as early as 1556, into French by Temporal (ed. Schefer, Paris 1896-8) and into Latin by Florinus, as *J. Leonis Africani de totius Africae descriptiones* (Antwerp 1556). On this latter translation were based an English version by John Pory (*Historie of Africa*, 1600; ed. Browne, London 1896), a Dutch one by Leers and a German one by Linschoten. The original ms. of the *Descrittione* was rediscovered in 1931 and placed in the National Library at Rome (no. 953); it was to have been edited by Sra A. Codazzi, but publication of this hardly seems worthwhile now that A. Epaulard has been able to compare it with the Ramusio edition and has brought to the *textus receptus* some improvements and corrections, utilised in his French translation, *Descr. de l'Afrique*, Paris 1956, which has been edited by H. Lhote, with a copious commentary by A. Epaulard, Th. Monod, H. Lhote and R. Mauny. It has been possible to identify the majority of the place-names, deformed in the Italian text, and the notes, which are generally accurate, throw useful light on the work's information.

The *Descrittione* contains nine sections: (1) generalities about Africa; (2) south-western Morocco (in particular, Marrakesh, with errors—see G. Deverdun, *Marrakech*, Rabat 1959, p. xiv and index); (3) the kingdom of Fās (a very extended treatment, one more accurate and confident); (4) the kingdom of Tiemcen; (5) Bougie and Tunis; (6) southern Morocco, and the southern parts of Algiers and Tunisia, followed by Libya; (7) the land of the blacks; (8) Egypt; and (9) the rivers, animals, plants and minerals of Africa. This work remained for centuries a major source on the Islamic world, and is still cited by historians and geographers of Africa. Although it is not free from errors—certainly excusable if one takes into account the conditions in which it was put together—it provides first-hand items of information on the situation at the beginning of the 16th/16th century in the lands visited, on the ethnog-

raphy and the institutions of their various inhabitants, and in particular, on political, economic and social life in North Africa.

LEPROSY (see **QUR'ĀN**, in Suppl.)

LERIDA (see **LĀRIDA**)

LESH (Ottoman لى, from the Albanian, Italian Alessio), a minor port, military stronghold and administrative centre in northern Albania, 30 km. to the south of Shkodër/Scutari, which was part of the Ottoman empire between 1478 and 1912.

Lesh, the classical Lissus, is one of the oldest urban centres of the country. It is built on the banks of the river Drin not far from its estuary, and is overlooked by two isolated hills, each carrying the ruins of ancient fortifications. This setting largely determined the history and the function of Lesh; it was a military stronghold in periods of danger and a harbour in more peaceful times. During antiquity, both hilltops and the lower town on the river were surrounded by an enormous wall, parts of which still survive. This large city was destroyed during the invasions of the Barbarians (592 A.D.), and never recovered again. Anna Comnena mentions Lissus in her *Alexiade* as a strong Byzantine fortress and as largely well-inhabited. In the 13th century, Lesh was included in the Serbian state, together with Shkodër. During the dismemberment of the Serbian empire, after the mid-14th century, Lesh became a part of the minor Albanian principality of Dukagjin, but its lord ceded Lesh to the Republic of Venice in 1393. The citadel on the lower of the two hills (the old Acropolis on the higher hill had been left in ruins since classical times) was in ruins in the Venetian period. The Signoria decided only to rebuild the walls of the lower town on the river, which was done between 1404 and 1430. An enormous conflagration destroyed most of the settlement in 1440. In 1451 the new city wall was ready, partly paid for by Venice, partly by the local inhabitants.

In 1468 the famous rebel against the Ottomans and national hero of the Albanians, George Kastrioti Skanderbeg, died in Lesh and was buried in the Gothic cathedral of St. Nicolas in the lower town, an event described in detail by the chronicler Marin Barletius. Ten years later, during Sultan Mehmed II's campaign against Shkodër (known to the Ottomans as Iskenderiyye), Lesh was captured and incorporated in the Ottoman realm. Before they fled with wives, children and property to the ships that were waiting in the river, the inhabitants of Lesh set fire to the city. The conquest is related by Tursun Beg in his *Ta'riḥ-i Abū 'l-Faḥ* and by Sa'd al-Din in his *Tadhkirat al-Arḥāḥ*.

It was long before the ruined town recovered. At first, Lesh seems to have been included in the *sandjak* of Elbasan, but later (after 1485 and perhaps after the Venetian interlude) it was added to that of Iskenderiyye. In 1501, during Bayezid II's short war with Venice, Lesh was taken by Venetian

forces, who kept it for a short period. When they retreated, they had the town walls destroyed. The Ottomans recaptured a totally wrecked town. They decided to rebuild the citadel on the hill, a site which offered better chances for defence than the place along the river. The work was finished in 1528/1529, as is attested by a monumental Ottoman inscription—now preserved in the Lesh Historical Museum—which mentions the name of Sültan Süleyman, the date in numbers and in the form of a chronogram, and the name of the architect as Derwich Mehmed, the son of Skura. The latter must have been a member of the well-known Albanian noble family of that name.

In the first half of the 16th century, Lesh remained a small place. The *fîşmâl* defter no. 367 of 1530-6, preserved in the Başbakanlık Arşivi in Istanbul, mentions it as a village in the *fîşmâ* of Iskenderiyye, having 144 households. The *Mufasssal* defter T.K. 63 of the *fîşmâ* of Dukagjin, preserved in the Tapu ve Kadastro Cen. Mud. in Ankara (fol. 52-68), from 1599/1599-1 (dated by internal evidence), mentions Lesh as an urban settlement (*nahiye*) in the *sandjak* of Dukagjin. The latter was set up in the thirties or forties of the 16th century and had Peç (İpek) as its chief-lieu, although the *sandjak-beg* resided sometimes in Lesh. Western sources mention in 1553 a figure of 80 houses of Turks in the castle on the hill (which is called "Castel Nova"). The lower town (cf. Borgo) is described as a predominantly Christian place. The latter developed slowly into a centre of trade.

In the thirties of the 16th century, a strong impetus to this function of the town was given by the Ottoman governor of Shkodër (later also in Thessaloniki and Prizren), Kukli Mehmed Beg of Prizren. At his expense, the caravan road through the mountains from Lesh to Prizren in the interior was safeguarded by a chain of caravanserais. Two of them were built in Lesh itself, together with 30 shops, which were part of the *wakf* property of Kukli Beg's foundations in Prizren and its surroundings.

The *Mufasssal* defter T.K. 63 mentions that a part of the inhabitants of Lesh were "outside the old register", which means that they had moved in from elsewhere. They gained their living as workers in the harbour and had the *filuri* status as concerned taxes and paid only a lump sum of 52 *akçe* yearly. The register mentions 141 Christian households of them and six of Muslims, all living in the newly-founded suburb of "İghula" (İghuli Lesh) which was formerly a *memela*.

In or around 1580, the old cathedral of St. Nicolas was confiscated by the Ottomans and turned into a mosque, this being reported in the visitation report of the bishop of Bar (Antivari) Marino Bizzi in 1620. In 1624 the open town is said to have numbered 500 Turkish (read: Muslim) households. Râşidî Khalifa mentions Lesh as a part of the *sandjak* of Dukagjin and situated near the district of Zadrina, whose inhabitants were rebellious Albanians. Ewliya Celbi visited Lesh in 1072/1661-2 on his way to Shkodër. At that time, Lesh was a *veysudeli* in the *sandjak* of Dukagjin and the seat of the provincial administration of the area. In the castle, built on a steep rock, was a garrison under command of a *diâr* and only a few houses of civilians. An Ottoman budget of the year 1279/1669-70 has 226 men as garrison for the "Castle of Lesh in the *fîşmâ* of Dukagjin". The 17th century Lesh cannot have been very prosperous. Ewliya mentions that its houses were rather poor. The church-mosque was deserted in the

thirties or forties of the century, and left in ruins for more than a hundred years.

In the last decades of the 18th century, Sultān Selīm III concerned himself for the reconstruction of the building. At that time, it received the form it still had in our time (1978). The Armenian geographer Ineciyān describes Lesh in the last decades of the 18th century as a place with a thousand houses.

During the administrative reforms of the 19th century (1864), the old *sandjak* of Dukagja was dissolved and added to the *sandjak* of Shkodër. The *Kimās al-ʿalām*, v, 3991, describes it towards the end of the last century as a *kaḍaʿ* in the above-mentioned *vilāyet*, with 5,300 inhabitants, 80 shops and four mosques. The *ʿIshkodër vilāyeti istādimesi* of 1310/1892-3, mentions Lesh as being the chief-town of a *kaḍaʿ* with 32 villages with a total of 5,510 (male) inhabitants, of whom 1,500 were Muslims and 4,000 (Roman Catholic) Christians. The district contained 31 churches, and eight mosques but had only three schools, two for Muslims and one for Christians.

In the seventies of the 20th century, Lesh was still a minor town. Its centre was modernised, the old cathedral of St. Nicolas—Mosque of Sultān Selīm III, was restored. In the spring of 1978, the tomb of the legendary Skanderbeg was discovered by Albanian archaeologists, as being situated in the middle of the old church, just as Barletius wrote. Shortly afterwards, the town and the church suffered badly during an earthquake. What remained of the church was consolidated into a huge, concrete-built memorial to Skanderbeg. The remains of the castle of Sultān Süleyman still overlook the little town.

LETTER (see KARLO, PASHA, OTSALA)

LEVANTE (see SHARIF AL-ANDALUS)

LEVKEAS, Greek Leukas, Santa Maura, Aya Mavra, Turkish Levked, the name of a mountainous (up to 2,158 m. above sea level) island on the coast of western Greece with a total surface of 304 km². It is also the name of the only town on the island. The name means "White Island" in Greek, and goes back to antiquity. The fortified part of the town, an Ottoman naval base which was since about 1750 (see KARLI-ULI) a part of the province of the Kapuduo Pasha and a much-feared pirates' nest, was situated on a small, flat island in a shallow lagoon between the mainland of Acarnania and the island. It is connected with both of these through causeways and bridges across the lagoon. Today the old walled town is an empty shell; the entire civil population of Levkes town (in 1961, 6,532) has been since the end of the Ottoman period (1684) concentrated on a sandy spit on the north-eastern tip of the island. The Ottoman geographers (Piri Re'is, Menemci Mehmed Re'is, Kâtib Celebi, Ewlyā Celebi, etc.) called the island Levkadia (لڤقادیة) or لفقادیة, and the town Aya Mavra (ایاموردیة). The history of the town and the island are inseparably connected with each other. In Ottoman times, the town of Levkas (Aya Mavra) was the largest urban settlement in the *sandjak* of Karli-ili. In the second half of the 16th and most of the 17th century it was an Islamic centre of some importance, and possessed two of the largest works of Ottoman civil and military architecture in the Western Balkans, viz. the aqueduct of Sultān Süleyman and Prince Džihādgar and the castle, rebuilt by KIRK 'AM Pasha under Selim II.

The history of the town of Levkas goes back to the 8th century B.C., when it was founded as a colony of Corinth. The town of antiquity lay a few miles to the south of the present site. It disappeared during the migration of nations through the Balkans into Greece. The island was a possession of the Despotate of Epirus until the extinction of the native house, after which it became a possession of the Frankish house of the Orsini. Around 1300, John I Orsini built a small castle on a small sandy island in the mud bay between the island of Levkadia and the mainland of Acarnania in order to protect the settlement there, until that time an open one. In 1368 island and town were included in the possessions of the Italian ducal house of Tocco. Duke Carlo Tocco (1381-1403) made the town the capital of his dominions (which since around 1400 also included a part of the mainland). Carlo greatly enlarged the walled town. Open settlements are reported to have existed on both sides of the walled town. The open town of Levkas of today is of later origin. In 1430 the Ottomans placed most of Epirus under their direct rule. In 1449 they drove away the Toccos from the large city of Arta, only 50 km. from Levkas. The last Tocco, Leonardo, was maintained as a vassal of the Sultan and was connected

to him by family ties because of his marriage with Milica Branković, a niece of the much-respected step-mother of Mehmed II, Carica Mara (widow of Murad II). Milica died in 1464. In 1477 Leonardo remarried, this time with Francesca Marzano, a princess of the Aragonese house of Southern Italy, the bitter opponents of the Ottomans. Two years later an Ottoman fleet under Gedik Ahmed Paşa, then Bey of Avlonya (Valona), occupied the islands of Zakynthos (Zante), Cephalonia and Levkas (Cephalonia and Zante were lost to Venice in 1481; in 1485 the Ottomans re-acquired Cephalonia by treaty, but lost it definitively to Venice in 1500). Leonardo and Francesca, bitterly hated by their Greek subjects because of their ruthless exploitation, fled to Italy, where King Ferrante of Aragon gave them new possessions. Gedik Ahmed is said to have deported the population of the islands, or at least a part of them, to Istanbul as part of Sultan Mehmed's policy of repopulating his capital Istanbul. Very likely there were also strategic grounds.

During the Ottoman-Venetian war over the last bases of the Signoria on the Greek shores (see KORON, MODON, AYNAHALI), the Venetians under Bernardo Pasero captured Levkas in August 1502. It was returned to the Ottomans as a result of the treaty with Venice, in which the Sultan recognised the Venetian occupation of Cephalonia. Levkas was to remain Ottoman for almost two centuries.

Ottoman Levkas (i.e. the town) became the seat of one of the two *hüduds* into which the *sandjak* of Karli-ili was divided during the greater part of the 16th century. The town was the largest of the *sandjaks*, and possessed by far the most important castle, containing a strong garrison. The *hüdud* of Aya Mavra was relatively thinly populated. An Ottoman census register (Tapu defter 367 in the BBA) from the years between 1523-36 shows that the town of Levkas/Aya Mavra numbered 194 households, 28 bachelors and 20 widows, perhaps giving a total civil population of a thousand souls. The *hüdud* had at that time two towns (the second town was Vonitsa, with 90 households, 27 bachelors and 15 widows), and comprised 43 villages, five monasteries and a total population of 2,234 households, 300 bachelors, 199 widows (or a total population of about 12,000 souls). These notes from the census register make clear that the *hüdud* of Aya Mavra not only comprised the island of Levkas but also a considerable part of the mainland of Acarnania. The bulk of the population of the *sandjak* of Karli-ili lived in the *hüdud* of Engli-kasri (= Aegleokastro, Ottoman between 1469 and 1832), further inland. Engli-kasri itself, which was officially the seat of the *sandjak* *begi*, numbered according to the same register 144 households, but the *hüdud* contained no less than 253 villages with 9,009 households, 290 bachelors and 234 widows (perhaps 46,000-47,000 souls). The register mentions that the garrison of Levkas town contained 111 soldiers and nine gunners. The castle of Engli-kasri, safely inland, had only 25 soldiers (*merdan-i kasri*), Vonitsa, more exposed than Engli-kasri but less dangerously situated than Levkas town, had 25 soldiers and two gunners. Not a single Muslim household or individual is mentioned in the entire *sandjak* of Karli-ili. There were only three mosques in this province, those in the three castles, serving the needs of the garrisons. The register of 1523-36 mentions in the entire *sandjak* only three *imams*, two *halkas* and two *medreses*. Thus Islam in Levkas was in the first half-century of Ottoman rule only represented by the military

and administrative machinery. This was to change notably in the subsequent years.

Because of the constant lack of fresh water in the fortified town, due to its setting on saltings surrounded on all sides by the waters of the lagoon, the Ottomans were forced to carry out important hydraulic works. Good drinking water was brought from the interior of the island to the fortified town by an aqueduct of 3 kms. long, which was carried over the lagoon for almost a mile on an aqueduct with several hundreds of arches (Ewliya Celebi, viii, 636, gives 366 arches, Coronelli, *Mémoires, etc. de la Morée*, Amsterdam 1686, 146, has 360 arches; Henry Holland [in 1812], *Travels in the Ionian Islands*, London 1813, 61, has 366 arches). Over the aqueduct ran a narrow path offering a much shorter way to the island than that over the saltings. A note in Mühlmann's defter no. 6 in the BBA in Istanbul contains the extract of an order of the *hüduds* of Engli-kasri and Aya Mavra that the aqueduct currently under construction in Aya Mavra had to bring the water firstly to the walled town and then to the open town on the island, and not to the walled town alone, as had previously been ordered. The inhabitants of the town had pointed out to the Porte that the open town (*naraz*) did not contain 200 houses, as was thought in Istanbul, but 700 to 800 houses. Hence the need for more water. The order states that the aqueduct was built by 'His Majesty'. It is dated 17 Rebi' al-küvel 972/24 October 1564, thus in the reign of Süleyman the Magnificent. Mühlmann's defter no. 5, containing a part of the orders of the year 973 (1565), has an imperial order from 6 Rejeb to the Beg of Karli-ili and the *hüdud* of Aya Mavra requesting the repair of the fortress works and ordering the subject people from the nearby villages to assist the garrison in the work. An order of some months later (21 Ramadan 973) urges the *hüdud* to begin the work and to finish it as soon as possible.

During the crisis of Lepanto (1571), the fortress of Aya Mavra was besieged but held out. After the siege the Ottoman government ordered the total reconstruction of the old fortress works. This work was carried out under supervision of Kapudan Râîs 'Ali Paşa between the years 980-1/1572-4. The Mühlmann's defters 10, and 21 contain some dozen of orders demanding carpenters and masons from Tirhala, Aynabuhîli and Yenova to go to Aya Mavra, and Yürüks and Tatars from Settalk and Tirhala and timariots from Üsküb (Skopje) to assist with the work. This new fortress has the form of an irregular hexagon which is at its longest 220 m and 130 m wide. It is strengthened by nine round bastions of various sizes, all equipped with domed and vaulted casemates for guns and an open artillery platform on top. The medieval castle of the Orsini was maintained at the north-eastern corner, as a kind of *ikâle*.

The works of the Ottoman geographers contain little information about this outpost of Islam in the far west of the Balkans. Piri Reis in his *Bahriyye* describes in a few lines the setting of the fortified town, as being situated on an island in a shallow lagoon and accessible only by two draw-bridges that only opened to let ships pass through. Hadidi Khallifa (*Rumeli ve Bosna coğrafyası hakkında*, Vienna 1812, 128) merely copies this information. Mehmed 'Ashik in his *Menâzır al-'arâdîye* does not discuss this section of the Balkans. A wealth of information, on the other hand, is found in the *Seyâhat-nâme* of Evliya Celebi (viii, 632-7). Evliya visited Levkas in 1081/1670-1, at a time when Islam

had made considerable progress. After a detailed and fairly correct description of the work of fortification, he tells us that there were five Friday Mosques in the town, among which was the *Khānkar Dīlārī*, a converted old church (this church-mosque was worn in 1863 by D. T. Ansted, *The Ionian Islands*, London 1863, 139-40, but has since disappeared). Besides these mosques there was a fine newly-built *mesjid*. Other Muslim buildings were a *medrese*, two *mektebs*, a *hammam* and six *tekkes*, of which one was erected by a certain Ahmed Agha in 1028/1619, with an inscription in Turkish giving the date in numbers in the form of a chronogram. In the walled town were 200 stone-built houses remaining from the times of the unbelievers. These houses were exclusively inhabited by Muslims. Due east of the walled town was an open suburb called "Sheh-kār Varoḡh", with forty or fifty wooden houses inhabited by Muslims and Christians. Just outside the west gate of the walled town, on the sandy flats stretching towards the island, was a larger suburb, called "Taḡḡre Varoḡh". It contained 300 houses built of wood (for strategic reasons). In this suburb was a wooden mosque with a stone-built minaret, a *mesjid*, a *tekke*, a *mekteb* and two *khāns*. The Christian inhabitants of this suburb possessed seven tiny churches. This part of town was full of winehouses, frequented by the irregulars of the garrison and the fleet.

At a distance of two miles across a shallow sea was the island of Lefkada, whose fertility was praised by Ewliya. It had innumerable gardens and orchards and twenty prosperous villages, all inhabited by unbelievers. The island was reached by a path on top of the aqueduct which Ewliya attributes to "the brother of Sultan Selim II, prince Dīlārāḡr" (1531-53). It is possible that there is a confusion with the son of Selim II, also called Dīlārāḡr, who must have reached manhood at the time when the order in the *Mühimme defter* 6 was written. This Dīlārāḡr died in 983/1573 (cf. *Siddik-i 'Oḡḡmānī*, I, 29).

The fourth part of the "agglomeration" of Levkas was the "Varoḡh-i Lefkada" containing no less than 700 prosperous houses, all inhabited by Greeks, and having 20 churches. This information is in blatant contradiction to what we find in the *Megale El-lēike Enkykliōpedeia*, xvi, 28, art. "Leukas", where a pitiful story of decay and stagnation is told and the great suburb on the island is said to have been "a few fisherman's huts". This part of town was long known as Amaviki, a name that slowly fell into disuse in the 19th century.

The whole urban settlement of Levkas thus had 1,250 houses, or about 6,150 inhabitants. Six years after Ewliya, Jacob Spon and George Wheeler (*Italienische, Dalmatische, Griechische und Orientalische Reise-Beschreibungen*, Nürnberg 1681, I, 19 [also tr. into English and French]) noted that in the citadel and the suburbs together lived 5,000 or 6,000 inhabitants, mostly Greeks and Turks.

The strength of the garrison of Aya Mavra as given by Ewliya (631), is perhaps exaggerated. He mentions 1,085 *ḡaḡe uḡḡḡḡr*, but an official Ottoman budget of the same year as his visit (published by Ö. L. Barkan in *İktisadî Fakültesi Mecmuası*, xvii [1955-6], 278) has only 285 *topçiyân ve rûḡḡḡḡ ve 'azâbân ve medriyân-ı ḡaḡe-yi Ayanavra* ("gunners, captains, soldiers and cavalry of the castle of A.") on the pay list.

The halcyon days of Muslim Levkas ended during the war of 1683-99 against the Christian coalition.

In the summer of 1684 the Venetian fleet under Morosini captured the town after a bombardment of 16 days. The garrison and the Muslim civil population got a safe conduct to the Ottoman mainland. Morosini turned the walled town, denuded of its inhabitants, into a citadel and removed its houses. He also evacuated and demolished the two suburbs just outside the castle and turned them into a glacis for the fortress. The deported inhabitants were helped building new houses on the island. Since that time the town was solely confined to the former Varoḡh (= Amaviki) on the island itself. All the Muslim buildings except the fortress works and the aqueduct were removed by the Venetians.

The Treaty of Karlowitz (Karlófa [g.n.]) assigned the town and the island definitely to Venice, which in the first years of the 18th century modernised the Ottoman castle. On that occasion, the *İc Kâife* of 1300 disappeared and the east front of the castle, facing the mainland that had remained Ottoman, the ramparts and bulwarks, was replaced by modern works, including two bastions, a ravelin and a *couvre-face* in the wet moat and an envelope all around. Two separate works came to cover the flanks. Some Latin inscriptions mention the name of the commander under whom the work was carried out and the date of completion, viz. Augustine Sagredo, 1713.

During the Corfu campaign of the Ottomans against Venice (1716), the modernised fortress was strongly defended. It was captured by the Ottoman army but was to return to the Venetians a year later. The Venetian rule lasted until 1797 (Treaty of Campo Formio) and was only interrupted by a revolt of the Greeks in 1769, after which the fortress was again repaired (long Latin inscription.). In 1797 the island was occupied by the French, who kept it till 1800, when after a brief cession of the combined Ottoman-Russian forces the island became part of the so-called Republic of the Seven Islands. The French returned in 1807, but were driven away from these islands by the British in 1809-10. In the first decade of the 19th century, the mainland of Acarnania was controlled by Tepedilimli 'Alî Paḡḡa, the able but treacherous Vizier of Yanina (Yanya), who in 1807 invested Lefkas unsuccessfully. On a rocky foreland commanding the only road from the mainland to the island he erected in the year a strong fortress. This was the site of the *Khalwetiyye tekke* of Dīdār Hasan, extensively described by Ewliya in 1670. Hence the name of that new work, *Kastro tis Tekkes*. Six km. further south, on a cape commanding the southern entrance to the lagoon of Levkas, 'Alî Paḡḡa constructed another, large, castle, now called "Castle of St. George". Both forts still exist today.

The mainland of Acarnania was included in the new Greek kingdom in 1832. In 1864 the British ceded Levkas and the other Ionian islands to Greece. The repeated changes of master did not stimulate the expansion of the town. When Henry Hol' and visited it in 1812, the town numbered but 3,000 inhabitants. Until the sixties of the present century, the populations of island and town have remained stationary (the island in 1863, 24,000; in 1901, 26,000). The great Ottoman aqueduct was wrecked during an earthquake in 1825, together with most of the town (Ansted, *Ionian Islands*, 141). It was not rebuilt, but served further as road until in this century it disappeared completely under the modern causeway. The town was rebuilt with wooden houses to minimise the damage of the very frequent earthquakes [that

of dates in *M. E. Enkykliō*, xvi, art. "Leukas"). The now decayed and deserted three Ottoman castles remain the only visible link with the Islamic past.

Bibliography: The Ottoman sources mentioned in the article are unpublished. A comprehensive history of Ottoman Levkas, based on Ottoman and Western sources, is still a task for the future. Fragments of information can be pieced together from *inter alia*, E. Kresten and W. Krieker, *Griechenlandsbünde. Ein Führer zu Klassischen Städten*, Heidelberg 1962; W. Müller, *The Latins in the Orient*, London 1908 (repr. 1964); idem, *Essays on the Latin Orient*, London 1921; idem, *The Ionian Islands under Venice*, in *EHRR*, xlii (1928); F. Babinger, *Mehmed der Eroberer*, Munich 1933, 427-3; idem, *Beiträge zur Geschichte von Qariyeh vornehmlich aus arabischen Quellen* (most accessible in *Aufsätze und Abhandlungen*, Munich 1962, 370-7); D. N. Nicol, *The Despotate of Epirus*, Oxford 1957. For the confused accounts in the Ottoman chronicles, see KARLILI above. It should be added that the chronicler Oruç Beg (German tr. R. F. Kreutel, *Der fromme Bayezid*, Graz 1976, 152), has little-known details on the Ottoman capture of 1502. A Western travel account contemporary with Ewliya Çelebi (1675-6) is J. Spon-G. Wheeler, *Italienische, Dalmatische, Griechische und Orientalische Reise-Beschreibung*, Nuremberg 1681 (also in English, *A journey into Greece*, Amsterdam, 1686); cf. also H. Holland, *Travels in the Ionian Islands, Albania, Thessaly and Macedonia*, London 1815 (repr. New York 1971), 58-64; W. M. Leake, *Travels in Northern Greece*, London 1835, i, 20 ff.; Leake has also accounts of the actions of 'Ali Pasha on the mainland and his endeavour to capture Levkas fortress (with a good topographical sketch-map of the various parts of town, the forts and the aqueduct); D. T. Ansted, *The Ionian Islands in the year 1863*, London 1863 (Santa Maura on 225-228, with much on history, economy, topography, etc.). See also K. G. Machairas, *I Leukas epi Enklokrotas* (1684-1797), Athens 1951, and idem, *I Leukas, 1700-1864*, Athens 1953. P. Rontogiannis, *Istoria tis nissou Lefkados*, i, Athens 1960.

The first detailed plan of the Ottoman castle of Seflin II and Kılıç 'Ali is given in the work of Vincenzo Coronelli. For an old drawing of the aqueduct, see A. Grasset St. Sauveur, *Voyages dans les îles et possessions co-dépendantes vénitennes du Levant*, Paris 1800, 337 ff. For details on the fortress, see Machairas, *Te en Leukade frourion tis Agklas Maoras*, Athens 1956 (100 pages, but nothing serious on the Ottoman actions. Very good plans of the walled town before and after the Venetian reconstruction and large-size map of the area). For the Ottoman aspects of the castle, see for the time being, M. Kieł, *Leukas/Santa Maura, een Turks-Venetaanse grensoversteek*, in *Jaarboek Stichting Mene van Coehoorn*, 1976, 58-64 (with photographs and plan of the castle).

For a modern survey of the history of the entire Ionian archipelago, see M. Pratt, *Britain's Greek empire*, London 1978.

(M. KRIEL)

LEWEND, the name given to two kinds of Ottoman daily-wage irregular militia, one sea-going (*devis*), the other land-based (*harî*), both existing from early times.

The word may derive in its maritime sense from the Italian *levantine* (Sh. Saml, *Kāmas-i Türkî*), used originally by Venetians for soldiers recruited from their Levantine possessions, and then passing into

Ottoman Turkish as a term for mercenaries recruited from the Mediterranean regions, especially the eastern lands and islands of Greece, Dalmatia and western Anatolia. Some claim its more common use as "a rough-and-ready cavalryman" came from Persia (cf. Redhouse, *Turkish and English lexicon*, s.v., and Uzunçarşılı, 46). By 966/1558 the Ottoman government clearly distinguished mounted *lewends* from coxswains (*Muhammed defteri*, iii, 163, and *Silahdar ta'rihi*, i, 132).

1. *Devîs lewend*. In the hey-day of Ottoman maritime expansion, demands for unskilled labour could be met by hiring Muslim or Christian (*Rûm*) *lewends* for a period of the campaign, paid in early times by booty, in later times a daily wage through the admiralty. These *lewends* acted as rowers, guardsmen, marines for shore invasion, but above all as seagoing musketeers. Muslim *devîs lewends* wore distinctive blue baggy trousers with a yellow sash; *Rûm lewends* a cloak with cowl, a blue-and-white sash, and white baggy trousers. For those whose labour the Admiralty needed during the winter in the Bosphorus arsenal, special quarters (*hâs*) were built on the Rûmelli side in the early 12th/18th century, known to this day as *Lewend çiftliği*. By the mid-12th/18th century, Muslim *lewends* took over many of the specialised naval duties previously pursued by *Rûm lewends* (who no longer enjoyed absolute trust), to serve permanently as *kalyondis* or galleon sailors. Their apparently exciting life as semi-official pirates, corsairs, and adventurers on the sea lived on into the modern Turkish language, in which *lewend* still means a bold, good-looking, dashing young man.

2. *Karî lewend*. Trained musketeers, discharged from Ottoman armies or the fleet, acting in concert with other jobless and homeless personnel (such as *sebhân*, *gönüllü*, and *'asab* [q.v.]), created mischief in Ottoman lands. Those who acted as cavalry were called *karî lewend*. Any man with a horse might join one of the many official or outlaw bands which swarmed in Anatolia, particularly after the 10th/16th century. *Karî lewends* fell into three categories: (a) *kapılı lewend*: irregular cavalry attached and paid by a *beglerbegi* or a provincial wali, for special services in peace or war, such as guarding fortresses, civil police duty, and honour guards. *Kapılı lewends* generally followed Ottoman military rank-order, led by a *bulukbaşı*, and included Anatolians, sc. Arabs, Kurds (Ralec, 37) and Turks, together with Rumelians, sc. Albanians (Turani, 168), Hungarians (Orhonlu, 100) and probably many others. *Kapılı lewends* were colourful but not particularly uniform apparel, their respective employers supplying clothing suitable to their particular allocation (Cezar, 294-6). (b) *kapısız lewend* (sometimes *başlı-başlı*, "independent"): any *lewend* discharged from the service of his *beglerbegi* or wali, who in theory returned to civilian pursuits. Anatolian social and economic conditions being in serious dislocation after the 10th/16th century, most *kapısız lewends* moved quickly into wandering groups of brutal marauders, many of whom took part in the *Diyâllî* revolts (q.v. in Suppl.); and (c) *mîrî lewend*: those hired by the government as musketeers or cavalry for a specific campaign and paid for by the central treasury.

To the end of the 12th/18th century, *lewends* found employment in Anatolia and Rûmali, often terrorizing rather than protecting those officially in their charge. In Dubrovnik in 1000/1592 they were "brigands" (*ah-i fesâd* or *lewendâh*) (Biegun, 82); in Cairo in 1008/1599 a visitor called them "unscrupulous scum"

(Tietze, 40); an observer in Ankara in 1029/1699 saw them as tyrants over the citizens (Andreassyan, 162); in 1069/1658 they supported Abāza Hasan Paṣha's [q.v.] massive rebellion, crushed by Kōprulu Mehmed Fāḫāh (Naʿīmā, vi, 347-9). By 1131/1719 a *fetvā* had abolished the *lewends* from the empire, but a new war with Persia demanded an extension of their enrolment by eastern frontier governors until 1136/1716 (Uzunçarlı, 47). Two decades later, 10,000 *lewends* deserted Yegen Mehmed Paṣha in his ill-fated battle against Nādir Shāh (ibid.); the Ottomans reacted angrily and those caught were executed, but many continued the sale of their services to any provincial officer or man of wealth (a'yān [q.v.]) who could pay. By 1190/1776 the government again ordered the *ḡarā lewends* to be abolished; most were absorbed into acceptable military units by the turn of the century. Others fled to Syria, where they found employment with Pīrāzār Ahmed Paṣha of Sidon, Muḥammad Paṣha al-ʿAsm of Damascus, acceptance among the local Kurdish *lewends* (*lewend al-abrāh*, Rafeq, 37), and work in Palestine as mercenaries (Cohen, 282). By the beginning of the 13th/19th century, most *ḡarā lewends* had been eliminated from the empire or had been absorbed into the modernised armies of Selīm III and Mahmūd II.

Bibliography: References to *lewends* may be found in many official documents (*Maklūmāt defterleri*, the *İbnillāhın ismāfī*, the *Cevdet ismāfī*, *askeri*, *dahiliye*, *mahye*, and others) in the Bağ Vakālet Arşivi, Istanbul. Many references occur in standard Ottoman historians like Muṣṭafā Naʿīmā, *Tārīkh*, Istanbul 1280/1863, and *Silāḡār leʿrīh*, Istanbul 1317/1899, as well as the other chroniclers of the period, both published and manuscript. The emphasis on *lewends* as seagoing irregulars may be studied in Hammer-Purgstall, *Staatsverfassung*, II, 234 ff.; Zinkeisen, III, 307 f.; and N. d'Olivson, *Tableau général de l'Empire Ottoman*, III, Paris 1825, which includes pictures, 416, 432. Several encyclopaedias and dictionaries give pertinent information, the best being I. H. Uzunçarlı, art. "Levend", in *LA*; also M. Pakalın, art. "Levend", in *h*, 358-9; and Midhat Sertöğlu, art. "Levend", in *Kisimî Osmanî tarihî ansiklopedisi*, Istanbul 1958, 188-9. The only major work devoted to the subject is Mustafa Cezai, *Osmanlı tarihinde lewender*, Istanbul 1965, which follows Uzunçarlı's general outline and includes many useful photographed archival materials and their transliteration into modern Turkish. The major work explaining the social conditions of Anatolia (990-1020/1582-1611) in which *lewends* flourished is Mustafa Akdağ, *Caldā isyanları*, Ankara 1963. Translations of contemporary observations of *lewends* as well as documents include H. D. Andreassyan, *Polonyalı Simon'un seyahatnamesi*, 1608-1619, Istanbul 1964, N. H. Biegan, *The Turko-Ragusan relationship, according to the firmāns of Murād III* (1575-1593) *exant in the State Archive of Dubrovnik*, The Hague 1967; Cengiz Orhonlu, *Osmanlı tarihine aid belgeler topluluğu*, 1597-1607, Istanbul 1970; A. Tietze, *Muṣṭafā 'Alī's description of Cairo of 1599*, text, translation, notes, Vienna 1975. Munit Aktepe, *Fatma isyanı*, 1730, Istanbul 1958, related the history of a *lewend* who precipitated the downfall of an Ottoman sultan and his government. General works referring to the activities of *lewends* include Serafeṭtin Tūran, *Kanaʿat'nin oğlu Şekade Bayezid vak'ası*, Ankara 1961, Abdul-Karim Rafeq, *The province of Damascus, 1723-1783*, Beirut 1966; A. Cohen, *Palestine in the*

18th century, patterns of government and administration, Jerusalem 1973; V. J. Parry and M. E. Yapp, eds., *War, technology, and society in the Middle East*, London 1975, esp. chs. by H. İnalcık, 195-7 and by A. K. Rafeq, 285, 291; and S. J. Shaw, *History of the Ottoman empire and modern Turkey*, I, *Empire of the Gass: the rise and decline of the Ottoman Empire, 1280-1808*, Cambridge and New York 1976, index.

[J. H. KRAMERS (W. J. GRISWOLD)]

LEXICOGRAPHY [see KAMUS]

LEZGH (self-designation *Lezgh*), pl. *Lezghiar*; Russian variants: *Lezgintsy*, *Kyurintsy*; others: *Lezg*, *Lezgin*, *Kürin*), a Muslim people of the Caucasus.

The *Lezgh* language belongs with Agul, Rutul, Tsakhur, Tabasaran, Budukh, Khaintal, Kifs, Dzhak, Khaput and Udi to the Samurian group of the Northeast-Caucasian (Ceoeno-Lezgian) language family. The *Lezgh* language is comprised of three closely-related dialects, all of which have been strongly influenced by the Azeri Turkish language, so. Kürin (Günel) and Akhtl, spoken in southeastern Daghistan, and Kuba, spoken in northeastern Agharbaydjan. The Kürin dialect forms the basis of the *Lezgh* literary language, since it is the most widespread of the three, and since it is the dialect spoken in Kuregh (the most important cultural and economic centre in the *Lezgh* territory, and former seat of the Khānate of Kürin).

Lezgh became a written language in the late 19th century (using the Arabic script), although it did not replace Arabic as the common literary language among the *Lezghs* until after the Russian Revolution (in the late 1920s). Early attempts at using the Cyrillic script (1904-5) for writing the *Lezgh* language met with utter failure. In 1928 the use of the Arabic script was abolished, and writing in *Lezgh* was changed to the Latin, and in 1938, to the Cyrillic script. *Lezgh* is at present one of the nine official languages of the Daghistan ASSR, although it is no longer used as a medium of instruction in the schools. Formerly (between the late 1910s and 1960s) *Lezgh* served as a language of instruction among the *Lezghs* of Daghistan (and between the late 1920s and 1939 among the *Lezghs* of Agharbaydjan) up to the 5th grade. *Lezgh* was also the official language used among the Aguls between the late 1920s and 1930s. Since that time, all education among the *Lezghs* has been in Russian in Daghistan, and in Azeri in Agharbaydjan. The term "Lezgin" had been used by Russian authors to refer not only to the *Lezghs* proper, but also at times to all mountaineer Daghistanis, or only the southern Daghistanis (including all the peoples in the Samurian group).

The *Lezghs* inhabit for the most part the southeastern portion of Daghistan (Akhtl, Dokuzpara, Kasumkent, Kurakh, Nagarmkent and Rutul rayons) and contiguous northeastern Agharbaydjan (Kuba, Nukha and Shemakha rayons). The 1970 Soviet census listed 323,829 *Lezghs* residing in the USSR. Of them, 50.2% lived in the Daghistan ASSR and 42.4% in the Agharbaydjan SSR. Of the *Lezghs*, 93.9% considered *Lezgh* their native language, while 3.7% considered it to be Russian and 2.4% other languages (mainly Azeri).

According to legend, the Islamic religion was originally introduced among the *Lezghs* by Arab conquerors in the 7th and 8th centuries. The final conversion of the *Lezghs* to Islam came in the middle of the 15th century with the conquest of the *Lezgh* territory by the Shāh of Shīrvān-Khātī Ullōh.

Although the bulk of the Lezghs are Sunni Muslims at the Shafi'i school, there is a sizable minority of Shu'bi in Agharbaydjan.

As a result of the long influence of the Turkish khānates of Agharbaydjan on the Lezghs, a Lezgh feudal principality—the khānate of Kūrin—was formed in 1775 with its centre in Kuraikh. This khānate, however, included only a relatively small part of the Lezgh territory and exerted only a minor influence on the Lezghs. The majority of Lezghs continued to live in free societies, while others lived at different times under the khānates of Kuba, Derbend and Kazikumukh. In 1812 the Kūrin khānate became a Russian protectorate, and in 1864, with its abolition, the Lezgh territory became an integral part of the Russian Empire. In the mid-19th century, under the leadership of Shamil and his Murids, the Lezghs took part in the Caucasian wars against the Russians.

Although a weak feudal structure had developed in the region of Kuraikh, the majority of the Lezghs lived in free societies made up of patriarchal clans and extended families. These free societies were ruled by the village *šidat*. Within the clan or extended family there was mutual help in work and family affairs, as well as group responsibility in vendettas, which were under the jurisdiction of the *šidat*. The Lezghs maintained a strict clan endogamic marriage system.

The traditional economy of the Lezghs was based primarily on home industries (weaving, rug making, leather working, pottery, smithing, etc.) and transhumance sheep and goat raising. These activities still play a major role in the village economy. In the foothill and lowland areas, cereal crops, gardening and horticulture are important. Winter pastures of the Lezghs were found primarily in Agharbaydjan, and there was a long tradition of seasonal (winter) migratory labour among the Lezgh men to the cities of Baku, Shemakha and Kuba (all in Agharbaydjan). As a result of this migration, as well as the long cultural and political ties with Agharbaydjan, the Lezgh culture and language have been profoundly influenced by the Agharbaydjanis; but this strong assimilatory force exerted on them has been sharply weakened during the Soviet period.

The Lezghs have a relatively long literary tradition though little pre-Revolutionary literature was written in the Lezgh language, since the dominant tongues here were Arabic or Azeri or Persian. Among the more renowned writers of Lezgh origin are the theologian Sa'īd of Kōčkhe, the mystical poet Etim Emin, the Azeri historian Hasan Alkadari and the poets Sayfullah Cōbzāde, Emir Arslan and Hādīdīl of Akhtī. Soviet literature began with Sulayman Stal'skil (the "national poet of Dagestan") and he has been followed by Tāhir Almorov of Khurug, 'Albek Fatadov, Shāh Emir Naradov, etc.

(R. WICKMAN)

LI'ÂN (Ar.), in Islamic law, an oath which gives a husband the possibility of accusing his wife of adultery without legal proof and without his becoming liable to the punishment prescribed for this,

and the possibility also of denying the paternity of a child borne by the wife. "In the language of the Shari'a, evidence given by the husband, strengthened by oath, by which the husband invokes the curse (*la'ma*: from this the whole process is a *pošari* named) and the wife the wrath of Allāh upon themselves, if they should lie; it frees the husband from *ḥadd* [q.v.] (the legal punishment) for *ḥaḍf* [q.v.] (accusation without proof of infidelity by persons "of irreproachable character") and the wife of *ḥadd* for incontinence" al-Tahānawī, *Dictionary of the technical terms used in the sciences of the Muslims*, ed. Sprenger and Lees, Bibl. Indica, Old Series, ii, 1309. On the technical use of the related verbal forms, cf. the Arabic lexica and Dozy, *Suppl. aux dict. arabes*, s.v.; al-Ḥastafānd, commentary on al-Bukhārī, *Ta'idh*, 25, at the beginning; al-Zurkānd, commentary on the *Muwassa'*, *Bāb mā dī'a fī 'l-ḥān*, at the beginning.

1. The following Kur'ānic passage is the basis for the regulations regarding the *li'ān* (XXIV, 6-10): "As to those who accuse their wives [of adultery] without having other witnesses than themselves, the man concerned shall swear four times by Allāh that he is speaking the truth and the fifth time that the curse of Allāh may fall upon him if he is lying, but the woman may avert the punishment from herself if she swears four times by Allāh that he is lying and the fifth time that the wrath of Allāh may fall upon her if he is speaking the truth. If Allāh were not gracious and merciful towards you and wise and turning lovingly towards you . . .".

These verses belong to a part of the Kur'ān, apparently composed at one time, containing various regulations about adultery and consisting of XXIV, 1-10, 21-6, verses 11-20, which certainly belong to the year 5, were inserted later, so that our verses must therefore be older (cf. Nōideke-Schwally, *Geschichte des Qordus*, I, 210-11; H. Grāme, *Mohammed*, ii, 27, puts the date between the battles of Badr (2 A.H.) and Uhud (3 A.H.)).

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Kur'ān XXIV, 4 (cf. also verses 23-5) for *ḥaḍf* and are therefore, like this penalty, primarily Muslim and have no attributes in Arab paganism, in which an institution like the *li'ān* had no place at all (contrary to D. Santilana, *Istituzioni di diritto musulmano*, I, 221 below). The word *li'ān*, which comes from the Kur'ān, is unknown to pre-Islamic poetry.

The *ḥadīth*s concerning *li'ān* are almost entirely (the oldest probably exclusively) exegetical, and profess to give the occasion of the revelation of the Kur'ānic verses in question; they are to some extent contradictory (attempts to harmonise them are found in al-Zurkānd, commentary on the *Muwassa'*, *Bāb mā dī'a fī 'l-ḥān*), systematised and unreliable (cf. Nōideke-Schwally, etc., where further references are given, to which may now be added those in A. J. Wensinck, *Handbook of early Muhammadan tradition*, 5:7 [to 55 ult. may be added, Tir. 44, sūra 24]). Four types may be distinguished among them: (1) the husband (unnamed) laments his sad case to the Prophet in covert language, whereupon the verses are revealed (oldest form); (2) 'Uwaymir b. Ḥārith asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type); (3) Ḥilāl b. Umayya accuses his wife of adultery and is to be punished with *ḥadd* for this, when Allāh saves him at some point by the revelation of the verses (this type, probably a development of the first, in which Sa'īd b. 'Ubadā also

is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and unoriginal appearance); and (4) someone marries a young woman and finds her not a virgin, while she disputes his assertion; the Prophet therefore orders *li'ân* (not *anâ'it*). There are of course other transitional and mixed forms. In so far as the *hadîths* yield nothing new about *li'ân*, this brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Kur'anic institution.

2. The first subject of the earliest legal speculation was the question, not touched upon in the Kur'ân, whether *li'ân* makes separation between the husband and wife necessary. In many *hadîths* this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuity of the marriage after the *li'ân*. The statement that al-Mus'ab b. al-Zuhayr is said to have held this view (Muslim, Nasbî 1, however, based only on an inadmissible interpretation of another *hadîth*, in which he appears as a contemporary; on the other hand, that 'Ufaymî al-Battî held it may be considered sufficiently proved [al-Zurqânî on the *Muwatta'*]). Among the oldest representatives of the other view, which later became predominant, that a continuance of the marriage was impossible after *li'ân*, may be included with some probability 'Abd Allâh b. 'Umar and with certainty al-Zuhri, in whose time it was already *sunna*, and Ibrahim al-Nakha'î (*Kutûb al-Âghâr*); the tracing of this opinion back to 'Abd Allâh b. 'Abbâs, which we find in the *hadîths*, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of *li'ân* is to be carried through, whether by a triple *talâq*, which the husband has to pronounce against his wife, or by the decision of the judge before whom the *li'ân* is taken, or by the *li'ân* itself. The first view is undoubtedly based on a large number of traditions, while no trace of its use in law has survived; these traditions are rather interpreted in favour of the second view (cf. the *hadîth* of al-Zuhri in al-Taharî, *Tafsîr* and al-Buhârî, *Talâq*, lib. 30 and *Hudûd*, lib. 43; the tradition in Ahmad b. Hanbal, v, 330-1, forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Taymîsî, no. 2667). The second opinion survives in the later legal *ikhtilâf*; apart from the ample testimony to it in *hadîth*, its oldest representatives known with probability or certainty are 'Abd Allâh b. 'Umar; al-Zuhri, in whose time it appears as *sunna*; and Ibrahim al-Nakha'î (*Kutûb al-Âghâr*); its ascription to 'Abd Allâh b. 'Abbâs is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the *madhhab*. We seem therefore to have a tendency to development in a particular direction.

Other prescriptions about *li'ân* in tradition going beyond what is laid down in the Kur'ân, are of less importance. Thus when the question is raised at all, it is unanimously laid down that the husband can never marry the wife again at a later date, that a *li'ân* may take place during pregnancy (legal *ikhtilâf* is later attached to their interpretation of this *hadîth*), that the child has only relationship with its mother as regards kinship or inheritance, i.e. is considered illegitimate. Other *hadîths* say that the *li'ân* must be taken in a mosque and attribute the formula to be spoken there by the *kalîf* to the Prophet. We are also

brought into contact with questions of detail, which play a part in the latter *ikhtilâf* by a tradition according to which the Prophet did not allow *li'ân* unless the husband and wife were on equal terms as regards Islam and freedom; a series of older authorities who held the contrary view is quoted in the *Madârik*.

Details of the further teaching of *fiqh* in al-Nakha'î on *li'ân* are given in the *Kutûb al-Âghâr*. Two more general pronouncements in Mâlik and al-Shâfi'î bring us to the period of the rise of the *madhhab*. Mâlik states definitely that it was the *sunna* of Medina, about which there is no doubt and no *ikhtilâf*, that the husband and wife after the *li'ân* has taken place could never marry one another again, and al-Shâfi'î says that with *li'ân*, divorce of the pair and denial of the paternity of the child was *sunna* of the Prophet.

3. The teachings of the separate *madhhab* develop the views of their earliest representatives, not entirely on the same lines (e.g. from the *Muwatta'*); it is to be assumed with probability that Mâlik followed the second view regarding the element in *li'ân* which annulled the marriage (cf. above), while his school later held the third opinion entirely. The most important regulations of *fiqh* regarding *li'ân* that go beyond what has been so far discussed are as follows; if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally-prescribed fashion and she denies his charge, recourse is had to the process of *li'ân*. If the husband refuses to pronounce the formulae prescribed to him, he is punished with the *hadd* for *hadîth*; according to Abû Hanîfa, however, he is imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to *hadd*. If the wife refuses to pronounce the corresponding formulae, she is punished with the *hadd* for adultery; but according to Abû Hanîfa and the better tradition of Ahmad b. Hanbal, however, she is imprisoned until she pronounces the formulae, whereupon she is set free or confesses her transgression and is then liable to *hadd*. On the question whether *li'ân* is possible if one partner is or both are not Muslims or not free or not *'adl*, there is a wealth of *ikhtilâf*, which cannot be detailed here; the same applies to the possibility of *li'ân* during the pregnancy of the woman, with the object of denying the paternity of the child. On this point, the strength of the principle that the marriage decides the descent of the child, is remarkable, as is the distinction between two objects of *li'ân* (accusation of the wife of adultery and denial of paternity), which is only a result of later developments. In the whole of the earlier period these two objects coincide from the juristic point of view. The divorcing element in *li'ân* is, according to the Mâlikîs (on their presumed divergence from Mâlik himself on this question, cf. above), and a tradition of Ahmad b. Hanbal, the *li'ân* of the wife, according to al-Shâfi'î that of the husband; but according to Abû Hanîfa and the better tradition of Ahmad b. Hanbal, however, it is the verdict of the judges pronounced after the *li'ân* of both. Opinions also differ regarding the legal consequences of a later withdrawal of the *li'ân* by the husband; according to Abû Hanîfa and one tradition of Ahmad b. Hanbal, a new marriage of the two people is possible in this case, but according to Mâlik, al-Shâfi'î and the better tradition of Ahmad b. Hanbal, it is not, among older authorities, only Sa'îd b. Jubayr is in favour of the first view, while 'Umar, 'Alî, 'Abd Allâh b. Mas'ûd, 'Abd Allâh b. 'Umar, 'A'îsâ and al-Zuhri are quoted as in favour of the second (not all have historical

confirmation), which was also held by al-Awālī and Sufyān al-Thawrī. Finally, it is a disputed question whether the *libās* can only be performed orally or (in the case of a dumb person) by gestures; al-Bukhārī devotes ch. 25 of his *Kitāb al-Ṭalīb* to this discussion of this question and the reasons for his attitude to it.

4. It is easy to understand that the resort was only had to the *libās* in extreme cases. Thus we find a scholar of Cordova in the 4th/10th century pronouncing the *fiṣm* against his wife simply in order to revive this *sunna* of the Prophet, which had fallen into oblivion (I. Goldziher, *Muhammedanische Studien*, II, 22, Eng. tr. id., 33). But it has only begun to fall into disuse with the introduction of modern legal codes into the Islamic countries and the creation of legal mechanisms for the adjudication of disputes over paternity. Thus the natural substitute for it, proof of non-access at the time of the child's conception, was introduced into Egypt in 1929 by the device of restricting the competence of the *Shari'a* courts in questions of maintenance and paternity; hence the courts were forbidden to entertain disputed paternity suits where either non-consummation of the marriage, or the birth of the child more than one year after the last physical access between wife and husband, could be established. In some countries, e.g. Tunisia or Morocco, procedures have been introduced whereby a husband can repudiate a child with which his wife is pregnant, or has already given birth to it, without recourse to the *libās* procedure. In the Arabian peninsula, however, it remains in force, whilst in the Indo-Pakistani sub-continent it still provides a way by means of which a wife who claims to have been falsely accused of infidelity by her husband can go to court and claim dissolution of the marriage.

(J. SCHACHT*)

LIBĀS (A., pls. *libas*, *alibsa*) like its cognate counterpart in most Semitic languages (cf. Akk. *libāṣu*; Heb. and Aram. *לבוש*; Syr. *ܠܒܝܫܐ*), is the general Arabic term for clothing or apparel. The dictionaries define it as "that which conceals or covers the pudenda", for which the Qur'anic verse is cited, "O Children of Adam! We have revealed unto you clothing to conceal your shame, and finery, but the garment of piety, that is best" (VII, 26). In addition, "it is for self-beautification and adornment and for protection against heat and cold" (*Kānās* ZA, s.v.). In addition to the form *libās*, one finds *liba*, *malbas*, *malbas*, *malbus*, *libas* and *labaza* also signifying clothing.

A detailed history of Islamic costume has yet to be written. There have been of late ever-increasing studies of modern and late pre-modern attire for various Islamic countries (cf. *Bibliography*), but with the exception of R. Dozy, *Dictionnaire détaillé des noms des vêtements chez les Arabes* (Amsterdam 1845) no comprehensive work covering all Arab—much less Islamic—lands in all periods has been produced. Dozy's pioneer work was based solely on literary references which were mostly in manuscript at that time. His literary references were somewhat supplemented by R. Levy, *Notes on costumes from Arabic sources*, in *JRAS* (1935), 328-38. R. B. Serjeant's monograph *Islamic textiles, material for a history up to the Mongol conquest* (Beirut 1972), although not dealing specifically with costume, has brought forth a great deal of important ancillary material. Recent attempts to coordinate literary sources with representations of costume in Islamic art and with actual relics of garments preserved for specific periods are those of L. A. Mayer, *Mamluk costume*, Geneva 1952, and Y. K. Stillman, *Female attire of medieval Egypt, according to the trousseau lists and cognate material from the Cairo Geniza*, unpubl. diss., University of Pennsylvania, Philadelphia 1972.

We shall limit ourselves here to a general survey of costume history in the Arab world during the classical period, with some brief notes on pre-Islamic and modern times.

1. — IN THE CENTRAL AND EASTERN ARAB LANDS

1. **Clothing of the pre-Islamic Arabs**
Despite numerous references to the Arabs in classical geographical and historical literature, there is only scattered and scanty information concerning their attire. Herodotus mentions that the Arabs wore the *isara*, a sort of long flowing garment caught in with a belt (*Hist.* VII, 66). This most certainly is the *isār* (also found in the forms *asr*, *ar'san*, and in Middle Arabic texts and vernaculars *isār*), a large sheet-like wrap worn both as a mantle and a long loin cloth or waist cloth (comp. late bibl. Heb. *יָרֵם*). This is corroborated by Strabo, who says of the Arab Nabateans that "they go without tunics, with girdles about their loins, and with slippers on their feet" (*Geog.* XVI, 4, 26). The mode of wearing the *isār* by the Muslim pilgrim in a state of *ihram* [s.v.] reflects this ancient fashion.

The earliest evidence for the clothing worn in ancient Arabia is the rupestrian art of prehistoric Arabia (second and first millennia B.C.). These show men wearing relatively little clothing aside from a *loche-sax* and a variety of headresses (see E. Anati, *Rock-art in Central Arabia*, I, Louvain 1968, 159, 263, and *passim*). Already at this very early time some women are depicted in enveloping wraps (*ibid.*, 195). Some sort of slippers or sandals were also worn by both sexes (*ibid.*).

Those Arabs who lived within the cultural sphere of one or another of the great empires could not help but be influenced by the fashions of the higher civilisations, clothing being a manifestation of culture, no less than art, architecture, literature, etc. Thus we find statues of the Arab rulers of Hatra in Mesopotamia which depict them wearing Parthian-style dress. Some wear a sleeved mantle and chiton, and others Persian trousers and military festoons (see F. Altheimer R. Stähli, *Die Araber in der alten Welt* II, Berlin 1965, 227). Those Arabs who inhabited the oasis towns of the Syrian desert apparently dressed in the fashion of the eastern Hellenistic (see

R. Dussaud, *La pénétration des Arabes en Syrie avant l'Islam*, Paris 1955, figs. 20-3, et *passim*.

Because of their conservative existence beyond the pale of sedentary civilisation, the Bedouin have maintained a fairly constant style of dress from pre-Islamic times down to the present. Throughout the Muslim world loose wraps have always been an extremely common feature of dress for both men and women. Ibn Khaldūn noted that wraps, as opposed to tailored or fitted clothing, were the mark of non-urban dwellers (*Muḥadditha*, *seps*. Beirut 1900, 417). Ibn Khaldūn's observation, of course, needs some modification. City-dwellers wore wraps also. To be sure, these were of finer quality, often ornate, and were worn over fitted clothing. The Bedouin have always shown a preference for dark garments. The Babylonian Talmud cites the dark garments of an Arab as an example of a blue-black colour it is trying to define with precision (*Niddah*, 20a). Clothing is frequently mentioned in *Dīhābī* poetry, especially the many kinds of outer mantles such as *burd*, *isār*, *riḍā*, and *shamsa* (apparently similar to the bibl. Heb. מְשָׁנָה). Tertullian mentions that Arabian women appeared in public totally enveloped in their mantle in such a way so that only one eye is left free (*De virg. vel.*, 17). This fashion continues in places as far apart as Iran and southern Algeria and Morocco.

The use of footwear in Arabia goes back to prehistoric times and was certainly necessitated by the harsh landscape. Many of the figures in the ancient rupestrian engravings wear some sort of distinctive shoe or sandals (Anati, *Rock-art*, *passim*). The Talmud specifically mentions that the sandals worn by the Arabs are "close-fitting" (*Yoma*, 102a) and that they "are knotted tightly by the shoemakers" (*Shabbat*, 122a).

2. The time of the Prophet and early Islam. The fashion of dress of the earliest Muslim community was on the whole an extension of the preceding period, with certain modifications for the new moral sensibilities. It is interesting to observe that many of the garments worn by the Prophet and his contemporaries continued through the centuries as the basic clothing of villagers and Bedouin, being simple, functional, and suitable to the ecology. The urban dweller, though perhaps far more conscious of *summa* [q.v.] than his rural or nomadic cousins, has since Umayyad times been constantly modifying his wardrobe. Nevertheless, the basic outlines of the Islamic vestimentary system have remained remarkably constant even in the city.

The basic articles of clothing at the time of the Prophet for both sexes consisted of an undergarment, a body shirt, a long dress, gown, or tunic, and an overgarment such as a mantle coat, or wrap, footgear consisting of shoes or sandals, and a head covering. A person might wear many garments or only one depending upon a variety of factors including weather, occasion, economic means, etc. Many of the items of clothing worn by men and women were identical. Indeed, many of the articles were simply large pieces of fabric in which the wearer wrapped himself. What must have set off male from female fashion in many instances was the manner of draping, the accessories (jewelry, head- and footgear, and veils), as well as colours, fabrics and decoration.

The basic undergarment was the *isār* (sometimes referred to as *ḥaḥū*), the loincloth which goes back to prehistoric times. It may well be—although there is dispute over this point in the Muslim traditions as well as in Western scholarship—that *sirwal* (from old P. *sārawāro*; modern P. *shāwār*) or underdrawers

were already in use by this time before the conquest of Iran. Persian cultural influence had filtered down into Arabia through the Lakhmid kingdom of Hira and perhaps up through the Yemen. There are *ḥadīth*s both claiming and denying that the Prophet wore them. From many *ḥadīth*s, however, it would seem that there were women who wore certainly *maṭarawīd*, i.e. wearing the *sirwal*, at this early period. In one well-known story the Prophet averted his glance out of modesty from a woman who had fallen from her mount until he was assured that she was wearing a *sirwal*. How these early *sirwal* looked cannot be ascertained. In later Islamic times they differed greatly from country to country and included all sorts of pantaloons, knabreeches, long trousers, and close-fitting drawers. It is reported that the men who bore 'A'isha's litter on the pilgrimage wore *ḥubdā*, small *sirwal* or briefs (Bukhārī, *Ṣaḥīḥ*, *ḥab* xxv, *ḥab* 18). Not everyone could afford a separate undergarment, and there are numerous *ḥadīth*s in which men without underwear are forbidden to sit or squat publicly, tuck up their garments while working, or to drape themselves in the fashion known as *al-ṣawmā* whereby one end of the mantle is pulled up on the shoulder leaving the other side of the body exposed—apparently in the style of the Greek chiton (cf. e.g. Bukhārī, *Ṣaḥīḥ*, *ḥab*, 8, *ḥab*, 10, 1; *ḥab*, 20, 2; and most of the other canonical collections).

The basic body shirt was the *ḥamīṣ* (from late Latin *camisia*; cf. Jerome, *Ep. test. mil.*, 64, *no.* 11). Like so many items of Islamic attire, it was worn by both sexes. Just as in the Arab world today, the *ḥamīṣ* was frequently worn by children. The Prophet supposedly covered his uncle al-'Abbās with a *ḥamīṣ* when the latter was taken prisoner naked at Badr. Any variety of robes or tunics might be worn over the *ḥamīṣ*. These include the *ḥabab* which in addition to being a gown was also a general word for garment (the pls. *ḥayyib* and *ḥabīb* designate clothes) and fabric, since many garments were no more than a piece of cloth (*ḥabīb*). Also worn over the *ḥamīṣ* were the *ḡubba*, a woolen tunic with rather narrow sleeves which was imported in the Prophet's time from Syria (Bukhārī, *Ṣaḥīḥ*, *ḥab*, 10, and *ḥab*, 10, and perhaps elsewhere in the Byzantine empire (Ibn Māḡīja, *Samān*, *xxii*, 4); the *ḥula*, a long, flowing coat which the Prophet wore tucked up when he went out (Bukhārī, *Ṣaḥīḥ*, *ḥab*, 3) and of which he is reported to have worn on occasion a red one of great beauty (*ḥab*, *ḥab*, 13, 11); the *ḥabā*, a luxurious, sleeved robe, slit in front, with buttons (*muḥarrar*), made of fabrics such as brocade (*ḥabā*), and apparently of Persian provenance; the *ḥarīḡī*, a robe similar to the *ḥabā*, but slit in the back. The Prophet is reported to have received a *ḥarīḡī* (*ḥarīḡī ḥarīḡ*) as a gift, to have worn it, prayed in it, and finally to have thrown it off as if it were suddenly loathsome, saying that it was not fitting for the God-fearing (Bukhārī, Muslim, *Nasā*, and elsewhere). The custom of wearing several layers of tunics and robes continued through the Middle Ages and still persists in traditional areas today, in Morocco, for example, one frequently sees a man wearing two and even three *ḡallābas* (hooded outer robe) over two or more tunics.

The principal form of armour was the coat of mail known as *dir* or *dir'a* which Nöldeke thought to be of Ethiopic origin (*Neue Beiträge zur sem. Sprachwissenschaft*, Strasbourg 1910, 53), but as Bosworth has shown, was borrowed from Persia (cf. *Iran and the Arabs*, in *Cambr. Hist. of Iran*, iii, ed. E. Yarshater,

Cambridge 1953). Also mentioned in the early sources is a *ghubba min kadid* or tunic of mail.

Arabian fashion required both men and women to wear a mantle of some sort over everything else when appearing in public. In the case of the less well-to-do, the mantle or outer wrap might be the only garment over the underwear, and there are numerous *hadiths* dealing with questions of public modesty which arose because of the common presence of men dressed in a single wrap at prayer. Once again, it is the ubiquitous *isār* which was the fundamental garment in this category for both sexes. Another basic one was the *ghamisa*, which like *isār* simply means "wrap". These were usually white or some other light colour. The *ghamisa*, on the other hand, was black with ornamental borders (*sa'atim*). In a frequently repeated *hadith*, the Prophet found himself distracted by the decoration on a *ghamisa* he was wearing at prayer and called for a simple woollen cloak known as an *anbiḡḡiyya* (Bukhārī, *Ṣaḥīḥ*, viii, 14, 1, cf. *passim*; Ibn Māǧia, *Ṣunan* xxii, 1). Like many wraps, the *ghamisa* also served as a sleeping garment. Some wraps and mantles at this time seem to have been associated with one sex or other, although these were in the minority. The *ridā'* was a man's mantle par excellence, and for the man of honour, in the words of the *Ḥishām* poet al-Samawī, "every *ridā'* he wears is becoming". The *ḡiḡḡāb*, *ḡiḡḡār*, and *marj* were primarily for women. Tirmidhī, Muslim and Abū Dāwūd all repeat a *hadith* about Muḥammad wearing a black *marj*, but all other references to this garment are solely in a feminine context (e.g. *Iḡruq* al-Kays, *Mawālīk*, 26; Bukhārī, *Ṣaḥīḥ*, li, 13). Then, as now, there were many names for wraps and mantles, and these were often synonymous, perhaps reflecting earlier usages of regional dialects. That the terms were frequently interchangeable is clear from a *hadith* where a woman brings the Prophet as a gift a woven *burda* with a border (*burda mansūǧa fihā ḡiḡḡiyya-nāḡi*) which she herself had made and asks the people assembled if they know what a *burda* is. They answer "a *ghamisa*". The story continues that Muḥammad wore it as his *isār* [sic] and gave it upon request to a man who wanted it for a shroud (Bukhārī, *Ṣaḥīḥ*, xxi, 29; Ibn Māǧia, *Ṣunan*, xxxi, 1; and with variations elsewhere). Many wraps and mantles were known by their fabrics. Thus the *namra* was a man's wrap with stripes of varying colours which gave it the appearance of a tiger's skin, whence its name. The *mulabbada* was simply a 'felted *isār*' (the generic word for wrap; cf. Assyri. *kuṣiṭa*, bibl. Heb. מְלוּבָבָה, both general terms for garment or covering). The *burda* or *burd* [g.u.] was a wrap of striped woollen cloth produced in the Yemen. The Prophet wore a *Nadīrān burd* with a wide border. He gave one such mantle of his to the poet Ka'b b. Zuhayr [g.u.] which became legendary. The distinction between fabric and garment is often not clear. The *isbara* was a striped garment similar to the *burd*, and according to Anas, it was the favourite garment of the Prophet. Yet we also read of *isbara* garments, and thus, in a tradition to 'Aḡḡa, the Prophet was wearing a *burd* of *isbara* fabric when he died (*ṣaḡḡiyya bi-burd isbara*). The *siyār* was both a mantle of Seres (Gk. Συγρε; Aram. ܣܝܪܐ and ܣܝܪܐ) or Chinese silk and the fabric. Thus we find *ḡiḡḡa siyār*, *burd siyār*, and *ḡamīḡ ḡarīr siyār*.

Precisely how these mantles and the many others mentioned in the traditions were draped we cannot know, but it is quite clear from the sources that there was a wide variety of styles. This is further corroborated by the fact that in those parts of the

Islamic world where traditional wraps and mantles are still worn today there is considerable variation from one locale to the other in draping style. The canonical *hadith* collections are almost unanimous in citing condemnations of the practice of ostentatiously trailing one's garment along the ground (*ḡarr man al-ḡaywā'*). Ankle-length garments were considered proper in the early *umma*. Shorter garments became the mark of an ascetic, longer ones the mark of a libertine.

Already in the Prophet's time the ancient Near Eastern practice of covering the head out of modesty and respect was the norm for both men and women. It is for this reason the Muslims and Jews customarily cover their heads when praying, rather than baring them as in the West. The Qur'ān warns that the wicked man will be dragged down to hell by his exposed "lying, sinful forehead" (XCVI, 15-16). Of course, a man or woman could draw his or her long mantle or ample wrap over the head, and in the case of women this was and still is the most common fashion even when some sort of hat or veil is worn under it. The Prophet is reported to have visited Abū Bakr while wearing the border of his *burd* over his head with a black headband (*'ḡāba dasma'*) (Bukhārī, *Ṣaḥīḥ*, lxxvii, 16). In his last public appearance before his death, Muḥammad supposedly wore his *muḡafa* (a wrap similar to the *isār*) over his head, again held in place with a black headband (*ḡab*, li, 23, 37).

The *'umma* or turban has been worn by the Arabs since pre-Islamic times. The word *turban* which is used in one form or another in all western languages derives from Persian *dāband* via vulgar Turkish *tol-ban* or *tolban*. The *'umma* of *ḡiḡḡiḡ* and early Islamic times was probably not the composite headgear of the mediaeval and modern periods consisting of one or two caps (*ḡaḡiyya* or *'arabīyya* and/or *ḡalansura*, *ḡulāḡ*, or *farḡḡḡ*) and a winding cloth, but merely any strip of fabric wound around the head. G. Jacob has suggested that the later *turban* is a synthesis of Arab and Persian styles (*Altanab-sches Beduineneleben*, Berlin 1897, 217). In the early *umma*, the *'umma* certainly did not have any of the significance it was later to have as a "badge of Islam" (*isnā al-Islām*) and a "divider between unbelief and belief" (*ḡaḡiyya ḡayn al-kufr wa 'l-imān*). Nor was it yet—in the words of a proverb still heard in Morocco, at least—the "crowns of the Arabs" (*ḡiḡḡān al-'arab*). The many *hadiths* which provide detailed descriptions of the Prophet's *'umma* are clearly anachronistic. For later generations, Muḥammad was "the wearer of the turban" (*ḡaḡḡ al-'umma*), and like many of the accoutrements associated with a hero of epic proportions, his turban had a name—*al-siḡḡ* or "the cloud". According to a *Shī'ī* tradition, he willed it to 'Alī. This *ḡaḡḡ* may have been circulated in order to counteract any prestige accruing to the Umayyad and 'Abbāsid caliphs by their possession of the Prophet's *burda*. One of the few reliable facts we know about the *'umma* in early Islamic times is that it is one of the garments specifically forbidden to a person in a state of *ḡhram* [g.u]. The *'umma* must have consisted of a very long strip of fabric as in later periods, since there are reports of its being used for bandaging (e.g. Bukhārī, *Ṣaḥīḥ*, lix, 16, 2).

The hats worn in the Prophet's time included the *ḡaylān*, which though worn by Muslims was considered a typically *ḡhaybarī* Jewish hat (cf. Bukhārī, *Ṣaḥīḥ*, lix, 38, 23), the *ḡalansura* which originally designated a close-fitting cap, and the *ḡurnus*, a

sorl of high cap or bonnet. Already at this early time the *buraqa* must have also designated by extension a cloak with hood, despite Björkman's view to the contrary (art. "Turban", *EP*, iv, 88g) since 'Umar's assassin was prevented from escaping by a Muslim who threw a *buraqa* over him (Bukhārī, *Ṣaḥīḥ*, Ixi, 8). The word *halansura* apparently also could designate a hood or cowl, since it is mentioned along with the *ḥisāma* as one of the garments which a man might spread under him for prayer when the ground was too hot (*ibid.*, viii, 23). The high cap known as *farfura* or *farfur*, though not mentioned in the early traditional literature, appears already in a 7th-century papyrus (J. von Karabacek, *Äthiend-ländische Künstler zu Konstantinopel, in Denkschr. d. Kais. Akad. d. Wissen.*, Ed. Ixi, Abb. 1, Vienna 1918, 67). The 16th-century traveller Balon suggested a connection between this cap and the ancient Egyptian headcovering called by the Latin writers *horreum capitis ornamentum* or *turrilans coronam* (cited in Dozy, *Vêtements*, 263). S. Fraenkel's suggestion that the word is derived from Aramaic *ܚܪܦܐ* (*Die Aramäischen Fremdwörter im Arabischen*, repr. Hildesheim 1962, 53) seems more probable, since such hats were worn in the Aramaic-speaking regions in the period just prior to the advent of Islam. They are depicted in several murals from Dura-Europos and elsewhere (see e.g. R. Ettinghausen, *From Byzantium to Sasanian Iran and the Islamic world*, Mayer Memorial Studies ii, London 1971, Pl. xix, no. 65). On military expeditions, men wore a *mughfor* or *ghufura*, a cap or headcloth of mail over which was worn a *halansura* or a helmet known as *bayda* (so-called because of its resemblance to an ostrich egg). The Prophet was wearing a *mughfor* on the day Mecca surrendered.

Women in early Islamic times normally covered their head and face with any of a variety of veils when appearing in public. In addition, they were usually entirely enveloped in the large *ghibāb* from head to foot leaving only one eye free. A common head veil was the *mandil* or *mundil* (ultimately derived from Lat. *mantellum*; cf. Sp. *mantilla*). The word may also have already been used at this time for "handkerchief" or "hand cloth" (see the detailed discussion on the *mandil* in F. Rosenthal, *Four essays on art and literature in Islam*, Mayer Memorial Studies ii, Leiden 1971, 63-108, and *MANDIL*). The two most common lace veils were the *hijām* (q.v.), a rectangular cloth covering the nose and the lower half of the face, and the *durḥa*, a harness-like affair consisting of fabric suspended from the centre front of the headband (*ḥisāma*) to cover the face. The lower corners of the *durḥa* were attached to the sides of the headband by a string creating a mask-like effect. The *durḥa* is still worn by married women amongst the Sinai Bedouin. *Ḥaḡḡa* were neither of these veils when she was a *muḥrima* (*al-talabithu wa-l-talabitha*). Another veil worn by women at this time was the *uḡḡa*. Oddly enough, there is no mention of any sort of hats or head-dresses for women at this early period, despite a veritable plethora of such items from the High Middle Ages to modern times.

Men did veil on occasion, normally by wearing the outer mantle (*isār*, *ridā'*, *burd*, *milḥafa*, etc.) in such a way as to cover both head and face). The Prophet is described on more than one occasion as being *mutalabbith*. This does not necessarily imply that he was wearing the face veil known as *ḥisā* or *mughfor* (cf. for example, Bukhārī, *Ṣaḥīḥ*, lxxvii, 16). Very handsome young men sometimes veiled their faces,

particularly at fairs and fairs, in order to protect themselves from the evil eye (*Aḡḡānī*, vi, 33; xi, 28; xii, 137; xv, 157; also J. Wellhausen, *Reise arabischen Heidentums*, repr. Berlin 1961, 196). The free end of the turban cloth frequently served as a face veil to protect the wearer against dust while riding. It was veiled in the fashion that al-Hadḡḡādī (q.v.) entered into the mosque at Kāfa, mounted the pulpit, and dramatically bared his face as he began his famous sermon with the lines "I am the son of splendour, the sceler of the high places/When I take off my turban you know who I am".

Footwear for both sexes fell into one of two categories—the *naʿl* or sandal which could be of palm fibre, smooth leather, or leather with animal hair, and the *ḡaff*, a sort of shoe or boot made of leather. The various kinds of slippers which are popular throughout the modern Islamic world under a variety of names (*ḡabḡī*, *ḡāḡa*, *surmaḡa*, *bulḡa*, etc.) came into vogue after the conquests.

3. Early Islamic laws and customs regarding clothing. The austere nature of the early Medinese *umma* did not encourage luxury of any kind. The Kurʿān promises the righteous garments of silk (see *ḡanāʿ*) in Paradise, but the Prophet felt that such clothes were inappropriate in this life for men, although apparently not for women. According to a frequently-repeated *ḡadīḡ*, Muḡammad forbade seven things: silver vessels, gold rings, garments of *ḡarir*, *ḡibḡī* (brocade), *ḡass* (a striped fabric from Egypt containing silk), *isḡarḡ* (satin), and *mayḡḡir ḡumr* (tanned hides). Actually, there are many more fabrics mentioned in the traditional literature which he supposedly proscribed. It would seem that he did make exceptions in the case of individuals suffering from some pruritic skin condition or lice. With the development of the empire and the rise of a leisured class, there came into being a wealth of counter-traditions expressing the permissibility of wearing clothes of silk and other luxury fabrics.

Many of the earliest and most reliable traditions regarding clothing deal with *isḡām* and questions of ritual impurity caused by menstrual flow or the ejaculation of semen. Each of the Prophet's wives had a special menstrual garment. Garments defiled by menstrual flow need only to be washed to be worn for prayer (e.g. *Abū Dāwūd*, *Sunan*, i, 130), and if not stained, a menstrual garment may be worn for prayer without washing. For these and related laws, see *ḡANASA*, *ḡHUSL*, *ḡAYD* and *ḡUDḡ*. It is not certain whether or not women in the early *umma* had special clothes for mourning. During the *ḡahiliyya*, a woman wore her worst clothes when in mourning (*al-talabith ḡayyāb*—Bukhārī, *Ṣaḥīḥ*, lxxvii, 46, 47). The Prophet forbade women in mourning to wear dyed clothing except for garments of *ḡash*, a Yemenite fabric with threads dyed prior to weaving (*ibid.*, 48, 49). The technical term for "mourning garment" (*ḡanab al-ḡidd*) only appears in Ibn ḡanbal (*Musnad* vi, 438) and seems to be a later development. The name implies a garment dyed to a dark iron black.

As already noted, many of the garments worn in early Islamic times were the same for both men and women, especially tunics and wraps. There were, nonetheless, distinct stylistic differences. Islam, like Judaism and Christianity, strictly condemns transvestitism (Bukhārī, *Ṣaḥīḥ*, lxxvii, 61). However, in Islam this prohibition clearly refers to overall conduct as much as dress.

Clothes have always been considered objects of significant material value in the Middle East. They

are mentioned as valuable gifts, a medium of payment, and items of booty. A man who had worked in the Prophet's baggage train supposedly went to Hell for taking a single *ṣabʿa* (a sleeveless robe) from the *ḥamas* of the Prophet (Bughārī, *Ṣaḥīḥ*, Ivi, 190). Garments could also be used for the payment of the *zakāt* (*ibid.*, xxv, 33). As had been the custom of oriental rulers since ancient times, Muhammad bestowed valuable garments upon members of his entourage as a mark of favour (cf. e.g. Genesis, xxxvii, 3 and 12, 42).

Many customs were associated with clothes. Then as now, pious wishes and felicitations were appropriate for someone with a new garment. Muhammad wished Umm Khaltid *abīf wa-ḥayyā* ("wear it out and exchange it!"), when he presented her with a small black *ḥamṣa* (Bughārī, *Ṣaḥīḥ*, lxxvii, 22, 2). In more recent times, the wishes have become less eloquent, and one simply says *maḥrūk* ("congratulations") or *naḥmūna* ("how nice!"). In accordance with an ancient custom going back to pagan times, the Prophet reversed his *riḍāʾ* when he went out to make the prayer for rain. He did not reverse his cloak, however, when making the *ṣalāt* (q.v.) on Friday (*ibid.*, xv, 11). The act of reversing the garment was apparently symbolic of the change in weather sought. It was still practiced in Tunis at the end of the 19th century (Wellhausen, *Reise*, 197). The custom of baring the head in extreme humidity during the *ṭaḥṣīb* ritual also probably goes back to this period, though it is not mentioned in the literary sources until the later Middle Ages (see I. Goldziher, *Einleitung des Hauptes*, in *Ist.* vi [1916], 301-16, esp. 304).

Many customs regarding clothes which most certainly have their roots in ancient Near Eastern superstition and are found also in the Talmud are ascribed to Muhammad in the Muslim traditions. Thus the believer should always put the right shoe on first. He should not go out with only one shoe on—either both or barefoot (cf. the ill omen for Pelias of anyone shod in only a single sandal, in the Greek myth of Jason). Furthermore, shoes should never be left with the soles facing heavenward.

4. The Umayyads and 'Abbāsids and the *ḥirās* system. Judging by the rather scattered and scanty literary evidence, most of the Arabian garments of early Islamic times continue into the Umayyad period, although some items become more and more restricted to Bedouin use (e.g. the *ḥanf*). The most significant change that came with the rise of an Islamic empire is the use of clothing made of luxury fabrics by the Umayyad caliphs and their courtiers. 'Abd al-Malik is reported by al-Makrizī to have worn embroidered garments (tr. E. Blochet in *Revue de l'Orient Latin*, viii [1900-1], 175). Sulaymān and his retinue wore only garments of *waḥy* or variegated silk, including the *ḡubba*, *ṣiḍāʿ*, *ṣuḥūl*, *ḥamṣa*, and *ḥalāwṣa* (Masʿūdī, *Murūʿī*, v, 400). There is one report specifically mentioning the so-called "caliphal garments" (*ḥiṣṣa al-ḥakīmīya*) being worn by al-Walīd II (Aḡṣānī viii, 83). Later under the 'Abbāsids, the caliph wore special robes of office with embroidered borders and which were called by this name. It is only stated of al-Walīd's "caliphal garments" that they were white. The 'Abbāsīd robes of state were normally black. Their custom of wearing black garments on official occasions was established by al-Manṣūr and was only abandoned for a brief period in favour of 'Alīd green under al-Ma'mūn (Jabari, iii, 202 f.).

Two of the most significant phenomena of Islamic

costume history originate in the Umayyad period—the sumptuary laws requiring distinguishing clothing for the non-Muslim subject population, and the production of regal embroidered fabrics for clothing.

The laws of differentiation or *ḥiṣṣa* (q.v.) most probably do not go back to the time of 'Umar b. al-Ḥaṭṭāb, since at that early period the *ḥil al-ḥiṣṣa* (q.v.) and the Arabs did not dress alike anyway. Although these laws were to be minutely detailed only in later centuries, they go back in general outline as well as in spirit, at least, to the caliphate of 'Umar b. 'Abd al-'Azīz. *Ḥiṣṣa* were forbidden to wear Arab-style headgear, including the *ḥamṣa*, *ṣaḥ*, and *ṣayṣa*, Arab military dress, and certain robes, as for example, the *ḥabāʿ*. They also had to wear a distinguishing belt called *ḥiṣṣa* and more frequently *ḥiṣṣa* (cf. Gk. *ḥiṣṣa*). This ordinance may have applied at first only to Christians. By the reign of Hārūn al-Raḥīdī, these rules governing *ḥiṣṣa* dress were well-refined and were ascribed back to 'Umar I (Abū Yūsuf, *K. al-Ḥikma*, Cairo 1382, 127 f.). For a detailed discussion of the restrictions on *ḥiṣṣa* dress and the sources for Umayyad and 'Abbāsīd times, see A. S. Tritton, *The caliphs and their non-Muslim subjects*, repr. London 1970, 115-26.

The production of special embroidered fabrics in palace textile factories also began in Umayyad times and became a standard feature of mediæval Islamic material culture. The fabrics were known as *ḥirās* (q.v.), which in its narrowest sense meant "embroidery", especially embroidered bands with writing in them, and in a wider sense, indicated an elaborately embroidered robe, such as might be worn by a ruler of his entourage. *Ḥirās* garments were bestowed as tokens of royal favour and were among the standard gifts brought by diplomatic embassies to other rulers as part of foreign policy. In the view of many scholars, the Umayyads most likely took over Byzantine state factory establishments and adapted them to their special needs and tastes (e.g. E. Kühnel and L. Bellinger, *Catalogue of dated Iraqi fabrics*, Washington: The Textile Museum, 1932, 1). However, most mediæval Arab historians believed the production of *ḥirās* garments to be derived from a Persian institution, and there is some evidence that garments with royal insignia were worn in Sasanian times (see S. D. Gortem, *Petitions to Fatimid caliphs from the Cairo Geniza*, in *JQR*, NS, xlv [1954-5], 34 f., where Talmudic evidence is cited). The truth as to the origins of the *ḥirās* system would seem to combine both views.

The first Umayyad caliph who is specifically mentioned in the Arabic sources as having had *ḥirās* factories was Hishām b. 'Abd al-Malik (al-Dīshqīyārī, *K. al-Waḥid*, Cairo 1938, 60). In any event, it is clear that by late Umayyad times the *ḥirās* system extended across the caliphate, and continued to flourish under the 'Abbāsīds, Būyīds and Salḡūqs. The production of such luxurious fabrics was a highly profitable business, and there was considerable government control. The state was also responsible for the prices in Ashtor's view (E. Ashtor, *Histoire des prix et des salaires dans l'Orient médiéval*, Paris 1969, 73). This is perhaps an oversimplification.

To the mediæval Middle Eastern bourgeoisie, *ḥirās* garments were status symbols as well as valuable pieces of real property. Clothing formed part—sometimes a considerable part—of a family's investment, being transmitted from parents to children, to be converted into cash in case of emergency. Clothes also

formed an important element of the state's assets. Thousands of garments are listed among the annual treasury receipts under Hārūn al-Raḥīd (al-Dīshī-yārī, *K. al-Muḥarrir*³, 179-182). In addition to their socio-economic importance, garments of *pure* fabrics were of great socio-political significance. The 'Abbāsid caliphs and, at a later date, other Muslim rulers, were wont to bestow robes of honour (*ḥāḥilā*⁴, *siḥāḥ*, *ḥāḥilā* [q.v.]) upon those of their subjects—Muslim and non-Muslim, male and female—whom they wished to reward or for some reason mark for distinction. The *ḥāḥilā* was often not a single robe, but an entire outfit. This suit consisting of two or more garments was known as a *kullā*. (The word today means a 'western suit of clothes'.) The vizier Ḥamīd b. al-'Abbās (d. 322/933), for example, received two such outfits each consisting of a lined coat (*muḥḥḥāḥ*), a sleeved robe (*ḥāḥilā*), a body shirt (*ḥāḥil*), drawers (*ḥāḥil*), and turban (*ḥāḥil*) (*Ḥamīd al-Sabīḥ*⁵, Ta'wīḥ al-ḥāḥil, ed. Amedroz, Beirut 1904, 176).

With the rise of the bourgeoisie during the 'Abbāsid period and the dissemination of the polite educational ideal of *adab* [q.v.] by the Persian secretarial class, many new garments and fabrics came into use, and people became ever more fashion-minded. The early aversion from silks and satins was forgotten or ignored by all but a pious few, and only the most ascetic and the poor wore the rough woolen robe known as the *ḥāḥilā* [q.v.] (the latter use of this word to designate 'rag' or 'dishcloth' is instructive). Another work garment worn only by the very poor was the sleeved tunic known as *muḥḥāḥ*. Cultured gentlemen and ladies, on the other hand, were very much concerned with their appearance. The *adab* al-Waḥḥāḥ⁶ [q.v.] (d. 323/936) devoted several chapters of his book *On elegance and elegant people* (*K. al-Muḥarrir*³ at *al-ḥāḥil* wa *al-ḥāḥil*⁷, ed. Brünnow, Leiden 1886; ed. cited here is that of Cairo 1362/1953) to describing the types of clothing worn by his contemporaries, as well as the acceptable canons of taste. The fashionable man, according to al-Waḥḥāḥ⁶, outfitted himself in several layers of clothing, beginning with a fine undershirt (*ḥāḥilā*), over which was worn the heavier, lined (*muḥḥḥāḥ*) *ḥāḥil*. Both of these ought to be of fine linen, such as *Dabīḥ* or *Ḥāḥil* (produced in Egypt and Fārs, respectively). Over these tunics was worn a lined robe (*ḥāḥilā*) or *ḥāḥil* of linen, silk, or *muḥḥāḥ* (a fabric with a silk warp and a wool of some other stuff). Finally, when going out, the fashion plate would drape over these his *ḥāḥil* or another cloak known as *muḥḥāḥ* (also *muḥḥāḥ*) which had decorative borders at each end (*ḥāḥil*) and cover his head, or turban rather, with a *ḥāḥil*, which at this time was probably a cowl (*K. al-Muḥarrir*³, 160 l.). Making a good appearance also meant not wearing unpleasant or clashing colours, dirty clothes, or clothes perfumed like those of slave girls. Shoes and sandals could be of any of a number of leathers, colours, and designs; and it was permissible to wear shoes in such colour combinations as black and red and yellow and black (*ibid.*, 161). The wearing of stockings (*ḥāḥil*, from Pers. *ḥāḥil*), a fashion adopted from the Persians, was by now well-established.

Al-Waḥḥāḥ⁶ does not provide as much detail in his chapter on female attire which is devoted specifically to "those clothes which differ from those of fashionable men". The elegant woman's lingerie consisted of a smoky-grey coloured *ḥāḥilā* and *ḥāḥil*. White garments of any kind—except for the *ḥāḥil*—were considered masculine and were to be avoided. Exactly

what kind of dress was worn over the undergarments at this time is not specified. Al-Waḥḥāḥ⁶ does mention, however, that it should be wide-sleeved (*ḥāḥil*) and that the collar should have a drawstring (*wa ḥāḥil* al-*muḥḥḥāḥ*). For her wraps, the woman was to wear a *ḥāḥil* or a *ḥāḥil* (*ḥāḥil* from Rosetta and Tabaristan, respectively). She might then totally envelop herself in a *ḥāḥil* or *muḥḥāḥ*. On her head she wore a black *ḥāḥil*, which seems to have been the female equivalent of the *ḥāḥil* both in form and use. Black was particularly stylish at this time. The *ḥāḥil* was worn together with a face veil (*ḥāḥil* or *ḥāḥil*). The *ḥāḥil* was held in particular esteem (*ibid.*, 163 l.).

Persian cultural influences became more pronounced under the 'Abbāsids. In addition to those garments of Persian provenance already mentioned (*ḥāḥil* and *ḥāḥil*), there was introduced at this time the distinctive, tall, conical Persian hat called the *ḥāḥil* or simply *ḥāḥil* (e.g. Yāḥū, *Ḥāḥil*⁸ vi, 39). This hat was also called *ḥāḥil* because of its resemblance to a long amphora-like wine jar known as a *ḥāḥil* (*ibid.*, i, 373, and *Ḥāḥil*⁹ x, 123). The top of the *ḥāḥil* was pointed (cf. al-Mas'ūdī, *Muḥḥāḥ*, viii, 377 — § 3337, where it is described as *ḥāḥil*). This hat consisted of a wicker or wooden frame covered with fabric such as silk. R. Levy has suggested that it may also have been shaped like "a truncated cone worn base upwards after the fashion of the cumbersome headgear of the modern Lurs" (*Notes on costume from Arabic sources*, in *JRAS* 1935, 324; however, this suggestion is not borne out by the evidence of illuminated manuscripts. Abū Zayd of al-Ḥārīḥ's *Ḥāḥil* is frequently depicted wearing a pointed *ḥāḥil* (e.g. *Bibl. Nat.*, Paris, ms. arab. 3929, l. 69). Hārūn al-Raḥīd is supposed to have worn such a hat inscribed on one side with the word *ḥāḥil* and on the other with *ḥāḥil* for the duties which he undertook on alternating years of leading the pilgrimage and the war against Byzantium (Tabarī, iii, 709). Another Persian garment which was introduced at this time and which became extremely popular throughout the Arab world is the *ḥāḥil*, a fine robe with sleeves that buttons down the front (the original Persian word designates a cuirass). The caliph al-Muḥḥāḥ wore a *ḥāḥil* of Tustarī silk brocade with silver when he set out on his fatal march against the rebel Muḥḥāḥ in 320/932 (Dorj, *Vêtements*, 164 l.; Levy, *JRAS* 1935, 332, and the sources cited by both). Since the later Middle Ages, the form *ḥāḥil* (variant *ḥāḥil*) has been used exclusively throughout the Arabic-speaking world, due to the influence of Turkish.

Fine garments were brought to Baghdad from all over the Muslim world, as well as being imported from abroad. From India came the *ḥāḥil*, a long piece of sari-like cloth which served a variety of functions: as a bunch, apron, and a variety of headgear (Stillman, *Female attire*, 214 ff.). From China during this period there came oilcloth raincoats (*ḥāḥil*) (*Ḥāḥil*, *Latīḥ al-muḥḥāḥ*, Cairo 1960, 22; Eng. tr. Bosworth, Edinburgh 1963, 14; *Med. Renaissance*, Eng. tr. 390). Fine garments for men in 3rd/9th century 'Irāq ranged in price from 5-30 *ḥāḥils*, and even more (Ashtor, *Price of salar*, 53). However, some of the prices cited by Arab writers for fabulous garments and fabrics are clearly anecdotal, as for example, the 50,000 *ḥāḥils* that al-Ḥāḥil [q.v.] is reported to have paid for a piece of *ḥāḥil* (cf. Mas'ūdī, *Muḥḥāḥ* viii, 398). Still, it is quite apparent both from the literary and documentary sources that throughout

the Middle Ages clothing was very costly in comparison with the other necessities of life.

5. The Fātimids. Perhaps no period in the history of the Arab East was more clothes-conscious than that of the Fātimids. Fātimid pomp and ceremony exceeded anything known in Baghdad, and clothing played a major part in creating the splendid effect.

The first Fātimid caliph in Egypt, al-Mu'izz (d. 365/975), founded a special government costume supply house known as the *dār al-kisra* or *khazāna al-kisra* with an outlay of 500,000 *dirhams*. An official bureau (*dawān*) oversaw the production, storage, and distribution of costumes. Every official and functionary from the caliph down to government clerks was supplied with a ceremonial costume (*badla mawakhhiyya*) for public occasions. According to al-Makrizi, who is the almost exclusive source of information for Fātimid ceremonial costumes, each person was provided with an entire wardrobe "from the turban to the underdrawers" (*Kḥiṭāṭ* II, 409). The *kḥiṭāṭ* provided different weight clothes for summer and winter. A complete costume (*badla mukhalla*) could consist of as many as a dozen articles, most of which have been mentioned in the preceding sections.

Naturally, these ceremonial costumes were made of the most costly fabrics. The most popular were *harir* (fine silk), *asīl*, *dashik*, *ghazāl*, *dimyḍī* (all linters), *ghurmusānī* (kingly brocade), and *shikhlān* (silk). Most of the ceremonial costumes were white and embroidered with gold and silver threads in accordance with the official Fātimid imagery of luminous splendour and divine light. The selection of the caliphal costume was itself a ritualised event before every holiday.

Each rank and office was distinguished by its costume. The most outstanding item of the caliph's attire was his enormous turban which consisted of a cap (*gḥḥhiyya*) around which was wound a *mandil* in a fashion unique for the ruler in the shape of a myrobalan. The special manner of winding the caliphal turban was called "the winding of majesty" (*gḥḥḥ al-waḥd*). The entire turban was ornamented with jewels. An enormous *saffaire* (*yafīfa*) mounted on a silk band was centred on the caliph's forehead (*Kḥiṭāṭ* I, 449). The entire headgear was called "the noble crown" (*al-tāji al-gḥḥḥ*).

The rest of the imperial retinue wore a variety of less splendid headresses. The chief eunuchs of the court who were the *amirs* of the palace, all wore turbans which were distinctively wound under the chin—the so-called *faḥḥ al-ḥimāma* or simply *al-ḥanaka*. Thus, they were known as *al-ustādḥān al-muḥanna-kin*. The caliph al-ʿAzīz became the first ruler to appear with the *ḥanaka* (*Kḥiṭāṭ* II, 235) and eventually so did the vizier and the *amirs* (*ibid.*, I, 440, 449). This fashion was introduced into the east by the Fātimids from the Maghrib, where it still may be seen, especially in southern Algeria and Morocco.

Another head covering which is first mentioned during this period is the *kalayis* or *halūla* (cf. Lat. *calandrea*, Fr. *calotte*, Pers. *galāta*) which was a kind of cap (*Kḥiṭāṭ* I, 413). It was to become a standard item in Ayyūbid and Mamlūk times (see e.g. al-Kālikashandī, *Ṣubḥ al-aʿshā*, IV, 39, 50-3; al-Makrizi, *Kḥiṭāṭ* II, 93).

The various modern studies dealing with Fātimid ceremonies draw mainly upon al-Makrizi and to a lesser extent, on al-Kālikashandī and on Ibn Taghribirdī, all three of whom depended upon the lost work of Ibn al-Tuwayr. See K. A. Inostrantsev,

Toryesovskii vied Fatimidskikh kḥiṭāṭov ("The solemn entry of the Fātimid caliphs"), in *Zapiski Vost. Otdel. Imp. Russ. Arkheol. Obshchestva*, xvii (St. Petersburg 1904); M. H. Zakl, *Kunus al-Fatimiyyān*, Cairo 1937; M. Casard, *Le cérémoniel fatimite et le cérémoniel byzantin: essai de comparaison*, in *Byzantion*, xli/2 (1951), 355-420; idem, *La procession du nouveau an chez les Fatimides*, in *AIEO*, x (1952), 364-98; A. M. Mājid, *Nuṣus al-Fatimiyyān wa-rasāḥun fi al-ḥir*, II, Cairo 1955.

6. The Geniza as a source for mediaeval Islamic attire. The Cairo Geniza (q.v.) manuscripts are an important and till recently, untapped source for the costume history of the Fātimid, Ayyūbid, and—to a lesser extent—the Mamlūk periods. In particular, the some 750 *trousseau* lists from the Geniza, in combination with ancillary Geniza records, offer a wealth of information on the attire of Jewish women in mediaeval Egypt, and by extension, the attire of Muslim women as well. Information for male costume comes from commercial documents, but is by no means as extensive or as detailed.

One fact stands out clearly—that Jewish and Muslim women dressed alike during the Fātimid and Ayyūbid periods. The Geniza *trousseau* lists give every indication that the restrictive laws of *gḥyāb* were not enforced. The same garments are mentioned as in the Islamic sources. There is no limitation in the Geniza as to colour and textile, rather there is the greatest variety of hues and diversity of fabrics. Jewish women, like their Muslim counterparts (and most likely Copts as well) went veiled.

The Geniza documents show that the bourgeoisie consciously or unconsciously tried to imitate the modes and mores of the ruling class. Merchants, for example, bestowed *gḥḥḥ* and *ḥir* garments upon relatives and friends. People of means wore all the precious fabrics known to us from the descriptions of the Fātimid ceremonies. Over sixty fabrics are mentioned in the Geniza. Of these, forty-six are known from the literary sources collected by Sergeant. Under the Fātimids and Ayyūbids, the mercantile class indulged itself in many types of garments. The Geniza *trousseaux* mention almost seventy items for women alone.

The Geniza has revealed the names and considerable data for more than two dozen garments which were hitherto unknown or only mentioned in isolated literary sources without any explanation or description. Among these are the *gḥḥḥ* and *maḥḥima*, both fine dresses; the *ḥaḥḥa*, a dress which first appears in late Ayyūbid *trousseaux* and became popular in Mamlūk times, after which it seems to have disappeared; the *ḥaḥḥa*, *ḥaḥḥa*, *ḥaḥḥa*, and *ḥaḥḥa*, all head scarves or shawls; and the *ḥaḥḥa* and *ḥaḥḥa*, both belts or cummerbunds.

In addition to new names of garments and textiles, the Geniza has provided an entirely new vocabulary of patterns and adornments. Many of these designs can be correlated with those in manuscript illustrations (see Stillman, *The importance of the Cairo Geniza manuscripts for the history of mediaeval female attire*, in *IJMES* viii (1970), 579-89).

There is also considerable new information on garments already known. For example, the *ḥaḥḥa* and the *ḥaḥḥa*, both mantles, which have been in attested use in the Maghrib from mediaeval to modern times (al-Idrīsī, *Nuṣus al-muḥḥa*, ed. Dory and de Goeje, Leiden 1866, 59; al-ʿUmari, *Masālik al-abyāḥ*, tr. Caudefoy-Demombaynes, Paris 1927, 125) are shown to have been worn in Fātimid and Ayyūbid Egypt as well. No doubt they were brought

into the east after the Fatimid conquest in 358/969. The *badaw*, a short, sleeveless tunic, worn by both sexes and usually associated with the Arabian Peninsula (Dozy, *Étymologies* 56-8), is shown to have been a fairly common article of feminine attire in mediaeval Egypt.

For the information provided by the Geniza on costume, see Y. K. Stillman, *Female attire of Mediaeval Egypt*; idem, *The wardrobe of a Jewish bride in mediaeval Egypt*, in *Studies in Marriage Customs*, ed. Ben-Ami and Noy, Folklore Research Center Studies, IV (Jerusalem 1974), 297-304; eadem, *The importance of the Cairo Geniza manuscripts for the history of mediaeval female attire*, eadem, *Katibot ha-Geniza ha-Masor li-Livush ha-Israheli bimé ha-Efrazim*, in *Hitvat Genizat Kahir*, ed. M. Friedman, Tel Aviv 1980, 149-60.

7. The early Turkish dynasties: Saljuqs, Ayyubids, Mamluks. The Turkish military dynasties that controlled one part or another of the Middle East from the late 5th/11th to the early 10th/16th centuries brought with them many Central Asian styles, particularly in military and ceremonial attire. These, however, were the distinguishing costumes of the military élite. The fashion of dress of the native Arab population was little affected at first. M. V. Gorelik (*Slizhenostofnnyy miniatyura XII-XIII vv. kak etnografichesky istochnik*, in *Sovetskaya Etnografiya*, clxxxix [1972], 37-50) has attempted to distinguish between two broad complexes of dress throughout the Arab east at this time—the western, based on the fusion of Arabian styles with those derived from Hellenistic Mediterranean prototypes, and the eastern, derived from Iranian, Turkish, and Inner Asian styles. Syria and 'Irak during this period fell generally into the latter category, while Egypt, with the exception of the military, fell into the former.

Throughout much of this period, the typical outer garment for a member of the ruling class was any one of a variety of coats (*abiyas*). These were worn over the usual layers of underclothes, the most common of which was the *hamdian*. The undershirt was normally hidden by the outer garments, except in southern 'Irak where it was cut long to extend below the coat above it.

The Saljuqs and Ayyubids preferred the so-called Turkish coats (*al-abiya al-turkiyya*), the hem of which crossed the chest in a diagonal from right to left. The Mamluk *amirs* wore the Tartar coats (*al-abiya al-tatarsiyya*) with the hem crossing the opposite way. Over the coat was worn a belt of metal plaquettes (*hiydas*) or a sash (*band*). Al-Makrizi (*Khitat* II, 99) identifies the *hiyda* with the ancient *minfaqa*, and states that there was a special market in Cairo (*suk al-hamd-hiyya*) devoted to the sale and manufacture of these belts. (For a finely preserved specimen of the *hiyda*, see Mayer, *Mamluk costume*, Pl. IX.)

For members of the upper classes, the sleeves of their coat were frequently indicative of rank and social status. The longer and more ample the sleeves, the higher the standing of the wearer.

The illustrations from *Makamul*, K. al-Aghani, and K. al-Diyar manuscripts from this period attest a wide variety of caps and turban styles. The normal headgear of the military class was a stiff cap with a triangular front. It was sometimes trimmed with fur (*sharbiya*), and sometimes had a small kerchief bound around it to form a sort of turban (*shah-hifa*). The other most common cap was the *Aslamta* which was usually yellow under the Ayyubids, yellow and

red under the early Mamluks, and later red only (Mayer, *Mamluk costume*, 29).

The *shab* and the *sharbiya* were so much the distinctive mark of a Muslim knight that even a Crusader was prepared to wear them as a gesture of friendship to Salih al-Din (Ibn al-Aghir, xii, 57-8).

Under the Mamluks, two popular short sleeved coats were the *baghmish* (also *baghmish*) and the *sallariyya*. These were made of a variety of fabrics and frequently were lined with fur. Such a coat was sometimes worn under an ample outer robe (*farajliyya*).

Eventually, some of the garments which were at first the mark of the military aristocracy were imitated by the middle classes. The *baghmish*, for example, appears in several Geniza documents.

The only comprehensive study of the attire of any of the dynasties of this period is L. A. Mayer, *Mamluk costume*, where there is an extensive bibliography. Shorter, general studies include: Mayer, *al-Azayd fi 'ayyam al-awlad*, in *al-Kutub* (1932), 438-49; idem, *Saracenic arms and armor*, in *AI*, x (1943), 1-12; M. V. Gorelik, *op. cit.* (men's dress only). A. M. Nagid, *Nusum dawlat salafin al-Mamluk wa-russiumum fi Misr*, I, Cairo 1967, 64-67, has a chapter on Mamluk attire which, however, adds little to Mayer's work.

8. The Ottoman period (to early modern times). As far as the costume history of the region is concerned, the Ottoman conquest of the Arab East in the early 10th/16th century marked a continuation of the preceding period, rather than an abrupt change. Ceremonial and military dress remained Turkish (see below, section IV). Some Ottoman fashions were adopted by members of the urban élite, as for example, the Turkish-style *kafan* for men and the long, tightly-fitted coat known as the *yelek* for women. Turkish synonyms came into common use for certain items of clothing alongside, but not necessarily replacing, the native Arabic equivalents (e.g. *shakir* for *armil* and *yagmal* for *burqa*). But on the whole, Arab styles and Arabic terminology prevailed. The vestimentary system remained essentially the same.

Outside of the principal, metropolitan seats of administration, distinct regional styles predominated. These regional distinctions were of minor differences in cut (e.g. sleeves, opening for the neck, amplexes, and length) and not so minor differences in decorative details such as embroidery, colour, fabric pattern, fastenings, trimming, etc., rather than in the basic garments themselves. The extent of the fine details in variation in basic costumes throughout the Ottoman East in the last century is apparent from the important photograph album of Hamdy Bey and M. de Lamoignon, *Les costumes populaires de la Turquie en 1873*, Constantinople 1873.

Regional distinctions were—and this remains true today in those places where traditional costumes are still worn—most striking in female attire. Men's clothing was more or less uniform throughout much of the Middle East during the Ottoman period. This was due in part to the fact that men were physically and socially more mobile than women and came to have a more pan-Middle Eastern style of dress. Thus when a plate from E. W. Lane's *Manners and customs of the modern Egyptians* (London 1836) appeared in a book on Syria with the added caption "A Syrian gentleman with pipe and inkwell, ca. 1860", the inaccuracy was only minor.

9. The last one hundred years: the impact of the West on traditional Middle Eastern

dress. The ever-increasing Western economic, political, and cultural penetration into the Middle East in the second half of the 19th and the first half of the 20th century had a marked impact on the costume history of the region. Over the past hundred years a gradual abandoning of traditional, inosew-folding garments has been taking place in favour of Western tailored clothes. The transition was slow at first and did not take place in every place and among all groups at the same time.

The first group in the Arab East who began in large numbers to abandon traditional attire were the westernised Christian and Jewish protégés of the foreign powers. The civil emancipation of non-Muslims during the *Tanzimat* [c.a.] period and the expansion of missionary schools and European businesses accelerated the process.

Most Christian and Jewish women abandoned the veil a full generation or more before their Muslim counterparts. One factor which facilitated their abandoning the veil so much earlier was that the segregation of women in the non-Muslim communities was never as strict as it was among Muslims, nor was the non-Muslims' style of veiling quite as total even in the preceding centuries (see e.g. Y. K. Stillman, *The costume of the Jewish woman in Morocco*, in *Aspects of Jewish folklore*, ed. D. Noy, Cambridge, Mass. 1979).

By the end of the 19th century, the "to veil or not to veil" question had become one of the burning issues for modernist reformers such as Kāsim Amlā (see his *Tahrir al-mar'a*, Cairo 1901). It also became a burning issue for the small but growing Egyptian feminist movement. Huddā Shahrāwī, the famous Egyptian feminist, is supposed to have solemnly cast her veil into the Mediterranean as she returned home in 1923 from a woman's congress in Rome (A. H. Hourani, *The vanishing veil: a challenge to the old order*, in *UNESCO Courier* [January 1956], 37). Her symbolic action was soon followed by many upper and upper-middle class women, but not by women of the lower-middle class, which remained the last stronghold of tradition (see Y. K. Stillman, *Attitudes toward women in traditional Near Eastern societies*, in *S. D. Goitein Festschrift*, I, ed. S. Morag, I. Ben-Ami and N. A. Stillman, English-language volume, Jerusalem 1968, 345-60).

Muslim men abandoned traditional attire more rapidly than Muslim women. This is due to the male's greater physical and social mobility, as noted above. The first Muslim men to adopt the European mode of dress were members of the bureaucracy and the upper class who were in direct contact with westerners and who, in many cases, had visited Europe. Such individuals were referred to as "westernisers" (Ar. *mulaḥḥaziyyūn*) and "westernised gentry" (Turk. *alafranga zehableri*). Throughout the 19th century they remained a small minority. However, after the First World War the change became rapid (see e.g. R. Tresselt, *L'évolution du costume des citadins syriens depuis un siècle*, in *La Géographie*, lxx (1938), 1-16, 76-82; idem, *L'évolution du costume des citadins en Syrie depuis le XII^e siècle*, in *La Géographie*, lxxix-lxxxii (1939), 257-71, 29-40).

One aspect of the male wardrobe that has resisted change even where the transition to Western attire has been more or less complete is the headgear. It is still common to see men dressed in a Western suit, wearing a *kāfiyya*, a *lurbūgh*, or a *kāfiyya*. This is due to the traditional importance of covering the head and to the fact that the headcovering (origin-

ally the turban) was considered a badge of Islam. The *kāfiyya*, which was in the last century most commonly worn by Bedouin and peasants in many parts of the Middle East, has in recent years taken on a nationalist connotation comparable to that of the fez in Ottoman Turkey under the Young Turks. The chequered *kāfiyya* is today the badge of the Palestinian commandoes (see V. K. Stillman, *Palestinian costume and jewelry*, Albuquerque 1979, 16). The traditional *ḡinnā* is now worn almost exclusively by members of the *ṣulamī* in the Middle East (although in the Maghrib, and in particular in Morocco, it is still commonly worn even by men who have adopted Western dress. See below, section II).

Outside the major cities, traditional costumes are still commonly worn, but they are losing ground rapidly in many places. Even among some Bedouin, European garments are gradually displacing traditional clothing (see L. Stein, *Bedouins*, in *Mitteilungen aus dem Museum für Völkerkunde zu Leipzig* [1962], 41-2). The one area which has successfully maintained its traditional style of dress in all levels of society is the Arabian Peninsula.

Any sort of country-by-country survey of the traditional garments still worn—or worn until recently—in the Arab East would be outside the scope of this article. Western travellers to the Middle East over the past two-and-a-half centuries have provided lengthy and detailed descriptions of native costumes. In addition to these, there have appeared in recent years a number of scholarly monographs on various aspects of Middle Eastern costume (see *Bibl.*).

What follows is the alphabetical glossary of some of the more common articles of clothing still worn in the Arab East in the 20th century:

GLOSSARY

- 'abā'*, *'abā'a*: coat, shoulder mantle, worn by both sexes (Arabian Peninsula, Egypt, 'Irāq, Syria, Palestine)
- 'aḥḥā*: ringed cord or rope to go over the head scarf, worn by men (Ar. Pen., Ir., Syr.-Pal.)
- 'andart*: a lined vest ranging from short to knee length, worn by women (Eg., Syr.-Pal.)
- 'araḡiyya*: skull cap, often embroidered, worn by both sexes by itself or under the head-dress (Ar. Pen., Eg., Syr.-Pal.); called *'arakīn* in 'Irāq
- 'aṣba*: folded scarf worn by women (Eg., Syr.-Pal.)
- bahāḡī*, *ābāḡī*: oriental slippers of soft leather (Ar. Pen., Eg., Ir., Syr.-Pal.)
- baḥan*: cotton or silk man's gown (Ar. Pen., Ir., Syr.-Pal.)
- baṣṣāḡ*, *baṣṣāḡ*: a wide-sleeved man's coat (Ar. Pen., Ir., Syr.-Pal.)
- baḡ*: mantle, jacket, worn by both sexes (Syr.-Pal.)
- brin*: ringed cord or rope to go over the head scarf, syn. with *'aḥḥā* (Syr.-Pal.); binding for lorn cloth, syn. with *ḡaḥaw* (Ar. Pen.)
- ḡard*, *ḡarda*: heavy woollen wrap usually worn by men (Ar. Pen., Eg.)
- burnas*: woollen hooded cloak worn by men, imported from the Maghrib (Eg.)
- burḡa*: woman's face veil (Ar. Pen., Eg., Syr.-Pal.)
- bāḡ*: variety of *'abā'* made in N. Syria (Syr.-Pal.)
- bāḡī*, *ḡāḡī*: black face veil worn by women (Ir.)
- ḡaḡī*, *ḡaḡī*: Turkish-style pantaloons, underdrawers, worn by both sexes (Eg., Syr.-Pal.)
- ḡawīr*: a woman's jacket with short sleeves, syn. with *ḡaḡīra* (Syr.-Pal.)
- ḡaḡiyya*: a heavy winter cloak for men (Eg.)
- ḡiḡ*: the patched garment of Ṣūfī, also worn by clowns (Eg., Ir., Syr.-Pal.)

ḡalābīyya: the loose body shirt still commonly worn by men in Egypt.

ḡulīyya: embroidered *ḡubba*, a wedding costume may be a dress or a coat depending upon the region, worn by women (Syr.-Pal.); a man's marriage *ḡafīda* (Yemen)

ḡubba: a coat-like outer garment worn by both sexes (Ar. Pen., Eg., Syr.-Pal.)

ḡurḡā, *ḡurḡā*: a wide-sleeved coat worn by men (Syr.-Pal.)

durrāʿa: a woman's outer coat, open in front, sometimes syn. with *ḡubba* (Syr.-Pal.)

farāḡīyya: a long-sleeved man's robe (Eg.)

farḡīyya: a woman's dress (Syr.-Pal.)

farḡīyya: a square kerchief bound around the cap by women (Eg.)

fās: the Turkish fez, synonym for the red *farḡāḡ* (Ar. Pen., Eg., Syr.-Pal.)

fashān: a woman's dress (Eg., Syr.-Pal.)

fāḡ: embroidered karchief hung from the waist sash by men (Ir.)

ḡabīnī, *ḡabīnīyya*: head scarf with an embroidered pattern of lozenges, worn by both sexes (Syr.-Pal.)

ḡawḡa: large head shawl for women, worn in the Hebron area (Syr.-Pal.)

ḡabara: dark, silky enveloping outer wrap for women (Ar. Pen., Eg., Syr.-Pal.)

ḡaḡ: binding for waist wrapper worn by both sexes (Ar. Pen.)

ḡayḡa: cloth belt with silver plaque in the centre, worn by men (Syr.-Pal.)

ḡaḡ: a belt or sash worn about the waist by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

ḡaḡīyya: a large dark wrap worn around the body with the upper parts pulled down over the shoulders and secured with pins (Eg.)

ḡadda: a white *ḡafīyya* worn in summer (Syr.-Pal.)

ḡafīda: headband worn by women (Ar. Pen., Eg., Syr.-Pal.)

ḡāḡā: woven, woolen belt, worn by both sexes (Syr.-Pal.)

ḡā: a loose gown worn by women (Ar. Pen.)

ḡāḡ: a large, enveloping body wrap for women (Eg., Syr.-Pal.)

ḡafīyya, *ḡafīyya*: head scarf worn by both sexes (Ar. Pen., Ir., Syr.-Pal.)

ḡafīda, *ḡafīda*: ample, full-length robe, buttoned down the front, with long sleeves, worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

ḡamar: a broad belt often red in colour, worn by men (Eg., Syr.-Pal.)

ḡamīḡ, *ḡamīḡ*: shirt-like dress worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

ḡamalaka: a woman's dress (Ar. Pen., Syr.-Pal.)

ḡabandīyya: a variety of 'add' made in Hasbaya (Syr.-Pal.)

ḡarka: veil, head scarf, worn by women (Syr.-Pal.); also syn. with *dūḡ* of Sŏfs

ḡaḡ: short boots or leather outer socks (Ar. Pen., Eg., Ir., Syr.-Pal.)

ḡawar: a man's belt (Ir.)

ḡabr: a variety of *ḡaab* (Syr.-Pal.)

ḡubān: a jacket with long, wide sleeves, worn by both sexes (Syr.-Pal.)

ḡumbā: overgarment, gown, made of striped silk, worn by both sexes (Syr.-Pal.)

ḡurḡ, *ḡurḡ*: a metallic cap or crown, often studded with jewels, worn on top of a woman's headdress (Eg., Syr.-Pal.)

ḡaḡ: man's turban cloth (Ir., Syr.-Pal.)

ḡaḡā: long bands of cloth attached to a hat and in which woman's hair is wrapped (Syr.-Pal.)

ḡā: a woman's head scarf of white silk or cotton net into which flat metal strips have been decoratively hammered (Syr.-Pal.)

ḡāḡ: pants, underpants, worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)

ḡāḡ, *ḡāḡā*: a felt cap worn by men (Eg., Syr.-Pal.)

ḡāḡā: a variety of *ḡaab* worn by Jordanian women (Syr.-Pal.)

ḡāḡā: head scarf worn by Bedouin women (Ar. Pen.)

ḡāḡā: a woman's head scarf, veil (Syr.-Pal.); an embroidered karchief hung from the waist sash by men (Ir.)

ḡāḡā: syn. with *ḡarāḡīyya* (Ar. Pen.)

ḡāḡā: pointed man's shoes of thick red morocco (Eg.)

ḡāḡā: a variety of 'add' made in Baghdad (Ir.)

ḡāḡ: long stocking of soft, yellow leather, inner shoe worn by both sexes (Eg., Syr.-Pal.)

ḡāḡā: a fine 'add' of white wool for men, produced in Baghdad (Ir.)

ḡāḡ, *ḡāḡ*, *ḡāḡ*: syn. with *ḡāḡ* (Eg., Syr.-Pal.)

ḡāḡā: a large, enveloping outer wrap worn by women (Eg., Syr.-Pal.)

ḡāḡā: a large, white head veil for women (Syr.-Pal.)

ḡāḡā: a jacket worn by both sexes (Syr.-Pal.)

ḡāḡāḡāḡā: a peasant woman's jacket (Syr.-Pal.)

ḡāḡā: a very wide turban worn by 'ulama' (Eg.)

ḡāḡā: a large, enveloping outer wrap worn by women (Ar. Pen., Eg., Ir., Syr.-Pal.)

ḡāḡāḡāḡā: a silk *ḡafīyya* (Syr.-Pal.)

ḡāḡ: a general word for shoe used throughout the Middle East

ḡāḡ: a loose gown worn by women, synonymous with *ḡāḡ* (Eg.)

ḡāḡ: a small embroidered bonnet trimmed with coins, worn by women (Syr.-Pal.)

ḡāḡ: a woolen or velvet coat for women (Syr.-Pal.)

ḡāḡ: a jacket worn by both sexes (Syr.-Pal.)

ḡāḡāḡāḡā: a variety of 'add' made in Hasbaya (Syr.-Pal.)

ḡāḡā: a man's leather belt (Syr.-Pal.)

ḡāḡ: a woman's shawl, usually of wool (Ar. Pen., Eg., Ir., Syr.-Pal.)

ḡāḡāḡā: synonymous with *ḡāḡā* (Ir.)

ḡāḡāḡā: a large veil common to the Hebron area and southern Palestine

ḡāḡāḡā: a black face veil of goat's wool or horse hair, worn by women (Ir., Syr.-Pal.)

ḡāḡā: the winding cloth of a turban (Syr.-Pal.)

ḡāḡāḡā: a variety of *farḡāḡ* (Eg.); a skull cap worn beneath the *farḡāḡ* (Syr.-Pal.)

ḡāḡāḡā: Bethlehem married woman's hat

ḡāḡāḡā, *ḡāḡāḡā*: a black, enveloping outer wrap for women (Ar. Pen., Ir.)

ḡāḡāḡā: woman's pants or pantaloons (Eg., Syr.-Pal.)

ḡāḡā: a head scarf of Bedouin women (Ar. Pen., Syr.-Pal.)

ḡāḡāḡā, *ḡāḡāḡāḡā*: woman's belt, usually woven of goat's hair, quite ornate, worn mainly in Southern Palestine

ḡāḡāḡā: sleeveless vest worn by both sexes (Ir., Syr.-Pal.)

ḡāḡāḡā: bonnet-like hat trimmed with coins most common to women of Ramallah (Syr.-Pal.); a man's headcloth (Ir.)

ḡāḡāḡā: a short, sleeveless vest, worn by men (Eg.)

ḡāḡāḡā: the common skull cap worn by both sexes alone or under the head dress (Ar. Pen., Eg., Ir., Syr.-Pal.)

laǧaina: short-sleeved jacket worn by both sexes (Syr.-Pal.)

laǧfir, laǧfir: a high conical cap resembling a matre, worn by Süfīs (Eg., Syr.-Pal.); a high pointed woman's headdress of wood, horn, or metal, once very common among the Druze (Syr.-Pal.)

laǧra: a woman's head scarf or veil (Syr.-Pal.)

laǧra: a large, dark head veil that hangs all the way down the back, worn by women (Eg.)

laǧra: basic tunic worn by both sexes throughout the Middle East; a woman's dress (Eg., Syr.-Pal.)

libba: draw-string for *awāl*, used throughout the Middle East

maǧā, maǧāya, maǧā: terms designating a variety of women's bonnets, usually decorated with coins (Syr.-Pal.)

maǧma: Turkish-style veil, frequently syn. with *burka* (Eg., Syr.-Pal.)

maǧra: a woman's long coat, tightly fitting (Eg., Syr.-Pal.); a long vest worn by both sexes (Ir.)

maǧra: a belt, usually made of a folded scarf, worn by both men and women (Syr.-Pal.)

Bibliography: For a detailed bibliography on Middle Eastern costume that includes both travel and scholarly literature, see V. K. Stillman, *Palestinian costume and jewelry*, Albuquerque 1979, 130-8; in addition: R. Arié, *Notes sur le costume en Égypte dans la première moitié du XIX^e siècle*, in *REI*, xi (1967), 601-13; J. S. Buckingham, *Travels in Mesopotamia*, London 1827; idem, *Egypt and Palestine*, New York 1838; J. L. II. — THE MUSLIM WRIST

The Muslim West, which in the Middle Ages included Spain and Sicily as well as North Africa, belongs generally to the Arabo-Mediterranean vestimentary system, whose common unifying factors are rectangular tunics and loose outer wraps. Within this system, however, there has always been a great deal of regional, ethnic, and socio-economic variation. The Maghrib has been noted since the time of the Arab conquest in the second half of the 1st/7th cen-

tury for its own particular styles in dress, as in other aspects of material culture. The reasons for this can be conveniently summarized as follows: (1) the physical distance of the Maghrib from the Muslim-Arab heartlands; (2) the indigenous Berber element, which always remained strong; (3) in the case of Spain, the large native Iberian population and the propinquity of Christian territory; (4) the absence of the Persian *kātib* class; and (5) the very late arrival of the Turks in Tunisia and Algeria (and their total absence from Morocco).

Since much of the information concerning mediaeval Arab costume—nomadism, style, customs and institutions—applies to the Maghribi centres of urban culture in the Middle Ages, this article will deal only briefly with this period, concentrating on the uniquely Maghribi aspects of its costume history. Most of the article will deal with the period extending from the later Middle Ages to modern times, or approximately the last 700 years, which, it should be pointed out, has been the subject of more study than that devoted to Middle Eastern costume history for all periods combined. A glossary and an extensive bibliography by country follow at the end.

1. Pre-Islamic foundations of Maghribi costume. When the Arabs conquered North Africa, Punic and Byzantine influences were still alive in the cities and towns. The countryside may also have had some Punic elements, but was overwhelmingly—if not exclusively—Berber. Even in Classical times, North Africa was noted for its distinctive style of dress. Greek and Roman authors considered the natives to be barbarians because they wore only an animal skin draped over the left shoulder covering the front and back. Garments of soft leather reminiscent of *fulfūl*, the soft leather from goatskin (which in European languages is called morocco, maroquin, etc.) were also mentioned as being worn, and indeed, some archaeological remnants have been found (see S. Gsell, *Histoire ancienne de l'Afrique du Nord*, Paris 1927, 22-38, where numerous sources are cited). Both this simple style of draping and the use of leather garments continued among the Berbers well into modern times.

The most striking feature of North African clothing in Roman times was the flowing, unbelted tunic. Roman and Byzantine sources mention the unbelted tunic frequently and in the same attributive way that they note the trousers of the European and Asiatic barbarians. Thus, for example, Virgil speaks of the nomadism *gens et distinctos Mulieribus Afros* (*Aeneid*, viii, 724), and Corippus, the 6th-century poet of the Byzantine reconquest, says even more explicitly: *Nec tunicae manicis ornant sua brachia Mauri/Tunda non ullis stringitur cingula bullis* (*Distichos* . . . *Yohannides*, ii, 130-1). The basic Maghribi tunics such as the Tunisian *amaǧra*, the Algerian *abeya*, and the Moroccan *qandūra* all fit this type. Though ample and uncinched, the tunics of the pre-Islamic period seemed to have been short, not falling below the thigh. Similar short, simple garments were common in Berber areas such as the Moroccan Rif and the Algerian Mzab into the early 20th century.

Another distinctive feature of North African attire which continued to be a hallmark of Maghribi style in the Islamic period is the hooded cloak, called *burnus* (*burnā*) in Libya, Tunisia, Algeria, and *siḥam* and *adīmif* and less commonly *burnis* in Morocco. Gsell (*op. cit.*, p. vi, 24-6) sees the origin of the *burnus* in the *sagum*, the simple wool cloak worn by the

Roman legionnaire. E. F. Gauthier [*Le passé de l'Afrique du Nord: les siècles obscurs*, repr. Paris 1952, 148 f.] points to an even more similar garment, the *pacnula*, a travelling cloak to which a hood (*paculus*) was generally attached. Philologically, the word *burnus* is probably derived from Greek and Latin *birras* (S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, repr. Hildesheim 1962, 50 f., where an interesting connection is made with *sagum* on p. 51, n. 2). The term *burnus* existed in early Islamic Arabia, where it usually designated a bonnet (see 121A5, 1). The North African *burnus*-cloak was palpably different. When the Arabs invaded the Maghrib, they distinguished between two great Berber groups, whom they called the *Barinūs* and the *Butr* (Ibn Khaldūn, *Iḥṣār*, vi, 89 f.). W. Marçais (*Articles et conférences*, Paris 1961, 71) has suggested very plausibly—albeit with caution—that these names might reflect not genealogical or ethnic groups, but rather physical appearance; i.e., those Berbers who were hooded garments (*barinūs*), and those who wore short garments (*butr*), most likely without hoods. The ubiquity of *burnus* in the Maghrib may originally have been due to the fact that the Berbers in Antiquity and for the first few centuries under Islam wore no caps or headcloths (e.g. Ibn Khaldūn, *Iḥṣār*, vi, 89; *wa-rūʿ al-ḥakīm fi ʿl-ḥalīb al-ḥarā*). Furthermore, some Berbers shaved all or part of the head (Gsell, *op. cit.*, 16-18, for classical sources; cf. also Ibn Khaldūn, *Iḥṣār*, vi, 89; *wa-rubḥamā yataʿāḥḥadūnāh bi ʿl-halīb*).

One last distinctive feature that may be traced back to pre-Islamic times is the large wrapping cloth used as an outer garment by both men and women (albeit in quite different ways) from Libya to Morocco. This wrap which is known by various names, the most common in Arabic being *ḥiṣṣ*, *ḥiṣṣ*, and *barzakka*, and in Berber *aḥaban*, *aḥḥuṣ*, *aḥḥen*, *ahaykt*, and many others. Gsell suggests that this primitive garment has its origins in two wraps commonly worn in Roman North Africa, the *iodix* and the *stragula* (*op. cit.*, 29, n. 6). The poet Corippus speaks of the rough wrap which the natives of North Africa wore thrown over the shoulder and enveloping the arms (Johannides, ii, 234 f.: *Horrida substrictis dependens stragula membris*; *Ex umero demissa iacit*...). Ibn Khaldūn also says that most Berbers wrap themselves with a *hiṣṣ* that is thrown over the shoulder (*Iḥṣār*, vi, 89; *yafḥamūlūna ʿl-ḥiṣṣamā bi ʿl-hakīya*). Later European travellers also took note of this rather inconvenient fashion (see G. Marçais, *Costume d'Algérie*, 25-30, where numerous sources are cited). In Islamic times, the ancient Berber wrap came to be associated with its Arabian counterparts, the *isār*, *miḥafa*, etc. Insofar as it was used as a veil for women, it overlapped with eastern fashions. However, it seems clear from the sources and from the modern witness that the Maghribi man's was, and remained, quite different in the way it was draped.

2. Maghribi costume during the early and high Middle Ages. The Arabs looked upon the Maghrib as a colonial territory even more than they did the conquered lands of the Middle East. There was almost nothing in the cultures of North Africa or Spain to command even their grudging respect or to stimulate a desire for emulation. They therefore adopted little or nothing from the native costume during the first century or so of their rule. The fashion of the urban élite was Arab. A child's tunic dating back to the earliest Islamic period which is now in the possession of the Bardo Museum in Tunis is very similar to garments from the same time in the Coptic Museum in Cairo (see M. Fendil, *Un vêtement*

islamique ancien au Musée du Bardo, in Africa II [1967-8], 241-71). The 4th/10th-century geographer al-Mukaddasī (339) observed that Maghribis dressed in the Egyptian fashion (*wa-bi ʿl-Maḡribiyya al-miṣriyya*—that *miṣriyya* here refers to custom in dress is clear from the continuation of the text). The many references to clothing in Ifrīqiya collected by H. R. Idris for the 4th-6th/10th-12th centuries correlate fairly well with what is known of Middle Eastern attire during that period (Idris, *La Berbérie Orientale sous les Zirides*, Paris 1962, ii, 594-600). The only items that were distinctly Maghribi were the *ḥiṣṣ*, the *kurziyya* (from Berb. *lakarzi*; see Dozy, *Vêtements*, 380-2) which was a simple winding cloth for the head, and *abṛāk* (sing. *abṛāk*), native cork-soled sandals (Dozy, *Vêtements*, 362 f.; Idris, *Suppl.*, ii, 334; Idris, *op. cit.*, 597; cf. Sp. *alcorques*). According to al-Mukaddasī (*op. cit.*, 239), even the traditional Arab *ridāʾ* was worn draped like a *hiṣṣ* or *burnus*.

The early Umayyad *awṣ* in Spain tried as best they could to maintain the material culture of Syria, and it may be safely assumed that the dress of the small Arab élite and their epigones (*muṣaʿfirūn*) remained generally faithful to the styles of the Damascus caliphate. The newer Islamic styles with their oriental influences became the fashion of the upper classes when the ʿIrāqī singer Ziryāb (q.v.) arrived at the court of Cordova in 207/823, where he established himself as the Andalusian Petronius. He was not only the arbiter *al-muṣaḥḥarūm* in regard to the cut, colour, and fabric of clothes, but established the proper season for each outfit (al-Makkārī, *Analekta*, ii, 88, citing Ibn ʿIyās). It was he who established the *ḡibba* as the standard robe for both sexes. One eastern fashion which only took limited root in Spain was the wearing of the turban (*ʿindama*), which was reserved mainly for the *ḡhāṣāʾ*. Bare heads or heads crowned with a red or green wool cap (*ḡhīṣāra*) were commonplace for much of the Spanish population of all classes. Most of the figures that appear in the genre scenes on carved ivory pyxes from Umayyad Spain appear to be bareheaded (see e.g. E. Kühnel, *Islamic art and architecture*, Ithaca, N.Y. 1966, Pl. 228; W. M. Watt and P. Cachia, *A history of Islamic Spain*, Edinburgh 1965, Pls. 5 and 7). The *ḡhāṣāra* and the *ḡhīṣāra* were also in vogue after the arrival of Ziryāb (for details on both, see 121A5, section 1). The last ʿAmirid *ḡhīṣāra* ʿAbd al-Rahmān Sanḥudla increased his already great unpopularity in 399/1009 by ordering courtiers to wear turbans in the style worn by the Berber military (Ibn ʿIḥṣār, iii, 48). The style was soon abandoned when two months later his rule came to its violent end.

There was with the passage of time considerable intermingling of styles between the Christian North and the Muslim South. The Spanish peasant's frock, *sayo*, in Ar. *ḡḡaym* (from Lat. *sagum*) was commonly worn in the countryside (Lévi-Provençal, *Hist. Esp. muz.*, iii, 425; Dozy, *Vêtements*, 212 f.). Soldiers wore a scarlet cape (*ḡabāʾ*) similar to that worn in Christian territory (Lévi-Provençal, *op. cit.*, iii, 429; Dozy, *op. cit.*, 360; obviously derived from Sp. *capo* or *capa* and not from Pers. *ḡabāʾ*, concerning which see 121A5, sections 1 and 3). Oriental fashion progressively gave way—perhaps as a partial corollary to the Reconquista—to a uniquely Andalusian style or cut (*ḡayṣil*). By the 7th/13th century, an Easterner in the turban and robes of the Levant was regarded as a curiosity (Lévi-Provençal, *op. cit.*, iii, 492).

It is interesting to note that although Muslim

women in Spain wore the various veils used in the Middle East, such as the *hijma*, *burqa*, *miṣṣa*, and *isr* (see e.g. H. Péris, *La poésie andalouse, en Arabe classique au XI^e siècle*, Paris 1953, 179, 280, 329), they were not always too strict about it. The poet al-Ramādī saw the beautiful *Ḳhalwa* at the Bāb al-ʿAtjārin, a popular gathering place for women in Cordova, and fell in love with her at first sight. Although she was unveiled, he did not know whether she was slave or free (Ibn Ḥazm, *Tamḥ al-ḥamāma*, ed. H. K. al-Sayrafi, Cairo n.d., 22 f.). The roguish Ibn Ḳusām (s.v.) tells of a married Berber woman he met and with whom he had an affair. She is described as wearing only a garland on her head (J. T. Monroe, *Hispano-Arabic poetry*, Berkeley and Los Angeles 1974, 265). Jurists complain of the heretical innovation among the common people whereby a man allows his wife or *itāra* to unveil in front of someone other than an immediate male relative (Ibn ʿAbd al-Raḥmān, *Risāla fī dīn al-ḥiṣba wa ʿl-muḥtasib*, tr. R. Aré, in *Hesperis-Tamuda*, 1 [1960], 32). This laxity may have been due to the influence of the large non-Muslim population or of the considerable Berber element, or both. Even women who were normally veiled would bare their faces when in mourning (see e.g. Péris, *op. cit.*, 203; also Ibn ʿAbdūn, *Risāla fī ʿl-ḥaḍḍ* wa ʿl-ḥiṣba, tr. Lévi-Provençal, *Shiite musulmane au début du XII^e siècle*, Paris 1947, 39, para. 53).

3. The Berber Empires and their successor states. Middle Eastern influences in Maghribi dress — as in other aspects of material culture — declined greatly from the late 5th/11th century onward. Indigenous Berber and Spanish influences became stronger than ever. The major factors in the increasing "Berberization" and "Andalusianisation" were the rise of extensive Berber empires that united the Maghrib with what remained of Muslim Spain. This occurred at a time of growing isolation, when the Arab East was coming under the rule of Turkish military régimes with their own language, customs, and style of dress (see *LIBAS*, section 2) and when the arteries of communication between Maghrib and Maghrib, though by no means cut, were not as smooth as in preceding centuries, because of the war, instability, and the overall decline of Muslim sea power. Lastly, the urban centres of high culture in Ifrīqiya which had set the fashion for much of North Africa were in ruins after the invasion of the Banū Hilāl Bedouin. Further west, Morocco was a centre of power and Spain a centre of culture. Once united, they would become the local point of style for the rest of the Maghrib.

The rise of the Almoravids paralleled in a sense a contemporary phenomenon in the East. They were a non-Arab ruling élite who wore their own distinguishing uniform. They dressed in Saharan Berber fashion, and are described as being untouched by Mediterranean civilisation (al-Bakrī, *K. al-Maghrib fī dhikr bilād Ifrīqiya wa ʿl-Maghrib*, ed. de Slane, *Nogies* 1857, 164 f.; also Ibn Ḳhalḍūn, *ʿIbar*, vi, 181). The main feature setting the Almoravids apart from their subjects was their face veil (*hiṣma* (s.v.)), which masked the lower half of their face, hence their nickname of *al-muḥtasib*. Ibn Ḳhalḍūn (*ʿIbar*, vi, 197 f.) notes that many Saharan people were *muḥtasib* even in his own day. The style was essentially the same as that of the modern Tuaregs. Almoravid dress was not for the subject population. In fact, Ibn ʿAbdūn (*op. cit.*, 61 ff., para. 56) warns against permitting even the other Berbers in the service of the Almoravids to wear the

hiṣma in the streets of Seville because of the fear it struck in the population. The Almoravids also wore the *ḥimāma* and *bernis*. There were some Andalusians who donned these items in order to ingratiate themselves with their new masters, even though their own compatriots laughed at them (Ibn Abī Ḥāshim, *al-Ḥulla al-ḥayr*, in Dozy, *Recherches*, i, p. 11).

The Andalusians found little to copy from the Almoravids. However, the latter found a great deal worthy of emulation in Spanish civilisation. Under Almoravid rule, Andalusian culture spread into Morocco together with, certainly, Andalusian fashions. This movement of styles across the Straits of Gibraltar mainly from north to south would continue under the Almohads and in varying degrees under their successors.

The rise of the Almohads had a more direct and lasting influence on Maghribi costume history. The Maḥdī Ibn Tūmart's (s.v.) puritanism extended to matters of dress. His biographer al-Bayḍḥak relates that on his return home from the East, the Maḥdī upbraided the people of Bīḡiyya for wearing sandals with gilded laces (*al-ḥarḍ al-zarḍiyya*) and turbans not in the Muslim fashion (*ʿand ʿim al-ḡibḡiyya*), and for men wearing *futūḡiyya*, which was apparently a tunic normally for women (*Tarīḡ al-ʿAlmohadiyya*, ed. in Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928, 52, Ar. text). The prudish Maḥdī had to cover his face when passing adorned and unveiled female *ḥaḥa* vendors in the streets of Tlemcen (*ibid.*, 51). His full wrath was heaped upon the Almohad rulers themselves. In the Fīḍay mosque of Marrakesh, he called the veiled *amī* and his retinue "veiled slavegirls" (*ibid.*, 68: *ḡamrī manah-ḡadī*). When he encountered the princess al-Ḥura unveiled as was customary among Almoravid women, he reprimanded her so severely that she went crying to her brother the *amī* (Ibn Ḳhalḍūn, *ʿIbar*, vi, 227).

Like all Berbers, the Almohads wore the *burnus* (also *burnū*) and the *ḥisā* (al-Bayḍḥak, *op. cit.*, 72 f.). They normally wore the form of turban known as *ḡarbiyya* (*ibid.*, 31). Under the Ḥafḡids, the descendants of the great Almohad families were the *ḡay-las* with the ends *criss-crossed* in front like the Arabic letters *lām-alif* (R. Brunschwig, *La Berbérie Orientale sous les Hafḡides*, Paris 1947, ii, 278). It was not long before the early Almohad simplicity in dress gave way to the luxuries of al-Andalus. They bestowed magnificent robes of honour (*ḡḡila* *ḡamīyya*) upon their favourites (al-Marrāḡuṣhī, *K. al-Muḡḡib fī talḡḡ al-ḡadīr al-Maghrib*, ed. Dozy, Leiden 1881, 175, 184, 230).

From the Almohad period onwards, veiling for women was more strictly observed throughout North Africa and Muslim Spain. The Almohads also instituted one of the most unusual applications of the laws of *ḡayr* (s.v.). Suspecting the sincerity of the large number of Jews who had converted to Islam under duress, the caliph Abū Yūsuf ordered that all these neophytes should wear distinguishing clothing consisting of blue-black garments (*ḡayḡ ḡayḡiyya*) with exaggeratedly wide sleeves (*ḡamām muḡḡal al-ḡa*) which reached to the ground, and ludicrous caps (*ḡamāmūt ʿalī ḡḡma* *ḡḡa*) that resembled pack saddles (*ḡa-ḡamāmūt ʿalī ḡarādī*) which extended below the ears (al-Marrāḡuṣhī, *op. cit.*, 223). His son and successor Abū ʿAbd Allāh changed the uniform to yellow garments and yellow turbans (*ibid.*). It may be considered part of the Almohad heritage that in Morocco throughout the later Middle Ages and until modern times, the dress code for Jews was one of the most strictly applied in the Muslim world (see N. A.

Stillman, *The Jews of Arab lands*, Philadelphia 1979, 83, 304, 312, 367).

There were no great changes in Maghribi fashion with the passing of the Almohads. The habits in Tunisia, the Zayyānds in Algeria, and the Marfuds in Morocco were all in a sense successors rather than supplantes of the Almohads. The information on Tunisian dress culled by Brunschvig (*Sha'ides*, II, 176-82) correlates well with what is known from the preceding period. Local names for special varieties of garments appear more infrequently now, as for example, *barakān*, the heavy wrap for men and the *saf'āri*, the light wrap for women. Both are mentioned as being commonly worn in Tunisia (*ibid.*, 276, 280), and both are known from earlier centuries as well (see Y. K. Stillman, *Female attire of medieval Egypt*, 42 f., 62 f.). Leo Africanus's [?] description of clothing worn in Marfud Fez also shows considerable continuity in the general outlines (*Description de l'Afrique*, tr. A. Epaulard, Paris 1956, I, 207 f.). He does note that the learned doctors and gentlemen wore jackets with large sleeves like upper-class Venetians. He also mentions that women's trousers for outdoor covered the entire leg. He further notes that the latter are always veiled with a large wrap covering the head and the entire body (*ibid.*) as well as with a face veil (*lithām*) covering all but the eyes (*ibid.*, 208).

Clothes are mentioned by the Marfud historian Ibn Aḥmar (*Rawḍat al-sharīf fi dawlat Banī Marīn*, Rabat 1382/1941, 15) in connection with the popular Moroccan belief in *baraka*, the blessedness of a charismatic individual. The Amir 'Abd al-Hakī b. Maḥyū was considered by the Zanāta to be a possessor of *baraka* and a *mughāb al-dū'a* (one whose prayers are answered). His *kalanzawa* and *zardī* would be sent to women in difficult labour to ease the birth.

With the passing of the Almohads, the Muslims of Spain abandoned the turbans they had briefly worn (al-'Umari, *Maṣālik al-aḥṣār fi mamālik al-aḥṣār*, tr. Gaudelroy-Demonbynes, Paris 1927, 234). Multi-coloured garments were popular. The wealthy wore garments of the fine gilded silk (*al-ṣaḥy al-muḥḥak-kah*) produced in Almería, Murcia, and Malaga or special silken clothes (*al-lubās al-muḥarrar*) called *mulaḥḥad muḥḥafam* ("felted, checked") made in Granada and Baza (al-Maḥḥarī, *Analḥīṭa*, I, 123). R. Arné has noted that fashions of the neighbouring Christian kingdoms already influenced the mode of Andalusian dress in the early days of the Nasrīds (*L'Espagne musulmane au temps des Nasrīds*, 381). The *sayo* (Ar. *ḡāya*) mentioned above was worn not only by peasants, but even by the Nasrīd innkeeper when out riding (*ibid.*). The *marfūs* (Ar. *malūḥa*), a sleeved outer garment whose precise details are vague, and the *capellor* (Ar. *ḥabīllar*), a hooded cloak shorter than the *burnas*, were among the new fashions (*ibid.*, 386).

4. From the end of the Middle Ages to modern times. The basic outlines of Maghribi costume remained quite constant from the end of the Middle Ages up to and well into the period of colonial domination. Certain new fashion elements were brought into the region by the Turks in Tunisia and Algeria and by the Moriscos and Jewish refugees from Spain in these countries and Morocco as well. Most of the clothing innovations which they introduced remained particular to their own ethnic group. Thus, for example, the *ḡalḡila* (Sp. *gualletta*), a whirling skirt, was worn in Morocco only by Jewish and Andalusian women (see Y. K. Stillman, *The costume of the Jewish woman in Morocco*, in *Studies*

in Jewish Folklore, ed. Talmage, Cambridge, Mass. 1980, 350, 355, n. 30). The high, brimless hats known as *farfur* and *farfura* in Algeria were part of the uniform of the Turkish military elite (Marçais, *Costume d'Alger*, 53-8), and as late as the 18th century, the Turkish-style *ḡuband* was not permitted to native North Africans (*ibid.*, 55). Nevertheless, Ottoman modes of dress did make themselves felt in the urban centres of Algeria and Tunisia. The *jaico* (Turk. *yelak*) was very popular in Algeria, and the high, split cone, metal head piece, known as the *ṣarma*, became a general fashion for women in Algeria and Tunisia (*ibid.*, 116-119, and Pis. xxix, xxxii, xxxiii, xxxiv). Likewise, the *ḡabādūl*, or *ḡabādūr*, a short coat brought by Jews and Andalusians became widespread in the cities of Morocco and Algeria, and in Morocco was manufactured exclusively by Jewish tailors (see Brunot, *Noms de vêtements masculins d'Alger*, in *Mélanges René Basset*, I, 97 f.).

Most remarkable is the conservative nature of draping patterns in men's clothing, which as we have seen goes back to the world of Antiquity. Also interesting to note is the widespread use of libulas to fasten garments. The Maghribi *libula*, called *balma*, *ḡabellā*, *ḡufiyya*, and in Berber *tabzimt*, *taṣṣay*, and *taṣṣarāt*, has been shown to go back to Antique prototypes (H. Camps-Fabrice, *L'origine des fibules berbères d'Afrique du Nord*, in *Mélanges Le Tourneau* = *ROM*, nos. 13-14 (1973), 227-30). However, traditional attire is—as in the case of the Middle East—losing ground rapidly to Western dress, particularly in the major cities and towns where more than half the population now resides.

GLOSSARY

- a'ṭaba*: large outer wrap for Berber men (Mor.)
āḡāya: a sleeveless, long overblouse for men; a sleeveless, flowing dress for women (Alg.)
'abrāḡ: bandana for women (S. Mor.)
āḡḡūf, *āḡḡūf*: Berber cape, hooded for men, unhooded for women (S. Mor.)
'anrāḡiyya: skull-cap for men (Mor., Alg., Tun.)
ḡabūdḡār: flat slippers for both sexes (entire Maghr.)
ḡabūdḡūḡ: embroidered head shawl for women (Tun.)
ḡarrahān: large enveloping outer wrap for both sexes (Lib.)
ḡad'ḡiyya: sleeveless vest for men (entire Maghr.); a sleeveless *ḡafḡān* for women (Mor.)
ḡalḡin: flat slippers, usually pointed at the toe, but sometimes rounded, worn by both sexes (entire Maghr.)
ḡarāḡs: large hooded cape for men (entire Maghr.)
ḡāḡka: woman's hat (entire Maghr., but different in each country)
ḡāḡm: body shirt for both sexes (Mor.)
ḡāḡmī: jacket for men (Alg.)
ḡarḡāḡa: a vest (Lib., Tun.); an old threadbare garment (Mor.)
ḡabādḡūl, *ḡabādḡūr*: a full-length, caftan-like garment with either no buttons, or a single button in front (Mor., Alg.)
ḡjard'id: a pair of men's leather leggings (Tun.)
ḡḡḡlḡḡa, *ḡḡḡḡḡiyya*, *ḡḡḡḡḡ*: Hooded outer robe with long sleeves, originally worn by men only, now by both sexes (mainly Mor., also W. Alg.)
ḡḡḡḡa: full-length, sack-like chemise without sleeves (Tun.)
ḡḡḡḡḡa: a long, woolen outer robe without sleeves or collar which is closed by a single button at the neck; worn by men (Mor., Alg., Tun.)
ḡāḡka: a pointed bonnet for women (Tun.)

durr'a, der'a, derra: long robe with sleeves for both sexes (entire Maghr.)

fajfite, djalfite, djanfite: a skirt of Spanish origin worn mainly by Jewish and Andalusian women (Mor.)

faradiyya (Berb. *tafarafit*): a very light gown with a deep slit at the breast which may or may not have sleeves and is worn under the *basin* or garment by both sexes (Mor.). It also comes in a half-length version called *nuss faradiyya*

fardja, frajja: garment similar to the *faradiyya* for men only (Alg., Tun.)

farmla: vest for elderly men (Alg.)

fighil, shaw and headscarf for women (Mor.)

fimla, furmayla: corselet for women (Alg.), embroidered bolero (Lib.)

faja: outer wrap; loin cloth for women (entire Maghr.)

fakiyya: a body shirt for men worn under the *djallaba* (Mor.)

gandira: full-length tunic with short sleeves for men (S. Mor.) and for both sexes (Alg.)

ghilla: sleeveless outer robe for women (Mor.)

ghilia: vest for both sexes (Alg.)

gndra: a light, lacy chemise for women (Alg.)

haddin, shaddin: a variety of heavy burnus (Mor.)

h'ik, h'ik, h'aykt: huge outer wrap, usually white, worn by both sexes (entire Maghr.)

hafer: general designation for belt, especially a sash (entire Maghr.)

ihreggen, idghaga, iherkas: all names for a simple Berber sandal (Mor.)

ihari: a Berber turban consisting of a white cloth wound about the head leaving the crown uncovered (Mor.)

'imama: standard turban (entire Maghr.)

'ismayya: a simple, wide tunic consisting of a hole in the centre for the head and one at each side for the arms, made of striped wool and worn by men; also a very ample blouse of strong cotton worn over other clothing (Mor.)

isdr: large outer wrap for both sexes (entire Maghr.); fringed shawl worn by Jewish women (Mor.)

kabbis: a coat for both sexes (entire Maghr.)

kabib: wooden clogs for women (Alg., Tun.)

basin: caftan, originally worn by men and women, now only by women (Mor., Alg.)

malasema: pointed bonnet for men (Alg., Tun.)

kamis, kamigigga, kamidja: long body shirt for both sexes (entire Maghr.)

kaghgha: long sleeveless outer gown for men; long-sleeved flowing tunic with a deep slit down the breast for women (Mor.)

h'dya: sleeveless vest for men (Alg.)

khidfi: a red wrap for women (Mor.)

kussa: abaya: elegant wedding and festivity dress of Jewish women consisting of several parts, derived from 15th century Spanish dress style (Mor.)

kmagigga: fine embroidered tunic for both sexes (Tun., Lib.)

kad: large outer wrap for both sexes (entire Maghr.)

khil: headscarf for women (Mor.)

kursiyya: belt for both sexes (Mor.)

litham: veil for lower half of the face, worn by married women (Mor., Alg.)

malusa: large Turkish style turban worn by religious dignitaries (Tun.)

unaryil: short, embroidered shift for women (Lib.)

mdama: leather belt worn by men, women and children (Mor.)

milhafa, makhfa, jama'hafi: large outer wrap worn by both sexes (entire Maghr.)

mantan, wendil: man's waistcoat with long, straight sleeves (Mor., Alg., Tun.)

na'i, n'ila, n'yl: sandals (entire Maghr.)

nakb: lace veil for married women, often synonymous with *litham* (Mor., Alg.)

rihiyyil: flat leather slippers worn by both sexes (Mor., Alg., Tun.)

ressa, rras: small, rather flat turban (Mor.)

infadri: large outer wrap for women (Tun., Lib.)

aya: a skirt (N. Mor.); a dress (S. Mor.)

tabbil: closed shoes for either sex (Mor., Alg., Tun.)

tabbil, shabil: flat slippers for both sexes (Mor.)

ghadd, ghadda: turban (Mor., Alg., Tun.)

ghil, ghan: head scarf for both sexes (Mor., Alg., Tun.)

ghilghila, ghig: brimless soft hat worn by both sexes (entire Maghr.)

ghilghiyya, hifiyya: woman's bonnet (Tun.)

ghiniyya: woman's headscarf (Mor., Alg.)

indriyya (= *zadriyya*): a man's waistcoat (entire Maghr.)

istham (Berb. *istham*): man's hooded cape (Mor.)

iswail: trousers for both sexes (entire Maghr.)

is'ghira: large embroidered shawl for women (Tun.)

isakya: pointed woman's bonnet (Tun.)

isbiyya: skull cap for men (entire Maghr.)

isbich: hats of various types for men (entire Maghr.)

taraza, tarazala, tarazal: wide-brimmed straw hat for both sexes (Mor., Alg.)

izmal: fringed head scarf for women (Lib.)

izdhar: stockings for both sexes (entire Maghr.)

izak: riding boots (entire Maghr.)

izakib: leather leggings worn by women (Mor.)

isbiyya: woman's head scarf (Mor., Alg.)

isbilla: see *ghilghila*

isghila: a simple, sleeveless, square-cut man's tunic (S. Alg.)

isbhan: a man's jacket with long sleeves (Lib.)

isir: a Berber scarf for both sexes (Mor.)

Bibliography: For the Maghrib in general, Dory, *L'habillement*, is still extremely useful, since it is based heavily upon North African and Spanish sources. (1) For Algeria: G. Margals, *Le costume musulman d'Alger*, Paris 1930, remains unparalleled. See also: A. Bourgeot, *Le costume masculin des Kel Ahaggar, in Libyca*, xvii (1969), 355-76; M. Chabrolles, *Comment se vêtent les Touaregs*, in *Bull. de Liaison Saharienne*, vi/ao (1955), 68-8; idem, *Remarques sur la bahmouk soufi*, in *ibid.*, iv/x3 (1953), 52-4; S. Galloy-Jorelle, *Les tissages ras de Djebala, in Cahiers des Arts et Techniques d'Afrique du Nord*, vi (1960-1), 103-15; A.-M. Golchou, *La vie féminine au Mzab*, Paris 1927, 2 vols., palestin; C. (V. K. STILLMAN)

III. — IRAN

Iranian costume belongs to a completely different vestimentary system than does Arab costume. The most salient features have shown remarkable con-

sistency from pre-Achaemenid to modern times. Whereas Arab costume (see 1. above) is marked by rectangular tunics and loose wraps, Iranian clothing has traditionally featured tailored garments that include a sleeved coat of varying length and ample-ness (*kabā*), long, straight trousers (*ghalabā*) or leggings (*pay-tāba* or *rān*), close-fitting boots (*mūsa*, *kafsh*, *khāfsh*, or *chāhma*), and a high or medium high soft cap (*kūdkā* or *kālanmāna*, the latter perhaps a descendant of the ancient *kyrbasia*). This type of attire is typical of other equestrian peoples from the steppes of Inner Asia, such as the Scythians, and also of the Phrygians, and is consistent both with the harsh and highly variable climate and their pastoral way of life. It also shows strong affinities with the clothing of other Indo-Aryan peoples who moved further west, such as the Germans. This sort of clothing was also convenient to the cavalry warfare practised by these peoples. Flowing robes were also worn, but mainly as royal or priestly dress for ceremonial occasions. Women, like men, wore coats or jackets (*kabā* or *nīm tana*) and trousers or a skirt (*dāmān*), with however, a chemise (*pirihān*) or tunic (*ghama*, a word which like Ar. *ghawb* also designates an unspecified garment and cloth in general).

For convenient surveys of pre-Islamic Iranian costume, see H. Goetz, *History of Persian costume*, in *Survey of Persian art*, ed. A. Pope, London-New York 1938, 227-36; Georgina Thompson, *Iranian dress in the Achaemenian period*, in *Iran, JBIPS*, li (1965), 121-6; Z. Dya' Pūr, *Pāghā-i zandā-i Iran*, Tehran 1347/1968, 4-125.

1. The Umayyad and 'Abbāsid periods. During the Umayyad period 'Irāq, which had for centuries been part of the Persian cultural sphere, became arabised. Traditional Iranian modes of dress remained in the tianan heartlands and in Transoxania. Despite the fact that Umayyad rulers adopted elements of Iranian costume for themselves and their court (see e.g. R. Fittinghausen, *From Byzantium to Sassanian Iran and the Islamic world*, Leiden 1972, 21, 30-3), they did not permit the Arab fighting men on duty in the Persian territories to don Iranian clothing. Soldiers who put on the Persian-style cuirass (*kāfshān*) and leggings (*rān*) were punished (B. Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 515). However, by late Umayyad times the Arabs settled in Khuzestān were becoming increasingly assimilated into the local culture, and, it may be assumed, had adopted many elements of native attire.

The rise of the 'Abbāsids, the founding of Baghdād, and the increasing importance of Persian *masūdī* in the civil service, made 'Irāq a zone of osmosis where Iranian and Arabo-Hellenistic styles fused, with Iranian elements passing westward and Arab styles and terminology eastward. There is a frequent overlap in the New Persian vestimentary vocabulary of Arabic and Iranian terms (e.g. Ar. *libās* becomes a common synonym for Pers. *pāghā*). Nevertheless, native Iranian styles remained distinctive well into the 'Abbāsid period, as noted by the Arab geographers (e.g. al-Mukaddas), 326-7. For other sources, see P. Schwartz, *Iran in Mittelalter*, repr. Hildesheim 1969, 140-2, 404-5, 424-6, and 834-5. Among the more particular Iranian fashions in Arab eyes were the wearing of boots (*khāfsh*) in summer as well as in winter (al-Mukaddas, 327), the unique cold weather clothing (*ibid.*, 328), and the extensive use of the *saylasan*, or headshawl worn over the turban, by religious scholars and notables in the northern and eastern parts of Iran and even by the common folk in Fārs (*ibid.*, 327, 440).

Throughout the 'Abbasid period—as in earlier and later times as well—Iran was noted for its fine textiles. For a thorough survey of Persian textile production in this period, see R. B. Serjeant, *Islamic Textiles*, Beirut 1979, *passim*. Iran was also noted for the special garments produced there. Amul and Kābila were famous for their wool *jayvānās* (ps.-Djābīs, K. al-Tabasbar bi-l-hijāra, ed. H. H. 'Abd al-Wahhāb, Cairo 1935, 30-1; Gurgān and Rayy for their excellent variety of soft wool cloaks known as *namāḥ* (from Pers. *nam* "soft", *ihād*, 29:30), and Bana for its fine kerchiefs and turban cloths (*dastār-i banī*, anon., *Hadūd al-'Alam*, rev. ed. V. Minorsky and C. E. Bosworth, London 1970, 125). Ātharbaydūn, Armenia, and Arrān produced the best quality trouser cords (*ḡahwār band*, *Hadūd al-'Alam*, 123:3). Kāh, the capital of ḡh-wārazm, was noted for its quilted jackets (*kaḡḡand*, *Hadūd al-'Alam*, 121).

Artistic representations from the 5th-7th/11th-13th centuries invariably show both men and women in a full-length sleeved coat (*ḡabā*) with arm bands (*ḡabā band*) either with or without *ḡabā* inscriptions. In a 5th/11th century stucco relief from Rayy, each of the women in the courtly scene is depicted in a brocade coat (*ḡabā-yi ābā*) with a bordered edge (*ḡabā-yi-ābā*). Each woman wears a fillet (*ḡabānī band*) in the centre of which is an agrette (*ḡabān*). Most of the women wear a necklace (*ḡabān band*) and earrings (*ḡabānī band*) (the relief is included in Pope, *Survey*, v, Pl. 317 and Diyā' Pūr, *Paḡhān-i sanān-i Irān*, Pls. 106 and 107. For a survey of Persian jewelry during this period, see Dī. Diyā' Pūr, *Zīnārāt-i sanān-i Irān*, Tehran 1347/1968, 331-62).

The Sāldjūk period did not mark for Iran the introduction of totally new styles of dress as it did in the Arab East (see section i, above, 8) since the Sāldjūks were themselves under the influence of Persian culture. There were, however, some new fashions that were introduced at this time, particularly in head coverings. At least three distinctive caps were introduced at this time, all of Inner Asian, Turkish origin (for examples of Sāldjūk caps, see ill. no. 7, also Pope, *Survey*, v, Pls. 642B, 652, 653, 686, 687, 688A, 692, 694, 706, 708, 714A, 813). Men of high rank wore a crown-like hat with a pointed rim on either side (*ḡabānī*, Spuler, *Iran*, 365). The so-called Sāldjūk crown (*ḡabānī*, *ḡabānī*, or *ḡabānī*), which then was affixed both to one of the Mongol caps and to the ancient Sāsānid crown, remained for centuries the headdress of rulers and princes depicted in Persian paintings. It is perhaps to this sort of "crown" that the poet Sa'adī refers in the expression *ḡabānī ḡabānī*, or "cap of lordship" (*Bāstān*, introd., t. 212, in *Kullīyyāt-i Sa'adī*, ed. M. A. Farāhī, Tehran 1964, 12). These various hats were apparently known by regional and ethnic names, such as *ḡabānī* *ḡabānī* (al-Rāwandī, *Rāḡat al-paḡdā*, Tehran 1933, 385) or *ḡabānī* *ḡabānī* (Sa'adī, *Gulistan*, in *Kullīyyāt-i Sa'adī*, 62). The Sāldjūks also introduced new military garments.

a. The Ilkhānid and Timūrid Periods. The Mongol conquests brought with them many totally new fashions from the Far East. Court styles were those of China: mandarin robes with elbow-length sleeves are most commonly depicted. These were decorated with heraldic designs on the breasts and back—usually Chinese clouds, scrolls, and vegetal motifs. Beneath the robe was worn a long-sleeved tunic. Men wore a variety of hats with brims turned up or down, and even with double brims (for exam-

ples of these different hats, see Goetz, *Persian costume*, in Pope, *Survey*, iii, 239, Fig. 746a,b; and D. T. Rice, *The illustrations of the "World history" of Rashid al-Din*, Edinburgh 1976, 21, Fig. 108-9).

Military attire was also of the Far Eastern variety, consisting of long coats of link mail arranged in horizontal bands (*ḡabān-i ḡabān*) or cuirasses (*ḡabān*) of mail (*ḡabānī*, *ḡabānī* *ḡabānī*, ed. Karwānī, ii, 186, 176. For examples of the Mongol long mail coat, see Rice, *Illustrations . . . of Rashid al-Din*, Pls. 38, 44, 48, 49, 53. For the mail cuirass, see Pope, *Survey*, v, Pls. 634B, 639, and 842A). The latter could be worn under a robe (*ḡabān-i ḡabān*, Rashid al-Din, *Histoire des Mongols de la Perse*, ed. and tr. E. Quatremère, repr. Amsterdam, 1968, 122).

Also typical of Mongol armour were their close-fitting helmets with ear-flaps and a small spike at the top (for examples, see Rice, *Illustrations . . . of Rashid al-Din*, Pls. 22, 38, 39, 40, 43).

During the Ilkhānid period, women's clothing seems not to have undergone any major change, except with respect to the head gear. The head scarf (*ḡabān*) was worn for the most part as a wimple (see e.g. Pope, *Survey*, v, Pl. 836B) by non-Mongol women. The Mongol princesses, however, wore a special bonnet consisting of a light wood frame covered with silk and from the top of which protrudes a long feather (see Goetz, *Persian costume*, in Pope, *Survey*, iii, 221, Fig. 747a-b). This bonnet is frequently mentioned by Rashid al-Din (*Histoire des Mongols*, ed. Quatremère, 202, 106, 107), and is called *ḡabānī*. The *ḡabānī* could be ornamented with gold and precious stones and sometimes had a long train (*ḡabān-i ḡabānī*) which hung down behind. According to Ibn Baṭṭūṭa, the girls who attended the Mongol ladies wore "a *ḡabānī* that looked like an *abray* (*fox*) with a gold band encrusted with jewels around the upper part, tipped with peacock leathers" (Ibn Baṭṭūṭa, tr. H. A. R. Gibb, Cambridge 1958, 485).

Despite Timur Lang's partiality to Mongol ways, there is a noticeable decrease in Mongol influence as far as Persian costume is concerned under the Timūrids. The bulky mandarin robes give way to close-fitting garments which follow the body's own lines. The outer *ḡabān* was often left entirely open or was left partially open at the neck and below the waist revealing another coat below, beneath which a long body shirt (*ḡabān* or *ḡabān*) was worn. The *ḡabān* band which, except for a military belt over the armour, had all but gone out of style in the Ilkhānid period, became once again a regular part of male attire, worn on either the inner or the outer coat. The distinctive caps and hats of the Sāldjūk and Mongol periods were gradually replaced during the Timūrid period by turbans, which at first were small, but became progressively larger throughout the 9th/15th century (for examples of the caps and turbans of the period, see Pope, *Survey*, v, Pls. 851, 860, 865, 878, 880, 882). The reason for the gradual disappearance of the Mongol caps is that they came to be considered as symbols of paganism, in contradiction to the *ḡabān* which was symbolic of Islam (see e.g. Muḡammad Ḥaydar, *A history of the Moghuls of Central Asia*, tr. E. D. Ross, repr. New York 1970, 38). One new head-covering that appears at this period is the *ḡabānī*, a fur-trimmed cap of Turkoman origin. As in earlier periods, both men and women wore fur cloaks (*ḡabān*, *ḡabānī* *ḡabānī*, *ḡabānī* *ḡabānī*, *ḡabānī* *ḡabānī*, Tehran n.d., 25) and fur-trimmed robes (*ḡabānī* *ḡabānī*, Sa'adī, *ḡabānī*, in *Kullīyyāt-i Sa'adī*, 122; and *ḡabānī*, *ḡabānī*, in *Kullīyyāt-i Sa'adī*,

213). For illustrations of fur-trimmed coats, see Pope, *Survey*, v, Pls. 842B, 878; also Diyā' Pūr, *Pūshāh-i sanān-i Irān*, Pls. 129, 132.

Female attire during the Timūrid period also consisted of several layers of long, close-fitting robes. The *pirāhan* covered the entire body down to the feet and was long-sleeved. A wide variety of outer coats were worn by women at this time. Although some had long, narrow sleeves, most were short-sleeved (*Aslān-i Aslāk*), and some were sleeveless. The woman's *habd* depicted in Timūrid paintings came in both long and three-quarter length versions (for the feminine *habd* in all its variety, see Diyā' Pūr, *op. cit.*, 143-65, Pls. 113-32). The short coat is perhaps the *habdān*, mentioned in earlier literary sources (e.g. al-Kātib al-Arāghānī, *Sanāh-i 'Ayyār*, Tehran n.d., I, 50), but does not appear in artistic representation until this time.

Most of the women's head-dresses depicted in Timūrid paintings are simple, consisting in the main of a white *sar band* worn in the simple fashion of the preceding periods or allowed to flow down behind. Some women are depicted wearing a close-fitting bonnet-like cap which is usually dark in colour. The bonnet has wide flaps that come down in front of the ears, and is held in place with a chin strap. On the top of the bonnet is a small flat plaque to which the face veil is attached (see Diyā' Pūr, *op. cit.*, Pls. 119-20; also J. M. Scarce, *The development of women's veils in Persia and Afghanistan*, in *Costume*, v [1975], 6, Pl. 1, where, however, this headdress is interpreted somewhat differently).

European travellers report that women appeared in public at this time in an all-enveloping white wrap (*ladr-i safsā*), their faces hidden behind a black net of woven horsehair (*pičā*) (e.g. Ruy Gonzales de Clavijo, *Narratives of the Embassy... to the court of Timour*, London 1859, 89). Another sort of face veil worn at this period was a small, white mask covering only the mouth and chin (*dahān band*, Diyā' Pūr, *op. cit.*, 155, Pl. 172).

3. The Safawid period. The establishment of the Safawid dynasty marks not only a watershed in Iranian political and religious history, but a turning point in its costume history as well. During this period, Far Eastern influences in Persian costume cease to be important, and there is a reassertion of native Iranian styles.

The most immediate change came in the man's turban (*dūd band*), which was wrapped around a cap with a high, spiked protrusion that extended straight up through the middle of the headdress (see e.g. Pope, *Survey*, v, Pls. 893A, 895, 896, 898, 900, 902B). The cap which forms the centre of the turban was known as the *shāhī* Safawid. It was normally red, although occasionally blue. Because of the red caps which distinguished the Shī'ī Safawids and their followers, they were referred to by the Sunnis as *Aslāk-i sarāk*, or "red caps" (see Abu 'l-Ḥāzī Bahādur Khān, *Histoire des Mongols et des Turanes*, ed. and tr. P. L. Desmaisons, repr. Amsterdam 1970, 209, n. 1), which was the Persian equivalent of Tk. *šēlī* *shāh* (q.v.). The symbolic importance of the Safawid *shāhī* was such that in an allegorical painting showing the religions of the world, the Shī'īs, as well as Muhammad, 'Alī, al-Hasan, and al-Husayn are all depicted wearing it (the illustration is in the Houghton *Shāh-nāma*, Metropolitan Museum of Art, New York and is reproduced in B. Lewis (ed.), *The World of Islam*, London 1976, 237).

Safawid costume became extremely sumptuous with the reign of Shāh Tahmāsp (1501-1524-76).

Clothes were more closely-fitted than ever before. The *habd* for both sexes became somewhat shorter. It was now fastened in front by a row of shiny buttons or golden frogs. The waist was cinched with a narrow belt decorated with large bejewelled gold discs spaced at equal intervals (for surviving examples of such belts, see Diyā' Pūr, *Ziwarid-yi sanān-i Irān*, 365, Pl. 274, and Pope, *Survey*, vi, Pls. 1394B-C; for detailed depictions in miniatures, see *ibid.*, v, Pl. 901). The most outstanding feature of the Persian wardrobe for the next century-and-a-half is the great richness of the fabrics in both colour and pattern (see Pope, *Survey*, v, Pls. 896, 898-900, for illustrations; and *ibid.*, vi, Pls. 1006, 1017, 1017, 1015, 1028, 1034, 1047, 1042, 1046, for actual textiles and garments).

Safawid costume reached its most distinctive development in the 16th/17th century. The *habd* remained close-fitted about the trunk, but was now often flared below the waist. Over the *habd* was worn an overcoat (*kalāpūsh*) which could be short and sleeveless (*kurdi*) or long and with sleeves (*kaḍābi*). The turban (*mandil* or *dūd band*) became even larger than before, but no longer had the long stick protruding from the top. A large scarf or sash replaced the belt with roundels. It was usually tied with a large knot in front (for surviving examples of such silk sashes, see Pope, *Survey*, vi, Pls. 1074A-E). Safawid clothing has been described in detail by the European travellers Herbert for the first half of the 17th century (T. Herbert, *Travels in Persia, 1627-1629*, London 1928, 79-80, 230-3) and Chardin for the second half (Sir J. Chardin, *Travels in Persia*, London 1927, 211-15, and the engravings between 212 and 213).

Female attire during this period was very sensuous. The dress (*jamīn*) was buttoned or tied below the neck, but slit open down to the navel to expose the bare flesh (Pope, *Survey of Persian Art*, v, Pl. 918A). The items of underwear (*jundān*) were straighter than male drawers and were often decorated with flower motifs. Over these were worn embroidered leggings (*zangār*) that went from several inches above the ankle to slightly above the knee (see Pope, *Survey*, v, Pl. 918, where a reclining female is shown with her dress rolled up to expose her underwear). A loose shawl (*dārhad*) which was held on the head by a tiara, an embroidered hand, or a pointed *Aslāk*, fell down on to the back and shoulders (see e.g. J. M. Upton, *Notes on Persian costumes of the sixteenth and seventeenth centuries*, in *Metropolitan Museum Studies*, II [1929-30], 206, Fig. 2; 214, Fig. 13; and 219, Fig. 21). As in the previous period, the favoured *šāhī* for outdoor wear was white. One new innovation that came into use at this time was the *rū band*, a rectangular white veil that was fastened over the *šāhī* and fell down over the face. The *rū band* had a small slit covered with netting over the eyes to permit vision (Scarce, *Women's veils*, in *Costume*, v, 7, Pl. 7).

Two major trends can be detected in Persian costume during the 17th century. One is a bohemianism that appears in the increasingly casual and suggestive style of dressing, at least in the court circles depicted in paintings (see Pope, *Survey*, v, Pls. 927B, 918A-B, 922B, 924B; and Upton, *Notes on Persian costumes*, 217, Fig. 16). The other is a noticeable, albeit still minor, Western influence in clothing styles. At first this influence was more Georgian than truly European (Chardin, *Travels*, 212), but later the influence of the clothing of European traders and diplomats became stronger (Upton, *Notes on Persian costume*, 217).

4. The Kâdjâr period. There was little discernible change or development in Iranian costume during the half-century of instability between the end of Safaviid rule and the establishment of the Kâdjâr dynasty, except for a decrease in the elegance of upper-class attire and an increase in words of Turkic origin in the vestimentary vocabulary.

The second ruler of the Kâdjâr House, Fath 'Alî Shâh (1212-50/1797/1834), attempted to recreate the glories of the Iranian past with a revival of ancient artistic traditions and styles, including in court dress. He adopted for himself a modified version of one of the Sâsânîd winged crowns (see Lewis, *World of Islam*, 270, Pl. 27, and 272, Pl. 35). Wide shoulder capes and diadems in imitation of Timariid prototypes were also revived for a short while (Götz, *Persian costume*, in Pope, *Survey*, iii, 2254). However, under his successors this artificial renaissance came to an end.

There was growing European influence in Persia already during the reign of Fath 'Alî Shâh. During the 19th century these influences became increasingly dominant in court and military dress. Popular costume came under foreign influence more slowly. The many European travellers, missionaries, and diplomats who visited Persia in the 19th and early 20th centuries have left detailed descriptions of clothing of the period. Male costume was composed of loose drawers (*âf* *djâma* or *shahrîr*) of white, blue, or red cotton, a collarless shirt (*âllâfâk* or *kamsîr*), a tunic (*kamarbîn*), a vest (*kâfâja* or *ânâfî*), one of a variety of outer coats (*balâpâsh*, *birâna*, *habâ*, *djâbâ*—the latter favoured by government secretaries, or jackets (*nîm âna*). The principal hat for all classes was the high *kudâh* of felt (*namad*) or lamb-skin (*pâstî*) which was dented in on one side. Footwear consisted of boots (*sarmâza*) of Russian leather (*bulghâr*) for the upper classes, and leather sandals (*âfâkâ*) or cotton shoes (*gîna*) for the common people. The belt for all classes was most commonly a large shawl tied round the waist (*dâh âmar*). The raulas commonly wore the *fabâ* (see section 1, above), and *sayyîda* the green *simâna* (among the numerous descriptions of male attire, see J. B. Fraser, *A winter's journey: Constantinople to Tehran*, ii, London 1838, 77-103, 151-7, and C. J. Wills, *In the land of the Lion and the Sun, or modern Persia (1866 to 1882)*, London 1893, 327-22).

Female attire for the upper and middle classes consisted of a transparent *pirâhan* of gauze and pantaloon (*âfâkâr*). Over these were worn a short frocked coat or jacket and a pleated skirt (*djâhâs*). The head was normally covered with an embroidered scarf of cotton, silk, or cashmere (*çarpâf*). Upper-class women are depicted in contemporary paintings wearing a jewelled tiara (*nîm âfîf*). Out of doors, women wore a white or black *âfâdâr* and one of a variety of face veils (*ru band*, *pîda*, *burbu*, *nîbâb*) (see Fraser, 323-5; E. C. Sykes, *Persia and its people*, London 1910, 196-203.)

5. Recent years. Urban dress is overwhelmingly that of the modern West. Recently however, there has been a return to the *âfâdâr* even among educated women for political as well as religious reasons. Outside the major cities, and especially in tribal regions, traditional costumes are still worn (for a comprehensive survey, see D. Diya'î Pâr, *Pâqâhâ-i ilâh, âfâdâr-nîghâna wa-mâsûlî-yân ba-râkât-i Shâh-âhshâ-yi Muhammâd Ridâ Shâh-i Paklovi*, Tehran 1340/1967).

IV. — TURKEY

1. Old Turkish costume of the 6th/12th to the 13th/19th centuries. After having settled in Anatolia, the Turks remained faithful to their customs and cultural traditions and preserved their traditional costume. The latter, tracing its origin to Central Asia, was enriched from the 5th/11th century, in Iranian territory, by a certain number of new elements. To judge by the iconographic documents of the 12th to 15th centuries, Turkish costume was inspired to a great extent by Persian costume. But Persian costume evolves, new designs and types of clothing appear in it, whereas Turkish costume, whose style remains almost unchanged for several centuries, retains its specificity and its national character.

Synthesised studies of an historical and comparative character are not always to be found on this subject. The only materials which we have at our disposal, apart from illustrations, are the articles which have come to light and which relate to certain types of clothing in the different periods that Turkish costume has evolved in its history. The question which invariably arouses the largest number of problems and controversies is that of terminology, especially concerning the clothing and the small clothing items of which nothing more has remained. In order to reconstitute the cut of an old costume, its original parts, those which have been preserved, have in the first place to be positioned. Turkish costumes are to be found at present in very large numbers in the collections of Turkish museums, especially in the Topkapı Sarayı Museum of Istanbul. They are also to be found, although in a smaller quantity, in European and American museums, notably in the Victoria and Albert Museum, London, the Islamisches Museum, Berlin, and some others. The oldest pieces of these collections date back to the 15th century, but it is impossible and risky in many cases to establish the exact date of their fabrication. The costume of the 16th century possesses, on the other hand, a documentation which seems credible. This comprises especially the Turkish miniatures and, notably, the special albums with the miniatures of costumes (*âfâf-î-nîma*) which constitutes in this respect a very rich source of information. Failing originals, we can also derive help in our comparative studies from various iconographic materials originating from Europe, such as prints, engravings, paintings or further representations of Turkish costume on objects in ceramic, metal and other materials.

Another source of information on old Turkish costume is constituted by the writings of travellers,

explorers; the descriptions left by European ambassadors; as well as the documents of Turkish archives speaking of the organisation of corporations of tailors, of sewing workshops and of registers of costumes.

The classification of costumes can be established according to the use for which they were destined. We may distinguish, (1) the civilian costumes, (2) the military ones, and (3) the religious ones (of *Sulama* and *derwishes*). The civilian costumes are divided into (h) costumes of the court (costumes of ceremony, state, household) and (ii) costumes of the bourgeoisie, each having its masculine and feminine variants.

A complete costume is composed of some basic elements (whose number varies in accordance with needs and whose importance is not always the same): (a) head-gear, (b) outer garments, (c) inner garments, (d) belt, (e) shoes and (f) accessories.

In Ottoman Turkey, there were registers of laws which also contained the precepts of etiquette. These laws regulated notably dress, i.e. head-gear, clothing, the kind and colour of the material, the shoes, all in accordance with the rank occupied in the social and administrative hierarchy, of the religion or race of the person in question. The most important regulations of this kind date back to the period of Süleyman I (1520-66), Ahmad III (1701-30) and 'Uthman III (1754-7).

Head-gear. It was the head-gear, masculine as well as feminine, which, in Turkish costume, was characterised by the greatest diversity and mobility of forms.

a) Masculine turbans. The Turkish *başmak* was a head-dress of felt or woollen cloth of different thickness around which was wrapped a turban (a long band of material) called in Turkish *sarik* or *dübbel* (current pronunciation *tübbel*). It is from the form of the *başmak* and the way in which the turban was tied that there derive different types and names of head-gear known in Europe as turbans. The *başmak*s, whose height varied, normally had the form of a contracted or enlarged cylinder, flat or bulging; but there were also those which resembled a truncated cone or a cupola. The highest *başmak*s (40 to 60 cm.) were kept rigid by means of a construction of metal bars or a kind of basket. They had a smooth or quilted (*terk*) surface and were trimmed with cotton to give the effect of rebel or a dome shape with the quilting (*dülm*). To make the turban, lengths of material (*sarik*) were used which were folded or made into rolls (*burmal*). Fine materials such as cotton, gauze, muslin, fine wool, silk or brocade were chosen for this. Under the *başmak* was placed a skull-cap (*takke*) which could also be worn alone. Sometimes small braids (*sak*) or pendants (*puskull*) were attached to the *başmak*s, allowing the end of the *sarik* to fall on the back or the shoulders (*aylaml*). To give protection from the rain, a kind of small umbrella or covering (*yagmurbaş*) was carried.

*Kavuk*s included: *çevrösünlü*—of cylindrical shape, growing broader at the top, worn with a white turban rolled *slantwise* on two sides; *salim*—of cylindrical shape, introduced by Selim I (918-26/1512-20), some 65 cm. high, flat on top, worn with a white turban rolled around and bulging at the sides; *külah*—also called *paçall külah*, is the most widespread type of turban, worn from the 18th century by functionaries and civilians. It is a *başmak* of cylindrical shape, quilted, worn with a white turban not too long, rolled at the base and tied in front; *müştavveze*

—a head-dress reserved for the Sultan and the highest dignitaries, a *başmak* of cylindrical shape, growing slightly broader towards the top, about 45 cm. high, flat on top, worn with a white turban rolled around; the end of the turban was fastened with a small roll of red felt; *kallâf*, a head-dress reserved for dignitaries with the rank of *paşa* which, from the 18th century, became official head-gear, a *başmak* with the body of a cone, worn with a white turban rolled around, draped and bulging in four places, decorated with a gold band; *şor* (*şorî*), worn from the 18th century by the religious classes, a large, dome-shaped *başmak*, worn with a white turban rolled around and which, draped, forms harmonious folds; *şafet* (*şubetî şafî/afî*), worn from the 17th century by the functionaries of the Defter, a dome-shaped *başmak*, worn with a long turban forming folds fastened towards the base with a fine thread or pin; and *şharîf*—worn from the 17th century, a high, pointed *başmak*, worn with a turban rolled around whose end was often left free.

Another quite widespread head-dress was the turban worn on a small skull-cap (*takke*), often folded in large rolls (*burmal*) or particularly the *başmak* worn with a small turban (*mucâbbad*) rolled around; the *başmak* without a turban was called *dol başmak* or *dol kallâf*.

b) *Külah* (cap, hat). *Külah*s were a very widespread masculine and feminine head-gear, worn by soldiers, dervishes, functionaries and civilians. This head-gear, of which several dozen variants existed, could be made from felt or woollen cloth combined with other materials such as cotton cloth, fur, small turbans, scarves and trimmings. As to their shape, the most common were caps, head-dresses in the shape of a dome, cone, cylinder broadening towards the top, tube, helmet, brimmed hats with flaps and straps. Among the *külah*s most frequently worn by servants of the court and soldiers there were: the *seris tas*, worn by the pages; a high, cylindrical *külah* trimmed with brocade and decorated with *zîrf*; the *hök*, which was the most widespread head-gear, in a cone or helmet shape, raised in front, decorated at the base with gold braid; officers wore it decorated in addition with a plume; the *ışkıl* (*kırdî külah*) of the Jesuites, a high *külah* whose rear part fell in the form of a covering (*yafırm*) on the back, a ribbon ornamenting it at the base where a metal case for the officer's spoon or plume was also fixed; and the *barsa* of the palace domestics, a *külah* of woollen cloth in the shape of a sleeve whose rear part fell on the back.

The *külah*s worn by the dervishes most frequently had the form of a cone, a helmet or a cylinder widening towards the top and they were normally quilted (each order or *şarika* had the right to a defined number of *terk*). There were also *külah*s bordered with fur (*müştavveze*). Only *şayyâh*s had the right to put a turban on the *külah*. The *külah*s worn by dervishes also had other names: *şakke*, *şifî* and *şifî şifî*.

In the 19th century, the *fer* became a current head-dress, as did the *ğubara* in the army.

c) *Kaipaak* (busby), a kind of bonnet of lamb's fleece or woollen cloth decorated with lamb's fleece, worn by men and women.

d) Feminine headgear: *külah*s of various shapes, scarves with a flap or a peak (*şifir*); a veil (*şarşef*); a scarf called a *yekmek*, and the *şhwar*, the most popular head-gear, in the form of a conical *külah* or hood decorated with a fine scarf or shawl

and trimmed with feathers, precious stones and ribbons.

Outer garments. The most characteristic and widespread outer garment in Turkey (known since antiquity in Central Asia and the Near East) was the *kaftan* (caftan), a long, full robe with sleeves. Its cut varied according to the period and area. The Turkish caftan had several variants which were distinguished from one another by the length and width of the skirts and sleeves, the buttoning, the use of slit or supplementary sleeves of a decorative character. It was these elements and the cut which decided the type of caftan. The *ahîsî*, for example, was a ceremonial caftan, made with sumptuous materials, quite full, with skirts side by side or crossed over. Caftans had skirts descending as far as the ankle, covering the knee, descending as far as the ground or even trailing on the ground. They were slightly-fitting, flared or close-fitting, most often with a collar or bottom of a collar buttoned up to the neck and with a rounded or pointed scooped neckline, with crossed over, buckled or buttonless skirts, fitted or more or less flared sleeves, descending as far as the wrist or short, elongated slit or falling on the back, double sleeves. Caftans were made in brocade, velvet, *kamkâr*, satin, cotton, silk, cotton satin and wool. They were often embroidered, laced with frogs and loops, edged with fur and with the lining.

Outer garments. These included the *dolama*, a caftan worn by the least important palace servants, which has a long robe, fastened in front, with narrow sleeves; *entârî*, a kind of caftan, the most widespread of all the garments, worn under the real caftan and fur, descending as far as the ankle or covering the knee; *ferâje* (a man's garment), a long, full robe, with rather wide, short sleeves, sometimes edged with sable, sometimes with a collar; *gâbbâ*, a full caftan; *kerâke*, a kind of *gâbbâ* in fine wool; *ahîrâ*, a full, short caftan with sleeves; *âddî* (really the name of a thick material), a garment of thick woollen cloth, stopping at the knee; *setre*, a military garment covering the knee and fastened at the front; *tephen* (or *tehen*), a short caftan with sleeves, buckled and bordered; *salâ*, a kind of *tephen* worn by the working classes; *yelek*, a waistcoat without sleeves formerly worn as an outer garment; *gâmurâddî*, a short, trimmed waistcoat without sleeves; *manâddî*, a short caftan without sleeves, stopping at the waist; *buşgâ*, a kind of very full caftan with wide sleeves, worn most frequently as a travelling or riding garment. Dervishes' garments; *tennâre*, a long robe without sleeves; *hayderî*, a kind of short garment, without sleeves, stopping at the waist; *ahîrâ*, a short caftan with flared sleeves; *elek*, a shirt; and *mindân*.

To go out, particularly in the rain, a kind of cape was put on, called a *harmâniyyâ*, *harânk*, *hâpâi* or *yagârmânk*. Furs were an important element in the costume worn at court. Fox, squirrel, ermine, sable, lynx and marten furs were covered with the most varied materials (brocade, wool, velvet, silk, cotton satin and satin). They were characterised by a great diversity of styles, but the caftan was also dominant there. The most sumptuous fur was the *hâpâniyyâ* of the sultan, with a large fur collar, narrow or short sleeves, decorated with fur below the shoulders, with straight supplementary sleeves, laced with frogs and loops in front; *ferîsî* *buşgâ*, a fur of white sable covered with green cotton satin; and *kamkârâ*, a fur (or caftan) with straight sleeves, with a collar. Full furs edged with fur in front and in general with a collar were worn during cere-

monies, gala receptions, etc. These were the *âst kürk*, the *âlîndat kürk*, or the *dort hollu kürk* (when they had supplementary sleeves), or further the *hel yâllî kürk* (when it was a fur with wide sleeves).

The outer garments most often worn by women were: the *ferâje*, the *entârî*, the *yelek* and capes (*harmâniyyâ*); *ferâje*, a kind of full cloak with sleeves and a collar, sometimes with cuffs; *entârî*, a long robe whose cut varied, normally with a low neckline, fitting at the waist and flaring from the hips, buttoned in front as far as the waist, trimmed, laced with frogs and loops, with narrow sleeves, sometimes long or turned up. Women also wore short caftans or short *entârî* stopping at the hips with wide skirts. Their furs had long sleeves or short ones or were without sleeves. They put a long robe under the *entârî* or over baggy trousers.

Inner garments. Among these are counted skirts (*gâvâk*, *ghâvâk*); a long robe worn under the *entârî* or caftan, *dolama* or *âddî*; baggy trousers (*ghâvâdî*) of varying fullness, tulle and in finer materials for women; men's trousers (*âkâghîr*), reaching down to the ankle or below the knee; the *petur*, full trousers as far as the knee and straight from the knee to the ankle; the *sonâk*, breeches worn by men as an outer garment; pants (*don*). All the parts of the trousers were held with a special belt called *uğur*.

Belts were an indispensable element of old Turkish costume. They were of two kinds: material belts (*ghusâk*), supple, knotted, with the ends hidden under the trousers; and leather belts (*humer*), fastened with a buckle, often decorated, gilded, in hammered leather, embellished and encrusted with precious stones.

Shoes were divided into indoor shoes with a supple sole and town shoes with a thicker sole. *çizme*, the most widespread shoes for several centuries, with a high leg reaching up as far as the knee and a supple sole; women's boots bore the name *paçmak*; *cedâk* (an older form *çedâk*), with a low leg, most often made in yellow Moroccan leather, with a supple sole; *mesit*, a kind of *cedâk*; *ghîghîp*, a mule without heels with the end slightly raised and a supple sole; *terlik*, the most popular shoes, worn by men and women, without heels or quarters slightly raised at the end, in leather or material, often decorated; shoes for women had a low heel. To go out in the town the *paçmak* was slipped on over the supple shoes (*cedâk*, *mesit*). Sandals with a compensatory sole called *salla* were also worn. The shoes of the sultan, dignitaries and women were often richly decorated, in accordance with various techniques, with plant motifs (appliqués, embroidered, hammered leather).

Accessories decorating the headgear: plume (*sorgul*, *sâpîrge*), crest (*çelenk*), feathers, ornaments, scarves, shawls, ribbons, tassels, small braids and plumes. Accessories decorating outer garments: shawls, trimmings, buckles, small buckles and metal badges. Jewels and side arms completed the costume.

2. The modern period. In the 19th century, in the period of the army reforms, a new military uniform was introduced, combining modified forms of old Turkish costume with some elements of European uniform. This new uniform became common during the second half of the 19th century. Later on, modern European uniform was introduced.

Regional costume is not made the object of this study: there only exist a few studies in depth on this subject (see Hamdy Rey and Marie de Launay,

Les costumes populaires de la Turquie en 1873, Constantinople 1873).

(T. MAJDA)

LIBERIA, an African republic in which, according to the sources, Muslims account for no more than 15 to 20% of the population. They are concentrated mainly between Monrovia and Robertsport on the frontier of Sierra Leone as well as on the frontier of Guinea. Their number is estimated at 300,000, but because the censuses take no account of religious allegiance, there exists no precise figure for a Muslim population whose Islamic culture was until recently extremely primitive.

Islam was a late manifestation in Liberia. Certain groups related to the Mandingo peoples and arriving in the 16th century, from the region of Kaakan were probably the first Muslims to penetrate what was to become Liberia. After the Vai, other Mandingo groups like the predominantly merchant tribe of the Gbama were totally Islamised, while the Loma (or Bouzi) the Kpelle, the Mano and the Sumba were only partially converted. These peoples, impelled by military and commercial forces, included in their ranks Islamised elements. But the expansion of Islam could only begin to take shape from the 19th century onwards when the Afro-American employers had crossed the forest zone.

Since Liberia was governed until the coup d'état of 12 April 1980 by Liberians of Negro American

origin, mostly of the Protestant faith, Muslims enjoyed no political representation. Moreover, the Liberian constitution of 1847 had a significant preamble: 'Our People recognises with pious gratitude the goodness of God who has accorded us the blessings of the Christian religion and granted us political and religious liberties...'; but the first clause declared that all religions would be tolerated and that no religious conditions would be attached to the holding of public office.

In 1953, President Tubman enacted a law pledging to the Muslims of Liberia full recognition of their rights. In 1965, the same president attended the mosque for the beginning of Ramadan and delivered the address. It was his government which, after consultation, gave to the leading *Imâm* the title of *Muslim Bishop*.

Since 1974, the National Muslim Council of Liberia has united the principal groups. It comprises the following organisations: *The Council of the Muslim Community*, founded in 1949 by Alhajj Varnumyeh Sharif who, in 1953, built the capital's first mosque (inaugurated by President Tubman); *The Muslim Congress of Liberia*, founded in 1963 for cultural and scholastic objectives; *The Muslim League of Satefiya*; and *The Liberia Muslim Union*, established in the north, in the province of Nimba, and providing bursaries for academic students to be educated abroad.

The majority of the Muslims are orthodox Sunnis of the Maliki rite. Since 1957, the 'Caliph' Mirsh Nâsir Ahmad, who came in 1970 from Pakistan, has established himself and gathered around him a group of about a thousand disciples belonging to the Ahmadiyya sect. In addition, an autonomous and syncretist Baha'i sect, which arrived in the country in 1957, has founded at Bomi Hilina a school capable of accommodating between 25 and 30 pupils.

In a land where the level of literacy is low (15 to 20%), the contribution made by the Muslim schools is feeble. The National Muslim Council sponsors one primary school in Monrovia and three high schools of which one, at Kakota, comprises 300 pupils. There is one elementary school at Robertsport (province of Cape Mount) and a secondary school in the province of Boag (40 pupils). Instruction is given partly in Arabic, partly in English.

Some rare Arabic books feature in the libraries of the capital, including some that have no religious content. There are certain Lebanese newspapers, of no interest other than to nationals of that country. The Ahmadiyya broadcast a five-minute television programme every Friday.

Each year, between 200 and 300 Liberian pilgrims make the journey to Mecca. Only *al-'id al-kabir* at the end of Ramadan is celebrated with any kind of vigour. Despite these modest activities, the role of the Muslims seems to be steadily growing.

Bibliography: *Libéria*, in J. M. Cuoq, *Les Musulmans en Afrique*, Paris 1975, 172-4 and bibli cited there; J.-P. Monchau, *Les Musulmans de Libéria*, in *Atlas raisonné du monde musulman contemporain*, to appear in the publications of the CREAM.

(R. CORMEVIN)

LIBYĀ, an Arabic form based on the Italian Libia, which in turn derives from the ancient Greek Λιβύη/Λιβύα.

1. The name. The name first appears in ancient Egyptian writings in the form RBW or LBW, perhaps representing Lebu or Libu. It was also known to the ancient Israelites and occurs several times in the later books of the Old Testament in the form Lubim,

1. Egypt, Fatimid period. *Taswe* with decorative bands and border. (Courtesy of the Coptic Museum, Cairo).

2. Egypt, Fatimid period. Fragment of an embroidered garment. (Courtesy of the Coptic Museum, Cairo).

3. Egypt, 1007-11. *Twāṣ* silk fragment inscribed with the name of the Fāṭimid caliph al-Ḥākim and decorated with birds (*ṣudayyar*). (Courtesy of the Museum of Islamic Art, Cairo).

4. Egypt, Fāṭimid period. Dancing girl in what appears to be a *siwāl*. She holds a *mandil humm* in each hand. (Courtesy of the Museum of Islamic Art, Cairo).

6. Syria (?), ca. 1500. Group scene: The seated figure on the right is wearing a *saylân* or *farka* over his turban. The fourth figure is wearing a printed robe (*sakhlâma*), the woman standing below him is veiled by an *isâr*, and the man on the left wears a turban wrapped around a *jalâssana*. From the *Makâmât* of al-Harîrî. (Brit. Mus. Add. 22.214, fol. 15).

5. N. 'Ijâk (?), second quarter of the 13th century. Woman wearing a *sîda* (*faradîyya*). On her head is an *shâbe ma'âla*. From the *Makâmât* of al-Harîrî. (Bibl. Nat. Paris, non. Arabs 3939, fol. 131r).

7. N. Çirâk, ca. 1518-19. Ruler wearing a *paâdî turkî* with *paâdî* bands. On his head is a *sharbaşa*. His attendants also wear Turkish costs. Most wear the cap known as *Asakanta*. From the frontispiece of the *K. al-Aghânî* (Feyzullah Efendi 1566, fol. 1b, Millet Kütüphanesi, İstanbul).

9. Tripolitanian merchant. From Handy Boy and Launay, *Les costumes populaires de la Tunisie en 1873*, Constantinople 1873, Pl. XLII.

8. Syria. Two women of Lattakia. The standing figure is veiled with a *burqa* and *shura*, the reclining figure with a *yaghsak* and *mud'a*. From Lortie, *La Syrie d'aujourd'hui*, Paris 1884, plate facing p. 48.

10. Egypt. Men of the bourgeoisie in *giwla* and *banīḥ*. From Lane, *Modern Egyptians*, London 1896, 47.

21. Transjordanian villager wearing a *kumma*, *kabr*, and 'abā'a. On his head a *kūfya* and a 'abā'a. From Musil, *Arabia Petraea*, Vienna 1908, fig. 29.

22. Palestine. *Shams* worn by married women. Bethlehem, late 19th century. (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

23. Palestine. *Takya* for a woman. Bethlehem, late 19th-early 20th century (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

15. Syria. *Yidek* for a woman. Aleppo, ca. 1850. (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

14. Syria, early 20th century. *Libas* or *sirwal* for a woman. (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

27. Morocco. A boy's striped woolen *djellaba*.
(Courtesy: Moroccan Ministry of Tourism).

16. Morocco. Draping of the man's *kisf* or *keff* in the national fashion.
(From E. Douat, *Marrakech*, Paris 1903, 254).

18. Morocco. High Atlas Berbers wearing the heavy black woollen *shnif*. (From G. Rousseau, *Le costume au Maroc*, Paris 1938, fig. 1).

19. Algerian *mufti* wearing long Andalusian *serwal* and a *kaftan* over which is a *shab'a* and a white *sitham*. On his head is a Turkish-style turban called *simima mbogdja* over which is the scarf known as a *muhammaka*, similar to the ancient *saylasan*. (From G. Marçais, *Le costume musulman d'Alger*, Paris 1930, Pl. XIII-Bibl. Nat. Estampes O 1 2 a)

20. Tunisia. Woman's wedding dress known as *kmdjdja kabira* from Nabeul. (From S. Sethom, *La tunique de mariage en Tunisie*, in *Cahiers des Arts et Traditions populaires*, no. 3 [Tunis 1969], fig. 9).

21. Southern Morocco. Guedra dancer wearing an indigo iadr pinned at either side of the bosom with silver fibulae called *shalila*, *Asfiyya* or *basima*. (Courtesy: Moroccan Ministry of Tourism).

22. Iran. Men and women in Tirmidid attire (from the *Shāh-nāma* of Rāysunkur, Gulistan Palace, Tehran, dated 833/1429-30).

23. Iran. Scene from the *Khamsa* of Nizami depicting Alexander meeting the *Khakhan* of China. All are dressed in Safavid attire and wear the distinctive turban with the protruding spike known as the *tāji Safawi* (from a ms. in the Metropolitan Museum of Art, painted in Tabriz, 931/1524-5).

24. Iran. Kādjār court scene showing Fath 'Alī Shāh receiving tribute. Figures in the foreground wear frocked coats and Aūdās, while the enthroned Shah wears a modified version of the ancient Sāsānid crown (from Bodleian Library, Oxford, ms. Elliott 327, f. 263b, ca. 1810).

25. Iran. Women in black šāḍer and white rū band (from E. C. Sykes, *Persia and its people*, London 1910).

nı* (key bearer). (National Li-
brary, Warsaw).

The *Lebanim* of Genesis, x, 13 may possibly represent the same name. The term passed into later and modern usage through the Greeks and subsequently the Romans. In Greek geographical writings, it was most commonly used—along with *Africa*, which later replaced it in this sense—as the name of one of the three continents or, occasionally, as the name of the region in North Africa west of Egypt. Transmitted by the Greeks to the Romans in both senses, it was first made the name of a specific political entity by the Emperor Diocletian, who established the adjoining provinces of upper and lower Libya west of Egypt. The authenticity of a *ḥadīth* quoted by al-Bakrī (*Description de l'Afrique septentrionale*), ed.—French tr. M. G. de Slane, Paris 1965; Ar. 8, tr. 23) according to which the Prophet is supposed to have said "He whose sins are numerous must place Libya (Lūbiya) behind him", i.e. go to fight the infidels in Ifriqiya, is doubtful; moreover, the same author (Ar. 21, tr. 49) states that Ifriqiya is really called Libiya, from the name of the founder of Memphis, who reigned over the land.

The term passed, along with much other Greek geographical knowledge and terminology to the Arabs, who normally wrote it in the form *Lūbiya* (لُوبِيَا). The earliest Arabic geographical writers name *Lūbiya* as one of the four quadrants into which the world is divided, the others being Europe, Ethiopia and Scythia (al-Battānī, *Opus astronomicum*, ed. C. A. Nallino, text iii, Rome 1899, 27, tr. 19; Ibn Khurraḍādhbih, 135, cf. Ibn al-Fakih, 6-7, 197; Agapius of Manbij, K. al-*Uṣūl*, ed. A. Vasiliev in *Patrologia Orientalis*, v, Paris 1910-2, 602; al-Ḥamdānī, *Sifat Dīwān al-ʿArab*, ed. D. H. Müller, 1, Leiden 1884, 32; Yāqūt, s.v., citing al-Bīrūnī who ascribes this classification explicitly to the Greeks). *Lūbiya* consisted of "Egypt, Kuzuni, Ḥabash, the lands of the Berbers and adjoining countries, and the southern sea" in addition to this vague use as the name of a quarter, *Lūbiya* also occurs, more specifically, as a place-name in northern Africa. Ibn ʿAbd al-Hakam (*Futūḥ Miṣr*, ed. and partial French tr. A. Goleau, *Conquête de l'Afrique du Nord et de l'Espagne*, Algiers 1947, 35, 77), probably copied by Ibn Khurraḍādhbih (ed. and partial French tr. M. Hadj-Sadok, *Description du Maghrib et de l'Espagne au III^e siècle*, Algiers 1949, 13 and n. 172) makes *Lūbiya* a province of western Egypt. Al-Nasʿūdī (*Mawāḍiʿ*, iii, 242 = 5 1206), copying in his turn Ibn Khurraḍādhbih, speaks of a place (*maḥall*) named *Lūbiya* wa-Maʿrakisiya (Marnasica) and elites in the *Tanāḥ* (20) the region (*adhiya*) of al-Iṣkandariyya, *Lūbiya* and al-Maʿrakisiya. Ibn al-Fakih (*Bulādh*, 74, French tr. Massé, 90) makes *Lūbiya* a locality of Egypt. Al-Yaʿqūbī (*Bulādh*, 330, 342, tr. Wiet, 197, 201) speaks of *Lūbiya* as one of the districts (*ahra* or *amaḥ*) dependent on Alexandria, while Yāqūt (iv, 368) places *Lūbiya* between Alexandria and Barca. Most of the mediaeval Arab geographers see North African Libya as administratively part of Egypt (al-Maqrīzī, *Khitāṭ*, ed. Wiet, i, 56, 399, 321; Ibn Duqmāḥ, v, 43; al-Kalkashandī, *Ṣubḥ*, iii, 386-7, 390-1, citing the *Rawḍ al-miʿār* and al-Ḥudūdī; see further J. Maspero and G. Wiet, *Matériaux pour servir à la géographie de l'Égypte*, Mémoires IFAO, xxvii, Cairo 1919, 163; A. Grohmann, *Studien zur historischen Geographie und Verwaltung der frühmittelalterlichen Ägypten*, Vienna 1959, 8-9). The name also occurs as that of a mountain vaguely situated west of the Nile Valley. The passage in

al-Bīrūnī, (K. al-*Dīwān* fi *ṣiḥṥat al-ḥayāt*, Hyderabad 1355, 200) naming *Lūbiya* as a source of precious stones south of Egypt, is certainly a misreading for Nubia. The form *Libiya* is used, exceptionally, by al-Maqrīzī (*Khitāṭ*, ed. Wiet, i, 32), citing the Arabic version of Orosius, and therefore following the Latin form of the name. By late mediaeval times, the name *Lūbiya* seems to have passed out of use in Arabic. It reappears in the 19th century when it is clearly derived from European sources. A late Ottoman work of reference, the historical and geographical dictionary of Ahmed Rifāʿi (*Lughat al-ʿArabiyya wa-dīwān al-ʿArabiyya*, vi, Istanbul 1300, 151) lists *Libiya* in the form *Libt*, obviously transcribed from the French, and defines it as "the Greek name of Africa". The entry goes on to explain the different senses in which the word was subsequently used ends by noting that, in the writer's own day, the term was confined to the regions "beyond Tripoli, Tunisia and Egypt and northeast of the Great Sahara Desert." Al-Mubārak (*Khitāṭ*, xv, 41), no doubt following European practice, also uses the form *Libiya* for the region west of Egypt.

The name *Libya* continued in occasional use in Europe, mainly in the context of ancient history. It was given greater precision and popularity by the Italian geographer F. Minutilli, whose *Bibliografia della Libia* was published in Turin in 1903, and who applies the term specifically to the two Turkish *sandjaks* of Cyrenaica (Barqa (q.v.)) and Tripolitania (Tarābulus al-Ḥarb (q.v.)), the only parts of the North Africa littoral that had not yet fallen under European control. *Libya* remained a geographical expression until the Italian invasion and the Italian decree of 5 November 1911, proclaiming Italian sovereignty over the two Turkish *sandjaks*. It was made the official name of a country—for the first time since Diocletian—by the Italian royal decree of 1 January 1934, which created a new colony, formed by the union of Cyrenaica and Tripolitania, and called *Libya* (Arabic *Libiyā*). This form was retained by the independent state established after the ending of Italian rule.

Histiógraphy: For the earlier history, the reader is referred to the articles *BARQA*, *BARĀNA* and *TARĀBULUS*. Languages: On the Arabic spoken in Libya, see *ʿAKASIRYĀ* iii, 3. The Western dialects. On Berber, see *BARBERS*, v, as well as A. Basset, *La langue berbère*, in *Handbook of African Languages*, i, London-New York-Toronto 1952, 69-70. (Ed.)

2. **Libyo-Berber inscriptions.** The Maghrib and the Sahara possess a large number of inscriptions using a script peculiar to the North-West of Africa, which was given the name Numidian and later Libyan. The first name, which has fallen out of use, was, however, to be preserved to designate one of the forms of this script, known as Eastern, which is widespread in Tunisia and Eastern Algeria.

The Libyan inscriptions published up to now and regarded as ancient, let us say pre-Islamic, can be estimated at some 1,200, but the Sahara possesses thousands of more recent graffiti and inscriptions carved on weathered rocks in the same script, still used by the Touareg, who call it *Tifinagh* (See *BARBERS*, vi).

These inscriptions, whether the monumental texts of Dougga from the 2nd century B.C. or the simple Touareg graffiti, use only signs of a strictly geometrical form, based for preference on the straight line. Also, the alphabet of Dougga which contains 23 or 24 signs only uses the circle for two letters: (C):

B and O: R and the curve exceptionally) for M, more often written J, and (for S, more often rendered by X.

The other Libyan alphabets make more use of the curve, which appears for example in five or six *Tifinagh* signs. The dots, only present in the composition of two Eastern Libyan signs, are more frequent in *Tifinagh* (seven signs) where they sometimes replace the straight portions of the Eastern signs, also — in Eastern it is rendered by W in *Tifinagh*. The Libyan scripts seem to have failed to appreciate any cursive form; the signs are clearly separated in the ancient scripts, which know nothing of connections and ligatures, which are not so rare in *Tifinagh*, where the initial *n* and final *t* are joined in about twenty cases according to K. Plasset.

Another characteristic is that the Libyan script, like the *Tifinagh*, remains essentially consonantal. The vowels are not transcribed graphically except at times with a dot in *Tifinagh*, at the end of certain words. The sign \equiv seems to have had a separate function in the Eastern script, and the dot to have been the equivalent of *alif*.

The Libyan script, moreover, has no shuffling of consonants and does not indicate stress, also, the alphabet is limited. In fact, 24 signs are known in the so-called Eastern form, of which one is doubtful, which agrees with the information given by an African writer of the 5th century, Fulgentius, according to whom the Libyan alphabet contained 23 signs.

The Libyan inscriptions, the ancient Libyco-Berber or *Tifinagh* and the modern *Tifinagh* inscriptions, occupy a vast area which seems to correspond to the ancient domain of the Berber language. Roughly, the signs of this script are to be found as far from the Mediterranean as far south as the Niger and from the Canary Islands to Libya. It is towards the east that the limit of this script's use is least known.

In Libya it was a common use in the Fezzan and Tripolitania. Recently, at the time of his excavation of Bu Njem, R. Rebuffat noted that the Libyan inscriptions and graffiti there were influenced by Latin writing. Beyond there the evidence is less certain; nevertheless, a rock inscription found at Khôr Kilebera in Nubia was published recently. The signs of this inscription are sufficiently close to ancient *Tifinagh* for Alvarez Delgado to suggest a transcription and translation. Another author, Zavadovsky, even considered recognising in it a continuation of Meroitic script by Libyan, but this hypothesis was rejected by the majority of specialists. In this vast area, the density of inscriptions is highly variable and they are, furthermore, of different periods.

The zone with the highest concentration of Libyan inscriptions, their *locus classicus*, is undoubtedly North-West Tunisia and the part of Algeria adjacent to it; of the 3,724 published by J.-R. Chabot in his *Recueil des inscriptions libyques*, 2,073 come from this region. It is in fact the land of the Numides Masyyles, cradles of the Numidian kingdom, where the Libyan language and script remained alive for a long time. In this district a large number of inscriptions are, moreover, from the Roman period. The rest of Algeria, as well as Northern Morocco, contains a low density of inscriptions. Despite the discoveries made since the *Recueil* of J.-R. Chabot appeared in 1940-1, the number of these inscriptions has only risen to 27 in Northern Morocco (L. Galand), and those in Algeria to the west of Sétif can be estimated at around fifty, of which about ten are in Kabylia alone.

Things are less clear on approaching the Saharan regions. Exploration is incomplete and above all very unevenly conducted. Furthermore, geological and topographical conditions are very influential factors in distribution. It is quite understandable that the flat regions, such as the Hamada or the basins occupied by dunes like the Western Great Erg, the Edeyen of Marzouk, contain very few inscriptions, while the rocky regions are infinitely richer. In the present state of our knowledge, which does not necessarily reflect the reality, the richest Saharan regions are the Hoggar and Tassili n'Ajjer, as well as its Libyan extension formed by the Acaeus, the Ait, the Adrar of the tiers and the southern edge of the Atlas chain, particularly the south of the High Atlas, the Anti-Atlas and the Rio de Oro.

Inscriptions whose signs are close to the Saharan alphabet are not exceptional in the Canary Islands.

Periodically, "Libyan" inscriptions are mentioned outside the Berber domain, such as those of the Grotto Regina at Palermo, which, if their relationship to Libyan is confirmed, can be explained by the presence of Numidian mercenaries in the Punic contingents of Sicily. Others have been shown to be bad readings of Latin inscriptions (an inscription of La Garde Freinet, Var, attributed to the "Sarcenus") or the most fantastic interpretations, such as inscriptions found in Mexico or even Chile.

Traditionally, there are several distinguishable "alphabets" in the Libyan script. Some are contemporaneous with each other, such as the so-called Eastern and Western alphabets. The Libyco-Berber script of the Northern Sahara and the ancient *Tifinagh* preceded the *Tifinagh* used at the present day by the Touaregs, who are unable to read the ancient *Tifinagh*. Modern *Tifinagh* can undergo regional variations which are still little known.

The Eastern alphabet covers the north of Tripolitania, Tunisia and Eastern Algeria; the western limit of its use is to the east of Sétif, although two western-type inscriptions may be seen at Guelma and some eastern-type inscriptions may exceptionally be found in Kabylia; such is the case of the decorated stele featuring a person standing found at Lakhderia (ex-Palestin), which bears on its main face, on either side of the person, an inscription with eastern signs. This inscription mentions offices and titles similar to those in use in Dougga in the 2nd century B.C. This detail allows us to put forward the hypothesis that it may well be an official inscription of the Numidian Masylian kingdom and somewhat "foreign" in a land that was in ancient times Masylian and the later Mauritanian. This hypothesis may be strengthened by the existence on the reverse of the stele of graffiti using the Western script, which is that of the other inscriptions of the region. In the present state of our knowledge, the stele of Lakhderia is the westernmost evidence of the Numidian or Eastern alphabet which seems to us to be more precisely Masylian.

The Western Libyan alphabet covers the lands peopled by the Masylylians and Moors. It contains a greater number of signs than the Eastern, but also presents more variations, some signs known in Algeria are unknown in Morocco, and vice-versa. This script thus occupies a vast region, for all the Libyco-Berber inscriptions of the Northern Sahara and the Atlas belong to it to a greater or lesser extent. A great many of the Canary Islands inscriptions have the same signs, whose value is unfortunately not known with any certainty; besides, it is hardly likely that the Western script and that of

the Libeco-Berber inscriptions can be transcribed in the same way everywhere. This does not prevent three signs $\rightarrow \nabla$ (read from right to left) being found throughout the western area, from Guelma to the Atlantic, and is evidence of a certain unity.

Modern Tifinagh signs, current or sub-current, whose use goes back at least to the 5th century A.D. (tomb of Tili Huan in Hoggar), are known throughout the Touareg world and go beyond it on the north-west, to Touat and Gourara, where they were even in use among the Judaeo-Berbers.

In some regions such as the Anti-Atlas, particularly in the Tinzoulène, the signs of the Western script are sometimes mixed with small animal figures (horse, dog, ox) which appear to act as pictograms; they are so closely linked that it makes it hard to believe that they do not have the same semantic content. The presence of dromedary figures in the same scenes prevents these inscriptions from being regarded as very ancient. These pictograms, if they really play this role, cannot serve to support the hypothesis of the Libyan alphabet coming into being through transformations of ancient marks of ownership and other traditional drawings, such as those which still figures in tattoos.

However, it should be noted that Tifinagh has two signs: ∇ , a sign which has the value *Dj*, and ∇ , which has the value *Z*, the two of which seem to be derived from signs of a figurative, more or less anthropomorphic, character. More frequently, Libyan Tifinagh is written in horizontal lines, but the meaning of the reading is highly variable, sometimes it is from right to left, sometimes from left to right, from top to bottom and in boustrophedon. K. Pinse noted that the use of a movable support, such as a sheet of paper, actually favoured this tendency. There are even some inscriptions known which describe almost closed curves.

Only the current form of Tifinagh and the Eastern Libyan alphabet can be transcribed, the former because the script and language are still in use among the Touareg, the latter because we have at our disposal several Libeco-Punic inscriptions, in particular that of Dougga, where we know that the Libyan text corresponds quite closely to the Punic text. This last has also been transcribed, without translation, some Libyan titles or municipal offices, such as *LOGNIT* or *GZB*, which, it seems, had no equivalent in the Punic towns. Unfortunately, while the value of the signs is basically known and only requires some verification or points of detail, the language of the Libyan inscriptions is still unknown to us. The little that is known of Libyan, some elements of vocabulary and some presumed grammatical functions, show clearly that this language belongs to Berber; an ancient Berber, certainly, and imperfectly transcribed by a strictly consonantal alphabet, but which cannot be fundamentally different from the numerous current Berber dialects.

However, since the composition of the famous *Reconquête* of Chabot, the very few specialists in this field have in general refused to suggest any translation of the texts, which are indeed very short, of the majority of the Libyan inscriptions; some even go so far as to pose the question of whether Libyan belongs to Berber. This carefulness contrasts with the adventurous attempts of G. Mercy, who, relying on Berber, particularly Moroccan *Tamazight* and Touareg *Tamazagh*, suggested a translation for most of the Libyan inscriptions known in his time. This attempt was followed by M. Alvarez Delgado, who extends it to some Canary Islands inscriptions.

Between the possibly exaggerated carefulness of the former, and the certainly dangerous enthusiasm of the latter, there has to be a middle position which accepts at the same time both the most serious checking and control and the minimum of hypothesis indispensable for the progress of all-knowledge.

The Western alphabet contains some supplementary signs which are absent in the Eastern, and whose originality has been demonstrated by L. Galdard in his *Inscriptions antiques du Maroc*. The two of these two ancient alphabets were certainly contemporaneous, and it would be a mistake to believe, following a historicising logic, that the Eastern alphabet is the older because the script came from the East. Personally, adopting a hypothesis of J. Février, the author of the present article would carry it so far as to think that the Eastern form of the Libyan script (Numidian or Massylian alphabet) is a recast and simplified form of the original script due to contact with Punic, whereas outside the Massylian territory the old forms continued to be employed and to evolve until they became modern Tifinagh, which itself affords variations. His only disagreement with the hypothesis presented by J. Février is over the age of this adaptation, which Février placed in the 3rd century or the beginning of the 2nd century B.C., whereas it seems to be much earlier.

Among others, the hypothesis has for long been prevalent that the Libyan alphabet derived directly from the Punic alphabet, as the name Tifinagh given to the present form of this script implies. But it is widely recognised that an origin derived from etymology can be fallacious. Nevertheless, the Libyan alphabet has several signs in common with the Punic script where they have the same value (*G*, *T*, *SH*). S. Gsell, however, raised considerable objections to this opinion. The writing of the Punic characters, as they are transmitted by numerous steles from Carthage, Utica, Hadrumeta and Cirta, is radically different from those of all the Libyan alphabets. Not only do nearly all the Punic signs have a cursive form, while the Libyan signs are angular and geometrical, but even the meaning of the script differs. All the Punic inscriptions, like every Semitic text, are written in horizontal lines from right to left, while the Libyan inscriptions are generally written from bottom to top in vertical columns, particularly those which we have every reason to believe the most ancient. It is only at Dougga for several decades, during the reigns of Masinissa and Micipsa, that some inscriptions of an official character were written in horizontal lines. These inscriptions number eleven, which represent a hundredth of the texts gathered by J.-B. Chabot. This proportion would be even smaller if we were to take account of the inscriptions discovered since. The case of the texts inscribed at Dougga is thus highly original and denotes a very powerful Punic influence, but this appears to be only a factor of modernisation and not as an especially determining original element.

If we are to look, as is most likely, among the Near Eastern scripts for the forms from which the Libyan alphabet derives, it is not to the Phoenician of Africa as it is known at Carthage, but to a more archaic script that we should turn, which would explain the similarities remarked with the South Arabian scripts (Himyarite, Sabaeen), but also with the Tudeitan alphabet of Southern Spain.

The script did not necessarily penetrate Africa by sea, and it is actually more likely that it crossed the continent and that the Numidian Massyllan form (the most recent of the ancient Libyan alphabets) may have arisen out of a transformation of the archaic forms in contact with the Punic world.

As far as this alphabet itself is concerned, two old hypotheses may definitely be rejected. The first is that of Meitzen, according to whom the Eastern alphabet was wholly invented by Massinissa, for we know today that some Libyan inscriptions are earlier than this king and, further, that the Numidian royal administration employed Punic exclusively in its official inscriptions, as it did in the legends on its coins. The other hypothesis, that of Lidbarski, who wanted to link Libyan with Neo-Punic, is even more improbable, for it is based on a totally outdated chronology of the Neo-Punic script.

If the origin of the Libyan alphabet poses some insoluble problems, it is even more difficult in this its invention or introduction.

Contrary to the views of several authors (H. Hühner, S. Gsell), the Libyan inscriptions or signs which are found on some rock carvings as in El Mekrouba, Ombi Nafan and Khummet el Hadjar, cannot be contemporaneous with these latter. It is now known that these carvings are in the most part Neolithic and thus very much earlier than every script. Careful examination reveals in every case that the inscriptions are superimposed on the carvings.

However, this is not the case with the inscription from the Azh n'Fakus (High Atlas, Morocco). This inscription occupies a vertical cartouche delimited in an anthropomorphic figure of which it forms an indisputable part. It is certain that this inscription, which contains fifteen or sixteen signs not belonging to the Saharan alphabet, is contemporaneous with the carving. The technique of the lines, the patina, style and details such as the representation of the sex and the lateral fringes, which accompany the figure, are identical with other carvings which are usually attributed to the Old Bronze Age (El Argai civilisation in Spain). Even assuming it as late as possible within the archaeological context, this inscription seems to us clearly earlier than the 6th-5th century B.C.

In Morocco, we also have the inscription of Sidi Salmou of the *Libhar* which refers to the tumulus that it adjoins and with which it is consequently contemporaneous; the funerary furniture of this monument belongs to the 4th-3rd century B.C.

In Eastern Algeria the *buzza* (Palaeo-Berber dry-stone burial chamber) at Tiddas contained pottery, a piece of which has three Libyan letters painted on its belly. The bones contained in the pottery of this tomb have been dated from 2200 \pm 100 years to 250 \pm 100 B.C. So this inscription is quite likely to be older than the bilingual dedication of the Temple of Massinissa at Dougga, dating from the tenth year of the reign of Micipsa, i.e. 138 B.C. This inscription was for a long time the only Libyan text reliably dated, and there was also an unconscious tendency to regard it as the oldest. A study by J. G. Février of the inscriptions of Dougga, mentioning municipal offices, allows us to reconstruct the genealogy of an important person, Sotou, who was twice (during one year?) prince of the city. Taking account of this genealogy, it is possible to date back two other inscriptions (*RIL*, 10, 12) to a generation preceding the dedications of 139;

these inscriptions would date from the decade 170-180 B.C.

In the Sahara, the datable documents are rarer, but a preliminary investigation has shown that *Tifinagh* is very much older than the historians, who believed that the Berbers only conquered the Sahara in the 3rd century of our era following the pressure exerted by Rome on the land routes of the north, formerly thought. In Fazzan, some *Tifinagh* scripts are carved on amphora found at Gerna which date from the 1st century of our era. Among these graffiti figures sign 𐤖 , which exists only in the Saharan alphabet. The Fazzan necropolis thus proves that in the 1st century of our era, *Tifinagh* was in use in the heart of the Sahara.

In the massif of the Hoggar, the stele of Assikrem, whose inscriptions and carvings appear very ancient (H. Camps-Fabrer), is worth citing, and especially the carved blocks of the funerary monument of Ti n' Illnan at Abalessa. These blocks which bear *Tifinagh* script have been cut so as to form part of the construction of the monument, of which they constitute the lower courses. The cutting has mutilated or interrupted some carved texts. This *Tifinagh*, which belongs, however, to the modern alphabet, is thus at least contemporaneous with the monument and probably older; the funerary furniture and the isotopic date calculated from the wood of the bed or stretcher on which Ti n' Illnan reposed, date the construction of the monument back to the 5th century of our era.

Such are the chronological pointers which allow us to assert the great antiquity of the Libyan script in the Maghrib, where it is clearly earlier than the reign of Massinissa, i.e. at the emergence of the Numidians and Moors into history. As for the Sahara, the use of *Tifinagh* goes back to at least the beginning of our era and probably much earlier.

Bibliography: It is not possible to present a complete bibliography of the Libyan inscriptions. The various histories of the alphabet and of writing should be consulted, particularly that of J. G. Février, Paris 1948, and M. Cohen, *La grande invention de l'écriture et son évolution. Documentation et index*, Paris 1958, 90-2. A very complete bibliography, for the period, is given by J. B. Chabot in the *Recueil des inscriptions libyques*, Paris 1940-2. See also C. Meinhold, *Die Libyschen Inschriften. Eine Untersuchung*, Leipzig 1932-5; L. Galand, *Inscriptions libyques*, in *Inscriptions antiques du Maroc*, Paris 1966; J. Alvarez Delgado, *Inscripciones líbias de Canarias, ensayo de interpretación líbia*, La Laguna, Tenerife 1964. The greatest caution should be exercised in using G. Narcy, *Les inscriptions berbères de l'Afrique du Nord*, Paris 1936, and the numerous articles of this author which appeared in *Hespéris* (1934-7), *Afrique Alger* (1936) and *R. Afr.* (1937).

L. Haudrand provides annually a report entitled "Les études de linguistique berbère" in the *Annuaire de l'Afrique du Nord*. In these chronicles the discoveries and analyses of Libyan inscriptions are mentioned regularly. These reports have been collected in a volume entitled *Langue et littérature berbères. L'insaisissable des études*, Paris 1979. For the chronology of the inscriptions, see G. Camps, *Recherches sur les plus anciennes inscriptions libyques de l'Afrique du Nord et du Sahara*, in *Bulletin archéologique du Comité des Travaux historiques*, N.S., x-xi (1974-5), 146-66.

(G. CAMPS)

3. Modern history. — On 29 September 1911, Italy declared war on Turkey and started its long-planned invasion of the Libyan littoral. Italian troops did not succeed in penetrating beyond the coastal strip due to stiff resistance by combined Turkish-Libyan Forces. Negotiations between Italy and Turkey resulted in the Peace Treaty of Ouchy (27 October 1912). On the battlefield, however, Libyan resistance did not subside. During World War I the Italians were virtually besieged in their coastal strongholds. In Cyrenaica, Fazzan and the Sirteia, resistance was led by Ahmad al-Shariff (1873-1933), head of the Sanusi order, with support from Turkey and Germany. It was under their influence that he decided to attack British Forces in Western Egypt in November 1915. Defeated, he transferred all political and military control of Cyrenaica to his cousin Muhammad Idris al-Sanusi (born 1880). In April 1917 agreements were reached between Idris and the British and Italians (the Accords of 'Akrama). The Sanusi-Italian accord was superseded in October 1920 by the Accord of al-Radjma, in which Idris was recognised as the independent ruler (*Amir*) of the interior oases.

In Tripolitania, leadership was divided. Though a number of tribal leaders (*inter alios* Ramadan al-Shaywi (or Suwayhid) and the Ibadi Berber Sulayman al-Barrani) agreed on establishing a Tripolitanian Republic (*Dawlatiyya Tarikhalya*) in 1919, fighting soon broke out between tribal factions. To overcome dissensions and to strengthen their position vis-à-vis the Italians, they decided to offer Idris al-Sanusi the emirate of all Libya. This put him in a predicament, for he was bound to the accords with the Italians. On the other hand, refusal of the offer would undermine his position with his adherents. Finally, he decided to accept the offer, but subsequently fled the country to Cairo (1922).

Full-scale war in Libya was resumed after Mussolini's take-over in Rome in 1922. Due to its internal divisions, resistance in Tripolitania was soon crushed, but in Cyrenaica the charismatic leadership of the Sanusi representative 'Umar al-Mukhtar inspired Bedouin resistance for almost ten years until at last he was injured in battle, imprisoned and publicly hanged on 16 September 1931. Facilitation of Libya being completed, the Italians started extensive agricultural colonisation schemes in the fertile coastal plains. In 1935 they completed the strategic coastal road connecting Tripolitania and Cyrenaica. The onset of World War II impeded further Italian development plans. After severe fighting between Germany and the Allied Forces, in January 1943 all of Libya was occupied by British and Free French Forces. Idris al-Sanusi had assisted the British war effort from Cairo, and an army of Libyan exiles under the Sanusi flag had participated in the liberation of Cyrenaica.

After World War II the future fate of Libya was put before the General Assembly of the United Nations. On 21 November 1949 it was decided that Libya should become an independent state before 1 January 1952. A UN Commissioner, the Dutchman Adriaan Pelt, was appointed to supervise the power-transfer from British and French military governments. The UN decision stimulated political debates on the future form of an independent Libya. Two opposing groups emerged. The older tribal and religious leaders, mainly concentrated in Cyrenaica and Fazzan, supported a federation under the Sanusi crown. The younger generation, influenced by Arab nationalism, advocated a unitary republic. This

no doubt would lead to the preponderance of Tripolitania, with its larger population and its better-developed economy and thus reduce the influence of Idris's supporters. They were wary of Idris's close bonds with Britain. The outcome of the debate, however, was anticipated by the proclamation of Idris al-Sanusi as head of an independent emirate of Cyrenaica, while control of foreign affairs and defence remained with Britain (1949). After this, Idris would not support the independence of a united Libya unless under his own crown.

Libyan independence was declared on 24 December 1951. (Due to peculiar international circumstances it was only in 1955 admitted to the UN.) The constitution provided for a hereditary monarchy under a Sanusi King and a representative federal government consisting of two houses (a Senate and a House of Representatives). The King was endowed with extensive powers, including the right to select and dismiss the Prime Minister, to appoint half the Senate and to dissolve the elected parliament. The political system never matured. The first elections to be held on 19 February 1952 resulted in a victory for government candidates, but voting results were contested by the opposition parties. Demonstrations ended in violent clashes with police forces. As a result, all political parties and programmes were suppressed. From that moment, Libyan politics gradually degraded into the assertion of family, tribal and parochial interests.

The next two decades witnessed increasing pressure on Libyan society. An unprecedented oil boom was the main cause. Libya's first oil was struck in 1955; in 1962 it joined OPEC; and in 1969 Libya had already become the world's fourth largest oil producer. Oil revenues ended Libya's dependency on foreign financial aid and allowed a more assertive policy. In order better to cope with the exigencies of oil exploration, in 1965 the cumbersome federal system was abolished. Social changes set in with developing oil industry, urbanisation and industrialisation gave birth to a new stratum of traders, service-men and technicians, petroleum and dock workers started to organise in trade unions. The new social groupings were denied political expression. Subsequent tensions were heightened by foreign politics. During the Suez crisis (1956) and again in 1967 there were violent outbursts of Arab nationalist feelings. But Libya, a member of the Arab League since 1953, was tied to the West in its foreign policy by the presence of British and US military bases. The government, though briefly joining the Arab oil embargo of 1967, had no means adequately to meet widespread popular support for a Nasserist policy. This undermined the King's authority.

On 1 September 1969, Idris was deposed. In spite of an initial wave of popular enthusiasm, the revolution remained entirely an army affair. It had been planned and implemented by a movement of "Free Officers" modelling itself on the Nasserist revolution. A Revolutionary Command Council (RCC) took control of affairs. It consisted of twelve officers under the general leadership of Colonel Mu'ammār al-Kadhafi (Gaddafi). Political parties remained suppressed. An attempt at broadening the RCC's political base was made by creating the Arab Socialist Union (1972). Lack of cadre, apathy and hostility from traditional leadership caused its failure. Another attempt was made in 1973 by the proclamation of the popular revolution. Its ideology was set forth by Mu'ammār al-Kadhafi in his *Green books* (see Bibl.). In these, he propagated his Third World

theory which related parliamentary democracy as well as class domination. Libya was to be governed by Popular Congresses (*mu'tamardi sha'biyya*), and Popular Committees (*lajin sha'biyya*) in every section of society. On 3 March 1977, power was officially transferred to the people and the country renamed the *Djammahiriyya* (Masses' Republic).

In oil policies, republican Libya took a nationalist stand, leading to a sharp price increase and a major share in production. On the international scene, the theme of Arab unity was paramount, though al-Kadhafi's Third World theory has universalist aspirations.

Bibliographical: Indispensable bibliographical materials are to be found in H. Schlüter, *Index Libyensis. Bibliography of Libya 1957-1969 with supplementary material 1975-1986*, Boston Mass. 1972, and *Index Libycus. Bibliography of Libya 1970-1975 with supplementary material*, Vol. I. Tübingen (*al-Fihris al-Libi 1390-1439 1395-1399*), Tripoli n.d. On the colonial period, a lot of material is available, especially in Italian. A good short account is to be found in E. E. 4. **Ethnography and demography.** Since the early 1860s, when Libya began to export oil on an international scale, the social and economic structure of its population has been undergoing a continuous process of accelerated and extensive change. Nonetheless, studies of Libyan culture and society and its institutionalised forms—the family, kinship systems, political organisation, legal procedures, religious beliefs and practices, etc.—must still take into account geographical and historical diversities

within the country and among its inhabitants. The three regions of Tripolitania, Cyrenaica (Barqa), and the Fazzan have had different economies, varying external connections, and experienced specific historical and cultural influences; and internally, each of these regions has been diversified in particular ways.

Along the Mediterranean coastline of 1,200 miles lies a fertile coastal strip nowhere broader than 50 miles. The barren Gulf of Sirte, an arc of some 300 miles where the desert comes right down to the sea, separates the settled coastal areas of Tripolitania from those of Cyrenaica. These areas are well-watered, enjoy a Mediterranean climate and contain the principal cities, towns and villages inhabited by the overwhelming majority of the country's population. The western coastal zone includes the capital city of Tripoli; the inland hills of Djabal Nafusa, with sufficient rainfall for habitation, and ancient olive groves surrounding small Berber-speaking towns and troglodytic settlements formerly inhabited by Libyan Jews; and, between the fertile coast and the hills, the arid plain of Djafara. The eastern zone contains the country's second largest city, Benghazi, and the Djabal Akhdar mountain range which runs in an arc parallel to the coast from Derna to south of Benghazi and whose uplands, rising to 2,000 feet, receive plentiful rainfall.

To the south of this strip lies a second zone which in the past has been too arid for permanent settlement, but which is sufficiently watered to provide grazing and crops of barley for nomadic herders. Although rains were uncertain and the hot wind from the south (ghib) could 'shrive plants like a flame', this was the country's main barley-producing area.

Beyond this zone was an absolute desert with the exception of four oasis groups in Cyrenaica—Djagh-bab (q.v.), Djala, Narada and Kufra (q.v.), and the sparse half-dozen oases of the Fazzā (q.v.). Only about one-twentieth of the country's total population lived in this area of extreme desert climate.

The divisive geographical features of Libya were mitigated by trade, religion and, finally, by the political unity created by Italian colonisation, beginning in 1911 and furthered by the Second World War. Before the opening of West African ports in the 19th century, a good proportion of the wealth of tropical Africa had reached Europe by way of Libya. From the Fazzan and Cyrenaica, gold, ivory, ebony, ostrich feathers and slaves transported to the emporia of Tripoli and Benghazi had sustained oasis-dwellers, camel-herders and merchant townsman. The Fazzan had been a wealthy community of slave-owning merchants, Berber-speaking Tuaregs with trading networks as far as Timbuctu, in parts of the Sahara and into the Western Sudan; while Cyrenaica had controlled the caravan route through Kufra to Wadai. When this commerce ceased, the Tuareg moved further west while the former Tebu-speaking slaves remained in the oases, subsisting as crop-sharing peasants until the oil boom of the 1960s. Most of these areas, as well as the Djabal Akhdar and the tribes in the plain of Djafara, were more or less autonomous and maintained their own locally based social structures.

Until the 1950s, at least four-fifths of the population of Tripolitania lived from agriculture and animal-rearing. In the Djafara, a number of tribes, integrated in a complex social and economic pattern that included sedentary peasants, transhumants, and oasis cultivators, were linked by *suff* (q.v.) relations of alliance which transcended other loyalties.

In Cyrenaica, as well, the combination of nomadism, pastoralism, and some cultivation, along with the significant seasonal variations in climate, assumed a characteristic form of social organisation, viz., the segmentary tribal system. Throughout Libya (and elsewhere in North Africa and the Middle East), the disposition of non-urban groups reflected the distribution and exploitation of natural resources, and the usage of common concepts, especially that of the segmentary tribal system, was widespread and of central importance. Nonetheless, these shared concepts often glossed over diverse adaptations to different types of ecologies. Thus, for example, in Cyrenaica the virtually sedentary cow and goat herders of the *Djabal Akhdar* and the camel and sheep pastoralists of the semi-desert area differed significantly in the pattern of their social relationships. The idiom of "tribe" also nominally existed in the cities of the coastal area, but the urban elites with their cosmopolitan values and social structure had more resemblances and affinities with their urban counterparts in the Arab and Muslim world than they did with the tribesmen of their hinterlands.

Libya, like the rest of predominantly Berber North Africa, had been invaded in the 5th/11th century by the Banū Hilāl [q.v.] and Banū Sulaym [q.v.], some of the former settling in Tripolitania, and the latter in Cyrenaica. These tribal movements from the east accelerated the process of Arabisation and the spread of Islam and produced a fusion of cultures and races. Only small pockets of Berber-speakers have resisted. In Tripolitania there are communities of sedentary agriculturalists along the northern fringes of *Djabal Nafūsa* between Yefren and Nalut, and on the coast at Zuara; these Berber-speakers, who are further distinguished by their adherence to the *Ibādiyya* [q.v.] sect, constitute an estimated 4% of the population of Tripolitania; in addition, there are in the oases of Ghadāms and Ghat Berber-speaking Tuareg. To complete the linguistic description, mention should again be made of the Tebu of Fazzāla and southern Cyrenaica who speak their own language, a Sudanic dialect. Finally, amongst the Arabic-speaking population, the Libyan Jewish communities deserve inclusion: before emigrating en masse during the decade following the Second World War, the Jews numbered some 30,000, most of them in Tripolitania. Their communities had their own internal social structures and values, and they played an important role in economic life, particularly trade.

In regard to religion, the overwhelming majority of Libyans have long adhered to the Sunni creed and followed the Mālikī school of law. Yet neither their beliefs, nor the history of the country, may be understood without taking into account the revivalist movement of the *Sanūsīyya* [q.v.], a neo-Sūfī order established by Muḥammad 'Alī al-Sanūsī (1787-1859). The order, founded on a network of lodges, spread along the desert oases from Tripolitania to the Sudan. With his headquarters in the interior at *Djaghbūb*, a strategic centre for consolidating power and spreading the creed among tribes along the caravan routes, the head of the order created a political-religious organisation that was to lead the opposition to Italian penetration and eventually become transformed into the Libyan Kingdom under the rule of a descendant of the founder, King Idrīs. The *Sanūsī* order, as an Islamic revivalist movement, gave the population of the country a religious zeal and, aroused by Italy's attack, a sense of unity that developed into Libyan nationalism.

During the period of Italy's colonisation of Libya, a large number of agricultural estates belonging to Italian individuals and development companies were established, a programme of state and land-grant colonisation in the 1920s was followed by large-scale agricultural settlement by Italian peasant families in the 1930s. The invasion and the colonial occupation disrupted and influenced the economic and social life of the indigenous population in a myriad of ways, e.g. there was an increase in sedentarisation among nomads, the breakdown of corporate groups, the spread of education, and a massive exodus of poor rural pastoralists and agriculturalists to take up wage labour in the cities and towns of the coastal region, especially after the Second World War.

Since independence in 1951, the government has created a new group of Libyan farmers by transferring to them former tribal lands (and eventually nationalising those lands in 1971) and establishing a National Agricultural Settlement Agency. Moreover, it has instituted policies for land use, irrigation, rural settlement (and, since the revolution of 1969, a state policy for rural development with projects planned for the *Djabal Akhdar*, *Djabal Akhdar*, *Kufra*, *Serir* and *Fazzāna*), and has generally sought to raise the contribution of agriculture to the national economy. But because of the phenomenal development of oil and the growth of industry and services, agriculture has declined significantly since the pre-1969 period when it involved 70% of the labour force.

In 1964 oil in Libya began to flow on an international level. Since then it has transformed the country from a poor agricultural and desert backland to a land of affluence and one of the biggest oil exporters in the world. With an estimated annual average income of \$ 8 billion per year (1978) and a per capita Gross National Product of \$ 6,310, Libya has become the richest country in Africa and the fifteenth richest country in the world (1977 World Bank Report). The national economy now depends on the oil sector, which accounted for about 62% of Gross Domestic Product in 1980. The government (renamed since 1973 the Socialist People's Libyan Arab Jamahiriya, to replace the Libyan Arab Republic established following the *coup d'état* led by Colonel Muḥammad al-Kadhafī [Gaddafi] in 1969) has concentrated in its latest Development Plan (1976-80) on the needs of electricity, water supplies, sewage and housing, and the creation of three major industrial complexes. It is the urban sector, where one-third of the labour force are foreigners and less than 3% women, which now receives governmental priorities.

Libya is on the way to becoming a highly-urbanised society. About half of its population in 1978 of 3,074,100 (of whom 2,597,600 are Libyans) live in towns of 20,000 or larger. Its accelerated urban growth results from migration, natural increase and immigration of foreign labour. Between 1966 and 1973, towns of 25,000 or more population grew by 20% annually, one of the highest rates in the world (Natural increase for the same period was 4.3%). The urban regions of Tripoli and Benghazi (10% of the country's total area) contain 92% of the total population, include fourteen of the fifteen towns with a population of at least 10,000, and are responsible for 86% of Libya's agricultural production. The city of Tripoli has grown from a population of some 30,000 at the beginning of the century, to 110,000 (1931), to 240,000 (1954) and to an estimated 320,000 in 1980; while Benghazi, according to the 1980 estimate, has some 400,000 inhabitants. By the end of this century, it is expected that of Libya's

population of 5.5 to 7 million, 67% to 74% will live in cities of 20,000 or more, i.e., that the number of city-dwellers will triple or quadruple. The study of social and cultural changes consequent to these processes greatly increases the challenges to Libyan ethnography.

LIBYA-YI SHERIF, the hairs of the Prophet. In imitation of the Prophet's practice shaving of the hair and beard later became a *sunna*. According to al-Bukhārī, during his penitence and fast pilgrimages, Muhammad permitted people who wanted to get his hair when he was being shaved (Ahmet Zebidi Zeynüddin, *Sahih-i Buhārī muhtasari teridiri tarih tecmimi*, tr. Ahmed Nam-ı Kamil Miras, Istanbul 1926-46, vi, 293-8, x, 442). The hairs of his head and beard, thus obtained, were preserved and later circulated in all Islamic countries. People kept this hair in a bottle, wrapped in layers of green

cloth, in mosques, palaces, etc., opening this on public festivals such as during the days of Kandı, Bayram, and in the second half of Ramadan. In the houses of the rich, the Libya-yi Sherif was regarded with respect and placed in an honoured, elevated position. In the mosques it stood on a high stool on the landing above the last stair of the pulpit (Osman Eğin, *Türkiye muarf tarihi*, Istanbul 1939-43, i, 174; Mehmet Zeki Fakih, *Osmanlı tarih devirleri ve isimleri sözlüğü*, Istanbul 1971, ii, 366).

Although it means properly a hair from the head of beard of the Prophet, it is called Şakal-ı Sherif incorrectly by the public in the Turkish-speaking countries, meaning the Prophet's beard only.

The Libya-yi Sherif is today kept in a silver box at the Topkapı Palace, together with the other relics of Islam, in the Imperial Chamber (Kıyâs Odası), in the Pavilion of the Holy Mantle (Kıyâs-ı Sa'adât Dairesi) (Kemal Çiğ, *Relics of Islam*, Istanbul 1966, 7). Two other examples which belong to the Yıldız Palace, now transferred with other objects to Istanbul University Library, are however in boxes encrusted with mother-of-pearl on which verses from the Kur'an are written. As well as green cloth, these are wrapped in a kind of gauze with inscriptions printed on it, called *destimal* ("napkin"), specially made (İsmail H. Baykal, *Enderun mektebi tarihi*, Istanbul 1953, 148) for the visits to the Holy Mantle organised by the Sultan-Caliph on 15 Ramadan and then distributed to the courtiers and other people invited to the ceremony (see KATKAYI ŞERİF).

The ceremony of visiting the Holy Mantle is explained at length in many Ottoman writers. Although the Libya-yi Sherif is kept with the other relics there, it is never mentioned, and the Mantle of the Prophet occupied the most important place in these ceremonies (H. Z. Uğaklı, *Saray ve âdeti*, Istanbul 1966, 223; Leylâ Saz, *Haremün ıyvanı*, Istanbul 1974, 195). It is interesting to note that in histories such as those of Süldâs or Selâuk, we find much information about the Holy Standard and the Holy Mantle's being removed from their places and sent away in times of crisis, and about help being expected from them when the sultans or the Ottoman army were in trouble; but one of these authors writes anything about the Libya-yi Sherif (İ. H. Uzunçarşılı, *Osmanlı devletinin sayar teşkilatı*, Ankara 1945, 250-60).

LIBYAN, people and State in early Arabia. 1. LIBYAN and Libyānite in epigraphy. Inscriptions discovered in the north of the Hijaz and speedily identified as "Libyānite" have preserved the names of at least six kings of Libyān, a kingdom which must have existed for several centuries in pre-Islamic times. The great majority of the Libyānite inscriptions are found in the valley of al-ʿUll and its immediate surroundings, especially in the neighbourhood of al-Kharayba, the site of ancient Dedān, not far to the south of the great Nabataean centre of al-Hijr (q.v.), i.e. modern Madāʾin Sāhib. Not only Libyānite, but also other inscriptions are found in more or less considerable numbers in the same area: Dedānite, Minaean, Thamudic,

Nabataean, Hebrew and Arabic. C. N. Doughty, Ch. Huber and J. Euting were the first travellers to copy Lihyânite inscriptions and to report on the archaeological remains in their vicinity. On the basis of Euting's documents in particular, D. H. Müller presented a first interpretation of the texts. Close to 400 Lihyânite inscriptions and graffiti were subsequently published by A. Jausen and R. Savignac in their monumental *Mission archéologique en Arabie*. In recent years, many more have come to light, for instance those included in some of A. Jammé's publications, particularly in various volumes of his *Miscellanees*. Most important was the discovery, in a mountain gorge near Bi'r al-'Uḡayb, to the west of al-Khurayba, of a group of texts connected with a place of worship of Dhū-Ghābat, the principal deity of Lihyân at the time.

The Lihyânite inscriptions are written in a South Semitic alphabet, related to but distinct from the South Arabian, Dedānite, Thamudic and Safaitic scripts. Although the evolution of the South Semitic letter forms is not yet sufficiently clear in all its details, it has become generally accepted, since H. Grimme (1930, 1932), that the Dedānite inscriptions are older than the Lihyânite ones. On both historical and palaeographic grounds, these Dedānite inscriptions are usually dated, with F. V. Winnett (1937, p. 50), to the sixth century B.C., or slightly later; cf. Winnett, in Winnett and W. L. Reed (1970, pp. 114 ff.). It is not known when the Dedānite supremacy in the region was replaced by the Lihyânite one and after how long an interval, if any. It seems certain, however, that the kingdom of Lihyân flourished at least throughout the 3rd century B.C.; the Minaean inscription found in Dedān and now dated to approximately this period points to the presence of a colony of Minaean traders without implying, contrary to what was previously believed, Minaean political domination, cf. A. van den Branden (1957, p. 26) and J. Ryckmans (1957-8, p. 243; 1961, pp. 54 ff.). The name of certain kings of Lihyân, *TLMY*, may be another indication that the Lihyânite rulers were to some extent contemporaries of the Ptolemies of Egypt, if the identification of that name with Ptolemy, suggested by E. Littmann, in J. Euting, *Faghad*, II, 325, and W. W. Tarn is correct. But the name could be Semitic, and it has been compared, most recently again by al-Ansary (1970), with that of Talmay, king of Geshur (II Sam III, 3 and XIII, 37; I Chron. III, 2). The southward advance of the Nabataeans probably caused the downfall of the Lihyânite kingdom. In this connection, three short Nabataean inscriptions, found south of Taymā and written by a certain Mas'ūdū, who calls himself king of Lihyân, are often quoted. Various dates have been ascribed to these inscriptions: the 2nd century B.C. by A. Jausen and R. Savignac (*Mission*, II, 221), the middle of the 1st century B.C., 'but before the final Nabataean conquest of Dedān', by W. F. Albright (1953, p. 7) and, less likely, the 1st century A.D. by W. Caskel (1954, p. 42). Among the deities worshipped by the Lihyânites, the inscriptions mention, in addition to Dhū-Ghābat, Hallāh, Lāt, Han-'Uḡayb, Han-'Aktab, Ha-Kūḡbay, Ba'alsamin, Humām, Ha-Mabr, Kharrī, Salāmā and Wadd (the vocalisation is purely conventional). These and other deities are also encountered in composite proper names such as Zūd-dhū-Ghābat, Wadd-ANāḥ, 'Amāt-'Uḡayb, Djarum-han-'Aktab, Djarum-Kutbā 'Abd-Mināt, etc. The site of a temple was discovered in al-Khurayba by A. Jausen and R. Savignac (*Mission*, I, 56 ff.). Its walls were

probably ornamented on the inside with large statues, parts of several of these statues were found lying in the debris. In the central court of the temple, there was a stone basin, circular in form and more than four metres in diameter.

The language of the Lihyânite inscriptions is an early form of Arabic. Some differences with Classical Arabic are easily observed. The defective spelling of words like *bt* (cf. Classical Arabic *bayt*) and *'s* (cf. Classical Arabic *'aws*) shows that the Lihyânite phonemic system comprised the vowels *i* and *a*. After nasals, *i* may have been reahed as *ih* and is occasionally spelled conformingly, e.g. *ḡhḡh* instead of *ḡhḡ*—daughter. The article has the form *h*; *ʾan-belore* ¹, ² and, optionally, *h*; *h* occurs in one inscription. The dual pronominal suffix *-hny* (cf. Classical Arabic *-humā*) did not end in *-i* because, in Lihyânite orthography, final *ing -i* is written with the letter *-h*. The nominative dual *status constructus* is also spelled with final *-y* and, for that reason, cannot have ended in *-i*. The perfect, third person *u*, sg. of the causative stem of verbs with identical second and third radicals is frequently not contracted, *'hl* or *hll*; but contracted forms are also found on occasion. A systematic analysis of the inscriptions will undoubtedly reveal other peculiarities of Lihyânite Arabic.

(A. J. Drewes)

2. In Islamic sources. The Islamic historical and genealogical sources consider the Arab tribe of Līhyān to be a branch of the Hudhayl (q.v.), and ascribe to it the genealogy Līhyān b. Mudhayl b. Mudrikā b. al-Yās b. Mudar, i.e. Līhyān was attached to the North Arab stock. When and how the Līhyān came to the position in which we find them in the 6th century A.D., forming part of the Hudhayl and established in a territory considerably to the south of their original home, so now in the country to the north-east of Mecca, we cannot tell, on account of the complete absence of documents. Muslim tradition has lost all memory of them and confounds them apparently under the general designation of *Thamūd* (q.v.) with the *Thamūd* proper and the Nabataeans of al-Hijr; a memory, but a very vague one, of the old kingdom of Līhyān may perhaps have survived in the isolated mention in a tradition that the Līhyān were "remnants of the *Djurmūn*", who later became part of the Hudhayl (Tabari, I, 749, 11-12 [see *ḡurmūn*]), following Ibn al-Kalbi; *Taḡ al-ʿarūs*, x, 324, 1-2, following al-Hamadī, probably in *al-Iḥlīl*, since the passage is not found in the text of the *Djairat al-Arabī*.

In the period just before and after Islam, the Līhyān do not seem to have had a history independent of their brethren of Hudhayl; it is only rarely that they are mentioned apart from them, e.g. in *Ḥamasa*, 34, a proposal of their battles with the warrior-poet *Taʿabbata Sharrāḥ*; Yāqūt, *Buldān*, II, 272, IV, 204 [cf. the *Ḥamasa* of al-Buhārī, 80-2; Ibn al-Djarrāḥ, ed. H. H. Brūn, no. 86 = *SEIFAW*, *coit.* no. 4, 1927, 31], II, 614, of a battle with the *Khuṣāʿa*. The poets of this tribe are as a rule reckoned among those of the Hudhayl—e.g. *Malik b. Khālid al-Khunnāʿī*, *al-Mutanāḥḥil al-Khunnāʿī*, etc. At the time of the preaching of Islam we find them, like the rest of the Hudhayl, under the political influence of the Quraysh. This explains their hostile attitude to Muhammad, which resulted in the murder of their chief Sulaymān b. Khālid b. Nubayh by ʿAbd Allāh b. ʿUmayy at the instigation of Muḥammad. This murder was cruelly avenged by the Līhyān, who slew several Muslims in their turn (the *ṣaḥḥ al-Raḡīf*, 4 A.H.). As there is no further mention of hostile relations between the Muslims and the Līhyān, it is probable that the latter were included in the submission which the Hudhayl made to Islam (see *Ḥudhayl*).

After the triumph of Muḥammad, and in the periods following, there is an almost complete lack of information about the Līhyān, and there are very few persons of note belonging to this tribe: the grammarian, *al-Līhyānī*, whose full name was ʿAbd Ḥ. Ḥarīm (Ḥāzim) or b. al-Nubārak, d. in 222/837 or 223/838 (cf. al-Zubaydī, *Taḡhāt al-nuḥāt*, ed. Krenkow, in *RSO*, VIII, 145, no. 123, with bibliography; Flügel, *Die grammatischen Schulen*, 51) perhaps belonged to it, but other sources (Yāqūt,

Iḥḥād, v, 229; *Taḡ al-ʿarūs*, x, 324, 19) trace his *nishā* 'al-Līhyān' to the unusual length of his beard (*ḥayḡa*).

LĪM, LĪMŌN [see *MUHANNADY*]

LIMASSOL [see *gumug*]

LIMNI (Turkish form of the Greek Λήμνος, in older Ottoman historical works *Limon* and *Limli*, in older Greek sources also Λήμος, *Stalagmon* in mediaeval western sources, *Lemnos* in modern usage) an island in the northern part of the Aegean Sea, 50 km. west of the entrance of the Dardanelles (Canakkale's *Bogazlı* [q.v.]) halfway between Mount Athos and Tenedos (*Bogazlı Adı* [q.v.]). The island, of ca. 470 km², has been virtually useless since long before Ottoman times. Agriculture is of local importance only. Its famous export product since antiquity is a sort of volcanic earth which had reputedly medicinal power, *terra limnia*, *fin-a mādā-fīm*, which used to be dug once yearly with some ceremony. Lemnos today has a Greek population of about 25,000 which is constantly decreasing. Myrina (formerly Kastro, Turkish *Limli*) on the western coast is the capital of the island that forms a part of the province of Lesbos of the Republic of Greece. There is a military air base at Mudros. The large harbours of Puraia in the north and Port Mudros in the south, almost rutting Lemnos in two halves, are not much used any more.

Lemnos in the Middle Ages was part of the Byzantine Empire. It suffered the depredations of corsairs, Arabs from Crete (*Ḥarāḡ* [q.v.]) in the 10th century, and those of *Sakdjüks* from Anatolia in the 11th century. With the partition of the Empire after the Latin conquest (1204), Slaves became an imperial hat granted to Filocalo Navigajoso and to his descendants in 1207. Byzantine rule was restored by the Emperor Michael Palaeologus between 1276-8. Prisoners of state were held in the island, e.g. the Ottoman pretender Düzme Mustafa in 823/1419-20. Shortly before 1453, Doria I Gattilusi (1426-55), Lord of Lesbos (Turkish *Mallı* [q.v.]), acquired the whole of Lemnos as a fief. After the fall of Constantinople (29 May 1453), the Byzantine authorities fled. Thanks to the diplomatic activities of Ciriobulus, the Byzantine-Ottoman historian, who was a judge in nearby Imbros (Imroz [q.v.]), the Gattilusi dynasty of Lesbos was granted Lemnos and Thasos (Tashir [q.v.]) as fiefs by Sültan Mehmed II. subject to a tribute of 2,325 gold pieces a year. Domenico Gattilusi, son and successor of Doria I, was in 1455 granted Lemnos only. In 1456, however, the inhabitants appealed to the sultan to be directly governed by him. From this time, the first *kānūn-nāme* of Imbros, Lemnos and Thasos must be dated, and this was revised by Selim I in 1519 (cf. Barkan, *Konular*, 237-40).

A papal war fleet commanded by Ludovico, Cardinal Scarpacci, captured the island in 1457, but in 1459 the Ottoman admiral Khādir Isāḥī Bey retook it. Ciriobulus intervened once more to maintain its special status, which led to the grant of Lemnos (plus Imbros and Lnos on the mainland

(Turkish Enet) in 1460 to the ex-despot of the Morea Demetrios Paleologus in return for a tribute of 3,000 gold pieces a year. A Venetian force conquered the island in 1464, and held it till the peace was concluded in 1479. Gedik Ahmed Paşa (q.v.), *kapudân paşa*, had the fortresses repaired and Anatolian subjects were settled there. A regular administration was now set up with a *royade*, a *hâdî* and *koşgebân* in charge of the native Greek population. Limni became later a part of the province of the *sandjak beys* of Gelibolu (i.e. of the Ottoman admiral). Towards the end of the 16th century, Lemnos, together with Chios (Sakiz [q.v.]), was the only prosperous island of the Archipelago, with 74 villages, including 13 Turkish Muslim ones.

Its strategic position led to repeated Venetian attacks and its conquest in 1656, undone a year later by Topal Mehmed Paşa after a 63 days' siege of Kastro. Following the destruction of the Ottoman fleet near Cephise on 5 July 1770 by the Russian fleet of Count Alexis Orlov, Lemnos suffered a Russian attack. An Ottoman squadron defeated the Russians in Mudros Bay, and this success brought *Özazârlı Hasan Bey* (q.v.) the titles of *ghâzî* and *paşa*. After 1774, Ottoman authority in the Archipelago had to be restated, which led to a harsh regime and subsequent popular unrest.

During the Russo-Ottoman war of 1806-12, a division of Admiral D. Seayavın's fleet occupied Lemnos in 1807. In the same year the *kapudân-paşa* Seydi 'Ali Paşa confronted the enemy in the battle of Athos, west of Limni (30 June 1807). Lemnos did not play an active role in the Greek War of Independence. When the Ottoman administration underwent the reforms of the *tanziimat*, Lemnos in 1283/1866 became one of the 4 *sandjaks* of the vilâyet of the *Dişadâr-ı bahâr-ı sefid* [q.v.], with the *hâdîs* of Bozğia-Ada, Imroz and 'merkez', the latter subdivided into the *nâhiyes* of Bozğaba (Strat) or Aghios Eustratos Island) and Madros. An Orthodox bishop resided at Kastro. There was a small garrison, and a government steamship had its station there. In 1312/1894 the population consisted of 23,499 Ottoman subjects and 192 foreigners (in the 1310/1892 statistics, there were 34,451).

During the Macedonian crisis, the Powers sent a naval force to occupy Lemnos's castle, customs house and telegraph office (5 December 1905) in order to press the Porte to introduce reforms. At the outbreak of the Balkan War, the main division of the Greek fleet under the flag of Admiral Paul Koundouriotis steamed straight to the island (19 May 1912). The next day, 1,500 troops were landed and these occupied Lemnos after a short fight with the 30-man-strong Ottoman garrison. The *metesarrif* and leading Muslim civilians were deported. A Greek naval base was established at Port Mudros.

The Treaty of London (that of St. James) of 30 May 1913 confirmed the Greek annexation. During World War I, the Venizelos government lent Lemnos to the Allied Powers. An Anglo-French naval base and army camp were established at Port Mudros, from where the Gallipoli campaign was directed. It was here, aboard the British battleship HMS *Agamemnon*, that an Ottoman delegation led by the Minister of Marine Hüseyin Ra'îf (Orbay) negotiated with the British plenipotentiary Admiral Arthur Calthorpe and concluded the armistice of 30 October 1918 ending hostilities between the Allied Powers and Turkey.

At the Treaty of Lausanne (24 July 1923) the new Republic of Turkey recognised formally the loss of

Lemnos and other islands. With Samothrace (Turkish Semadirek), Imroz (Gökçe-Ada) and Tenedos (Bozğia-Ada), the last two having been restored to Turkey, Lemnos formed part of a demilitarised zone. The 2,500 Muslim-Turkish inhabitants of Limni had already left their island in 1920, and Greek refugees from Anatolia took their places in 1923.

LİNEN (see KATTAN)

LINGA, a minor seaport, modern Bandarī Līnga, on the northern shore of the Persian or Arab Gulf, in lat. 26° 34' N. and long 54° 53' E., to the south of Lāristān (see LĀR, LĀRISTĀN) and facing the islands of Kishm (q.v.) and the Tūmba. Līnga has a harbour of some depth, allowing traffic by dhows and coastal craft; behind the town lies a salt marsh, and then the Bandī Līnga mountains, which rise to 3,900 ft./1,190 m. The population, formerly largely Arab, is now predominantly Persian, but with strong admixtures of Arabs, Baluchis, Indians and the descendants of black African slaves, these comprising both Sūnis and Shī'īs.

The old port was at Kung, 3 miles/13 km. to the east, where the Portuguese retained a footing till 1711, long after they had lost Hormuz (q.v.). In 1760, the Kawāsīm Arabs (q.v.) under Shavhā Šāhī came from Ra's al-Khayma and established footholds at Līnga, which they seized from the Kāšmīrī (q.v.) of the Qājāngīrī district, at Shīms and on Kishm Island, till they were in 1765 expelled by Karīm Khān Zand (q.v.). In 1860–1 the British naval expedition from Bombay which attacked the Kāšmīrī pirates at Ra's al-Khayma went on to take Līnga and other Kāšmīrī-held ports on both the Arab and the Persian shores of the Gulf. In 1887 the Persian imperial government extended its control over Līnga and deposed the last hereditary *shaykh* of Kadīb, carrying him off in chains to Tehran.

Līnga was at this time still a flourishing port, a centre for pearl-fishing, with Indian merchants residing there; an import centre for textiles coming into Persia; and an export centre for Persian tobacco. There was still some slave-running of Persians and Baluchis into the Arabian peninsula and of Somalis and black Habashites into Persia which the Persian authorities in Shīrāz were unable or unwilling to stop. Curzon in 1890 estimated the population of Līnga at 20,000. After the assertion of Persian central government control, and the inclusion of Līnga within the reformed government customs administration, many of the old-established merchant families moved to the Arab shores, e.g. to Dubayy, Bahrayn and 'Uman, and in recent times, Līnga has been only a shadow of its former self, completely overshadowed by such ports as Bushire and Bandar 'Abbās. The population in the 1970s was 9,404. Līnga is also administratively one of the five *bakhshs* in the *shahristān* of Lār in the *ustān* of Fārs, the population of the *bakhsh* being ca. 41,000.

LION [see AL-ASAD; MINTAKAT AL-BURŪJ]

LIPKA or LUNGA, *Лутва*, the name given to the Tatars who since the 14th century inhabited Lithuania, and later the eastern and south-eastern lands (Belorussia, Volhynia) of old Poland up to Podolia, and after 1672 also partly Moldavia and Dobruđa. Derived from the old Crimean Tatar name of Lithuania, the record of the name in Oriental sources *لپکا* in 926/1520, later *لپک*; V. Véliamīnōv-Zernōv, *Matériaux pour servir à l'histoire du khānat de Crimée*, St. Petersburg 1864, 3, 4, 720; also *لپک* and *لپک* *Sākhār* *لپک*, I, Istanbul 1928, 615, 633, and C. Orhonlu, *Lipkalar*, in *JM*, xvi [1972], tables I, VI] permits to infer an original *Lipka* > *Lipka*, from which Pol. *Lipka* was formed (contamination with Pol. *lipka* 'small lime-tree'; thus etymology was suggested by the Tatar author S. Tuhan Baranowski, *Saqd qawātala narwa Lipkār*, in *Wschód*, II [1932], 96–9). A less frequent Polish form, *Lutka*, is corroborated in (*Lutka* >) *Lupka*, the Crimean Tatar name of the Lipkas up to the end of the 19th century (Ewliya Celebi, *Kniha putestestvoia*, ed. by A. S. Verilina, I, Moscow 1967, 254, n. 3).

The Tatar settlements in Lithuania date back to the first quarter of the 14th century. Lithuania was also to provide a refuge for various exiles from the Golden Horde in later years. However, Tatar colonisation on a mass scale in Lithuania is commonly associated with the person of the Lithuanian Grand Duke Witold (ca. 1352–1430), a supporter of the Khan Tokhtamish and his sons in their struggle for power within the Horde. Witold's expedition to the banks of the Don in 1397 gave a rise to a voluntary and long-lasting immigration of large masses of Tatar population from the steppes to Lithuania. The newcomers, who were brought to settle at the very centres of power (Vilna, Troki and others), while maintaining their tribal organisation and freedom of the Islamic cult, were enlisted to do military service in separate units, and were endowed for this with land and exemption from the taxes. The nobility came in time to be put on a par with the Lithuanian and Polish nobility, whereas the former *tamgas* performed the function of coats-of-arms (S. Dziedulewicz, *Herbars rodzin litawskich w Polsce*, Vilna 1929). The poorer part of the Tatar population engaged in various activities such as wagon-driving, trade with the East and tanning, a craft traditional with Turkic peoples. Certain of the Lipkas also provided some dispatch-riders sent to the Crimea, and official interpreters for mutual contacts with Turkish and Crimean embassies. The privileges granted to the Lipkas by Witold were to be later reaffirmed by the successive Grand Dukes of Lithuania and Kings of Poland. Nevertheless, they were exposed to the envy of the magnates and nobility and of the Roman Catholic clergy as well, which in turn provoked the first manifestations of ill-will among these Muslims towards their adopted land. Their complex situation was adequately depicted in the anonymous *Riddle-yi Tatar-i Lek* by one of the Lipkas who, during a stay in Istanbul in 953/1557–8 on his way to Mecca, wrote his account for Süleyman the Magnificent (from a 18th century copy thereof, no longer extant, the Turkish text with Polish translation and commentary was published by A. Muchliński, *Zdanie sprawy o Tatarach litewskich* . . . Vilna 1858). The rule of the fervent Catholic Sigismund III (1567–1632) and the Counter-Reformation movement brought a number of restrictions to the liberties granted to non-Catholics in Poland, the Lipkas

among others. To this can be attributed the intervention by Sultan Murad III with the King in the matter of liberty of religious cult for the Lipkas, undertaken in 1609/1691 upon the request of two Muslims who had accompanied the King's envoy to Istanbul (Z. Abrahamowicz, *Katalog dokumentów tureckich*, Warsaw 1959, no. 236). In 1609 the mosque at Troki was destroyed and some Tatar women were accused of witchcraft and burnt. P. Czyżewski, in retaliation for his father's death at the hands of a Lipka, published a pamphlet, *Afshar tatarski prociarski*... (1616), abusive towards the Muslim creed and its believers. It gained wide popularity (republished 1640, 1643) despite the *Apologia Tatarum* by Azulawicz (1630). The Lipkas who had defended their new land in the wars against the Teutonic Order and Muscovy, and even the borderland territory of Poland against the attacks of Crimean Tatars, on the other hand, as early as in 1565/1557-6, having the author of the *Riadle* for their mouth-piece, had expressed their wish to be reintegrated with the world of Islam and even of having their land subjugated by the Pādighāh. Now, ostracised as they were and in view of the material difficulties in the Polish army, they partly joined the Turks when the latter invaded Poland in 1672. Köprülüzade Fādh Ahmed Pasha made Poland, by the Buczacz treaty of 1683/1672, refrain from putting any obstacles to their emigrating to Islamic lands; however, their pro-Turkish enthusiasm was soon to abate. A. Kryczyński, who had once served in the Polish army, and later was made commander (*mudatig*) at Bar, the centre of one of the four *sandzys* within the new *vilayet* of Podolia, and a fervent promoter of the idea of serving the Ottomans, perished at the hands of other exiles in October 1673 (*Silāhādr ta'rikhī*, i, 638; S. Kryczyński, *By barzki*, in *RT*, ii, 229-301). Some of the Lipkas availed themselves of the Amnesty Act and returned to Poland (K. Grygajtis and J. Jancaak, *Powrót Lipków pod sztandary Rzeczypospolitej*, in *Sobótka*, 1930/2, 181-9). They also took part in the battle of Chocim on the Polish side under the command of John Sobieski (1673). The reign of John III, a protector and patron of the Lipkas, was also noted in their history by a wave of conversions to Roman Catholicism, a fact which roused the displeasure of Khān Selīm Giray I in 1693/1683 (Vel'yaminov-Zernov, *op. cit.*, 720). The Lipkas fought in 1683 under King John III at Vienna, and their merits were recognised and rewarded at the 1684 Diet. Nevertheless, there were as many of them as 472 at Kamieniec Podolski, and lesser numbers were stationed at other Podolian castles occupied by the Turks (Orhonlu, *op. cit.*, 71; Lipkas are also to be found in the *Dafter-i rüsmiye-i yulwāne me'arib-i Himāri eyalet-i Kamanice bey mülkiye-i larkhi fi sene 1098* [= 1682] at the Wojewódzkie Archiwum Państwowe, Poznań).

The next considerable emigration of the Lipkas to Turkey took place early in the 18th century, in connection with the victory won by King Augustus II over the Polish-born King Stanisław Leszczyński, whom the Lipkas had supported in his war against the Saxon King. Those of the Lipkas who stayed on in Turkey after 1673, as well as the new emigrants, were settled in Moldavia (the "Paste Pola Tatarow Lipkow Libka Tatarlerinuz [sic] Topraghi تپراغی لیپک تاتارلینوز" in J. A. B. Rizzi Zannoni, *Carte de la Pologne divisée par provinces et palatinats*... Paris 1772, no. 23), Dobruđa, and even Anatolia (in the *sandzys* of Khudāwendigār [q.v.] and on the Kizil İrmak [q.v.]).

Formerly a constant threat to Polish borderland areas, after 1699 they served the borderland *pashas* as interpreters in the peaceful relations with Poland. In Poland they enjoyed the favour of the last King Stanisław Augustus (1763-95), and later had their shares in the national Polish uprisings against the Tsarist government; they also served with the Poles in the Napoleonic army. On the other hand, the Russian Empire opened to them a way to a lawful career and education; what was more, the Lipkas owed to it a stimulating contact with the other Turkic Islamic peoples (those of the Crimea and of Adhar-bāyghān). This atmosphere of religious and national revival, of animated contacts with Turkey and the other Muslim lands, as well as with the centres of Muslim learning (Sarajevo, Cairo), distinguished also the activities of the Lipkas in restored Poland (after 1918). An important part was performed by the Cultural and Educational Association of the Tatars in the Republic of Poland (established 1926) and personally by Dr. J. Saynkiewicz, *mufi* since 1926, an orientalist who was in close contact with the Polish Islamiet T. Kowalski (Cracow) and two Karaim Turcologists, S. Szapszał (Vilna) and A. Zajackowski (Warsaw). In Vilna, where the *mufi* had his seat, a Tatar National Museum was founded in 1929, and the Tatar National Archives in 1931. Several journals were published, *Przegląd islamski* (1910-31, *Życie tatarskie* (from 1914), and the *Rocznik Tatarski* (= *RT*) dealing with scientific research (I-III: Vilna 1932, *Nasze* 1933, Warsaw 1938; vol. IV, destroyed by the Nazis, was never published). In 1936 a Tatar cavalry unit was founded within the Polish Army; they wore the traditional horse-tails (*iugh*). The forms of Muslim religious activities in Poland were finally established by the relevant Act passed on 24 April 1936. The outbreak of the Second World War did not permit completion of the building of the mosque in Warsaw. Tatars participated in the Polish resistance movement and fell victims to the Nazis during the occupation. The westward shift of Poland's frontiers after the war, and the emigration of the *Mufi* Saynkiewicz, who had not left any followers of his stature, were detrimental to the general situation of the Lipkas. Some of the Tatar intellectuals, however, supported by the Polish state, have focused their attention on religion, contacts with the Muslim world, history, mosques, burial grounds and other monuments of the Tatar past in Poland (M. Kono-packi, *Les musulmans en Pologne*, in *REF*, 1968/1; A. Miśkiewicz, *Tatarski policy w latach 1918-1980*, in *Nowa*, 1980/8, 83-109).

The author of the *Riadle* reckoned that there were a hundred settlements of the Lipkas, with a corresponding number of mosques, in Poland, and numbered their population at 200,000, which seems greatly exaggerated. Ibrahim Pecevi, quoting the statement made by a messenger of the Lipkas to the *mufi* at Akicirman, mentions sixty villages with mosques (*Ta'rih*, i, Istanbul 1283, 472, quoted by A. Muchlitski, *Isledovanie o proisshozhdenii i sostoyanii iterskikh tatar*, St. Petersburg 1837, 60-1, and Orhonlu, *op. cit.*, 63). In 1932 there were about 6,000 Muslims in Poland, with 16 mosques and one under construction, and two prayer-houses (*RT*, i, 323). At present, their approximate number in Poland exceeds 2,000. There are only two mosques, in the villages of Bohonjki and Kruszylnany (Boghom, Kuzghum among the Tatars), of which the former, devastated by the Nazi troops, has been rebuilt on a government grant. Since the 19th century there has also been a Muslim community in Warsaw

with an old burial ground, two new ones were established after the last war in Gdańsk and Szczecin, where the Tatar repatriates from the East had come to settle.

The author of the *Risale* reports that the imams were brought by the Lipkas partly from the Crimea and the Horde. Pełewi relates that litigious matters of religious and legal nature were submitted by them to, e.g., the mufti at Akkerman (*loc. cit.*). Their contacts with the Muslim clergy in Turkey (also attested by the references in contemporary Turkish authors; Orhonlu, *op. cit.*, 66) are recorded still in the 18th century (Czartoryski Library, Cracow, no. XVII/108e). The author of the *Risale*, a fervent Muslim himself, had deplored the fact that some of the Lipkas assumed the Christian creed, that the knowledge of Arabic was dying out among them and that, still worse, they tended to forget their own language, so that *yerlişir İslam ile şâyemeye başladılar* and nobody but the newcomers knew the "Ottoman" language. Pełewi's informant had equally stressed that the Lipkas on copying the Kur'an 'arabî *hâfîz* ile commented upon it *Leh beferesi İslam ile* (*loc. cit.*). Ewliya Çelebi had at first called them soberly *Leh kralları İslâmî ummet-i Muhammedden* *Lifka karami*, and numbering them into the "Tatar" nations, justly regarded their language as belonging to the Slavonic family (*Seyahat-nâme*, II, 90; V, 138, 146). Later, however, when the name of the Lipkas was cited to him at Ujvár-Neubauers (Nové Zámky, in Slovakia) by the Crimean Tatar adversaries of the Swedes in Poland in 1636 (*cf. LSW*), he wrote how in that "Sweden" which he had allegedly visited along with the Tatars in 1603, he found 800,000 (VI, 368) or 1,000,000 (X, 77) *göçer* *miş* Tatar, adding to this that they did not know Tatar at all and spoke among themselves only *İslâmî İslâmî dilleri* (VI, 368). In fact, the Lipkas, as a result of their intermarriage with the Poles and Belorussians, abandoned completely their native language, however, though Polish and Belorussian became their predominant languages, even in religious writings, they were spelt in Arabic alphabet (such texts in both languages are quoted by Muchlidski, *Isiślowanie* . . . 62-70; in general, A. K. Antonovich, *Belorusskie Isisli, pisaniye arabikim pismom, i Isisli grafiki-ortograficheskaya sistema*, Vilna 1968, with detailed bibliography). Furthermore, the Polish and Belorussian as spoken and written by these Muslims were enriched with many loan-words taken from the Muslim creed, community life, and everyday activities, of Arabic, Persian and Turkic origin (A. Woronka, *Szczegółowe Tatarów ilenizkich*, in *RT*, II, 351-67, with a vocabulary listing similar words and phrases). This cultural ambiguity can be also observed on the tombstones of the Lipkas, where the half-moon and the *shahada* formula in Arabic are usually followed by the text proper written in Polish or, formerly, sometimes in Russian. In recent times, however, even the knowledge of the Arabic alphabet has been dying out among the young generation. Hence when J. Sobolewski wrote his *Wykład wstary mohamedaniskiej czyli islamiskiej* ("Exposition of the Muhammadan or Islamic creed", Vilna 1830), with an explanation of the religious rites and prayers, he did it in Polish only; the book was destined for his many co-religionists who were unable to read the traditional *Azides* in the Arabic alphabet. The Polish translation of the Kur'an by Jan Mirza Tarak Buczacki (Warsaw 1838) was founded not upon the original only, and was provided with commentaries derived from the French translation of the Kur'an

by Kaziminski, which, to cite J. Szyrkiewicz, "were often offensive to the religious feelings of a Muslim" (*Literatura religijna Tatarów ilenizkich i jej pochodzenia*, in *RT*, II, 140).

The Tatar national and cultural revival in inter-war Poland was, however, largely due also to some of the Roman Catholic Lipkas (S. Dziaduliewicz, S. Kryczyński and others). Lipkas converted to Christianity were also among the ancestors of the celebrated Polish writer H. Sienkiewicz (1846-1916; Nobel Prize for literature 1905). The Tatars, who since the 14th century had been settled on Polish territories as war prisoners, were soon converted, with just a vague memory left of their origin (the names "Tatar" or "czabany", pl. derived from Turkic *čoban* "shepherd", as in the surroundings of Chrzanów near Cracow) and their traditional occupations (tanning and horse breeding).

LISAN AL-'ARAB [see *IBN MANẒUR*]

LISAN AL-DIN [see *IBN AL-QHAṬIB*]

LISBON [see *AL-ṬUGAYNA*; *AL-ṬUGAYNA*]

LISS (A., also *lasi*, *lasi*, pl. *lasi*, with *maider* *Isisliyya*, *Isisliyya* (see *LA'*, VIII, 355-6, and *Lane*, s.v.), one of the two main words in Arabic for thief robber (the other being *sariṣ*); in Persian we have *duad* "thief", *duad* "thief", and in old Turkish *ogurl*, Ottoman *hırsas*, modern *hırs*. Arabic *liss* and the unassimilated variant *hırsas* must have appeared in the language during the Byzantine period, presumably via Syriac *lisset*, whilst there exists the form *hass*, closer to the Greek original *ληστής*, in Mishnaic Hebrew and Palestine Jewish Aramaic (see S. Krauss, *Griechische und lateinische Lehnwörter im Talmud, Midrasch und Targum*, Berlin 1898-9, II, 315; Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, 284; J. Schacht, *An introduction to Islamic law*, Oxford 1964, 9). *Liss*, etc. do not appear in the Kur'an, where we have *sarik* and *sarik* (V, 42/38, XII, 20, 73), but nevertheless they are found occasionally in pre-Islamic poetry (Imru' al-Qays, Labid), and then quite frequently in the Umayyad period (for full documentation, see the forthcoming entry s.v. in *WKA*).

In general, the pre-Islamic Arabs did not recognise theft as a highly reprehensible crime, and it was not condemned unless the victim was a member of the kin group or a *ghar* within it (hence Djamāl al-'Uḡliri could satirise a man's father as "the one who stole a guest's cloak", *Ḥamla* of Abū Tammām, 133); the injured party was normally left to secure redress himself and recover his property (see G. Jacob, *Altarabisches Bedeutenstern nach den Quellen ge-*

schilleri, Berlin 1897, 217-18). Only with the coming of Islam did theft and brigandage become crimes punishable under the *Shari'a*, and *ḥudūd* were laid down both for simple theft (now called in legal parlance *al-siqḥ al-fuḡḡrā*) and for brigandage and highway robbery (*al-siqḥ al-ḥudūd* or *ḥaf' al-fariḥ*); for the legal aspects of these crimes, see *AKRIG*. And of course, the carrying-off of camels and other beasts in the course of *ghaw* [q.v.], the raiding of a hostile tribe, was always regarded as perfectly legitimate.

Bedouin society up to the present day has preserved much of the ancient ethos in regard to thieving, with the Kur'ānic penalty of amputation only sporadically applied, even in the towns. In eastern Arabia, H. R. P. Dickson noted that amongst the local Bedouin, stealing from friend or foe was regarded as something shameful and dishonourable, 'ayb, but not treated as a crime (*The Arab of the Desert, a glimpse into Bedouin life in Kuwait and Saudi Arabia*, London 1949, 331-2). Where penalties for stealing are applied, they often involve the infliction of indignities rather than mutilation and suchlike severities. Doughty, whilst journeying with a pilgrim caravan, observed the beating of a servant who had stolen from his master, although the leader of the caravan did in fact have the power of life and death in regard to crimes considered as really serious. In the town of 'Anayza in al-Rasim, he noted that common thieves were beaten with green palm rods (because dry ones would have broken their bones) by the *muftaww*'s or elders responsible for order and decency, but amputation was not practised, and petty theft, if not openly paraded, was disregarded (*Travels in Arabia Deserta*, London 1926, i, 14, 69, ii, 368-9). In Jordan, Jaussen registered humiliating punishments amongst the Bedouins there for stealing, such as tearing out the offender's beard hair by hair (*Coutumes des Arabes au pays de Moab*, Paris 1948, 229-30), forcibly shaving or plucking out the beard being an ancient Near Eastern way of showing contempt for someone, cf. Hannun King of the Ammonites shaving off half the beards of David's servants (II Sam. x, 4-5). Only when a man showed himself as no habitual thief, thereby bringing dishonour on his kin, was he likely to be outlawed by them, becoming an outcast in respect of that particular offence (A. Kennett, *Bedouin justice, laws and customs among the Egyptian Bedouin*, Cambridge 1925, 21).

Within the Bedouin life of pre-Islamic and early Islamic times, the *lūṣ* was in many ways hardly distinguishable from the outcasts and desperadoes of the desert known as *ṣa'dīk* and *futāk* (see *SO'U'OK*), who lived outside the tribal system with every man's hand against them; the poetry of these *ṣa'dīk* and *futāk* attracted the attention of philologists of the 'Abbasid period, and more recently, has attracted that of modern western and oriental scholars (see e.g. Yūsuf Khalīf, *al-Ṣa'dīk al-ṣa'dīk fī 'l-ṣa'd al-dīnīyā*, Cairo 1959; Sezgin, G.A.S., II, 133-45; and arts. *AL-BUḤAYRĀNĪ*, *TA'ABBAT* *SHARRAN*, *'URWA B. AL-WARD*). But the activities of those described as *lūṣ* proper seem also to have been isolated for study by the philologists and compilers of *asāb* works. Thus we have mention in the literary sources of an *Abū Ḥabīb al-lūṣ*, containing poetry of well-known thieves and brigands amongst the Arabs, by the pupil of al-Aṣma'i, Abū Sa'īd al-Ḥasan b. al-Ḥusayn al-Sukkarī (222-73/827-88 [q.v.]); see Brockelmann, I, 208-9; Sezgin, II, 63, 133; and of a *Kalāb al-Sall* or *'al-siqḥ* of Abū Muhammad al-Ḥasan b. Ahmad al-A'raḥī, called al-Aṣwad al-Ḥandajīnī (d. ca.

428/1036-7, see Sezgin, II, 68, 88). The contemporary Syrian scholar 'Abd al-Mu'īn al-Maḥḥīlī has collected the names together of some 30 *lūṣ* poets of the Islamic period, together with their surviving verses, see his *Aḥḥār al-lūṣ wa-ahḥārūhum*, in *RAAD*, XLIX (1974), 362-76.

With the awakening, from the 3rd/9th century onwards, of a distinct interest among Arabic authors in low life and in the criminal and semi-criminal under-worlds of the burgeoning Islamic towns, we find a certain amount of information on the activities of those thieves and brigands in the urban environment, although there are enough continuing references to criminal activities in the countryside and deserts (e.g. the rustlers of thoroughbred horses and camels, the thieves of the latter being known as *ḥḥurāb*, sing. *ḥḥarīb*, see C. E. Bosworth, *The medieval Islamic underworld. i. The Banā Sāsān in Arabic life and lore*, Leiden 1976, 178) to show that rural crime and brigandage never disappeared.

A writer of such varied interests as al-Djāḥiḥ shows a special interest in the tricks and stratagems of the sophisticated criminals of his time, and he seems to have written a special work on the *ḥiyāl al-lūṣ*, partially extant and cited in subsequent *asāb* works (e.g. possibly in al-Bayhaḥī's *K. al-Maḥḥīr wa 'l-maḥḥīr*, ed. Schwally, 521-3, without explicit mention of the title here; cf. Ch. Pellat, *Géographie III. Essai d'inventaire de l'œuvre géographique, in Arabica*, III (1956), 164, no. 95). The compilers of collections of anecdotes were eager to include tales about clever thieves, and in the opening of his *Niḥār al-muḥāḍara al-Tanḥīlī* lists among the interesting tales which he had heard in the course of his career those of fanatically-inspired assassins using knives (*ṣa'd al-ṣa'dīyā wa 'l-sakāḥīn*), of brigands and thieves, and of profligates and rowdies (*ḥalī al-ḥashāra wa 'l-ayyāḥīn*) (ed. 'A. Shāḥīḥ, Beirut 1991/1977-3, I, 4). Several of the succeeding anecdotes do in fact deal with the ruses of crafty evildoers, see e.g. I, 136-8, nos. 79-80, VII, 56-102, 250-1, nos. 37-9, 144, VIII, 218-28, nos. 96-8. One of these tales actually deals with a body of thieves and bandits in India called the *Bānuwāḥīyya*, whom al-Tanḥīlī equates with the Arab *muḥāḍir*, the cut-purse who follows and steals up behind a person to rob him, and from whose activities Muslim traders in India suffered (cf. also the *Bānuwāḥī* of al-Djāḥiḥ, cited in Bosworth, *op cit.*, I, 37); Muslim authors seem to have been aware of the existence of organised groups or castes of dacoits and thugs in India, grouping these criminal bodies with the Bedouins of Arabia and predatory Iranian peoples like the Kurds, the Balūc and the *Kūfūds* (see *qurṣ*) as examples par excellence of violent and uncontrollable brigands. One should note also the connection in certain sources of gambling (see *ḡimār*) and thieving, seen in the not-infrequent phrase *lūṣ muḥāḍir* 'thief and gambler' (see F. Rosenthal, *Gambling in Islam*, Leiden 1975, 214, 253).

The authors of *maḥāmīd* [q.v.] and other works of the picaresque genre likewise found here material around which they could weave incidents involving their respective heroes. Thus Badī' al-Zamān al-Hamaḡhānī wove several of the adventures of Abū 'I-Faḥ al-Ikandārī around the activities of impudent thieves, such as those who stole surreptitiously from the ranks of prostrate worshippers during the *ṣalāt*, those who ascended house walls and used grapnels for purloining articles inside the rooms, and these who burrowed into cellars and vaults from the outside or from adjacent houses (the *maḥḥīr* or *ṣa'd al-*

malib) see further, Bosworth, *op. cit.*, i, 200-3). Especially valuable evidence on this type of activities is to be found in the chapter on *al-lagay* and associated unfortunates in al-Rāghib al-Isfahānī's *Mukhḍarāt al-madabī* (ed. Cairo 1287/1870, ii, 208-12, ed. Beirut 1964, iii, 189-99). Al-Isfahānī cites as an outstanding figure among successful criminals one 'Uthmān al-Kharrāṣī, who as a skilful practitioner himself (called al-Kharrāṣī, not because his original profession was that of tailor, but because he "sewed up", *kharrāṣa*, the holes bored into houses for felonious purposes so neatly that they were almost undetectable) had apparently become something of a semi-legendary figure by al-Rāghib's time (the Dawūd al-Ḥalabī Library in Mosul—whose contents are now dispersed and their location largely unknown—contained a *Ḥikayat 'Uthmān al-Kharrāṣī fī 'l-ḥayāt wa-ḥaṣayyihā*, see Pellat, *loc. cit.*; and one wonders whether there is some connection with the hero of two anecdotes given by al-Tanḫūkhī, named as 'Abbas b. Kharrāṣī and described as a supremely clever thief of Basra, see *Nighār*, vii, 97-102, nos. 58-9).

According to this 'Uthmān, there were five main categories of thieves and brigands: (1) the *muḥḍāl* or "trickster", who worked by stratagems and who did not kill in the course of his crimes and was therefore looked down on his more desperate and violent counterparts; (2) the *ḥāḍib al-layl* or "worker by night", the nocturnal housebreaker, who got in either by boring or by scaling walls (the *mutaṣallih*), and the robber with violence (*muḥḍār*); (3) the *ḥāḍib al-layl* or "gentleman of the road", the highwayman or brigand; (4) the *muḥḍāl* or "burrower, excavator", said to be well-known and presumably a man who dug up a people's buried treasure hoards; and (5) the *ḥāḍib* or "strangler, assassin", who may work by suffocating his victim, but may also be a disemboweller (*ḥāḍib*) or one who pounds his victim's head with a stone (*ḥāḍib*). He then goes on to detail the types of confederates and auxiliaries (*ḥāḍib*) whom criminals employed, e.g. to "ease" likely prisoners for a future break-in or to create diversions whilst a raid could be made (for further details, see Bosworth, *op. cit.*, i, 201-6).

Bibliography. Given essentially in the article. On the legal status of highway robbers and thieves, see Majid Khadduri, *The Islamic law of nations*, Shaybānī's *Siyar*, Baltimore 1966, 247-50.

(C. E. BOSWORTH)

LITERATURE [see ADAB; 'ARABIYYA; ḤAZAL; MADHīb; MAKĀMA; MATHNĪYA; SHI'ī; TA'ẓīl, etc.]

LITHAM (A.) (sometimes also pronounced *lithām*), the mouth-veil, is a piece of material with which the Bedouins concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary on al-Harīrī, ed. de Sacy, Paris 1821, 374, 3). According to the *LA*, *lithām* is a mouth-veil which also covers the nose top (*arḥat al-nās*) and is worn by women. It served the practical purpose of protecting the organs of respiration from heat and cold as well as against the penetration of dust (cf. *Dhu 'l-Rumma*, no. 5, 43, also no. 39, 24 and 73, 16; and the commentaries on al-Mutanabbī, 464, 27, and al-Harīrī, 374, 2). It also made the face more or less unrecognisable, and thus formed a protection against the avenger of blood (Goldziher, in *ZDMG*, xli [1887], 101). The *lithām* was therefore also sometimes worn as a deliberate disguise by people who did not usually wear it; thus in the *200r Nights* (ed. Macnaghten, i, 878) it is worn by a princess, who disguises herself as a man, and (*ibid.*, ii, 59) by a woman for similar reasons. A denominative verb

has been formed from *lithām*, the fifth form of which in particular means "to put on the *lithām*" (e.g. *Aghānī*, viii, 102, 20; *Kāṣ*, 55, 19; *Aghānī*, ed. Kasa garden, 121, 13; Wright, *Opuscula arabica*, iii, 2; al-Harīrī, *Maḥmūdī*, ii, 433, 2), while the eighth form in the meaning "to put on something as a *lithām*" is generally used only metaphorically (see below). *Talithām* usually means a woman's veil (Cherbonneau, in *J.A.* [1849], i, 64), but *talithām al-bayḍ* is also found as the distinctive dress of a particular office under the Fātimids; their chief *ḥāḍib* wore it along with the *tarbush* and *ḥaylān* (de Sacy, *Chrest.*, ii, 92). In general, however, the *lithām* does not seem to have been worn by town-dwellers.

The *lithām* has no considerable importance for Islam from the purely religious point of view; it is forbidden along with certain other garments for the *muḥḍar* (al-Bukhārī, i, 390, below).

The custom of wearing a *lithām* was generally disseminated among the Ṣaḥābiya tribes (q.v.) in north-west Africa, who are therefore described as *lithām* wearers, *muḥḍarīn* or *anṣāb al-muḥḍarīn*; as the Almoravids originated in one of their clans, the Lantāna (q.v.), the *lithām* thus came to have a certain political significance. The custom of wearing a *lithām* (below the *niḥāḍ*, see al-Bakrī, i, 70; the *lithām* is also mentioned by al-Ya'qūbī, Ibn Ḥawkal, Ibn Baṭṭūṭa, Ibn Ḥalqān, etc., cf. Corso, 151) was found in other parts of Africa also, e.g. in Kāṣ (al-Makrī, i, 293, 334) and still prevails among the Tuareg. The Tuareg veil has been the object of several special studies (see *Bibl.*). Amongst the Tuareg, it is not called *lithām*, but *teghuṣṣ* or *ḥiṣṣ* ("mushin"). Its origin seems to be pre-Islamic and perhaps even prehistoric. Among the ancient paintings and rock engravings found by Leo Frobenius there are human figures without mouth and nose, but with only two eyes. The primary motive for a veil seems to be magical, to protect the ways of life from evil forces. These Africans retained their veils even on journeys into the eastern lands of Islam, where it was not the fashion, while their women went unveiled. A tradition of late invention explains these remarkable customs by a story that on one occasion during an attack on a village, where there were many women but only a few men, the men put on veils and the women took up arms to deceive the enemy as to their real numbers (Goldziher, in *ZDMG*, xli, 102); another story has it that after the fall of the Umayyads, 200 members of the Umayyad family and their clients escaped to Africa disguised as women and that the wearers of the *lithām* are descended from them (Wustenfeld, *Der Tod des Husejn*, p. viii). According to al-Bakrī (text, i, 70, fr. 321), they never took off the *lithām*, and if one of them fell in a battle and lost the *lithām*, not even his friends could recognise him till the *lithām* was put on him again; they also called other men who did not wear the *lithām* "fly-mouthed". The Almoravids, particularly Ibn Tūmart, opposed the veiling practised by the Almoravids. They continuously insisted that it was forbidden for men to imitate the dress of women, but they did not succeed in abolishing the custom of wearing the *lithām* (Goldziher, in *op. cit.*, 102). Among further passages where the term *muḥḍarīn* occurs in this sense may be mentioned 'Abd al-Lāṭif, ed. de Sacy, 483, 18 (with other references); Fleischer, *Kleinere Schriften*, ii, 243 (discusses several passages); Marquardt, *Die Beirut-sammlung*, index, s.v. *Lithāmträger*. The word *lithām* and its derivatives was very much used in figurative language, especially by poets,

From expressions like "to kiss the lips of the beloved one, which are under her *liḥām*" (Dozy, *Vêtements*, 400; cf. *al-lah al-liḥām* = "the face" in al-Mutanabbi, 464, 27) develops the meaning of *liḥām* "to kiss" ("Umar b. Abi Rabi'a, ed. Schwarz, 6, 207; Ibn al-Fārid, *Dīwān*, Marseilles 1853, 125, l. 5 from below) and especially *talāḥama* = "to kiss one another"; *malḥām*, the place which is kissed (al-Farazdaq in Dozy, *Suppléments*). A girl is given a *liḥām* woven out of her own hair (2008 *Nights*, Breslau edition, ii, 52, 2); the camel has a *liḥām* of foam around its mouth (Dhu 'l-Rumma, 76, 27); the wolf is *aḥamm al-liḥām* = "black in the region of the muzzle" (al-Tirmidhī, 4, 35; of the wolf, we find it said in *Hamās*, i, 762, 27, *lam yatalaḥḥam*); the wine-jar has a *liḥām*, i.e. a piece of cloth over its mouth (*malḥām*; *Maḥādīyat*, ed. Lyall, no. 125, 7; also al-Aḥḥāl, ed. Sāḥim, 85, 2 and 'Alkama, ed. Socin, ii, 43, on jam); the sun is darkened by clouds of dust and is thus given, as it were, a mouth-veil (*liḥām*, al-Mutanabbi, 601, 15); "at the day (*nahār*) doffed its *liḥām*" = a description of dawn in Ibn 'Arabshāh, ed. Götter, 64, 3, from below; cf. the commentary on al-Marīfī, *Maḥādīyat*, 240, 20; *khaṣṣa* [al-subḥ] *al-liḥām*; many titles of books also begin with *Khaṣṣa* *al-liḥām*, cf. Brockelmann, S III, 915, 937 (eight titles with *khaṣṣa* *al-liḥām* and one with *imāla* *al-liḥām*); the *liḥām* is to be taken from the walls of buildings, i.e. they are to be exposed (Ibn al-Dīn, ed. Landberg, 63, 12); to doff the *liḥām* of one's origin = to confess it freely (al-Marīfī, *Maḥādīyat*, ii, 426, 3); the archangel Isra'īl has one of his four wings veiled like a vast mouth-veil (*liḥām*) from heaven down to the seventh earth (al-Karīmī, ed. Wustefeld, i, 56, below); a voice may be hidden, *malḥām* (Tarāfa, ed. Ahlwerdt, no. 5, 26 = ed. Beirut 1886, 10); a further metaphor is found in Ibn al-Fārid, in de Sacy, *Chrest.*, iii, 53, verse 25.

Bibliography: in general, cf. Dozy, *Vêtements*, 399-400 and *Supplément*, ii, 316; and for the walls of Muslim women, in general, cf. Snouck Hurgronje, *Twee populare duahujen verteld*, in *Verspreide Geskr.*, i, 293 ff. and 1204 ff. On the Tawarg well specifically, see H. R. Palmer, *The Tawarg well*, in *Geogr. J.*, lxviii (1920), 412-18; D. Campbell, *The Tawarg or veiled men of the Sahara*, in *MW*, xvi (1928), 256-62; Raffaele Corso, *Il velo dei Tawargh*, in *AIUON*, nuova serie (1949), 151-66; J. H. Roeman, *The Tawarg well*, in *Revue de l'Occident musulman*, no. 17 (1974), 107-18; L. Frobenius and H. Obermaier, *Nachrichte meken*, 1925, pls. 32, 80, 158.

LITHOGRAPHY [see MAYNA'Ā]

LITHOMANGY [see TARK]

LIU CHIH (*Mathews' Chinese-English dictionary*, Revised American edition 1969, characters nos. 4093, 933), also known as **LIU CHAI-LIEN** (*Mathews'*, nos. 4093, 629, 4003), 12th/18th century Chinese Muslim scholar (translator, theologian, philosopher and biographer of the Prophet Muḥammad), the most prolific Chinese Muslim author and probably the best-known literary figure yet produced by the Chinese Muslim community.

A *Hui* (Chinese-speaking) Muslim, Liu Chih was born in Nanjing ca. 1681/1670. Little is known of his class background or early childhood, but it is safe to assume that he was from a well-to-do family. His father Liu Han-ying (*Mathews'*, nos. 4093, 2030, 7469) is said to have "ceaselessly regretted" (Pelliot, *op. cit.* in *Bibl.*, 415, n. 1) the paucity of Islamic works

available in Chinese, and indeed, some sources have credited Liu Han-ying (under the pseudonym Liu San-chieh, *Mathews'*, nos. 4093, 5455, 774) with the authorship of two short Islamic tracts (Pelliot, *ibid.*); certainly, Liu Chih seems to have manifested an early interest in the study and translation of Islamic works. Liu tells us that he prepared himself for his life's work—the propagation of Islam through the medium of the Chinese language—by undertaking prolonged linguistic and philosophical studies. At the age of 25 he began a study of the traditional Chinese classics and histories which lasted for eight years. This was followed by a six-year study of Arabic and Islamic religious literature, a further three years study of Buddhism, and finally, one year studying the Taoist classics. Liu completed his universal education by reading 137 *Hsi-yang* (Western) books of which Ford, 150 (see *Bibl.*), writes: "this may seem a large number for that period, but it was over a century since Matteo Ricci had arrived in Peking (1601) and he and his successors, together with the Chinese scholars associated with them, had produced a whole series of works on geography, astronomy, mathematics, mechanics and religion, including some touching on Confucianism. It is therefore quite possible that there was a collection of that number at Nanjing and that Liu had seen it".

From the age of 33, Liu was to concentrate on making Arabic and Islamic works available to his Chinese co-religionists. It is clear that he also wished to make Islam philosophically acceptable to the Confucian Chinese establishment. As Ford (*ibid.*) points out: "his leaning towards Confucianism was more marked than that of any other Muslim and it has sometimes been questioned whether he did not compromise his Muslim principles. After ten years of study, he writes, it came on him like a flash that the guiding purpose of the *Qur'ān* was similar to that of Confucius and Mencius 'The Sacred Book', he wrote, 'is the Sacred Book of Islam, but it [the Confucian concept of moral propriety] is the same *li* which exists everywhere under heaven". In Liu's attempt to reconcile Confucianism and Islam, the traditional dilemma of Chinese Muslims—geographically and culturally isolated from the rest of *dār al-Islām*—can clearly be seen. The same may be said of Liu Chih's personal dilemma—the almost instinctive desire of a Muslim member of the Chinese *literati* in the ethnocentric 12th/18th century China to make his "barbarian" religion culturally and politically acceptable in his native land (Liu lived at a time of rapidly-deteriorating Haa Chinese—Hui Muslim relations), whilst at the same time strengthening the Islamic affiliations of the Chinese Muslim community.

Liu Chih tells us that after completing his preparatory studies, he wrote several hundred manuscripts, of which only about one-tenth were published. His first major work, *T'ien-fang A-sing-ti* ("The philosophy of Arabia")—preface dated 1115/1704) deals in some depth with questions of cosmology, creation, the nature of man and the unity of God. In the preface to this book, a contemporary non-Muslim mandarin, the Vice-Minister of the Board of Ritual, wrote: "the ancient Confucian doctrine has been undermined at different times by Buddhists and Taoists . . . now, however, in this book of Liu Chih we see once more the way of the ancient sages, Yao and Shun, King Wen and King Wu, and Confucius. Thus although his book explains Islam, in truth it illuminates our Confucianism". Similarly in the preface of Liu's *T'ien-fang tzu-ti ch'iao-chai* ("A selection of important Arabian [i.e. Islamic] rules and cere-

movies"—preface dated 1122/1710), the Vice-Minister of the Board of War was to write that after discussing the Muslim religion with Liu he had found that it upheld the traditional Confucian values of loyalty to the sovereign, filial piety and brotherly love—in short, that Islam was not to be equated with "heretical and vicious sects" which were opposed to the established (Confucian) order (Ford, *ibid.*). This early Ch'ing attitude to Chinese Islam was to change radically by the latter half of the 18th/19th century when North-West China was shaken by the rebellion of Ma Ming-hsin (q.v.), and still more so after the mid-18th/19th century risings of Ma Hsue-lung and Ya'qub Beg (q.v.). Liu's *Arabian rules and ceremonies* was less kindly reviewed in the 1197/1782 Catalogue of the Imperial Library, which states: "The style of this book is extremely elegant, but if the base is wrong to start with, the words avail nothing". In 1710, the same year as the publication of *Arabian rules and ceremonies*, Liu also produced a short handbook entitled *T'ien-fang shu-ma ch'ai-i* ("An explanation of the Arabic alphabet"), essentially a guide to the Arabic script intended for the use of Chinese Muslims.

Undoubtedly Liu Chih's greatest work—he himself saw it as both the zenith and climax of his life's work—was his biography of Muhammad, *T'ien-fang chih-sheng shih-lu sien-p'u* ("An accurate biography of the Arabian Prophet", Nanking 1137/1724, first published 1193/1779). This book has been wholly or partially translated into Russian, French, English and Japanese, and is certainly the most widely-known of all Chinese Muslim books. Liu's biography of Muhammad was based on a number of Arabic and Persian language works, the chief of which has been transcribed by Pelliot as *Tardjama Muslofi*, a work which remains unidentified. A list of 67 reference works in Arabic and Persian used by Liu in his researches has been studied by the Japanese scholar Kuwata Rokuro (see *Bibl.*, also Ford, *op. cit.*, 151).

Liu Chih tells us little of his personal life. We know that he was a bookworm, and that because of his studiousness he was considered rather dull by his relatives and friends. Liu travelled widely, primarily in search of Arabic and Persian texts. Whilst en route "he pursued his reading among the dust of the caris by which he travelled, and even when riding on his beast" (Mason, *The Arabian Prophet*, p. xli).

Before the Communist conquest of China in 1949, Liu Chih's tomb, which could still be seen outside the southern gate of the city of Nanking, was regularly visited by Chinese Muslim pilgrims. It is not known whether the tomb still exists today, but it should be noted that in 1973 the tomb of Sayyid Wakhs, by tradition the father of Chinese Islam, was restored by the Chinese government.

Bibliography: The first European language analysis of Liu Chih's work was made by the Archimandrite Palladius (Piotr Ivanovich Kafarov) under the title *Kitaishaya literatura Magometan: islozheniye soderzhaniiya na knizhnom yazyke, pod zaglavliem Liu ian'chaki shen chi lu, soderzhannee Liu-tze-tung* ("The Chinese literature of the Muslims: survey of Islamic works in Chinese entitled Yu-tin-shih san-shi-lu, compiled by Liu Tzu-tung"), ed. V. V. Grigor'ev, St. Petersburg 1874 (cf. *Trudi VOIRAO*, xvii [1887], 149-68). Pelliot says of this work: "cette publication n'est elle-même qu'un extrait d'un travail plus considérable de même titre, rédigé par Palladius entre 1848 et 1859, et qui... a enfin paru en 1909"; in

fact, the work referred to by Pelliot (*op. cit.*, 414, n. 8) first appeared in *Trudi VOIRAO*, xvii [1887], 163-496 (repr. 1909); see *Kitaishaya literatura Magometan, pokrovo ego archimandrita Palladiya... izdati yevromonakh Nikolai Adoratskii* ("The Chinese literature of the Muslims, by the late father Archimandrite Palladius, ed. posthumously by the monk Nikolai Adoratskii"), St. Petersburg 1887, 1909. For an early translation of Liu Chih's *T'ien-fang shu-ma ch'ai-i* by C. F. Hogg, see the *Chinese Recorder*, xxxiv (Shanghai 1891), 545-53, under the title *Mohammedanism—laws and ceremonies*. A short notice appears in M. Broomhall, *Islam in China*, London 1910, 73-5. An analysis of Liu Chih's work may be found in A. Vissière, *Analyses d'ouvrages chinois-Mahomédans*, in D'Ollone, *Recherches sur les musulmans chinois*, Paris 1911, 389-417, 421-5; also in *RMF*, xiii (1911), 30-63. A number of Liu Chih's works are listed in C. L. Opplie and S. M. Zwemer, *A classified bibliography of books on Islam in Chinese and Chinese-Arabic*, in the *Chinese Recorder*, xlviii (1917), 652-9, see nos. 6, 7, 13, 20 (2), 21 (2), 43, 71, 77. For a translation of Liu Chih's *Mu-min san-lu ching* ("Muslim three-character classic") by F. L. M. Cottet and R. L. Reichelt, see *MIF*, viii (1918), 10-15; also in the *Chinese Recorder*, i (1949), 645-52. [This is the same work as Liu Chih's *T'ien-fang shu-ma ch'ai-i* ("Arabian three-character classic") mentioned by Mason in *JNCBRAS* (1923), cited below.] For a preliminary examination of Liu Chih's *T'ien-fang chih-sheng shih-lu sien-p'u*, see I. Mason in *Journal of the North China Branch of the Royal Asiatic Society*, ii (1920), 139-80, under the title *A Chinese life of Mohammed*. Certainly the most interesting English-language work on Liu Chih is Mason's *The Arabian Prophet: a life of Mohammed from Chinese and Arabic sources*, Shanghai 1921; this work is an extensive (though not full) translation of Liu's *T'ien-fang chih-sheng shih-lu*. A list of some of Liu Chih's works also appears in Mason's *Notes on Chinese Mohammedan literature*, in *JNCBRAS*, I, 1 (1923), 173-175, see nos. 160, 162, 274, 277, 278, 284, 287, 312. The fullest translation of Liu's biography of Muhammad is in Japanese; see Tanaka Ippai, *Tempo Shisei jitsuroku*, Tokyo 1930. Also in Japanese, see Kuwata Rokuro, *Liu Chih no I-tai-ching shen-mu ni tsuite*, in *Ichimura hakushi koki hinen Toyo-shi renso* (Ichimura Festschrift), 1933, 335-53. A short notice may be found in Fu Tung-hsien, *Chung-huo lun-chiao shih* ("A history of Chinese Islam"), Shanghai 1940, 160-2 (Taipei reprint 1970; Japanese tr. 115 Akira 1942). Also in Japanese, Kadono Tatsuo, *Kanyō Ryukō* (on Liu Chih) no "Tenko Tenrai yaku yōrai" ("The Muslim scholar Liu Chih's Selection of important Arabian rules and ceremonies"), in *Shina Bukkyō Shugaku*, 14/1 (1940), p. 13. See also the monumental work on Chinese Islam of Tazaka Kōdō, *Chūgoku no shōka Kanyō no shōrai to sono gaku* ("Islam in China: its introduction and development"), Tokyo 1964, 1270-91. The most recent English language notice is J. F. Ford's *Some Chinese Muslims of the seventeenth and eighteenth centuries*, in *Asian Affairs*, ix/1 (1974), 144-56, see esp. 149-52. D. D. Leslie, in his *Islam in China to 1800: a bibliographical guide*, in *Abr-Nahrain*, xvi (1978), 16-48, states that Liu Chih's tombstone obituary is to be found on pp. 11077-11080 of the 1970 edition of his *T'ien-fang shu-ma*, see Leslie, *op. cit.*, 36.

(A. D. W. FOSBERG)

LIVADYA (Λαβιάδα), a town in central Greece on the slopes of Mount Helicon, bordering the vast fertile plain of Boeotia. Nearby is Lake Kopais, reclaimed between 1883-92. The local centre of agriculture and the seat of a bishopric, Livadya was in the Frankish Middle Ages one of the important castles of the Duchy of Athens. In Ottoman times (1460-1829) it developed into a prosperous urban centre and grew into the largest city of central Greece, after Athens, with the highest number of Muslim citizens to the south of Thessaly.

The origins of Livadya go back to the remote antiquity. Since the 8th century B.C., it was one of the minor Boeotian towns, living in the shade of the mighty Thebes. As is the case with many Greek cities, little is known about the town in the early Middle Ages. As an urban centre it appears to be the successor of the ancient city of Orchomenos/Skripou, the seat of the Byzantine administration since the 8th century, which declined during the 11th and 12th centuries. The castle of Livadya, situated on a steep conical hill overlooking the city on the south-west, must have been founded by the Franks after 1204, when it was included in the Duchy of Athens. The Catalans of the Grand Company occupied Livadya after the battle of Skripou in 1311 and held it till 1379-80, reconstructing the castle to the form it largely has today. At an unknown date, the Navarrese, who had captured the town in 1378-80, ceded Livadya to the Florentine Nerio I Acciaiuoli, but almost immediately afterwards it was taken by the Ottomans under Ghâzî Evrenos, who kept it for almost a year (1392-3). Yıldırım Beyazîd's armies, marching to the Morea in 1397, seem to have passed by Livadya, reconquered by the Franks under Bertrânc Mota. The unceasing warfare of the second half of the 14th century, and at least four epidemics of plague (1346, 1372, 1374, 1388) depopulated the land to a large extent. The Acciaiuoli tried to remedy this by settling ten thousand Albanian families who had been ousted from Epirus by Carlo Tocco. The reign of Antonio Acciaiuoli (1403-35), an Ottoman vassal, was more or less peaceful. There must have been some recovery, interrupted only by the plague of 1423. During the "Varna crisis" of 1443-4, the Livadya area was plundered and occupied twice, first by the Ottomans under Turkhân-oghlu 'Ömer Beg in 1460, as retribution for the treason of Nerio II, who had forsaken the Ottomans, and then by the troops of Despot Constantine of the Morea. The last Florentine Duke of Boeotia, Antonio II, also an Ottoman vassal, was removed in 1460 when the duchy became an Ottoman *sandjak* without much upheaval. This is perhaps the reason why the Ottoman chroniclers pass over the acquisition of Boeotia in silence. After Chalkis had been wrested from the Venetians (1470), this large walled city and important harbour became the capital of the *sandjak*, called Eğribos (from Euripos), and Livadya the seat of a *hâkîm*.

The Ottomans seem to have settled mainly in the Catalan castle and in a cluster of houses below it, on the banks of a torrent. There Turkhân-oghlu 'Ömer, the Ottoman governor of Thessaly, constructed an *hamam* and a domed mosque with some guestrooms that was to become the centre of Islamic life for the next three-and-a-half centuries. The castle was guarded by a garrison of a few dozen soldiers. The mosque is mentioned in the *Wâk'ât* of 'Ömer Beg, its staff being paid from the vast urban property of the Turkhân-oghlu clan in Thessaly.

The *Jemal Defter* M.M. 66 from 871/1466-7, is

apparently the oldest preserved Ottoman register containing information on Livadya. In the mentioned year, the town was a *sandja* of the *sandjak* of Tırhâle (Trikkala) containing 164 Christian households and 24 bachelors as well as a Muslim community of 57 households and 25 bachelors. The Christian group should be regarded as the autochthonous population of Livadya, the relatively large Muslim group as the product of a deliberate policy of colonisation after the town had been annexed.

In this same year the administrative district of Livadya contained 47 Greek ("Rûm") villages and 30 *şahens* inhabited by Albanians ("Arnavud"). A year after the conquest of Eğribos (Chalkis), in 1275/1271, the town and the district were detached from Tırhâle and added to the newly-formed *sandjak* of Eğribos, as is mentioned *dar kedar* in the 871 register. Another *dar kedar* note in the same register mentions that in *İshak b. Hüdâ* of 876/May-June 1272, Livadya was entrusted to 22 soldiers of the garrison of Eğribos, soldiers bearing Muslim Turkish names and coming from a number of places in the Balkans (Pilepe, Fanari (Thessaly), Nigbolit, İshak (Lama), Yambol Serfikje, Serres, Berat in Albania, etc.) thus giving no indication of where the first Muslim settlers of Livadya came from.

During the 16th century, Livadya shared in the general expansion of the cities of the Ottoman empire. The census registers of the *sandjak* of Eğribos, preserved in the Başbakanlık Arşivi in Istanbul, give exact information on the fast-growing number of inhabitants as well as on the number and scope of the Islamic institutions founded in the city in that period. The *Mufasssal Defter* of 1506 (T.D. 35), which records some of the *şahfs* of the *sandjak* of Eğribos (but no data on the population of Livadya), mentions a *mevâhîm-ı hâim* of Hasan Beg b. Mûsâ in the city and a *sandja* of Ayas Dede, which provided lodging for travellers. Both foundations were maintained from the rents of some shops, watermills and gardens in or near the town. According to the *Jemal Defter* (no. 367) of 1526-28, Livadya numbered 417 households, 295 of which were Christian, divided in four *mahalles* under their priests (49 of the Christian families were registered as cultivators of rice, *zâirakçıyân*). The Muslim community, consisting of 96 households, was apparently not yet crystallised in *mahalles*. The *Defter* also mentions a community (*çema'at*) of 36 Jewish families. Thus the population of Livadya was then 70% Orthodox Christian, 22% Muslim and 8% Jewish. According to the *Kanûn-nâme* of the city and the district of Livadya, contained in the same register, the Muslim citizens paid only the tithes and nothing else. This source also states that the Jews had come from the West and that among the Christian inhabitants there were Albanians and Vlach nomads. The Albanians enjoyed some minor tax facilities. The city was by then a *hâkîm-i kûndân*. T.D. no. 296 from 1539-40 mentions a garrison of 36 men in the castle of Livadya. This number could be so low because the city was safely situated in the interior of the country and had little to fear from an enemy attack (Chalkis and Athens, both on the coast, had then 357 and 114 men respectively, including *şadîrs*, gunners, etc.).

A further witness of the vast expansion of Livadya in the 16th century is the *Mufasssal Defter* of 1569-70 (T.D. 484). It mentions 552 Christian, 317 Muslim, and 32 Jewish households. The Christians still lived in four *mahalles*, but the Muslims had by now formed five *mahalles*, grouped around their mosques: the *Dişâmî*-i 'Akkâ'î 'Ömer Beg, the *Dişâmî*-

i Bâli Beg, the Mesğid-i Muştâk Voyvoda, the Mesğid-i Nuşîh al-Dîn and the Mesğid-i Mahmûd Çelebi. The rapid augmentation of Muslim inhabitants did not primarily result from conversion of local Christians, for the 1570 register, written when the peak of conversion to Islam was over, gives but 23% converts among the Muslims. In the 16th century, the cultivation of rice in the fertile and well-irrigated plain east of the city expanded likewise. The 1526 register mentions 51 Christian *tehdikçis* living in Livadya; that of 1570, recapitulating the registrations of the intervening years (not known to us) gives 53 "old" Christian *tehdikçis* and 16 "new" ones besides 16 "old" Muslim *tehdikçis* and no less than 43 "new" ones. Only 3% of these 59 Muslim cultivators of rice were converts, which means that they must have come from elsewhere, most probably from Thessaly with its massive population of Muslim Turkish colonists. The *tehdikçis* of Livadya had a privileged fiscal position, since they were exonerated from the *vacarîd-i dîvânîyye* and the *tehdik-i fâişyye*, a status given to them by "previous Sultans" and renewed ever since. The cultivation of rice in the marshy Kopas area thus goes back at least to Elyetîd II or even Mehemmed II. The Muslim population of Livadya as a whole had a specific status. It was exonerated from the *vacarîd* and the *tehdik* taxes and the duty of oarsmen of the fleet, but was expected to form a military reserve in case of attack. This status, based on "orders of the previous Sultans", probably goes back to the time of Mehemmed II.

The 1570 register shows a major shift in the ethnic-religious composition of the Livadya population: 62% was Christian, 35% Muslim and only 3% Jewish. It had the highest number of Muslim citizens of the entire *sandjak* of Eğriboz (in that year, Eğriboz numbered 199 Muslim households, Thebes (İstifâ) 121 households and Athens 36 households). This expansion of Islam as well as the further growth of the town continued throughout the last quarter of the 16th and first half of the 17th century, although exact numbers are lacking.

The most detailed description of Islamic Livadya in the 17th century is given by Ewlyâ Çelebi (Neyşân-ı-rûnî, viii), who visited the city in 1078/1667-8. By then it appears to have reached its widest expansion. There were 2,020 houses, six Christian *mahalles*, inhabited by Greeks, Latins and Armenians, and seven Muslim *mahalles*. The latter were principally the same as those mentioned in the 1570 register, but the *mesğids* had now become mosques. Ewlyâ Çelebi does not mention the *mesğid* of Mahmûd Çelebi, but adds as a new building the Mosque of the Tanneries, commonly known as Sâleyimînîyye, and notes three *mahalle mesğids*. According to Ewlyâ, the mosque of 'Ömer Beg was a small building in ancient style, with a plentiful congregation. The mosque of Bâli Beg, also in old style, had an inscription in Arabic, dated 931/1524-5, which Ewlyâ quotes in *extenso*. There were, furthermore, three dervish *tekkes*, three *nikkahs* and two *madreses*. The existence of the latter is not attested elsewhere. Ewlyâ gives a very accurate description of the castle, then guarded by fifty men who had their houses inside the walls. Like the European travellers after him, Ewlyâ extols the beauty of the town, situated on seven hills and dates, and its spacious and prosperous houses, fountains and coffeehouses. Among its population were many rich and notable persons. According to Ewlyâ, part of the *evâf* property of the Holy City of Medina and was governed by a Voyvode of the Kızlar Ağası [cf.], who had juris-

diction over this *evâf*. Commanding 200 men, he administered justice and had the right of capital punishment. Ewlyâ's information suggests that he paraphrased stipulations from state documents. Greek sources attest that Livadya was part of the domain of the Wâlidâ Sultân, thus reflecting the situation in the last part of the Ottoman period. On an Ottoman list of *hâşimîs* of 1667-8, Livadya ranked sixth in the hierarchy of twelve states.

Spon and Wholer, who travelled in 1675-6, relate that the town was inhabited by "Turks and Greeks" and a few Jews, living from the production of woollen cloth and trade in corn and rice, which was exported to all of Greece. The Turks possessed "five or six" mosques, the Greeks as many churches. They also mention a caravanserai and say that the mosque of 'Ömer Beg was originally a church, dedicated to St. George. According to Richard Pococke, who visited Livadya in 1745, the town was inhabited by an almost equal number of Greeks and Turks. His information about the number of houses seems unreliable. Pouqueville, who visited the town shortly before 1800, gives a "cadastre du Valvodit de Lebadea" with the names and numbers of the inhabitants of all the villages of the district. Livadya itself counting 2,000 households. In the same period, Col. Leake found Livadya singularly beautiful, possessing an air of opulence not found elsewhere in Ottoman Greece. According to him there were 1,500 houses, only 150 of which were Turkish. Henry Holland, travelling in 1825, noted that Livadya was "still retaining the reputation as one of its principal towns in modern Greece" with nearly 2,000 houses, "many of them very large and inhabited by wealthy and respectable Greeks." There were still five mosques with minarets, but the Turkish population was very small. Economy was still based on agriculture, exports consisting of wheat, barley, maize, cotton, wool, cheese, honey, etc., and estimated in 1805 at 250,000 *kûles* (bushels). The reason why the Muslim-Turkish part of the inhabitants of Livadya declined so markedly in the 18th century is not known in detail.

In the first decade of the 19th century, the powerful Tepedimânî 'All Pasha tried to extend his direct control over Livadya. He was unsuccessful in attempting to ease the taxes of the area, but succeeded in enlarging his influence, acting as Inspector of the Passes.

In the second half of the Ottoman period, especially in the 18th century, the type of land tenure and the administrative system favoured the development of a powerful Christian bourgeoisie that took control of production and commerce. The main representative of this class was Giannakîs Stannos Logothetis, a progressive and cultured man who was in touch with the liberal movements of Western Europe. The general prosperity of the Livadya area was attributed to men like him.

During the Greek War of Independence, the town was several times plundered and burnt and at the end nothing but ruins remained. After 1828, Livadya was rebuilt gradually. In 1889 there were 4,990 inhabitants; in 1907, 7,089; and in 1928, 12,583, more than during the last century of Ottoman rule (approx. 10,000). In 1928 the expansion virtually stopped (in 1961 there were 12,609 inhabitants), but in recent years there is again some growth. No traces of Islamic buildings are preserved except for a fine vaulted stone bridge and an 18th century clock tower. The Calaisa castle, wrecked through an earthquake in 1894, still exists in ruined condition.

Bibliography: A history of Livadya based on Ottoman sources remains to be written. Modern Greek literature deals mainly with the events of the War of Independence and recollections of the Greek part of the population. Very informative is: I. Γιαννιπούλος, *Ἡ διοικητική ὀργάνωσις τῆς Ἑπείρου* 'Ελλάδος κατὰ τὴν Τουρκοκρατίαν, Ph. D. diss. Athens 1971 [J. Giannopoulos, *The administrative organisation of Sterea Hellas during the Turkish rule*]. For the pre-Ottoman period, see K. M. Setton, *The Catalan domination of Athens*, rev. ed., London 1975; J. Koder, F. Hild, *Tabula imperii Byzantini, Hellas und Thessalia*, Vienne 1976 (both with extensive bibli.) and W. Müller, *Essays on the Latin Orient*, London 1984; for the Catalan fortress see A. Bon, *Forteresses médiévales de la Grèce centrale*, in *Bulletin de correspondance hellénique*, 121 (1937), 187-206. The Ottoman documents used here have not been published, except the *naşîf-nâme* of 'Ömer Beg, a Greek translation of which can be found in Epaminondas Pharrmalidis, *I Lariss*, Volo 1926, 288-310. The official Ottoman list of *hâşîmîs* of Rumeli was published by Özgür in *Özd. Prof. İsmail Hakkı Uzunçarşılı'ya armağan*, Ankara 1976, 252-305. For travellers' accounts, see Jacob Spon and Georg Wheeler, *Naukeurige Reyse door Italien, Dalmatien, Griekenland ende de Levant gedaan in de jaren 1675 en 1676*, Amsterdam 1689 (also in English and German versions); R. Pococke, *Beschryving van het Oosten en van eenige andere landen*, Utrecht-Amsterdam 1780 (also in English and German versions), 111/2; W. M. Leake, *Travels in Northern Greece*, London 1835, 119-20; F. C. H. L. Pouqueville, *Voyage de la Grèce*, 2nd ed., iv, Paris 1826, 159-75; H. Holland, *Travels in the Ionian Islands, Albania, Thessalia, Macedonia, etc.* 1822-23, London 1815, 395; J. A. Buehon, *La Grèce Continentale et la Morie, voyage, séjour et études historiques en 1840 en 1841*, Paris 1843, 220-6; A. Philippson, *Die Griechische Landschaften*, Frankfurt 1931, 1/2, 449-66; *Baedeker's Griechenland*, Leipzig 1888, 164; *Population de la Grèce au recensement du 29 Mars 1962*, Athens 1962, 535; *Μεγάλη Ελληνική εγκυκλοπαιδεία*, xv, 870-2. The anonymous Greek manuscript no. 93.3 from 1796, preserved in the Gennadius Library at Athens, contains a mass of information on the political, social and economic situation of Livadya, Salona, Vostitza (Aeghion) and Corinth for the late 18th century. An edition and a critical study of this singularly important manuscript was given by Σπύρος 'Ασδραχάς [Spyros Asdrachas] in the periodical 'Εποχές [Epochs] of May 1958.

(M. KIEL)

LIVNO (in pre-modern Slavonic texts, often written as Hivno; in older Ottoman texts variously written as Hivno, Hivno, etc.), a town in Bosnia situated at the spur of a mountain at the eastern edge of the homonymous *polje* or plain in a very dry and atony karst landscape on the approaches to Dalmatia. Today, it is a small local centre far off the main thoroughfares and little-visited, but in the 16th and 17th centuries it was a centre of Ottoman power, seat of the *sandjak* begs of Kila, and bulwark of Islam on the western frontiers of the empire. Until World War II, Livno boasted five domed and lead-covered mosques from the classical period of Ottoman architecture, thus ranking second in Bosnia, immediately after Sarajevo, in this aspect, demonstrating the importance which the place once had as a centre of Islam.

The town of Livno is an Ottoman foundation from the early 16th century, whose expansion was greatly promoted by various members of the *sandjak* administration residing there. The castle of Livno, now a ruin overlooking the town, is much older. It is mentioned by Constantine Porphyrogenitus (10th century A.D.) as Hlediane, one of the eleven *lupus* of the kingdom of Croatia, situated on the border between the Serbian and the Croatian lands. In the later Middle Ages, Livno belonged to the kings of Bosnia. It is mentioned as "Grad Hivanjski" in 1400 (Milošić, *Monumenta*, 248-9). In the first half of the 15th century, it was ruled by the family of Vukčić. King Tomas resided in Livno in 1444 (H. Šabanović, tr., *Evlija Čelebija putopis*, I, Sarajevo 1957, 154). The castle is again mentioned in 1466 as being guarded against the Turks by Vukoslav Hercegović, a son of Duke (Herceg → Hercegovina) Stjepan (one of Vukoslav's brothers became the later famous Grand Vizier of Bayezid II and Selim I, Hersekoglu Ahmed Paşa). The Ottomans captured the castle of Livno between 1466 and 1485. The exact date is not known, and is an object of controversy. The *Tahrir defter* no. 18 of 800/1485 mentions Livno as centre of a *nâhiye*; it possessed then a civil population of 27 families and 26 temporary residents.

In the first decades of the Ottoman period, there was only one mosque in Livno, the *hünkâr Džamî*, or Starogradska Džamija, in the castle, serving the needs of the garrison. In the first decades of the 16th century, a Muslim suburb grew up around the Begašina Mosque (Balagruša), built according to its Arabic inscription in 920/1514. This building, still preserved, is the first of the domed mosques of Livno. Soon afterwards, the Džumanuša Mosque of Suđin Čavuš from 935/1528-9 was erected, also a domed structure (destroyed in World War II). The open town of Livno sprang up below the castle on sloping ground, with the older quarters at the foot of the castle and the newer ones further down the hill.

Livno remained a *nâhiye* of the *hâşîmî* of Neretva until some time in the first quarter of the 16th century. After the conquest of Skradin in 928/1522 (*Pelent ta'stîk*, I, 72), Livno was included in a newly-founded *hâşîmî*, which had the Dalmatian town as its centre. In 1537, Murâd Beg Tardîć (a Dalmatian convert from Šibenik) captured the fortress of Kila facing the Venetian base of Split (Spalato) and became *sandjak beg* of the newly-formed *sandjak* of Kila (Pešava, I). As Split was too vulnerably situated to suit the requirements of an administrative centre, the residence of the beg was set up in Livno. They resided there especially in the latter part of the 16th century, which induced Italian and German sources to speak of "the *sandjak* of Livno". In 1648, during the Cretan War, Kila was lost for the Ottomans, but the *sandjak* kept the name of its former titular capital.

The second half of the 16th century and first half of the 17th century was the time of the greatest expansion of the town. According to the *Tapu defter* no. 283, 1-7 and no. 284, 67-73, both from 960/1553, the "Beylik of Hivno", part of the *hâşîmî* of the *Mir-i Liva* of Kila, Ahmed Beg, numbered five *mahalles* with 262 households (*âhâle*) and 170 bachelors (*mâğîrred*), thus totalling ca. 1,340 inhabitants. Only nine households were Christian, and all others were Muslims. Four of the town quarters were called after the mosque around which they had sprung up: *Mahalle-yi Džamî-i Sinan Čavuš*, with 50 *âhâle*, 43 *mâğîrreds*; *Mahalle-yi Džamî-i Hamza*, with 35 *âhâle* and 28 *mâğîrreds*; *Mahalle-yi Meşhûd-i*

Pehlivan Hüseyin, with 73 *hâşimes* and 46 *meşğerrads*; Mahalle-yi Mesğird-i Hüseyin Etmekci-zâde, with 48 *hâşimes* and 53 *meşğerrads*, and Varoş of Livno, with 19 Muslim *hâşimes* and nine Christian *hâşimes*. Other Ottoman registers, from 22 years later, testify to the rapid development of the town in those years. The *Tapu defter* no. 533, 320-30, and the *T.d.* 346, 298-307, both from 982/1573-4, mention seven *mahalles* in Livno. Added to those mentioned in 1553 are the following new wards: Mahalle-yi Džanič-i šerif-i Mehmed Ağa, Mahalle-yi Džanič-i šerif-i Mehmed and Mahalle-yi Ferhād Beg. The number of inhabitants is given as *nefers* (single individuals, persons), 653 men and a separate group of 40 tanners, an indication of the function of the town as a centre of handicrafts besides being an administrative centre. If three-quarters of the number given were family heads, this would make a total population of little less than 3,000 souls, which is indeed a spectacular growth. The second mosque mentioned in the *T.d.* of 982 is the so-called Parkuša Džamija, built according to its Arabic inscription in 975/1565-6 by Šepi Ahmed. It was the third domed mosque of Livno, and existed till World War II. The above-mentioned Parkuša Beg was a Sokolli-zâde (Sokolliović), a nephew of the Grand Vizier Mehmed Sokolli, Ferhād was *sanjak-beg* of Kila between 1566 and 1574, and is known to have erected a large caravanserai in the lower town of Livno. The last quarter of the 16th century saw the erection of two more domed mosques: the Begluk Džamija of Sokolli-zâde Lala Mustafa Paşa in 985/1577-8, built during his term as *sanjak-beg* of Kila (1574-7), and the Glavica Džamija, built by a Džokatar-oğlu Hadži Ahmed in 996/1587-8. Both buildings are preserved at the present time and still have their *Bauschrift* in Turkish. Four more mosques and a Clock Tower (1659) were built in the course of the 17th century: the Tepet Džamija, Borusa Džamija, Firagje Džamija (demolished in 1918), and the Pasma or Atlagić Džamija. The latter was most probably built by Mehmed Paşa Atlagić, the most important member of the Livanjski family of Atilbegović, or Atilagi. Mehmed Paşa Atlagić was *sanjak-beg* of Kila in 1685-7 and vizier of Bosnia in 1687-8 (H. Kreševljaković, in *Hrvatski Enciklopediji*, art. *Atlagić*). With the erection of these buildings, the architectural outlook of Livno acquired its definitive form. The only known important group of buildings of the 19th century is the mosque, *mekteb*, *tekke* and water-supply system of the brothers Mahmud Beg and Derwish Beg Ruzhatli. The mosque, the Mironić Džamija, built in 1291/1874-5, was restored in 1978.

When Ewliya Celebi visited Livno in 1070/1659-60, he found a fully-developed Muslim town, the seat of a *hâşim* (the Ottoman list of *hâşimes* of Rumeli of 1078/1667-8 also mentions "Livno" as seat of a *hâşim*), a number of officials of the provincial administration as well as a *disdar* who commanded a garrison of 600 men. The open town below the castle was composed of nine *mahalles* and had 1,100 stone-built houses, covered with shingles, 13 mosques, of which seven were Friday mosques (for three of them, he gives extracts from the inscriptions), three *medreses* (attached to the mosques of Džokatar-oğlu Hadži Ahmed, Šepi Ahmed and Lala [Mustafa] Paşa), five *mektaps*, six *tekkes*, one *hamam* and 300 shops. With 3,000-5,000 inhabitants, the town clearly reached the limits of self-sufficiency for a poor karst land like the Livno district. The "golden age" of Islamic Livno ended in 1686 when, during the great war against the Christian coalition, Siojan

Janković captured the town and burnt it down. The Starogradska Džamija in the castle and the Borusa Džamija were destroyed and not rebuilt. Since that time and throughout the 18th century, Livno was the seat of the *Livanjski kapetan*, a function which was in the hands of the Atlagić family till 1711. The most famous captain of Livno was Firdis in the first half of the 19th century. Parts of his fortified house (*kuća*) still exist.

At the beginning of the 18th century, with the border areas lost to Venice, the *sanjak* of Kila comprised four *hâşimes*. Akhišat (Prasac), Gölhisar (Jezero), Novosel and Livno, the latter with the *medreses* of Livno, Glavica, Grabovo and Satomišev. Livno recovered slowly from the destruction of 1686. The castle was maintained throughout the 18th and the greater part of the 19th centuries. In 1833 it still had 34 guns. The Ottoman period ended in 1878, when the Austrian-Hungarian army captured Livno after an obstinate defence. The town continued to flourish until the beginning of the present century as a small centre of grain and live-stock trade and silver filigree-work, until a great conflagration in 1904 swept away more than 500 houses. Before that date it had, according to the *Encyclopaedia Britannica*, 1911 edn. (xvi, 816), about 3,000 inhabitants, thus maintaining the level of the 17th century. According to the *Baedeker, Österreich-Ungarn* of 1913, 412, Livno had still 4,700 inhabitants, but this recovery was temporary. After 1918, when it was incorporated in the kingdom of Yugoslavia, a large part of its Muslim population departed. When René Pélissier visited it in the early thirties, Livno had but 2,000 inhabitants (Pélissier, *Sarajevo et sa région*, Paris 1934). During World War II, Livno was three times occupied by German and Croatian Fascist forces and as many times liberated, lastly in October 1944. During these events, all the hitherto preserved mosques but one (Balugaš Dž.) were deliberately destroyed or heavily damaged, together with the entire town. The ruins of the Glavica Džamija and the adjacent Clock Tower, together constituting the landmark of Livno, were restored in 1963-4. The Begluk Džamija of Sokolli-zâde Mustafa was restored in 1971-2, and the Zavra Džamija and Čurina Džamija, both wood-covered halls, in the seventies.

In 1953 Livno numbered 3,679 inhabitants, among whom is a small Muslim minority. The centre of gravity of the post-war town has shifted to the flat grounds of the plain below the totally-ruined Ottoman town. In the old parts, now under the protection of the Service of Ancient Monuments of Bosnia, only construction in local style is allowed, thus creating a harmony with the preserved Islamic monuments.

The *tasavvuf* letters from 960 and 982 are preserved in the Bağbakanlık Arşivi, Istanbul, and are not yet published. (M. Kisi.)

LIWĀ (A.), in Ottoman *lud*.

1. For the meaning banner, flag, standard see **ALAN**.

2. In the Ottoman empire the word indicated a province, several of which were at a certain moment joined into an *vilayet*, later *vilayet* (see **WILĀY**). The term *lud*, synonymous with Turkish *sandjak* (see **SANDJAK**), was mainly used in official documents. Accordingly, *mir lud* (from Arabic *amir al-lud*) stood for *sandjak begi* (see **BEG**), the governor and military commander of a *lud* or *sandjak*. From the middle of the 19th century onwards there was also used the term *vilayetsandjak*, derived from the title *vilayetsandjak*. Of all the states issued from the Ottoman Empire, only *Trak* kept the term *lud* (up till 1974) to indicate a province. In the army of *Trak*, *lud* indicates a brigade, *amir al-lud* brigadier (as in Egypt until 1939).

Bibliography: Gibb and Bowen, *Islamic society and the west*, London 1950, ii/1, 237-73; A. Birken, *Die Provinzen des Osmanischen Reiches*, Wiesbaden 1976. For further literature, see **SANDJAK**. (A. Birken.)

LIWĀN (see **WĀN**).

LIWĀT (A.), sodomy. There does exist in Arabic a verb *lifa* meaning 'to attach oneself, to join oneself to', but *lifa* appears to be rather a *masdar* of *lafa* or *lawafa*, denominative of *luf* [q.v.], i.e. Lot; in modern Arabic there are also the terms *lawafa*, *lawafat*, *lawafu*, etc., as well as a large number of euphemisms and of dialectical and slang terms. The homosexual is called *lufi* or *lufi* (pl. *lufi*), or *midwaf*, when he is the active partner, although the distinction is often difficult to establish; the passive is *ma'waf*, and his pervertion, *wafa*, among the synonyms, the most common is *ma'wafat*, generally translated as 'effeminate', although in normal usage it refers to the genuine hermaphrodite (see A. Boudhafa, *La sexualité en Islam*, Paris 1975, 53-7). In the Muslim West in the Middle Ages, a special term, *lud* (pl. *lud*) was used in reference to professional male prostitutes (see below).

In a number of verses of the *Kur'ān* relating to Lot and his people, the word *lud*, which may be rendered as 'depravity', is clearly an allusion to the vice in question, but this is even more strongly indicated by the pejorative nature of the remarks and questions attributed to this prophet: *inna-kum la-fudāna* *l-fidāna* *shakun* *min dāna* *l-mud*, *bal an-tum kaun* *musrifin* 'You commit the carnal act, in lust, with men and not with women, you are indeed an iniquitous people' (VII, 79/81), *inna-kum la-fudāna* *l-fidāna*? (XXVII, 55/54) and *inna-kum la-fudāna*? (XXVI, 163). The punishment inflicted upon the people of Lot, in the *Kur'ān* as in the Bible (Gen., xix, 1-25) leaves no doubt as to the way in which sodomy should be regarded by Islam, even though it is not explicitly condemned by the Holy Book, which indeed allows a certain ambiguity in passages where the believers are promised that in paradise they will be attended by menservants (*ghilman*, LII, 24; *widān*, LVI, 17, LXXVI, 19).

The statements of *hadith* are, on the other hand, perfectly clear and particularly harsh, as is noted by al-Nuwayrī who, in his *Nakāya* (ii, 204-10), has conveniently collected them together, with the addition of the opinions of the Companions and the *fukhā* on the subject. The Prophet is alleged to have said that what he feared most for his community were the practices of the people of Lot (although he seems to have expressed the same idea in regard to wine and to female seduction. *Nakāya*, ii, 108). According to him, both the active and the passive agent must be killed (*yukūl* *l-fudāna* *l-fudāna* *wa* *l-maf'ul* *biki*), terms which were subsequently to be applied, in grammar, to the subject and the direct object) or, more precisely, subjected to the punishment prescribed for the man guilty of *zina* [q.v.], the fornicator, that is, death by stoning (*la-rjūmu* *l-fudāna* *wa* *l-maf'ul*). The man who sodomises another or inflicts the same treatment on a woman, will on the Day of Resurrection be regarded as more reprehensible than carrion; needless to say, he will suffer eternal damnation, unless he obtains pardon through repentance. The lustful kissing of an adolescent is enough to earn a thousand years in Hell.

By the very fact of their existence, these *hadiths* show that, while probably not very common in Bedouin society, homosexuality was not totally unknown in Arabia of the pre-Islamic period. For proof of this, one need look no further than the story of *Ihā Nuwīs* [q.v.], who was compelled to kill *Ihā Shānkir* in order to escape his advances. Proverbs of the form *alud* *min*... (al-Naydān, ii, 205) testify to the antiquity of the term and of the idea which it expresses; al-Naydān cites the ex-

pression *ahwat min Dabb*, making the last word ("bear") into a proper name; similarly al-Djāhiz (*Muṣāḥḥarāt al-ḡawḍi*) wa 'l-ḡhilmān, in *Rasā'il al-Djāhiz*, ed. Hārūn, II, 130-7) quotes a Hijāzī proverb, *ahwat min Dik*, in which *Dik* ("cock") would also be the name of a person; these coincidences are curious, to say the least. Whatever the case may be, animals are not exempt from this vice: al-Djāhiz himself (*Ḥayawān*, III, 204) cites the example of a *maḥḥān* horse, perhaps castrated at an early age, which pursued male horses, mules and donkeys. The same author seems to have been the first to speak (*ḥikā*, VII, 178) of a fabulous animal, the *ḥadd*, which was in the habit of assaulting the men whom it encountered; its victims suffered a worm-infected anus and died as a result (cf. al-Nasā'ibī, *Murūḡī*, II, 319-20 = § 203). In his *Muṣāḥḥarāt*, he also mentions a *maḥḥān* of *Khawān*, Maymūn b. Zayd b. Ṭharwān, who was a *ḥāḥ* in Kūfa and who became proverbial under the nickname of *Sayrā*, but was apparently viewed with an indulgence that spared him any punishment.

However, in the course of the 1st/7th century, a number of precise cases of *liḥā* subjected to exemplary penalties are reported, especially by al-Djāhiz and al-Nuwayrī. Abū Bakr condemned a homosexual to be buried beneath the debris of a wall, and prescribed burning alive as the penalty for all those guilty of such practices; in this respect he was followed by 'Abd Allāh b. al-Zubayr and Hishām b. 'Abd al-Malik. For his part, 'All b. Abī Ṭālib ordered the stoning of a *liḥā* and had another thrown head-first from the top of a minaret; according to Ibn 'Abbās, this last punishment must be followed by stoning. 'Abd Allāh b. 'Umar went a step beyond the condemnation predicted by the Prophet, reckoning that these people would be resurrected in the form of monkeys and pigs. The famous letter from an Umayyad caliph (see *Ḥikā*, IV, 107b) ordering the governor of Mecca or of Medina to "hold a census" of the *muḥḥānathān* of the town corresponds to a real situation, even if the tradition itself is contrived.

In fact, the increase in prosperity brought about by the rich flow of spoils from the conquered lands was accompanied, paradoxically, by the corruption of morals in the two holy cities. As regards the subject which concerns us here, information relating to the development of music and song reveals the presence of *muḥḥānathān*, who were apparently for the most part of foreign origin. It may thus be assumed that from this time homosexuality became less of a rarity as the result of a rapid process of acculturation. A defender of paedophiles, of lovers of *ḡhilmān*, depicted in the *Muṣāḥḥarāt* (II, 176) of al-Djāhiz, observes in effect that natural love is a feature of Bedouin culture and of simple morality and that if the ancient Arabs glorified woman, this was because they knew nothing of the refined pleasures of this world, which are only to be encountered in a highly civilized society.

All the same, it is not impossible that the decisive impulse came with the arrival of the 'Abbāsids army from *Khurāsān* (cf. A. Mez, *Renaissance*, Eng. tr., 338) and that homosexuality subsequently spread more widely under the new dynasty. In fact, tradition attributes to al-Aṣṭān tastes so depraved that his mother, Umayy bint al-ʿAr, was obliged to procure for him slave women with the physical characteristics sought after by *liḥā* among boys and to dress them in masculine clothing, in the hope of inducing him to adopt more conventional morals (cf. *Murūḡī*, VIII, 200-300 = §§ 3151-2). It was no doubt

such episodes that gave rise to the fashion for "masculine girls", *ḡhilmāniyyāt*, a trend widely reflected in literature (see H. Zayyat, *al-Maḥāḥ al-ḡhilmāniyya fi 'l-Islām*, in *Machriq* [1956]). In Ifrīkiya, the Aghlabid Ibrahim II was surrounded by some sixty catamites, whom he treated in a most horrid manner (see M. Talbi, *Environnement aghlabide*, 306, 377). At Cordova, 'Abd al-Rahmān III had executed a young lad from León who was held as a hostage, the future St. Pelagius (Pelayo), because he had refused his advances (Simonet, *Historia de los Morárabes*, 542; see also Ch. E. Dufourcq, *La vie quotidienne dans l'Europe médiévale sous la domination arabe*, Paris 1978, 177-18). Homosexual tendencies are attributed to al-Mu'taṣim and to some of his successors, and it is probable that this is not a case of slander designed to justify a vice vigorously opposed by the *fuḥḥāḥ*.

In general, the *ḥadīth* relating to the punishment of the *liḥā* (see above) provides the base for the opinions of jurists, but a distinction tends to be made, in the application of the legal sanction (*ḥadd*), according to whether the culprit is *muḥḥān* or not, that is, in practice, whether he is married or celibate. Ibn Hābal and his followers appear to be the most severe, since they insist that in all cases the culprit must be put to death by stoning, while the other schools are in general content with flagellation, with or without banishment, if the man is not *muḥḥān*; it should be noted in addition that it is sometimes recommended that the prescribed penalty (one hundred strokes) should not be applied in full, and Ibn Hāzim goes so far as to reduce the number of strokes to ten. These variations correspond to the uncertainties surrounding the definition of the penalty to be imposed for fornication (see *ḥikā* for details), but also betray a tendency towards indulgence; moreover, since proof is always difficult to establish, there is little likelihood of the punishment actually being applied. These circumstances do not prevent moral pundits from considering illegal a lustful glance in the direction of a beardless youth (*amrad*), and the Hābalists forbid men to walk in the street with women or with adolescents (Mez, *Renaissance*, Eng. tr., 360).

The legal provisions set out above are thus to a large extent theoretical, since homosexual relations have always been tolerated. They were common in religious brotherhoods and in educational institutions (see A. Bouchéba, *op. loc.*, 148), and schoolmasters had an unenviable reputation in this respect, as is shown by many anecdotes. The nudity of the public baths did nothing to discourage such practices, and the paragraph devoted by H. Perls (*Poésie musulmane*, 347-3) to homosexuality in al-Andalus refers specifically to the *ḥammām*.

As regards women, the *Aḡḥūf* (ed. Beltrā, II, 110) mentions a love affair between a certain Hind (named, incorrectly, as the daughter of al-Nu'mān b. al-Mundhir by S. al-Munajjidī, *al-Ḥayāt al-ḡhilmāniyya 'ind al-'Arab*, Beirut 1958, 14; see Nasā'ibī *Peḥal*, index, under *Iḥṣān*) and Zarkī³ al-Yamāma, which would be the oldest example of Sapphism among the Arabs, but in this particular case we have a work of imagination, called moreover *Kūdh Hind wa-hud al-Nu'mān* by Ibn al-Nadīm (ed. Cairo, 427), who cites a dozen love romances with female names in their titles (e.g. *K. Ruḡayya wa-Ḥind*, *K. Salmā wa-Su'ad*, etc.). Although information is scarce, it is likely that *sakhḥ/sakhḥ* *muḥḥān*, while not widespread, existed no less than male homosexuality, since according to the relevant *ḥadīth* it is also identified with *maḥḥān* (*ḥikā* II, 200-300 = §§ 3151-2). These practices, which al-

Liḥābiš (Haywān, vii, 29) knew well, spread in parallel with sodomy, at least in the leisure classes of Arab-Islamic society, if we are to believe the rather late works of eroticism which will be mentioned in due course; in any case, at the end of the 3rd/9th century, Abu 'l-ʿAnbas al-Saymari [q.v. in Suppl.] wrote a *Kitāb al-Sakāʾih*, of which apparently no traces remain. In addition, the sodomisation of women, although formally forbidden by the Prophet (see above) and the *ḥadīth*, *lā taʿāḥ ḥanṣa min maḥḍaḥi-hinna/ addirḥimā* would seem to have been a fairly common practice (see A. Boudhiba, *op. loc.*, 246-7).

Besides female prostitution (*ḥiḡḡa*? [q.v. in Suppl.]), there is abundant evidence of male prostitution. It is not known how much credence should be attached to an allegation by Ibn Hawkal (93, 95, tr. Kramers-Wiet, 92, 93), reiterated in part by al-Idrīsī (*Nuḡha*, ed. Pèrès, Algiers 1957, 70; ed. Naples-Rome, III, 269-70), according to which the Kutāma Berbers "offer themselves to their guests as a token of hospitality, without any sense of shame", while at Sétif, they are content to offer their male children. Inconsistencies in these passages are such as to cast doubt on the author's claims.

In any case, the presence of professional deviants (*maʿḡirūn*) in the larger towns has been frequently attested by travellers (see G. H. Bonquet, *L'ethique sexuelle de l'Islam*, Paris 1953, 39). Mention has been made of transvestites, for example in Bougie (Idrīsī, *Strides*, 329, 391), in Tunis (R. Brunschwig, *Hafsidus*, II, 173) where Leo Africanus (tr. Epanard, 183) saw young boys prostituting themselves, in Fez, where the same author encounters what he calls *ḡana* (= *ḡirda*, a term of particularly common usage in Spain; see Doty, Suppl., s.v.) living with men in hostels. Such statements cover such a broad expanse of time that they cannot but be a reflection of a permanent situation which has, moreover, persisted into the present day (see, e.g. Boudhiba, *op. loc.*, 233). It need hardly be said that the authors of works of *ḡibḡa* utterly deplore these deviants and the moral corruption for which they are responsible, but not one of them is so severe as to demand for them the capital penalty ordained by the afore-mentioned *ḥadīth*. According to Ibn 'Abdūn (Lévi-Provençal, *Saville musulmane*, Paris 1947, § 170), the *ḡirda* are to be expelled from the town and severely punished if they return, since they are accursed of Allah and of the whole people; al-Sakāʾī (*Manṭiq ḡibḡa*, ed. Colin and Lévi-Provençal, Paris 1931, 68, and gloss, 26; Spanish translation by Chafetz, in *al-Andalus*, 1968 ff., § 161) speaks only of *muḡḡan-naḡḡān* (singers disguised as women), whom he forbids to wear their hair long over the temples or to attend banquets and funerals (see also Lévi-Provençal, *Trois traités hispanique de ḡibḡa*, Cairo 1955, 123). Although the repression of *ḡirda*, in the strict sense of the word, forms a part of the general censorship of morals, these works contain few specific references to it.

It should be said that this phenomenon, while provoking the disapproval of a number of moralists loyal to the tradition of the Prophet, has for the most part been viewed with indulgence—if not actively condoned—even in circles which would appear to be furthest from it.

Firstly, homosexuality was a theme favoured by libertine poets who, especially from the 1st/7th century onwards, glorified homosexual love quite shamelessly, often in terms of intolerable obscenity; in the latermable list of these poets, the first

place belongs without doubt to Abū Nuwās who, even without the dedication of the *roor Nights* (see N. Elisséeff, *Tāhmas et motifs*, 130) plays a role of unassailable eminence in this regard. His master Wāḡib b. al-Habīb, who is thought to have debauched him, Ḥusayn b. al-Dahhāk, Muḡf b. Iyās and a great number of others, were imitated and sometimes overtaken by exponents of *maḡḡān* (q.v.) and of *ḡibḡa*, which Ibn al-Ḥajjāj made his speciality, as well as by Ibn Kuzmān in his celebrated *ḡibḡā*.

On the other hand, there are a great many poets who have not hesitated, at some point or other in their career, to sing the praises of a youth, in many cases no doubt, less from personal taste than from the desire to conform artificially with a general trend. In fact care should be taken not to accuse all such writers of libertinism, for it was conventional practice to glorify wine, women and favourites, without becoming personally involved in debauchery or violating the rules of Islamic ethics. We may cite, as a simple example, the theme of *ḡibḡa*, of "crawling", appropriate perhaps for an *Imrī* al-Ḳays who lived in a society where it was possible to crawl under the tent in order to approach a woman, but purely conventional in the case of a city-dweller like Ibn Ḥayyad who, unlike the pre-Islamic poet, uses (*apud* Ibn Bassam, *ḡibḡā*, I/1, 244), in poetry of a high standard of sophistication, the masculine form to designate the person in question, whose sex thus remains undefined. Leaving aside the mystics, who frequently adopt an equivocal posture, the use, by poets whose morality is not suspect, of the masculine form in their love poems, derives less from a desire to shock than from a sense of modesty and from respect for a tradition that was reckoned to be harmless, a tradition maintaining an ambiguity universally accepted and appreciated.

In the sphere of prose, the most significant, if not the oldest writing, is certainly the *Muḡḡārat al-ḡamari* or *ḡ-ḡamari* of al-Ḥabīb who, always prone to cultivate the genre of *munāḡara*, debates, of which he is one of the pioneers in Arabic literature, presents in the form of a stylised dialogue arguments exchanged between homosexuals and men of normal sexuality. So as to leave no doubt as to his own tastes, this author saw fit to publish a *Riḡla fi ḡibḡi al-ḡamari* (ḡ-ḡamari, ed. Pellat, in the *Ḥawāṣir* of the University of Tunis, viii [1976], 183-92) in which he plays on the different meanings of *ḡamari*—"stomach" and *ḡamari*—"back" in order to demonstrate, with a great deal of humour, the superiority of the former; he goes so far as to attribute to sodomy the destruction of the people of *Ḥamūd* (q.v.), which is thus accorded the same status as the people of Lot.

In the *Muḡḡāra*, there are a number of anecdotes which testify to the popularity of stories of *ḡibḡa* from the 3rd/9th century; these were to find a place in collections compiled in later times for the entertainment of what were, in appearance at least, the most puritanical sections of society. A characteristic manifestation of this somewhat perverse taste is encountered in the work of al-Tawḡidī, who devotes a chapter of his *ḡibḡa*, the 18th night (II, 50-60) to *maḡḡān* and naturally tells the story of a *ḡibḡa* (tr. Boudhiba, *op. loc.*, 158).

The example set by al-Ḥabīb in his *Muḡḡāra* has been followed by quite serious authors who have left analogous writings, among which we may mention al-Ḥasib bayn al-ḡamari wa ḡ-ḡamari by Ibn Hindī (see Brockelmann, S I, 426) and the *Kutāb al-ḡibḡa* by Badr al-Dīn al-ʿAynī (see S. al-Munajjidī, in *RIHA*,

li [1957], 335). In addition, the vice in question inspired a specialised literature all its own, notably consisting of advice on techniques of seducing young men (see S. al-Munajjid, *al-ḥaṣā' al-ghayyā*, 52-4). The writers of works of eroticism (see 1211a) and add to *Bibliography*, A. Boudhiba, *op. loc.*, 171 ff.) mostly devote some space to sodomy; on this point, the most characteristic works are without doubt the *Nuḥāt al-ahbāb fi-mā lā yuḥād fi ḥudūd* (Bröckelmann, I, 495, S. I, 904) of al-Tiāshī and the *Nuḥāt al-salām* of Muḥammad Ṣādiq Ḥasan Khān (Istanbul 1296/1876; see Boudhiba, 178).

In the *Majāhira* of al-Djāhiz, which has nothing in common with the preceding works, the advocate for the *ghawḍi* claims (ii, 104) that there has never been a case recorded in which love for a youth has proved fatal, while tradition is full of examples of heterosexuals who have pined away, lost their reason or died for love. However, there are apparently authentic accounts which contradict this assertion. Al-Dabbī (*Bughyān*, no. 462, 11, Lévi-Provençal, *En relisant "le Collier de la colonnade"*, in *al-Andalus*, xv/2 [1950], 363-8) relates, after Ibn Ḥazm (although the text of the *Tawḥ al-ḥamīma*, ed. and tr. L. Bercher, 301, is quite perceptibly different), "the incredible adventure ... of a certain Ahmad b. Kulayb, poet and grammarian of Cordova who, in 426/1035, died of grief because one of his fellow-citizens, a member of the Andalusian patrician class, persisted in rejecting his advances" (Lévi-Provençal, *Hist. Esp. new.*, ii, 443); the same story is told by Yāqūt (*Iṣṣāḥ*, ii, 19 ff. = *Uḍabā'*, iv, 109 ff.; cf. Mez, *Renaissance*, *King tr.*, 359-60) who also relates (ii, 23 ff. = iv, 113 ff.; cf. Mez, 360-1), after al-Sanawbarī, the story of a bookseller of Edessa (al-Ruhā) named Sa'd, whose shop was a literary salon frequented by poets and in particular by a young Christian called 'Isā. Sa'd developed a violent passion for the latter, and did not cease pursuing him and dedicating poems to him; 'Isā became a monk, and finally denied access to the monastery, Sa'd set fire to all his possessions and became a vagrant. He died eventually of consumption, but the governor of the town accused the monks of having killed him and condemned the young man to death; the punishment was averted following the payment of a large sum of money, but when 'Isā went to visit his parents, the local children pelted him with stones and called him an assassin. A third story (Yāqūt, *Iṣṣāḥ*, ii, 23 ff. = *Uḍabā'*, iv, 122 ff.) tells of a poet in love with a young monk who pines away with grief and dies the very moment that he meets the object of his infatuation.

From anecdotes such as these one gains the impression, on the one hand, that the authorities and the people did not regard the inclinations of these homosexuals as immoral, and on the other, that monasteries and monks played an inauspicious role. It is quite clear that poetry and works such as the *Diyārī* of al-Shābūḥī regard monasteries (see 247a) as places of debauchery frequented by lovers of forbidden delights. One must, however, proceed with caution, because once again we are faced with a poetic theme whose treatment is analogous to that of the glorification of unnatural love by poets who are influenced more by respect for a tradition than by any desire to become personally involved in the acts to which they refer. In this context, the adventure of the Andalusian poet al-Ramādī, the account of which is borrowed by H. Pérès (*Poésie andalouse*, 278-9) from a work of dubious authenticity, the *Majāhira* al-awḥā of Ibn Khāḥkīn, seem to

us no more authentic than the braggings of Ibn Shuhayd, in a poem composed in imitation of Abū Nuwās (H. Pérès, *op. loc.*, 277-8).

The fact remains that in the Middle Ages, many attacks on Islam by Christians were based on the frequency of homosexual relations which, in their view, were permitted by the *Qur'ān* and which characterised the behaviour of Muslims; they based this opinion on verse 20/16 of Sūra IV which they misinterpreted as referring to sodomy, without taking account of the condemnation of "depravity" which it contains (see N. Daniel, *Islam and the West, the making of an image*, Edinburgh 1960, 241-51).

It is indeed difficult to measure precisely the extent of the phenomenon, but it should be recognised that the separation of the sexes, which is a particular feature of Islam, has played a significant role in promoting it (cf. Brunschwig, *Hafides*, ii, 173), among women as much as among men, and the precautions taken against such behaviour (al-Nuwāyri, for example, entitles the chapter cited above *al-ḥabīb al-ḥudūd*) did not succeed in preventing it. It is now known that homosexuality, once regarded as a punishable offence, is caused as much by genetic as by social and psychological factors, but it seems that in the event the latter have played the leading role in the proliferation of what remains, to a large extent, a vice.

Bibliography: Given in the article. (Ea.)

LIYĀKAT 'ALĪ KHĀN, honorary secretary of the All-India Muslim League from 1936 to 1947 and prime minister of Pakistan from 1947 to 1952, was born in the Karnāl district of east Panjāb on 1 October 1895. He was the second son of a well-to-do landlord, Nawwāb Runtan 'AB Khān of the Mandal family, which claimed to have migrated 500 years previously from Iran and to descend from the Sāsānid king Anūshīrwan (Qasraw I, 531-79 A.D.); British officials on the other hand considered the Mandals to be of Pathān origin, or perhaps Dīkās hailing from Samānā in Pāfānā. Liyākat 'Alī Khān's grandfather, Nawwāb Ahmad 'Alī Khān, gave powerful support to the British in the Mutiny uprising of 1857-8, for which he was handsomely rewarded in the bestowal of honours and the remission of rent.

From 1909 to 1919 Liyākat 'Alī Khān attended the Muḥammadan Anglo-Oriental College at Allgāth, where he was notably successful both on the games field and in the classroom. After graduating, he read law at Exeter College, Oxford, getting his degree in 1921, and was called to the Bar in 1922. At Oxford he began to display political promise as a prominent member of the Indian Majlis. On returning to India he settled down on the family estate in the Muḥā-lanagar district of the western United Provinces and, despite family pressure to enter government service and his own training as a lawyer, aimed at politics. In 1923 he joined the All-India Muslim League, the organisation of Muslim separatist politics, and when in 1927 the League split over its response to the Simon Commission to inquire into India's constitutional progress, he supported the Dīnnah group which boycotted the Commission. In 1928 he joined those representing the League at the Indian National Convention which discussed the Nehru Report. From 1926 to 1940 he was a member of the United Provinces Legislative Council, in which he quickly came to play a prominent part, organising and leading the small but influential Democratic Party and acting as deputy president of the Council from 1931 to 1936.

In the 1930s and 1940s Liyākat 'Alī Khān played the leading role, after Muḥammad 'Alī Jinnah, in generating the revival of the All-India Muslim League. In the early 1930s the League was crumbling, meeting only once in full session between 1931 and 1936. In 1933, while visiting London on his second honeymoon, Liyākat 'Alī Khān helped to persuade, and according to some was decisive in persuading, Jinnah to return to India to revitalise the organisation. In April 1936 he became honorary secretary, a position he held till 1947, even though from July 1936 to early 1938 he was associated with the landlord party in the United Provinces, the National Agriculturalist Party led by the Nawab of Cawnpur, the Muslim League leadership in the province, he declared by way of explanation, was too close to the Indian National Congress. In the early 1940s Liyākat 'Alī Khān prepared the League's organisation, and Muslims more generally, for the overwhelming victory of the 1945-6 elections. He sat on the League's major committees, he was chairman of the Central Parliamentary Board, he toured India to spread the League's message, he directed the *Dawn* newspaper which was founded in 1942 as the League's mouthpiece, and from 1940 he led the League's party in the Central Legislative Assembly in Jinnah's absences, which were quite frequent. So highly did Jinnah value Liyākat 'Alī Khān that in supporting his re-election as honorary secretary in 1943 he described him as his "right hand".

In the two crucial years before the partition of India, Liyākat 'Alī Khān was at the heart of events. In late 1944 and early 1945 he attempted to come to an agreement with Bhubabhai Desai, the leader of the Congress in the Central Legislative Assembly, which would identify common ground and enable the Congress and the League to participate in forming an interim government, although he may have gone too far on his own initiative, as Jinnah disavowed the project. He was also closely involved in two further attempts to solve the constitutional deadlock, the Simla conference of 1945 and the Cabinet Mission discussions of 1946. When towards the end of 1946 the interim government was eventually formed, Liyākat 'Alī Khān led the Muslim League bloc, defending Muslim interests with vigour. When that government's quasi-Cabinet offices were distributed, the Congress apparently trusting in the north Indian belief that Muslims were unskilled in financial matters, encouraged him to take the Finance portfolio, which gave him a say in all the activities of the interim government and enabled him through a masterly budget to impose his will on the political situation. Indeed, it is said that he used his powers to such effect that leading Congressmen, among them Sardar Patel, came to see partition as the only solution to their difficulties. After partition was finally agreed on 2 June 1947, Liyākat 'Alī Khān was marked out to be the first prime minister of the new state of Pakistan.

When Jinnah, governor-general and presiding genius of Pakistan, died on 11 September 1948, Liyākat 'Alī Khān came forward as the unchallenged ruler. He faced enormous problems: the state was divided into two parts separated by 1,200 miles of hostile territory; there were six million refugees; there were divisions of language, race and religion (15% of the population was Hindu); there was no administrative centre, efficient bureaucracy, political tradition or economic focus. That Pakistan survived these problems, in addition to the premature death of Jinnah, owed much to the wise leadership of Liyākat 'Alī Khān.

He responded firmly to the threats leveled by an India still not entirely reconciled to the dismemberment of the subcontinent, and through his statesmanlike approach to international affairs did much to establish Pakistan in the eyes of the world. When in September 1949 India imposed a total trade boycott because Pakistan refused to devalue her rupee alongside the Indian rupee, Liyākat 'Alī Khān was unmoved, and eighteen months later India yielded. When in both 1950 and 1951 India massed her forces on Pakistan's borders, he combined a staunch reply with a readiness to seek an immediate resolution of differences by negotiation. It is sometimes thought that he need not have accepted India's offer of a ceasefire in Kashmir in 1949, but it is difficult to see, in view of the condition of Pakistan and her resources at the time, what choice he had. In the world at large he maintained a determined policy of non-alignment: he attended the conferences of British Commonwealth prime ministers but quickly made it clear that Pakistan should not be "taken for granted"; he made a personally successful official visit to North America in May and June 1950 but made no foreign policy commitment. He did, however, make commitments in the Muslim world and embarked on that search for a leading role amongst Muslim states which in the succeeding decades characterised his country's foreign policy. International Islamic conferences were held, and by mid-1951 Pakistan had signed formal treaties of friendship with Syria, Turkey, Iran and Indonesia.

Within Pakistan, Liyākat 'Alī Khān's first concern was nation-building. He strove to make the fragments of the armed forces inherited from the British a truly national force, encouraging them to recruit as many of the under-represented East Pakistanis as possible and removing the remaining foreign officers. Brushing aside suggestions that, now Pakistan was won, the Muslim League had performed its task, he tried to mould it into a party of national construction. "Pakistan is the child of the Muslim League", he declared, "it is the duty of the mother to look after the child till it grows up", and to emphasise his point he became president of the League on 8 October 1950 and urged others to follow suit in drawing together party and government. Most important, he endeavoured to create a framework for politics in which all Pakistanis would be happy to work. There were great problems: autonomous provinces had to agree to surrender powers to the centre, a fair place had to be found for non-Muslim minorities, while the 'infidel', who knew that all sovereignty flowed from God and that they alone were equipped to interpret His law, had to be reconciled with those who believed that the people were sovereign and that power in politics should rest with their representatives. Liyākat 'Alī Khān's first step towards creating a constitutional framework was the Objectives Resolution brought before the Constituent Assembly on 7 March 1949. Although no more than a statement of intent, it marked out enough apparently common ground, particularly on the questions of sovereignty and minorities, for Pakistanis to be able to proceed with constitution making. There followed the publication of the interim report of the Basic Principles Committee in September 1950 which created great, and it seems unexpected, opposition; the East Pakistanis were the most vociferous, fearing that their majority in the Constituent Assembly would be reduced to a minority, although they were more numerous than the West Pakistanis. Liyākat 'Alī Khān responded by

postponing consideration of the report and deciding to hold general elections before grappling again with the constitutional issue. He has been criticised for this move, indeed for mishandling the issue altogether. On the other hand, his aim in holding elections was to create elected bodies which would be more firmly under central control. To this end, he used his powers as Muslim League president to vet all applications for candidatures. He had just completed the task in the Punjab, and was about to proceed to the North-West Frontier Province, when on 26 October 1951 he was assassinated by an Afghani while addressing a meeting in Rawalpindi.

As a person, Liyākat 'Alī Khān was noted for charm, manners, simple tastes and an egalitarian outlook which led him of his own accord to drop his hereditary title of Nawāb-sāda. As a public figure he was noted as a practical administrator, as a witty speaker, and as a calm, shrewd and selfless politician, qualities which no doubt helped him to outstrip more experienced politicians in Qānūh's esteem. The full measure of his achievement will not properly be assessed until the Muslim League papers are fully open for consultation and the context of his last ten years is better understood. Nevertheless, he did much to bring Pakistan into existence and more than anyone else to nurture it through the first four very difficult years. Had he been spared, he may well have given his country a workable constitution, the lack of which came to be much felt. Rightly his countrymen bestowed upon him the title Qānūnī-Millat, leader of the nation.

Bibliography: There is a description of Liyākat 'Alī Khān's family in Sir Lepel H. Griffin and Col. Charles Francis Mossy, *Chiefs and families of note in the Punjab*, revised ed., Lahore 1909; memoirs of him will be found in Ziauddin Ahmad, ed., *Qānūnī-Millat Liyākat 'Alī Khān: leader and statesman*, Karachi 1970; M. Rafiqul Afzal, ed., *Speeches and statements of Qānūnī-Millat Liyākat 'Alī Khān (1947-51)*, Lahore 1967, and S. M. Ikram, *Modern Muslim India and the birth of Pakistan (1838-1952)*, second ed., Lahore 1965; insights from those who worked with him closely can be found in Choudhry Khaliquzzaman, *Pathway to Pakistan*, Lahore 1961, and Choudhri Muhammad Ali, *The emergence of Pakistan*, New York 1967, while his relations with Qānūh are considered in H. Bollibo, *Jinnah: creator of Pakistan*, London 1954; the background to his achievement will be found in Khāid B. Sayyid, *Pakistan: the formative phase 1837-1948*, second ed., Oxford 1968; H. V. Hodson, *The Great Divide: Britain-India-Pakistan*, London 1969, and L. Binder, *Religion and politics in Pakistan*, Berkeley and Los Angeles 1961. (F. C. R. ROBINSON)

LIYŌN, capital of the ancient kingdom of Léon and, at the present time, of the province of that name, to the south of the Asturias. The name comes from the *Legio Septima Gemina Asturica*, which established its *castrum* there in the reign of the Emperor Trajan. J. M. Blázquez (*Estructura económica y social de España*) includes it among the towns which were provided with walls during the Later Empire, and its role was very slight for the whole of the Visigothic period.

The Arab geographers mention LiyŌn only rarely. Abū 'l-Fidā' says that "the Sa'ūd places it in 10°5' longitude and 46°55' latitude. It is a town in the seventh climate, in the land of the *Djālahga*. According to Ibn Sa'ūd, it is situated to the north-east of Zamora. It is the town of which al-Manṣūr

b. Abī 'Āmir (q.v.) destroyed the main rampart. It lies on a river which flows into the Zamora river. It is the finest and most important of the towns of the *Djālahga*". Al-Himyarī (*K. al-Rund al-mi'ār*, ed. Levī-Provençal, no. 164) makes it "one of the capitals of Castile/Kashṭāla. It is a populous town, where business, commerce and stock-raising are carried on. The people there are bellicose and toughy". Ab Maḥṣarī (*Nafḥ al-jib*, ed. I. 'Abbās, t. 143, 346) mentions the existence of tin mines in the region of Branga and LiyŌn.

The geographers and historians knew perfectly well that there existed a kingdom, with a capital (*ḥā'idā*) of this name, but generally preferred to utilise for this state the ancient term *Djillikiyya* or *Djāllikiyya* (q.v.). The information which one can glean from the chronicles is very sparse, a laconic attitude probably due in part to the fact that political and military activity there passed at an early date, and thenceforth almost exclusively, into the hands of the people of Kashṭāla (q.v.).

At the time of the Muslim conquest, the occupation of LiyŌn is mentioned neither by the *Fath al-Andalus*, the *Aḥbār maḡmū'a* nor the *Iftāḥ al-Andalus* of Ibn al-Kaṭīyya. It is a reasonable assumption that the town was included in the capitulation of Petrus, *Dux Cantabrigia*, which opened up all the Gallaecia-Asturias-Léon region. It was at that time probably a small, unimportant place with no Muslim governor. The Arab texts are indeed silent about it, and agree with the *Chronica de Alfonso III* in making Astorga and Oviedo the seat of "Munnuza", the Muslim governor of the region at the time of Pelayo's revolt.

The town must have been more or less officially abandoned at the time of the great rising of Berbers who emigrated from northern Spain in the years after 1237/41. According to the *Chronica Albeldense* (604), "Frucha, brother of Alfonso I, entered Léon", and the *Chronica de Alfonso III* (615:16) specifically says that "Abols, Astorga, Legionem, Septemmanas... Omnes quoque Arabes gladio interfecit; christianos autem secum ad patrimonium ducens", events whose veracity seems to be confirmed by the parallel version of the *Aḥbār maḡmū'a*. It is essentially these texts which Cf. Sanchez Albornoz depends on for his theory of the *Despoblación y repoblación del valle del Duero*, Buenos Aires 1966. A partial return, spontaneous and unorganised, by small cultivators and herdsmen must have taken place under the shelter of the ramparts of the town, since, according to Ibn 'Udhār (*al-Bayān al-maḡrib fī aḥbār al-Andalus wa'l-Maḡrib*, II, 346), 'Abd al-Rahmān II in 231/945-6 sent "his son Muhammad, who besieged, bombarded, pillaged and burnt Léon, without however being able to destroy the 27-cubits high walls". The *Chronica Albeldense* mentions under the reign of Alfonso "a campaign by al-Muḡharib which is said to have reached as far as the town and which had to retreat with heavy losses", but one cannot tell from this whether it is the attack mentioned by Ibn Bayān or not. The town remained uninhabited until 860, when Ordoño II "repeopled the deserted towns from which Alfonso I had expelled the Chaldeans: Tuy, Astorga, Léon and Amaya" (*Chronica Alfonso III*, 619).

Ibn Ḥayyān (*Muḥāsab*, v, 120, 325, 344) makes Léon the capital (*ḥā'idā*, *ḥaḡra*, *dār mamānā*) of *Djillikiyya*. The town was the objective of two raids by al-Manṣūr b. Abī 'Āmir, one in 372/982 and the other in 376/986, leading to the sacking and burning of the town ('Udhār, *Maṣālik*, ed. al-Ahwānī, 80).

Ibn Ṭīḥūrī (*Bayān*, iv, 80), as well as 'Abd al-Wāḥid al-Murrikūghī (*al-Mu'ajjiz fī al-ḥikm al-ḥabīr al-Maghrib*, 235, 268) consider Liyūn solely as an urban centre since they make Alfonso VII "the Slobber" lord of Ciudad Rodrigo, Avila, León and Zamora, information also reproduced by Ibn Khaldūn in his *K. al-'Ibar*.

As opposed to this view, Ibn al-Khaṭīb (*K. al-'imān*, ed. Beirut 1956, 74, 241) speaks of it as a kingdom and not as a town ("the Christians of Kashṭāla and Liyūn"). He has preserved for us an additional piece of information by including in the curious *Ḍikr al-'arīf bimā amkana min mulūk al-nasab bi'l-Andalus*, which comes at the end of his *A'māl*, material which the Christian chronicles attention about the physician-ambassador Yūsuf b. Waṣṣṭār al-Isrā'īl al-Tulayṭūl. This chapter uses phonetic transcriptions of Christian names and titles, giving also the Christian equivalent for *ḥigīr* dates. It is interesting to compare with this Ibn Khaldūn, who, in his *K. al-'Ibar*, also changes at approximately this time *ḥāms* [e.g.] into *ḥumf*. Ibn al-Khaṭīb reports thus that "in 148/766 [error for 768], Aurelio, brother of Froila, governed the territory of the Asturias, Galicia, Portugal and part of León"; "in 148/865 [error for, at the earliest, 866] Alfonso the Great transferred the *dar al-mulā* of his father to León and styled himself King of León"; and "Castilian separatism began under the reign of Garcia in 297/909 [correctly 911-14]", a period corresponding in fact to one of the phases of Castilian expansionism [see KAGYRATA]. Ibn al-Khaṭīb then mentions the birth of the kingdom of Castile under Fernán Sánchez, and his struggle against the Leónese state before its merging into the kingdom of Castile and León, as well as the origin and the succession of Portugal. The information given by Ibn Khaldūn in the chapter of the *K. al-'Ibar* called "Notice on the *Dynasties* Banū Idhḥānsh, kings of al-Andalus after the Goths . . .", although very similar to that of Ibn al-Khaṭīb, is not a mere piece of plagiarism but seems rather to come from a parallel source of information.

LÖDIS, a North Indian Afghān tribe and dynasty, 855-939/1451-1526.

z. History. Afghān tribes from the mountainous Sulaymān regions regularly migrated to the plain of the Indus; they joined the invading armies as auxiliaries in war, and came as traders or herdsmen during peace. They moved to the hills in summer and to the plains at the onset of winter. Among these emigrants were the ancestors of the Lōdī sultans of India. For the Afghāns in India generally, see *AFGHAN* and *KHILA*.

The Lōdīs are related to a clan of the *Ghīṭay* tribe of Afghānistān [see GHATAV] and ruled over parts of north India for 77 years. Afghāns came to the Indus plains from Rēh [s.e.] as early as 934/721-22 with the army of Muḥammad b. Qāsim, the conqueror of Sindh, and allied themselves politically with the Hindu-Shāhī [s.e.] rulers of Lahore, and receiving part of Lāmghān [see LAMGHAN] for settlement, built a fort in the mountains of Peshāwar to protect

the Panjāb from raids. During Alptigin's government at Ghazna, when his commander-in-chief Sebükṭigin raided Lāmghān and Multān, the Afghāns sought help from Rājā Dīyāpāl who appointed their chief, Shāykh Ḥamīd Lōdī, viceroy of the *wilāyats* of Lāmghān and Multān. Shāykh Ḥamīd appointed his own men as governors of those districts, and thereby the Afghāns gained political importance; their settlements stretched southwards from Lāmghān to Multān, incorporating the tracts of Banāḥ and Dēvā Ismā'īl Khān.

Later, a family of the Lōdī tribe settled at Multān, which was ruled in 396/1005 by Abu 'l-Faṭḥ Dāwūd, a grandson of Shāykh Ḥamīd. There was also a strong Afghān element in the forces of Sultan Maḥmūd of Ghazna and Shihāb al-Dīn of Ghūr. The latter on his third campaign to India [see GURUJITS] had 12,000 experienced Afghān horsemen in his army, and he defeated the Rājās under Rājā Fīṭḥawā of Dhilli. On his return journey, he settled in the hills of Rōh, the Sulaymān mountains, Aghnāghar and Badjāwī—a tract extending from Kābul to the Indus—and appointed Malik Muḥiz al-Dīn Ghūrī at the head of 20,000 men to transplant the Afghāns from Ghūr to the new settlements, thereby paving his way for the conquest of Hindūstān. Each clan was granted an *iqṭā'* in the environs of Nīlab and the Indus.

Serving thus in the army of Shihāb al-Dīn Ghūrī, the Afghāns rose to power and settled over a large tract of land. Their leader 'Alī Kirmānīh was appointed governor of Multān in 362/1186-7. Sultan Balban of the "slave kings" posted them as garrisons in Bhojpur, Kampila and Patāli against the Hindū rebels in the Dōḥ. During the reign of Muḥammad b. Tughluq, they rebelled under their leader, Malik Shāh Lōdī, in Multān at some time in 741/1341, and killed its governor. Since the time of seizure of the Panjāb by the Ghaznawids, the movements of Afghān merchants increased considerably. They started participating actively in the politics of northern India from the time of Muḥammad b. Tughluq and particularly after Firuz Shāh Tughluq's death (790/1388), during the decline of the Tughluq dynasty and the weak rule of the Sayyids.

During the invasions of India by Timūr [s.v.] in 801/1398, Afghāns fought on both sides. Malik Khidr Lōdī, Malik Bahā' al-Dīn Dhillwānī, Malik Yūsuf Sarwārī and Malik Ḥabīb Nīzālī joined the army of Timūr at the head of 12,000 Afghān mercenaries. About this time, Sultan Shāh's father Malik Bahārī had come as a warrior-trader to Multān from Balōt, a pargana in the Bīrūnī Panjābūd *sarkār* on the border of Balōchistān, according to the *A'in-i Akbarī*. He quarrelled with his two brothers Malik Maḥmūd and Malik Maḥdī, and took service under Firuz Shāh Tughluq's governor at Multān, namely Malik Mardān Dawlat, entitled Malik al-Shākh Nāṣir al-Mulk (*Tabaḥṭul-i Akbarī* and *Ta'rikh-i Muḥarrar Shāhī*). Malik Bahārī organised a tribal militia. After his death his sons Sultan Shāh Lōdī, Malik Firuz, Malik Muḥammad, Malik Khwājā and Malik Kālā stayed on in Multān while the city passed, during political confusion and unrest, into several hands. After the death of Malik Mardān Dawlat, his son Malik Shāykh and his adopted son Malik Sulaymān were appointed after his death governors of Multān in succession by Firuz Shāh Tughluq. Malik Sulaymān was succeeded in the governorship by his son Khidr Khān, the founder of the Sayyid dynasty at Dhilli [see DILLI SUZANATE], who had been appointed governor of Multān and the Panjāb

by the Tughlūks in recognition of his military service, but later betrayed the Tughlūks and joined the invading Mongol force under Timur.

Sultān Shāh Lōdī, who succeeded his father Malik Bahram as chief of the Afghan mercenaries, distinguished himself in the service of Khidr Khān and helped him in overpowering the Tughlūks. He succeeded in killing Malā Khān Khān, the *de facto* ruler of Dhill and the staunch supporter of Mahmūd Tughlūk, in the battle of Adodhan fought on the banks of the Satlaj (18 Jumādā I 808/11 November 1405). Thus Multān, together with the Panjāb, acceded from Dhill, and Sultān Shāh Lōdī was put in charge of Sirhind with the title of Islām Khān. During the time of the Sayyid Sultān Mubārak Shāh, son of Khidr Khān, the Afghan chief Sultān Shāh Lōdī obtained power and held Sirhind with the neighbouring districts in *ghajr* [i.e.]. He settled there with his four brothers and gathered a strong contingent of 12,000 horse, mostly of his own tribe. Malik Kālā married his uncle's daughter, received Dawrān (Sirhind *sarkār*) in *ghajr* and served under Nasir Khān, who held Multān as governor on behalf of the Sayyid Sultān Khidr Khān. His child was named Bahāul, the subsequent founder of the Lōdī dynasty at Dhill. He died in a struggle against the Nizāyī emigrants in the Indus valley, and the child was brought up by his uncle Malik Sultān Shāh Lōdī at Sirhind. Finding him a soldier of promising character, Sultān Shāh Lōdī gave him his daughter, Shams Khān, in marriage. Once in Sāmāna he visited a local holy man, Sayyid Abban, with two companions, (*Tārīkh-i Shāhī*, 3; *Tārīkh-i Durrat*, Sathar na., 4); the Shāykh demanded 2,000 *lankas* in exchange for the throne of Dhill if any one of these was willing so to hazard for it. Bahāul Lōdī had with him only 1,300 *lankas* which he instantly offered, and was congratulated as the future ruler of India. Although he was taunted by his companions for this transaction, he drew inspiration from the Shāykh's proposal and had no cause to regret either the throne of Dhill or his gift.

Sultān Shāh Lōdī nominated Bahāul as his heir-apparent in preference to his adult son Kutb Khān. On his father-in-law's death in Rajab 824/March 1421, the Afghan militia became divided into three camps under Kutb Khān, Shāh Firūz, (son and brother of Sultān Shāh Lōdī [= Islām Khān] respectively) and Bahāul Lōdī; the latter won over his uncle Malik Firūz to his side against the confederation of his rivals Kutb Khān and Muhammad Shāh, the Sayyid ruler of Dhill. The latter sent a force under his wazīr Malik Sikandar Tubta and Dhasrath Khokar to drive the Afghans out of Sirhind and to deprive Bahāul Lōdī of his *ghajr*. The Afghans, defeated, fled to the hills. Malik Firūz was made captive and his son Malik Shāhin Khān was killed. Bahāul escaped, and, on Dhasrath's return to the Panjāb, he managed to re-gather his scattered army. Malik Firūz escaped from Dhill and joined Bahāul. The contrary Kutb Khān Lōdī also joined Bahāul's camp. Thus mustering his forces, Bahāul Lōdī recaptured Sirhind in 840/1436. The Sayyid Sultān Muhammad Shāh sent a large force under one of his chiefs, Hāshim Shudant, better known as Husām Khān, which was defeated at Karā (Kharār in Anbālā district?) near Khidrābad Sachūra, and Husām Khān escaped to Dhill while Bahāul established himself firmly in the Panjāb.

In 844/1440, when Dhill was threatened by Mahmūd Khaljī I [i.e.] of Malwa, the feeble Sayyid Sultān of Dhill appealed to Bahāul, who agreed to help

him on condition that Husām Khān the prime minister was to be replaced by his nominee Hamid Khān. The Sultān acted accordingly, without taking into account the implications, and Husām Khān was killed. Bahāul Lōdī took the field with his contingent of 8,000 Afghan and Mughal militia and 20,000 of the royal army against Mahmūd, who after a day's desultory fighting sued for peace, and retreated to deal with a serious riot in his own capital, Mirdū [i.e.], and an invasion by Sultān Ahmad of Gujarat. This retreating Malwa army was waylaid by Bahāul. Dhill was saved from annexation to Malwa, and Bahāul was awarded the title of Khān-i Khānān, and confirmed in his *ghajr* at Sirhind, with Lahore and Dhillpur added to his fief. He then rebelled against Muhammad Shāh and annexed Sunām, Khār Firūza and other districts of the Panjāb. Twice he made unsuccessful attempts to capture Dhill, once during the time of Muhammad Shāh (d. 849/1445) and again during that of his son and successor Sultān 'Alā' al-Dīn 'Ālam Shāh (849-85/1445-78). Circumstances were in his favour. 'Alā' al-Dīn 'Ālam Shāh was a weak ruler. His authority barely extended beyond twenty miles from Dhill; hence the epigrams as *Dhillā tā Pāmbādāshāhī Shāh 'Ālam* ('Ālam Shāh's rule extends from Dhill to Pāmbād'). The ill-advised Sultān planned to kill his prime minister Hamid Khān, who escaped from Badā'un, occupied the palace of Dhill and invited Bahāul to take over. The latter came, but cleverly declined the offer as the time was not ripe. Subsequently seizing an opportunity, he had Hamid Khān arrested by Kutb Khān Lōdī and occupied Dhill. He offered the throne to Sultān 'Alā' al-Dīn 'Ālam, who however abdicated in favour of Bahāul, preferring himself to live a life of ease and seclusion at Badā'un. Bahāul, thereupon, ascended the throne of Dhill with the title of Abu 'l-Muzaffar Bahāul Shāh on 17 Rab' I 855/19 April 1451.

After the capture of Dhill, Bahāul extended his territory over north India up to Dzwampur [i.e.]. The last decades of the 9th/15th century witnessed a fluctuating struggle between the Sharqi dynasty of Dzwampur and the Husayn-Shāhi dynasty of Bengal, and then between the Lōdis and both of them. Bihar remained throughout a bone of contention. At first, Bahāul succeeded in driving out Husayn Shāh from his capital (Dzwampur) to his eastern possessions of Cumar, Cawnd and Bihār. The Lōdī Sultān proposed to maintain the *status quo*, provided that Husayn Shāh did not harbour his enemies, but the latter was bent on recovering his lost territory. (An inscription confirms the control of Husayn Shāh over Bihār in 892/1486-7, but it was annexed by Sikandar Lōdī and put in the charge of Daryā Khān in 907/1495-6, as is evident from another inscription.) Husayn Shāh Sharqi was driven to Kāhalgaon, 25 miles east of Bhāgalpur. The Dhill army crossed the Ganges from Pāna, while another contingent marched from Darwāshpur via Kuthughpur near Maner Sharf, against the Bengal Sultān 'Alā' al-Dīn. To oust the Lōdī troops, Prince Dāniyāl was sent by his father at the head of Bengal army towards Munger (Monghyr). The two armies stood facing each other for some time and ultimately a non-aggression pact was signed at Bīrh to the west of Monghyr. Even after this, the boundary remained fluctuating. Bhāgalpur was perhaps, the western extent of the Bengal sultanate during the height of Lōdī power; Sikandar Lōdī's bounds definitely extended up to Bīrh in the east (cf. *JRS* [1935], 358-63).

Bahāul considered himself a chief of chiefs rather

than an absolute autocrat. The Afghān chroniclers speak highly of his simplicity, sense of social equality, bravery and generosity. He followed strictly the *Shari'a*, and spent much time in the company of learned and pious men. He died in *Shahbān* 891/July 1488 at Malāwāl near Saket, a short distance from 'Agra' [s.v.]. His body was brought to Dihli and buried in the Bāgh-i Dūd.

Before his death, he ensured Lōdī dominance in north India by placing his second son Bārbak on the Jāwāpur throne and assigning Mālikpur to 'Ālam Khān Lōdī, Bahrayū to his nephew Kāim Pahār, Lakṣna'0 and Kāipī to 'Āzam Humāyūn Lōdī, and Badā'ūn to Khān Dīghūn Lōdī, while Nīzam Khān held the Panjāb, Dihli and most of the Dō'āb.

He was succeeded by Nīzam Khān as Sulṭān Sikandar Lōdī, who reigned until 921/1517-18. Bahlōl was a chief of chiefs; Sikandar Lōdī considered himself a fully-fledged Sulṭān. He was a good administrator, a just ruler and a good poet. He was able to control the unruly Afghāns by introducing the system of inspection, auditing accounts and registering a *ḥilya* (descriptive roll) [see *ḥilya* u *taḥqīq* in Suppl.].

Sikandar Lōdī was succeeded by his son Ibrāhīm Lōdī at Agra on 3 Dhu 'l-Qa'da 923/20 November 1517. To establish himself, he had to fight against his rival brother Sulṭān Dīlāl al-Dīn of Kāipī and other rebels. After nine years, he had to fight a defensive battle at Pānīpat [s.v.] against the Mughal invader Muḥammad Bābur of Farghāna. The Afghān Sulṭān, who had been betrayed by Dawlat Khān Lōdī, lost the battle, was killed on Friday, 8 Rabi'ab 939/20 April 1526, and was buried by the roadside. Although the Afghān sultanate passed into the hands of the Mughals after about 77 years' rule, the Afghāns continued to fight against the suzerainty of the Mughals under the Karrānis and Nūllānis in Bengal until they were finally subjugated by the Mughal emperor Dīnshāhr at Nekuḍiyāla about 30 miles from Dacca in 1021/1612.

Ibrāhīm Lōdī possessed military skill, but lacked tact and moderation. His idea of monarchy in which kin relationship was not counted was in accordance with the traditional idea of monarchy in India, but his repression of the powerful nobles of the Nūllānī, Farnūlī and Lōdī tribes caused his fall and death. He took drastic steps for establishing his suzerainty, but failed miserably in crushing the nobility which had reduced the Sulṭān to a mere figure-head from the time of Muḥammad b. Tughluq onwards, which had been granted too much license by his grandfather, but which had been largely controlled by his father, with his benevolent and tactful methods, methods which Ibrāhīm Lōdī himself lacked. He did not know how to win over and conciliate an aggrieved noble and was opposed to the equality which was a tradition of his own Afghān race. He hardly tried to patch up his differences with his nobles and to set up a joint defence against the invading Mughal force under Bābur. A correct use of the wealth which he had amassed in great quantities, and conciliation of his nobles, would have earned the loyalty of the nobility to him and helped him in bringing a still larger and stronger army to the battle field of Pānīpat than he could in fact assemble there, thus presenting a united resistance to the Mughals.

2. Administration. After years of insecurity, a stable government was established by the Lōdīs, essentially a military oligarchy; for, with the exception of a few Rājapūts, all officials and dignitaries were Afghāns, mostly of the Lōdī, Nūllānī, Farnūlī and Sarwānī tribes. Bahlōl had considered himself

as *ḥakīm al-umam*; Sikandar Lōdī insisted on the dignity of a sultan, thereby going against Afghān tradition. For the civil administration under the Lōdīs, see *passim*. 6. India (a) The Sultanate of Dihli, and *WIZARA*.

3. Social and cultural life. Timūr's invasion caused considerable damage to Indian culture in the Sultanate period, which shifted from Dihli to provincial capitals until the establishment of the Lōdī dynasty. Sikandar Lōdī's reign witnessed a renaissance of learning and culture in Dihli. Hindīs began to take interest in Muslim learning and Dīnagar, a Hindī poet, taught in a Muslim college. Sikandar patronised music, and gathered poets and musicians in his court. The Sulṭān's cultivation of music led to the compilation of a rare work, the *Lahḡat Sikandar Shāhī na-ḥāfīf-i tā-munānī*, a ms. of which is preserved in the Tagor library of Lakṣna'0 University.

There was some rapprochement between Muslim *Ṣūfis* and Hindū *yogīs*; the Bhakti poets Caitanya, Kabir, Nānak and others compelled some popular attention in the 9th/15th and 10th/16th centuries, under Sikandar Lōdī and his successors. There are some contemporary instances of social intercourse between Muslim saints and Hindū *yogīs*, and of Muslim followers of Hindū saints, and vice-versa. See further *HINDU*, and also *KABIR*, *MAKIL MUHAMMAD* [s.v.]; *ḤANĀFĪ*, in Suppl.

(S. M. INAMUDIN)

4. **Architecture.** Lōdī architecture is described in the articles **DILLI SULTANATE**, **ART**, and **HIND**, vii, **Architecture**. There are many sites not mentioned in those articles where monumental tombs of the Lōdī period are found, especially in the neighbourhood of Sirhind [q.v.], Sohānā and other towns in the Māwāt, and in the environs of Agrā. There is still no adequate study published on Lōdī architecture as a coherent whole, and a competent survey is badly needed. Recent research suggests that later Dillī Sultanate architecture in the regions of eastern Uttar Pradesh and Bihār has many features of a regional style not described in the classification of styles in **HIND**, vii.

5. **Coinage.** Gold and silver coins, already very scarce under the Sayyids, were not continued by Bahāū. His standard coin (= *ṣakha*), a billion issue of 9 2 to 9 4 grs., was of a traditional north Indian (80-rati) standard, but issued in sufficient quantity for the sobriquet of *bahāūī* to be applied to it. Sikandar's standard *ṣakha* was a 32-rati piece, hence of less than half the value of the *bahāūī*. The issues of Ibrāhīm are confined to copper small change. There are a few issues of autonomous Lōdī governors from e.g. Kalpi [q.v.]. See further **DAR AL-ḌAR** and **SIKKA**. (J. BURTON-PADE)

LOGIC [see **MANTY**].

LOJA [see **LAW** (5)].

LOMBOK, an island belonging to the Indonesian province of the Western Smaller Sunda Islands (*Nusa Tenggara Barat*). In the west it is separated from Bali by the Bali Strait, in the east by the Alas Strait from Sumbawa. It is some 4,670 sq. km. in area, and has approximately 1,850,000 inhabitants. There are extreme differences of climate between the humid western and the more arid southern and eastern parts of the island. Mount Rinjani (3,730 m.) is one of the highest mountains in South-East Asia. Mataram, situated close to Lombok's west-coast, is the provincial capital. The island is divided into three *kecamatan* (regencies): West, Central and East Lombok.

The main population group, comprising ca. 95%, are the Sasaks who are nominally adherents of Islam. Approximately 3% are of Balinese origin, in addition to some "orang Buda" who keep to old animistic beliefs, some Chinese, and few Arabs (about 140 in West Lombok).

Influence of Mahayana Buddhism in the 8th and 9th centuries A.D. is suggested by some recently-discovered Buddhist statues in the eastern part of the island. After the conquest of Bali by the *pañc* Gajah Mada from the Hindu-Javanese empire of Majapahit in 1343, Lombok met with the same fate. On the initiative of Trenggana (1521-65), the third ruler of the first Islamic kingdom on Java, Demak, Islam was introduced in Lombok among the Sasaka.

Tensions between the Sasak rulers and the kings of Sumbawa during the 17th century finally led to the intervention of the Balinese kingdom of Karangasem, which established its supremacy on Lombok at the beginning of the 18th century. Mataram, close to the western shore and thus in neighbourhood to eastern Bali, developed as the most influential centre on Lombok. Its king was counselled by Balinese nobles, and the districts, too, were governed by Balinese, whereas their decisions were executed by Sasak officials who were often descendants from the old indigenous nobility.

In 1849, Karangasem lost its supremacy over Mataram, which maintained closer relations with the Dutch at Batavia. But the Balinese nobility still tried to develop western Lombok into a second Bali, and by court decisions Sasaks were eventually made slaves and had to serve in that rôle. Finally, the Sasaks asked the help of the Dutch Indies government, which organised in 1864 an expedition against Lombok "to protect the Muslims", to abolish the dynasty, and to turn Lombok into a Dutch colony. Besides its political consequences, this expedition resulted in the discovery of the manuscript of the *Nāgarahitāgama*, a chronicle of the kingdom of Majapahit from the 14th century.

Although the Sasaks are usually considered to be Muslims, old customs, beliefs, and rules (*adat*) are still dominant. Especially during the 19th century, two parallel movements brought some change into the traditional social structures: the attempts of certain circles of the nobility to exert a greater degree of power, which they justified with *adat* convictions, and which was based on the eventual support of the Dutch; and, on the other side, the attempts of mainly commoners to gain some influence too. For them, Islam with its more democratic concept of society, provided sufficient motivation, and at the same time was consonant with the anti-Balinese feelings among the people.

It was the latter group, however, who in the course of time proved to be more influential than the former one. The features of this development are similar to those in other rural areas in Indonesia. The traditional nobility, which as descendants of the original semi-divine hero has a strong attachment to *adat*, disqualified itself by its affiliation to the foreign powers who ruled the area, whereas for the Muslim preachers, lacking those affiliations and usually themselves originating from the lower strata of society, it was much easier to convince the commoners that they were defending their interests. Externally, they were opposed to the habits and convictions of traditional Sasak culture. But as they were usually oriented towards Islamic traditionalism, a number of Sasak cultural and ceremonial notions were in effect absorbed into their understanding and practising of Islam. Besides the questions of leadership and social control, it was especially in regard to the matrimonial customs and kinship relations where a discrepancy between *adat* and Islam was felt, and this caused internal tensions in Sasak society, which on the whole is moving towards a gradual acceptance of the custom and habits of traditionalist Muslims. This happens mainly through intermarriage between *adat*-obeying and Muslim partners, where the former one adapts himself to the Muslim partner. But the transition from *adat* to Islam is much less a matter of changing doctrines than of changing practical behaviour, and it is mainly obedience to certain demands of the *Sharīf* which serve as the criterion for considering someone as a Muslim or not.

LOKCA [see LUNKA].

LOS PEDROCHES [see FAJIS AL-BALLŪT].

LOT [see LOT].

LUBĀN (*lubān, laubān*) is frankincense, the dried-up sap produced by notching some kinds of *Bauhinia*, obtained in Somalia and South Arabia in the form of yellow resin-grains. As is well-known, the term is Old Semitic: Assyrian *lubānu*, old South Arabian *l-b-n*, Hebr. *bonā*, Aram. *lebōnā* (*lebōdā*), Eth. *lāban*, from which have been derived the loanword *λίβανος*, *λίβανωτός*, Latin *olibanum*, with derivations in the Romance languages. The name can be traced back to the original meaning "white" (Hebr. *lābān*), after the colour of the fresh, milk-white gum-resin, exuded abundantly from the notched trunks and after some time solidified into yellow grains, which are then detached from the trunks or gathered from the soil. At least as often as *lubān*, there appears in Arabic the synonym *kandūr*, according to most authors of Persian origin, but perhaps to be derived from *χρόνδος* "grain"; this term may have become an independent form, derived from the combination *χρόνδος* *λίβανου* "frankincense-grain".

The frankincense trade is extremely old and has been treated repeatedly—but at times inadequately—in comprehensive descriptions. In the first place, frankincense—together with myrrh—formed the richness of the old South-Arabian states of the Minæans and Sabeans; the loss of the frankincense monopoly was one of the main causes of the collapse of this commerce fundamental for their existence, and consequently of cause of their downfall around the middle of the 6th century A.D. [see the good survey by W. W. Müller, *Alt-Südarabien als Weizenland*, in *Theol. Quartalschrift*, cxix (1906), 350-66] The Arabic sources point in the same direction. According to al-Aṣmāʿī, three items were found only in the Yemen, and indeed abundantly there: *al-ʿawr* (*escuma*, a dye-plant), *al-lubān* and *al-ʿaṣb* (Petrarum) [cited in al-Dīnawarī, *The book of plants*, ed. B. Lewin, Wiesbaden 1974, no. 627]. According to a Bedouin from Ḥamān (in al-Dīnawarī, *Le dictionnaire botanique*, ed. Hamidullah, Cairo 1973, nos. 971, 979), frankincense is only found in al-Shihr, in Shihr Ḥamān in fact, as a small briar which reaches up to two cubits high and which grows only in the mountains; its leaves resemble those of the myrtle [see *Is in Suppl.*], as do its fruits, which have a bitter (read *marāra* instead of *harāra*) taste, its resin, also used for chewing and called *kandūr*, wells up in some places struck with the hatchet and stays there until harvest. According to al-Dunashīdī, *Nakḥḥa*, ed. Mehren, St. Petersburg 1866, 67, frankincense is obtained on Sukūṭra (Socotra) and in some regions of the Yemen. After Matt, ii, 11, al-Tabarī, i, 729, 1, reports verbatim that the Magi brought gold, frankincense and myrrh. Lice infestation is caused by two different things: by taking excessive delight

in dried figs and by burning frankincense (Ibn Kutayba, *ʿUyūn*, iii, Cairo 1930, 294).

The best frankincense comes from the male plant (*lubān ḥakkar* = the *λίβανωτός ἄρρην* of Dioscorides); it is white and firm and has round grains which are gummy when broken open. The white frankincense (*lubān aḥyaf* = *λίβανωτός λευκός*) is also named as a noble variety; finally are to be mentioned the Javanese (in fact, Sumatran) frankincense (*lubān gūḥā*), i.e. benzoin, obtained from various kinds of *Styrax*-trees whose fumes are said to remove a cold in the head, and the reddish, Indian frankincense. When, however, the geographers speak continuously of the frankincense of Arabia, this statement is based more on a literary topos than on knowledge of things on the spot. The critical Marco Polo remarks explicitly that he does not want simply to repeat these literary accounts, but to report the personal information of the frankincense-traders. According to these last, frankincense was particularly cultivated in two regions of South Arabia in "Escier"—apparently al-Shihr—and "Dufar", the ancient Zafār. In al-Shihr, he further reports, the lord confiscates the entire harvest, pays the cultivator a low price, and sells it to the traders at a sixfold price (for this report, see W. Heyd, *Histoire du commerce du Levant*, ii, Leipzig 1885, 614-16). Some other places named by the geographers which produced frankincense lie close to each other and belong to the region of Mehra (s.v.). The fact that at times scanty production of frankincense could not always satisfy the sustained and high demand in East and West, led to numerous adulterations (S. Labib, *Handelsgeschichte Ägyptens im Spätmittelalter*, Wiesbaden 1965, 334). Nahray ben Nissim, a Jewish scholar, merchant and banker, called al-Majir al-maghribi and well-known from the Geniza documents, carried on a widespread trade in frankincense in the Mediterranean area in the 11th/12th century (S. D. Goitein, *A Mediterranean society*, 1, Berkeley and Los Angeles 1967, 354).

The medicinal use of frankincense, described extensively by Ibn al-Bayṭār, goes back for the greater part to Dioscorides, from whom was also borrowed without examination the enumeration of several kinds, together with their Greek names. According to him, frankincense has a heating, drying and astringent power, expels darkening of the pupils, causes wounds to scar over and checks haemorrhage. It softens virulent abscesses and, applied in combination with vinegar and pitch, removes warts and eruptions. It is good for earaches and, combined with other medicines, for illnesses of the trachea and of the intestines. For healthy people, it can be dangerous, for it may cause madness and, if drunk with wine, even death. Frankincense is burned by putting it in a mussel-shell and setting fire to it. Shortly before it is fully consumed it must be covered up so that the fire is smothered completely in order that the frankincense is charred and not reduced to ashes; it can then more easily be pulverised. Various supplementary observations were made by the Arab physicians, such as the following: frankincense "burns" pathological phlegms, dries up excessive humours in the breast, strengthens the stomach and warms up a cold liver. Dissolved in water and taken daily, it increases the reasoning power and eliminates loss of memory. It checks diarrhoea and vomiting, calms palpitation of the heart but can also lead to mental disturbances. When chewed, it strengthens the gums. Its bark is good for haemorrhages and intestinal ulcers. The bark of the frank-

cense-tree was often adulterated with that of the stone-pine, but the fraud could easily be detected; when burned, pine-resin smokes while frankincense burns with a flame. Apart from genuine medical sources, frankincense is until now still of great importance in popular medicine and magic, cf. e.g. for Egypt, M. Meyerhof, *Der Bazar der Drogen und Wohlgewürze in Kairo*, in *Archiv für Wirtschaftsforschung im Orient*, III, 3/4, Berlin 1918, 202, and for North-West Africa, Helga Venzlaff, *Der marokkanische Drogenhändler und seine Ware*, Wiesbaden 1977, 67 ff.

(A. DIERCKX)

LUBNÂN, Arabic name of the Lebanon. The Lebanon belongs to the sphere of Arab culture and of Islamic civilisation. It is also one of the components of the Christian world and of the French-speaking community. Created a state in 1920, it seeks its justification, as do all the countries of the contemporary Near East, through the quest for a very ancient identity. With the prosperity of their merchants, with the Biblical symbol of the cedar on their flag, or with the violence of the civil war which broke out in 1975, the Lebanese are a part of the myths and realities of the peoples who, from the Mediterranean to Mesopotamia, have based their civilisations on the patriarchal family, agriculture, the city, commerce and God.

The modern State of the Lebanon was proclaimed of September 1920 by General Gouraud, High Commissioner of the French Republic to the Levant. Within the frontiers allotted to it, and which then earned it the title of "Greater Lebanon", it occupied an area estimated today as close to 10,450 km², measuring no more than 270 km from north to south, and with a breadth of 40 to 75 km from east to west. It

is bordered to the north and east by the Syrian Arab Republic, to the south by the State of Israel, and to the west it has an open coastline on the Mediterranean. Like the *mutazarrifiyya* of Mount Lebanon, the Ottoman *sandjak* which preceded it, dating from 1861, it took the name which had come to be attributed, progressively, to the whole of the mountain range which stretches from the Nahr al-Kabir, in the north, to the Nahr Litānī, in the south; it contains, furthermore, part of Upper Galilee to the south, the central plain of the Biḳāʾ (the Coelestria of Antiquity), and the western foothills of the Anti-Lebanon and of Mount Hermon.

In implementation of Article 22 of the Treaty of Versailles which created the system of mandates, and of the Treaty of San Remo (25 April 1920) and of Lausanne (24 June 1923) which officially brought about the end and the dismemberment of the Ottoman Empire, the Council of the League of Nations, with its decisions of 24 July and 29 September 1923, placed the Lebanon under a mandate entrusted to France. On 26 November 1941, General Catroux, on behalf of the leadership of Free France, recognised the Lebanon as "a sovereign and independent State". In October 1943, following the election to the Presidency of the Republic of the Maronite Christian Bishāra al-Khūrī and the appointment of the Sunnī Muslim Ruyāḡ al-Sulḥ as President of the Council of Ministers, the ministerial declaration of the new government affirmed, with all the ambiguity necessary to a compromise, that "the Lebanon is a homeland whose countenance is Arab, which will benefit richly from the civilisation of the Arabs." It became a member of the Arab League on the foundation of the latter in March 1945.

Greater Lebanon had taken the name of the Lebanese Republic when it was endowed, in 1926, with a constitution establishing a parliamentary and liberal régime. In 1943, when the Lebanese Government, with the support of public opinion, took its own destiny properly in hand, it set the seal on these institutions by means of the National Pact (*al-Mithāq al-waṭanī*), a verbal accord which, in particular, defined the division of the responsibilities of power between the different religious communities; it thus entrusted the Presidency of the Republic to a Maronite Christian, the Presidency of the Council of Ministers to a Sunnī Muslim, and the Presidency of the Chamber of Deputies to a Shīʿī Muslim. Herein lies the heart of the problem. Under the cover of a constitutional régime inspired by the French Third Republic, Lebanese political and social life was to be regulated by a sectarian division of responsibilities, conforming to the development which it has experienced since the beginnings of Islam (see *guyra-ḥī*) and the changes that it had undergone in the Ottoman Empire in the period of the *Tanzīmāt* [i.e.]. If the declaration of 1943 stated that the Lebanon is a "homeland" [*waṭan*] of Arab countenance, the Constitution made it a "nation" [*umma*]. To which structure was the action of the state therefore to respond?

Social culture imposes its norms here, digging its root into a very distant past; there is more of history in this than in all the "Phoenician" justifications put forward today by the Christians, or in the unity of civilisation to which the Muslims lay claim.

Populated from the very dawn of history, the coast accommodated active ports, the memory of which has been perpetuated by the Biblical texts, and of which contemporary archaeology has revealed

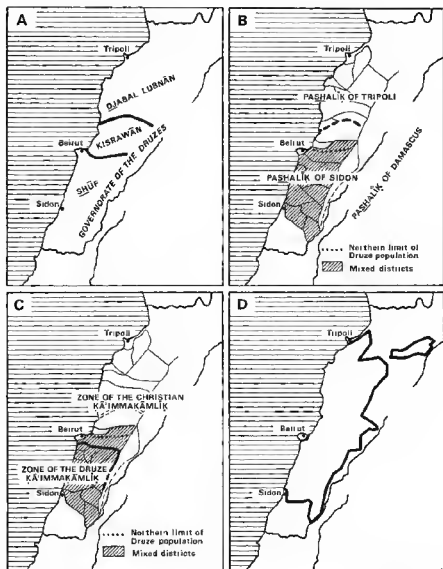

Fig. 2. Stages in administrative unification (after D. Chevallier, *La société du Mont Liban à l'époque de la révolution industrielle en Europe*, Paris 1971).

A The historic regions; B The Mountain under the *Shihāb* family; C, Lebanon and the two *kā'immaḥammīyās*, 1843-61; D The Province of Mount Lebanon in 1861.

the West, formed a passage hardly favourable to the prosperity of a sedentary life in the absence of security, the Lebanon range became one of the marches of western Syria where Muslim and Byzantine adversaries confronted one another, perhaps through the intermediary action of unruly local inhabitants with an aptitude for warfare. Furthermore, the virtual autonomy enjoyed by those who had established themselves there was favourable to the maintenance and development of heterodox and minority religious tendencies.

On the western slope of a mountain already largely deforested, between its first escarpment dissected by deep gorges and its high calcareous plateaus of the north or its ridges to the south, conditions for agriculture and human settlement were particularly favourable at altitudes between 900 and 1,500 metres, since here erosion had uncovered soft and fertile strata of chalk. Sandstone, marl, clay and basalt rock provide a more open relief in this area, where the climate is temperate, the air salubrious and water plentiful. Annual rainfall at this altitude in fact reaches levels of between 1,000 and 1,500 mm; most of the rainfall occurs from November to March, but, during the summer season, the high calcareous surfaces retain the water which they have absorbed over the winter in the form of snow. The Lebanese mountain range is well-irrigated at a latitude where water is rare, because it stops the humid air currents coming in from the west; it forms a barrier between the sea and the steppe. Behind the sheer eastern face, the inland depression of the Bīkā' (g.a.) becomes much more dry; climatic contrasts are accentuated; the Mediterranean littoral is replaced by the Syrian plains which stretch beyond Anti-Lebanon. The Bīkā' was the wheat-growing region to which the mountain people came in search of part of their cereal requirements; as a result, it became a disputed territory because, as an enclave also penetrated by nomads, it became a prey to the rival and destructive aspirations of distinguished families who sought to impose their control on the mountain region, and of those who governed in Damascus.

Over the centuries, the mountain people constructed and maintained walls of dry stone to retain the arable soil on the slopes, thereby establishing narrow fields which were arranged in successive and horizontal layers; these were put to full use when the farmers became capable of developing the cultivation of the vine, the olive and the mulberry. This remarkable and intricate system of terracing was an eloquent testimony to the need for regulating work communally in order to guarantee that of each participant, not only because they were subject—not without legal disputes—to the easements of rights of way, of distribution of water and of crop rotation, but also because the security of each element depended on the maintenance of the whole.

The men who constructed and cultivated these terraces were organised according to the two modes of grouping fundamental throughout this historical milieu: the patriarchal family and the religious community. Social life was at first determined by a system which sanctioned marriages within the framework of paternal parentage to form a patriarchal family which was turned in upon itself and of which the identity was established through a patrilineal genealogy and through reference to a more or less legendary ancestor. Within this context, the family group found expression for its defensive reflexes ('my brother and I against the son of my paternal

uncle, my paternal uncle's son and I against the stranger'), its obligations towards neighbouring family groups and its dependant relationships with more powerful families. In fact, the nature of its internal constitution did nothing to prevent, in the field of exterior contacts, the forging of links of solidarity and the establishment of hierarchies; the role of the latter was still significant in the 19th century among the families of the mountain region. This system, largely pre-Islamic in its origins, was adapted to different types of economic and political organisation, arriving progressively at its fullest expression during the Islamic period, in this mountainous milieu—it should be stressed—just as among the Arab tribes, nomadic, sedentary or sedentarised, of which the conquest did nothing more than establish norms within the general cultural ambience. Thus it was not confined to one religious community, but common to all, even though it underwent evolutions and variations in the course of the centuries; furthermore, the identifying marks of social culture which it entailed, and the experience of which was vigorously maintained through the everyday vocabulary of the Arabic language, were shared by the mountain people with their entire human environment, with the inhabitants of the interior as with those of the coast, and with those of the towns as with those of the plain.

However, the higher collective consciousness relied for its support on something beyond this organisation, which could only engender unstable coalitions between separate and rival agnate groups; it became crystallised at the level of a religious community which ascribed itself to a universalism of divine essence and thereby corresponded to a unitary aspiration where the social body ideally expressed its instinct for survival in its cultural identity and through its willingness to transcend personal interest. Islam was the perfect response to this need, while allowing the survival under its protection of other revealed religions which had proved satisfactory. While each religious community transcended the divisions of the family groups which composed it by uniting the latter in a common faith, the different communities became juxtaposed in their turn in a hierarchy imposed by Islamic law, analogous, in fact, to that which proceeded from the structure of society. The effects of this situation were to a great extent accentuated by the schisms and heresies provoked by the fragmentation of each of the great monotheistic religions into tendencies, different interpretations, communions, liturgies, doctrinal and judicial schools, themselves forming *ṭawā'if* (sing. *ṭā'ifa*), possessing their own distinctive characteristics in the service of the one God, and even exacerbating them in the course of continual confrontations between the communities. The historical ambiguity of the Lebanon, as compared with other groupings of the region, consists in the fact that it was constructed on the bending together of minorities to form a majority.

How did the distribution of those who fostered their idiosyncracies in this mountain refuge develop? The reply to this question is one of the keys to the progressive definition of 'the Lebanon' by its own inhabitants. It is not to be easily answered, however, first because our information on the population during the mediaeval period is still fragmentary and uncertain, furthermore because hypotheses on this subject have been exploited to develop fallacious or emotional claims which have served to justify community and political choices in contemporary Lebanon, with consequences that have not been

solely doctrinal. Passions are aroused and polemic erupts as soon as it becomes necessary to determine the appellation, past or present, of this mountain chain overhanging the Mediterranean, with the vindication or negation of claims of affiliation with the populations settled there, whose origins, in fact, are so often lost in the obscurity of time and in successive human migrations. The controversy continues when the effort is made to define the society and personality of this region in the Ottoman period, with incantatory references to the Occident or to the Orient, the whole being a splendid mental and verbal confusion of all the ideological and academic models. Genuine scientific endeavour has suffered from these practices; on the other hand, their analysis makes for a better understanding of the mentalities involved and of their significance in the Lebanese context.

In the context of each religious group, the collective imagination and, consequently, the emotional outlook of the community are nourished by accounts of the origins of the group. In the case of the Maronite Christians, they have appeared to be all the more important in the Ottoman and contemporary periods because they have explained, or justified, their geographical and human association with the ancient and Biblical designation of "Lebanon", and the extension of the latter over the whole of the country. The stages in the mental realisation of this territorial appropriation are instructive. In the 16th and 17th centuries, following the epic and liturgical work of the bishop *Diakē* b. Kāhā, one of the preoccupations of the Maronite chroniclers, in particular of the patriarch *Istifās al-Duwaybī*, had been to arrange and give shape to stories of monks who had lived as recluses in the canyons of the Kādīsh under the patronage of the saint *Mārūn*—or as successors to the patriarch *Yūhannā Nārūn*—and had exercised a ministry among the peasantry of the neighbourhood. These authors also insisted on the cohesion of the community around their patriarch and on their obedience to the orthodoxy of the Roman Church, which consolidated relations with Catholic Europe at a time when the Maronites were extending their territorial base in central Lebanon, coming into conflict with authority and encountering various spiritual and economic trends. To hagiography and to annals perpetuating the consciousness of the Maronite community, there may be added, especially since the end of the 19th and the beginning of the 20th centuries, the exploitation of scholarly works with a view to laying claim to a very distant past. Thus the Jesuit priest *Henri Lamourez* had taken up again the study of the "Mardaites" (cf. *ET*, *supra*), a rather mysterious people which he believed could have established roots in northern Lebanon after Byzantium had diverted its religious turbulence into opposition to the Muslims, and Maronite authors recognised once more some of their ancestors there, even though these last were tarnished by heterodoxy. However, a question then had to be answered: in relation to Islam and to the "Arabe", was this population to be regarded as alien or indigenous? The construction of a national past, conceived as an uninterrupted chain of events, also led Christian authors to claim kinship with the Phoenicians, as they saw in this approach the best interpretation of implantation in time and space.

The monuments which the Crusaders left behind at Tripoli, Beirut and Sidon and on the foothills of the mountain, constitute for their part evidence for those passions which appropriate this past or

reject it. Leaving aside sentimental and political reactions, it is nevertheless legitimate to wonder with what populations the "Franks" really came into contact. In the central and northern parts of the mountain, it seems very probable that the dominant tonality was then provided by a population that was either *Shīʿī* or influenced by *Shīʿism*. Thus when the Mamlūks, operating from Damascus in the name of orthodox Sunnism, sought, in 704/1305, to recall where the power of the state was situated and to which community it belonged, it was against these *raʿiʿiyyā* (sing. *raʿiʿī*), "people of dissent" or "rebels", as Ibn Taymiyya condemned them, that they launched in the direction of Kisrawān their victorious and devastating campaigns. This dispeopling of the *Shīʿīs* was favourable to an influx of Maronite population, moving in from the north, and to an extension of the authority of distinguished Druze lordships (see *supra*) around the *Ḥarb* and the *Shūf*. The chronicle of *Ṣāliḥ b. Yabāʿ*, written in the 15th century, clearly shows how the hierarchy of the family groups became established on the mountain by means of the fiscal and military organisation of the Muslim states (the system of *ḥudūd* under the Mamlūks, to be replaced by the *mukāṣaʿ* under the Ottomans). It was in this encounter between a population of settlers and an authority which derived its administrative legitimacy from the centre of Sunnī power and its structure from social culture that there was established the "Government of the Druzes" which European travellers discovered in the Ottoman period, and where one of the axes of the modern Lebanon progressively took shape.

With the dangers posed by the Franks and Mongols removed, the Ottoman conquest of Syria in 1516 was, in fact, a decisive moment for this mountain region. It had ceased to be a disputed frontier; it became a centre for access which, for all its undoubted difficulty, was situated at the meeting-point of the great land and maritime communications routes of the vast imperial Ottoman federation. Its inhabitants found in this the opportunity to develop their own activities, and thereby, also the means of affirming their own originality. The Ottoman régime favoured the expansion of regional networks for the relaying of long distance trade; the mountain people were thus able to obtain improved profit from their cultivated terraces, producing grapes and oil, and especially silk in the central regions, cotton and tobacco in the south. Their outlets were initially the local centres of manufacture and consumption, Damascus and Aleppo being the leading customers. Major commerce radiated from these inland terminals, both on interior routes and towards the coastal ports, Tripoli, Beirut, Sidon, which put them in contact with cabotage traffic plying between Palestine and Anatolia and with Egypt, the Maghrib and the ports of Christian Europe. Marseilles in particular, whose merchants, consuls and agents joined together in conducting their business under the system of capitulations (see *infra*).

As a ministry of the power of the sultanate which was maintained through control of the towns and the plains, Sunnī society first put down its roots in the centres for the radiation of religion, justice and authority. In the zone studied here, the Sunnīs were located principally in the ports, the coastal plains and the *Bikāʿ*; the dignitaries of Sidon undertook with those of Damascus rich exchanges in the form of merchandise, marriages and spiritual brotherhood, whilst Maronites were to be recorded in the genealogies of Beirut families. The old communities

of the Melkite Church of Antioch also shared in the revival of the cities and the development of the plains; in 1724, their fragmentation into two hierarchies, one of them "orthodox" and remaining under the jurisdiction of Constantinople, the other "catholic" and bowlike, amid controversy, to that of Rome, bore witness to the effects of the milieu in which they asserted their vitality. Between the "Greek Orthodox" monastery of Balamand (formerly the Cistercian Belmont) and the olive plantations of the Kîra, to the south of Tripoli, and, on the other hand, the agricultural development which grew up around the "Greek Catholic" monastery of Saint Saviour, Dayr al-Mukhallas, on land dominated by the Dînbulât Druze family, these two rites also maintained monasteries such as that of Shawayr, where a printing press was installed during the first half of the 18th century, in this centre of Christianity which the Kîrawân and the Ma'n were to become.

Between the Djabal Lubnân to the north and the Djabal al-Shûf to the south, the movement of Maronite population towards the south of the mountain effectively turned this region into a religious local point, an agricultural zone accessible to commerce, and formed *mukhâfa'ât* administered by families of Maronite *shaykhs* within the context of the "Government of the Druzes", the *hakm Djabal al-Shûf wa-Kîrawân* of the local chroniclers. Forces which came into contact here also clashed. The Jesuits had sent their first missionaries to the Levant two decades after the Council of Trent, and they had assumed direction of the seminary founded in Rome, in 1581, for the training of young Maronites. It was therefore no paradox that the communities of oriental rite attached to Rome were among the first to feel the impact caused by the renewal of religious activity in Europe and contributed to its repercussions. Under the influence of the Holy See, the Maronite Church underwent a movement of reconstruction which affected monasticism and the hierarchy, and a number of synods, including that of Luwayza in 1736, had to be convened for the new rules to be discussed, accepted and imposed. Better organised, it acquired material strength through the donations and *wakfs* of which it was the beneficiary; monasteries became institutions of education where, alongside liturgical Syriac, the Arabic language was cultivated as a means of instructing the faithful and of better understanding the sacred texts. The milieu regained its rights through the use of Arabic and the social structure; thereby, the Maronite Church "naturalised" its western elements. By virtue of the authority of its patriarch and the work of its monks on the popular level, its influence in the community grew in comparison to that wielded by the *mukhâfa'adîs*, the illie born by members of families responsible for the levying of a contractual tax on a district, *mukhâfa'a*.

Among the dignitaries (*ʿa'yân*) of old Maronite stock, some advanced in the echelons of the ecclesiastical hierarchy, whilst others acquired the title of honorary consul in dealings with the representatives of the king of France; but the maintenance of their power derived from their role in the Ottoman fiscal system. After their conquest of Syria in 1516, the Ottomans had retained the administrative divisions of the mountain region, following the example of their predecessors and on the basis of the ethnic distribution; the north belonged to the *vilâyet* of Tripoli, the centre and the south, where the "Government of the Druzes" held sway, to that of Damascus.

In 1660, in the wake of campaigns which the Porte had been obliged to conduct in order to suppress the rebellious ambitions of the Druze *amirs* of the leading family of the Ma'n, a new *paşalık*, whose governor resided at Sidon, was created to ensure better control of the Druzes and the Maronites. Detached from that of Damascus, its territory included the central and southern part of the Lebanese range and northern Palestine; however, the *paşa* of Damascus retained seniority over those of Tripoli and Sidon. The latter made no attempt to exercise direct authority over a mountain range that was difficult of access and inhabited by well-organised groups; in common with the usual practice of the Ottoman administration, they relied on local leaders for the levying and submission of the tribute, the most tangible sign of the sultan's power. In doing so, they were obliged, on the regional level, to adapt themselves to the structure and hierarchy of this society so as to utilise it in a manner favourable to the maintenance of their control, expression and assurance of the sovereignty of the Porte, even though the latter was far away and incapable of applying consistent coercion.

The principal tax, the *tribi*, was linked to the primacy of agricultural production; it was therefore levied on produce. It was farmed out and the leaseholder was subject to annual confirmation; the *amir*—or sometimes two or three *amirs* simultaneously—entrusted with this role belonged to the family of the Ma'n from the time of the Ottoman conquest to the last quarter of the 17th century, then to that of the *Shihâb*. The delegation of this authority consequently led to the pre-eminence of one family over the others, and of one *amir* over his kinsmen; the latter was obliged to lead a life of constant duplicity in order to reconcile the rules imposed on him by his social milieu with the obligation to hand over revenue to the Imperial financial chest and thus retain his post. According to the total sums determined by the Porte and demanded by the *paşa*, each year it was his duty to divide the amounts to be levied between the *mukhâfa'adîs* responsible for collecting the tax from the *mukhâfa'ât* under his jurisdiction. The "Great Prince", the translation adopted by European travellers for the title of *al-amîr al-kabîr*, also took the title of *al-hakim* to assert his authority in the *hakm Djabal al-Shûf wa-Kîrawân*. Following the example of the controlling family, those senior families which exercised authority over others, and whose members were the most important landowners, took responsibility for the collection of rents in the *mukhâfa'ât*, where their social and proprietorial power was thus guaranteed; but in the effort to exert and retain their authority, the *mukhâfa'adîs* wore themselves out in internal rivalries, which were the visible result of the division of society into juxtaposed and opposing groups, and which were revived by the ambitions and intrigues of the sultan's representatives. Thus in 1722, near the village of ʿAyn Dârâ, the Kavalî faction of the *amir* Haydâr *Shihâb* crushed the Yemînî faction; in order to establish more firmly the supremacy of the *Shihâb*, *amir* Haydâr then proceeded to make a new division of the *mukhâfa'ât* among powerful families, strengthening some of them and weakening others. But the Porte was also capable of dismissing *amirs* [see *KAYS* "AVLAK" Kays and Yaman in the Ottoman period].

School text-books appeal to the consciousness of present-day Lebanese through the history of two "heroes", the *amir* Fakhr al-Dîn II Ma'n (q.v.) and the *amir* Baḥrî II *Shihâb* (q.v.), who contributed to the vision of independence for their country in

a unitary fashion that transcended divisions and sectional interests. Both of them, one at the beginning of the 17th century, the other at the beginning of the 18th, exercised authority of a power and extent that had hitherto been unknown in the region; while exploiting the weakness and rivalries of the Turkish governors, they also looked for support to those states which, in the Mediterranean basin, testified to the regenerated power of Europe. But on each occasion, the Porte succeeded in frustrating their ambitions. When the Druze Fakhr al Dîn, with his son 'All, took steps to expand his empire and to render it autonomous, the Ottomans resisted him with the same determination that they had shown in suppressing Shî'ism in the interior of their empire and in combatting Safawid Persia on their eastern frontiers. Fakhr al-Dîn, forced to take refuge at the court of the Grand Duke of Tuscany in 1612, returned in 1616, but was finally captured near Haifa and sent to Istanbul where he was executed in 1635. In a totally different historical context, the *amir* Bashîr II Shihâb also died in Istanbul, in 1850, but of old age, after he had been forced to abdicate his power in 1840, when the Ottoman government, undertaking a programme of political reform and driving the Egyptian troops of Muhammad 'Alî out of Syria, refused to renew his appointment. However, for more than a half-century, from 1788 to 1840, he had thrown all the force of his strong personality into giving the people of the Lebanese range a unity of purpose. To this end, he followed the policy of his predecessors which consisted in adding to the territory of the "Government of the Druzes", belonging to the *paşahs* of Sidon, that of the land of Dûbayl, north of the river Nû'amâlayn, which was a dependency of the *paşahs* of Tripoli; he denoted the leading *mudîr*'s, like the Druze *shaykh* Bashîr Dûnbâlî (see Dûnbâlî), and made use of the support of the Maronites, who had become the largest community in the mountain region. But as the intermediary of a fiscal system which became more and more oppressive, and subjected to the coercions of Muhammad 'Alî during the presence in Syria from 1832 to 1840 of Ibrahim Pasha's Egyptian army, he left his country in a state of full-scale revolt on the part of the mountain people. This led to the elimination of the greatest of the "old style" dignitaries, since the central Ottoman power, in seeking to reassert its control, struck at the leadership first; his departure spell the dissolution of a system.

What situation was discovered by the Porte, when it re-established its authority with the support of a British military expedition and reformed it through its policy of *Tanzîmât*? Since the beginning of Ottoman domination, the active centre of Syria had shifted from the east towards the west, Lebanese overtures towards Mediterranean Europe and the demographic growth which had enabled the Maronites to spread from the north to the south of the mountain, had worked in favour of this orientation and had benefited from it. However, in this material, human and religious context, arboriculture, producing timber in commercial quantities, had been considerably developed to the detriment of edible crops, at the beginning of the 17th century, the cereals which the mountain people harvested from their soil were sufficient to feed them for only three or four months of the year, the remainder having to be bought. The need to guarantee their subsistence thus put them into still further dependence on the Turkish governors who controlled the fertile plains; although the *amirs* attempted to remedy this

necessity by a permanent extension of their influence over the Bîlâd, their efforts were in vain. On the other hand, commercial exchanges turned the mountain range into a zone of monetary circulation, and its economic development affected favourably its population growth; but, at the end of the 18th century and during the first four decades of the 19th, increasing pressure of taxation, linked to the effects of Ottoman monetary manipulations, had caused a massive depletion of financial resources and led to an impoverishment which was all the more powerfully felt because the cultivable areas of the mountain had reached a point of demographic saturation in terms of the development possibilities of the period. This in turn led to social tensions between, on the one hand, the *mudîr*'s, themselves impoverished and weakened by the policies of *amir* Bashîr II and by their own numbers and rivalries, and on the other, the tenant farmers who found it increasingly difficult to cope with increasing taxes and rents on contracting land space. On the Maronite side, the enrichment of the nobility (*arîya*) led to a regrouping in the framework of the community under the leadership of the clergy, with resulting profit to the latter's role. On the side of the Druzes, who had not experienced the same demographic increase, and who therefore were subjected to the continuing influx of Christian population simultaneously with the renewal of economic and political activity in Europe, there was a contrary regrouping behind the major traditional families, the social backbone of the community; a migratory movement also took place towards the Syrian interior, towards the Hawrân (q.v.). Social tension thus also led to community confrontations in the "mixed areas" which were inhabited by Druzes and Christians; the clashes which ensued were a part of the general unrest which affected Syria in this period.

With the regulations of 1842 and 1845, the Porte imposed a new administrative system which gave preferential terms to the Christian population but retained the division of the mountain, the northern part being entrusted to a Christian *kâ'imakâm* and the southern to a Druze *kâ'imakâm*, both were functionaries placed under the authority of the Turkish governor who was now resident in Beirut, and were assisted by a council: "like those which already exist at all points of the empire". It was the renewal imposed by changes in Europe that was manifested behind these modifications, behind new forms of intervention by representatives of European powers in Lebanon, especially behind the activities of the consuls of France and Great Britain posted to Beirut. This port was regularly visited by steamships after 1835; although the major cities of the interior underwent a crisis in their activities, it was the major regional beneficiary of the expansion in trade, especially after 1850, when its commercial affairs followed the rhythm of western economic trends, and the changes in the laws of property on hereditary introduced into the Ottoman empire (confirmed by the *Kayit-î Hümayûn* of 28 February 1856) stimulated the development of new commercial and financial enterprises. Its population grew and diversified, especially in its Christian component (6,000 inhabitants at the beginning of the 19th century, 50,000 in 1860, 130,000 in 1914). In the mountain region, industrial initiative was introduced by the French, who installed new systems for the spinning of silk: they diverted deliveries of cocoons for the benefit of their establishments, thus breaking the links between the small-holders and the influential families and

thereby contributing further to the decline of the latter. These economic changes, while favouring the prosperity of those who were the intermediaries, chief among whom were the Christians, had an adverse effect on the disadvantaged communities and led to aggravation of social and religious tensions. In 1859, an agrarian revolt saw peasants in conflict with *ghayās* in Marouthe Kisrawān. However, the Christians benefited overall from these transformations, while Muslims and Druzes were, overall, prevented from playing any part; claiming the "equality" promised by the reforms, reinforcing the status of the community with the support of France and of the Roman Church, profiting from a European expansion which both rivalled and dominated the traditional economy of the Near East—all these activities on the part of the Christians were in the eyes of the Muslims crimes committed by a people whom they had never ceased to despise, in opposition to their past supremacy and to their present existence. An incident in May 1860 touched off conflict between Druzes and Christians, and was followed by massacres of Christians in the "mixed areas" and in Damascus. To limit intervention by the European powers, the Turks restored order in the most brutal fashion; however, this did not prevent the arrival in Beirut of a French expeditionary force, which Napoleon III had also sent for the purpose of furthering the Mediterranean and Arab aspects of his policy.

The result of these events, of the presence of French troops until June 1861, and of the negotiations held between the Porte, France, Great Britain, Austria, Prussia and Russia, was the creation of a province of Mount Lebanon. Administrative unity was thus confirmed by law. Although it was nothing more than a *sandjak* or *mutasarrıfıyya*, the agreement signed at Pera on 9 June 1861 made it clear that: "The Lebanon will be administered by a Christian governor appointed by the Sublime Porte and responsible directly to it." The Porte laid down the condition that this Christian governor be chosen from among the non-Lebanese subjects of the Sultan. The majority of the population of the new province was Christian; order was maintained by its own police force and it was the beneficiary of a special fiscal system; it included neither Beirut, nor Tripoli, nor Sidon, but its links with Beirut developed continuously to their mutual enrichment in economic and human terms. Although its relatively autonomous status was guaranteed by the signature of five European powers, Mount Lebanon was none the less included in the general administrative modernisation of the Ottoman empire; the abolition of the ancient privileges of the *mushāʿaʿ*, the judicial equality of the Muslim and Christian communities, the representation of these communities on the *majlis* which advised the governor, all these corresponded to the general conditions applied to the administration of provinces as laid down by the law of 1864.

Beirut and Mount Lebanon were the centres of important movements in terms of products, people and ideas. The economic expansion introduced from the West was most clearly marked by the development of sericulture under the control of the city of Lyons, the capital of the industry; French participation in companies formed for the construction from Beirut to Damascus of a carriageable highway (1863), later of a railway line (1895); the extension of the port of Beirut; the architectural improvement of this town; and the founding of banks and trading houses. The increase in population and social pres-

sures led to waves of emigration towards Egypt and the Americas. The Arab literary renaissance, the *nahḍa* (ḡu.), expressed awareness of these encounters; besides the education provided by the Syrian Protestant College, founded in 1866 under the auspices of the American Presbyterian Mission, and by the Jesuit University of St. Joseph (1881), the pedagogic and literary activities of the *waʿallim* Butrus al-Bustānī (see AL-BUSTĀNĪ in Suppl.) and of numerous other writers, journalists and scholars led to a crystallisation of consciousness in the confrontation with all the human, spiritual and geographical dimensions which had been brought into play, and in posing the problem of the affirmation of the personality amid all these transformations. But although for many of the initiators of this intellectual revival the fact of belonging to a common civilisation was something that most transcend religious differences, ambiguities none the less survived at all levels of cultural awareness, since the idea of nationhood proposed by Europe was balanced, on the one hand, by a "Lebanonist" conception, especially among the Maronites, an Arab ideal for a uniting of energies going beyond community distinctions, and on the other, by an Ottomanist lecture for whom the Ottoman State was the guarantee of Islamic civilisation in the face of western domination. In 1911, Shakhb Arslān fought the Italians in Libya alongside the Turks; in June 1913, the Arab Congress, convened in Paris, proposed a decentralisation for the benefit of the different Arab provinces.

The war and the defeat of the Ottomans in 1918 gave an impetus to Lebanese development. Three Lebanese delegations, including one led by the Maronite patriarch, attended the Peace Conference to claim from it the maintenance and even the expansion of their territories. In 1920, the French military intervention against the Arab Kingdom of *amir* Fayyāl permitted the creation of the State of Greater Lebanon which was placed under a mandate entrusted to France. This state was established around a Christian, mainly Maronite, nucleus, which constituted a majority, although all the other lands of Arab culture were populated predominantly by Muslims. But the former province of Mount Lebanon was expanded with the addition of Beirut, Sidon, Tripoli, Akko, the Biqāʿ, the Wādī al-Taym and the Djabal ʿAnsī where Sunni and Shiʿi Muslims were present in large numbers. This situation aroused two principal attitudes: on the one hand, the Christians had no intention of accepting a position of inferiority in a Republic of which they considered themselves the architects; on the other, the Muslims speculated as to what their status was to be within a political entity which had not been founded according to their aspirations. Numerous factors came into play in this context, in particular: the nature of groupings and relationships in the community frameworks or the political parties; demography, increasingly favourable to the Muslims; the question of ability to cope with all the necessities of the modern world; and the economic role and the place of manual labour, not only in terms of the different social levels but also in terms of the communities. While some Shiʿi leaders were quite prepared to throw in their lot with the system, the ruling circles and the populace of the Sunni community expressed strong reservations and they took the opportunity of showing where their feelings lay at the time of the 1925 revolt. However, a compromise was devised, one of its principal Sunni initiators being Riyāḍ al-Sulh; in 1936 it was agreed, following Franco-Syrian

and Franco-Lebanese negotiations, that the Lebanon would continue to exist within its present frontiers and would retain the representation of the communities which had been confirmed by its parliamentary constitution. In 1943, the National Pact, already mentioned, was a decisive factor in the Muslim adhesion to the Lebanese identity. In March 1945, the Lebanon was among the founders of the League of Arab States.

Under all the presidents of the Republic who have succeeded one another since independence (Bishārā al-Khūlī 1943-52, Kamīl Shāmūn 1952-8, Fu'ād Shihāb 1958-64, Charles Hild 1964-70, Sulaymān Farānjīlyys 1970-6, Ilyās Sarrīkīs 1976-82), each serious crisis has renewed the fragmentation of the communities, but has also revealed the growth of a Lebanese consciousness among the majority of a population which has become accustomed to living in the framework of the Lebanese State. In February 1958, many Muslims greeted with enthusiasm news of the foundation of the United Arab Republic; but while bloody civil unrest engulfed the country between May and September of the same year and provoked, in the international and Arab context, the landing of American troops on 17 July in application of the Eisenhower Doctrine, the programme of reforms instituted under the presidency of General Fu'ād Shihāb was accompanied by the emergence of a genuine Muslim Lebanonism. At the same time, Kamāl Dūnbalāt, as much in his capacity as an aristocratic Druze of the Shī'īs as in his role as leader of a socialist movement, appeared to a fundamentally Lebanese patriotism in his effort to bring the country into the bosom of Arab solidarity. The Sunni leaders and the Muslims as a whole were placed in the reality of the Lebanese state as a cadre for the future, but they demanded institutional reforms which would give greater recognition to their numbers and to their talents in the control of the Lebanon. In a state where all civil life is defined by the fact of belonging to a religious community, this claim was supported on the basis of modifications arising from the demographic separation. It is, in fact, the Muslim populations that have increased most rapidly; this development is most clearly marked within the Shī'ī Muslim community, the most disadvantaged in the country, which has become the most numerous. The Shī'ī labour force has therefore tended to leave the impoverished rural zones of eastern and southern Lebanon, the precise areas where Israeli raids have contributed to the acceleration of the migration, to seek work in the expanding industrial zones of the Beirut region. A social problem has thus prolonged the process of political demand and demographic change; this has been reflected in the actions of the political parties of the Left, who have also sought, in a similar manner, to channel the discontent of the peasants of the north whose agitation, since 1970, has been directed against the major landowners and has called into question the authority of the state. They have also acquired, through their new militancy, a stronger "Muslim aspect".

This evolution has come about in a period of economic growth whose profits have been most unevenly distributed. Since 1967, the ascending curve of the Lebanese economy has followed that of the increased wealth of the Near East as a whole; petrodollars, "Arab" assets which are essentially the property of Muslims, have been invested in Lebanese banks, of which the majority are controlled by Christians. At the same time, the Lebanon has not only counted on the resources deriving from its "services",

but also on those produced by its industry, which has undergone a vigorous expansion in the suburbs of Beirut and Tripoli, exporting 80% of its production to Arab markets. While Lebanese technicians and businessmen, including Christians of the higher echelons, have taken the opportunity of practising their skills in the developing Arab countries, the contracted labour force in the construction industry of Beirut is of Syrian origin; thus, through its recent economic development, the Lebanon has become still more integrated into the life and destiny of the Arab world.

Paradoxically, this situation has been cruelly underlined since 1973 by the internal consequences of the recession of the western economy, for the Lebanon has also remained closely linked to the latter; the extension of social malaise has rendered political demands more bitter and has accentuated the impact of the Palestinian presence. This dates from 1948 (the foundation of the State of Israel), but it has only begun to pose a real problem to the authority of the Lebanese State since 1967, when the Palestinians consolidated their political orientation and took on the role of an armed organisation. Now, while the Palestinians exist alongside other Lebanese groups in a structure consistent with the norms of Arab society, and while they have exploited the liberal Lebanese régime to act, as independently as is possible, towards invoking the solidarity of the Arab nation, they have none the less remained very distinct from the remainder of the population, since they lay claim to a land which is not the Lebanon. The sovereignty of the Lebanese state has suffered as a result of their military activities in the frontier regions of the south and, consequently, as a result of repeated Israeli incursions; but, besides the members of the front of progressive parties, all Muslims have felt sympathetic to their cause and have often offered their support in internal political action.

The resentment at this situation felt by the Christians, and especially by the Maronite majority, has been channelled by the Lebanese Phalangists. Although of Arabic language and culture, the Christian population has developed and rediscovered an isolationist complex in an Arab world where the movement towards secularisation tends to work to the advantage of the institutions of the majority, i.e. the Muslims and where, equally, politically active movements have been mobilised in the name of Islamic ideals. This sense of insecurity has also been shared by those business circles which, while reaping the benefits of trading with the Arab countries, participated in the workings of the western economy. On the other hand, the movements of the Left have integrated their denunciation of the injustices of the system with revolutionary Arab perspectives. As a result of the origins of modern Lebanon as well as of present-day circumstances, the internal crisis has taken on Arab, Islamic and international dimensions, and is nourished by them.

After February 1975, the repression of political and social unrest at Sidon illustrated the limited capabilities of the Lebanese army, itself a multi-religious organisation. On 13 April 1975, a coach carrying Palestinians was machine-gunned by Phalangists near Beirut; twenty-seven passengers were killed. Since then, the authority of the government has progressively disintegrated. At the beginning of the 1970s, a whole generation of students had dreamed of a fraternal future for the Lebanon, to be achieved by the erosion of community divisions; this dream has been shattered. While the sovereignty of the state has been called into question, and the ancient

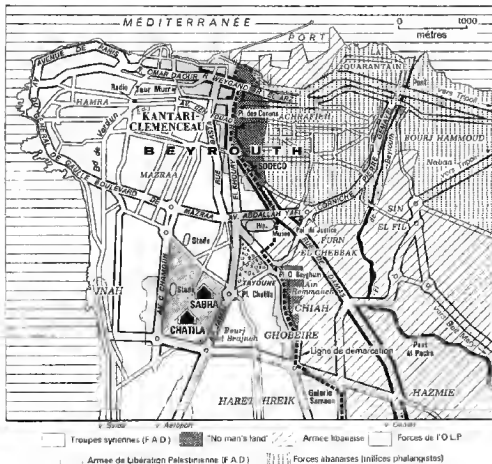

Fig. 3. Beirut in 1987 (after *Le Monde*, 19 May 1987).

structures of the familial group have been damaged by modern urbanisation and industrialisation, religious segregations have shown themselves to be all the more active at the level of collective consciousness, since they have remained the principal touchstones of identity and therefore the principal framework for community solidarity. In the agony of the civil war, political and social conflicts have been kept alive by the most ancient segregational structures of Near Eastern society; the polarisation of passions according to religious allegiances has been the most symptomatic expression of this at the conscious level. How is one to contemplate the idea of the partitioning of the Lebanon as envisaged by the minorities, the constitution of semi-autonomous fraternities of combatants, principally within the popular Muslim milieu, the conflicting claims of fragmentation and unitary ideologies, or the unequalled violence of the fighting since September 1975, without reference to this conglomeration of sociological and historical data?

The Lebanese crisis which began in 1975 owed its seriousness to internal causes which in their turn

reflected the clunges in the Arab world and the social, cultural and political tensions which had become acute throughout the Near East. At the beginning of the war, two powers with an interest in the existence of the modern Lebanon made official approaches to the different Lebanese parties: Syria, with repeated missions on the part of its Minister for Foreign Affairs, France with the fact-finding missions of Maurice Couve de Murville and Georges Gorse. In June 1976, Syria sent a massive force into the Lebanon under the cover of the Arab Peace-Keeping Force in order to restore calm. In spite of truces, the sound of gunfire is still to be heard, uneasy alliances and the reversal of alliances (especially after the Camp David Accords), across struggles for hegemony within each politico-religious faction. The continuing prosperity of the banking sector has no doubt compensated for the massive destruction of property and the aggravation of social disparities. From 1910 to 1938, civil disorders in Lebanon had been resolved only by the intervention of western armies. Since 1976, the presence of the Arab Peace-Keeping Force has shown that a

Fig. 4. Lebanon in 1981 (after *Le Monde*, 20 May 1981).

solution should be found through Arab negotiation, but having regard to international repercussions and to the conflict with Israel which led, in 1978, to the despatch of a United Nations Interim Force in the Lebanon (U.N.I.F.I.L.).

It is estimated that the Lebanon has close to three million inhabitants. It is they, residents or temporary emigrants, who ensure the existence of their country. Though each continues to feel part of a minority in relation to his compatriots, the adhesion of the majority of the Lebanese to the Lebanon is symbolically represented by the celebration of the Day of the Flag; but, while they are aware of belonging to the same entity and are determined to maintain it, they do not share the same national vision.

Bibliography: Since the relevant bibliography is extremely rich and often very polemical in tone, there have been listed below only some works of reference which contain detailed bibliographies themselves and some recent studies which bring important information. (D. CHEVALLIER)

LUBD (pl. of *hūd*, *lahūd*), felt. The production and craftsmanship of wool (see *sūr*) was very prosperous in the mediaeval Muslim world, and supplied a variety of articles not only for refined and wealthy customers but also for the popular market in the form of relatively inexpensive clothing. In more recent times, local woollens have not managed to compete with European products (E. Ashtor, *Les laines dans l'Orient médiéval*, in *Atti Inst. F. Dattini*, Florence 1976, 657-86). Felt was one of the less expensive products among the woollen articles manufactured locally (and probably not threatened by imports from Europe), but there were also felts of high quality which were dyed (see for their colours, below) or embellished (Ibn al-Zubayr, *al-Dihāḥī*, p. 87, a royal cloak of Byzantine origin).

As elsewhere, felt was manufactured in the Muslim world at that time by pressing wool between pieces of wood, etc., a process often combined with moistening and binding by means of *ṣamāḥ* (i.e. gum, for the Middle Ages, a description is supplied by Ibn al-Ukhuwwa, *Ma'ālim*, 232, and for the beginning of the modern period, by al-Kāsimī, *Diet. des métiers*, ii, 399-400).

The maker of felt was called the *lubbād*, *lubbādī*, and *lubbādī* (Ibn al-Ukhuwwa, *loc. cit.*; al-Makrībī, *Khitāb*, Beirut ed., i, 194; al-Kāsimī, *loc. cit.*). The names of a number of articles are derived from that of 'felt': cap (*lubbād*), cloak, or piece of felt worn over the outer garment (*lubbādā*), moquette (*hūd*, *lahūd*), saddle, or a piece of felt put under the saddle, especially among the nomadic Arabs, etc. (al-Nahigha and Imra' al-Kays, ed. Ahlwardt, 7, 149; *Dimen al-Hudhāliyyin*, ed. Weillhauser, 86; *Qārīr*, ed. Sāwī, 139; Ibn Kutayba, *al-Ma'ānī*, 944 [but it is not known if this *hūd* of the Arabs of the pre-Islamic and early Islamic periods, was manufactured like the felt known in sedentary civilisation]; al-Shībushī, *Diwān*, Baghdad 1966, 199; Ibn Hayyān, *al-Khāṣṣ al-nabī*, Cairo 1959, 151; al-Raghib al-Isfahānī, *Mushāḥḥad*, Beirut 1963, iv, 377-8; Ibn al-Zubayr, *op. cit.*, 60, 245-6; al-Zamakhsharī, *Asās*, Cairo 1960, 432; *idem*, *Muḥaddamāt*, Leipzig 1830, 63; al-Makrībī, *op. cit.*, ii, 99, 256, 331; *LA*, Beirut 1955, iii, 386, 387; Lane, i, 2646; S.

Fränkel, *Fremdwörter*, 103; Dozy, *Vilements*, 395; *idem*, *Suppl.*, s.v.).

In fact, felt was also used for the manufacture of items whose names are not derived from it, such as clothing and hats (see some of the above sources and al-Djāhī, according to Ch. Pellat, in *Arabica*, i, 103 [*ṣamāḥ* of felt]; Ibn Hawkal, tr. Kramers-Wiet, 113; Dozy, *Vilements*, 174, 251, 267, 306; *ḥalansawa*, *farāgh*, for example), linings of jackets (A. Miquel, *La géographie humaine*, ii, 499—the cave here in point is the equipping of a Muslim expedition, outside the Islamic world, with clothing manufactured in 'Iraq'), blankets and mattresses (al-Tanūkhī, *Faṣḥī*, Cairo 1955, 139; mattresses of less affluent people), ropes (possibly; see below). Felts were available in several colours, apart from the natural colour (red): al-Djāhī, *op. cit.*, 158-9; al-Shābushī, *loc. cit.*—black: Ibn al-Zubayr, *op. cit.*, 145-6).

The felts came from various regions and countries; from China (refined and rare felts, in the Muslim world, al-Djāhī, *loc. cit.*; al-Tha'libī, *Laf'ī*, tr. C. E. Bosworth, 142), from North Africa (al-Djāhī, *loc. cit.*; al-Isfahānī, 151; Ibn Hawkal, *op. cit.*, 113; al-Tha'libī, *loc. cit.*; Ibn al-Zubayr, *op. cit.*, 47), from Armenia and Khurāsān (al-Djāhī, *loc. cit.*; Ibn al-Zubayr, *op. cit.*, 60; al-Hamadī, *Tahmil*, 22). The Turks, in common with other peoples of Central Asia (A. Miquel, *op. cit.*, ii, 156, 159, 234), used large quantities of felt, for clothing as well as for the making of tents, but there is no evidence to show that felt was exported from these regions to the centre of the Muslim world. Felt from Tālākān (in Khurāsān), strong and resilient, was used possibly for the weaving of a kind of rope rescue-ladder (al-Mas'ūdī, *Murūj*, vii, 217 = § 799). In Samarkand (Transoxania) and Damascus (Syria) there were specialised quarters in the suburbs or in the town, for the manufacture and sale of felt (Yakūt, iv, 343).

(J. SABAŃ)

LUCKNOW [see *LAHNAW*].

LUDD, the Arabic name of Lydda, the ancient Hebrew Ludd, a town in Palestine to the south-east of Jaffa (Yāfa, Yāfo) and 27 km. in direct line from the Mediterranean shore.

Ancient history. Ludd is extremely ancient, and its name is believed to appear in the list of towns conquered by the Egyptian King Thutmose III (c. 1468-1436 B.C.) (cf. Ali, *Essays*, 138; Aharoni, 149). The name of Ludd appears four times in the later books of the Bible (I Chron. viii, 15, the building of the city by several families belonging to the tribe of Benjamin; Ezra, ii, 33; Neh. vii, 37, xi, 32-3). The Hebrew name was preserved in the New Testament (Aḡḡa, Acts, ix, 32), and through it has entered, in the Latin form of Lydda, into the European languages. After the British occupation in 1917, the name of the city was given to the whole district, which was called 'the District of Lydda'. Early in the 3rd century A.D., the Greek name Diospolis must have been given to the town by Emperor Septimius Severus, who visited the place in 200-1, when the town was given Roman city rights and coins were struck there (cf. Smith, 122 n. 3). Although the name Diospolis survived until the Islamic conquest, the local Jewish and Samaritan population continued to use the original name of Ludd, which appears frequently in Talmudic literature (e.g. *Paṭ. Talmud*, *Shvi'it*, 9; *Babylonian Talmud*, *Megilla*, 3b-4a; *Sanhedrin*, 32b, 74a; *Sukka*, 2b; *Hullin*, 56b; *The minor tractates of the Talmud*, London 1965, 127, 331, 342).

During the whole of the Second Temple period, the city was one of the major Jewish centres, although in the Hellenistic and Roman periods it occasionally remained outside Jewish domination. The Seleucids ceded it to Jonathan Maccabaeus in 125 B.C. and 83 years later, Pompey detached it from the Jewish state. In 48 B.C. Julius Caesar restored it to Jewish rule. In 44 B.C. after the murder of Caesar, Cassius, who appeared in the country with a large Roman army, sold its population as slaves when the town failed to pay the high tribute imposed on it (Josephus, *Wars*, I, ch. xi, 2). The city revived and even flourished as a centre of Jewish learning and a home for Jewish spiritual leadership after the destruction of Jerusalem in 70 A.D. (Smith, 122 and n. 2).

Once Christianity was proclaimed the state religion by Constantine, Ludd instantly assumed an important place in Christian thought, mainly because of the healing miracle which St. Peter performed on the paralytic Aeneas (Acts, ix, 32-5. Cf. Hieronimus, in *Reland, Palaestina*, 877), which is said to have been the cause of numerous converts to Christianity in the city and its environs. However, the real sanctity of Ludd and its major fame in the Christian world are due to the belief that it is the birthplace of St. George, who is probably the most venerated hero in Eastern Christianity and who rose from obscure origins to become "not only the virtual patron of Syrian Christendom and an object of Muslim reverence, but patron, as well, of the most Western of Christian peoples. St. George of Lydda is St. George of England..." (Smith, 122). His fame must have been due to his martyrdom, on the eve of the triumph of Christianity, under Diocletian in Nicomedia in A.D. 303, after which his relics (or his head only) were brought to Ludd and buried there.

Early Christian travelers refer, therefore, to Ludd as the place where the saint is buried. At some time during the Byzantine period, probably under Justinian, a church was built over the burial place, the altar of which must have stood over the tomb itself, and a monastery which was also established in the city was dedicated to him. The church, however, appears not to have been dedicated to him, since travellers mention only the tomb and the monastery (Smith, loc. cit.). The archaeological survey in which the traces of the Byzantine church were discovered was carried out by Clermont-Ganneau (*Archaeological researches*, II, 68-103, 341-6; cf. *SWP, Memoires*, II, 267-8). The town became, already in the 4th century an episcopal see (despite partial destruction after an anti-Roman revolt in 352) and retained this position until modern times, even after its cathedral was destroyed and its Christian population reduced to a negligible number; there was even a Synod of Diocesis early in the 5th century. The signatures of several Bishops from Ludd appear on conciliar documents; Aetius Lydensis at the Council of Nicaea (325), Dionysius Diopolitanus at the Council of Constantinople (381); Photinus Diopolitanus (as well as Photinus episcopus Lydae) at the Council of Chalcedon (451) (Reland, *op. cit.*, 878-9. For more references concerning Ludd in classical literature, cf. Avi-Yonah, *Gesetz*, 75).

Topography The town is located on the border between the coastal plain and the Shephela, in an extensive area of flat land, some 40-50 m. above sea level, which came to be known after it as "the Valley of Lod" (cf. *Pal. Yalmut*, loc. cit.). The area enjoys a very good amount of winter rain (annual average of above 500 mm.), and its alluvial soil

stores large quantities of excellent water which have rendered the environs of the city extremely fertile in all times; this, in addition to the rich soil and generally warm climate, made the town famous for its agriculture. It was always described by travellers as being encircled by olive groves and vineyards (and in modern times, citrus plantations). Cotton grows very well in the area, and in the later Ottoman period it was cultivated extensively as a major cash crop. The cultivation of cotton ceased during the British Mandate, but was renewed in a most extensive form in Israel. Plants used in the dyeing industry, for which the town had also been very famous (until the building of Ramla), must have also been grown around the city. The virtually unlimited possibilities offered by the natural conditions explains the place's attraction for settlers, who repeatedly restored it after the frequent calamities, whether of human or natural making, which befell it throughout its extremely long history.

Its position made Ludd from ancient times an important station on the eastern and more frequented branch of the Via Maris which runs from Gaza via Yavneh (Ar. Yubnā) and Ludd to Antipatris (Ra's al-'Ayn) and thence via Waddi 'Ara (ancient 'Iron) to the Valley of Jezreel. This route running along the eastern slopes of the hills of Samaria, though longer than the one running parallel to the coast, was deemed easier and safer. It attained special importance in the post-Crusader period (mainly under the Mamlūks), and has since served as one of the major traffic routes in the country. The road connecting Jerusalem to Jaffa also passed via Ludd, thus making it into an important crossroads, a position which the city regained in modern times after the construction of the Jaffa-Jerusalem railroad at the end of the last century (see below).

Early Islamic history. According to al-Balādhuri's tradition, Ludd was conquered by 'Amr b. al-'As after the conquest of Nabulus and Samaria (*Futūḥ*, 138/13). Al-Tabari relates that the city capitulated in 15 A.H. and quotes the agreement made with its inhabitants. It is the standard formula of capitulation treaty known from other places in Syria which were reportedly taken without war (*ṣulḥ*), and stipulates *amān* (protection) for the conquered inhabitants' life and property, guaranteeing the safety of the religious institutions in return for a payment of an unfixed sum of *ḡirya* (al-Tabari, I, 2406-7). Very soon after the Islamic conquest the town underwent a process of rapid deterioration, mainly due to the growth of Ramla as a major administrative, economic and cultural centre in the *Diyāl Filastīn* (the Byzantine *Palaestina Prima*).

Ramla was built by Sulaymān b. 'Abd al-Malik with the intention of serving as the capital of the province, after a long period in which the *Diyāl Filastīn* had been devoid of a proper administrative centre. Having discarded, for obvious reasons Caesarea, the Roman-Byzantine capital of *Palaestina Prima*, the Muslims made Ludd into the permanent seat of the administration. The city was, however, too Christian in ethos for the taste of the Umayyad rulers, especially after the inauguration of 'Abd al-Malik's Arab-Islamic reforms. When Sulaymān was nominated by his brother al-Walīd I as governor of Palestine, he took up residence in Ludd, but immediately embarked upon the grand scheme of the building of Ramla (*Futūḥ*, 143; Yāqūt, s.v. "Ramla"). Once the new capital was established, Ludd almost instantly fell into oblivion. The Islamic traditions

unanimously confirm this by saying that the building of Ramla was the reason for the destruction of Ludd (*see-kāna dīnāhā sabab hānāh Ludd, Yāqūt, loc. cit.*). Some traditions even say that Sulaymān destroyed the homes of the inhabitants of Ludd in order to force them to move to his new capital, Al-Yūsufiyya, who specifically mentions Sulaymān's destruction of Ludd, emphasises that in his own time it was already in ruins (*Buldān*, 308). The traditions relating to its deterioration are all intensified by the Islamic accounts of its past glory. Thus Ibn al-Fākih speaks about the splendid buildings of Ludd, which impressed the Muslim beholders so much that they believed that they were built for Solomon by the djinn (*Muḥḥaṣṣar*, 217). This tradition must refer to the Byzantine basilica of Ludd, which had been built over the tomb of St. George. It is believed to have been destroyed by al-Bīḥīm in 398/1008 and rebuilt by King Stephen I (St. Stephen) of Hungary (997-1038). However, by then the church of Ludd had already been celebrated in the Islamic eschatological traditions. Al-Mukaddasī, in the second half of the 4th/10th century, mentions the church as the most prominent feature of the city and adds that 'Qā will kill the Antichrist or Daḡdījal [g.v.] at its gate. In his time, the place had already undergone a process of Islamisation, for he refers to a large Friday mosque which served as a prayer place not only for the Muslims of Ludd but also for the inhabitants of its environs, including even those of the provincial capital Ramla (al-Mukaddasī, 176; *Le Strange, Palestine*, 493).

The place which Ludd occupies in the Islamic eschatological tradition must have been born out of the popular mixture of legends connected with the image of St. George and the Jewish traditions about the false Messiah (or in Aramaic, *Meṣīḥā daggala*, hence Arabic Daḡdījal). Some of the Islamic traditions about the death of Daḡdījal at the gate of the church of Ludd, or at the gate of the city, identify their Jewish origin. According to these accounts, Umar used to show great interest in the subject, and persistently searched for information about it. After the battle of Ajnādāyn (g.v.), when Ludd was captured, a Jew told Umar that the Muslims would kill Daḡdījal "a little more than ten cubits from the gate of Ludd" (al-Ṭabarī, 1, 2403; Ibn al-Aṭhīr, 1, 388, 399; Abu 'l-Fidā', *Taqwīm*, 227). In a tradition attributed to al-Zuhri, Jesus, at the head of the Muslims, would follow Daḡdījal and kill him at the gate of Ludd (Ibn Kathīr, 1, 99; al-Bakrī, 490). Similar eschatological traditions are numerous, and the whole theme has been elaborated upon in great detail by Ibn 'Asākir (ed. Munajjid, 1, 149-52, 184, 215-17, 228-9, 232, 256-7, 260, 264-5, 606-19; *Taḡdīb*, 1, 42, 195).

It is very possible that the tradition grew somehow out of the idea connecting St. George and the dragon, which can be traced to the 6th century, when the legend of Perseus and Andromeda was transferred to St. George. There is no doubt that the magnificence of the Byzantine church and later the Crusaders' cathedral of Ludd, as well as those local legends woven around the image of St. George, furnished the proper background for the development of the Islamic traditions concerning the church in particular and the city of Ludd in general. The core of the traditions in which the false Messiah dies in Ludd is Jewish. From this point of view, those Islamic accounts emphasising the Jewish connection with the tradition are correct. Clermont Gauzeau suggests, however, that the Daḡdījal in this case represents the dragon, while St. George, who was

transformed by the Islamic popular tradition, into al-Khidr (see AL-KHADR), kills it (Smith, 123).

The feast of St. George on 23 April continued to be celebrated under Islam, and its ceremonies at the church were also attended by Muslims. Three verses by al-Mu'allā b. Ṭarfī, the caliph al-Mahdī's poet-singer freedom, in which he talks about his "coming intentionally to Ludd on the feast of *māri sirgīs*" (sic), where he saw "ladies like gazelles in their covert", attest to the popularity of the feast, at least in the pre-Crusader period (Yāqūt, s.v. "Ludd"; *Al-Khāṣṣ*, 74, 46-7).

The Byzantine church is described by all the early Christian travellers. On the eve of the invasion of the Crusaders in 1099, the Muslims destroyed it again. The Crusaders found Ludd and Ramla deserted, and thus were easily able to establish a corridor from Jaffa to Jerusalem, whence they could mount their attack on the Holy City as well as widen their hold on central and southern Palestine. In Ludd they built in 1130 a new cathedral with much splendour and magnificence, over the remains of the previous Byzantine church and the Saint's tomb. They dedicated it to the Saint, because of its location as well as because of the then prevalent belief in his intervention in their favour during the siege of Antioch. The new cathedral "was a great pile, capable of use as a fortress" (Smith, 122). Toward the end of the 12th century, the cathedral attained even greater attention and significance when St. George was adopted by Richard Cœur de Lion as the patron saint of England, in addition to the veneration he already enjoyed as the patron saint of Eastern Christianity (it was, however, only under King Edward III that St. George actually became the patron saint of England, *ibid.*, 122 n. 31). Moreover, under the Crusaders, the name of St. George replaced the name of the town, so that during the whole of their period it came to be known as St. George, and pilgrims call it by this name until the 16th century (ZDPV, 2, 215; xi, 195). Even the Jewish traveller Benjamin of Tudela speaks about his visit to St. George, erroneously identifying it with the Biblical Luz (*Early Travels*, 82, 88).

In 583/1187, following the battle of Hittin (g.v.), Saladin conquered Ludd (Abū Shāma, 1, 89), but the effect on the town of this conquest was felt only three years later. In the framework of Saladin's policy of dismantling the main coastal fortresses, he demolished Ascalon (Asqalan) and proceeded to dismantle on 3 Rabi' al-Thani 587/24 September 1191 the fortress of Ramla. On this occasion he also demolished the Cathedral of Ludd (Abū Shāma, 1, 191; Ibn al-Aṭhīr, xii, 47; Zetterstéen, 235). Al-Yāqūt, 1, 462, erroneously speaks about the demolition of the whole town. Muḥḥar al-Dīn, 1, 419, remarks that with the destruction of the church the town became "a village like the other villages" (cf. Robinson, *Bibl. res.*, 1, 34-5; De Vogüé, *Lévi*, 363). When peace negotiations began between Saladin and the Franks in 588/1192, the former suggested that the King of Jerusalem should receive Ludd to compensate him for his losses in the dismantled Ascalon (Abū Shāma, 1, 200). The strategic importance of Ludd as an inland station on the main route from Egypt to Syria (cf. Muḥḥar al-Dīn, *loc. cit.*), which had, in the previous period, been lost to Ramla, must have been at least partly resumed during the Crusader Ayyūbid period. In 601/1204-5, during the negotiations between the Franks and al-Malik al-Aḍil, they demanded and received Jaffa as well as what amounted to the lease of Ludd, Ramla and their environs (al-Makrizī,

Sulāḥ, ii, 164). The name of Ludd appears in the sources again in connection with the peace treaty of 625/1229 between al-Malik al-Kamil of Egypt and the Emperor Frederick II. In this treaty, which provided for the cession of Jerusalem to the Franks, Ludd was also handed over to the Crusaders' sovereignty, together with some other villages which were part of the territorial corridor between Jaffa and Jerusalem, which came under Frankish domination (Sulāḥ, i, 230; al-Kalqanḥandī, iii, 429). In 666/1267-8, Ludd was conquered by Baybars, who must have dismantled whatever remained of the church (Sulāḥ, i, 230, 565), the stones of which were later used to build the bridge to the north of the city in 671/1273.

The development of the inland branch of the Cairo-Damascus route (for the eastern branch of the Via Maris) in the course of which the great engineering enterprise of building the monumental bridge of Ludd was undertaken, was part of Baybars' policy to demolish completely the coast of Syria and Palestine. This policy began in fact, with Saladin and was later used by the subsequent Muslim rulers. In view of the Mamlūk weakness on the sea and their inability to prevent the free naval activity in the Mediterranean, Baybars and his successors followed the strategy of abandoning the demolished shore and creating a strong line of inland fortresses. The unprecedented attention paid to the inland route to Damascus passing via Ludd was part of this overall Mamlūk strategy (cf. Ayalon, *עקרונות*, ii, and idem, *The Mamlūks and naval power*, 7-20).

Clermont-Ganneau, who studied the bridge as well as the church of Ludd, remarked that whole parts of the Crusaders' cathedral were used for building of the bridge (RAO, i, 270-1, cf. Prawer, ii, 424); modern Islamic art historians, however, doubt this theory. The bridge is known as *Dijr Dindās*, after the name of a neighbouring village, and has been in constant usage since the time of its building until this very day. Two almost identical inscriptions on both its façades commemorate its building; it was ordered by Baybars and executed by 'Alī al-Dīn 'Alī al-Sawwāk b. 'Umar in Ramaḍān 671/April 1273 (Clermont-Ganneau, *loc. cit.*). On both sides of the inscriptions Baybars' famous heraldic symbol, the leopard, is carved in relief with its paw raised to strike a miserable animal resembling a mouse, believed to represent the king of Jerusalem or the Crusaders in general (cf. Prawer, ii, 421-2).

Ludd revived as a consequence of the development of this major traffic route, especially since the early Mamlūk sultans paid great attention to the orderly and secure movement of the royal postal services or *barīd* (q.v.) between the imperial capital of Cairo and the major provincial capital of Damascus. In the Mamlūk administrative division, Ludd was made into a centre of a subdistrict, *ṣamāl Ludd* (al-Kalqanḥandī, iv, 100). Ibn al-Furāt (vii, 225) speaks in 680/1281 about *al-miṣṣat al-Ludd wa 'b-Ramla*. After then, Ludd is mentioned as an important station on the road between Cairo and Damascus (e.g. in Sulāḥ, i, 3, 82-3; Ibn Ḥaǧǧir, *Durar*, i, 312). Nevertheless, it did not regain its former splendour, for during the Mamlūk period also, it was overshadowed by Ramla. Muǧīr al-Dīn describes the place in this time, namely the very end of the Mamlūk period, as a pleasant village with an active Friday mosque. The singling-out of the mosque of Ludd is understandable in view of the fact that its monumental structure was far beyond the needs of the little village and served the population of the neighbouring villages as well. Muǧīr al-Dīn adds that to the east of the city there

was a *maḥḥad* venerated as the tomb of the famous companion 'Abd al-Rahmān b. 'Awf. There is no question that the *maḥḥad* and the local traditions around it were a post-Crusader invention; (in actual fact, Ibn 'Awf died in Medina and was buried in the cemetery there of al-Bakī' [q.v.], Ibn 'Abd al-Barr, *Istīṣāb*, ii, 850; Muǧīr al-Dīn, 419).

The Grand Mosque was also built at the order of Baybars, in part over the sites of the Byzantine basilica and the Crusaders' cathedral, with the building material taken from the ruins of both. On one of the columns of the mosque a 6th century Greek inscription which had belonged to the Byzantine church can still be seen. The mosque built by Baybars is called al-Djāmi' al-'Umarī. The long inscription in early Mamlūk *ṣaḥīḥ* script over its entrance is the only detailed source concerning its building. It runs as follows:

"... ordered the building of this blessed Friday Mosque our lord the Sultān al-Malik al-Zāhir Ra'īk al-Dunyā wa 'l-Dīn, Abū 'l-Faṭḥ Baybars al-Sāliḥ, the associate of the Commander of the Faithful, may God make his victories glorious and forgive him. This was done under the direction of the servant, yearning for the mercy of his (divine) Master, 'Alī al-Dīn 'Alī al-Sawwāk al-Sāliḥ, may God forgive him, in the month of Ramaḍān 666 (began 15 May 1268)." (L. A. Mayer, *Muslim religious buildings*, 31).

This means that the mosque was built shortly after the conquest of the city. The work was executed by the same 'Alī al-Dīn al-Sawwāk who was later charged also with the building of the bridge but of whom nothing else is known (Mayer, *loc. cit.*). Another inscription on the grand mosque, hitherto unpublished, bearing the name of Kā'itbāy and dated 13 Ramaḍān 692/a September 1287, commemorates the abolition of certain unjust taxes upon the inhabitants of Ludd. Of special interest is the fact that the name of the powerful local leader of Djabal Nābulus, Khālīl b. Ismā'īl, hitherto known from literary sources only, appears in this inscription as officially participating in the affairs of Ludd. This may be explained by the fact that a few months earlier in 892/1486, the *amir* Abū 'l-ḥayr al-Dīn, the great *darūdār*, arrived in the environs of Ludd and Ramla, whence he set off to recruit warriors for the war against the Ottoman Bāyezid II. Khālīl b. Ismā'īl was officially nominated to the *ṣaḥāba* of Djabal Nābulus and took an active part in this recruiting activity, through which he must have widened his scope of influence (but clashing with the *adāb* of Jerusalem, Muǧīr al-Dīn, 666, 669).

The Bedouin element, which during the Fāṭimid period was predominant in the coastal plains of Palestine, and particularly around Ramla and Ludd, reappeared as a major factor in the history of the country in the post-Crusader period, again easily establishing itself around Geza (Ghazza) on the one hand and around Ludd and Ramla on the other. These areas have always been within easy reach of the nomads, who took advantage of the weakness of the Mamlūk and later also Ottoman military and administrative hold on the country. The environs of Ludd in both periods were completely at the mercy of Bedouin tribes, mainly of the Sawāḥma, the Kūḥūk and the Sawtariyya, who replaced the Banū Djarrah of Tayyī²—the predominant tribe of the Fāṭimid period in Palestine.

According to Oppenheim, the Sawāḥma and the Kūḥūk arrived in the Ramla-Ludd region from Lower Egypt at the beginning of the 11th/12th century; but the Sawāḥma, the leading tribe of the area,

definitely arrived earlier, for in 1622 they took part in a coalition (with Bedouins from the Nabulus area and others) which aided Ahmad b. Turabbay, the Bedouin amir of Luddiyya (q.v.), in his war against Fakhr al-Din II (Sharon). *The political role of the Bedouins in Palestine* . . . 28-9).

The Ottoman period and modern times. Throughout most of the Ottoman period, Ludd was completely overshadowed by Ramla. It was a small village, which in judicial matters fell under the jurisdiction of the deputy *kādi* of Ramla (Heyd, 55-6). In spite of its small size, it retained some of its importance as being situated on the central postal route of the empire. When in 1552, Roxelana (Khurram Sultan [q.v.]), the favourite and later wife of Sultan Sulaymān the Magnificent, established her famous endowment (Yimrān) in Jerusalem, Ludd was one of the many villages which were made *waḥf* for it (*ibid.*, 123, n. 2, doc. 90, and n. 7; *QADAF* [1944], 270-94).

The European travellers who visited the town in the Mamlūk and Ottoman periods are of little value for the history of Ludd until the 19th century, when the systematic research of the Holy Land began. They all repeat the same description of a small village in the midst of a fertile environment, emphasising the impressive ruins of the Crusader cathedral. At some time during these periods, an altar was built by the small Greek Orthodox community, who used to assemble at the place for regular prayers. In spite of Ludd's fertility and favourable location on a major commercial route, it was not until the second half of the 19th century that it began to revive. In the middle of the century the number of its population, according to the 1851 census, was only 1,345 (the number for the neighbouring villages being 4,400, *SWP*, II, 279). The increased attention paid by the Ottomans to Syria and Palestine in the second half of the century, which entailed improvement in the internal security, mainly in the central parts of the country, and the keeping of the Bedouins in closer check, had an immediate influence on the fortunes of the town. The systematic European scholarly investigation of Ludd, which began with Edward Robinson in 1838 and continued particularly in 1852, and was followed by the Palestine Exploration Fund (Conder, Kitchener and others), drew European attention to Ludd and its past. In 1871 and again in 1873-4, Clermont-Ganneau prepared a most detailed study of the town and its environs, which included a detailed study of the Byzantine basilica and the Crusaders' cathedral. At this time work began on the rebuilding of the present church of St George, partly on the ancient foundations not included in the mosque. Once completed (on a far smaller scale than the former edifice), the church became the focus of popular celebrations twice a year, on 24 April, the birthday of the Saint, and 26 November, the day in which his relics were brought to Ludd (*SWP*, *Memoires*, II, 468).

In spite of this steady growth of the town, its real development came with the building of the Jaffa-Jerusalem railway, which began in 1890 in accordance with a *firman* granted by the Ottoman sultan to Joseph Navon Efendi. On 26 September 1892, the railway was inaugurated and Ludd was transformed almost overnight and began to overshadow Ramla.

When the First World War broke out it regained its significant strategic value, serving the logistic efforts of the Turks and Germans. On 15 November 1917 General Allenby's army entered Ramla, and dispersing a retreating Turkish column, took Ludd two days later.

Under the British administration, Ludd (now officially called Lydda) flourished very rapidly, mainly because of the wide-gauge railway (143.5 cm.), with which the British replaced the old narrow (105 cm.) Ottoman one, connecting Jaffa via Ludd not only to Jerusalem but also via Rafah and Kantara to Cairo. Hence towards the end of the thirties of the present century, Ludd became one of the most important rail junctions in the Middle East. In 1934, the first airstrip was built near the city which was developed into an international airport, inaugurated in 1937, and today the major international airport of Israel, Ben Gurion Airport. All this contributed to the population growth of Ludd. By 1922 it numbered 8,103 inhabitants, exceeding for the first time the population of Ramla (Baron, *Report* . . . census of 1922), and by 1947 it was about 19,000 (2,000 Greek Orthodox and the rest Muslims).

An earthquake on 11 July 1927 damaged the town very badly, destroying 500 homes and killing 40 people. Severe earthquakes had occurred formerly in 1033 and 1546 (*PEF*, *QS* [1927], 371).

On 11 July 1948, in the course of the Arab-Israeli War, Ludd was conquered by Israel. Out of its former Arab population, only 1,036 remained in the town. Very soon modern outskirts grew up around it, and by 1958 its population reached again the figure of 19,000, most of them Jews from the Arab countries. The rapid growth of the airport and the Israeli air industry have in the subsequent 20 years doubled its size and population (the latter standing at 40,000 in 1980).

(N. SHARON)

LŪDHĪĀNA, a district and town in the Džalandhar division of the Panjāb state of the Indian Union. The tract is an alluvial plain, covering 3,614 km.² and bounded on the north by the silver Sutlej. Generally, it has been a frontier area. On the high road from Central Asia, it has been crossed by successive waves of conquest or immigration, while over the last 250 years it has seen struggles for supremacy between the Durrānī Afghāns and the Mughals, between the Sikhs and the British, and recently between India and Pakistan. In 1809 Lūdhīāna town became a British frontier cantonment, and the district gained most of its present form after the Anglo-Sikh war of 1846. Since the partition of India in 1947 it has been close to the Pakistan frontier. Before partition, nearly 38% of the district's population were Muslims; now they form less than 1%, 300,000 Muslims having migrated to Pakistan.

The town of Lūdhīāna stands on the Grand Trunk Road and is an important junction on the Northern Railway. It appears to have been founded in the 9th/15th century by the Lōdī rulers of Dīhli, from whom it took its name. In the 19th century it was an important Wahhābī centre, and in the great uprising of 1857, Shāh 'Abd al-Kādir, a prominent Wahhābī and friend of Sayyid Ahmad Barelwī, took the lead against the British. In the 20th century 'Abd al-Kādir's family remained prominent in the resistance to the British, a great-grandson, Nawāfās Ḥabīb al-Rahmān, leading the Khilāfat agitation of 1919-23 and, as President of the District Congress Committee, the civil disobedience movement of 1930. In the 1930s, the town was the centre of the Ahlān, religious idealists, Indian nationalists, and for a time the leading Muslim party in north-west India. Consequently, Lūdhīāna returned the only Muslim Congressman from the whole Panjāb in the 1937 elections, although by the next elections of 1946 the Muslim League was able to capture the seat with ease. Since 1947 the area has seen striking industrial and agricultural growth; it is one of the most prosperous regions in India.

(F. ROBINSON)

LUGHĀ (A), "speech", "language" in current usage.

The term does not appear with this sense in the more ancient texts. In the Kur'ān it is exclusively *lughā* which is used to express the concept of "language" and not *lughā*, which is completely absent from the Kur'ānic text: *bi-lughān 'arabiyya* *rubin* ('in clear Arabic language'), XXVI, 195; and *wa-mā*

arabnā min rasūl *illā bi-lughān 'arabiyya* ('all the messengers whom We have sent [to Mankind], We have made them speak in the language of their own people'), XIV, 4. According to J. Fück and Nöldeke, it seems that this term is non-existent in the "ancient poetry of the Bedouin" (see Fück, *Arabia*, French tr., 195) but this cannot be asserted because there is not yet available an exhaustive inventory of the vocabulary of those ancient poetic works which have survived. *Lughā* cannot have acquired the sense of "language" or "speech" until the end of the 2nd/8th century. Before this date, the term always appears with the very specialized sense of "manner of realising an element of language" particular to an ethnic group, a tribe or a locality; whereas the meaning of regional or tribal "variant of realisation" which it possesses in the works of the grammarian Sībawayh (d. 180/793). It is appropriate to stress the fact that, in the writings of this author, and of his contemporaries, *lughā* does not denote the full range of linguistic particularities associated with an ethnic group, in other words a local patois or a dialect, but only a local variant. Thus in the common expression *lughat ahl al-Hijāz* (Kūṣb, I, 28, 35, 187, etc.), *lughat Haghayl* (*ibid.*, II, 191). It concerns the special "manner" of the Hijāzians of treating the particle *wa* like the verb *laysa* ("not to be") and the "manner" of the Haghaylites of forming the plural of words of the type *ḡumma* in *ḡumma*. This sense of "variant" or of "regional variety of realisation" is clearly illustrated in the use, by Arab grammarians and lexicographers, of the dual or plural form of the word *lughā* in expressions such as *ammal Ma'āharib fa-fih lughāt* ('as for the name of Ma'āharib, there exist several variants', Kūṣb, II, 50) and the lexicographical phrases *fih lughatim* and *fih ṭalāḡim lughāt*. In view of the fact that a "regional or tribal variant" is always regarded, by those whose own speech does not include this variant, as a deviation and often also as an incorrect expression in terms of their speech, it comes as no surprise to find that the word *lughā* is derived from a root *l-g-h* of which the essential meaning is precisely the idea of digression from a certain norm of expression, whence the very strong sense of a co-derivative of *lughā*, *laghū*, "inconsistent", "incomplete construction, lapsus"; whence also, by transposition to the content alone—even if the form is "correct"—"subject without point or interest" (see *LA*, art. *l-g-h*). This is confirmed, furthermore, by the eminent scholar and lexicographer Ibn al-'Arabī: "the sense of *lughā* is derived from this idea (of deviation): in fact, [it is stated that] certain speakers produce locutions by which they depart from the manner of speaking (*lughā*) of certain others" (*ibid.*). Another word, *laghū*, which already has in the works of the most ancient grammarians the very strong sense of "incorrectness" and of "solecism" (cf. Kūṣb, I, 304), alternates with *lughā* in the texts collated by researchers into Bedouin culture [see *LAGH AL-ʿARABĪ*]. For example, this remark reported by the disciples of the eminent Abū 'Amr Ibn al-'Alī, as made by one of his informants, Abū Maḥdiyya: *laysa ḥadīṡ min laḡn wa-lā min laḡm ḥarīmī* "this is not my manner of speaking nor that of my tribe", al-Kāfi, III, 39, repeated by al-Zadīdī in his *Maḡāzī al-ʿulamāʾ*, 3). In his *ʿAṣṣā*, al-Kāfi is quite explicit: "*Laḡn* also signifies *lughā* according to al-ʿAsmaʿī and Abū Zayd, and it is in this sense that it is to be understood in the saying of the caliph 'Umar "Study... the *laḡn* in the same fashion that you study the Kur'ān

(*ibid.*, i, 3). Ibn Abi Dāwūd, author of the *Kiṭāb al-Maṣābiḥ* (d. 316/429), uses *lahn* in this sense in his article *Ḥikāyat al-Ḥan al-ʿArab fī l-maṣābiḥ* 'the divergences of *lahn* specific to Arabs in texts of the Qurʾān,' and at the very beginning of this article he asserts that "al-*al-ḥan* (pl. of *lahn*) are the *luḡāt*" (*ibid.*, see in this context the excellent studies devoted to the word *lahn* by J. Fack in 'Arabiyya, appendix). There is, however, the general sense of "manner of speaking" without reference to a particular element in the following passage: *ḥallim bi-halimihim wa-ḡāʾa l-Kurʾān bi-luḡatihim* 'they are addressed in their own language and the Qurʾān has used their *luḡa*' (*Kiṭāb*, i, 166-7). This general sense is also to be inferred from these expressions in the *Kiṭāb*: *fī ḡāwī l-ḡuḡāt al-ʿArab* 'in all the manners of speaking (or linguistic usages) of the Arabs' (i, 110); *man ḥin al-naṣṣ min luḡatih* 'those whose habitual linguistic usage is to employ the accusative in this case' (*ibid.*, ii, 285); and *illā man lā yuḡāḡ bi-luḡatih* 'except those whose manner of speaking is not acceptable' (*ibid.*, ii, 264).

These variants and the arbitrary manners of realising the elements of 'Arabiyya constituted, in the period of the major "field studies" made by Arab researchers (al-*luḡawīyyūn*), especially in the 2nd and 3rd/8th and 9th centuries, the essential material towards which the analyses of the grammarians (al-*naḡawīyyūn*) were directed. The term *naḡw* which came ultimately to denote "grammar" and which is to be opposed to *luḡa* taken in this sense of "linguistic material" (compiled from the mouths of Arabic speakers) itself signified, initially, 'a type of expression' (cf. *ḡāḡa l-naḡw min al-ḡāḡa*; *Kiṭāb*, i, 497). Thus the *naḡawīyyūn* ('grammarians') were the individuals who studied the *naḡw* (or *naḡaw*, pl. of *naḡw*; see *Kiṭāb*, ii, 381: 'types of expression heard from the mouths of Arabic speakers') with the purpose of making an exhaustive examination and of formulating rules. It is nevertheless clear that the sense of *naḡw* in these usages does not contain the idea of deviation, which is the specific nature of the word *luḡa* and of *lahn*, the latter having a much stronger sense and ultimately taking on, in the 3rd/9th century, the meaning of 'incorrectness'.

When applied to pronunciation, the *luḡāt al-ʿArab*, insofar as they constitute optional variants, are contrasted with variants conditioned and dictated by the physiological laws of articulation: there is talk in this case of *ḡāḡ* (= variant) due to the *ḡarūḡa* (constraint imposed by these factors; cf. Ibn Dīnāl, *Sirr al-ḡarḡa*, i, 78) or to the system of the language; it is then a matter of *naḡw*, that is, of a formal process effected on an element of the language (cf. Ibn Dīnāl, *Kiṭāb*, i, 371). In the context of the oral reproduction of an existing and memorised text (in effect, the Qurʾān and poetry) these variants—both *luḡāt* and conditioned variants—are called *waḡḡāt al-ḡarḡa* 'add' by grammarians and by specialists in Qurʾānic diction alike (Ibn Kutayba, *Taʾwīl*, 33). *Luḡa* was also contrasted with *luḡḡa*; in the period of the early grammarians, this latter term denoted a deviation in the pronunciation of a number of phonemes (not exclusively *ḡayy*, as is often believed; cf. al-Dībāz, *Bayān*, i, 34), but this was a case of individual and not collective deviation. It was sometimes difficult at the first attempt to distinguish between a regional variety and a purely individual variety, as is shown by this statement from the *Kiṭāb al-ʿAyn*: *ṣamʿnāḥā fā-lā nadri a-luḡa am luḡḡa*—'we have heard it well,

but we do not know if it is a regional variant or a [simple] individual pronunciation' (*ibid.*, i, 128).

The attitude of Arab lexicographers and grammarians towards linguistic data—the *luḡāt*—has not always been properly understood by contemporary authors. The norm (the 'norm' of the linguist E. Cowrie and the 'idiom' of the linguist J. Gagnepain) is for them the result of a choice, but this involves the choice of the native locutors themselves (*ḡuḡāt al-ʿArab*, the 'native speakers of 'Arabiyya') When this choice emanates from the greater part of those speakers, Sibawayh refers to *ḡawī al-ʿamma* 'the way of speech of the majority' (*Kiṭāb*, i, 228, ii, 263; variants: *ḡawī ʿammāt al-naṣṣ*, *ibid.*, i, 263, 293; *ḡawī ʿammāt al-ʿArab*, *ḡawī al-ʿArab ḡuḡatihim* 'the manner of all Arabic speakers', *ibid.*, i, 477, ii, 303). Ibn Dīnāl, for his part, was to use the expression *luḡāt al-ḡawī*—'the manners of speaking of the majority' (*Kiṭāb*, ii, 13). It could also be the case that this convergence of usages was lacking; each *luḡa* was then considered a norm in itself. 'All the *luḡāt*', declares Ibn Dīnāl, 'may be regarded as probative references (*ḡuḡāt*)—with regard to the norm), and when two different *luḡāt* have the same range of usage and are equally accepted by the *ḡayy* (Ibn Dīnāl speaks in this context of two *ḡayy*, i.e. two different systems), it is not permitted to prefer one of them at the expense of the other' (*ibid.*, ii, 10). Attention should also be drawn to the remarkable insistence with which Sibawayh (in common with his masters and disciples) urges the reader to rely upon *ṣamʿ*, upon attested facts only and above all 'to accept among these [types of expression which Sibawayh cites] only those which Arabic speakers have themselves accepted and to treat them in the same fashion (*istakhsan min ḡāḡā mā istakhsan al-ʿArab wa-ḡāḡat ḡawī al-ḡawī*, *Kiṭāb*, i, 252). Ibn Dīnāl also asserts (*Munṣif*, ii, 440), 'Samʿ can annul the action of *ḡayy*'. This assumes, as this author explicitly states, that 'everything which *ḡayy* permits is not necessarily actualised in reality' (*Kiṭāb*, i, 477).

In fact, the only criterion of normalisation which has been retained by the Arab scholars is that of the maximum extension of usage with the domain of 'Arabiyya (the *ḡawī ʿammāt al-ʿArab* cited above) and of the most widespread inter-comprehension. Whence the degrees of 'clarity' applied to *luḡāt*: *ḡāḡa/ḡayy*. The *Kiṭāb* of Sibawayh is also full of these appraisals: *ḡāḡa ʿarabi ḡayy* 'this is Arabic of widespread usage'; *ḡāḡa aḡḡar* 'this is more widespread'; and *aḡḡar wa-aḡḡaf*—'more widespread and better known' (see *Kiṭāb*, i, 27, 43, 74, 78, 258, etc.). When two *luḡāt*, or more, were in competition, some were described as being 'Arabic' and *ḡayy* or *ḡayyide* ('good'), others as *aḡḡar* or *aḡḡaf* ('better') or *ḡayy* or *ḡayy* ('bad'); here it is no longer a question of value judgments, but of acceptability applied solely to the subjects of speech and on the basis of the most widespread usage (cf. the expression *ʿarabi ḡayyide ḡayy*, al-*ḡal al-aḡḡar*, *ibid.*, i, 27, 60). The geographical recurrence of a *luḡa* was assessed with the aid of the following scale: *muttāʿ*—perfectly uniform, recurrent or general (100%); *ḡāḡ*—predominant (86%); *ḡayy*—widespread or frequent (65%); *ḡayy*—less widespread or less frequent (13%), and *naḡw*—rare or isolated (4%) (see *Muḡḡir*, i, 234). It may be noted that this scale is applied equally to the frequency of an element or linguistic form within one grouping, see in this context the contrast between *muttāʿ* *fī l-ḡawī* 'general in usage' and

muḥarrir fī l-ḥiyās "general in terms of *ḥiyās*", in *Khaṣṣa*, I, 96 ff. and *Ḥaṣṣ-Salab*, *Linguistique arabe et linguistique générale*.

As opposed to *maṣw*, *lughā* is the very essence of language, in other words that part which is not constructed (by induction), inconsistent with the rules of grammar or now predictable or non-deductible by means of these rules. It is primarily a matter of *saṣmā*, that is of crude identifications. Thus the entire range of data recorded from the mouths of speakers of 'Arabīyya constituted the *lughā* (taken as a collective: the ensemble of all the *luḡāt* duly identified). Analysed in groups of items, it is vocabulary opposed to grammar; included in it, necessarily so, were not only the lexical unities effectively in use—along with their regional variants—but also colloquial expressions, in the form of idioms or *amṭāl* [pl. of *amṭal*] in the very broad sense of "stereotyped figure of speech" or " cliché of widespread diffusion". Cf. the first compilations of *amṭāl* which have survived to the present, comprising collections of idiomatic figures, and not only of maxims and proverbs; see e.g. *al-Fihrist* by al-Mufaḥḥal b. Salama, Cairo 1960].

The non-predictable character of *lughā* (as crude fact and/or as vocabulary of a formal system, that of *maṣw*) has been well described by Ibn Jinnī: "The language of the Arabs comprises two sorts of elements: those elements that one is obliged to accept as such, with their configuration, for example, and not on the basis of a rule; such elements are: *ḥaḡar* (stone), *dār* (house) . . . and another type that may be apprehended through *ḥiyās*". (*Khaṣṣa*, II, 421. "*Ḥaḡar* may be analysed in a root (*ḡ-ḡ-r*) and a system (C'a C'a C'a), but the fact that these unities combined in *ḥaḡar* arrive at the meaning of "stone" is a fact of *saṣmā*; all that can be done is to memorize it (*yuhfiṣ*). It is also in this sense that this remark of the lexicographer Ibn Fāris (d. 395/1004) is to be interpreted: *al-lughā li-l-ḥaḡar ḥiyās* *maḥṣūḥ* *naḥnu al-ḥim*—"the data of the language cannot be obtained, in our era, as far as we are concerned, through *ḥiyās*" (*Sāḥib*, 33).

Lughā, initially "regional variant of realization" or "datum of the language", comes to designate the oric speech of an ethnic group and even to be identified with the word *lisa* which signifies "tongue" and "language". This identification is however absolutely unknown to the first generations of grammarians (up to and including Sibawayh). It appears sporadically at the end of the 8th and 9th century (see the use of it made by the jurist and leader of the law-school al-Shāfi'i to his *lisa*, where he employs the word *lughā* with the sense of *lisa* only once (p. 564) and *lisa* in all other cases). It was probably in the period of the great controversies of the 'alim al-kalām that such a usage came into being; al-Dībāḡ in fact uses *lughā*, still as a manner of speaking, but enlarged to cover the entire language of an ethnic group (regional speech types, 'Arabīyya, languages other than Arabic; see *Bayān*, I, 161-2 and *Hayawin*, v, 299). The sense of regional variant applied to a single linguistic element or item is, however, retained until a very late period.

The science of *luḡāt*, which became the science of *lughā* or the data of the language, underwent a prodigious development following the major researches initiated by the very founder of this branch of science, Abū 'Amr Ibn al-'Alā' (154/770), that is, in the period when his immediate disciples such as al-Aṣma'i (d. 213/838), Abū 'Ubayde (d. 209/828), Abū Zayd al-Anṣārī (d. 215/831) and the

Kāfās al-Mufaḥḥal al-Dabbī, Ibn al-'A'rābi, Abū 'Amr al-Shayḥānī, etc., made immense journeys of investigation across the Arabian peninsula. This gigantic effort of collection and codification of data (which continued until the total disappearance of the spontaneous mastery of 'Arabīyya - *al-faṣḥā*, at the end of the 4th/10th century) resulted initially in the composition of innumerable monographs on the *luḡāt al-ḥabṣī* "the variants of realization specific to the Arab tribes", on *amṭāl* or "clichés", *maṣḥūḥ* or "hapax legomena", toponymy, the vocabulary of flora and fauna, onomastic types of verbs, *maṣḥūḥ*, the extension of use of schemes, etc. (on this subject, see H. Nassār, *al-Mufaḥḥal al-'Arabī*, Cairo 1956). To this, there is added the collection and codification of variants in reproduction of the Kur'ānic text which were drawn from those who had belonged to the school of the *Tāḥṣīs* or from their disciples. All Arabic lexicography of later centuries is based on these monographs.

Lughā as a datum constitutes, for early grammarians as well as for philosophers, the product of a *waḡf*, that is of an institution. The same furthermore applies to the rules of grammar themselves because they are different from one language to another (cf. *Muḥṣir*, I, 48) and, above all, because they do not result from the application of more primitive rules, but by induction from the acts of discourse of Arabic speakers (*maḥṣūḥ* *mustanbaḡa min al-ḥim* *ḥalām al-'Arab*; Abū 'Alī al-Fārisī, *al-Tahmil*, fol. 1). The difference, as has just been observed, resides in the fact that *lughā* is the non-inductive ensemble of linguistic items. "By the *waḡf* of an articulated sound" declares al-Rāḍī, "is meant the primitive assignment of an articulated sound (*laṣṣ*) to a certain significance (*ma'na*) with the intention of ascribing this significance become the object of conventional usage within a community" (*Sharḥ al-Kāfiya*, I, 3). Thus everything which is not imposed by institution (*maḥṣūḥ*) as the symbol of something is outside the scope of *lughā*, outside *waḡf*. Among other examples of this are the following: *ṣar*, *ḥaḡ*, *ḥaḡ*, etc., which have not been retained by the founder of the language for reasons of phonetic incompatibility (*ṣanaḡ* *al-ḥim*; see *Khaṣṣa*, I, 34). *Lughā* is, from this point of view, an *isṭilāḥ* or social institution tacitly accepted by its users; but a distinction is also drawn between these two terms, because it is considered that *lughā* is always a primitive institution, while *isṭilāḥ* can be an innovation, a technical neologism (cf. *Bayān*, I, 139-40), whence the pairs *asl al-waḡf* or *asl al-luḡāt* *isṭilāḥ* language/metalinguage and *waḡf al-luḡāt* *isṭilāḥ* primary institution/secondary institution (cf. al-Rāḍī, *ibid*, II, 116; al-Djurdjānī, *Dalā'il*, 24, 293, 308; and al-Fārisī, *Kiṭāb al-Ḥurūf*, 248). It is also in this context that a distinction is drawn between *waḡf al-lughā* as an organisation and code established by social institution and *waḡf al-kalām*, which is the arrangements of discourse and the choice of its elements by the individual speaker (al-Djurdjānī, *op. cit.*, 64, 69, 79, 81).

Waḡf constituted for the majority of the Mu'tasils a purely human convention (*maḥṣūḥa* = code), and for other thinkers, as an institution which is divine, or at least inspired in men by God (*ṣanaḡ*, *ibid*); see in this context *Muḥṣir*, I 8-28 and Loucel, *L'origine du langage d'après les grammairiens arabes*, in *Arabica*, 2-xi). It does not seem, however, that these two positions were so clearly stated in the works of the major Arab linguists and philosophers. In fact, al-Aṣḥārī (d. 341/955-6), to whom is attri-

buted the idea of the divine institution of the language, has a rather inconclusive attitude to the subject, judging by the lukewarm opinions of his disciples. The same applies to the Imām al-Haramayn and to al-Qhazālī (see *Muṣṣar*, I, 20). A similar position is adopted by the Mu'tazilī grammarians Abū 'Alī al-Fārisī and Ibn Dinnāl (who attributes to Sibawayh's pupil, Abū Ṭ-Ḥasan al-Akhḍash, the same cautious attitude; see *Kaṣp* 216, I, 41).

Considerably more interesting is the problem which the Mu'tazilīs raised towards the middle of the 3rd/9th century, that is, the absolute arbitrariness of the linguistic symbol compared with the no less absolute immutability of the *lughā*. These two extreme positions were represented, the first by Abū Ṭ-Ḥusayn al-Ṣāliḥī and the second by 'Abd al-B. Sulaymān al-Ṣaymārī (ca. 230/854; see the *Maḥāṣil* of al-Ash'arī, II, 186, and I, 290). The argument of 'Abd al-B. was as follows: "If there existed no particular relationship between articulated sounds and the objects they signify, the assignation of each of these signifiers to a signified object would be tantamount to choosing a possibility of designation without any motive (*tarḍīḥ bi-dān mawḍūʿ*), which is absurd" (quoted by al-Rāzī, *Tafsīr*, I, 22). The other Mu'tazilīs did not follow 'Abd al-B. "There is no necessary relationship", the ḥāfi 'Abd al-Djabbār (425/1025) was to say, "between the expression (*al-ṭibā'a*) and the content, such that one cannot exist without the other" (*Muḥḍaf*, v, 20). For al-Ṣāliḥī, such arbitrariness has no limits since it is possible, he claimed, "to change today the names [of things] and the *lughā* as it presents itself to us at the present time" (*ḥāṣ al-lughā*; *Maḥāṣil*, II, 186). Later, these two opinions came to be reconciled: "As for those things which have become the object of a convention", the ḥāfi 'Abd al-Djabbār was to assert, "it is certain that they could have been established according to an entirely different system with the same validity. But the moment that these objects are fixed by a conventional system, they are assimilated, for the user, to that which could not be otherwise than it is" (*Muḥḍaf*, xvi, 192). In the same period, Ibn Sīdā reproduces this dichotomic formula which summarises well the reconciliation of the two extremes: "Language is constraint (*qafḍ*) although the conventional expressions of which it is composed have been (at the moment of *waḍ'*) freely chosen (*ikhtiyār*)" (*Muḥḍaf*, I, 31).

The expression *ʿilm al-lughā* (or *ʿilm al-lughā*), has always denoted, as opposed to *ʿilm al-naḥw* (or *ʿilm al-ʿarabiyya*), lexicology or more exactly the science of the datum of the language (cf. al-Zadjidī, *Idāh*, 79; Ibn Fāris, *al-Ṣikḥ*, 31; Ibn Yaʿqūb, *Sharḥ*, I, 4; al-Rāzī, *Sharḥ*, I, 4, *Muṣṣar*, passim, etc.). Ibn Khaldūn defines *ʿilm al-lughā* as "the science of the instituted elements of the language" (*al-ʿilm al-lughā bayn al-mawḍūʿ al-lughawīyya*, *Muḥḍaf*, 1059), a science which he includes along with *ʿilm al-naḥw* and *ʿilm al-bayān* (style) among the *al-ʿilm al-lughawīyya* (*ibid.*). Besides this expression, there was also another: *fiḥ al-lughā* which functioned as a synonym of *ʿilm al-lughā*, but it seems likely that this was a more specialized branch of the same discipline, that is, the study of the serological distinctions and affinities which exist between the elements of vocabulary (cf. the work of Ibn Fāris cited above, the *Fiḥ al-lughā* of al-Ṭaḥṭibī and the *Maḥāṣil* of Ibn Sīdā, as well as the definitions of Ibn Khaldūn, *Muḥḍaf*, 1050-1). The very frequent modern usage of *lughā* with the sense of "language" has led certain of our contemporaries

to attempt to employ the expression *ʿilm al-lughā* to represent the modern concept of "linguistics", which is not entirely appropriate because this signification has had, and still has, the sense of lexicology. A different term exists to denote this concept: *ʿilm al-lughā* (often abridged into *ʿilm al-lughā*), which al-Fārisī employs in his works and in particular in his *Idāh* *al-ʿilm*, where he envisages in a very distinct fashion the possibility of constructing a general linguistics extending to all languages and no longer to one particular language (8-13, 22).

(A. HADJ-SALAH)

LUGHĀ, 'ILM AL- [see LUGHĀ].

LUGHAT-NĀMA [see *QURʿĀN*, in Supplement].

LUGHZ (A., pl. *alghāz*) "enigma", *muʿammā* (pl. *muʿammayyāt*) "word puzzle, verbal charade", *umḥḍaf* (pl. *alghāz*) "riddle, conundrum", three Arabic terms often used in a figurative sense, but basically referring to three kinds of literary plays upon words which are fairly close in type to each other.

The enigma is generally in verse, and characteristically is in an interrogative form. Thus for *ḥalāḥ* "heavily lustrous": *maʿ adām* f. *ʿal-ḥalāḥ*, *ḥalāḥ* *ḥalāḥ* // *maʿ adām* *ḥalāḥ* *ḥalāḥ* // [...] *fa-lā ḥalāḥ* *maʿ adām* *ḥalāḥ* *ḥalāḥ* // "What is the thing which in reality has no existence, but nevertheless you see it in existence whenever you confront it [...] and if we cut off its head (= *fa*), it will be yours (= *ḥalāḥ*)?"

The *muʿammā* is to be distinguished from the *lughā* by the absence of the interrogative element and by the fact that the sense of the passage, also in verse, had been made "blind" by various procedures. Thus it may be formed by designating one or more words by various clues to the letters forming it or them or by allusions relating to the pronunciation: the alphabetic value, the numerical value of the letters, misreading or inversion (*ḥalāḥ*). Mostly, no account is taken of the vowels or of letters without phonetic value. Good taste is the rule.

The invention of the *muʿammā* is attributed to Khāfi b. Ahmad, the inventor of prosody, while the Persians of course attribute it to 'Alī b. Abī Ṭālib.

The following is an example of *mu'ammal* on the name Ahmad *awwalahu l-hāshimū tuffūhātū* // *aw-rābū* 'I-tuffūhātū *l-hāshimū* // *l-wa-awwalū* 'I-muḥū *l-hāshimū* // *l-wa-ākhīrū* 'I-awādū *l-hāshimū* "Its first is the third of [the word] *l-hāshimū* (apple) = A; and the fourth of [the word] *l-tuffūhātū* (apple) is its second = H; and the first of [the word] *muḥū* (musk) is its third = M; and the last of [the word] *awādū* (roses) is the remainder of it = D".

The *mu'ammal* was used by many poets (in particular by Abū Nuwās; see E. Wagner, *Abū Nuwās*, Wiesbaden 1965, 380-3).

As for the *al-lughz*, this term denotes a simple guessing game (e.g. "Guess what I have in my hand"), but can also mean a type of enigma (fairly close to the *lughz*. Thus for *al-saṣībī* "wine": *nuṣ riddiṣi kaṣlī* 'I-muḥibbī // in *hāla*: *uṣṣub l-ṣāḥibī* "What is the alternative sense meant by the person setting forth a riddle when he says: ask [—saṣ] the way [—ṣāḥibī]?"

In colloquial Arabic, riddles and conundrums have been collected by A. Giacobetti, *Recueil d'anigmes arabes populaires*, Algiers 1916; J. Quemener, *Enigmes tunisiennes*, Tunis 1937; they have been made the subject of a paper by A. Hamidou, *Devinettes populaires de l'Algérie*, in *Kafr*, 322-3 (1937), 357-72 and of a study in *IBLA* (1943), 198-213; numerous examples can be found in *ibid.*, 1937, 1938, 1939, 1941 *passim*, 1943, 274-62, and 1945, 420-9. For the riddle in Turkish see *ibidem*.

(M. BENCHEKHA *)

AL-LUHAYYA (Ar. "small beard", Yaḥyā b. al-Husayn, *Ghāyāt*, II, 569 n. 3), a small port on the Red Sea coast in the Yemen Arab Republic (lat. 25° 42' N., long. 42° 41' E.), ca. 210 km. north of al-Hudayda [q.v.]; see the map accompanying 'Asṭa, and situated at the northern end of a narrow and shallow bay formed between the mainland and a coral reef. The bay is continued northwards past the town by a narrow boat-channel, at the entrance of which small craft may moor. Larger vessels lie about 5 km. south-west of the town in an open roadstead between the mainland and the offshore island of al-Urmak. At very low tide, not even small boats can reach the town when loaded.

A. Sprenger's identification of al-Luhayya with Ptolemy's Μαμαλία κόμη is not proved, nor is it certain that the port is identical with Ναπηγὸς κόμη, Sambrachate or Leupas (Pēny), as proposed by E. Glaser.

When Alfonso d'Albuquerque entered the Red Sea in 1513, he called at al-Luhayya (Luya in the Portuguese sources). The port then belonged to the territory of the *Imām* of Ṣan'ā', to whom tribute was paid. Previous to the 16th century, al-Luhayya, like other ports on the Arabian coast such as al-Hudayda, Kamarin Island, al-Mukhā (Mocha) and Zabid, had been in the power of the Rasūlids [q.v.], and their heirs the Banū Ṭāhir, whose last monarch, 'Amir b. 'Abd al-Wahhāb, was defeated in 1515 by the firearms of the Mamlūk forces under Salām al-Rūmī and Husayn Turki (Serjeant, *The Portuguese*, 29), sent by the sultan Kāngawh al-Ghawrī [q.v.]. The ruler of al-Luhayya, Fakḥ Abū Bakr b. al-Makhlūl al-Zayla'ī (of Zayla' [q.v.]), supported the Egyptians, made the *ḥajj* for al-Ghawrī and, after the Mamlūk forces had damaged the port of al-Hudayda, opened up the road leading inland. With one hundred men armed with muskets (*ḥanādīḥ*), he then advanced against Meṣr, Abū Maḥmūd (Schumacher, *Political history*, 19) and Yaḥyā b. al-Husayn (*Ghāyāt*, II, 544) remark that this was the first time firearms were used in the Yemen; see however Schumacher, *op. cit.*, no. 16, 92. After Sultan Selīm I had conquered Egypt, Ottoman suzerainty was quickly recognised by the Egyptian forces in the coastal towns. According to the *Taḥṣīl al-Shihri* (Serjeant, *op. cit.*, 31, 170), the Portuguese, after an unsuccessful attack on Djidda [see, however, *ET*, II, 372a] in 1523/1527, turned back to Yemen, pursued by Salām al-Rūmī "or one of his men" who took a Portuguese *ghōb* (Ar. *ghurāb* "brigantine") near al-Luhayya. This story, confirmed by João de Barros (*Decadas*, III, 1, 6), refers to Lopo Soares de Albergaria's expedition in the Red Sea.

In 1635 the *Imām* al-Manṣūr bīllāh al-Kāsim b. Muḥammad [q.v.] succeeded in expelling the Turks, and al-Luhayya again came into the possession of the *Imams* of Ṣan'ā'. Around 1650, ships sailing between Naṣawa and al-Mukhlā on behalf of Banyans settled in the latter port apparently used to anchor at the port of al-Luhayya (Van Donzel, *Foreign relations*, 134-6, 139). On his return from Ethiopia to Yemen, Ahmad b. al-Haymū, the envoy of Imām al-Mutawakkil 'alī ḥāḥ (1054/57-1064-70) to the Ethiopian King Fasiladas (1632-57), disembarked at al-Luhayya.

During his stay at al-Luhayya between 29 December 1762 and 30 February 1763, C. Niebuhr was amicably received by amir Farḥān, a black African, appointed as governor (*ḥāḥ*) by the *Imām* of Ṣan'ā'. He was told that the town was not older than three hundred years and that its foundation, as is the case with Bayt al-Fakḥ and al-Mukhlā [q.v.], was connected with a local Muslim saint, *ḥayyā* Saḥī (Ṣāḥib), around whose cell and later tomb the original settlement grew. The descendants of the *ḥayyā* were still revered in al-Luhayya in Niebuhr's days. The town had no circular wall then, but on the landward side there were some twelve towers, armed with a few cannon and lying at a distance of 120 double steps from each other. The highly-placed entrances were accessible only by a ladder. The towers, however, were not worth much as defence works, the *ḥāḥ* and Bakī tribes [see *al-lughz wa-maḥāḥ*] (see also Niebuhr, *Beschreibung*, 258-61, and Robin, *Les hautes terres*) marched across them and burned the town, and on a rumour of another attack, the inhabitants fled to al-Urmak. Since the water was brackish, it had to be fetched at some distance. The people, among whom were some forty Banyans, lived off commerce and fish. Although the coffee was of inferior quality compared with that of Bayt

al-Fakih, it was cheaper, since transport to the more important port of al-Djudda was inexpensive. In al-Luhayya merchants bought it for customers in al-Djudda, Egypt and Turkey, and some Cairenes used to come over in order to acquire it in person. Limes were made by hawking coral in the open air, and rock-salt was cut in the neighbourhood. Although Niebuhr describes the town as rather poor, al-Luhayya had to pay monthly 2,000 thalers to the *Imām* of San'a', and during the *muséris* (April-June) when Indian vessels were calling, 3,000 thalers, more than al-Hudayda had to bring in. The arrival of Indian vessels at al-Luhayya around 1770 is confirmed by Bruce (Travels, i, 323). Niebuhr also relates that one of the rich merchants of al-Luhayya had obtained several kinds of aphrodisiacs from 'engländischen Wundärzten' (*Reisebeschreibung*, i, 304, not 'Wunderärzten' as in Th. Hansen, *Reise*, 246, or 'miracle doctors'), idem, *Arabia Felix*, 221), so English ships must have called at al-Luhayya around 1760, at least occasionally.

In the 12th/18th century, the power of the *Imāms* of San'a' declined sharply, and many towns declared themselves independent, while the Sharifs of Abū 'Arish (q.v.) grew more powerful. In 1730 only the coastal land between al-Luhayya and al-Mukhā remained in the *Imām's* possession, and by 1790 the coastline between al-Kunūfiya (q.v.) and Bayt al-Fakih, including al-Luhayya, was under the authority of the Sharifs of Abū 'Arish (Baldry, *Al-Yaman*, 158). At that time, the monthly revenue of al-Luhayya was roughly computed at 6000 (Bury, *Arabia Infelix*, 119).

The rise of Wahhābī power at the beginning of the 19th century forced Sharif Hamād Abū Masmār of Abū 'Arish to give allegiance to 'Abd al-Wahhāb Abū Nukta, whom Sa'ūd II had appointed governor of the Tihāma (Philby, *Sa'udi Arabia*, 13). When in 1809 he revoked his allegiance and restored the revenues of the coastal towns to Ahmad b. Manṣūr 'Alī, the *Imām* of San'a' (Salt, *A voyage*, 123; Playfair, *A history*, 129), the Wahhābīs despatched an army by sea to Dīayzān (q.v.), from where it advanced southwards, looting and burning al-Luhayya and al-Hudayda. Under Wahhābī rule, an attempt was made to develop the port of al-Luhayya, and negotiations were opened with the English East India Company to start a factory (Lord Valentia, *Voyages*, ii, 385, quoted by Ritter, *Erdkunde*, 884). When Ehrenberg visited the port in 1825 (Ritter, *Erdkunde*, 192 n. 485) a Persian ship was blockading the harbour in order to force the *dola* Faṭṭ al-Ilāh to pay a debt. By then the walled town had been deserted. Abū Masmār was forced to give allegiance again to the Wahhābīs, but shortly afterwards he associated himself with Muhammad 'Alī, the viceroy of Egypt, and in an agreement, authority in the Tihāma was surrendered to Muhammad 'Alī, who restored that territory to the *Imām* of San'a' in return for a payment of 20,000 bahars of coffee (El Batrik, *Egyptian-Yemeni relations*, 282). When in 1832 the Ottomans rewarded the Albanian Mehmed Agha Türkke Bilmez with the governorship of Hīḡāz for having assisted in al-Djudda against Muhammad 'Alī, he occupied several coastal towns, but by 1837 the whole of the eastern shore of the Red Sea was in Egyptian hands (El Batrik, *op. cit.*, 286), although Husayn Efendi from Belgrade was governor of al-Luhayya when the French botanist Botta visited the port in 1836 (Ritter, *Erdkunde*, 750). When the Egyptian troops moved southwards, Great Britain, having occupied Aden in 1837, exerted pressure on Muhammad 'Alī to evacuate the Arabian peninsula. The

Egyptian forces accordingly left the coastal towns in 1840 and the territory was surrendered to Husayn, the Sharif of Abū 'Arish. In 1842 the latter admitted his dependence on the Ottoman Sultan and was created a Pasha and governor of the sea coast (al-Khazraji, *History of the Rasulīyy dynasty of Yemen*, ed. Redhouse, i, Introd., 33). In 1844 the *Imām* Manṣūr 'Alī tried to recover the territory, and after his deposition in 1848 his successor occupied several coastal towns and imprisoned Sharif Husayn. But the latter escaped and re-established his authority over the Tihāma (Redhouse, *op. cit.*, i, 36). In 1849 Ottoman troops under Tewfik Pasha occupied the Yemen, and after the latter's untimely death, 'Abd Allāh b. Muḥammad 'Awn of Mecca was appointed governor of the whole of the Tihāma. Opposition to Turkish rule continued, however, among successive Zaydī *Imāms*, Sharifs of Abū 'Arish, tribal *shaykhs* and occasionally the Sharifs of Mecca. After subduing the Sharifs of Abū 'Arish, the Idriṣī family in Ṣabyā (see *Ṣafa*, i, 708b) became fierce opponents to Turkish rule, so that the Ottoman forces were compelled to withdraw to the principal garrison towns. The opening of the Suez Canal in 1869 enabled the Ottomans to despatch troops rapidly to Yemen, and in 1871 they subdued 'Asir. In 1872 San'a' became the centre of the Ottoman government in the *sulṭay* of Yaman, which was divided into four *sangjaks*, each headed by a *nasasarrif*: Markaz, 'Asir, Ta'izz and al-Hudayda, al-Luhayya being a *kada* of the latter (Weener, *Modern Yemen*, 62, n. 5). Its population was estimated in 1881 at 2,000. In 1882 Muḥammad b. 'Alī of the 'Alī family of the Banū Mughayd, who had been granted the hereditary chieftainship of the highland tribes of 'Asir by Fayṣal b. Sa'ūd (q.v.), cut off the Turks in Abū (q.v.) from the coast, and the Banū Marwān, who inhabit the region between Maydī (Midī) and Haraḍ, attacked al-Luhayya. The coastal towns were the only Turkish strongholds amidst the 'state of almost chronic rebellion' (Baldry, *op. cit.*, 169) in 'Asir and Hīḡāz, and served as bases for expeditions against the rebellious inland tribes. In 1899 even the garrison of al-Luhayya came under attack. When a telegraph line was constructed between al-Luhayya and al-Maydī, Turkish soldiers guarding the workmen were attacked. Al-Maydī, north of al-Luhayya, was captured by tribesmen loyal to the *Imām* and became a centre for the illegal import of arms. In 1906 the Turkish troops were withdrawn from al-Luhayya and al-Maydī, but not for long, because in the same year they marched from al-Luhayya to Hīḡāz, accompanied by Bonī Pasha, a *shaykh* of the pro-Turkish Banū Ḳays who inhabit the region east of al-Luhayya. Shortly afterwards, Turkish soldiers of the al-Luhayya garrison joined others from Dīayzān, Zabīd and al-Mukhā in their march on al-Hudayda in order to demand their discharge papers; many had served seven years in Yemen but had received less than one year's pay (Baldry, *op. cit.*, 178-9). In 1909 Sayyid Muḥammad b. 'Alī al-Idriṣī of Ṣabyā came to the assistance of tribes living to the east of al-Luhayya who had been forced to pay illegal taxes levied by Bonī Pasha. He occupied the port, but it was soon recaptured by the Turks, for in the same year two gunboats, two transports and nine battalions were sent from Istanbul to al-Hudayda and al-Luhayya. The latter port became Rīfāt Pasha's base for launching attacks against the Idriṣī tribesmen. In 1911 the *Kā'im-mulūk* of al-Luhayya set out with 200 troops against the inhabitants of al-

Zuhra who had captured a caravan of eighty camels. He was, however, defeated and besieged in al-Zuhra. Later that year, the Banū 'Abs seized the wells outside al-Lubayya, but due to dissension among the Arabs, Hani' Bey, arriving from Kamarān, was able to regain them. Shortly afterwards, however, Hani' Bey suffered a severe reverse in al-Lubayya itself. A new Turkish expedition was prepared against Sayyid Muḥammad, Hani' Bey having 2,500 troops ready in the port. But this advance was postponed because of the outbreak of the Turkish-Italian war in 1911 (see Green, *Italian relations*). In 1912 the Italian navy bombarded al-Lubayya and extended the blockade of the coast to a point 15 km. north of the port, while 6,000 followers of Sayyid Muḥammad moved against al-Lubayya. The whole coast between al-Kunfudha and al-Lubayya was now under the effective control of Sayyid Muḥammad.

On the eve of the First World War, the Ottoman government desired to settle the difficulties in Yemen, Imām Yahyā of San'ā and Sayyid Muḥammad (see al-Kibsi, *Imām Yahyā*) agreed to observe a truce. Most of the Turkish troops were withdrawn from Yemen, only small garrisons remained in the main towns of the Ṭihāma. During the War, Sayyid Muḥammad signed a treaty with the British Resident at Aden (May 1915) and overran much of the northern Ṭihāma. He did not, however, succeed in taking al-Lubayya because of the Turkish artillery (*Handbook*, I, 141-2; Plinby, *Arabia*, 239; Ribani, *Around the coasts*, 166-7). After the War, the Turks evacuated Arabia in 1935/1920 Sayyid Muḥammad concluded a treaty with Ibn Sa'ūd (g.c.), but after his death Imām Yahyā in 1925 annexed the entire Ṭihāma and its ports as far north as al-Naydī. During the war with Imām Yahyā, Sa'ūdī forces occupied the coast as far south as Bayt al-Falḥ, including al-Lubayya. The treaty of al-Tā'īl in 1935/1934, defining the frontier between Sa'ūdī Arabia and the Yemen, led to the attachment of al-Lubayya to Yemen.

In 1970 the population of al-Lubayya was estimated at 3,000. At present, the port has no commercial significance and is only a small base for fishing boats (*pombū*), traffic being limited to coastal shipping. The seaborne trade is now centred at the modern facilities of Ahmadi, the new harbour of al-Budayḥa.

VAN DONZEL).

LUKATA (A.), an article found (more precisely: "picked up"). The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations. The picking up of articles found is generally permitted, although it is sometimes also said to be more meritorious to leave them. The finder is bound to advertise the article which he has found (or taken) for a whole year unless it is of quite insignificant value or perishable. The particulars of this advertising are minutely regulated by special rules. After the termination of the period, the finder, according to Mālik and al-Shāfi'ī, has the right to take possession of the article and do what he pleases with it, but according to Abū Hanifa, only if he is "poor"; but the use of the articles as religious alms (*ṣadaqa*) even before the expiry of a year is permitted in a preferential clause by Abū Hanifa and Mālik. If the owner appears before the expiry of the period, he recovers the object back, as he does after the expiry of the period if it is still with the finder; but if the finder has disposed of it in keeping with the law, he is liable to the owner for its value; Dawūd al-Zāhiri alone recognised no further claim by the loser in this case. The establishment of ownership is facilitated, compared with the ordinary process in Mālik and Ahmad b. Hanbal (in al-Bukhārī also; cf. his superscription to *Lukata*, 489 f.). As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of in-

jured animals and more onerous when they are not injured. *Al-Shakīf* and Ahmad b. Haubal have similarly some special regulations for articles found in the *Ḥaram*, the sacred territory in Mecca, which at bottom go back to the old idea of a special right of ownership by Allāh in the *Ḥaram* and articles found in it.

These prescriptions of the *fiqh* are based on certain *ḥadīths* which have been handed down with several variants (cf. al-Bukhārī, *Lukaḥa*; Muslim, Constantinople 1320 ff., v, 133) which need not be quoted in detail here as they agree with the principles in all essentials. But it may be mentioned that in a very old stratum, later worked over, there is mention of a two- or three-year period. In the conception of the primitive jurists, the article found is sometimes described as deposited (*wadʿa*); further, out of special religious scruples, one is careful not to pick up found dates and eat them, as they might belong to the *makkī*; finally, there is a *ḥadīth* which forbids the Mecca pilgrim (*ḥāḡī*) to pick up articles found at all. From the superscription by Bukhārī to *Lukaḥa*, 680 ff., it is evident that found articles might be handed over, or used to be handed over, to a government office; but their retention in the finder's care is justified by quoting a special tradition.

None of these traditions can be considered historical; at most, the prohibition by the Prophet in his oration after the occupation of Mecca from keeping articles found in the *Ḥaram* without advertising them (cf. above) may be genuine on account of its antiquated terminology. *Lukaḥa* is not mentioned in the *Kurʾān*.

Bibliography: In addition to the pertinent sections in the *fiqh* and *ḥadīth* collections, cf. Th. W. Juynboll, *Handeling tot de kennis van de mohammedanische wet*, 386; E. Sachau, *Mohammedanisches Recht*, 639 ff.; D. Santillana, *Instituciones de derecho musulmano medieval*, 3, 328-9. (J. SCHACHY)

AL-LUKKĀM, DĪBAL, the name which the mediaeval Arabic geographers give to the mountain chain which is situated in the northern part of Syria and for long formed the frontier between the Islamic and the Byzantine lands. In classical times it was known as the Amanus/Amanus (*Ḥamaṇu* in the cuneiform inscriptions); but by the Turks as Alma Daḡ (Alma Daḡ in modern Turkish); since it has not been treated under *ELMA DAḠ*, it has seemed useful to consider it here, even though the *Djabal al-Lukkām* does not correspond exactly to these ramifications of the Taurus Mountains, which detaches itself from the dolomite massif of the Karadere Daḡ in the region of Marʿaḡh, to the south of the Pyramus (*Dīyarbān*), running parallel to the chains of the Taurus and Anti-Taurus, surrounding with its eastern ridge the Gulf of Alexandretta, and falling steeply into the sea to the south of Ra's al-Khinzir (5,100 ft.), together with the *Djabal Mūsā* or *Djabal Almar* (5,750 ft.).

The deep transverse valley of the Orontes and the morasses of al-Amk (q.v.) separate the Alma Daḡ from the Lebanon chains, which differ also in their geological formation (mostly limestone) from that of the Taurus system. With its offshoots, the Alma Daḡ cuts off Cilicia entirely from Syria and the Mesopotamian hinterland; apart from a few passes that are mere mule-tracks, the pass of Baylān (q.v.) is the only connection between Asia Minor and Syria and has always been much frequented. The heights of the several mountains are not yet accurately

known; the average height is said to be 3,650 ft., and some peaks reach 7,300 ft. or more; as the highest point, Dornmeyer gives the Menhūr, 7,430 ft. In the northern part, jagged and steep peaks prevail; in the south, more rounded outlines. The Alma Daḡ with its fresh verdure is an attractive sight, for its sides are thickly overgrown with trees, out of which the bare dolomite peaks project. The ridge of the Alma Daḡ north of Iskandarīn formed in Ottoman times, together with the sides sloping to east and west, an administrative unit, the Sandjak Djabal Berekat; cf. Sachau in *SBPr. Ak. W.* (1892), 314.

Locally, no one common name is used for the whole of the Amanus; in the reports of European travellers and in the maps based on these, this fact has caused considerable confusion as to the nomenclature, because the same name is sometimes used for a part, sometimes for the whole. For the northern part of the Amanus we find the name *Gawr Daḡ* or *Djaur Daḡ*, i.e. the mountains of the infidels; H. Kiepert in his *Carte générale de l'empire Ottoman* (Berlin 1892) makes the Alma Daḡ reach about as far as Işlāhiyye (Nicosia, lat. 37° N.); the continuation of this mountain-chain as far as the neighbourhood of Marʿaḡh he takes as *Gawr Daḡ*; cf. also H. Kiepert's map for Sachau's *Reise in Syrien und Mesopotamien* (Leipzig 1883). To R. Kiepert's map for von Oppenheim's *Vom Mittelmeer zum persischen Golf* (Berlin 1900), Alma Daḡ only appears as the name of one single mountain massif to the north of Baylān; the name *Gawr Daḡ* does not appear at all on it, in its stead we find *Sur Daḡ*, *Adje Daḡ* and *Göydaḡ* as names of single peaks between Marʿaḡh and Işlāhiyye. The northern *Gawr Daḡ* is connected, according to E. Reclus, with the southern mountain by a mountain plateau in the depth of which is situated the *Gawr Göl* (i.e. lake of the infidels). The name of *Gawr Daḡ* is occasionally extended to the whole of the Amanus (e.g. on the map of Favre and Mandrol). Reclus does not call the southern Amanus Alma Daḡ, but, in accordance with a number of travellers, Akma Daḡ. Banzinger is evidently mistaken in calling the southern part of the Amanus *Gawr Daḡ* and the northern part Akma Daḡ. Caernik seems to stand quite alone in calling the Amanus *Kara Daḡ*; this name is evidently the Turkish translation of *Djabal al-Lukkām* (also al-Ukkām), the "black mountains" (*luḡām*, Arabized from the Syria *uḡāmā* = "black") of the Arab geographers of the Middle Ages, the παῖδες ἔπος of the Byzantines; for the name al-Lukkām designating nearly the same as Amanus, cf. Sachau, *op. cit.*, 323. By a misnomer, the Alma or Akma Daḡ in its more limited sense (north of Baylān) is also often called *Nawis Daḡ* by travellers, which name according to Kotachy (cf. also the map by R. Kiepert, mentioned above) belongs only to the northeastern part of the *Djabal Arrūs* (south of Baylān).

(M. STRECK *)

LUKMĀN, a legendary hero and sage of pre-Islamic Arabia. He appears in the Kur'an as a monotheist and a wise father giving pious admonitions to his son. In later Islamic lore, he became the creator of fables par excellence and a striking parallel of Aescop.

1. Lukmān in Old Arab tradition. The Arabs of the Dīhīlīyya knew of a certain Lukmān b. 'Ād. The connection with the long-lost tribe of 'Ād (q.v.) places him in the dimmest recesses of the Arab past. The two attributes upon which his fame apparently rested were his wisdom and his longevity. Many early poets, including Imru' al-Qays, al-Nābigha, al-A'ashā and Tarala, celebrate his wisdom (Horowitz, *Koranische Untersuchungen*, 133-5). To be "as wise as" or even "wiser than Lukmān" are standard compliments in panegyrics. Because of his proverbial wisdom, Lukmān was credited with being the architect, or one of the architects, of the famous Ma'rib (q.v.) dam (e.g. al-Mas'ūdī, *Murūfī*, II, 360).

In ancient Arabian legend, Lukmān was al-Ma'ānīyah ('the Long-lived'). He is granted a long life. (According to later Muslim tradition, this was a reward for his piety, in contradistinction to the wickedness of his people.) From among several choices offered him, he chooses the duration of the lives of seven vultures, the vulture (nawr) being the most popular symbol of longevity among the Arabs (Goldziher, *Abū zur arabisch. Phil.*, Leiden 1899, II, pp. 14-15; cf. Ps. ciii, 5, where the Heb. cognate *neher*, meaning "eagle", has the same significance). Lukmān nurtures and protects each of his seven vultures in turn. The last one is named Lubad which means "enduring" or "remaining" (LA and TA, s.v.). He finally dies, however, and with him Lukmān. This story is cited in explanation of the old Arab proverb "eternity (al-abad) outlasts Lubad" (al-Maydānī, *Amthal al-'Arab*, Cairo 1310/1892-3, I, 290-1). According to the different versions of the tale, Lukmān lived 560, 1,000, 3,000, or 3,500 years. In Islamic times, he is considered second in longevity only to al-Khidr (al-Sajjīdānī, K. al-Ma'ānīyah, ed. Goldziher, in *Abū zur arabisch. Phil.*, II, 2).

It is difficult to know what details beyond this essential nucleus are of pre-Islamic origin and what are the creations of later Muslim narrators. It is possible, for example, that the tradition that includes Lukmān among the ambassadors sent by the drought-stricken 'Ādites to pray for rain at the Ka'ba may have its roots in pagan Meccan lore (al-Tabarī, I, 235). Already in its pre-Islamic form, the Lukmān legend exhibits motifs found elsewhere. R. Basset (*Loqmān Berbère*, pp. xxvii-xxix) finds a remarkable parallel in the interpretation given by Silius Italicus of Romulus's watchdog for twelve birds. The birds turn out to be twelve vultures, signifying that Rome will endure for twelve centuries.

2. Lukmān in the Kur'an and the Islamic tradition. Sūra XXXI, which belongs to the Third Meccan period, bears the name of Lukmān. No allusion is made to either his 'Ādite origin or his longevity. Likewise, there is no mention of Lukmān in connection with the various references to 'Ād and its prophet Hūd throughout the Sur'an.

The Kur'anic Lukmān is a sage who is found only in the shūra that bears his name. He first appears in v. 12, where it is stated that God gave him wisdom or, perhaps as has been recently suggested, a book of maxims (see D. Gutas, *Arabic wisdom literature: nature and scope*, in JAOS, LI (1981), 50-6, 57-8). In vv. 13 and 16-19, Lukmān offers pious counsel to his son. The admonitions bear the unmistakable stamp of ancient Near Eastern wisdom literature. Three times he begins with the formula "O my dear son" (ya bna'ayya) that prefaces so many of the aphorisms of Ahiqar (Ar. Haykāt). R. Harris has pointed out the parallel between v. 18: "Be modest in thy gait and lower thy voice, for the most hateful of voices is that of the ass", and Ahiqar's maxim: "Incline thy head downward, soften thy voice, and be courteous . . . For if a house could be built by a loud voice, the ass would build many houses each day" (Harris at alii, *The story of Ahiqar*, p. lxxvi; cf. Ar. text in *ibid.*, 4, 11). Even though vv. 20-34 no longer cite Lukmān, they partially reflect the same genre. Thus v. 27: "If all the trees on the earth were pens and the sea were replenished after it with seven seas [of ink], the words of God would not be exhausted" can be traced back to Jewish wisdom literature, where it is found in numerous variations (R. Köhler, *Und wenn der Himmel sein Papier*, in *Oriens v. Occident*, II, 546-59; Idem, in *Ethnologie Mitteleurop.*, I, 311-23, 441-52; H. L. Streck and P. Bihlerieck, *Kommentar zum Neuen Testament aus Talmud und Midrasch*, Munich 1956, II, 587). However, this verse is later than the rest of the shūra and was revealed in Medina during a dispute with the Jews. Its inclusion indicates that it was considered appropriate to the general tone of the shūra.

Once the Kur'an had consecrated Lukmān as the wise sifter of proverbs, everything that was thought pious or sensible could be attributed to him. Wahb b. Munabbih is credited with saying that he had read 10,000 chapters (bab) of Lukmān's wisdom (Ibn Kutayba, K. al-Ma'ārif, ed. Wüstenfeld, Göttingen 1850, 27). The Arabic collections of proverbs (notably that of al-Maydānī) attribute much to Lukmān (see Basset, *op. cit.*, pp. xlii-iv). Al-Tha'labī devotes a chapter of his *Kisāf al-anbiyā'* (Bānāq 1886/1869, 275-7) to the wisdom of Lukmān. Many sayings seem to link up with the Sūra of Lukmān. v. 14 advises reverence for parents, but warns against being led astray by them to worship false gods. Al-Tha'labī's authority makes Lukmān say: "Be amenable to your friends, but never so far as to act against God's laws". There is much that is reminiscent of Ahiqar. For example, Lukmān teaches: "A father's beating his son is like water for a crop." The parallel maxim in Ahiqar states: "Spare not thy son, for strokes of the rod are to a boy like dung to the garden." Lukmān says: "When thou seest people who remember God, join them; if thou hast knowledge, it will be useful to you with them, and they will increase it; if thou hast none, they will teach thee; and when thou seest people who do not remember God, do not join them; for if thou hast knowledge, it will not avail thee with them, and if thou art ignorant they will increase your ignorance".

Abīkar says: "Join the wise man, then thou wilt become as wise as he, but join not the brawler and babbler, lest thou become associated with him". Lukmān gives excellent advice for one going on a journey, and also adds that he should be armed. So too does Abīkar. Al-Maydīnī (*Amṣāl*, i, 97) attributes to Lukmān the dictum: "Consult the physician before thou faltest ill!" This corresponds to the advice of Ben Sira: "Honour the physician before thou hast need of him" (*Ecclesiasticus*, xxxiii, 7).

It may be that many of these proverbs that belong to the general treasury of Near Eastern wisdom literature had already begun to penetrate into the Arabian Peninsula in the *Ḍiḥḥill* period. The Christian Arab poet 'Adī b. Zayd (q.v.) of al-Hira knew of Abīkar, whom he calls al-Haykar (see Noldeke, *Untersuchungen zum Achiqar-Roman*, 25; also Goheen, *The present-day Arabic proverb*, in *idem*, *Sinaiit*, 371, 376 ff.). Already at this early time, the dicta of foreign sages may have begun to accrue to the indigenous Lukmān al-Hakīm.

Muslim legend is fond of making the sages and wise men of the past into prophets. But since the Qur'ān merely says that Lukmān received wisdom from God, all of the traditional scholars with the sole exception of Ṭhrīma agree that he was not a prophet (al-Ḥiḥābī, *Kiṣas al-anbiyā'*, 275). Nevertheless, he receives mention in most of books of the *kiṣas al-anbiyā'* genre (q.v.). Most accounts tell that God offered Lukmān the choice between becoming a prophet or a sage, and that he chose the latter. He even becomes vizier to King David, who tells him: "Blessed art thou, O Lukmān. You have been given wisdom and spared tribulation, while David has been given authority and has suffered trials and rebellion" (*ibid.*). Most of the traditions give him a biblical genealogy connected variously with Abraham, Job and even Balaam (see 4. below). He is said to have lived down to the time of the prophet Jonah. He is also called judge of the Jews (*ibid.*, 275, citing al-Wāḥidī). Some accounts make Lukmān the author of a book. Supposedly, Muḥammad was shown the scroll (*maḥallā*) of Lukmān and asked if the book in his possession was comparable to it, to which the Prophet replies: "These are indeed fine words, but what I have is better, namely the Qur'ān revealed by God" (Ibn Hiṣḥām, *Sira*, Cairo 1375/1955, i, 427; also al-Tabarī, i, 1208).

3. Lukmān the writer of fables. At some time during the Middle Ages, Lukmān came to be regarded as the author of fables as well. This is perhaps due in part to the fact that *amṣāl* means both proverbs and fables in Arabic. Lukmān thus became the Aesop of the Arabs. Much was transferred to Lukmān that was told in Europe of Aesop. The tendencies to this can be traced quite early. The Qur'ānic commentators already relate traditions that he was a "thick-lipped, flat-footed black slave" of Ethiopian or Nubian origin (al-Tabarī, *Tafsīr*, Bāḥk 1328/1970, xii, 43). He is also said to have been an Egyptian, a carpenter, a shepherd, and to have had deformed legs. These features are obviously modelled on the story of Aesop. So too are several of the anecdotes about Lukmān. For example, Lukmān's master orders him to butcher a sheep and set the choicest parts before him. Lukmān gives him the tongue and the heart. His master then orders him to slaughter another sheep and bring him the worst parts. Once again Lukmān sets a heart and a tongue before him, for there is nothing better than a good tongue and a good heart and nothing

worse than evil ones (in Maximus Planudes, *Vita Aesopi*, only the tongue is mentioned and not the heart; see Eberhard, *Fabulae Romanorum Graeco conseriptae*, Leipzig 1872, 259). On another occasion, Lukmān's fellow-slaves eat their master's figs and accuse Lukmān. At Lukmān's suggestion the master makes them all drink warm water. Lukmān vomits only water, the other slaves figs and water. Once, Lukmān's master in his cups had wagered he would drink up the sea. Sobered, he asks Lukmān's advice. The latter demands of those who had taken up the wager that they should first dam up all the rivers flowing into the sea, as his master had promised to drink up the sea only but not its tributaries. This last motif is widely disseminated in folk tales of the type of the Emperor and the Abbot (Aarne-Thomson Type no. 922; the folktale and its parallels are discussed at length in W. Anderson, *Kaiser and Abt*, FCC no. 42, Helsinki 1923, especially p. 239, where reference is made to Lukmān; also Chauvin, *Bibliographie*, viii, 60-2). These anecdotes are also found in the biography of Aesop by the 14th century monk Planudes, who drew upon older material. The story of the wager to drink the sea is known as early as Plutarch's *Dinner of the seven wise men* (Plutarch, *Moralia*, 151B-C) and the Midrash (*Leviticus Rabbā*, 33).

The older Arabic literature does not know fables of Lukmān. They first appear in the later Middle Ages. The Paris manuscript published by J. Dorenbourg is dated 1199 and is from Christian circles. It contains 41 fables. These fables have been published frequently and discussed in detail, especially by Dorenbourg, Basset and Chauvin. Out of the 41 fables, only no. 22 has no clear parallel: the thorn bush begs the gardener to lend it so that kings may delight in its flowers and fruits; the gardener waters it twice a day, and the thorn bush overruns the whole garden. Basset (*Les fables de Lukmān*, 98, n. 2) posits a possible connection with Jotham's parable in Judges, ix, 8-13, while H. Schwartzbaum has suggested a link with the talmudic proverb-fable about the thorn and the cabbage (*The Mishle Shm'olim of Rabbi Brecheiah ha-Nakdan*, Kiron 1979, p. xlvii, n. 80, citing ET *Baba Qama*, 92a-b). All the other Lukmān fables with the exception of the thirteenth (the goat and the bull) are found in the Syriac fables of Sophos (= Aesopus) published by J. Landsberger (*Die Fabeln des Sophos*, Posen 1859). The only fables of Lukmān not found in the Greek Aesop are no. 9 (the gazelle in the well), no. 22 (the thornbush), no. 24 (the wasp and the bee) and No. 40 (the man and the snakes). It has further been observed that in these fables, a number of important animals that were indigenous among the Arabs, such as the ostrich, the hyena, the jackal and the camel, play no part. As these fables first appear in the later Middle Ages, and on the basis of other evidence, there can be no doubt that we have here a translation and adaptation of the Syriac version of Aesop originating in Christian circles in Mamlūk Syria.

4. Lukmān and related legendary figures. Lukmān is a composite, and hence a many-sided figure: he is a *muḥannas*, i.e., sage, master of proverbs and author of fables. It is no wonder then that he has often been compared and identified with other legendary heroes, such as Prometheus, Ahimélech, Iacian and Solomon. Muḥammad b. 'Alī al-Zawṭānī makes Lukmān the teacher of Empedocles (*Ta'wīḥ al-Hukamā'*, in M. Anwar, *Biblioteka Arabo-Sinaita*, Leipzig 1857, 61a). Three of these equations deserve closer examination: (1) with Balaam, (2) with Abīkar

and (3) with Aesop. The identification with Balaam is old. Al-Jahiz and al-Bayhaqi (although not al-Tabari apparently) give the following genealogy: Lukman b. Ba'ur b. Nuhayr b. Tarigh. It would seem that some Muslim exegetes sought for something corresponding to Lukman in the Bible. They found this in Balaam, as the roots *b-l-h* and *b-h-m* both mean "to swallow". This identification may have been reinforced by the talmudic tradition that Balaam (and also Job) was one of the seven gentile prophets who proscribed to the nations of the world (BT *Baba Batra*, 15b). This became a Muslim tradition which entered the Hebrew *Mishle Sendebar*, where Lukman is one of the seven wise teachers of the king's son (ed. and tr. M. Epstein, Philadelphia 1967, 54-5), and also the *Disciplina clericorum* of the Spanish Jewish apostate Petrus Alfonsi (ed. A. Hilka and W. Söderhjelm, Heidelberg 1912, 3), where it specifically states: "Balaam qui lingua arabica vocatur Lucuman". It is clear that for Muhammad and his contemporaries, there was no confusion between Lukman and Balaam. Neither is there any confusion in al-Tabari, who does not make Lukman the son of Ba'ur and who relates the story of Ba'ur b. Ba'ur in its proper place and with the correct details (al-Tabari, I, 508-101). On the other hand, al-Jahiz makes Lukman Ba'ur's son, while at the same time devoting a full narrative to Nuhaym b. Ba'ur (Kitab al-anbiya', 186-9). Al-Jahiz and others like him were probably aware of the inconsistency, but wished to connect Lukman with the Bible at any cost. Horowitz has suggested that perhaps early Muslim traditionalists' Jewish leanings connected Lukman with the Edomite king Bela son of Ba'ur in Gen. xxxvi, 32 (*Jewish proper names and derivatives in the Koran, in HUCA*, II (1925), 273 f.), and that this was the source of the confusion.

Lukman's similarity to Ahiqar was also noticed long ago, but it was only in the early 20th century that the identification found a vigorous champion in Rendel Harris, who devotes ch. vii of his *Story of Ahiqar* to it. He bases his identification on the agreement of Sura XXXI, 18, with Ahiqar's warning about the voice of the ass, the formulae "O my son!" in both, and the Arab hypotheses which compare Lukman with other figures in legend and history, notably to the relationship of Lukman, Ahiqar and Aesop. The arguments, however, are not convincing. The Ahiqar legend was known in the Arab world, and a considerable number of Arabic and Karshuni manuscripts have survived. Many of the aphorisms attributed to Ahiqar, like those attributed to Lukman, were part of the common stock of Near Eastern lore and may be found in the Bible, the Apocrypha and elsewhere. The use of the introductory formula "O my son" was standard in advisory literature of this sort, and is found in *Proverbs* and *Ben Sira*, to mention only the most outstanding examples.

Any real relation between the personalities of Lukman and Ahiqar comes through Aesop. The story of Aesop shows originally a close relationship to that of Ahiqar. The later legend of Lukman has borrowed much of the story of Aesop and thus become obliquely like the Ahiqar story, but in reality Lukman is not directly connected with Ahiqar but with Aesop.

5. Lukman in Persian and Turkish literature and lore. Lukman was a fairly popular figure in Persian literature. A lengthy chapter is devoted to him in the 5th/11th-century Persian *Khas al-anbiya'* of al-Nisaburi (ed. B. Yaghma'i, Tehran 1340/1967, 333-8), which contains anecdotes

found in the Arabic *Khas* as well as some new material. Rumi devotes several stories to Lukman in the *Mafhumat*. In addition to the well-known anecdote of Lukman's innocence proven by drinking warm water (*Mafhumat*, ed. Nicholson, GMS IV/1, London 1925, 220-2), Lukman appears as an idealised ascetic who is a pure slave (*banda-yi pad*) to his earthly and heavenly masters and thus is master of himself and free from sensual passion (*hikmat-i bad wa az hawl-i dard bad*). In this story, Lukman is the true master and his master the slave. He exchanges clothes and roles with Lukman when they travel. He would gladly set him free, but knows that Lukman has found true freedom in servitude (*ibid.*, 326-9). In another anecdote, Lukman's master will only eat food from which Lukman has partaken and is enraptured even with the scraps. One day upon receiving a gift of a melon, he gives Lukman slices after slices. The latter eats it as if it were honey. When the master himself tastes the final slice his mouth is blistered by the sourness. He asks Lukman how he could eat such poison. Lukman replies that he had received such bounty from him that he could not do otherwise. The love of the giver makes the bitter sweet (*ibid.*, 329-32). Sa'di relates a story in which Lukman is once again an idealised ascetic in the Persian mould. By mistake, he is placed into cruel slavery for a year, bearing all in silence. When the mistake is realised, he harbours no grudge and says that he has learned compassion from the experience (*Diwan*, in *Kulliyat-i Sa'di*, ed. M. 'A. Faruqi, Teheran 1964, 328).

Lukman was known to the Turks from both Arabic and Persian literature. In addition to his standard roles, he also appears in Turkish folklore as an Arab physician by extension of his title *hakim* (see W. Eberhard and F. N. Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953, 346). In one tale, Lukman teaches the adventurer Mehmed the Mad how to cure the wife and daughter of the king and the wife of the grand vizier, all three of whom had grown horns (W. S. Walker and A. E. Uysal, *Tales alive in Turkey*, Cambridge, Mass. 1965, 33).

Bibliography: in addition to the works cited in the text, see C. H. Toy, *The Logman-legend*, in *JAOI*, xvi (1896), pp. clxxi-clxxvi; L. Leroy, *Vue, principes et testament de Logman*, in *ROC*, xiv (1909), 225-53, where some very important texts are given; H. Schwartzbaum, *Jewish and World folklore*, Berlin 1968, contains many references and parallels to Lukman; H. Halm, *Kosmologie und Heilslehre der frühen Isma'ilijya*, Wiesbaden 1976, 34 ff., for Lukman's place in the esoteric doctrines of the Sevener. Still very useful for the fables of Lukman and their many relationships is V. Chauvin, *Bibliographie des ouvrages arabes*, Liège 1890-1922, III, 1-82. For Ahiqar, see T. Nöldeke, *Untersuchungen zum Ahiqar-Roman*, in *AGW Golt*, Phil.-hist. Kl., N.F. xlv/4, Berlin 1913; F. C. Conybeare, J. R. Harris and A. S. Lewis, *The Story of Ahiqar*, Cambridge 1923; R. H. Charles (ed.), *The Apocrypha and Pseudepigrapha of the Old Testament*, Oxford 1913, 715-84. (B. HELLER - [N. A. SKILLMAN])

LUKMAN B. SAYYID HUSAYN AL-'ASH'ORI
AL-HUSAYN AL-'UMAWI originated from Urmia in western Persia. It is not known when he, or perhaps already his family before him, migrated to the Ottoman empire. Nor do we know much about his studies and career. He was apparently a protégé of the Grand Vizier Mehmed Sokulu (d. 937/1579) and of the influential Khodja Sa'd al-Din [?] whom he

praised as his benefactor in one of his works (Rieu, *Catalogue of the Turkish manuscripts in the British Museum*, 53b, and H. Schreweide in *Der Islam*, xiv) [1970], 222). In 1569 Selim II appointed him as *Şâh-nâmâdjî* (official historian-pastryerist; for this office, see Babinger, 130-4); as such he was the successor of Eflâtûn Şîhrîvânî and Feḫrullâh 'Arîf. In his works, Lukmân gives two different dates for this appointment; Shawwâl 976/March 1569 (N. 'Asîm, in *TOEM*, 430) and the end of Muḥarram 977/middle of July 1569 (A. Towhid, in *TOEM*, 107, and Rieu, *Catalogue*, 53b; see also Babinger, 164-5). To this office was attached a *nâḥiye* which yielded yearly between 30,000 and 34,000 akḥes (*TOEM*, 430-1). As *Şâh-nâmâdjî*, Lukmân was mainly active during the reign of Murâd III (982-1003/1574-95); he is said to have been deposed soon after the latter's death and appointed as *Defterdâr* (q.v.). He died in 1010/1601-2 (*Öğmenli meâzîrifî*, lii, 136) or later (*TOEM*, 432; Babinger, 165).

As was the case with his predecessors, Lukmân's literary gifts were under discussion. It is noteworthy that contemporary biographers of poets and learned men did not consecrate a section to him in their works. The well-known historian 'Âlî (d. 1007/1599), on the other hand, criticises him caustically (*TOEM*, 431 and Schreweide, *op. cit.*, 290-2; but see Rieu, *Catalogue*, 53b). Until now, Lukmân's extensive literary production taken has been into account mainly by art historians because of the costly presentation of several manuscripts and because of the miniatures by well-known painters which they contain. The pictures are a culminating point of historical Ottoman miniature-painting (I. Scheydte, *La peinture turque*, I, Paris 1966, and N. Atasoy and F. Çagman, *Turkish miniature painting*, Istanbul 1974). From a literary and historical point of view, Lukmân's works have hardly been evaluated; because of his office as court poet, whose task was to extol the ruling dynasty, the choice of his themes was limited. Inevitably, many themes had to be repeated and were partly treated in the various works almost at the same time.

Lukmân's works, written in Persian and Turkish, in both poetry and prose, are the following: 1. *Zafar-nâma*, known as the *History of Süleym Sulaymân*, deals with the final years of the sultan (1561-6). Brought to an end in 986/1578-9, it is an epic Persian poem, written in the same metre (*musaddis*) as Firdavsi's famous work. It was described by V. Minorsky, *The Chester Beatty Library. A Catalogue of the Turkish Manuscripts and Miniatures*, Dublin 1958, no. 413. 2. *Kıyâfât al-muḥâniyya fi şamâ'ih al-ḥamâniyya*, also known as *Şamâ'ih al-ḥamâniyya* or *Şamâ'ih nâma-yi Âlî*. 'Öğmen, describes the first twelve Ottoman sultans and gives, besides their portraits, short pieces of information on their reigns. It was probably finished in 987/1579-80 (Atasoy and Çagman, *op. cit.*, 39). Rieu, *Catalogue*, 548, gives the year 997, but this is likely to be an error since the Munich manuscript, which he quotes as evidence, contains another of Lukmân's works, 3. *Şâh-nâma-yi Selim Khân*, an epic Persian poem on the reign of Selim II (974-88/1566-74). According to the colophon of the illuminated manuscript in Topkapı Sarayı Müzesi, which was prepared for the benefit of the sultan, the poem was finished in Dhî'l-Hijja 988/January 1581 (Atasoy and Çagman, *op. cit.*, 34). The signature of the manuscript must read: A. 3995, Table 16 and p. 80, 27, see also Karatay, *Farsça yazmalar kataloğu*, no. 788, where no date of the work or of the manuscript is indicated. 4.

Hunar-nâma, a Turkish work in prose in two volumes. The first volume, composed between 987/1579 and 992/1584, describes the appearance, the qualities and the virtues of the Ottoman sultans as far as Selim I (918-26/1512-20), together with the most important events of their reigns. The second volume was finished in 996/1587-8 and deals with the reign of Sultan Süleymân (966-74/1520-66). The work is written in simple Turkish. Originally, two other volumes were planned on Selim II and Murâd III, see *TOEM*, 103-12, and further, Karatay, *Türkçe yazmalar kataloğu*, no. 688-9; Atasoy and Çagman, *op. cit.*, 44-6. 5. *Şâh-nâmâ nâma*, an epic poem in Persian on the reign of Murâd III in two volumes. The first volume comprises the period until 985/1577 or 989/1581. In the *Hunar-nâma*, Lukmân says that he presented the work, consequently this first volume, to the sultan in the middle of Ramaḍân 985/end of November 1577 (*TOEM*, 107-8), probably for it to be checked beforehand, as was usual in such cases. Atasoy and Çagman, *op. cit.*, 36, 50, take the year 985/1581 from the colophon of the manuscript. Karatay, *Farsça yazmalar*, no. 792, attributes the first volume not to Lukmân, but to an unknown predecessor in the office named 'Alî al-Dîn Mansûr Şîhrîvânî. However, only the above-mentioned Eflâtûn and 'Arîf are known as Lukmân's predecessors. Volume II deals with the period 990/1582 to 996/1588. The text was finished in 1001/1592-3, but since the making and the finishing off of the manuscript stretched out until 1006/1597-8, the finished work could only be presented to Mehmed III (1003-12/1595-1603). 6. *Zuhdât al-âdâmîyya*, a universal history in Turkish prose, arranged genealogically, in four sections: 1. The creation of the world, 2. the Prophets, 3. the life of Muhammad, the caliphs and the Islamic dynasties, 4. the principalities in Anatolia and the Ottomans until the year 991/1583. The work was possibly finished after the death of Murâd III (1003/1595), whom the Dublin manuscript mentions as having died. Minorsky, *op. cit.*, no. 414, suggested *Zafar-nâma* as another possible title. Karatay, *Türkçe yazmalar*, no. 678, calls it *Silsile-nâma*; the *Zuhdât* which he ascribes to Lukmân in no. 733 seems to be another work. 7. *Muḥlis al-fîlmâr*, a history of the Ottoman dynasty until 992/1584, in Turkish prose. Only the sultans Süleymân, Selim II and Murâd III are dealt with in detail, and the two last mentioned in a purely annalistic way; see Rieu, *op. cit.*, 54-5. 8. *Şâh-nâmâ-yi Âlî* 'Öğmen, a rhymed chronicle in Turkish of the Ottoman sultans, covering the beginning of the dynasty until 999/1590-1, and written in the same year; see Rieu, *op. cit.*, 186-7.

Besides these principal works, Lukmân is said to have left some other writings or translations (*TOEM*, 107; Babinger, 165). The *Sûr-nâma*, famous for its illustrations and composed by an unknown Dîvânî secretary, was erroneously ascribed to Lukmân by R. Ettinghausen (*Türkische Miniaturen vom 13. bis 18. Jahrhundert*, UNESCO Taschenbücher der Kunst, Tafel-Verszeichnis 18-21), see Karatay, *Türkçe yazmalar*, no. 703; Atasoy and Çagman 39-42.

Bibliography: given in the text.

(H. SCHREWEIDE)

LUKMANDJI B. HADIS ALLAN B. MULLA KAPTEKIN RAMPOL, was a great Mustafîlî-Tayyibî Ismâ'îlî savant of India and was given the title *bâ al-'ilm* ('the gate of knowledge') by the thirty-ninth *adâf*, Ibrâhîm Wajidi al-Dîn. He was the teacher of Ismâ'îl b. 'Abd al-Rasûl al-Majidi, the author of the *Fahrist*. He died on 8

Dharmadā II 1173/27 January 1760. His works, very few of which seem to have been preserved, deal with the history of the *da'wa* in India, biographies of *da'wa* dignitaries, Ismā'īlī doctrine, and the refutation of dissident groups.

His son Waḥbkhān (or Wāḥ Muḥammad) was also a distinguished scholar, while his grandson Hibat Allāh, the mentor of the forty-third *da'wa*, 'Abd al-'Alī Sayf al-Dīn, was considered one of two learned men of his time, the other being 'Alī b. Sa'īd al-Hamādī. For a while, Hibat Allāh supported the son of al-Maḥdī¹⁰, who had claimed to be *al-hudūdī* *al-daylī* of the hidden *imām* with whom he was in contact. In 1261/1286-7 he was banished from the *da'wa* by the forty-second *da'wa*, Yūsuf Naḥmī al-Dīn. He died probably after 1274/1299-1300.

Bibliography: Ismā'īl b. 'Abd al-Raḥmān al-Maḥdī¹⁰, *Fārisī*, ed. 'Alī Nakhī Munawwī, Tehran 1966, 54-5, 57-9, 101-3, 107-9, 117-18; Muḥammad 'Alī b. Muḥammad al-Dīwānī, *Mawṣūf-i baḥr*, Bombay 1301-11/1883-94, iii, 404, 480, 486-92, 498-9, 520-6, 556-9, 584, 589, 610-11; I. Poonawala, *Bibliography of Ismā'īlī literature*, Malibu, Calif. 1977, 201-4, 206-7, 210-11. (I. POONAWALA)

LÜLEBURGAZ (in old texts variously written as Bīrghos, Būrgūš, Būrgūš, Cātāl Būrgūš, etc.; the form "Lüleburgaz" is of recent date and related to the industry of pipe-making), a town of more than 25,000 inhabitants in Turkish Thrace and a minor administrative and agricultural centre on the highway from Edirne to Istanbul, 75 km. south-east of Edirne. It is situated on level ground in a wide valley on the southern bank of a tributary of the Ergene River. In the past it was one of the largest caravan halting-places on the Belgrade-Edirne-Istanbul highway, the chief artery of Ottoman Europe. In addition, it was an administrative centre; in the 15th century, a *nāhiye*, and from the 16th century, the seat of a *kaḥk* in the *hüdud* of the Paṣha. Hacıbīl Khāziz (Rumeli and Bosna, Vienna 1812, 20) mentions it as a *kaḥk* of the *sandjak* of Vize, Ewliyā Celebi as belonging to Kırk kilise. In the 18th century, it belonged (once again?) to Vize. In the second half of the last century, it belonged at first to the *sandjak* of Tekfirdağlı (Tekirdağ), in which Vize was incorporated (*Sāli-nāme* of the *Edirne vilāyeti* of 1281/2/1864-76). Later, it was incorporated in the *sandjak* of Kırk kilise (cf. *Sāli-nāme* for Edirne 1310/1862-3). Today it is a part of the *il* (vilayet) of Kütahya.

Lüleburgaz goes back to a Byzantine stronghold, Askadiopolis (Tomaschek, *Hamus-Halbensei*, 324; Jireček, *Neerissa*, 133). The name Burgaz is a corruption of the Greek Πύργος "tower", thus giving a hint of the size of this castle.

The Ottoman chronicles (Oruç, 'Aḥlīk paṣha-nāme, Anonymous-Giese, *Neghri*, Sa'īd al-Dīn) unanimously place its conquest between 759/1358 and 761/1360, and all of them noted that the castle was deserted when the Ottoman *ghazis* took it. They burnt it down, according to the first three sources, demolished it from one side to the other according to Sa'īd al-Dīn, and levelled it according to *Neghri*. When Bertrand de la Broquière passed through it in 1433, he noted "a town which they call Pirgash which has also torn-down walls and where no others reside but Turks". The accounts of 16th century Western and Ottoman travellers, as well as the extant monuments, allow us to reconstruct the resurrection of Lüleburgaz. Arnold van Harff, passing through it in 1499, is still silent about it. De Scheppe called it in 1533 already "la ville de Bosgar", but had to pass the night in a local school. By then it must have been

a small borough with a Friday mosque and a *hamām*. The latter is mentioned by Mehmed-i 'Aḥlīk. The mosque, the Eski Džami', or Kādi Džami', is still extant and situated near the bridge. It is a work of the early classical phase of Ottoman architecture, from the time of Bāyezīd II or from a few years later. When Hans Dernschwam (ed. Babinger, 242) passed through "Borgas" in 1555, he still saw the gate and walls of the old castle and noted a stone bridge over the river; but he still had to spend the night in Karıştiran, a settlement 10 km. to the south-east of Lüleburgaz, which possessed three caravanserais. A few years after Dernschwam's visit, the Begterbegi of Rumeli and later Grand Vizier, Şokollu Mehmed Paṣha, laid the foundations for the total reconstruction of the town and its transformation into a caravan halting-place of the first order. A new stop between Karıştiran and Baba eski was a necessity because the distance between the two was far too great (43 km.) to cover in one day. In 967/1599-60 he completed his exquisite domed mosque and vast *medrese* with 24 student cells. A long inscription, still preserved, gives the date in the form of a chronogram. Seven years later he completed the erection of two spacious caravanserais, with separate stables for camels and horses, separate rooms for female travellers and state officials, an *imaret*, a double *hamām*, a school and street lined with 65 stone-vaulted shops between the *medrese* and the caravanserais. The whole complex covers an area of 170 x 150 metres and is one of the most harmonious civic centres ever erected by the Ottomans. The works were designed by the famous architect Sinān and appear in various places on the lists of his works drawn up by his friends and contemporaries. The date of completion of the two caravanserais is given in the extant inscription in the form of a chronogram, whose numerical value gives 973/1565-6, the first year of Şokollu's Grand Viceroyalty. The chronogram also found its way to the work of Ewliyā Celebi (cf. 301, of the printed edition). This date is further corroborated by the notes of the Italian traveller Marc Antonio Pigafetta, who saw the workmen still active in 1567. Since that time a host of travellers have mentioned the buildings, either with a few words or with a detailed description.

Melchior Besolt called "Fregasch" or "Burgasch" in 1584 a "stättlin" and described the buildings in detail. He mentions the "die new stone bridge", also built by "Mechamed Basascha", who likewise laid out a stone paved road half-a mile long. Mehmed-i 'Aḥlīk remained some time in "Bīrghos" in 986/1578-9 and 998/90, and called it "a small town without walls". He mentions a ruined and uninhabited castle and noted that the Grand Vizier Mehmed Paṣha "constructed in Bīrghut a pleasant mosque, having within the precinct of its enclosure a lofty *medrese* and for the overnight stay of the sons of the road a large *ribāḥ* and a public kitchen. It was ordained that for all guests a plate of food from the kitchen was placed before every fireplace of this *ribāḥ*. A *hamām* and a small market street were built next to the mosque. In Bīrghos is further an unpretentious old *hamām*. The environs of Bīrghos comprise well-cultivated land which yields excellent grain". The account of Mehmed-i 'Aḥlīk passed in a shortened form into the work of Hacıbīl Khāziz, see *Rumeli and Bosna*. Reinhold Lubenau, travelling in 1587-8, called Lüleburgaz a "leiner Marckt", and adds the detail that the buildings were partly situated in "schoner, groser Garten". All buildings were covered with lead. Lubenau found the mosque especially beautiful,

and adds that all travellers, Turk, Jew or Christian, received three times a day a dish of rice and mutton, this for three days in succession. The most detailed description of this Turkish "Grand Hotel" is from Ewliya Çelebi, who visited the town in 1661/1651. It was then a *medrese* in the *sandjak* of Kırk Kilese; a township of 700 houses, divided into six *mahalles*. It had five places of prayer, of which three were Friday mosques, 300 shops and seven *nakkas*. All travellers, regardless of their religion, received twice daily a dish of soup, a loaf of bread, a candle and fodder for their horses. On Fridays they got stewed rice with meat and onions and sweetened saffron rice (*serce*). A number of other travellers mention the buildings and the free distribution of food, but add hardly any new details.

Lüleburgaz continued to function as a caravan halt throughout the 17th and 18th centuries, but it seems to have remained a relatively small place. This period of prosperity ended abruptly in 1224/1299-1200 when a gang of *Kırkalis* under the robber baron Kars Fayd captured it and burnt it down, together with the two caravanserais. When, under Mahmud II, order was restored in Thrace, the caravanserais had to be rebuilt from their foundations. An inscription with a long eulogy on the good works of Mahmud, placed above the old inscription of 967/1559-60, still reminds us of this work. The vaulted shopping street and the two caravanserais, as they appeared just before the fire, are depicted in two very accurate drawings by Luigi Mayer. Lüleburgaz remained a small place throughout the 19th century. The *Sel-nâme* of the Edirne *sultân* of 1267/1870-1 calls it the centre of a *şehâ* with 33 villages, and with 2,056 male Muslim inhabitants and 3,419 male non-Muslim inhabitants. The town itself numbered according to the *Sel-nâme* of 1321/1874-5, 584 houses with 834 male Muslim inhabitants and 1,528 male non-Muslim inhabitants. There were three Friday mosques, two *medreses*, one church, one synagogue, 282 shops and one *hammâm*. The size and shape of the town had thus remained basically the same as in the time of Ewliya Çelebi.

With the Russo-Turkish war of 1877-8, all territories beyond Edirne were lost and the caravan road suffered an eclipse. The two caravanserais of Lüleburgaz and the *imâret* were taken by the army and transformed into a barracks for the cavalry and the fourth battery of gunners. The old *Kâğıt Dükânı* was turned into an ammunition store. The *Sel-nâme* of 1350/1892-3 gives the same number of buildings in the town, but adds the name of two *tekkes*, one of the *Gülşahiyya* [see *GÜLŞAHİ*, 18A47M] and one of the *Nakşibandiyya* [q.v.] order. This source also gives detailed information about the composition of the population of the district of Lüleburgaz. The total number of inhabitants had augmented considerably, from about 10,000 in 1870 to 25,313 in 1893. The Muslim population had grown faster than the non-Muslim element. The Muslims now numbered 7,079 males and females altogether, and there were 6,450 Greeks (Rûm), 720 Bulgars, 220 Jews, 662 Gypsies (largely Muslim), and 38 Armenians, besides some non-permanent residents, also largely Muslim.

During the First Balkan War, Lüleburgaz was occupied by the Bulgarian army, but the Turks took it back in 1913. From 1918 till 1923 the town and all of Thrace were occupied by the Greeks. After Thrace had returned to Turkey and the Greek population had been exchanged for Turks from the new Greek Macedonia by the provisions of the Treaty of Lausanne, Lüleburgaz recovered slowly from the blows

which it had received. The town was to profit greatly from the decay of Edirne in the forties and fifties, and did not cease to develop when Edirne recovered in 1958. Lüleburgaz numbered 13,000 inhabitants; today this has passed the 25,000 mark. It is at present a prosperous and relatively well-built town, almost entirely Muslim Turkish. The two caravanserais and the *imâret* of Sokollu Mehmed Pasha disappeared in the troubled times around World War I; but the mosque, *medrese*, *hammâm*, shopping street and *mekke* are still standing, and rank among the best of all extant monuments of Muslim architecture in European Turkey outside Edirne.

LÜLİ, one of the names for gipsies in Persia; parallel forms are: in Persian, *lari*, *lari* (*Farhang-i Dzhahangiri*); in Baluchi, *lari* (Dany's Bray, *Genius of Baluchistan*, 1921, iv, 143, gives the popular etymology from *lar* = "lot, share").

The name *lari* is first found in a legend relating to the reign of Bâhrâm Gûr (420-38 A.D.). At the request of this Sâshûd King, who wished to amuse his subjects, the Indian king Şhangal (?) sent to Persia 4,000 (12,000) Indian musicians. Hamza (1350/96), ed. Berlin-Kaviani, 38, calls them al-Zûlî [q.v.], Firdawsî (Mohl, vi, 76-7), Lûrîyân; *Tha'âlîhi*, *Qanun al-siyar* (ca. 459/1037), ed. Zotenberg, 567, says that from them are descended the black Lûrî (*al-Lûrîyîn al-sûdân*), skilful players of the flute; the *Mudjmal al-tawârih* (ca. 520/1126), tr. Mohl, in *J.A.*, xii (1842),

515, 534, confirms this origin of the Lūrī. The Lōlī (plur. Lōlīyān) are often mentioned by Persian poets. Manūčihārī (Dāmghān-Djurdān-Ghamā, 5th/11th century), Djamāl al-Dīn 'Abd al-Razzāk (d. 588/1199, Isfahān), Kamāl Ismā'īlī (d. 635/1237, Isfahān), Hālie (d. 791/1389, Shirāz) saw that the Lōlīs are "black" (like night), petulant (ghāḡh) and elegant (ghāḡḡ), that they play the flute, that their way of living (*binagah* "baggage") is irregular. The Persian dictionaries explain *lōlī/lōlī* as "shameless, gay, sweet, musician, woman of light morals", etc.; cf. Vullers (the quotation from Anrī Khusrāw (d. in 725/1325 in India), s.v. Lur, refers rather to the inhabitants of Luristān).

The origin of the name *lōlī* has not yet been investigated. The term seems to be applied to the inhabitants of the town of Sīnd which the Arab authors call Arīr or al-Rūr (cf. Aras > al-Rās; Aīn > al-Lān). This town has been conquered by Muḥammad b. al-Qāsim before 95/714 (al-Balādhūrī, 439, 440, 445). According to al-Bīhārī, India, ed. Sachau, 200, 230, the town of Arīr (Aror) lay 30 *farsakhs* south-west of Multān and 20 *farsakhs* above al-Mansūra. In Elliot and Dawson, *History of India*, London 1867, I, 61, 303, the town is called Aror. This town, the old capital of the Hindu rājās of Sīnd, is now in ruins (on the Indus, in the *Mūsha* of Rohri in the district of Sukkur; cf. *Imperial gazetteer of India*, Oxford 1908, VI, 4 and xxi, 308; Aror and Rohri). The change of 'Aror/Rūr into Lōrī/Lōlī is readily explained by the phonetic law of dissimilation of the two *r*s especially after the change from Aror (Indian) to al-Rūr (Arabic). The descendants of the Indian muskīns of Bahām Gūr (i.e. the gipsies) seem to have been called after the most important town that the Arab invaders had known, and perhaps before them, the Sāsānids. This explanation would locate quite precisely the original home of the *lōlī/lōlī*, without in any way prejudicing the ethnic relationship of this tribe.

The term *lōlī-lōrī* (unknown in Khurāsān, Ivanov 1974) is particularly found in the south-east of Persia, in Kirmān and in Balūčistān. *Lōlī* or *lōlī* is also found in Turkestan: Bāhūr, ed. Imlinskiy, 358, 457, uses "Lōlī" in the sense of "player"; Abu 'l-Ghāḡḡ, ed. Dermaisons, 242, 258, 276, 282, mentions in the 6th/12th century a Shāykhānī prince of Marw and Ābward, son of a Lōlī woman. Mayev, *Indology. Ross. Geogr. Obzr.*, xli/4, 349, and *Geogr. Magazine* (1876), 326-30: Lōlī in Eastern Bukhārā; Genard in Dutreuil de Rhins, *Mémoires. dans la Haute Asie*, Paris 1898, II, 306: Lōlī and Āhā in Chinese Turkestan; Valikhonov, *Sofinskaya*, in *Zapiski Ross. Geogr. Obzr. po Etnografii*, xxix (St. Petersburg 1904), 43: Lulu (sic) and Multān in Kāshghar. Lastly, it has been suggested that the name of the gipsy tribe in Syria, Nūrd, pl. Nawara, is derived from Lōlī (cf. Père Anastase, in *Machrie*, v (1902), tr. in *Jnal. of the Gipsy Lore Soc.* (1913:14), 298-319).

The Lōrī/Lōlī gipsies (cf. the reference above to their dark skin) must be clearly distinguished from the Lur (s.v.) highlanders who live in the southwest of Persia, have a fair skin and speak an Iranian dialect with no trace of Indian elements. The situation is, however, slightly complicated by certain minor points. In the first place, the use of the terms Lōlī, Lūrī, Lur, etc., is not always quite clear. In the confederation of Arab tribes of Fārs there is a Lur clan; Sykes, *Ten thousand miles in Persia*, 330; Rittich, *Foyshāh va Belūčistān*, in *Ist. Ross. Geogr. Obzr.* xxxii/1: (1902), 69, speaks of a Lōrī section (Persian pronunciation of Lōrī?) among the Lōlī

of Kirmān. Edmonds notes the existence of a Lūrī (?) clan in Luristān in the Daghendān division of the Bayrānwand group. In Kurdistan there is a clan Lur-i Kulāghar (see s.v.s.v.).

Still more confusing is the fact that some Lurs follow the profession of acrobats, bear-leaders, rope-dancers (cf. Crilkov, 277). As early as the 8th/14th century, Shihāb al-Dīn Ibn Faḡl Allāh al-'Umari mentions the talent of the Lurs in these directions, and in our own day we find wandering troops of Lurs as far north as Tabriz, where there is a permanent colony of Karāci gipsies, professional actors and singers. It is possible that the special qualifications of the Lur and gipsy players differ somewhat; the Sūzmānī of Kurdistan (cf. *Ṣāḡḡḡ* 2024a and 2024b), who excel in singing and dancing, are not acrobats. But we must first of all wait till a special investigation settles to what precise section the wandering Lur artists belong.

There is nothing impossible in a gipsy infiltration into Luristān. Whatever was the ethnicity covered by the name Zūtī (on the confusion of the Zūtī with the Lōrī, see above: Hāmza, Tāh'libī) the existence of Zūtī colonies in Khūzistān is known as early as the time of al-Balādhūrī (s.v.) (cf. Hāmza al-Zūtī between Arghān and Rām-Hurand; the modern town of Hindiyān ["the Indians"] may have a similar origin). According to al-Balādhūrī, 382, when in the second quarter of the 1st century A.H. the Zūtī had apostatised from Islam, they were joined by the local Kurds, which provoked the punitive expedition of 'Abd Allāh b. 'Amīr b. Kurays (s.v.) to Tihādī (s.v.) (= Mālamīr, the future capital of Lur-i Buzurg). The alliance of the Zūtī and Kurds (= Lurs (s.v.)) at so early a date is curious. Under al-Rūr, Yāqūt, II, 833, mentions two places in Sīnd and a small district (*nahiyā*) under Ahwāz in Khūzistān. Schwarz, *Iran im Mittelalter*, v, 665, identifies this Rūr with the district of al-Lūr (cf. Luristān). In the light of what has been said above one might suppose the existence in al-Lūr of a very ancient Indian colony. But as our sources contain no positive confirmation of this hypothesis (according to Ibn Hawqāl, 176, the "Kurds" were predominant in al-Lūr), the questions of the origin of the name al-Rūr in Khūzistān, of the identity of this al-Rūr with al-Lūr and of the remoter origin of the name Lur must for the present be left open. In any case, even if the name Lur came from the town of al-Lūr, the origin of the name would not necessarily settle the question of the ethnic origin of this people.

As to the general question of the gipsies in Persia, their names in the provinces other than Kirmān and Balūčistān were in the early years of this century:

in Khurāsān: Kīrghānī (in which a fantastic popular etymology sees *ghayr-i ghāmī*, interpreted as "innumerable", in Transcaucasian Turkish dialects *ghāghānī* means "rascal"; cf. the comedies of Faḡh 'Alī Akhūndov (see *Akhūndov*);

in Astarābād and Māzandarān: Džūgi and Gāo-dārī;

in Ādharbāyghān: Karāci (which in Čaghātay Turkish means "faithful servant, person near the Khān"; Abu 'l-Ghāḡḡ, 145, and Bugadov, II, 45);

in Fārs (and elsewhere): Kāolī (= Kābulī).

The names mentioned may have corresponded to slight local distinctions not yet fully known. Gobineau collected the following names of particular tribes leading a nomadic life in the north of Persia: Sanād (?), Kāsa-tārāsh, "cup-makers", Budāghī, Adenesīr (Adheruāsh?), Zargur-i Kirmānī, "goldsmiths of Kirmān", Shāhriyārī (winter at Hamadān, summer

near Damšwand), Karzi, To'sa-tabib (*dawar* + *tabib* 'sheep-doctor'?), Glöbüz, Bāsh-kāpān (in Turkish *bāsh* 'head' + *kāpān* 'he who seizes'?), Gāōdārī (bold hunters in Māsāzārān; cf. de Morgan), Kāghī and Bāghumbān. According to Newbold, the Persian gipsies fall into two classes: Kādi (or Ghurbātī) and Glöbüz.

As names applied to Persian gipsies in general, de Gobineau gives *Beshāwan*/*Peshāwan* (cf. the name of the Armenian and Transcaucasian gipsies, the *Besho*) and *Ojdiit* (?). The following names have a general and neutral character: *Ghurbātī*, 'living in a foreign land' (according to Ivanow, the Persians, who confuse *gh* and *h*, see in *hurbātī* an offensive allusion to the promiscuity (*hurbat*, 'relationship, consanguinity') of which isolated communities in all ages have been accused; the name is sometimes transcribed *hurbāt* and *hurbātī*), *Fiyāghī* (from the Arabic, *fayāghī*, 'couriers'), *Ustākār*, *Āghā*, *Gharbāl-bānd* 'slave-makers'.

The number of gipsies in Persia was in the early years of this century estimated at 20,000 families, or 100,000 souls, of whom 3,000 families were in Āghar-bāghān and 300-500 families in Kirmān (Sykes). The gipsies had an organisation of their own, at the head of which was the chief of the *Shāh's* runners (*ghāfir-bāghī*) under whom were the provincial deputies (*kādistār*). In eastern Persia, the gipsies were very little different from the Persian peasantry (Sykes, Ivanow). In *Khūristān* they played a considerable part in the life of the rural community as artisans, making and repairing sieves, chains, combs etc. In Astārābād, the Gāōdārī were coppermiths, carders of wool and cotton (de Morgan). Throughout Persia one sees the black tents of the nameless *lāli* who must be gipsies. It remains to be seen also whether the Kurd tribes bearing names like *Kharāt* ('turners'), *Laur-i Kulthāgar* ('hatters') are not of gipsy origin (see XXXX). In the towns, such as Sabzawār, Nishāpūr and Tabriz, the gipsies had quarters of their own. There were troops of gipsy dancers and musicians in Persia, but they did not seem to be very popular. Ouseley gives a description of the comic performances and of the marionette theatres of the Karāzi (Tabriz). The dancing and singing girls of the *Sārmāl* tribe in Kurdistan were often described by travellers; cf. notably: T. M. Chevalier Lycklama de Nijeholt, *Voyage en Russie, en Caucase et en Perse ... pendant les années 1866, 1867 et 1868*, Paris 1870-4, iv, 30-70; *Čirkov, Pudevol žurnal*, 282, 299, 330; *Khurshid Efendi, Siyāket-nāma-yi ĩudūd*, Russian tr., 119; cf. T. Thomson, *The Scoundrels: are they Gypsies?* in *Jnal. Gypsy Lore Soc.*, II (1909), 275-6.

The language of the gipsies of Persia (Sykes, de Morgan, Ivanow) has taken its morphology from modern Persian; its vocabulary also is full of Persian words (cf. the lists in de Morgan); Indian elements seem to be rarer than in the Roman of Europe; the language of Kirmān and *Khūristān* (Sykes, Ivanow) contains a large number of unrecognisable elements. Longworth Dames out of 96 words in Sykes's vocabulary found 23 Indian, 4 Arabic, 28 Persian and 32 of unknown origin. He preferred to regard this dialect rather as an artificial secret jargon. Denys Bray (quoted by Ivanow) in any case confirmed the fact that the *Lāli* of Balūkhīstān is learned by the children as a separate language ('is at any rate acquired naturally by *Lāli* children, as a language for the home circle').

The *Sārmāl* used Kurdish mainly. According to Čirkov, they were called *Dumli*, which must corres-

pond to *Dōmān* (= *Dōm*, the name of a low caste in India, from which comes the well-known name for gipsies *Rom*). The vocabulary of the *Dōmān* (Baghdād, Aleppo?) as collected by Newbold, *JRAS* (1856), 303, from an informant from Altun-köprü, is full of Kurdish words: *Ādwar*, 'stone', *ghōv*, 'salt', *Āmūz*, 'boy'. A Kurd tribe in the east of Bōhtān bears the suggestive name of *Sindī/Sindiyān* (the 'Sinds'). According to the *Āghar-bāghān*, the chief of the Kurdish clan (of the *Zāghī*) had married a gipsy woman. In discussing the relationship of gipsies and Kurds, it should be remembered that in 220/835 a section of the *Zuff* settled in *Khānkūn*, i.e. at the gates of Kurdish territory; cf. de Goepje, *Mémoire*, 30; Tabart, III, 1168.

According to Sampson, two categories of gipsy speech may be distinguished, according to the fate of the primitive Indian aspirated *medial*: the one changes them into aspirated *tenues*, i.e. *Prākrit*, *bāhīnī* > *phān* (Armenia, Europe), the other deprives them of aspiration, *ādīnī* < *den* (Persia, Syria, Egypt). The interest of the Persian dialects lies in the fact that Persia was the first country in which the gipsies sojourned after leaving India (probably in the Sāsānid period). In the gipsy dialects of Persia, as yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system. Ouseley, for example, found among the Karāzi of Tabriz the word *bekn* 'sister' which must be older than *phān* or *den* (cf. also *ghord* in Gobineau).

Literary references to the *Lūfīyān* or *Lārīyān* are to be found in many classical Persian authors, including Bād'ī, Muṣṭafī, Firdawsi, Manūshirī, Hāfiḡ and Qubayd Zākhān, who variously describe them as musicians and dancers, vagabonds, thieves and prostitutes.

In modern times, the general term for the gipsies in Iran is *kawli*, but a wide variety of names are used locally. Apart from those listed earlier, the following may be mentioned: *ābedī*, *ghurbātī*, *ghānī*, *hārdmī*, *hāfīdī* (Zandjān), *lawand*, *lāghmī*, *yūt* and *zangana*. No up-to-date population statistics are available, but such information as there is suggests that the figures quoted by Sykes must by now be considerably reduced. The main centres are still Fārs, Arāk and Āghar-bāghān. *Dhukā'* quotes some notes by Fīrūs Bākūr-zāda on a group of *kawli* settled in Kūt 'Abd Allāh (10 km. south of Ahwāz) since the turn of the century. According to Mughdām, the *ghurbātī* of the Wāsi area (between Hamādān and Arāk) spend five months on the land and seven travelling (*dawra-gardi*). They do not give their daughters in marriage outside the tribe, but apparently may take non-*kawli* wives. The main present-day occupations of the gipsies of Iran, as elsewhere, include basket-making, tinkering, singing and dancing, magic, fortune-telling and making of spells and charms.

(V. MINORSKY — [L. F. ELWELL-SUTTON])

LU'LU' (pl. *la'ālā'*, *la'ālī'*, the pearl). The word is often used as a synonym of **AL-BURA** [q.v.], and the difference in meaning between the two cannot be defined with precision. With coral and amber, the pearl belongs to the organic products associated, however—as is still the case in our days—with the precious stones (*ḡamāḡir*), and thus with the minerals (*ma'ādāt*). Yet the difference between the pearl and the real minerals was well-known: the former changes quickly because it is of animal origin (al-Akfānī, in Wiedemann, *Aufsätze*, i, 843). In the same way, the Jews in antiquity had considered the pearl as belonging to the minerals, but since the Tannaitic period to animal products (I. Löw, *Fauna und Mineralien der Juden*, ed. A. Scheiber, Hildesheim 1969, 227). Ibn Māsawayh, *Djāwāhir*, 24 f., enumer-

ates 27 varieties of precious stones, among which come the *lu'la'* as the first, the *yāḡūḡ* (ruby), the *sumarrud* (emerald), the *malā* (diamond), etc. Al-Bīrūnī, *Djāwāhir*, 81, declares that there were "originally" (*fī 'al-āṣl*) only three precious stones, namely the *yāḡūḡ*, *sumarrud* and *lu'lu'*. Elsewhere (105) he says that the *lu'lu'* consists of two kinds of pearls, a bigger one (*durr*) and a smaller one (*sumarrud*). Likewise al-Tifāḡhī, *Ashār*, 249, who adds that *djāwāḡir*, *djūmūd* and *ḡadār* are synonyms of the pearl in general, while *durr*, *ḡabb* and *ḡharīda* indicate the unpierced pearl and *lu'lu'* the pierced one. Terminology is, however, fluctuating; for further details, see the *DBI*.

The authors mentioned above also describe in fair detail the various kinds of *lu'lu'* according to colour (white, yellow, lead- or ivory-coloured), form (globular, oblong, olive- or turnip-shaped, conical, flattened, almond-shaped, notched), size, structure (various shells), compactness, consistency, weight and value, its changes by means of external influences (oils, all acid reagents, in particular still lemonade, and further, the heat of fire and friction against coarse objects), and finally, the places of its discovery, pearl-fishing and trade. Al-Bīrūnī, *op. cit.*, 134-7, moreover, has an interesting chapter on causes and elimination of worthlessness or faultiness of pearls. On the innermost layer of the pearl-oyster's shell, the so-called mother-of-pearl, see ḡADAF. All these qualities of the pearl have their own very specific nomenclature, based on close observation. The calculation of the specific gravity of the pearl was amazingly accurate (according to al-Khāzīnī in Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972, 123). Even the formation of the pearl is explained correctly, namely by the infiltration of parasitic foreign bodies, bringing about growths which then solidify into pearls. At the same time, however, the curious fable held currency according to which pearls originate in the pearl-oyster from rain: every year [the Southern Sea—the Indian Ocean—is agitated by heavy storms which force the pearl-oyster to emerge at the surface, where its two valves open and take in the rain. After that, the oyster snaps the two halves closed and dives to the bottom of the sea; from the rain-water, a precious stone grows like an embryo in the womb (al-Tamīmī, *Murshid*, 35-6; *Das Steinbuch aus der Kosmographie des . . . al-Kāzīmī*, ix, J. Ruska, *Beilage zum Jahresbericht 1895/96 der Prov. Oberrealschule Heidelberg*, 21 f., s.v. *durr*); or, according to the majority of the scientists, like the egg in oviparous animals (al-Akfānī, *Nuḡḡab al-ḡadāḡīr fī aḡḡāl al-djāwāḡir*, in Wiedemann, *Aufsätze*, i, 843).

For the finding-places of pearls and their recovery, see **AL-BURA**. Plentiful material is also to be found in the extensive lemma *lu'lu'* in *WKAS*, ii, 45-50, containing a well-arranged synopsis of pieces of evidence for the metaphorical use of the word: the pearl is compared with teeth, tears, dew- and rain-drops, small bubbles, with the goblet, with words and poems, letters, wisdom, boys, girls or women, with a face, with gazelles, flowers or blossoms, stars, currents, etc. The word appears also extraordinarily often in book-titles with an ornamental, metaphorical or metonymic meaning, mostly as "head title" before the real title, which is introduced with *fī*, see *GAL* S III, 619 (*fī ḡāḡ al-lu'ālī'*), 644 (*lu'ālī'*), 649 (*lu'ālī'*), 1083 f. (*lu'ālī'*); the indexes to the separate volumes of Sergin, *GAS*; ḡāḡḡḡḡ Khāḡḡā, *Kaḡḡ al-qunūd*, ed. Yalīḡḡā, ii, 2334 f., 2570 f.; Iamāḡḡ Bāḡḡā, *Iḡāḡ al-maḡḡūn*, 396 f., 476 f.

Apparently a word for pearl-trader cannot be derived from *lurr*, but only from *lu'lu'*; *lu'lu'* or *lu'lu'* (WKAS, II, 30).

LU'LU' ("pearl"), a noun often given as proper name to a person of servile origin, a guard or an officer or a leader of a special body of *ghulām* (q.v.) in the service of a prince. Thus a Lu'lu' was the *ghulām* of Aḥmad b. Ṭūḥā (al-Mas'ūdī, *Murūj*, viii, 69 = f. 319b); a Lu'lu' was chief of police in Baghdād in 324/935-6 (Miskawayh, I, 351); another was governor of Hama for the Khāḡid, and it was he who was to capture al-Mutanabbī when the latter proclaimed himself a prophet and attracted a numerous following of partisans in the Syrian desert (Ibn Khallikān, ed. Būlāḡ, 1959, I, 44).

Lu'lu' al-Kāḡir ("the elder" or "the senior") al-Djarrāḡ al-Sayfī played an important role at the court of the Ḥamdānids of Aleppo. The nisba al-Sayfī indicates that he was in the service of Sayf al-Dawla, and in fact he is seen, during the reign of the latter, in 355/965, participating with the *ghulām* (q.v.) of Khawāḡān in an expedition mounted from Antioch against the town of Miṣṣiṣa (Mopsuestia); the nisba al-Djarrāḡ suggests that he also served, before the Ḥamdānid prince, one of the members of the family of Djarrāḡids (q.v.), but the historians give us no information on this point.

As chamberlain (*ḡāḡib*) of the Ḥamdānid Abu 'l-Ma'ālī Sa'īd al-Dawla, who on his death-bed (383/993) committed his son Abu 'l-Faḡḡīl to his care (cf. Bar Hebraeus, ed. Sāḡhāl, Beirut 1890, 309, and *Chronography*, 179), Lu'lu' played his part, with other *ghulām*, in having Abu 'l-Faḡḡīl recognised as successor to the emirate of Abu 'l-Ma'ālī. He subsequently acquired a position of even greater importance through his daughter's marriage to Abu 'l-Faḡḡīl.

In the difficult situation facing the emir of Aleppo, threatened by the commander of the Fāṭimid troops, Baḡḡātekin (Maḡḡātekin) and by Fāṭimid ambitions, Lu'lu' followed a policy of caution, recalling the troops which Abu 'l-Faḡḡīl had sent to the south and avoiding further conflict with the Fāṭimids. When Baḡḡātekin came, in Rabī' II 383/May-June 993 and laid siege to Aleppo, Sa'īd al-Dawla and Lu'lu' appealed for help to Byzantium, which, since the treaty of 359/966, had exercised a kind of pro-

tection over the emirate of Aleppo. As Yahyā b. Sa'īd al-Anṣārī expressed it (PO, xliii/3, 442) they "threw themselves at the feet" of the Byzantines. The emperor sent the governor of Antioch, Bourtes (Burdj) with troops, but Baḡḡātekin drove them away and continued the siege which lasted until the beginning of 995. Lu'lu' sent another appeal for help to the emperor Basil II, who arrived in person with 15,000 men and forced Baḡḡātekin to raise the siege. Generously, the emperor excused Abu 'l-Faḡḡīl from the payment of the tribute which the emirate had been giving to the Byzantines since the treaty of 359/966. In confrontation with Baḡḡātekin, to whom Abu 'l-Faḡḡīl was prepared to surrender Aleppo, Lu'lu' showed himself more resolute than his master. He played an increasingly influential role in the conduct of affairs.

In 386/996, he persuaded Abu 'l-Faḡḡīl to deal severely with the rebel governor of Ma'arrat al-Nu'mān, who subsequently went over to the Fāṭimid camp. In 388/998-9, Lu'lu' and Abu 'l-Faḡḡīl made an attempt at capturing Apameia, which was relieved by the Duke of Antioch, Damien Dalassenas (Yahyā, PO, xxiii, 453-6). In Safer 392/December-January 1002, Sa'īd al-Dawla Abu 'l-Faḡḡīl died, and Lu'lu' assumed full power, not hesitating to rid himself of the two sons of Sa'īd al-Dawla, whom he banished to Egypt, and destroying some fortresses in the territory of Aleppo to prevent his enemies from installing themselves there. Furthermore, in order to maintain good relations with Byzantium, he ordered the imprisonment in the citadel of Aleppo of an adventurer named al-Aḡḡar who dreamed of renewing the holy war against Byzantium, which was a prospect deeply worrying the emperor. Al-Aḡḡar had been a fugitive in Diyarra, but the governor of this province, al-Waḡḡib, handed him over to Lu'lu', thus putting an end to his activities (see Yahyā, PO, xliii/3, 466-7). Lu'lu' continued to pay tribute to Byzantium and died in 398/1009-9. His son al-Manṣūr exercised power in Aleppo, but he was little more than a governor under the Fāṭimids.

The character of Lu'lu' presents some favourable aspects, some which are less so. Loyal and courageous, he saved the life of Sa'īd al-Dawla in the battle which the latter was obliged to fight against Baḡḡāḡ, his rebellious *ḡāḡib* who had ambitions to take over control of Aleppo. Taking the place of Sa'īd al-Dawla next to the standard, and accepting the blows intended for the prince, he assured his victory. But according to a tradition related by Kamāl al-Dīn, Sa'īd al-Dawla was poisoned by one of his concubines at the instigation of Lu'lu'. Lu'lu' presents the image of a slave (*ghulām*) who, by his energy and ability, and favoured by external events, succeeded in holding himself up to a position of supremacy over an emirate, admittedly an emirate of secondary importance. It could be said that he prefigures in the 5th/11th century what various of the Mamālūks of Egypt were later to become on a larger scale.

LU'LU', **BADR AL-DĪN** **AMIR** 'L-FADĪYL AL-MALIK AL-RĀḤM, a freedman, possibly black, of the last Zangids of Mosul, whose régime he prolonged. Designated by Arslān Shāh I on his death in 607/1210-1 as regent of the principality for his young son at Kāhir, then by the latter (d. 613/1218) for his infant son, Arslān Shāh II, he was officially designated, with a caliphal diploma, as lord in 619/1230. The chronicles mention him especially for his innumerable minor clashes with the lesser surviving Zangids and their Muḥaffarid allies from Irbil; he had, on the other hand, the support of the Ayyūbid al-Aḥraf, all this interfering with the intrigues of the Khawāram-Shāhs and first Mongol detachments. Later, he fought with al-Sāḫib Ayyūb in Ḥazire and then with al-Nāṣir of Aleppo. In all these clashes, he appears far less as a successful military leader than as an astute diplomat. This ability and his longevity resulted in his being regarded as a power; it is for having wanted to marry his daughter that the first Mamlūk Sultan, al-Nāṣir, was assassinated by his wife, Shāḫīr al-Durr. The last days of Lu'lu' were clouded, however, by the Mongol invasion; after the fall of Baghdād and the caliphate, he succeeded in keeping Mosul as a vassal of Hulaṭū. He died in 657/1259, aged about 80. His sons soon had to renounce the succession and flee to Baybars in Egypt.

The chronicles tell us nothing of Lu'lu's internal administration. We know, however, that Mosul attained in this period a notable role as a craft (copper-work), commercial and cultural centre. The people from Mosul who are several times mentioned in Acre under Latin domination are possibly Christians, a large number of whom survived in Upper Mesopotamia. 'Izz al-Dīn Ibn al-Aḥfir (q.v.) may have written his history of the Aṭabeks with the encouragement of Lu'lu'.

LUR (in Persian *Lur* with a short), an Iranian people living in the mountains in south-eastern Persia. As in the case of the Kurds, the principal link among the four branches of the Lurs (Mamāsāni, Kūhgilūi, Bāḡhtiyārī and Lurs proper) is that of language. The special character of the Lur dialect suggests that the country was Iranicised from Persia and not from Media. On the ancient peoples, who have disappeared, become Iranicised or absorbed in different parts of Luristan, see LURISTĀN.

The name. Local tradition (*Ta'riḫ-i qasida*) connects the name of the Lurs with the place Lur in the defile of Mān-rūd. This tradition is perhaps based on a memory of the town al-Lūr mentioned by the early Arab geographers (al-Iṣṭakhrī, 195, etc.), the name of which survives in Šabūr-yl Lur (to the north of Dizdū). There are several other place-names resembling Lur, namely Līr, a district of Džunday-

Šabūr [Schwarz, *Iran im Mittelalter*, 666; cf. the Kūhgilūi tribe: Līrāwī], which may be to Lur what pīr in Lur is to pāl "money" in Persian; Lurjān (Yāḡūt: Lurdāḡiān, now Lurdāḡin) according to Isfahānī, capital of the canton of Sardan (between Kūh-Gilū and the Bāḡhtiyārīs) and lastly there is a place called Lur (Lort) near Šaymara.

Al-Mas'ūdī alone, in his list of "Kurd" tribes speaks of the Lurriyya tribe (which may mean the Lurs connected with the district of al-Lur). In the 7th/13th century Yāḡūt uses the names Lūr, Lurr, to mean the "Kurd tribe living in the mountains between Khūstān and Isfahān"; he calls the country inhabited by it *bilād al-Lur*, or Luristān.

These facts show the stages of evolution of the geographical term (perhaps pre-Iranian) into an ethnic name. If however we seek an Iranian etymology for the name Lūr, its connection with the first element in Lurh-asp (already proposed by von Bode) at once suggests itself. According to Justi, *Iranisches Namenbuch*, 183, Lurh is explained by **ruḡra* "red". The place-name Rūr in Yāḡūt may supply an intermediary form. The *Ta'riḫ-i qasida* gives a popular etymology *Lur* = *lir* "wooded hill" in Lur.

Etymology. If the linguistic data connect the Lurs with Fārs, local tradition only regards as true Lurs the tribes who came from the defile of Mān-rūd. According to the *Ta'riḫ-i qasida*, 539, 547, there is in the *wāḡiye* of Mān-rūd a village called Kurd, near which there is a defile. The place called Lur is situated in this *āl* (the word means in Lur a "little ravine", cf. O. Mann). The name Mān-rūd much resembles that of Nāḡrīyān-rūd (the word *nāḡrīyān* is found as *nān/nān* in Lur; Zhukovski, II, 158) but certain historical considerations make us look for it near Māngarra-Māngarra (cf. *Ta'riḫ-i qasida*, 548, on the place lying between Mān-rūd, Sāmbā and Māngarra). The clans (*gushā*) of the natives of Kūh-Mān-rūd were later called after the places where they had settled, like the Džangrūi (Congrūi, Džangardi) and the Ūtari (Axtari). The governing family of the Aṭabegs of Little Lur belonged to the Džangrūi (the name of their clan is Šabūrī, Šalḡūrī; the names Šalwī in *Ālam-nāra*, 369, Šalwārī in *Āll Hazān*, *Tadhkira*, 135, and Šalwārī in Houtum-Schindler are to be corrected). The *Ta'riḫ-i qasida* concludes by enumerating the 6 clans (*ghasab*) of the two principal *gushā* and the 18 other tribes (*ghasab*) of the Lurs.

A few names (Māngarra, Anḡrakī, Džūdākī) correspond to modern names. Finally, four clans are mentioned: Šābī (Šāni), Arslān (Ashān, Aslān), Aikī and Bībī, who, although speaking Lur, are not Lurs; the people of the other villages of Mān-rūd were peasants (*pāstān*).

In ca. 500/1100, a hundred (or 400) Fāḡlāwī Kurd families arrived from Syria. They came by the north (Šuturān-Kūh) and settled at first on the lands of the Kūhgilūi *wasīs* (see LUR-i Kūh; and cf. *Nuḡhat al-Juhūd*, 70, under the word *girdāḡ*). At the beginning of the 7th/13th century, new tribes flocked to the standards of Ḥazrāsp of the Great Lur. Among them were two Arab tribes: 'Ukaylī ('Akūlī; cf. the place of this name below Šhūḡṭar), a Hāshimī one, and 28 different tribes (*muṭa'arrifān*), among whom we find the Bāḡhtiyārī (Mūḡhtārī), the Džawānūd (Marāsīn), the Gōwānd (cf. the village near Šhūḡṭar), the Džūd, the Līrāwī, the Mamāsāni (Mamāsānī?), etc. According to the *Šangī-nāma* (I, 26), all these tribes also came from Syria. These waves of immigration must have had a considerable effect on the ethnic composition of the Great Lur.

It is probable that the immigrants were Kurds and that traces of them still survived among the Kurds whom Ibn Battūta (ii, 21-30) found at the beginning of the 8th/14th century near Bahbān and Rām Hurmāz when on his way to the capital of the Grand Lur. There has long been a village of Kurdistan on the Dīrāzkhī and it had even given its name to this river. Shihāb al-Dīn al-'Umādī (in *Notices of extracts*, xlii, 330-2) mentions the existence of Lurs in Syria and Egypt and tells how Saladin (564-89/1169-93), alarmed by their dangerous ability to climb the steepest ramparts, had them massacred en masse. This anecdote throws a light on the causes which produced the arrival in (?) return to Luristān about 600 A.H. of numerous Iranian tribes.

The southern part of Little Lur was exposed to infiltration by Kurds, especially through the valley of Karkha (cf. LAW; just to the north of Susa is a tree *šār-s Bābā*, bearing the name of a clan of the Kurd tribe of *Dyūskān*, celebrated in the history of the Hassanwayhids (q.v.); cf. Ibn al-Athīr, ix, 146, 219) and exposed to Turkish and Mongol invasions (cf. the desperate fighting of the Atābegs of the Lur-i Kūlik against the Bayāt and Aywa [= Bahārū?] Turks).

In the Safawid period, Turkish tribes were introduced into Luristān from the direction of the Kūh-Gilū (where traces of them still exist), and Georgian and Armenian colonies to the north of the Bakhtiyārī country. On the movements of the population under Nādir, the Zands and Kādījars, see below. The ethnic situation gradually stabilised at the beginning of the 19th century.

The names of the Lur tribes and groups are now quite well-known, and as we have lists going from 1836 to 1922, a comparison enables us to note the changes that have taken place meanwhile. Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds, but the general framework of the tribal grouping remains essentially the same.

In 1881 (Curzon, ii, 274), there were 421,000 Lurs, of whom 179,000 were Bakhtiyārī, 41,000 Kūh-Gilū, and 210,000 Faylī. According to Rabino, this last section numbered in 1904 31,650 tents (or 130,000 individuals) in Pīgh-Kuh, and 10,000 tents (or 50,000 individuals) in Pušt-i Kuh (this last figure seems too low).

The Mamāsānī (Mamassan) group includes 4 main tribes, the Bakash, Dīwāwī (Djāwī), Dugh-manīyārī and Rustanī (see *ghūlārān* in *FI*). The Kūh-Gilū group (Kūh-Gilū) includes three large tribes (Akādjārī, Bawī and Dīkī). The first of these tribes (cf. the name of the old Turkish tribe of *Aghadjārī*) is of a composite character, for of its nine clans four (Afshar, Begdālī, Čağatay and Kasa-Bighlī) are Turkish (evidently the remains of the Shāh-Sewen, to whom the government of Kūh-Gilū had been given under the Šālews) and a fifth clan (Tilakūsh) bears the name of a district in Kurdistan of Senna (q.v.). Concerning the second tribe, Bawī, O. Mann notes that it bears the name of an Arab tribe of the neighbourhood of Alwāz; but there is also a mountain called Bawī to the south of Kūrramābād. The third tribe, Dīkī, is purely Lur and is composed of two main sections: Čārbunfa and Līrāk with very many subdivisions. This three-fold composition of the Kūh-Gilū group is typical of many of the Lur tribes.

As to the Bakhtiyārī, Sawyer as long ago as 1894 said that their territory was "thoroughly surveyed on a scale of 8 miles to the inch, nearly every tribe visited in their own encampment, every-

thing appertaining to the Bakhtiyārīs may now be said to be known". But Curzon's tables (1890) are still the last word available to the student. Of the two Bakhtiyārī groups, Čahār-lang and Haft-lang, the latter is the more important at the present day. The Čahār-lang, who used to be in the south, are now mainly on the outskirts in the district north of the northern barrier [between Burūjird and Gulpāy-gān].

The main groups of Lur are: Tārhan, Dīmān, Sīlāla (cf. LAW) and Bālā-gīrwa. The tribes of the last group are the Lurs par excellence and have important subdivisions: Dīrgwand, Sagwand etc. It is possible that the Dīrgwand are the real nucleus of the Lur race. Their chiefs are called *mīr*.

In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chiefs, the Lurs proper (Bālā-gīrwa) are distinguished by a more democratic feeling. The power of the hereditary families of *hāns* is based on their "guard" (*hāyāt*), but this power is considerably reduced by the authority of the chiefs of the clans (*hāghmāh*). The *hāns* are forced to court the favours of these wild, petty chiefs (Edmonds: "uncouth headmen"); the latter are amenable to the solicitations of their neighbours, and in this way the tribes are broken up and new groupings take place.

Little is known of the ethnology of the Lurs. The notes of Duhaussiet (who commanded a Lur regiment in 1859), *Études sur la population de la Perse*, 23, of Khazirkoff, *Mém. sur l'ethnographie de la Perse*, Paris 1866, 15, 110, 138, and of Danilov, only touch the surface of the subject. Duhaussiet particularly notes the peculiar (compressed) form of the skull of the Lurs. Edmonds emphasises the difference between the Lurs and the Laks; the latter are taller, have purer features and aquiline noses. Their women are more beautiful than those of the Lurs. The hair of the Lurs is often chestnut-coloured; very heavily bearded men are found among the Lurs (the Persians call Luristān *ma'dān-i rīgh*, "mine of beards"). The women do not seem to have such liberty among the Lurs as among the Kurds. According to Edmonds, there are no cases among the Kurds of women acting as chiefs of tribes. But von Hauner (ii, 239) mentions under the year 1725 the warlike exploits of the two daughters of the Wālī 'Alī Mardān Khān.

The domestic life and manners of the Bakhtiyārīs have found enthusiastic panegyrists in Layard, Mrs. Bishop and Cooper in his *Grass*, New York 1925. On the other hand, the Lurs have been very severely judged by most travellers, cf. Edmonds, in *Geogr. Jour.* (1922) (*ibid.*, the speech of General Douglas, who was wounded by the Lurs in 1904).

Bibliography: *for the Mamāsānī* (cf. *ghūlārān* in *FI*) and the Kūh-Gilū, cf. especially Hasan Faṣāḥī, *Fārs-nāma-ye Nāṣirī*, on which are based Demorgny, *Les tribus du Fars*, in *RNM*, xxii (1913), and B. Miller, *Keleslye plimensa Farsa*, in *Vost. Sbornik*, St. Petersburg, ii (1916), 213-26. Cf. also the lists in Bode, Layard, Sheil, Baring etc. (summed up in Curzon, *Persia*, ii, 327) and those of O. Mann, *Die Mundarten d. Lur-Sämme*, pp. xv-xxi. *for the Bakhtiyārī*: H. Rawlinson, *A march from Zohab*, 102-6 (cf. Ritter, *Erdkunde*, ix, 210-15); A. M. Layard, *Description of Khuzistan*, and especially *Early adventures*; Curzon, *Persia*, ii, 286-8. *For the Lurs*: the lists of Rawlinson (Ritter, *Erdkunde*, iv, 215-29), Bode, Layard, Čirkov, Houtum-Schindler, O. Mann, *op. cit.*, p. xliii, and especially the articles by Rabino, in

RMH (1926), and C. J. Edmonds, in *Geogr. Jnsl.* (1922).

Religion. The Christian and Jewish colonies (cf. the evidence of Benjamin of Tudela) settled in the village of Karhā since the Sāsānid period may have left some traces in the country. A very curious tradition is the story of the conversion of the Bakhtiyārī to Christianity in the time of Constantine the Great (?) (Hawwā, ii, 768). A mention in the *Ta'riḫ-i Dīshān-gushāi*, GMS, xvi/2, 276, shows that in 650/1252 the *muhāhid* (Isma'īlīs) had gained a footing around Gird-Kūh. The Hurūfī heresy had probably also a following in Luristān, for the *murīd* of its founder Faḍl Allāh, who attempted the life of Sultān Shāhruḫ in 830/1427, was called Ahmad Lur (Brown, *Lit. hist. of Persia*, iii, 366). In the Sāfawid period, the *awliā* of the Little Lur claimed descent from 'Abbas, son of the caliph 'Alī, whose tomb is shown near Sirvān (Mīssabādān); cf. Rawlinson, in Ritter, ix, 402. The esoteric doctrines of the extremist Shī'is are widespread in Luristān. The great majority of the Lak are Ahl-i Haqq [q.v.] ('All-Ilāhī). The Segwand, Pāpī and Badrā'ī tribes are also followers of this secret religion. In the belief of the Ahl-i Haqq, Luristān is the scene of the activities of the third avatar of the divine manifestation who is called Bābā Khōshīn and numbers among his "angels" Bābā Tāhīr [q.v.]. An important sanctuary of the sect, the tomb of Shāh-zāda Ahmad (the alleged son of the *imām* Mūsā Kāsim), is in the district of Kūs near Bī-Ḫw (territory of Zāwawān) and is kept by Sayyids of the Pāpī tribe; these Sayyids wear red turbans which recalls the predilection for red of the old Muḥammīsiya — Khurramīyya [q.v.], whose flags were of this colour.

The religion of the Lurs was so little orthodox, even from the Shī'is point of view, that at the beginning of the 19th century prince Muḥammad 'Alī Mīrā had to send for a *madjlish* to convert the tribes to Islam (Rabino, 24). All the Lur and Lak tribes are officially Shī'is (contrast the attachment of the true Kurds to Sunni orthodoxy).

Language. Down to the beginning of the 20th century, our knowledge of the Lur dialects was confined to 88 words collected by Rich, to four Bakhtiyārī verses in Layard and to some thirty words collected by Houtum-Schindler. As late as the *Grundriss d. iran. Phil.*, i/2, 1898-1901, 249, we find the thesis stated that Luri is closely related to Kurdish and may even be described as one of its dialects. The materials of Zhukovski (collected in 1883-6) were finally published the day after the death of the author (d. 4 December 1918). The merit therefore of having first established the important fact that Kurdish and Luri are quite separate ("eine tiefergehende Scheidung des Kurdischen vom Luri") is due to O. Mann. This scholar has shown that although there are Kurd tribes in Luristān (see LAB.), the true Lurs speak dialects which belong undoubtedly to the south-western Iranian group (like Persian and the dialects of Fārs) and not to the north-western group (like Kurdish and the "central" dialects).

The Luri dialects which have none of the asperities of Kurdish (see KURDS) fall into two categories. To the first belong the dialects of the Great Lur: Mamāsānī, Kūngīū and Bakhtiyārī (the latter has a few insignificant peculiarities of its own); to the second belong the dialects of the Little Lur, i.e. of the Faylī Lurs.

Even the first group possesses very few special features compared with modern Persian. From the

point of view of phonetics: -am at the end of a word becomes -om, -am (mānām/īlām; ādām/āghām); ā changes into ē; pālpāl; intervocalic ā gives āi (39): mānām/īlām; the combination -khī -fi give -āgh and -hi (1): āghāgh/āghāgh, rāfī/rāfī; initial āh becomes ā: āghāgh/āghāgh, etc. Peculiar to Bakhtiyārī are the change of intervocalic m to v: āghāgh > āghāgh and the occasional change of ā to ē: āid > ēid. It is remarkable that some of these phonetical peculiarities were long ago noted by Ḫāmd Allāh Mustawfī (*Ta'riḫ-i gurāda*, 537-8). He says that Luri (although full of Arabic words) does not have the peculiarly Arabic sounds, like ḡ, ḡh, ḡh, f and ḡ. Inflection: Plural in -gāh, -yāh, -āh, e.g. āghāgh, āghāgh; accusative in -ā, -āh instead of rā-yāghāgh got = *lurā-yāgh*; formation of the present; i instead of Persian wī; first Persian plural ending in -im(n): āghāghāgh(n) = *māghāghāgh*. Luri usually forms the preterite of active verbs as in Persian with the help of personal endings (active construction) and not like Kurdish and the majority of Persian dialects (including those of Fārs) which give the preterite a passive construction. Vocabulary. In the present and preterite stems, Luri usually follows Persian, but we find stems and words unknown in Persian: *izām*, *wādam*, "to throw"; *fār*, *idāram*, "to be able"; *ā*, "eye", etc. From the Mongol period, Luri has kept several expressions like: *lurghāgh*, "chief of a clan"; in Mongol, *lurghāgh*, "official"; *ghāgh*, "guard of the khān"; in Eastern Turki *camp*, *lager*", cf. Rudakov, ii, 102; *āghāgh*, "encampment", in Mongol, *āghāgh*, "camp, tent".

As to the Faylī group, their dialect differs very little from ordinary Persian (Mann: "weiter nichts als ein stark abgeschliffenes Persisch").

There are in Luristān a few islands of Kurds of some importance. Such are in the north the Lak tribes [q.v.]. Among the Faylī, the Maḥlī group (on the frontier of Kirmānshāh, at Hūlaylān, and farther south) speaks a southern Kurdish dialect like that of the Kābur. The Kurdiḡhāghāgh group (to the south of Puḡht-i Kūh) speaks a "Kurmandjī" Kurdish. Linguistic conditions in the Puḡht-i Kūh still require further study.

Bibliography: P. Lerch, *Isildoraniyy*, iii, pp. xi-xiv (German tr., *Forschungen*, 5); O. Mann, *Kurde Skizze der Kurdische, in SB Pr. AW* (1904), 1173-93; O. Mann, *Die Mundarten der Lur-Sprache im süd-west. Persien, in Kurd.-Persische Forschungen*, Berlin 1920, i (bibliography, list of tribes, Mamāsānī, Kūh-gāgh, Bakhtiyārī and Faylī texts); D. L. R. Lorimer, *The phonology of the Bakhtiyārī*, London 1922; V. A. Zhukovski, *Material d'ra'izn. pers. novell*, iii: dialects of the Bakhtiyārī Čarlang and Haftang, Petrograd 1922 (texts collected in 1883-6, vocabularies Bakhtiyārī-Russian and Russian-Bakhtiyārī); K. Hadank, in the preface to O. Mann, *Kurdische Persische Forschungen*, Berlin 1926, iii. On the Mamāsānī and Kūh-gāgh materials of Romaneski, cf. *Bull. Acad. de Russie* (1919), 432.

Literature. The Lur tribes and especially the Bakhtiyārīs have a rich popular literature, fairy tales, epic fragments, celebrating the exploits of their heroes (like Muḥammad Yāqī Khān Čar-Lang and Hāghīū Khānī Haft-Laugh), lyrics, songs sung at marriages (*wasnāq*) and cradle-songs (*lāghāgh*). These pieces are often pretty and full of sentiment; cf. the collections by O. Mann and Zhukovski (the latter published an article on Persian and Bakhtiyārī lullabies in the *Zhurn. Min. Narodn. Prosvyēd* [Jan. 1889]); D. L. R. Lorimer and E. O. Lorimer, *Persian*

tales, London 1919, 197-351; *idem*, *Bakhtiari tales* (translations only).

There are also Lur poets writing in the established literary forms: Husayn Kulī Khān Hāl-Lang (killed in 1882), Nadīmā Mamāsan, Dāstari, Fayḍ (still alive in 1902), Izādī (d. 1905), 'Alī Aghar Khān Nihāwandī (cf. O. Mann). A *Mir'as-nāma-yi Bakhtiari* by Shāykh 'Alī Akbar Mu'ammam was lithographed at Tehran in 1314. A *ghazal* by Muḥṣī Zulf 'Alī Kurānī was published by N. Y. Marr in the *Comptes Rendus de l'Acad. de P.U.R.S.S.* (1922), 55-8; according to Marr, a *tadhkira* of Bakhtiari poets compiled by 'Ummān-i Shāhid is in the library of Sālār-i Fāṭih. Another similar *tadhkira* comes from the pen of Ahmadi-yi Bakhtiari.

History. On the participation of the tribes of Khūzistān and Fārs in the fighting between Arabs and Persians in the early centuries of the Hijra, see *xurro*. The caliphs interested directly in the affairs of the country; especially in Lur-i Kūlik (q.v.). The fortunes of the Lurs were more closely associated with the Iranian dynasties ruling in Khūzistān, at Shīrāz, Isfahān, Hamadān and in the Zagros, so the Saffarids, Buyids, Kākwayhids, Hatawayhids and their successors of the family of Abu 'l-Shawk (see 'AMNĀTIYAS).

We have coins of the Būyids struck at Idhādī (Codrington). In 325/935 the Būyid army marched through Luristān (Sūs-Shāpūr-Kh'wast-Karadī). The Hatawayhid Kurds, whose capital was at Sarmādjī (south of Esfahān), extended their domains into the valley of the Karkhā. Shāpūr-Kh'wast (= Khurramābād) formed part of their possessions about 400/1009 (Ibn al-Athīr, ix, 89; *Taḡhrib al-nu'man*, ed. Amedroz, ii, 291, iii, 451). The Kākwayhid Garshāsp sustained a siege by the Sāldūks in Shāpūr-Kh'wast (434/1042). The *amirs* of this last dynasty later settled in northern Luristān: the family of Zangī b. Bursuk in Shāpūr-Kh'wast before 499/1105. Husām al-Dīn Alp-Kush at Dīsh-i Māhid on the Karkhā before 549/1154 (*Riḥlat al-jawād*, ed. Iqbāl, 283). A Turk Husām al-Dīn Shūhā or Akṣar is mentioned as lord of Luristān and of a part of Khūzistān between 547/1153 and 570/1174-5. A long inscription (Kūlik?) on a stone near Khurramābād is still undeciphered (cf. a copy in von Bode, ii, 298; Rawlinson thought he recognised in it the name of the Atābeg Shūhā' al-Dīn, but according to Curzon it has an earlier date (517/1123)).

In any case, all attempts from outside to subdue Luristān or to take parts of its territory affected the tribal system very little, the development of which came to a head at the coming of the Atābegs.

The principal source for the domestic history of the country is the *Ta'rikh-i guzida* (730/1330) based in turn on the *Zubdat al-iwā'id* of Dīwān al-Dīn al-Kāshānī (of which the Preussische Staatsbibliothek only has the first volume, no. 368 of Petsch's *Catalogue*). The *Madīna' al-ansab* (ca. 743/1342-3) is based on independent oral tradition, but is less accurate. The *Dīkhān-dāst*, although late (its author, Kādi Ahmad, died in 795/1367-8), uses unpublished data. The *Shāraf-nāma* (1205/1596) is based on the *Zubdat al-iwā'id* or perhaps a good copy of the *Ta'rikh-i guzida*. According to these sources, which supplement the statements of the Arab geographers, the situation in Luristān about 300/912 was as follows:

The Shūl [see *SHULISTAN*]—who are not mentioned by the Arabs before the Mongol epoch—occupied a part ("half") of Luristān. The *wilāyat* of Shūlistān proper (*Ta'rikh-i guzida*, 537, 539, 53) had a governor

named Nadīm al-Dīn Akbar (according to the *Madīna' al-ansab*, the title Nadīm al-Dīn was hereditary among the Shūl), while the Lur territory under the Shūl (probably Kūh-Gū) had a *ptāgh* Sayf al-Dīn Mākām whose family had been prominent in the country since the Sasanid period; he was of the Rūzbihān tribe, which the *Ta'rikh-i guzida* mentions among the Lur tribes. The rest of Luristān was ruled by a family of Lur princes (independent of the Shūl), of whom Badr ruled in the Great Lur and his brother Mansūr in the Little Lur. Their dates are uncertain. Badr's successor was his grandson Naṣr al-Dīn Muḥammad b. Khūfī b. Badr (according to the *Madīna' al-ansab*, Naṣr al-Dīn was a nephew of Aṭrang (Rang) b. Muḥammad b. Hīlāl). Naṣr al-Dīn was deposed by the Fadlawī Kurds, who founded the dynasty of the Atābegs of the Great Lur and relied for support on tribes who came from outside Luristān (cf. above, under *Ethnology*). The same Fadlawī drove the Shūl out of their settlements.

We know nothing of Mansūr, brother of the above-mentioned Badr. The tribes of Little Lur were directly under the caliphs, and in the north were subjected to the invaders. The founder (in ca. 580/1184) of the native dynasty of the Atābegs of Lur-i Kūlik (q.v.) had to dispose of a rival Surkhāb b. 'Ayyār (probably a scion of the dynasty of Abu 'l-Shawk which was called 'Ayyār/Annār; see 'AMNĀTIYAS).

The history of the two dynasties of the Atābegs is filled with feuds, murders and executions, but in domestic affairs the state of the country was fairly prosperous. The Atābegs built bridges and *madrasas* (Ibn Baṭṭāta) and secured a peaceful existence for the inhabitants (cf. *Ta'rikh-i guzida*, 530). The revenues of each of the two Atābegs were estimated at a million *dirhams*, while each of them paid to the Mongol treasury a tribute of 91,000 *dirhams* only (*Nasihat al-jalāl*, 70).

In the interval between the Mongols and the rise of Timūr, the two Atābegs were vassals of the Muḥallafids. In 788/1386 and 795/1393 Timūr ravaged Little Lur, but treated the Lord of Great Lur more kindly. In 795/1393 Timūr passed through Kūh-Gūg and Shūlistān. The Timūrids consolidated their power in Luristān, and in 837/1433-4 the last Atābeg of the Great Lur disappeared.

Safawid period. The lords of the Little Lur maintained their position, and by intrigue even succeeded in extending their power over the plain to the west of the mountains of Puḡh-i Kūh. After the execution of Shāh-wardī Khān, Shāh 'Abbās installed in his place a *wālī* descended from a lateral line of the old family. The possessions of this *wālī*, Husayn Khān, were, however, somewhat reduced.

After the disappearance of the dynasty of the Great Lur, the power had passed to the chiefs of the tribes composing this federation. Under Shāh Tahmāsp we find the title of *Sardār* of the local *wilāts* conferred on Tādj-Mīr, chief of the principal clan, the Astarakī. Tādj-Mīr, having neglected his duties, was executed and replaced by Mir Dīkhāngīr Bakhtiyārī (the Astarakī and Bakhtiyārī had come to Luristān after 600/1203-4; cf. *Ta'rikh-i guzida*). Dīkhāngīr, under the guarantee of Shāh Rustam of the Little Lur, pledged himself to supply annually to the Safawid treasury 10,000 mules. In 974/1566-7 the governor of Hamadān was sent to remind him of his obligation (*Shāraf-nāma*, i, 48). Henceforth, the Bakhtiyārī tribe becomes of the first rank and, as usual, gives its name to the whole confederation.

As to the Kūh-Gūg territory, it was governed by

Khāns of the Turcoman tribe (Shāh-Sewen) of Aghār settled among the Lurs. In 948/1586 a dervish impostor claiming to be Shāh Ismāʿīl II had a considerable success among the Dīkī, Dīawānī and Bāndārī tribes, who killed several Afghār governors. In 1005/1596-7, as a result of the excesses committed by the Afghār as well as by the Lurs, the governor of Fārs, Allāh-wardī Khān, established the direct centre of his government in Kūh-Gilū (Taʾrīkh-i ʿĀlam-āra, 198, 358).

We do not know under what circumstances at the end of the Safawid dynasty (Fārs-nāma-yi Nādiri) the group of Mamāsanī tribes, who had migrated into the Great Lur (after 600/1203-4) occupied the ancient Shāhīstān (q.v.).

After the Safawids: During the troubles provoked by the appearance of the Afghāns before Isfahān, the wālī of Luristān, ʿAlī Mardān Khān Faylī (a descendant of the Husayn Khān appointed by Shāh ʿAbbās), played a considerable part. With 5,000 of his men he took part in 1135/1722-3 in the defence of the capital. He was even appointed commander-in-chief of the Persian troops, but the other Khāns refused to take orders from him. When the Turks invaded Persia in 1137/1723, ʿAlī Mardān Khān abandoned Kāuramābād (which was occupied by Ahmad Pāshā) and retired to Khūzistān, from which he undertook a diversion against Baghdad. The Turks who had gone through the Bakhti-yārī country and reached Fīrūzān had to retire. Cf. ʿAlī Ḥazīn, Taʾrīkh-i aḥwāl, ed. Balfour, London 1832, 113, 134, 137, 248, who was an eye-witness of the events; Hanway, *The revolutions of Persia*, ii 135, 139, 168, 238; Malcolm, *History of Persia*, London 1829, ii, 60-1; von Bode, *Travels*, ii, 281-3; Von Hammer, *GOR*, iv, 227.

About the same time, several Bakhti-yārī khāns (Kāsim Khān, Saʿī Khān) are mentioned as resisting the Afghān and Ottoman invaders, but they did not agree well with ʿAlī Mardān Faylī. In 1137/1724 ʿAlī Muḥammad Husayn Khān Bakhti-yārī recognised as his successor a certain pretender who claimed to be prince Saʿī Mīrzā. The latter's headquarters were in Kūh-Gilū; he was not taken till 1140/1727-8 (Hanway, ii, 268, 338; Mubīnī-Khān, Taʾrīkh-i dīshān-guḡhā-yi Nādiri, Tabriz 1284, French tr. Jones, London 1770, p. xxvii). The Afghāns do not seem to have penetrated into the Bakhti-yārī country, and their expedition in 1136/1724 against Kūh-Gilū was a fiasco (Von Hammer, ii, 210; Malcolm, *op. cit.*, ii, 449). By the treaty of 1140/1727-8, the Afghān Aghraf ceded Luristān to Turkey with other western provinces. The Turks kept it (nominally) till 1149/1736, when Nādir re-established the status quo (Hanway, ii, 254, 347; Von Hammer, *GOR*, iv, 235, 317).

Under Nādir, a certain Turcoman chief named Bābā Khān Capashlu (Çewashlu) was appointed beglerbeg of Luristān-i Faylī. On the other hand, ʿAlī Mardān II Faylī was entrusted by Nādir with diplomatic negotiations in Istanbul. Nādir in 1145/1732 passed through Kūh-Gilū with his troops, where Muḥammad Khān Balūḥ (the claimant to Shīrāz) was defeated. The local Afghārs had to support Nādir, who was one of their tribe. Several expeditions were sent against the Bakhti-yārī, among whom a new chief ʿAlī Murād Mamlawand (Cahār-Lang) had collected together the melencontes. In 1145/1732 Bābā Khān Capashlu was sent against him for the first time. In 1149/1736-7 Nādir Shāh took the field against him in person, going via Dişpelak and Burburūd. The Bakhti-yārī country

was several times invaded, but the main blow was directed against the little-explored country south of Shūtarīn-kāh. ʿAlī Murād was captured and executed. The Bakhti-yārī were decimated and deported to Dīhm and Langar (in Khūzistān). A little later, a Bakhti-yārī detachment distinguished itself in the assault on Kandahār (Mabūd Khān, *op. cit.*, 116, 134, contains interesting geographical details; tr. Jones, i, 185, ii, 28; ʿAlī Ḥazīn, 232, 253; Malcolm, ii, 21).

The deported Bakhti-yārī returned from Khūzistān immediately after the death of Nādir (Taʾrīkh-i balūḥ Nādirīyya, ed. Mann, 26), and when the dynasty of the latter was extinguished, the Bakhti-yārī chief ʿAlī Mardān Khān (who is not to be confused with the two wālīs of Luristān-i Faylī) attempted to play a big part. In 1163/1750, along with Karīm Khān Zand, he set up at Isfahān a scion of the lateral line of the Safawids (Abī Dāwūd, under the name of Ismāʿīl III). The career of "guardian of the sovereign" acted by Nādir seemed to be certain for him also, but Karīm Khān gained the upper hand; the troops of ʿAlī Mardān, who included Lak of the tribes of Kalhur and Zangena, were defeated in 1165/1752; he escaped to Baghdad, but died there by the hand of an assassin; cf. Mīrzā Sādiq, Taʾrīkh-i qisṭ-guḡhā, quoted by Malcolm, ii, 61 and note; Von Hammer, *GOR*, iv, 475, 477; R. S. Poole, *The coins of the Shāhs of Persia*, London 1887, p. xxxv; Curzon, ii, 289.

Karīm Khān (q.v.), who had disposed of his Bakhti-yārī rival, was himself a Lak of the tribe of Zand, settled in the immediate neighbourhood of Luristān-i Faylī. On the movements of population in his time, see xviii and LAK. In 1200/1785, when Dīrʿār Khān Zand had to fall back on Shīrāz, a number of Lurs and of Turks assembled at Isfahān under former partisans of ʿAlī Murād Khān, but the town was soon occupied by Abī Muḥammad Nādir, who had nothing better to do than attack the Bakhti-yārīs (ʿAbd al-Karīm Shīrāzī, Taʾrīkh-i Zandiyya, ed. Beer, 29; Malcolm, *op. cit.*, ii, 179 ff.), which injured his popularity among the tribes.

The Lur Bakhti-yārī country was never completely assimilated during the century-and-a-half which the Kājārs reigned. A résumé of this history of the Bakhti-yārīs in the 19th century has been given by Curzon in ch. xxiv of his *Persia and the Persian question*. At first the Kunuzī family, descended from the brother of ʿAlī Mardān Khān (see above), came to the front, but the expedition of the governor of Isfahān Manuḡhī Khān Muḥammad al-Dawla (whose real name was Yenikolopov; he was an Armenian from Tiflis) in 1842 put an end to the career of the Ilkhānī Muḥammad Taki Khān of the Cahār Lang group, and the family did not recover. In ca. 1846 the Bakhti-yārīward for Baydarwand, a family which claimed to be descended from a shepherd named Papī rose to prominence in the Haft-lang group, and in spite of the assassination in 1848 of its chief Husayn Kāfi Khān (Hāghī Ilkhānī) by order of the governor of Isfahān, Nāṣir al-Dīn Shāh's eldest son Masʿūd Mīrzā Yūl al-Sultān, under whose jurisdiction the Bakhti-yārī country fell, the family held on to its wealth and importance. The tribal khāns did, however, now fall into a period of prolonged dispute over the leadership, with two factions of the Ilkhānīs and Hāghī Ilkhānīs on one side versus the Ilbēgi family on the other. Eventually, a basic principle of power-sharing between the two families was established which was to endure until 1936, when Rīdā Shāh Pahlavī placed the Bakhti-yārī country under standard Persian civil jurisdiction; until this time, the country enjoyed virtual autonomy under the

rule of the Ilkhānī and the Ilbegī. The Ilkhānī-Hājīdī Ilkhānī group in fact enjoyed a superior financial and political position, in part because from 1899 onwards they drew an investment income from Messrs. Lynch Bros, when the Bakhtiāri Road, connecting Ahwāz, Shūshār and Isfahān, was opened, and then after 1905 from oil concessions, whilst both families received subsidies from the British government during the First World War in return for Bakhtiāri support. The Bakhtiāris also played a considerable role in the Persian Constitutional period, in alliance with the Shīrī 'ulamā' and the urban-based constitutionalist reformers, achieving prominence in national as well as local affairs; by 1912 Bakhtiāri khāns held the governorship of seven cities in Persia, including Kirmān, Isfahān and Kāshān, and one was Prime Minister (Shams al-Sultān) and another Minister of War (Sardār Asad).

The centralising efforts of the Qājāris had more effect in Luristān-Faylī (formerly Lurī Kūtkī) in as much as, as a result of the governorship of Kirmānshāh of the energetic prince Muḥammad 'Alī at the beginning of the 19th century, the old family of the wālīs of Luristān found its rights reduced simply to the possession of Pushtī Kūh (see Čirkov, 227). The Pish-Kūh formed the Persian province of Luristān. Muḥammad 'Alī Mīrzā with troops and artillery marched through this province. In 1836 Rawlinson followed him at the head of his Gurkha regiment. After the famous expedition of Manučhr Khān (1841), his nephew Sultān Khān Khān Sahām al-Dawla, governor of Khūzistān, maintained order in Luristān, but for the second part of the 19th century Luristān was plunged more or less into a state of anarchy. It was not till 1900 that prince 'Ayn al-Dawla was able to restore order in Luristān, and at this time several explorers travelled freely in the disturbed province. But in November 1904 two British officers (Col. Douglas and Capt. Lorrimer) on their way to Kirmānshāh were attacked and wounded by Lurs. A considerable agitation was stirred up among the Lurs (and in western Persia generally) by the appearance among them of the rebel prince Sālār al-Dawla (several times after 1905). In spite of the efforts of the Persian government, Luristān remained closed till 1917, when with the help of foreign representatives several caravans went from Dīzful to Burūjird. About the same time, the Persian government conferred the rank of wālī of Pish-Kūh on Nāṣir 'Alī Khān Amrā'ī [see 1. ix]; cf. Edmonds in *Geogr. J.* (1922).

The advent of Ridā Khān, later (1925) Ridā Shāh Pahlavī, meant a declared policy by the central government of bringing the Bakhtiāri country into the normal framework of administration in Persia, part of which involved the forcible sedentarisation of semi-nomadic tribesmen; but with Ridā Shāh's deposition in 1941 and the period of weaker rule during the earlier years of Muḥammad Ridā Shāh's reign, many Bakhtiāris and Lurs reverted to the semi-nomadic way of life they had been accustomed to, and this last still prevails amongst an appreciable section of the estimated 300,000 Lurs and Bakhtiāris.

LUR-I BUZURG, a dynasty of Atābegs [see ATABAK] which flourished in eastern and

southern Luristān between 550/1155 and 827/1423, the capital of which was Lūhādī (q.v.) or Mālamīr.

The aponymous founder of the dynasty, also known as Faḡlawī, was a Kurd chief of Syria named Faḡlawī. His descendants (the *Ḍiḡlān-ān*) mentions 9 predecessors of Abū Ṭāhir migrated from Syria, and passing through Mayyafarīqīn and Ḍaharbāyḡīn (where they made an alliance with the Amīra Dūbūdī [?] of Gilān), they arrived about 500/1106 in the plains north of Ushūrān-Kūh (Luristān).

Their (1) chief Abū Ṭāhir (b. 'Alī) b. Muḥammad distinguished himself in the service of the Salghurid Sanjar (543-56/1148-61) in an expedition against the Shābānkāra (q.v.). As a reward, Sanjar gave him Kūh-Gilūya and agreed to send him to conquer Luristān. He succeeded in this. Abū Ṭāhir assumed the title of Atābeg, and later quarrelled with Sanjar and made himself independent (ca. 550/1155). (The *Maḡmā' al-awṣā'* seems to confuse several individuals under the name Kā'id 'Alī, to whom it attributes the following successes: the defeat of the Shūl (q.v.), the deposition of Nāṣir al-Dīn, last descendant of Badr, ruler of Luristān, and the defeat of the Khūzistān troops commanded by the Turk Ishāq.)

Under the son of Abū Ṭāhir, (2) Malik (sic) Ḥazārāsp (560-26 or 650/1204-29 or 1232?), Luristān prospered, and new Arab and Iranian tribes flocked into it. Ḥazārāsp drove out of Luristān the last remnants of the Shūl and invaded Luristān proper. The Shūl migrated to Fārs. Ḥazārāsp disputed with the Salghurids the possession of the fortress of Māndjash (Mandjash, south-west of Mahānīr). The possessions of Ḥazārāsp were extended up to a distance of 4 *farṣaḡ* from Isfahān. The caliph al-Nāṣir (575-622/1180-1225) confirmed to Ḥazārāsp the title of Atābeg. On the other side, Ḥazārāsp maintained friendly relations with the Khūzistānī Shāh Muḥammad and gave his daughter in marriage to his son Ghuyūsh al-Dīn (Dūwayf-Boyle, II, 383-7, 471). (The *Ḍiḡlān-ān* mentions two sons of Ḥazārāsp: 'Imād al-Dīn (d. 646/1248-9) and Nuṣrat al-Dīn Kulha (d. in 649/1251-2); the former bought Zardē-Kūh, where several members of the family were afterwards interred.)

(3) Tikla (ca. 655-6/1257-8), son of Ḥazārāsp and his Salghurid wife, successfully withstood four attacks on him by the Salghurid Atābeg of Fārs, who was indignant among other things at the expulsion of the Shūl from Luristān. Tikla took from Ḥusūn al-Dīn Khalīlī (d. 640/1242-3?) certain districts of Lur-I Kūtkī. He defeated the generals sent against him from Khūzistān by the caliph. During the Baghdad campaign of Ḥölāḡū Khān (655-6/1257-8), Tikla accompanied him in Kitbuka Noyan's division (*ḡunīn*). He did not, however, conceal his feelings about the treatment inflicted on the caliph and Muslims. Ḥölāḡū took umbrage at this, and Tikla fled to Luristān and shut himself up in Māndjash. Ḥölāḡū pardoned him, but later changed his mind and had him executed in Tabriz. Tikla was buried at Zardē-Kūh.

(4) Shams al-Dīn Alp Arghūn succeeded to his executed brother and ruled for 15 years. He led a nomadic life. His winter residence was at Lūhādī and at Sūs (probably Sūsān on the Kārn above Shūlātar) and his summer one at Dīlāy-i sard (on the upper waters of the Zardē-rūd) and at Būzūf (source of the Kārn).

His son (5) Yūsuf Shāh had spent his youth with

Abaka Khān (663-66/1265-62) and even after being appointed in his father's stead, remained at the Mongol court with 200 horsemen. He took part in the war against Burāq Khān (97-101), and distinguished himself in a skirmish with the Daylamis. To the possessions of Yūsuf Shāh, Abaka added Khūzistān, the region of Kūh-Gilūya and the towns of Firūzān (7 farsakhs above Isfahān) and Durbādghān (Gul-pyāgān). Yūsuf Shāh went to Kūh-Gilūya and attacked the Shāh settled in the modern Mānāsūt country east of Kūh-Gilūya. After the death of Abaka, Yūsuf Shāh was forced against his will to go with 2,000 cavalry and 2,000 loot to the help of Ahmad Takūdār. The latter was defeated (683/1284), and the Lurs retreated from Tabas to Natanz across the desert, where the majority died of thirst. After the accession of Arghūn, Yūsuf Shāh went to pay him homage and interceded on behalf of the former vizier Khwādja Shams al-Dīn, who had taken refuge in Luristān (cf. d'Obisson, IV, 5).

His son (6) Afrāsiyāb sent his brother Ahmad to the court of Arghūn while he himself remained in Luristān, where he put to death the members of the former vizier's family. Their relatives having taken refuge in Isfahān, Afrāsiyāb sent his kinsmen in pursuit of them. At this moment arrived the news of the death of Arghūn (696/1291). The Lurs killed the Mongol governor of Isfahān. Afrāsiyāb appointed members of his family to govern in Hamadān, Fars and in the territories reaching to the Persian Gulf, and even began to march on the capital. The Mongol general Amir Turak was defeated at Kūhrūd or Kūhrūd [p.u.] near Kūshān. Gaykhātū Khān sent Mongol troops against Afrāsiyāb and troops from Lur-i Kūck. Afrāsiyāb shot himself in Māndjāchi, but after some time went to Gaykhātū who pardoned him. Returning to Luristān, Afrāsiyāb massacred his own relatives and a number of the nobles. Ghāzān Khān (694-703/1295-1304) at first showed himself favourable to Afrāsiyāb, but in 696/1297, on the complaint of the Amir Harkūdāq of Fārs, Afrāsiyāb was tried and executed at Nahāvand (?) of Fārahān.

The rank of Atābeg was next conferred on his brother (7) Nuṣrat al-Dīn Ahmad (696-730/1296-1330 or 733/1333), who had spent most of his life at the court of the Ilkhāns. According to the *Madīna*⁶ al-*ansab* he introduced Mongol institutions (*siyāsa mughāl*) into Luristān. Hamid Allāh Mustawfī praises his able and prudent administration, which repaired the damage done by Afrāsiyāb. He was a friend of men of religion and several books were dedicated to him, like the *Tārīkh al-ʿAḡam fi ahvāl-i mulūk al-ʿAḡam* of Faḡl Allāh Karwīnī. The *Madīna*⁶ al-*ansab* gives him the title of *shīr*. According to Ibn Baṭṭūṭa (*Rihla*, II, 29-30, tr. Gibb, II, 287-8), he built 260 *madrasas* (here = "berruities"), of which 44 were at Iḡhādī, and he had roads cut through the mountains.

His son and successor (8) Rukn al-Dīn Yūsuf Shāh II (737-40/1333-40) was also a just ruler. His lands, according to the *Madīna*⁶ al-*ansab*, extended from Bagra and Khūzistān to Lālamūstān (?) and Firūzān. He was buried in the *madrasa* of Ruknābād.

His successor was his son (according to Ibn Baṭṭūṭa, his brother) (9) Muḡaffar al-Dīn Afrāsiyāb II (Ahmad). Ibn Baṭṭūṭa, travelling via Māghāl-Rāmus-Tustar, visited the capital Iḡhādī [p.u.] or Mālamir. He found the prince addicted to wine. The Arab traveller describes the peculiar customs of the Lurs, which he witnessed at the burial of the son of the "sultān". The latter's possessions included Tustar (Shūghtar) and extended to Carwā

al-Rukh (the modern Kahyarukh in Čarmahāl west of Firāzān). During the ten days the Arab traveller took to cover this distance, he found shelter every night in a *madrasa*. At the same time (740) Eṣmāʾ Allāh Mustawfī mentions among the possessions of the Great Lur Dīshak (apparently the district to the north-east of Luristān and west of Gulpyāgān).

Next follows an obscure period. According to the anonymous historian of Mirzā Iskandar, the successor of Afrāsiyāb was his son (10) Nawr al-Ward ("rose-bud"), who ruled from 756/1355 (?) to 756/1355 and dissipated the treasures of his ancestors. According to the *Dihān-dāst*, Muḡammad Muḡaffar of Fārs (713-60/1313-50), learning of his dealings with Abū Isḡāk Iḡdī, had him blinded at Sūs in 756/1355. His cousin (the *Dihān-dāst* has "nephew")

(11) Shams al-Dīn Paṣṡang b. Yūsuf Shāh II (?) succeeded him and ruled from 756/1355 to 780/1378. At this time, Luristān became involved in the civil wars of the Muḡaffarids [p.u.]. When Shāh Maṣṡūr, making Shūghtar his headquarters, began a series of raids on the lands of Paṣṡang, Shāh Shūḡḡḡ (elder brother and rival of Maṣṡūr, d. 766/1384) came to the help of Paṣṡang. We have coins of 762/1362 and 764/1362-3 struck at Iḡhādī in the name of Shūḡḡḡ (S. Lane-Poole, *Cat. of oriental coins in the Brit Mus.*, VI [London 1881], 235, 237). After the death of Paṣṡang, a struggle began between his two sons, (12) Malik Fir Ahmad and his younger brother (12bis) Malik Hūṡṡang, in which the latter was killed. (According to the anonymous historian of Iskandar, if he has been rightly understood by Howarth, Ahmad and Hūṡṡang were sons of Nawr al-Ward and the former was the immediate successor of his father.) Shāh Maṣṡūr drove out Fir Ahmad and appointed in his stead a nobleman named Malik Uways. When Timūr passed through Luristān in 795, Fir Ahmad came to meet him at Rām-Hurmuz. Timūr later received him graciously at Shīrāz, confirmed him by a decree (*il fawṡḡā*) in his hereditary possessions, and allowed him to repatriate 2,000 families of Lurs deported by Shāh Maṣṡūr. In spite of this, in 798/1395-6 Timūr took as hostages to Samarkand the brothers of Fir Ahmad and Afrāsiyāb. After the death of Timūr, Mirzā Fir Muḡammad imprisoned Fir Ahmad in Kūbandiz. He was restored in 812/1408-9, but met his end in a popular rising. The son of Fir Ahmad (13) Abū Saʿfīd, kept for two years a hostage at the court of Mirzā Iskandar at Shīrāz, succeeded his father and died in 820/1417. His son (14) Shāh Husayn died in 827/1424 by the hand of his relative (15) Ghayyāḡ al-Dīn b. Kāwūs b. Hūṡṡang (12bis). The latter seized power, but the Timūrid Sulṡān Ibrāhīm b. Shāhruḡ sent troops to expel him and thus ended the rule of the Faḡlawi family. Later, the power passed into the hands of local notables of the Bakhtiyārī tribes (*Sharaf-nāma*, I, 48).

LUR-I KÜÇIK, a dynasty of Atabegs [see **ATABEG**] which ruled in northern and western Luristān between 580/1184 and 800/1507 with *Khurramābād* as their capital. The Atabegs were descended from the Lur tribe of *Djāngurū* (*Djāngardi*?) The dynasty is also known by the name of *Khurshīdī* from the name of the first Atabeg. (It remains to be seen if this name is connected with that of Muḥammad *Khurshīd*, vizier of the former rulers of Luristān before the rise of the Atabegs of Lur-i Buzurg.) After 730/1330, the power passed to another line which later claimed to be of 'Alid descent; at this time also, the title *malik* succeeded that of *atabeg*.

The ancestors of the *Khurshīdīs* had entered the service of Husām al-Dīn (of the Turk tribe of *Shūhli* or *Shūhli*, who ruled Luristān and *Khazistān* about the end of the Saljūq period (ca. 550-80/1155-84?)).

(1) *Shudjā'* al-Dīn *Khurshīd* b. Abī Bakr b. Muḥammad b. *Khurshīd* was at first *shihna* of a part of Luristān on behalf of Husām al-Dīn, but after the death of the latter (in 590/1194-5 or 580/1184-5) became independent lord of the whole of Lur-i Kūçik. He waged war on the *Djāngawī* (the tribe in which he had originated, but which was then being ruled by his rival *Surkhsh* b. 'Ayyār) and besieged their stronghold *Diz-i Siyāh* (in the district of *Mānruḍ* and in the *aldayar* of *Samhā*). The inhabitants handed all *Mānruḍ* over to him, but the caliph ordered *Shudjā'* al-Dīn to deliver up to himself the stronghold of *Māngarra* (*Mūngerre* north of *Kūsh*). In compensation, *Shudjā'* received the district of *Tarāzāk* in *Khazistān*. *Shudjā'* al-Dīn drove back the *Buyāt* Turks who were ravaging Luristān. He led a nomadic life and spent the summer at *Krit* (in *Bālā-Girwa*) and the winter at *Dular* (*Fih-i Lurān* in *Puht-i Kūh*?) and at *Malāb* (?). He died a centenarian in 622/1224 and his tomb was venerated by the Lurs. His son *Badr* was killed by his nephew

(2) *Sayl* al-Dīn *Rustam* b. *Nūr* al-Dīn, who became Atabeg and was a good ruler. *Rustam* was succeeded by his brothers first (3) *Shāraf* al-Dīn *Ahū Bakr* and next (4) 'Izz al-Dīn *Gārshāp*. The latter married the widow of *Abū Bakr*, *Malika Khātūn*, who was the sister of *Sulaymān Shāh Ayya*, later commander-in-chief of the caliph al-Musta'īim (*Abū* should be altered to *Ayya*, name of a tribe or a district in the time of the last Saljūqs; cf. *Rāwaf al-jūdi*, ed. 1861, 346; *Djauyār Boyik*, II, 421-2; *Nushat al-ḥulūd*, ed. Le Strange, 107; Desfrémery, *Recherches sur quatre princes d'Hamadan*, in *JA* [1847], 277). When (5) *Husām* al-Dīn *Khālīl* b. *Badr* b. *Shudjā'* killed *Gārshāp*, a struggle ensued between him and *Sulaymān Shāh* (*Shihāb* al-Dīn?). The Lurs took *Bahār* (near *Hamadān*), but finally *Khālīl* was defeated and killed near *Shāpūr-Rūst* in 640/1242.

His brother (6) *Badr* al-Dīn *Mas'ūd* went to the court of *Mangū* and returned in the train of *Höleḡū*. This devout man, an authority on *Shāfi'i* law, ruled till 658/1260. He showed great kindness to the family of *Sulaymān Shāh* when the latter was executed at the taking of *Baghdād*. The sons of *Mas'ūd* were executed by *Abaka*, who appointed as Atabeg (7) *Tādī* al-Dīn b. *Husām* al-Dīn *Khālīl*, also executed by *Abaka* in 677/1278-9.

He had two immediate successors, the two sons of *Mas'ūd* of whom (8) *Felsk* al-Dīn *Hasan* ruled a part of Luristān (*alāla*, *wayā*) and (8 bis) 'Izz al-Dīn *Husayn* ruled the crown domains (*indjā*). The number of their troops was 17,000. They chastised the *Buyāt* and reunited under their control all the lands between *Hamadān* and *Shūshār* and between *Isfahān* and the Arab lands. Both died in 692/1293.

Gaykhātū appointed as their successor (9) *Djāmāl* al-Dīn *Khūr* b. *Tādī* al-Dīn, who was killed in 693 near *Khurramābād* by (10) *Husām* al-Dīn 'Umar b. *Shams* al-Dīn "Darnak" b. *Shāraf* al-Dīn b. *Tahamtan* b. *Badr* b. *Shudjā'*, who relied for support on the *Mongol* tribes settled in the lands adjoining Luristān. The other rulers did not recognise this usurper and he had to make way for (11) *Shams* al-Dīn *Mahmūd* b. *Nūr* al-Dīn b. 'Izz al-Dīn *Gārshāp*, who slew a certain *Shihāb* al-Dīn *Hyās* and in turn was executed by *Khātūn* in 693/1296.

(12) 'Izz al-Dīn *Muḥammad* b. 'Izz al-Dīn (8 bis) was a minor, and his cousin *Badr* al-Dīn *Mas'ūd* (son of 8) obtained from *Ölǵaytū* the title *Aibeg* and ruled over a part of Luristān (*alāla*), but later 'Izz al-Dīn fully established his authority. After his death (716/1316 or 720/1320 his widow (13) *Dawlat Khātūn* retained a semblance of authority while the real power was in the hands of the *Mongols*. Such was the state of affairs when *Hamd-Allāh Mustawī* was writing his *Ta'rikh-i gurida* (ca. 730/1329-30). Later, the *maliks* (who according to the anonymous historian of *Mirzā Iskandar* became the wife of *Yūsuf Shāh* of the Great Lur) found herself forced to surrender the throne to her brother (14) 'Izz al-Dīn *Husayn* who received investiture from *Abū Sa'īd* and ruled for 14 years. His son and successor (15) *Shudjā'* al-Dīn *Mahmūd* was killed by his subjects in 750/1349-50.

(16) The *Malik* 'Izz al-Dīn b. *Shudjā'* al-Dīn was only 22 when his father died. The vicissitudes of his life are known from the record of them in the *Zafar-nāma* in 785/1383; the *Muzaffarid Shāh* *Shudjā'* with his army visited *Khurramābād* and married the daughter of 'Izz al-Dīn. Another of his daughters was married to *Aḥmad* b. *Uways* *Djālā'ir*. When *Timūr* arrived in *Persia* in 785/1385, he was told of the depredations of the Lurs of 'Izz al-Dīn. Setting out from *Firūz-kūh*, *Timūr* by forced marches reached Luristān. *Burūjird* was left waste, and the fortress of *Khurramābād* razed to the ground. The ringleaders were thrown down from the tops of the cliffs. The fate of 'Izz al-Dīn is unknown and we do not know if he was one of the Atabegs of Luristān to whom in 789/1387 *Timūr* granted an audience at *Shirāz*, but according to the anonymous historian of *Mirzā Iskandar*, 'Izz al-Dīn was captured in 790/1388 in the fortress of *Rūmryān* (*Armiyān*, *Wāmyān*, situated near *Burūjird*) and deported with his son to *Turkeṣtān*. At the end of three years both father and son were released. In 793/1391 'Izz al-Dīn played a part in the aggrandisement of the *Muzaffarid* *Zayn* al-'Abidin, son of his old suzerain *Shāh Shudjā'*. When in 795/1393 *Timūr* returned to *Persia*, he went

from Burğird to Shāhtar. Luristān was overrun piece by piece and laid waste by the troops of Mirzā 'Umar, but 'Izz al-Dīn escaped his pursuers. In 798/1395-6 prince Muḥammad Sulṭān, governor of Fārs, extended his authority over all Luristān and Khūzistān. In 805/1402-3, we find a mention of the restoration of the fortress of Armiyān (?) near Burğird ordered by Timūr, and under 806/1403-4 the *Zafar-nāma* mentions the arrival in Baykān from Nihāwand of a courier bearing the head of 'Izz al-Dīn, whose skin had been stuffed with straw and publicly exposed. His son (17) Sūdī Abmād, whose irregularity in the payment of tribute seems to have provoked the punishment of his father, regained his possessions, after the death of Timūr in 807/1405 and ruled till 815/1412-13 (or 825/1422). (18) Shāh Husayn ('Abbās'), i.e. descendant of 'Abbās b. 'Alī b. Abī Tālib, another son of 'Izz al-Dīn, took advantage of the decline of the Timūrids to extend his territory. He plundered Hamadān, Gulphāyān, Isfahān and even undertook an expedition to Shāhrasūr, where the Baktariy Turks slew him in 821/1406-7 (or 823/1408-9). His son (19) Shāh Rustam supported Ismā'īl I; at this period, the lords of the Little Lur had already adopted the theory that they were of 'Alid descent. The son of Rustam (20) Oghar (or Oghuz) accompanied Shāh Tāhmāsp on his campaign of 940/1533-4 against 'Ubayd Allāh Khān, and during his absence his brother (21) Dīhāngīr seized power. He was executed in 949/1542-3. The governor (22a) of his son (22) Rustam Shāh handed over the latter to Tāhmāsp Shāh, who imprisoned him in Alamūt while Muḥammadī, another son of Dīhāngīr, was hidden by the Lurs at Cāngula. An impostor in Luristān gave himself out to be Shāh Rustam Tāhmāsp, then released the true Rustam, who recovered his *sed* but had to hand over a third of it (*do dīng*) to his brother (22 bis) Muḥammadī. At the instigation of the wife of Shāh Rustam, the governor of Hamadān seized Muḥammadī, who was shut up in Alamūt. The sons of Muḥammadī plunged Luristān and the adjoining provinces into great disorder. Ten years later Muḥammadī escaped, and conquered Luristān while Shāh Rustam took refuge at the court of the Shāh. Muḥammadī established good relations with Tāhmāsp and Ismā'īl II, but after their death submitted to the Ottoman Sulṭān Murād III (942-1003/1574-95), which earned him an extension of his territory by the cantons west of Puḡht-i Kūh: Mandak, Djesān, Badrūt and Tursak. But relations with the Ottomans soon became strained, and Muḥammadī became reconciled with the Sāfawids.

(24) Shāhwardī b. Muḥammadī, who had escaped from Baghdād where he was living as a hostage, received investiture from Shāh Muḥammad Khudābānda after his father's death. At the time of the occupation of Nihāwand by the Turks, Shāhwardī showed some signs of independence. In 1007/1592-2 good relations with Shāh 'Abbās were re-established, with whom Shāhwardī made the root of his alleged descent from 'Abbās b. 'Alī and his Shī'ism (*kaḡayyā*) as 'Abbāsgīrī. Shāh 'Abbās married his sister and gave him a Šāfawid princess in marriage. In 1007/1593-4 Shāhwardī in a pitched battle killed the governor of Hamadān, Oghurlu Sulṭān Bayāt, who was trying to levy taxes in Burğird. Shāh 'Abbās, filled with wrath, left the Khūzistān front and hastened to Khurramābād. Shāhwardī crossed the Saymara (Karkūd) and escaped to Baghdād. Luristān was given to Sulṭān Husayn b. Shāh Rustam. In 1007/1594-5 Shāhwardī

was paroled and restored, but he was not long in relapsing. In 1006/1597-8 Shāh 'Abbās took the field against him a second time. Shāhwardī was besieged and slain in the fortress of Cāngula (in Puḡht-i Kūh). Husayn Khān b. Manṣūr Beg Salwāl (?) was given Luristān, except Saymara, Hindūas (?) and Puḡht-i Kūh, which were given to Tāhmāsp Kulī Ismā'īl. This may be regarded as the end of the dynasty of the Atabegs of the Little Lur, although the dynasty of wālis of Luristān (later of Puḡht-i Kūh) claims descent from Husayn Khān, who was a cousin of Shāhwardī.

(V. MINORSKY)

LURISTĀN, "land of the Lurs", a region in the south-west of Persia. In the Mongol period the terms "Great Lur" and "Little Lur" roughly covered all the lands inhabited by Lur tribes. Since the Sāfawid period, the lands of the Great Lur have been distinguished by the names of Kūh-Gūš and Bakhṭiyārī. At the beginning of the 18th century, the Mamāsanī confederation occupied the old Shāstīn [g.v.] and thus created a third Lur territory between Kūh-Gūš and Shirāz.

It is however only since the 16th century that Lur-i Kūrk [g.v.] has been known as Luristān (for greater precision it was called Luristān-i Fayl). In the 19th century, Luristān was divided into two parts: 1. *Piḡh-Kūh*, "country on this side of the mountains" (i.e. east of Kabr-Kūh) and 2. *Puḡht-i Kūh* (country beyond the mountains), i.e. west of Kabr-kūh. At the present day, the term Luristān usually means *Piḡh-kūh*, while *Puḡht-i kūh* means the Fayl country.

The Mamāsanī territory and the Kūh-Gūš form part of the provinces of Fārs. The capital of the Mamāsanī is at Fahliyān. Kūh-Gūš (Kūh-Dīlāya, Kūh-Gāš) stretches from Bāgh (west of Fahliyān) to Bībāhān; this last town is the main centre for the tribes of Kūh-Gūš. To the south, the Kūh-Gūš tribes descend as far as the Persian Gulf. The mountains of Kūh-Gūš and the frontier between its tribes and the Bakhṭiyārī are not yet well-known. The chief rivers of Kūh-Gūš are the Abī Shīrīn which is formed by the junction of the Khayrābād and the Zohra, and in its lower course runs via Zaydān and Hindiyān, and the Abī Kurdistān or Dījārīn, one branch of which later runs into the Karūn [g.v.] and the other towards Dawrāk. On Kūh-Gūš, see the valuable *Fārs-nāma-yi Nāsrī* of Hasan Fāṣāḡ [g.v. in Suppl.], the *Itinéraires* of Stoeckler, Haussknacht (*Routes en Orient*, Map iv), Wells and Herzfeld, and the general account in Bode, I, 251-89; II, 327-9; Ritter, *Erkunde*, ix, 132-44, is now very much out of date.

The Bakhṭiyārī lands stretch from Caharmāhāl (west of Isfahān) to Shāhtar; to the south, the Bakhṭiyārī march with the Kūh-Gūš, and to the north they go beyond the northern banner of Luristān (Shuturān-kūh, etc.). They are found at Faraydan, Burburūd, Dīlāpāgh, and in the cantons around Burğird (even before 1840 many villages had been purchased here by Muḥammad Taqī Khān

Cahâr-Lang). Roughly speaking, the Bahktiyârî occupy the upper basin of the Zand-rûd and of the Kârûn above Shûshîtar. (The works of Layard, Sawyer, Mrs. Bishop, Curzon etc. give a very accurate picture of this mountainous country, in the centre of which rises the Kûh-i Raag (12,000 feet high) which forms the watershed between the Persian Gulf and the central Persian plateau. (It may be asked if the name Kûh-i Raag is not the Mongol *küen*, "encampment, laager", found in Luristân?))

The frontier between the Bahktiyârî and the Lurs proper follows the western branch of the Âb-i Diz, an important tributary of the Kârûn. Luristân (Pish-kûh) is bounded on the east and west by the convergent streams of the Âb-i Diz and the Kakhâr, while in the north the range of the Chûh-nâ-bâghân, Garrû, etc. separates Luristân from Nihâwand and Sîlâghor (district of Burghîd). To the west of Karkhâ, Pûshî-i Kûh begins. In the northwest, the frontier of Luristân runs to the southwest to the districts of Hûlaytân and Harsîn, which belongs to the province of Kirmîshâh.

The chief left bank tributary of the Karkhâ is the Kashgân (Rawlinson: Keshaghan) which is formed by two arms. The northern arm with its tributaries drains the beautiful plains of Hûr-rûd, Altghar and Khâwa. The southern arm, separated from the northern one by the Yâfta-rûd range, takes the name of the town of Khurramâbâd (q.v.) near which it passes. After the confluence of the two arms, the Kashgân, running south-westwards, receives on the left bank the combined waters of the Kâwgrû and Tâyin, which flow from Kûh-i Haftâd Pahlû (south of Khurramâbâd) and the northern slopes of the Kûh-i Gird. These two ranges are at right angles to the mountains which follow the right bank of the Âb-i Diz, which they separate from the valley of the Karkhâ. On the right bank the Kashgân receives the Mîdiyân-rûd, "river of the mare". Above Kashgân, the Karkhâ receives on its left bank several tributaries of less importance still little known (Rûhâr, etc.). Below Kashgân and also on the left bank, the Karkhâ receives the Fânî, Laytûm (Lohlum) and Âb-i Zâl. This last river with its tributaries, Anîrak, etc., rises in the southern slopes of the Kûh-i Gird. The topography of the right bank of the Âb-i Diz is not well-known. The sources of the Baladrûd and its right bank tributary the Kîr-âb is a considerable distance to the north. The Baladrûd flows into the Âb-i Diz between Dizfûl and Susa. The Kîr-âb receives on its right bank the waters of the Kûl-i-âb which come down from the high valley of Mûngarra, which with the peaks that surround it form a kind of natural bastion and separate the basin of the Baladrûd from that of the Âb-i Zâl. The Şahrî-yî Lur plain, formerly well-irrigated, lies north of Dizfûl and south of Kîr-âb ("pitch-water"), whose naphtha spring has been known since ancient times. It was probably here that Darius settled a colony of Greeks (Ritter, ix, 203).

The interior of Luristân presents a series of mountain ranges, which stretch north-westwards to south-eastwards, the direction usual in Persia, and rise one behind the other between the plain of Susiana and the northern barrier (height about 9,000 feet).

Ancient history. The lands now occupied by the Lur tribes have been inhabited since the period before the arrival of Iranians in them. This region, being at a considerable distance from Assyria, was mainly under the influence of Elam; Susa, where there have been found traces of occupation going back to the third millennium B.C., lies just at the

entrance to the mountains of the Little Lur. The purest traces of the local culture and of this alone are found more to the south-east. Just as the Atlâbes of the Great Lur had for their capital Ishadî (q.v.) or Mâlanîr, so in very early times, the lords of this district, the kings of Asiâpî (Hapirtî?), whatever were their relations with the rulers of Susa, had control at least of the Kârûn valley. The site of Mâlanîr (cf. de Bode, Layard, Jequier in de Morgan, *Délégation en Perse*, 1902, II, 133-43. and Hüsing, *Der Zagros und seine Völker*, Leipzig 1903, 49-50), with its purely indigenous (Elamite, non-Semitic) inscriptions and bas-reliefs, is an important point. The discovery by E. Herzfeld (*Reisebericht*, in *ZDMG* [1926], 259) in the Mâmkasî region of a bas-relief and bricks bearing Elamite characters (1,500-1,000 B.C.) is valuable as indicating the extent of Elamite penetration into the Lur mountains. Kûh-Gîlo lying between Susiana and Persis may correspond to the still-unknown region of Anghân [Anzan], out of which came the ancestors of Cyrus the Great. On the survival of this name near Shûshîtar, cf. *Grundr. der Iran. Phil.*, II, 418 (according to Rawlinson: Assin).

The antiquities of the valley of the Upper Kârûn (the two Sûsan, Lurdagân, the mounds of Seim, Tûr and Irâdî) are insufficiently known (Layard, Sawyer). According to Sawyer, the higher Bahktiyârî lands are "singularly devoid of any ancient landmarks".

Mention should be made of the great importance of Luristân, from at least the later fourth millennium B.C., as a centre for metal-working, with an industry distinguished from other local ones by its greatly-varied and richly decorated range of bronze-work, made by thecire-perdue process. This bronze-work has some sub-human decoration, but is especially notable for animal motifs. This zoomorphic decoration probably stemmed originally from Elam, which much influenced Luristân till the destruction of Elamite political power by Nebuchadnezzar I (ca. 1124-1103 B.C.) of Babylon, after Babylonian influence is visible in Luristân art. The bronze industry continued until the 7th century B.C., in association with equally fine ironwork; see P. R. S. Moorey, *Prehistoric copper and bronze metallurgy in Western Iran (with special reference to Luristân)*, in *Iran, Jnal. of the BIPS*, vii (1969), 123-53.

The western part of Luristân in the strict sense of the word is known as Mâsâbâghân and Pûshî-i Kûh. No monuments of very great antiquity have yet been discovered in Pish-kûh except the caves (Median?) of Se-darîn between Mûngarra and Khurramâbâd, see Corio, 129. The early inhabitants of Luristân were the Kashgû = Kossaiot, who imposed their rule on Babylon between 1750 and 1650 B.C. The Achaemenids paid the Kossaiot for the right of passage by the Babylon-Ebathân route. These highlanders were temporarily subdued by Alexander the Great. Antigonus, pursued by Eumenes, traversed the heart of the Kossaiot country, according to Rawlinson on the route Pul-i-tang-Keiân pass-Khurramâbâd (Ritter, *Erdbkunde*, ix, 335). The Kossaians (who should perhaps be distinguished from the Kîsroet = Odôioi = Uwâdja = Khôz) spoke a language different from that of their neighbours, but in it we already find proper nouns borrowed from Indo-European. Cf. E. Meyer, *Gesch. der Altertümer*, 1/2, Berlin 1913, § 435. Hüsing, *Der Zagros*, 24, and Antran in *Les langues du monde*, Paris 1925, 283. (The name Kashgû has perhaps survived in that of the river Kashgân.)

It is also probable that northern Luristân was more or less dependent on the land of Ellipi, often

(V. MINORSKY)

LORCA, Lorca, a town of Eastern Spain lying between Granada and Murcia and having a population at present of 58,600. It is the ancient *Iluro* or *Heliocroca* of the Romans. In the Islamic period, it formed part of the *hīra* of Tudmīr (q.v.), and was famous both for the richness of its soil and subsoil and for its strategic position. Its *hīra* was one of the most substantial in Andalusia. It is situated at 2,400 feet above sea-level on the southern slope of the Sierra del Cāno, and dominates the course of the river Guadalquivir. Under Arab rule it usually shared the fortunes of Murcia, and reverted to Christian rule in 1266.

LORI [see LŪT].

LŪT, the Biblical Lot (*Genesis*, xii, 5-13, xvii-xix). The Qur'ān, where his story is told in passages belonging to the second and third Meccan periods, places Lūt among the 'envoys' whose career prefigures that of Muḥammad as a man in conflict with his compatriots, those at whom his message is directly aimed; the crimes of the 'people of Lūt' were, besides the refusal to believe, their persistence in vices such as lack of hospitality and homosexual practices, a misconduct punished, in spite of intercession by Ibrāhīm (q.v.), by the dispatch of angels of destruction who utterly devastated the sinful city, which is not identified by name, simply described as *al-mu'tafīḥa* (pl. *al-mu'tafīḥāt*), a transposition of the Hebrew word *maṣpeḥa* ('overturning'), used in the Bible in reference to the

destruction of Sodom and of its three sister cities. The city was buried under a shower of marked stones (*sigill*). Lût and his family were saved, with the exception of his wife, who disobeyed the prohibition and turned round during the flight. The relevant Kûr'anic data have been collected by H. Speyer. *Die biblischen Erzählungen im Qoran*, Gräfenhainichen 1931, repr. Hildesheim 1962, 151-8; and by R. Blachère, *Le Coran*, major edition, III, Paris 1952; index, 1203, single-vol. edition, Paris 1957, index, 721; see also R. Paret, *Der Koran. I. Übersetzung*, Stuttgart 1966, 130, II, *Kommentar und Randnotizen*, Stuttgart 1970, 265; W. Montgomery Watt, *Bell's Introduction to the Qur'ân*, Edinburgh 1970, 230 ff. and index, 117; D. Sidersky, *Les origines des légendes musulmanes dans le Coran*, Paris 1933, 46-8; presentation in apologetic form by the Muslim scholar 'Abd al-Wahhâb b. Sayyid Ahmad al-Nadîdî (ca. 1278-1350/1865-1941: see Zirikli, *A'âm*, iv, 333), *Kitâb al-anbiyâ'*, Cairo 1366/1966, 95, 122-28.

The "traditions" passed on by Kûr'anic commentators, historians and compilers of cautionary tales, rely for the most part on Biblical details which are not found in the Revealed Book, on elements borrowed from the Jewish *Aggadah* or freely invented; the iniquitous judgments of the people of Uddûm (Sodom), the theme of the bed of Procrustes, emphasis on the wickedness of Lût's wife, names attributed to anonymous characters in the Scriptural account; for details, see the article by B. Heller in *ET*; summary of Jewish legends, with sources, in Ginzberg's *The legends of the Jews*, Philadelphia 1909-38 (and re-impression), I, 245-7, v, 241, n. 175, not forgetting M. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, Leiden 1893, 132-42. We set forth here only a few references: al-Tabarî, *Tafsîr*, original edn., viii, 164-6, new edn. *Dâr al-Ma'ârif*, Cairo 1957, xii, 347-53; idem, *Annales*, I, 266 ff., 321, 325-43; al-Ya'qûbî, *Tarîkh*, ed. Houtsma, 22-4. Nadîf 1384/1964, 17-19, see Smîr, *Bizâ'el en Légende*, Leiden 1907, 30-2; a later version which (like al-Ya'qûbî) follows the Biblical text quite closely, by Rashîd al-Dîn, tr. K. Jahn, *Die Geschichte der Kinder Israels*, Vienna 1973, 35, 36, 38. Popular and cautionary versions: al-Jâzî'î, *Kitâb al-anbiyâ'*, Cairo 1325/1907, 65-7, Cairo 1371/1952, 64-6; al-Kisâ'î, *Kitâb al-anbiyâ'*, ed. I. Eisenberg, Leiden 1922-3, I, 245-9. In *jadîd* as properly defined, Lût appears in reference to Kûr'ân, XI, 82/80, in a context giving avoidance of the modesty of Muhammad; al-Bukhârî, *Ṣaḥîḥ*, *Anbiyâ'*, II (ed. Krehl, II, 347; *sulḥān* edition, repr. Cairo 1378/1958, iv, 279); Ibn Mâdjâ, *Sunan*, K, al-Fitan, 23, ad. M. Fu'âd 'Abd al-Bâqî, Cairo 1372/1953, no. 4962, 1335 ff.; see Weinsinck, *Concordance*, II, 165 ff.

On the basis of the proper noun Lût, and by association with the authentic Arabic root *l-w-ṣ* (with the sense of "sticking", "adhering"), a group of words was formed to indicate unnatural vice (see *LWV*).

In common with other "prophets" of the Kûr'ân, the figure of Lût was invested with a mystical significance by Ibn 'Arabî (s.v.), who considered him the symbol of the spiritual force that subdues the passions of the concupiscent soul (*Fuṣūṣ al-ḥikam*, 13, ed. Abu 'l-'Alâ 'Afîf, Beirut 1285/1946, 126-31 and editor's commentary, 155-62). In the same spirit are the reflections of the Indian Ṣūfî Shâh Wall Allâh (1703-62) in his *Taḥṣîl al-ḥādīth fi rumûṣ al-anbiyâ'*, abridged tr. J. M. S. Baljon, *A mystical interpretation of Prophetic tales by an Indian Muslim*, Leiden 1973, 20-1.

Bibliography: In addition to the sources mentioned in the main article, see J. Horowitz, *Koranische Untersuchungen*, Berlin 1926, 21, 26, 49 ff., 54, 136.

(B. HELLER — [G. VA]DA)

LŪT n. YAHYĀ [see *ABD* *muḥammad*].

LUTE [see *AL-'UD*].

LUTP (A), the opposite of *shidāq* [s.v.]. Derivatives of the root *l-p-f* are used in the Kûr'ân in two senses, as (a) kind (e.g., XLII, 18) and (b) subtilty (XXXI, 15; VI, 103; XXXIII, 34; LXVII, 14; XXII, 62). Senses (a) and (b) are linked by the idea of God organising matters in such a way as to bring about a beneficial state of affairs. It is this religious notion which is applied in the Arabic translation of Alexander of Aphrodisias' *Fi maḥādīd al-ḥikm* to refer to teleological direction in nature (265), and by Mūsā b. Maymūn to refer to God's stratagem in the hardships which he obliges his creatures to endure (III, 32, 328). The term is applied theologically to the notion of divine grace, labour or help, being developed by the Mu'tazila to deal with an aspect of human freedom and its relation to divine omnipotence. Divine favour makes it possible for man to act well and avoid evil ('Abd al-Jabbār, *Sharḥ*, 529). It is not granted to the sinner, whom God neither prevents from acting well nor directs to commit evil. 'Abd al-Jabbār, who provides the most systematic treatment of *lutf* in the volume of his encyclopaedia of that name (*Mughnī*, xiii), says that for the Mu'tazila, divine grace is all that is capable of helping the agent carry out the duties set for him without interfering with his freedom. If a person believes only because he has received a *lutf*, he is not as deserving as if he did not require it. A person who will do the right thing does not require a *lutf*, which is then not necessary. It cannot be true that God necessarily helps all men, since otherwise it would not be possible to sin (*Sharḥ*, 520) and there would be no free will. But if man acts well, he is rewarded and helped by God as a consequence; if he sins, he is deprived of God's help (*Sharḥ*, 520).

Taken more broadly, the description *lutf* may be applied to many aspects of human well-being, e.g. health (*Mughnī*, xiii, 11), wisdom, the use of reason, prophecy and the provision of holy books (*Nihāya*, 411). These all help to direct man in the right direction without compelling him (*Mufaḥḥḥ*, II, 734). Hence a rationale is provided also for punishment. God could turn unbelievers into believers, but His favours do not interfere with voluntary belief and so God does not grant favours which directly convert unbelievers into believers (*Mufaḥḥḥ*, 447, 575; a list of *al-luṭf* is provided in *Shihristānī*, 53).

Another sense in which *lutf* is obligatory (*wadīb*) is that where God is "obliged" to provide as much *lutf* as possible to whomsoever is responsible for his actions. This doctrine was of course strenuously opposed by the Ash'ariyya, who apply the term *lutf* to all God's acts, bad as well as good (*Iḥṣān*, 173-4, 165). But for the Mu'tazila, God is morally obliged to send to earth prophets and to arrange for the laws which man ought to follow to be communicated to them. Similarly for the Shī'ī al-Killī, the institution of the *imām*, like prophecy, is a "necessary grace" which is imposed on God. Since God has created the world only in the interests of man, he is obliged by a *lutf wadīb* to guide his creatures by sending them on occasion mediators to make plain His will. The Mu'tazila thought that man would be capable of social existence without the gift of a prophet or *imām*—nevertheless, they hold that God is obliged to

organise the world well, hence due to a *lutf* *irāgh*, has to provide mankind with guidance.

LUTF 'ALI BEG a. Āḡā KHAN, Persian anthologist and poet, who is also known by his pen-name ĀNGAR which he adopted after having used the names Wāh and Naḥāl previously. He was descended from a prominent Turcoman family belonging to the Begdill tribe of Syria (Begdillā Shāmī) which had joined the Kizilbāsh movement (7th/15th century). Afterwards, the family settled down in Isfahān. Many of his relatives served the later Ṣafawids and Nādir Shāh as administrators and diplomats. Lutf 'Ali Beg was born on Saturday 20 Rabi' II 1134/2 February 1722 (the date mentioned in the two Bombay lithographs of the *Atashkade* is erroneous). The invasion of the Afghāns occurring in the same year forced his parents to flee to Kum, where they lived till his father was appointed to the post of governor of Lār and the coast of Fārs in ca. 1148/1735-6, and they moved on to Shīrās. When his father died at Bandar 'Abbās two years later, Lutf 'Ali Beg undertook the pilgrimage to the Hīdajā and to the holy shrines in Irak. During a subsequent journey to Maghād he entered the service of Nādir Shāh, whom he accompanied on a campaign in northern Iran. He continued to work for Nādir's successors, but retired in the early years of the Zand period to a life of study and literary pursuits, subsisting on the revenue of a small estate near Kum and living at Isfahān, where peace had been restored by Karīm Khān Zand. However, in 1188/1774-5, he and some of his fellow-poets had to leave the city on account of the oppressive rule of the Zand governor Muḥammad Rūmānī. Lutf 'Ali Beg died in 1195/1781 according to the chronograms which his friends Hādī and Ṣabāḥī wrote for him (see *al-Dharī'a*, ix, Tehran 1331/1953, 3).

Lutf 'Ali Beg's fame rests in particular on the anthology *Atashkade*, on which he continued to work from about 1174/1760-1 almost till the time of his death. The work is divided into two parts, styled "oceans" (*midyāra*). The first part, on the poets of previous times, opens with a section (*shā'ir*) devoted to royal poets. Three further chapters (called *akḥḥar* and subdivided into *gharā'ir*) deal with the poets of Iran, Tūrān and Hindūstān according to the districts and towns of their provenance. An appendix on female poets (*farāgh*) has been added to it. The main source for this part of the *Atashkade* was the *Khuṣṣāṣat al-aḥādīr wa-subḥat al-fakhr* of Taḥl al-Dīn Kāshānī. The second *midyāra*, divided into two *parāwa*, contains the lives of contemporary poets, many of whom were personal friends of the author. It is preceded by a dedication to Karīm Khān Zand and a sketch of the troubled history of Iran from the time of the Afghān invasion onwards. A short autobiography followed by a selection from Āḡar's own poetry concludes the work.

The *Atashkade* was often copied in the early 13th/19th century. Lithographs appeared at Calcutta 1249/1833-4, and at Bombay 1277/1860-1 (reprinted Tehran 1337/1958) and 1299/1882-3. An annotated edition by Khasan Sādāt Naḡīf, of which three volumes were published at Tehran (1338/1957, 1338/1959 and 1340/1961), has remained unfinished. N. Bland edited the opening section, the *gharā'ir* on royal poets (London 1841), and gave an account of the entire work in *JRAS*, xiv (1843), 345-92. An abridged version, the *Taḥḥīrāt al-shāh*, containing the poems only in the alphabetical order of the rhymes, was made by a brother of the author, Isḥāq Beg 'Uḍḥī (cf. A. Gulcīnī ma'ānā, *Ta'riḥ-i taḥḥīrāt*, i, 182 f.). The existence of a Turkish translation, mentioned by J. H. Kramers (*EP*, s.v. *Lutf 'Ali Beg*), has been questioned by Tahsin Yazıcı. For a complete inventory of the biographies occurring in the *Atashkade*, see E. Sachau - H. Ethé, *Catalogue of the Persian manuscripts in the Bodleian Library*, Oxford 1889, cols. 262-93.

As a poet, Lutf 'Ali Beg was also held in high esteem by his contemporaries. Much of his early work was lost when the Bakhtiari chief 'Ali Mardān sacked Isfahān in 1164/1750. He became a pupil of Mir Sayyid 'Ali Muḥṣinī (d. 1171/1757-8), who was one of the instigators of the "literary return" (*dasgāh-i adabī*) to the stylistic standards of early Persian poetry which manifested itself among the poets of Isfahān and Shīrās during the Zand period (cf. M. T. Bāḥr, in *Armaghān*, xvi [1331/1932-3], 713 ff.). Apart from a *Dīwān* (cf. *Bankipost catalogue*, iii, Calcutta 1912, 219-21; Storey, *ib*, 870; A. Munzawī, *Fihrist-i muḥḥakāt-i ḥaḥḥī fārsī*, iii, 2206 f.), four *maḥḥas* are known: 1. *Yūsuf-u Zulaykhā*, fragments of which are contained in the *Atashkade* (for separate manuscripts, see Munzawī, *ib*, 3331); 2. a short poem, known as *maḥḥas-i Āḡar*, which he wrote in imitation of a *maḥḥas* entitled *Atashkade*, or *Sar-u gūda*, by Āḡā Muḥammad Sādīk Tafaghī, which seems to have inspired him also in the choice of a title for his anthology (cf. A. Gulcīnī ma'ānā, in *Madāḥ-i dāshkade-i adabīyyāt*; *Maḥḥad*, iii [1346/1967-8], 23-51; Munzawī, *ib*, 3317); 3. a *Sāh-nāma* (cf. Munzawī, *ib*, 2872); 4. a *Muḥḥas-i nāma* (cf. *ib*, 3215). Less certain is the attribution to this author of two other works: a prose-work, *Gandīnāt al-ḥaḥḥ*, composed in the manner of Sa'dī's *Gulistan* (mentioned in the *Atashkade* *Andūman-i Kāshānī*, cf. Ibn-i Yūsuf Shīrāzī, *Fihrist-i Kūshkādā-yi madrasay-i 'Alī-yi Sepahsālār*, ii, Tehran 1318/1939, 453) and a *taḥḥīrāt* on contemporary poets entitled *Daftar-i nuk ḥamān* (mentioned by Āḡā Buzurg al-Tīhrānī, *al-Dharī'a*, vii, Naḡlaf-Tehran 1349/1930, 226; cf., however, Gulcīnī ma'ānā, *Ta'riḥ-i taḥḥīrāt*, i, 48 note). As it seems, Lutf 'Ali Beg wrote some poems in Turkish as well (cf. M. F. Köprülü, *IA*, s.v. *Aḥar*, 139b).

LUTFI 'ALI KHAN, the last ruler of the Zand dynasty of Iran. He was born in 1183/1769, the son of Djalal Khan son of Shāhī, younger brother of the founder of the dynasty, Karīm Khān [q.v.]. During his father's reign, when the Kādjār armies had overrun most of northern Iran, Lutfi 'Ali subjugated Lār and Kirmān and for the last time retook Isfahān, but was soon forced back to Shirāz. When his father was killed in 1204/1789 in a coup led by Sayy Murād Khān Zand, Lutfi 'Ali fled to Bushīr (Bāshahr), where he was assisted by the governor Shāykh Nāṣir, long a loyal vassal of the Zands. Thus reinforced he marched on Shirāz, where a fifth column led by the *halūtar* [q.v.] (mayor), Hādīdī Ibrāhīm, aided him to overthrow the rebels.

A brave and likeable youth, in contrast to his cruel and treacherous father, Lutfi 'Ali was genuinely welcomed by the populace. Though defeated in the field, he held Shirāz against a Kādjār assault; the following year he unsuccessfully besieged Kirmān, then in 1205/1791 set out to recapture Isfahān. However, since his accession he had become openly suspicious of the influential Hādīdī Ibrāhīm, and was induced by whispers of his disloyalty to take with him the *halūtar*'s young son as a hostage. Acting perhaps in self-preservation, Hādīdī Ibrāhīm arrested the Zand officers left in Shirāz and took over the garrison, his brother, who was with Lutfi 'Ali's army, fomented a mutiny from which the young Zand leader and three bonded men fled to Shirāz. Here he found the gates closed against him and was deserted by all but four of his followers. Fleeing again to Bushīr, he found that Shāykh Nāṣir's son and successor had elected to support the *halūtar*. Nevertheless, he recruited some local support and successfully defeated both Zand and Kādjār forces sent against him. Hādīdī Ibrāhīm's appeal to the Kādjār leader to occupy Shirāz was answered by Āghā Muḥammad Khān in person with an army of 40,000. Lutfi 'Ali's small cavalry force defeated the Kādjār vanguard and that night came within a hair's breadth of capturing the main camp. In 1207/1792 Āghā Muḥammad entered Shirāz, and Lutfi 'Ali was henceforth a fugitive, still mounting guerrilla attacks from temporary bases all over south-eastern Iran. Supported successively by chiefs of Fābas and Narmāshīr, he twice held the city of Kirmān; in 1209/1794, after a four-month siege, the Kādjār army was admitted to the town by treachery and Lutfi 'Ali barely escaped to Bam. For their support of his rival, Āghā Muḥammad wrought a terrible revenge on the people of Kirmān [q.v.]. The governor of Bam, fearing a similar fate, betrayed Lutfi 'Ali to the Kādjār leader, who blinded and tortured him before taking him to Tehran for execution in Rabi' al 1209/November 1794.

As the gallant underdog, Lutfi 'Ali inspired admiration in contemporaries both Iranian and European, though the Persian chronicles, written under Kādjār patronage, are of necessity more circumspect. Sir Harford Jones Brydges, who accompanied him during part of his time as a fugitive, and Sir John Malcolm, to whom Hādīdī Ibrāhīm later tried to justify his tergiversation, praise the youth's daring and resilience, which indeed imparted a certain nobility to the largely self-inflicted death throes of the Zand dynasty. His alienation of Hādīdī Ibrāhīm, however, was symptomatic of the dynasty's failure to live up to its early promise. Karīm Khān had been careful to cultivate the trust of the rural and urban

classes in addition to that of his tribal army, whereas his successors, including Lutfi 'Ali, were too intent on leading among themselves and lending off the Kādjārs to promote or even protect the benefits which the bureaucracy, merchants, artisans and peasantry had obtained from Karīm Khān. Having lost the support of the towns, Lutfi 'Ali's nomad force disintegrated in the face of a Kādjār army which was, if not militarily, certainly politically and logistically stronger.

Gurney, Tehran 1357/1974); 'Abd al-Ḥusayn Nawā'ī, *Alḥavān-i Lutfi 'Ali Khān-i Zand*, in *Yādgar*, III, no. 5, 46-37.

(J. R. FARREY)

LUTFI, 14th and 15th century poet in Caghāṭay Turkish, and the greatest master of the *ghazal* before 'Alī Shīr Nawā'ī (845-906/1441-1501). The little that is known about his life comes mainly from 15th and 16th century works, especially those of Nawā'ī. Lutfi was born in Harāt, and died and was buried at his home in the nearby suburb of Dih i Kāsar at the age of 99 (Muslim) years. Modern scholarly conjecture suggests ca. 768-867/1367-1465 (J. Leimann); or d. 870/1465-6 or even later (H. F. Hofman). He lived quietly, but some contact with the Timūrid court is indicated by his dedications of a few poems to princes from Shāh Rukh to Ḥusayn Baykara. Nawā'ī, who knew him personally, reports that after studying the secular sciences, Lutfi was initiated into Sūfī mysticism by Shāh al-Dīn Khlyābānī, that the poet was a saintly person and was a close friend of Dīkmī, the great Persian poet and mystic of Harāt.

Lutfi's poetry has been highly esteemed since his own lifetime. There has been general agreement with the judgement of Nawā'ī who said he was "the Master and King of Speech of his people" (*Hādī-i Fāhānā*), "the King of Speech of his time", peerless in Persian and Turkish, but better known for his Turkish poetry (*Maḡāzīl-i al-nāṣirī*), and the single Turkish poet comparable to the greatest Persian poets (*Muḥāmmat al-ḡhāṭayn*). Nawā'ī even incorporated five complete *ghazals* of Lutfi into his own poems (*muḥāmmat* and *muṣaddas*).

While Lutfi wrote some *hastās* and two major *mathnawīs*, his poetic gifts and originality were best displayed in the *ghazal* and *isrāgh*. In combining the classical Persian lyric tradition with elements of Turkish popular poetry, he produced *ghazals* of graceful simplicity which concealed a subtle sophistication, while yet retaining some flavour of Turkish folksong. This results in part from his preference for those *'arīd* metres which corresponded approximately with Turkish syllabic metres, but also from his use of specifically Turkish features, such as proverbs and folk sayings reflecting ancient Turkish customs and beliefs, and of imagery which was often more realistic than that of classical Persian poetry. His verse seems to contain proportionately more words of Turkish origin and less Arabic and Persian loan words than any of his contemporaries or successors in classical Caghāṭay. The musicality he achieved is due not only to his exquisite word choice

and sequence, but also to his technical skill in developing such features as the extended *radif* [q.v.]. The wit and humour displayed in new uses of old images, the enjoyable puns and wordplays in both *ghazal* and *mayugh*, were also not negligible factors in ensuring his continuous popularity for five centuries. His influence is visible in the works of such contemporaries as Sakhi, Atayf and Gadāʾ and of later poets directly, and even more, indirectly, by way of his influence on Nawāʾī's poetry, which was universally admired. Echoes of Lutfi are heard even in poets from other linguistic areas, such as the Azeri and Ottoman ones, particularly Fudūʾī (d. 1556) and the Turkmen ones, especially Maḥdām-Kul (18th century). Verses by Lutfi are frequently cited in Çağatay-Ottoman and Çağatay-Persian dictionaries from the 16th century onwards, and are plentiful in anthologies of the same period.

Literary Works. All Lutfi's known works are in Çağatay Turkish, except no. 4 (1) *Dīdār*. At least 20 mss. are extant, belonging to five major recensions, but each group contains some material lacking in the others. The total number of poems is not less than 548, of which 378 are *ghazals* and 112 are *mayugh*s. (Further research may yield more poems.) Of the recensions, the most reliable is group (a), consisting of 2 mss.: ms. Birnbaum (Toronto) TCi iii (late 15th–early 16th century) and British Library, Add. 7914 vi (Herāt 914/1509). The former contains 362 poems (1 *mayugh*, 1 *naʿat*, 297 *ghazals*, 52 *mayugh*s) and is the longest *Dīdār* of all Lutfi mss. The latter lacks the last 107 *ghazals*. The other groups are (b) Paris, Suppl. Turc 98r and (c) Gotha Tazī (both 16th century, with some similarities); (d) Bursa, Müze 113/156 (16th–17th century). Group (e) comprises all other known mss.: (i) all the mss. in the USSR: Tashkent, Uzbek Academy of Sciences (6 mss.), Navoi Museum (1 ms.), Dushanbe, Tajik Academy of Sciences (4 mss.), Leningrad (2 mss., not Arap, C1922—the one numbered Bx18r is an Ottoman poet Lutfi); (ii) Istanbul, University Library, T5452; (iii) Tehran, Sipahsālār 174. Group (a) mss. (which may be further subdivided) were all copied in the 18th–20th centuries and show many Uzbek and other local influences. The state of their text is markedly inferior to groups (b)–(d). Hundreds of verses attributed to Lutfi appear in ms. anthologies in major libraries, especially in the Uzbek and Tajik academies. Most are quotations from *ghazals* known from his *Dīdār*. Uyghur script copies of 13 *ghazals* are found in 3 mss. from the 9th/15th century. A number of verses from Lutfi's *Dīdār* appear with minor differences in Sakhi's *Dīwān* [a] *Gul u Nawāʾis*. An allegorical romantic epic in 2,400 *mathnawī* verses. Composed in 814/1411, it is a free version in simple Çağatay, based on the Persian work of this name by Qasim Takti (composed 734/1334). Seven mss. extant (see Hofman, *TL*). (3) *Zafar-nāma* (not extant). Described by Nawāʾī as being a *mathnawī* "translation" of more than 10,000 verses, which never got beyond the draft stage. It was presumably about the exploits of Timur, whose son Shāh Rukh commissioned its writing; it was probably based on Sharaf al-Dīn 'Alī Yazdī's Persian *Zafar-nāma*. (4) *Dīdār* in Persian, including *hasid* and *ghazals*. Apparently not extant, but citations appear in biographical *tadhkiras* and ms. anthologies.

Editions. (1) Facsimile edition of Bursa ms., *Lutfi Dīwān* (with introd. by) İsmail H. Ertaytan, Istanbul 1966 (incomplete, unfoliated); (2) the *Dīdār* of Lutfi, including facsimile of Birnbaum ms. TCi iii, ed. E. Birnbaum (in preparation); (3) Lutfi, *Devon*; *Gul u*

Nawāʾis (selections, in Cyrillic script, by S. Erkinov), Tashkent 1965.

LUTFI EFENDI, AHMAD, Ottoman court historiographer (*vakf'a-nisāsi*). 1. Life. He was born the son of Mehmed Agha, a master sandal-maker, in 1232/1816–17 in the Aladja Hammam quarter of Istanbul. He attended the local Kur'an school and became a *hâfız*, and also practised music regularly at the house of Zayn al-'Abidin Efendi, Sultan Mahmud II's chief *mawla*. In 1244/1828–9 he was enrolled in the Mathematical College (*Hendese-hâne-yi berri*), but left it after a year for the *madrassa* of 'Amūddīn Hüseyn Paşa, where he studied Arabic, Persian, *tafsīr*, *hadīth* and *fiqh*. In 1247/1832–3 he embarked on a scholarly career, and in 1252/1836–7 he became head of the body of religious teachers or *mudarrisin* in Istanbul. The following year, he was charged with collating documents for the official records office (*Tahrir-hâne*) and with lecturing before the sultan on selected days in Ramadān. He translated al-Ghazālī's *Taḥf al-mu'allim* into Turkish, with some additions of his own, as the *Taḥf al-mu'allim* and presented it to the sultan, now 'Abd al-Medjid. He then took up a job in the secretarial office of the Grand Vizier (1258/1842), where he worked as a Persian translator, until Rabi' II 1266/February 1850, when he was appointed to the itinerant clerkship of the Buildings Council (*'Imare meşgisi*) in the districts of Vidin and Nigh in Rumelia. He returned to Istanbul after a

year and was appointed first to the head clerkship of the Police Council (*Polis-i meşihat*) and then to the *Tahsis-i hâne* once more, and was charged with the regular and weekly preparation and publication of the official gazette, the *Takvim-i vaki'at*.

In 1265/1849 he was sent temporarily to Philippopolis (Filibe) in Bulgaria for a period of nine months, in order to collect arrears (*bakıya*) of taxation. Meanwhile, he also held the clerkship of the Investigation Committee (*Tefekküs hey'atı*) of Anatolia for two years. When this latter post was abolished, he again returned to the *Tahsis-i hâne* (1269/1853-3). Eventually, in 1278/1861-2, he became a member of the Medical Council (*Tibbiyye meşihat*) and taught official composition in Turkish (*iradî* [q.v.]) at the Medical School. Soon afterwards, in addition to becoming a member of the Education Council (*Ma'arif meşihat*) and continuing to edit the *Takvim-i vaki'at*, he was entrusted with the supervision of government printing. At the end of 1281/beginning of 1865 he became *Yâkûb-nâmîs* and remained in this job, in which he achieved fame, for many years. However, in 1293/1876 he again returned to the scholarly field, and his *medhiyye* rank was changed to the status of the *kadîlik* of Istanbul. The following year he was appointed a member of the Council of State (*Şura-yı devlet*); in Muharram 1297/December 1879-January 1880 he was promoted to the *kadî-askerlik* of Anatolia; and on 11 Muharram 1299/3 December 1881 to that of Rumelia. In 1304/1887, despite his occupying this latter post, one of the highest ranks in the learned institution, he returned to his previous post in the Council of State.

Lutfi Efendi died at his yard at Boyacıbaşı near Istanbul on 2 Şalvar 1315/17 March 1907 and was buried in the Süfîâr Mosque cemetery in the vicinity of Aksaray. Highly literate in Arabic and Persian and skilled in poetry and composition, he had also been an adherent of the Mevlevî dervish order.

2. Works. His most famous work was the continuation of the history of *Şevket Paşa* [q.v.], known accordingly as the *Lutfi Ta'rihi*, written in a straightforward style, and utilizing information from the *Takvim-i vaki'at* and some official documents. It is in 15 volumes covering the events from the beginning of Muharram 1311/16 August 1823 to the middle of 1293/middle of 1876; the first seven volumes were published between 1299/1873 and 1306/1889 at the Government Press and the Mahmutîd Bey Press during his own lifetime, and volume VIII was published posthumously in 1328/1910 at the Şabâb Press by the court historiographer 'Abd al-Rahmân Sherif Efendi with some additions. The manuscripts of vols. IX-XV, which were presented to the Sultan 'Abd al-Hamid II, were transferred from the Yıldız Library to the Türk Ta'rihi Enjümeni Library, and thence placed in the Türk Tarih Kurumu Library in Ankara; they remain unpublished. The original manuscripts of the first volumes of the *Ta'rihi*, together with some other rough drafts of the author's, are in the former Imperial Museum (now Archaeological Museum) Library in Istanbul.

His book *Def'at-ı vâkı'at* *Ahmad Lütfi* contains some of his poetry and some history in poetic form; it was printed at Istanbul in 1302/1885 and comprises 100 pages. The original manuscript of his *Lughat-ı kudsî*, a dictionary of 53,000 words, arranged by him alphabetically from a Turkish translation of the Arabic *al-Kawâs al-muhtâ* made by the court historiographer 'Asım [see 'ASIM, AHMAD, and KAWAS, Turkish lexicography], is in the Archaeological Museum Library; only the first two parts of

it, covering the letters *alif* and *âd*, have been published (in 1281/1865-6 and 1286/1869-70 respectively).

Bibliography: *Lutfi Ta'rihi*, I, 1-8, VIII, 2-6, XV (= TTİK Ankara, ms. no. Y 531-7), I, 65a; *idem*, *Divân-ı*, 33, 40; İ.M.K. LUTFI PASHA a. 'Abo al-Mu'în, Ottoman statesman and Grand Vizier, probably an Albanian by origin, born ca. 933/1528 (see M. T. Gökbilgin, *İA*, art. *Lutfi Paşa*).

As a *düşüncü* [q.v.] youth, he entered Bâyezîd II's [q.v.] *harem-i hâss*, where he received a thorough education in the Islamic sciences. He held the post of *şakird* before the accession of Selim I [q.v.], when he graduated (*şahro* [hınak]) as a *müfettiş* with 30 *akçe* [q.v.] daily, and then held in turn the posts of *şahinçir başı* [q.v.], *kapuçulu başı* and *mîr-i 'alem*. His first appointment to service outside the Palace was as *sandjak begi* [q.v.] of Kastamonu, and he subsequently became *beglerbegi* of Karaman. Lutfi Paşa himself gives these details of his life in the introduction to his *Asâ-nâmî* (ed. with translation and introduction by R. Tschudi, *Das Asâ-nâmî des Lutfi Pascha*, Berlin 1910; ed. Şukri Bey, with introduction by 'Ali Emîrî, Istanbul 1326/1908). However, he does not give the dates of his appointments and omits all details of his life before entering the Palace. He may also have served as *sandjak begi* first of Aydin and then of Yanya (Ioannina), since Feridûn Beg [q.v.] mentions a Lutfi Beg who served at the siege of Rhodes (Rhodos) [q.v.] in 928/1522 as *sandjak begi* of Aydin (Feridûn Beg, *Münşî'at al-salâfin*, Istanbul 1274/1857, I, 539), and a Lutfi Beg who served at the siege of Vienna in 936/1529 as *sandjak begi* of Yanya (*ibid.*, I, 573). These references may well be to Lutfi Paşa, the future Grand Vizier, since he himself claimed to have participated in both these campaigns (Lutfi Paşa, *Tarih-i al-'Osmânî*, ed. 'Ali, Istanbul 1341/1922-3, 3). In 941/1534-5 he became Third Vizier. By this time he had, by his own account, served in Selim I's wars against the Sefewids in eastern Anatolia, and against the Memlükas in Syria and Egypt. Under Süleymân I [q.v.], he took part in the campaigns of Belgrade in 927/1522, Rhodes in 928-9/1523, Mohács in 932/1526, Buda and Vienna in 935-6/1529, Güns in 939/1532 and against the Şafawids in 940-2/1533-6. In the latter campaign he served probably as *beglerbegi* of Karaman, commanding the rearguard of the Ottoman army at Tabriz in Rabî' al-Awwal 941/September-October 1534 (Feridûn Beg, *op. cit.*, I, 587). During the same campaign he was active in operations around Lake Van, when he commanded the architect Sinân [q.v.] to construct a fleet at Tatvan (Şâh, *Tadhkirat al-bînâyîn*, Istanbul 1315/1897-8; quoted in M. Fuad Köprülü, *Lutfi Paşa, in Türkiye'de Medenîyat*, I [1925], 129-30).

As Third Vizier, Lutfi Paşa commanded the fleet which left Istanbul on 1 Dhu 'l-Hijja 943/12 May 1537 to join forces at Alanya (Antalya, Vlore) with the army under the Sultan, which had travelled overland. While the *Kapudan Paşa* Khayr al-Dîn [q.v.] sailed to Egypt to collect provisions, forces under Lutfi Paşa raided the coasts of Apulia. On

the return of Khayr al-Din, Andrea Doria's attack on two galleys in the command of the *kethüddü* of Gallipoli (Gelibois [g.t.]), and a second attack on a galley which Lutfi Paşa had sent with messages to Corfu (Körür [q.v.]), furnished a pretext to attack this island. On 18 Rabi' al-Awwal 944/25 August 1537, Ottoman forces under Lutfi Paşa landed and overran the island, but were unable to take the fortress. On the command of the Sultan, and despite Lutfi and Khayr al-Din Paşas' objections, Ottoman troops began to withdraw on 1 Rabi' al-Akhir 944/7 September 1537. Lutfi Paşa returned to Istanbul with a section of the fleet (see Kaib Celebi, *Tarih-i al-kahir fi asfar al-bihar*, Istanbul 1920/1911, 48-50).

On the death of Mustafa Paşa on 1 Muḥarram 945/30 May 1538, Lutfi Paşa replaced him as Second Vizier. In this capacity, he accompanied the army on the campaign to Moldavia (Kara Bogdan [see *BOGDAN*]). The army left Istanbul on 11 Şafar 945/9 July 1538, and crossed the River Prut on a bridge which Sinan had constructed on Lutfi Paşa's orders (Sâg, loc. cit.).

When Aylis Paşa [q.v.] died on 20 Şafar 946/7 July 1539, Lutfi Paşa succeeded to the Grand Viceroyalty. In this position he led the negotiations which ended the war with Venice. By the terms of the peace concluded on 20 Rabi'ab 947/30 November 1540, Venice ceded Moumvasia and Nafplion, in addition to all places lost in the war, and paid an indemnity of 300,000 ducats (200,000 according to Lutfi Paşa, *Tevârih-i Ali 'Osmanî*, 384). Lutfi Paşa himself received a payment of 20,000 ducats from the Venetians (E. Charrière, *Négociations de la France dans le Levant*, I, Paris 1846, 471). He also headed negotiations with the Habsburgs over Ferdinand's claim to territory in Hungary which Janos Zapolai had ruled as an Ottoman vassal. The issue eventually led to war, and an Ottoman army left for Hungary in Muḥarram 948/May 1541. At this moment, however, the Sultan dismissed his Grand Vizier. Although Lutfi Paşa himself represents his removal from office as voluntary retirement to be "secure from the will of women" (R. Tschudi, *op. cit.*, Turkish text, 5), it appears to have followed a violent quarrel with his wife, Dewlet Şahîd Sultan, the Sultan's sister, whom he had married in 945/1538-9. According to 'Alî [Kânî al-ahbâr, quoted by Köprülü, in *op. cit.*], the quarrel followed his wife's objection to his grisly punishment of a prostitute. After his dismissal, Lutfi Paşa retired to his *çiftlik* [q.v.] in Dimetoka.

Lutfi Paşa obviously regarded his administrative activities as the greatest achievement of his vicariate. His *Asaf-nâme* summarizes his views on the principles of sound administration, at the same time mentioning his own reforms. The greatest of these he regarded as the abolition, except in cases of extreme urgency, of the *ulaḥ ḥakmî*, whereby state couriers (*ulaḥ*) could arbitrarily appropriate horses from the populace for their own and their retinues' use. Instead, he established a system of regular staging posts with their own horses (R. Tschudi, *op. cit.*, Turkish text, 10-11; Lutfi Paşa, *op. cit.*, 371-82; see also C. J. Heywood, *Some Turkish archival sources for the history of the mensulhane network in Rumeli during the eighteenth century*, in *Bogaziçi Üniversitesi Dergisi*, iv-v [1976-7], 50 n. 9). In the financial sphere, he claimed to have reduced state expenditure by, among other things, limiting the number of *kapıkulu* troops to 15,000, so that income exceeded expenditure. This had not been the case at the time of his appointment (R. Tschudi, *op. cit.*, Turkish text, 35-40). Evidently to prevent op-

pressive taxation, he advised against the regular levy of *ta'vîz* [q.v.] (*ibid.*, 41-2), and recommended that tax-farms (*mukaddat*) be exploited by salaried officials (*emin* [q.v.]) rather than by tax-farmers (*mülterim*) (*ibid.*, 39). Further to protect individuals against the claims of the state, he ensured that the Treasury did not appropriate inheritances until seven years had elapsed without an heir appearing (*ibid.*, 11-12). In strategic matters he rightly stressed the importance of the Ottoman fleet since the time of Selim I, and claimed responsibility for establishing a number of squadrons outside Istanbul and an *emin* to supervise naval expenditure (*ibid.*, 33; see also C. H. Imber, *The navy of Süleymân the Magnificent*, in *Archivum Ottomanicum*, vi [1974], 211-83).

An independent witness to Lutfi Paşa's reforms is Moses Almosnino of Salencia (ca. 1515-60, 1580), who reported that he had protected miners against the exploitation of mining concessionaires, and cattle-raisers against drovers and butchers (Moses ben Baruch Almosnino, *Extremes y grandezas de Constantinople*, Madrid 1638, 130-3). Lutfi Paşa's vicariate may also have seen the promulgation of the *hâss-nâme* [q.v.] of Süleymân I (U. Heyd, ed. V. L. Ménage, *Studies in old Ottoman criminal law*, Oxford 1973, 26-7).

Shortly after his retirement, Lutfi Paşa returned to Istanbul to request the Sultan's permission to go on the Pilgrimage, which he performed eventually in 949/1547, before returning again to Dimetoka, where he spent the rest of his life. In retirement, he devoted himself to writing works on morals, *fâh* and theology. He also wrote verse (Sehl, *Hezîl beḥîst*, Istanbul 1325/1907, 25; quoted by M. Fuad Köprülü, *op. cit.*). He himself lists thirteen works in Arabic and six in Turkish (Lutfi Paşa, *op. cit.*, 3-4; R. Tschudi, *op. cit.*, pp. XV-XVIII). He does not include the *Asaf-nâme*, which he may therefore have completed after his *History*, which dates from after 951/1544. He died probably in 970/1562-3 in Dimetoka ('Alî, *Kânî al-ahbâr*; quoted by M. Fuad Köprülü, *op. cit.*).

In Istanbul he endowed a fountain; in the village of Müslim near Edirne, he endowed a mosque and a *madrâs*-*hâne* with 200,000 *akḥes* and the income from twenty shops in Edirne (M. T. Gökbilgin, *Edirne ve paşa literatürü*, Istanbul 1952, 506-7).

Bibliography: In addition to the works cited in the text, see J. H. Mordtmann's valuable review of R. Tschudi's edition of the *Asaf-nâme* in *ZDMG*, lvi (1912), 599-603. (C. H. Imber)

LUTFI AL SAYYID, AHMAD, Egyptian scholar, statesman and writer, born in the village of Barqaya, Dakahlîya Province, on 15 January 1872 and died in Cairo on 5 March 1963. His family were rural gentry (*a'yân*), and both his father, al-Sayyid Abd 'Alî, and his grandfather were *'ammas*. He was educated in the traditional *kuttâb*, the government school in al-Mansûra, the Khedivial Secondary School in Cairo and the School of Law in Cairo. The most significant intellectual contacts which he made at the School of Law were with Muḥammad 'Abdûh and Hassûna al-Nawâwî. Having graduated in 1894, he entered the legal department of the government service, where he worked until 1903. In 1907, he became editor-in-chief of a new newspaper, *al-Darîd*, which voiced the views of a number of enlightened and liberal *a'yân* and the party which they founded later in 1907, the Hizb al-Umma ('National Party'). Lutfi's writings in *al-Darîd* from 1907-14 comprise his most important and influential body of work. From 1915-18 he was director of the National

Library, but resigned to act as secretary to the original *Wafd* of 1918-19 headed by Sa'īd Zaghlūl. He soon returned to the National Library, where he began his second substantial series of works, his translations from Aristotle via the French versions of Jules Barthélemy-Saint-Hilaire. From 1925-27 he was Chancellor of the Egyptian (later Cairo) University, with intermissions as Minister of Education (1928-9) and Minister of the Interior (1929). In his later years, he was a member of the Senate, and on retiring from politics, was president of the Academy of Arabic Language until his death. His liberal philosophy was largely the product of his readings in Western philosophers and sociologists from Aristotle to Locke and Bentham, Mill, Spencer, Rousseau, Comte and Le Bon. He saw Egyptian nationalism as the result of historical and environmental factors which Egyptianised all who resided permanently in Egypt and committed their destinies to her. Hence he campaigned tirelessly against Pan-Islamic, Pan-Arab and Pan-Ottoman ideologies in al-*Ḍarīda*, but granted equal worth to Egypt's Pharaonic and Islamic heritages. Rejecting religion as a basis for nationhood, he insisted that utility was the foundation of all political and social unity. He proclaimed freedom as the right of both the individual and the nation, and followed Muḥammad 'Abdūh's advocacy of a gradualist approach towards a constitutional régime through universal education. By his middle years, he was already called *ustādū al-ḡill* ('teacher of the generation'), and his writings are considered a notable contribution in the formation of modern literary Arabic. His autobiography appeared first in al-Muqawwar, Cairo, September-December 1950, and in book form as *Naṣṣat ḥayātī*, Cairo 1962. Selected editorials from al-*Ḍarīda* have been published in the following collections edited by Ismā'īl Maḥzar: al-Munāḥḥah, 2 vols., Cairo 1945; *Safāḥāt maṣarīyya*, Cairo 1946; and *Ta'ammul fī 'l-falsafa wa 'l-ādab wa 'l-siyāsa wa 'l-ḡīḥmā*, Cairo 1946. His translations from Aristotle comprise: *Yim al-aḥḡāl zā Nihumākhās* (Nicomachean ethics), Cairo 1924; al-Kawm wa 'l-faṣāḥ (Generation and corruption), Cairo 1935; *Yim al-ṭab'ā li-Aristūḡālīs* (Physics), Cairo 1935; al-Siyāsa li-Aristūḡālīs (Politics), Cairo 1948.

Bibliography: the following deal entirely or in large measure with Aḥmad Luṭfī al-Sayyid and his thought: 'Abd al-Latīf Ḥamza, *Adab al-maḡāla al-ṭuḡḡiyya fī Miṣr*, v, Cairo 1961; G. Delonoue, *Aḥmad Luṭfī al-Sayyid* (1872-1963), in *REI*, xxxi (1963), 89-103; Husayn Fawzi al-Naḡḡār, *Luṭfī al-Sayyid wa 'l-ṭuḡḡiyya al-Miṣriyya*, Cairo 1963; idem, *Aḥmad Luṭfī al-Sayyid: unidād al-ḡill*, Cairo 1965; C. Wendell, *Evolution of the Egyptian national image: from its origins to Aḥmad Luṭfī al-Sayyid*, Berkeley 1972, 202-313. Also to be consulted are: J. M. Ahmed, *Intellectual origins of Egyptian nationalism*, London 1960, 85-112; N. Safran, *Egypt in search of political community*, Cambridge, Mass. 1962, 90-7; A. Hourani, *Arabic thought in the liberal age, 1798-1939*, London 1962, 170-83; Afaf Luṭfī al-Sayyid, *Egypt and Cromer*, London 1968, 191-5; idem, *Egypt's liberal experiment, 1922-36*, Berkeley 1977, 219-27.

(C. WENDELL)

LUṬFIYYA [see **ḤADITHIYYA**].

LUṬĪ (also **Lāṭī**, **Lawāṭā-kār**), in current Persian strictly speaking an itinerant entertainer accompanied by a monkey, bear or goat, which dances to the sound of a drum and coarse songs. This however appears to have been a late restriction of the meaning of the term, deriving perhaps from its

earlier use to describe a jester attached to a royal or princely court. In other contexts, it is equivalent to a loose liver, gambler, wine-bibber, and more especially, a padcaster. The last meaning lends colour to the generally accepted derivation, through Arabic *lūṭī*, *lawāṭī*, from the Prophet Lot, though this has been questioned by some scholars. Another less likely source is the Persian word *lūt*, meaning 'voluntarily', whence *lūtī* = 'greedy'.

One of the earliest recorded uses of the term in Persian is by the 4th/10th century poet Kisā'ī, who associates it with the words *tās* and *maḡyā*, both meaning 'entamite'. Nāṣir-i Khusrāw, writing in the 5th/11th century, uses the term as equivalent to 'wine-drinker, thief, whoremonger', while Sāzānī (6th/12th century) warns against commercial dealings with *lūṭīs*, which suggests that the word was by then acquiring its later meaning of 'vagabond, wastrel'. Dīwān al-Dīn Rūmī (7th/13th century) and 'Ubayd Zakāwī (8th/14th century), however, use it primarily in the sense of 'pederast'.

Probably as a result of the association in certain aspects of *ṣūfī* thought between loose living and the following of the *Ṣūfī* path (see **MAḤMADIYYA**), expressions such as *lūṭī-yi Allāhī*, *lūṭī-yi Khudā'ī*, are found with the significance of 'generous, manly'. In current parlance, *lūṭī* also means 'rascal, vagabond', *lūṭī-bīḡān* or *lūṭī-bīḡī* 'cheating', particularly in financial matters, *lūṭī-ḡāwār ḥardān* 'improvidence, wastefulness'. On the other hand, *lūṭī-ḡarī* implies 'generosity'.

(L. P. ELWELL-SUTTON)

LUWĀTA [see **LAWĀTA**].

LUXOR [see **AL-UḡḡUR**].

LUṢŪM MĀ LĀ YALZAM, 'observing rules that are not prescribed', term commonly used for the edification of a second, or even a third or fourth, invariable consonant preceding the rhyme consonant (*rawd*) which, at least in classical poetry, remains itself invariable (see **KĀFIYA**, iv, 4122, middle). The term is also used in dealing with rhymed prose (*ṣaḡḡ*) (q.v.). In later Arabic and Persian literary theory the term covers not only the classical *luṣūm*, but also a variety of other devices which have nothing to do with the end rhyme. Common synonyms of *luṣūm* are *ṭināṣ* and *ḡināṣ*, and several authors insist that one finds the terms *ḡināṣ*, *ṭināṣ*, and *ṭafīṣ* in the sense of *luṣūm*.

Scholars occupied with rhyme theory point out that the introduction of a second invariable rhyme consonant is rare among the ancient poets, they justify the practice by arguing that some poets chose to regard the suffix *-at* of the third person feminine of the verb in the perfect, the pronominal suffixes, *-ka*, *-ki*, *-kum*, *-kamā* (implicitly, see Ibn 'Abd Rabbih, *al-ʿIḡā*, v, 501), *-hum*, and *-humā* as *wasl* (see **KĀFIYA**, iv, 4122, middle) which meant that the preceding consonant became *rawd* and as such had to be invariable in addition to these suffixes themselves (cf. the explicit statement by the poet Kuthayyir quoted by Akhṡāṣ, *Kawāṣif*, 18-19); it also meant that a line ending in the demonstrative *ḡāḡā* should prefer-

ably be followed by lines ending in *-āla*, e.g., *kund-fala*, and not, for instance, in *-āla*. They mention that adoption of a second invariable consonant was sometimes achieved by reduplication of the rhyme consonant, and that sometimes the second invariable consonant (or the reduplication) was maintained in part of the poem only. They do not offer an explanation for this last phenomenon and seem to be unaware of the fact that *nā*, *lām*, and *nūn* (less often *nām*) appear at times to be interchangeable, e.g., *ghomādh/ghomādh* (Tarfā, *Dīwān*, ed. D. al-Khatīb and L. al-Sakkāl [Damascus 1395/1975], 86-8), *hal-lāf/ghannāl* (Kutayyir, *Dīwān*, ed. I. 'Abbās [Beirut 1391/1971], 95-6, and the lines on p. 107; see also A. Bloch, in *AO*, xxi [1953], 230 and n. 31). Poems or fragments of poems ending on *-lāl(l)*, *-nūn(l)*, and *-wāl(l)* are quoted with special frequency. The question of the origin of the figure thus appears complex. The literary theorists beginning with Ibn al-Mu'tazz (d. 296/908), *Badī'*, 74-5, who lists the *'nād* (= *luzum*) as one of the ornaments of style (*maḥṣūn*, see *al-Badī'* and *tan al-Mu'tazz* and cf. *Israeli Oriental Studies*, II [1972], 69-90), made no serious attempt to clarify the history of the figure or to explain to what extent the *luzum* as practised by the poets of their own time was related to the technique of the ancient poets as recorded by the rhyme theorists. This is true also of Abu 'l-'Alā al-Mu'arrī (d. 449/1058), even though in the introduction to his *Luzūmiyyāt* (a work intended to demonstrate the possibilities of the figure and a curious exposition of the author's views on religion and ethics, see *al-Mu'arrī*) he offers a thorough review of rhymic theory. Abu 'l-'Alā seems to suggest that the *luzum* of later poets was largely independent of these earlier examples (37, II, 2-3) and implicitly denies that the suffix *-hum* can be taken as *wasl* (51, II, 2-7). Ibn 'l-Isbā' (d. 634/1256), *Tahṣīr*, 59, goes so far as to claim that the *luzum* in the works of the ancients was unintentional.

At a later stage, the literary theorists discovered examples of *luzum* in the *Kur'ān*, but these do not involve doubling of consonants or the repetition of suffixes, except in one case (VII, 86, see Ibn Abi 'l-Isbā', *Tahṣīr*, 518; idem, *Badī'* al-*Kur'ān*, 229) which is not valid, since it does not appear at the end of the verse and cannot be considered a rhyme. However, the examples from the *hadīth* and the sayings of 'Alī quoted by Yahyā b. Ḥumza (d. 747/1346 or 749/1348), *Tahṣīr*, II, 400-2, contain some instances of *saḍī'* with identical consonants preceding pronominal suffixes.

For a while after its first appearance in Ibn al-Mu'tazz's *Badī'* as *'nād al-shar'* *naṣṣah* the figure received little attention from the literary theorists. *Kur'ānic* examples and one example from poetry appear in Bākilīnī's (d. 405/1013) *Iḥṣān al-Kur'ān* (ed. A. Sakhī [Cairo 1374/1954], 145-6) in a chapter on *al-tarjī' min al-badī'*, but Bākilīnī does not mention the term *'nād* which one would expect in this context. Abū 'Abd Allāh Muḥammad b. Ahmad al-Khārazmī (flor. second half of the 4th/10th century) in his *Maḥṣūn al-'ulūm* (ed. G. van Vloten [Leiden 1895]), defines *'nād* as the poet's following self-imposed rules and does not offer any examples. The term seems even to have been forgotten for some time, as appears from the unpublished *Maḥṣūn al-bayān* of 'Alī b. Khulaf (5th/11th century) [see *AIUN*, xxviii [1977], 301 and note, and also I. Kratchkovsky in *AIEO*, xi [1963], 34, 108-9]: The definition which 'Alī b. Khulaf offers is correct, but as a result of a graphic error *'nād* had by this time been substituted

for *'nād*; this resulted later in the introduction of a new figure, *'nād al-mar'* *naṣṣah* which found its way into several handbooks (see, for instance, Ibn Abi 'l-Isbā', *Tahṣīr*, 166-7).

The *Khāṣṣat* of Ibn Dīnāl (d. 391/1002) has a chapter on the *luzum* *bīnā* is *yalzām* which stands apart from the treatment of the *luzum* in other grammatical and rhetorical studies: It offers a wide variety of examples, mostly from older poets and mostly in the *raḡar* metre. Ibn Dīnāl disregards (or does not recognise) some of the rules adopted by others. He accepts the *nām* of the second enclitic form of the verb as *wasl* (see *Khāṣṣat*, IV, 413a second half) and ignores the tendency of ancient poets to consider the *hā'* of *hām* as part of the *wasl* (II, 249); he points to unique instances of the *luzum* in a poem by 'Abdī b. al-Abrāq where all first hemistichs but one end with the article and in a *raḡar* poem by a certain Ghaylān [b. Hurayth] al-Raba'ī (M. Ullmann, *Untersuchungen zur Raḡariyye* [Wiesbaden 1966], index), where all lines but one end on a word in the genitive case which cannot be recognised as such because the *hā'* of *hām* is not a *hā'* *wasl* (see *Khāṣṣat*, IV, 412a first half; with a view to the case ending being pronounced in singing (P), cf. H. Birkeland, *Altarabische Pausalformen* [Oslo 1940], 12-3). Ibn Dīnāl also notes (II, 262-3) that Ibn al-Rūmī (d. ca. 280/893) distinguished himself as a *luzum* poet (see also Abū 'Ubayd Allāh Muḥammad b. 'Imrān al-Narabāhī [d. 384/993], *Maḥṣūn al-shu'arā'*, ed. F. Krenkow [Cairo 1354/1935], 289, II, 9-10), even though he sometimes did no more than maintain the same vowel before the *wasl* when this was not necessary, or not strictly necessary. In this context he makes a case, though not a well-documented one, for seeing in the *luzum* of *muḥṣan* poets (the term generally refers to early 'Abbāsid poets, but is also used specifically for 4th/10th century poets) a continuation of tendencies which existed in ancient poetry. He is perhaps the first to accept as a form of *luzum* the use of diminutives in the rhyme. Ibn Dīnāl's views may not have been widely known; his observations on Ibn al-Rūmī and on the use of the diminutive are also found in later authors, but are worded differently.

In several works inspired by al-Kawwārī's (d. 739/1338) *Tahṣīl al-mafāhīṣ* [see *al-Kawwārī* (*ḥiṣṣat* *ḍiḥāḡ*)] and in didactic poems on the *badī'* (*badī' 'iyyādī*) composed between the 8th/14th and 10th/18th centuries, the term is applied in a wider sense than before: one speaks of *luzum* even if only two lines of a poem show an additional invariable consonant (some of the examples quoted by earlier rhyme theorists are from poems that do not show the *luzum* throughout). The same is true, of course, of the *saḍī'*, where often there are no more than two rhyming clauses. There is also question of *luzum* in internal rhyme, e.g., *wa-mā 'ahīra 'l-ṣaḥābi mawī 'ahīra 'l-ḥasala*. 'Abbāsī (d. 963/1556), *Maḥṣūn*, II, 306, mentions a collection of *maḥṣūn luzūmiyya*, apparently based on the figure, by al-Ashtarikūf (see *Maḥṣūn*, and H. Nemat, in *JAL*, v, 66-92), who died in 538/1144 and quotes some poetry from this author. Moreover, the figure is no longer limited to the rhyme, but involves different kinds of rhetorical games and artifices, such as the avoidance of pointed or unpointed letters or alternating such letters from word to word, the avoidance of labials, the inclusion of a certain letter in every word of the line, the use of all letters of the alphabet in one line, and even graphic devices, such as the omission of connected letters. Suyūṭī (d. 991/1505) credits himself with having

invented the term *ṭayyīṣ* for such devices. The first example he mentions, however, is a device which involves the rhyme: The rhyme consonant may be, for instance, the *āḥ*, but the poet imposes upon himself to avoid using the pronominal suffixes of the third person singular (presumably even in cases where this would be permissible, see ʿARĪṢA, iv, 413a middle). Others do not seem to be aware of Suyūṭī's definition and use *ṭayyīṣ* as a simple synonym of the other terms listed at the beginning of this article.

In Persian rhetoric and prosody, the terms *ṣuḥl* and *ḥurūm mā lā yalzam* are used, as in Arabic, for the adoption of a second invariable consonant in prose and in poetry, and the reduplication of the rhyme consonant. In addition, however, the two terms are used for the repetition of two or more words in each hemistich or line of poetry, and for the use of internal rhyme. Rāḍīyānī (middle of the 3th/14th century) denotes the latter use specifically as *ṣuḥl al-ḥarīm* Rāḍī (beginning of the 7th/13th century), *al-Muʿjam*, 386, also applies the term *ṣuḥl* to the use of double *ḥāfiya* (e.g., *ḡayyūn ḡayyūn* *ḡayyūn* *ḡayyūn*) and points out that most Persian poets adopt an invariable consonant before the *āḥ* of the feminine ending of Arabic words without considering this convention as *ṣuḥl* or *ḥurūm* (216-17). Some later poets however disregard this rule, especially in cases where the *ḥāfiya* proper is followed by a *raḍf*, i.e., a word or particle recurring at the end of each line (see *Fi*, s.v. *raḍf* for a more accurate description which includes the *raḍf* in Turkish poetry; see also L. P. Elwell-Sutton, *The Persian metres* [Cambridge 1976], 225-6, 230). Another case of *ḥurūm*, according to Rāḍī (262-3), occurs when the poet maintains the *taʿrīf*, i.e., a long *ū* separated from the *raḍf* by a variable vowelised letter, throughout his poem (see Elwell-Sutton, 229-30, 233). Dīlshāmi (s.v. in Suppl.) (flor. early 8th/14th century) has collected a number of poems to which forms of *ḥurūm* have been applied under the heading *maḥmūd* in the 10th chapter of his anthology *Muʿnis al-aḥwāl wa-dakāʾik al-aḥṣār* (ed. Mir Sāhib Ṭāḥibī, i, Tehran 1337/1958, 285-87).

LYDDA (see LUDD).

M

MĀ BA'D AL-ṬABĪʿA, or **MĀ ILĀF AL-ṬABĪʿA** *mayāʿat*, a translation of the Greek τα μετὰ τα φυσικά 'the things which come after physical things', i.e. metaphysics, an expression which can have two meanings, each of which envisages a particular conception of that science (*ʿilm* or *ḡināʿa*). It can either be a discipline which one embarks upon after physics, utilising the results of the natural sciences, or else it can be one whose goal lies beyond the apprehensible objects which are the concern of phy-

sics. The two meanings are not mutually self-exclusive, but the first tends to put the accent on the role of experience and of knowledge of physical things in the search for metaphysical realities, whilst the second invites one to enter immediately into the domain of suprasensible principles in order to deduce from them the nature and laws governing beings of the material world.

One should note at the outset the two synonymous of this expression which denote metaphysics in

Arabic: on one side *al-idhhiyyāt*, "the divine things", and on the other *al-faiṣala al-idā*, "the first philosophy", a title which al-Kindī gave to one of his Rasā'il (cf. Rasā'il al-Kindī *al-faiṣaliyya*, ed. Abū Rida, Cairo 1953, ff). These two terms were borrowed from the Greeks. In Plato, the word *theologia* normally denotes metaphysics; in his view, there exists a sphere of the divine (το θεῖον), a term taken up by Aristotle, who identifies theology, the first philosophy and what we call metaphysics (*Metaphysics*, 1026, a 17-28). The translation uses the curious turn of phrase *ʿilm al-aḥyādī al-idhhiyyāt al-ḥawā* "science of divine things in regard to definition", in which *ḥawā* seems to correspond to the element λογική in θεολογική (*ḥawā* normally translating λόγος in its sense of definition). Ibn Rushd comments in these terms: "Just as the things of nature are those in the definition of which nature is involved, so are the divine things [those in the definition of which God is involved]" (*Tafsīr Mā ḥad al-idhhiyya*, ed. Bouyges, II, 712). Nevertheless, there does not follow from this that God is the object of metaphysics, neither for Ibn Rushd, who connects this science not with God but with the existence of an incorporeal and immovable substance, this substance being for him *al-mawḥid bi-l-ḥaḥḥa* *ḥawa* 'l-ḡawhar "the being in reality" (*ibid.*, 750), nor for Ibn Sīnā, who thinks that God is not a datum, but can be demonstrated starting from the Necessary Being. Ibn Rushd further follows Aristotle, who brought forward the possibility of a first philosophy (ἡ πρώτη φιλοσοφία) in 1026 a 23, saying that if there exists no other substance except those constituted by nature, then it is physics which should be the first philosophy, concerning which Ibn Rushd comments thus: "It is equally clear that if there is there a certain substance distinct from the moving substance, this substance which has existence will be the first, and the science which one builds upon it will be the primordial science (*al-ʿilm al-aḥdam*); it will be the universal science and the first philosophy" (*Tafsīr*, II, 714). Moreover, for Aristotle, beyond the general idea of the divine there are only the gods of the ancient poets (Hesiod) who come into mythological cosmologies remote from demonstrative philosophy. Connecting on the term θεολογία (*Met.*, 1000 a 9), Ibn Rushd writes (*Tafsīr*, I, 251), "Those who speak of divine things (*al-ḥawā al-idhhiyya*) are those who hold forth upon a discourse beyond what man can intelligibly understand (*ḥalām* *ḥāriḡ* *ḥamā* *yaʿqiluhu al-ʿaḥdān*)". In other words, before speaking philosophically of God, one must make an intelligible conception, and this is the role of metaphysics.

But how should one understand the expression "primordial science" which Ibn Rushd uses? All the question is included there. Indeed, metaphysics comes before the other sciences because it is universal and is concerned with the cause of everything which exists; should one therefore place it in front of the others in research and teaching, or on the contrary keep it back till the end? One may see here merely a difference of method, that of an expository procedure starting from principles and causes, and of a process of discovery starting from concrete and apprehensible experiences. This is al-Fārābī's approach, who tries by this means to reduce the divergences separating Plato and Aristotle. He accordingly remarks in his *Kuṭūb al-Diyān* *bayn ra'y al-ḥakīmāyā* (ed. A. Nader, Beirut 1908, 16) that for Plato, the most noble primordial substances are those which are near to the intellect and the soul, whilst for Aris-

totle, the most worthy substances of this name, by anteriorities and by their value (*bi-l-ḥaḥḥa* *wa-l-ḥaḥḥa*) are the first substances, i.e. the individual substances (*al-ḡawhar al-waḥid al-idhhiyya al-aḥḥad*). But the difference arises from what Aristotle then says from the point of view of the logical and physical sciences, whilst Plato speaks from the point of view of metaphysics (*fi-mā ḥad al-idhhiyya*) and theological doctrines (*wa-l-ḥaḥḥa al-idhhiyya*). Consequently, one can set oneself within a certain science or within another, or start from one or start from another, as a matter of indifference, according to one's intention. In his *Faiṣalat al-idhhiyya* (ed. Muḥsin Mahdī, Beirut 1961), al-Fārābī sets forth the Stagira's thought, following the progressive order of his enquiry as he sees it. After the questions of logic, and with the intention of discovering what makes for perfection in man, Aristotle studies the various questions which concern nature (*ḥaḥḥa*), the soul (*nafs*) and the intellect (*ʿaql*). "He must also examine profoundly the substances of the heavenly bodies; are they nature, soul or intellect, or are they indeed some other, more perfect (*akmal*) thing; also, are these substances things which are outside physical speculation? The point is that physical speculation only includes what the categories include. Now it is clear that there are other beings outside the categories: the intellect acting as Agent and the Thing (*ḥayā*), which give to the heavenly bodies a perpetual circular movement. This being so, one has to make speculations about the beings which have a more universal (*ʿamm*) field than those about physics" (*ibid.*, 130). "This is why Aristotle explodes in the book called *Mā ḥad al-idhhiyya* that he is making speculations and conducting a deep enquiry into beings in a way which differs from physical speculation" (*ibid.*, 132). One notes that al-Fārābī admits that one can begin by physics, which does not however prevent him from thinking (in fact, wrongly) that Aristotle recognises the existence of a domain of the being which is external and superior to the categories which, according to him, only concern the physical domain. Elsewhere he speaks clearly (131) of a penetrating enquiry into the beings which are above the natural things in the hierarchy of being (*fi l-mawḥidat al-idhhiyya al-idhhiyya fi ḥaḥḥa al-mawḥidat*).

Ibn Sīnā and Ibn Rushd take up the Aristotelian definition of metaphysics as being the science of the being as such (*al-mawḥid bi-l-ḥaḥḥa* *ḥawa* *maḥḥad*). But what is meant to be understood by this?

1. Ibn Sīnā's viewpoint. The basic principle is that "the object (*maḥḥad*) of all science is something whose existence is admitted, (or concluded: *awr muḥallat al-mawḥid*) in that science" (*Ḥayā*, *al-idhhiyya*, Cairo 1960, I, 5). It is drawn from the *Posterior analytics* of Aristotle (73 a 20): "If I say that a thing exists or does not exist, it is a hypothesis". Hence if one says that the object of metaphysics is God or the Prime cause (*al-mawḥid al-aḥḥad*), this is only an hypothesis which must be verified by means of another science. Now there is no other science, necessarily more particular than metaphysics, which is able to guarantee the existence of such-and-such an object. The *maḥḥad* of a science is the object concerning which this science conducts an enquiry (*al-mawḥid al-idhhiyya*). But since God or the Prime cause are not data, they are on the contrary the goal of a metaphysical enquiry (*maḥḥad*). Ibn Sīnā concludes that the object of metaphysics is the being as such which is inquired by every science, by every

question, by every thought and by every speech utterance (*ibid.*, 30): it is the *quā* (قوة), the "that which" (*al-shay' al-ḥāṣṣ*) and the thing (*al-shay'*). It does not have to be vouched for, since it is the thing itself which vouches for everything, or it is by means of it that one vouches for what one vouches for. This being as such can be divided, without one needing recourse to any category, in several ways: these divisions of it are like intrinsic accidents (ka *'l-ḥādith al-khāṣṣ*), whilst divisions according to categories are like kinds (ka *'l-ḥādith al-kullī*). It can thus be divided in one and in multiples (in *al-mahād - al-khāṣṣ*), in force and in action (*al-quwwa - fī'ā*), in universal and particular (*al-kullī - al-khāṣṣ*), in what is eternal and what arises from a temporal origin (*al-kāfiyya - al-muḥdith*), in what is completed and what is incomplete (*al-kāmil - al-muḥdith*), in cause and effect (*al-sabab - al-muḥdith*) and in possible and necessary (*al-mumkin - al-muḥdith*). This list has been made up from the metaphysics of the *Shay'* (I, 12) and from the *Kutub al-Naḥḥ* (ed. Ṣabīr al-Kurdi, 1938, 199). The last pair of oppositions in this division will mark out the Avicennan ontology through the distinction of the Being necessary by itself (*al-wājib al-mawḥūd bi-ghayrihi*), which is to be identified with God, and the being possible by itself (*al-mumkin al-mawḥūd bi-ghayrihi*), necessary by something outside of itself, i.e. the being of the universe. Consequently, starting from this general ontology, Ibn Sīnā explains the origins of various beings, first of all the heavenly ones (intelligents, spheres, souls of the spheres) by a process of emanation (*ḥayḥ*), as far as the Intellect acting as Agent, the Intellect of the sphere of the moon; and then of the sublunary world, which is made out of material elements by a progression from minerals to man, thanks to the shapes received from the Intellect acting as Agent which is *Wāḥid al-Gunah* (*Dalil formānī*). Thanks to reason, man is capable of returning to God, to such a point that God is, as the *Kur'ān* says (I.VI, 3), the First and the Last. From the domain of metaphysics, one passes on to that of connection with the heavens, then with physics, by a descending movement; then, beginning with connection with minerals, one passes on to that with plants, and from animals to that with the soul, as far as the rational soul, by means of an upward movement which ends up by a mysticism of the mind which corresponds in its point of arrival with that which was metaphysics at its departure point. For Ibn Sīnā, as for Plato, all reality is legitimately deducible from metaphysical principles, even though the imperfect nature of the human understanding does not in fact allow an integral deduction of the universe.

2. Ibn Rūshd's viewpoint. This is a case of recovering the pure Aristotelianism, stripped of all Platonic or Neoplatonic influence. Since being is not a generic concept, it cannot be defined and apprehended in itself, but only by means of categories. Thus for Ibn Rūshd, the problem is to know what one can say about it and how one can speak of it. "Aristotle's aim in this book (*Δ*) is to distinguish the details of the significations to which the names (*al-asmā'*) refer, significations which one thinks about in that science (metaphysics) and which hold these the position of the subject of an art (*maḥallat maḥallat*) in relationship to that art. These names are those which are uttered in regard to a single thing according to different points of view (*al-ḥādith al-muḥdith*). This is why he makes out of speculation on the meaning of these names one section of that science (*Tafīr*, II, 475). It is thus that one calls

everything connected with health "healthy": balanced temperance, exercise, remedial measures, "the same thing is valid for the name of the being (*maḥallat*) in relationship to substance and other categories" (*ibid.*, I, 303-4). It is possible therefore to have a single science of all the diverse beings, on condition that one understands the names designating them analogically. This is what has been called the analogy of proportionality; being in regard to substance is what being is in regard to substance is what being is in regard to quantity, etc. "Just as the things which are connected (*ḥawḥa*) with the curative arts fall, on examinations, into one and the same science, i.e. medicine, likewise all the things which are connected with being are the object of speculation in a single science (*ibid.*, I, 307). But metaphysics can also be justified by relying on the analogy of attribution, substance being the first analogue of being: "Thus the name of being (*ḥayḥ*) is a synonym of *maḥallat*, although it is used of different species of being, is only used for each of them through the fact of the connection which it enjoys with the prime being (*al-ḥayḥ al-awḥad*) which is substance". To be first accordingly means here to be the first analogue. "The categories are connected with the substance, not in that they are considered to be their agentive cause any more than their ultimate one, but in the sense that they subsist in it (*ḥayḥa bāḥ*) and that the substance is for them a subject (*maḥallat*)" (*ibid.*, 305). Now substance is a basic concept and in the measure that one accordingly brings together the study of being with the study of substance, "since it has been posited that for every unique concept there is a unique science ... there results necessarily that there is a unique science of being" (*ibid.*, 309). Metaphysics, being the study of being as such (Ibn Rūshd, who prefers *ḥayḥa* to *maḥallat*, often remarks that its object is *al-ḥayḥa bi-mā ḥayḥa*), ought probably to contain within itself all the aspects of being. Nevertheless, being in the shape of the accident (*bi-l-ḥayḥ*) and being in thought (*bi-l-faḥ*) are two defective entities (*al-ḥayḥa*). The aim of metaphysics is to examine "the real being which exists outside the soul" and it is "the substance which is the basic principle of this being" (*al-ḥayḥa bi-mā ḥayḥa*). This conforms to the importance which the substance assumes basically in metaphysical speculation (cf. *ibid.*, III, 1202). Beginning by the study of substances which are apprehendable by the sense and are mobile and corruptible, and then of substances which have these same characteristics except that they are incorruptible (the heavens), Ibn Rūshd hopes to arrive, with Aristotle, at a substance which is not apprehendable by the senses, is incorruptible and is immobile, the Prime Mover, the cause of all the movements of the universe.

Ibn Rūshd thus carries beyond the apprehendable world an idea of substance which he has drawn from physics and which seems to him to be the basis of all existence: all that exists is substance an exact correspondence here below. Ibn Sīnā, on the contrary, thinks that substance, like all other categories, must receive the quality of existence in order to exist, and that it can only receive existence by acquiring quantity, quality and all the other categories, for a substance which had neither quantity, quality and so forth, would be nothing. So it cannot in itself be taken as the first analogue or the representative of being conceived as existence. For Ibn Sīnā, the Necessary being is not a substance since it exists by itself, the *Ḥayyūm* of the *Kur'ān*

(II, 255, III, 2). On the other side, we have seen that the problem for the metaphysician is to know who established the existence of its object. Ibn Sīnā believes that this object, being implied in all sciences, does not need to be vouched for by one of them. Moreover, it is for metaphysics to provide the role of supplying the other sciences with the basis of their object. Ibn Rushd criticises this viewpoint, but by relying on his own one, namely that the first philosophy poses the question to itself about substance as the first analogue of being. "Ibn Sīnā, believing in the truth of the doctrine which does not want any of the sciences to set forth its own principles, and taking that *simpliciter*, believes that it is the task of the person who concerns himself with the first philosophy to give a clear exposition of the existence of substance apprehensible by the senses, eternal or not. He says that the natural scientist posits by hypothesis that nature exists (*yaḥd'u ma'fūm anna 'l-faḥ'a māwǧūda*) and that the scholar of divine science is the one who gives the demonstrable proof of its existence" (*Tafsīr*, III, 1423-4). Ibn Rushd then replies: "Yes, the specialist in the first philosophy seeks for the principles of substance as substance and sets forth clearly that the separateness of substances is the principle of the physical substance. But in making clear this search, he constantly calls for (*yaḥd'ir*) what physics clearly sets forth, whether in regard to the substance which can be generated and is corruptible, in the first book of the *Physics* (189 B 30-192 b 34), where it is demonstrated that it is made up of matter and form, or whether in regard to the eternal substance, in Book viii (260 a 20 ff.), where it is set forth that the driving force of that substance is stripped of all matter. Then he clearly lays down that the principles of the substance which are neither the Universal ideas (*al-kullīyyāt*) nor the Numbers (*al-ʿadad*) [of Plato]" (*ibid.*, 1424-5). One should mention a final divergence between the two philosophers. Ibn Rushd notes that Aristotle, in the tenth book of the *Metaphysics*, has an enquiry into the unit, the multiple, the identical (*huwa kawn*), the similar, the opposite and in-to still further notions "which bring out the general concomitants (*al-lawāziḥ al-ʿamma*) of the being as such" (*Tafsīr*, IV, 1405). In effect, metaphysics is a speculation about the being as such and about the "things" which are concomitant with it" (*al-awṣāl al-lāḥiqa laha*) (*ibid.*, III, 1395). Now we have seen that what is concomitant with being for Ibn Rushd is the division of being for Ibn Sīnā. It seems that this fundamental divergence holds good for all the other oppositions.

Ibn Sīnā's metaphysics is consequently open to a region beyond the world, the earth and the heavens; it makes a mystical system possible. For Ibn Rushd, on the contrary, although metaphysics studies the principles of beings which are objects of other sciences, it is not the foundation of those sciences, but their completion. He writes in his *Tafsīr*, II, 701, "Since . . . each science only concerns itself with studying a certain being which is its special object, it is clear that there must necessarily exist a science which studies the absolute being (*al-hayyūṣ al-muf-laḥ*); if there were not, our knowledge of things would not be completely exhaustive (*lam tawṣuḥa ma-ʿrifat al-aḥḍāṭ*)" (*Tafsīr*, II, 701). Furthermore, whilst Ibn Rushd seeks for the first cause of the movements of substances apprehensible by the senses, corruptible or incorruptible, and finds it in the immobile Prime Mover, Ibn Sīnā sets himself the task of "making an enquiry into the first cause from which

every being is brought about by causality (*huwa mam-jūd maʿad*) in as much as it has been the result of causality, and not simply in as much as it is a mobile being (*maʿwǧūd mutaharrik*) or a quantifiable being (*maʿwǧūd mutahammim*) (*Shifāʾ*, I, 1413-14, 14). But there is a problem there; it is not possible for metaphysics to speculate on causes in as much as they are causes *simpliciter* (*al-ʿaḥḍ bi-mā aya aḥḍ mutlaḥ*), in the first place because this science treats of notions "which do not raise the question of proper accidents owed to these causes as such, such as the notions of universal and particular, of act and capability, of possibility and necessity" (*ibid.*, 7); and then because the science of causes taken *simpliciter* presupposes that the existence of causes has been established for the things which have a cause (*ḥāḍat al-aḥḍ li 'l-ʿawṣ al-ḥāḍat al-aḥḍ*). Ibn Sīnā adopts here a very clear view of the problem of causality: it is not sufficient for the existence of a cause to be demonstrated in the eyes of reason. The existence of causes and effects is not proved by an intuition of causality; it comes from the division of being into the necessary and the possible. The first cause is thus the being necessary by itself. This is why there exists a being necessary so that all other beings have causes, since these exist even at the time when they are only possibilities. Now if one adopts as the point of departure experience of things apprehensible by the senses, all the causes that one will find are at the same time effects. One would not therefore be able, by tracing back the series of cause-effects, to reach the first cause, whether one went back infinitely or whether one came to a stop, as did Aristotle in his search for the Prime Mover, by an arbitrary decision: *ḍωρεν οργων*. On this point, Ibn Sīnā has set forth a highly original idea in his *Shifāʾ* (ed. Sulaymān Dunyā, Cairo 1958, III, 454-5). It concerns the position of the cause which is not an effect, in relation to the series of cause-effects. If it forms part of their ensemble (*ḡawṣ*), it is necessarily an extreme limit (*ṣaraf*). But if one takes a series made into a hierarchical chain (*ṣilsila maratib*) of causes and effects which is made up only of cause-effects, "there is a need for an external cause for this ensemble, but undoubtedly in continuity with it in regard to limit (*ḥādith li 'l-ṣila ḥāditha faḥḍ, lāḥiqaḥ tatagalu bihā . . . ṣaraf*)". Ibn Sīnā envisages the case where this succession is infinite, and then the cause-effects would form an infinitely limited ensemble. This ensemble is the universe; God is its "limit", but He is exterior to it. On the contrary, Ibn Rushd's Prime Mover is probably at the peak of the hierarchy of substance, but it is a substance and forms part of the world of substances. Just as metaphysics finishes off the sciences, likewise God supports the universe like the keystone of an arch.

(R. ARNALD)

MA CHUNG-YING (*Mathew*) Chinese-English Dictionary, Revised American Edition 1959, characters nos. 4310, 1505, 7489, also known as 尅 尅 尅, or "Little Commander" (*Gā* is an affectionate diminutive used in colloquial Kansu Chinese—see the *Hsin-Hua* *tsu-shen*, Peking 1971, 124; See-hing: see *Mathew*), nos. 5585, 4043, the youngest and best-known of the five Chinese Muslim warlords comprising the "Wu Ma" clique [g.v.] which controlled much of Northwest China during the latter half of the Republican Period (1911-49).

Little is known of Ma Chung-ying's early years,

He was born at Linhsia (formerly Hochow) in south-eastern Kansu, ca. 1910 (there is a contradiction in the *Biographical dictionary of Republican China*, which holds that Ma was born in 1911, but that he became a junior officer in 1926 "at the age of seventeen"; *op. cit.*, 463, col. 2). Little is known of Ma's immediate family, but it is clear that he shared the same paternal grandfather as the Kansu-Chinghai warlords Ma Pu-ch'ing (*Matthews*, nos. 4310, 5363, 1168) and Ma Pu-fang (*Matthews*, nos. 4310, 5363, 1519), and that he was thus a scion of the powerful Ma family of Pieh-tsang, a small village some 30 km. west of Lanzhou (Mei, *op. cit.* in *Bibl.*, 660). Ma Chung-ying was also distantly related to the Kansu-Ninghsia warlords Ma Hung-k'uei (*Matthews*, nos. 4310, 5366, 5651) and Ma Hung-pin (*Matthews*, nos. 4310, 5366, 5659), the most powerful representatives of the Ma family of Han-chia-chi, a large village some 25 km. south west of Linhsia. Together these five Ma warlords were to become famous—or infamous—as the "Wu Ma" Northwestern Muslim clique.

Ma Chung-ying first entered military service during 1924 when, at about the age of fourteen, he joined the local Muslim militia. One year later, in August 1925, troops of the "Christian General", Feng Yü-hsiang, invaded Kansu. The invading forces, under the command of Feng's subordinate Lin Yü-fen, formed a part of the Northwest Army, more commonly known as the First Kuominchün ("National People's Army"), a vast rabble which is estimated to have numbered in excess of 100,000 men during the late summer of 1925. Feng intended, through his subordinate Liu, to colonise large tracts of Kansu with Kuominchün soldiers; he also intended to finance his struggle against the Northeastern warlord Chang Tso-lin with taxes raised and opium cultivated in the Northwest. Not unnaturally, these aims found little favour with the people of Kansu, Ninghsia and Chinghai; nor were the local warlords much inclined to support Feng Yü-hsiang.

In 1926, one year after the Kuominchün invasion of Kansu, Ma Chung-ying received his first commission as an officer in the forces commanded by one of his uncles, Ma Ku-chung (Boorman and Howard, *op. cit.* in *Bibl.*, 463). During the same year, Liu Yü-fen, who was in occupation of the provincial capital at Lanchow, was attacked by a combination of local warlords from eastern Kansu (Sheridan, *op. cit.* in *Bibl.*, 195-6). Fighting was prolonged and severe, but the Muslim warlords of western Kansu seem to have remained aloof from the struggle, and Liu eventually succeeded in reimposing Kuominchün rule on the province. During his conflict, Ma Chung-ying, still only sixteen or seventeen years of age, is said to have "laid siege to and captured Linhsia on his own initiative" (Boorman and Howard, *ibid.*). Liu Yü-fen ordered troops under the command of Ma Lin (a great-uncle of Ma Chung-ying) to recapture Linhsia, but the young soldier easily defeated them, winning for himself a reputation as a military strategist and the nickname "Little Commander". Ma Chung-ying's triumph was short-lived, however, for his uncle and commanding officer Ma Ku-chung had not ordered the occupation of Linhsia, and he dismissed his nephew for insubordination. The "Little Commander" learned his lesson well; he withdrew to the Suifu area of Chinghai and began to build up his own forces.

The Kuominchün "pacification" of Kansu left large areas of the province devastated, but failed to break the rebellious spirit of its people. In 1927

north-western Kansu was racked by a violent earthquake; this, combined with the increased use of good arable land for the cultivation of the opium poppy and arbitrary tax increases imposed by Liu Yü-fen, caused widespread famine. Early in the spring of 1928 the patience of the Northwestern Muslims ran out, and the standard of revolt was raised against the Kuominchün by the Muslim leader Ma Ting-hsiang (*Matthews*, nos. 4310, 6404, 3076; see Sheridan, 250). Ma Chung-ying (who according to one source had fled to Sining, together with a group of his followers, because of an illicit affair with a young Muslim girl from a strictly orthodox family; see Ekvall, *op. cit.* in *Bibl.*, 946) rapidly became involved in this revolt against the Kuominchün. The city of Linhsia, which remained in Kuominchün hands, was besieged three times by Muslim forces. Robert Ekval, an American who travelled through south-eastern Kansu at this time, records that "The revolt had by this time assumed all the aspects of a holy war. Chanting prayers, forty or fifty thousand fighters went into battle with fanatical zeal . . . the young rebel leader Ma Chong-ling (*sic*) seemed to bear a charmed life and by his reckless courage gained the utmost in obedience and devotion from his ruffian troops. The Chinese (i.e. the Kuominchün) were panic-stricken at the desperate courage of the Muslims, but eventually, by machine-gun fire and light artillery, proved superior" (Ekval, 946-7). The Kuominchün was unable, however, to crush the Muslim revolt entirely; no sooner had the rebellion been suppressed in one area, than it broke out afresh in another. By September 1928 over 100,000 people had died (Sheridan, *loc. cit.*). Anti-Kuominchün feeling amongst the Muslims gradually gave way to racial hostility against all Han Chinese. On 14 February 1929, about 20,000 Muslims forced their way into Tchang, a city of some 5,000 families in western Kansu. An American eyewitness described the scene as follows: "[The Muslims] forced an entrance by felling over the north wall, immediately by they began to murder the Chinese in the most brutal way, cutting over the head with swords . . . The Muslims were in the city only about two hours, but during that time the official figures show more than 2,000 killed, 700 wounded, and \$2,000,000 damage" (Sheridan, 351). Kuominchün reprisals against the Muslims were equally bloody. According to American diplomatic reports (see Sheridan, *ibid.*), the savages of war and famine reduced people to cannibalism; between 1926 and 1929 as many as 2,000,000 people may have died. One casualty was Ma Chung-ying's father, who was executed on the orders of Liu Yü-fen in the winter of 1929 (Boorman and Howard, *ibid.*).

In 1929 Ma Chung-ying, his position strengthened by several victories over the forces of the Kuominchün, approached the Nationalist leader Chiang Kai-shek with a request that his private army should be recognised as a Kuomintang frontier unit. At about this time, Feng Yü-hsiang declared himself independent of the National Government at Nanking; as a result of this, Ma Chung-ying's distant relative Ma Hung-k'uei, the strongest of the "Wu Ma" clique, declared in favour of the nationalist cause. Ma Chung-ying went to Nanking, where he enrolled briefly at the military academy. In 1930 he returned to Kansu where he was appointed garrison commander at Kanchow (Changyeh) in the far north-west, near the frontier of Sinkiang [g.v.]; from here he controlled a small belt, including the towns of Suhow and An-hui, which "freed him from any financial

worry and allowed him to prepare his army for an expedition to Sinkiang" (Nyman, *op. cit.* in *Bibl.*, 101). Before striking out into Sinkiang, however, Ma seems to have made another bid to extend his personal power base in Kansu. Once again he met with failure, this time at the hands of his uncle Ma Pu-fang (Norins, *op. cit.* in *Bibl.*, 48).

In 1930 Sinkiang, China's largest province, was under the control of Chin Shu-jen, an avaricious and incompetent warlord from Kansu; over 90% of Chin's subjects were Muslims, but the Han Chinese warlord seems to have nurtured a fierce hatred for all Muslims, whether of Hui or Turkic ethnic origin. Chin's anti-Muslim sentiment may well have derived from the various Hui risings in Kansu; certainly, when a combination of famine and war drove starving Han Chinese refugees to flee from his native Kansu to Sinkiang in the late 1920s, Chin welcomed them with open arms. Less than 200 km from the north-western frontier of Ma Chung-ying's fief in Kansu lay the ancient oasis city of Kōmul (Kōmul [q.v. in *Suppl.*]). When Chin Shu-jen seized power in Sinkiang during 1928, Kōmul (Chinese name Hami) was still a semi-independent state, ruled by the aged monarch Maikūd Shāh, the last autonomous Khānate in Central Asia. When Maikūd died of old age in 1930, Chin Shu-jen, who held the half-apparent hostage in Urumchi, the provincial capital, announced the abolition of the Khānate and its full absorption within China. Chinese officials took over the administration of Kōmul, and Chin began to settle Han Chinese refugees from his native Kansu on arable land expropriated from the indigenous Uyghur [q.v.] farmers. Local unrest grew rapidly, and in 1931, following the abduction of a local Muslim girl by a Han Chinese tax collector, open rebellion broke out.

One of the leaders of the Kōmul revolt, a Uyghur called Yulbars Khān [q.v.] travelled to Suichow in north-western Kansu where he met Ma Chung-ying (now officially Commander of the 36th Division of the Kuomintang, though Yulbars comments that there were so many Ma's in this force that it was commonly called the *Ma-chia-chün*, or "Ma Household Army"; see Yulbars, *op. cit.* in *Bibl.*, 87-8). Ma agreed to enter the fray, ostensibly to help his Uyghur co-religionists and in 1931 he led his troops into Sinkiang in an open challenge to Chin Shu-jen. Ma was wounded during the autumn, and withdrew temporarily to Kansu to recuperate. In August 1932 Ma's troops again entered Sinkiang. Initially, they cooperated with the Uyghurs in their struggle against Chin Shu-jen. Ma's crack cavalry units, generally considered to have been amongst the best troops in China, fought their way to the outskirts of Urumchi before being repulsed by White Russian mercenaries under the command of Chin Shu-jen (see Wu, *op. cit.* in *Bibl.*, 73-100); meanwhile, Uyghur forces under Yulbars Khān and Khādīz Niyāz Hādīdī took control of the greater part of southern Sinkiang, and an "East Turkestan Republic" was proclaimed at Kāshghar [q.v.].

In April 1933 the incompetent Chin Shu-jen was ousted by Sheng Shih-ts'ai, his Chief-of-Staff. The new warlord, whose home province was Liaoning in the far Northeast, enjoyed the support of a group of some 3,000 battle-hardened Manchurian troops who had been driven into Siberia by the invading Japanese and repatriated to Sinkiang by the Soviet authorities. During the remainder of 1933, Ma Chung-ying's forces made two further attempts to take Urumchi, and despite judicious use of his White Russian and Manchurian troops, Sheng was forced

to appeal to the Soviet Union for aid. In January 1934, Soviet military units entered Sinkiang and attacked Ma Chung-ying's cavalry with aeroplanes and, apparently, poison gas. The Muslim warlord was forced to fall back on Turfan, but instead of withdrawing to his old base in north-eastern Kansu he took the decision to try and hold southern Sinkiang.

This decision brought the Kansu Muslims into direct conflict with the Uyghur Muslims of Sinkiang, their erstwhile allies. There had been indications of such a split for some time; as soon as fighting on the northern front had become bogged down before Urumchi, units of Ma's forces had advanced into the Tarim Basin where his troops "aroused the antagonism of the Turkic natives by looting and plundering" (Boorman and Howard, 464). It rapidly became clear to most of the Uyghur population (though notably not to Yulbars) that Ma was just another Kansu warlord, and not the saviour of the Muslims of Sinkiang they had hoped for. (There was never any question of Ma being viewed as a *mahdi*, and there seems to be no reason for assuming that he considered himself as such. Nyman, 101-3, is certainly mistaken in suggesting this.) The retreating Ma Chung-ying fell back on Kāshghar, where he destroyed the nascent Islamic "East Turkestan Republic"; he then transferred command of his forces to his brother-in-law, Ma Hu-shan (Maitheers, nos. 4310, 2161, 5630), and, in a move which still remains shrouded in mystery, crossed the frontier into the Soviet Union during July 1934. His brother-in-law, Ma Hu-shan, went on to occupy the whole of the southern rim of the Tarim Basin; here, as the "Commander-in-Chief of the 36th Division of the Kuomintang", Ma established a strange Hui-ruled fief on the borders of Tibet. Ma Hu-shan's stilet, "Tunganistan" [q.v.] was to endure until 1937, when his forces melted away and he took refuge in British India.

It is not clear why Ma Chung-ying should have deliberately chosen to enter the Soviet Union when his military position was far from hopeless—after all, he had been driven back from Urumchi by Soviet forces. Ma's eventual fate is uncertain; an article published anonymously in the *Journal of the Royal Central Asian Society* during 1935 states that he "died on arrival at Moscow", however, it is more likely that he was held by Stalin as a weapon in reserve against Sheng Shih-ts'ai, the Soviet puppet in Sinkiang. Ma may have been executed by Stalin at Sheng's request when the latter visited Moscow in 1938; certainly, he was never seen again, though for many years stories of his imminent return circulated amongst both the Uyghurs of Sinkiang and the Hui of Kansu.

MA HUA-LUNG (*Matthews' Chinese-English dictionary*, Revised American Edition 1969, characters nos. 4310, 2212, 4258), also known as *Ma Ch'ao-chung* (*Matthews*, nos. 4320, 433, 2171), a Chinese Muslim leader and exponent of the "New Teaching" who played an important part in the great mid-19th/19th century Muslim risings against the Ch'ing dynasty.

Ma Hua-lung was born at an unknown date during the first half of the 13th/19th century, probably at Ch'ien-chi-p'u (Hartmann, *op. cit.* in *Bibl.*, 14), a walled city in Ninghsia (q.v.) province situated on the right bank of the Yellow River some 80 km. south of Ninghsia city (the modern Yinchuan). We know little of Ma's personal background. Po Ching-wei, a member of the Shensi gentry who participated in the struggle against Ma (and therefore a hostile source), states that "Ma Hua-lung's family lived at Chin-chi-p'u for generations", seemingly, Ma came from a well-to-do family background, for he was "the leading rich man in the area, as well as a person with a military title which he earned by substantial contributions to the government". Furthermore, he was a man of considerable political and religious significance, for Po tells us that he was "very much respected and trusted by the Moslems in Ninghsia ... (and) ... he was a sweeping influence over the Moslems of the other provinces too" (Po Ching-wei, *Feng-shih-t'ao'ung-chi*, iii, 7-11; cited in Chu, *op. cit.* in *Bibl.*, 346-7).

In Ma Hua-lung's time, Chin-chi-p'u, said to have been a Muslim centre "for more than a thousand years" (Bales, *op. cit.* in *Bibl.*, 218), and described as the "Medina of Chinese Islam" (Wright, *op. cit.* in *Bibl.*, 111), indicating a significance secondary

only to that of Hecow (often described as the "Mecca of Chinese Islam"), was a prosperous trading centre which thrived on the tea and salt trade with Mongolia. Bales, 243, notes that "it was a purely Muslim city and no Chinese official was resident there. The officials lived at Lingchow" (a small city some 30 km. to the north).

Ma Hua-lung's lineage is unclear. He does not appear to have been directly related by blood to Ma Ming-hsin (q.v.) of An-ting, but he was certainly a spiritual descendant of the latter. Muhammad Tawāḥid (q.v. *cit.* in *Bibl.*, 117) states that he was the sixth *ghaykh* of the Nakshbandi *faiqa* founded by Ma Ming-hsin ca. 1175/1761 near Lanchow. Ma Hua-lung's father, Ma Erh (*Matthews*, nos. 4310, 1751), the fifth *ghaykh* in Ma Ming-hsin's *shaija*, is said to have died "a lingering death" (Wright, 109) at the hands of the Chinese; Ma Hua-lung was thus both a spiritual and a direct blood descendant of Ma Erh, the fifth head of the Nakshbandiyya-Djahlriyya order in Northwest China (see, however, Israeli's 1974 thesis, 273-324, for an alternative analysis).

It seems that, after the harsh suppression of "New Teaching" adherents in the Kansu-Chinghai borderlands resulting from the defeat of the 1196/1781 and 1208/1783 Muslim risings, the surviving "New Teaching" leaders moved eastwards towards Ninghsia. According to Fletcher (*op. cit.* in *Bibl.*, 77), it was Ma Hua-lung who made Chin-chi-p'u into the foremost "New Teaching" centre in all of China. From this bastion he was able to exercise an influence on the Chinese *umma* far in excess of that wielded by Ma Ming-hsin during his prime, for during the three-quarters of a century following the death of the latter, the "New Teaching" had spread from the Kansu-Chinghai border area across much of China. Seemingly, Ma Hua-lung played an important part in this process of proselytisation, for in a memorial addressed to the Imperial authorities at Peking requesting the prohibition of the "New Teaching", Tso Tsung-t'ang, the Ch'ing commander who eventually crushed the 1862-78 Muslim rebellion in Northwest China, complained that Ma, who styled himself the *Taung-ta A-hung* ("General Grand Mufti", *Matthews*, nos. 6912, 5943, 2, 2931), had "sent out people to spread this evil religion everywhere". According to Tso, these missionaries, known as *hai-h-fai* (*Matthews*, nos. 2014, 3805, 1850, possibly a corruption of the Arabic *ḥaf* term *ḥafīḥ*, see Israeli, *op. cit.*, 1974, 208), were "disguised as businessmen" (Tso Tsung-t'ang, *Memorials*, cited in Chu, *op. cit.* in *Bibl.*, 1966, 156-8). In fact, Muslim merchants dominated the North China caravan trade, and it is more than probable that many of the "New Teaching" *hai-h-fai* were also legitimate merchants. Tso continued: "According to the testimony of lately captured Muslim rebels, there are missionaries of the New Teaching in Peking, Tientsin, Heilungkiang, Kirin, Shensi and Hupeh" (Tso, *Memorials*, *ibid.*); it is also probable that the "New Teaching" had spread across Szechwan (where it was definitely established) to Yunnan (q.v.) where it may have played some part in the "Panthay" (q.v.) Muslim rebellion of Tu Wen-hsiu (q.v.).

During the great Muslim rebellion of 1862-78 (see AL-Sbi), four main centres of Muslim power were to emerge in Northwest China (excluding only the Turkic areas of Sinkiang which were either to pass under the rule of Ya'qub Beg (q.v.) of Kāshghar (q.v.) or to maintain a precarious independence under incompetent local leadership in Deungaria

(see Bales, 224, "Sketch map of main Muslim centres"). These were: (1) Ma Hua-lung's base at Chin-chi-p'u, the chief centre of the "New Teaching"; (2) Mochow and the surrounding area, a predominant "Old Teaching" centre under the leadership of Ma Chan-so (*Matthews*, nos. 4380, 553, 59); (3) Haining and the surrounding area, a region of mixed "Old" and "New Teaching" allegiances under the leadership of Ma Kuei-yüan (*Matthews*, nos. 4320, 568, 7728); and (4) a region centering upon Suchow, described by Bales, 224, as "non-sectarian", under the leadership of Ma Wen-yu (*Matthews*, nos. 4320, 7229, 4896). (Note, however, that elsewhere [227], Bales describes both the Haining and Suchow Muslims as being "mostly inclined to the New Sect".) In marked contrast to these Kansu and Chinghai Muslim leaders, Pai Yen-bu (q.v.), the most important of the Shensi Muslim leaders, was a guerrilla fighter with no permanent base. Of this plethora of Muslim leaders, however, it is interesting to note that in the opinion of Tso Tsung-t'ang: "only one man... could command followers from Hellungshiang to Sinkiang, and he was Ma Hua-lung" (Tso, *Memorials*, cited in Chu, 1955, 143).

The initial Northwestern Muslim challenge to the Ch'ing Empire came in Shensi, where between 1862 and 1864 Pai Yen-bu and other local Muslim leaders conducted a fast-moving cavalry campaign against the Manchu general To-lung-a. The Ch'ing forces scored some early successes in southern Shensi, but in 1864 To-lung-a was killed, and during the following months the Muslim revolt spread with great rapidity across the whole of Northwest China.

During the early years of the revolt, Ma Hua-lung, whose base at Chin-chi-p'u was situated well behind the main battle front in southern Shensi, succeeded in maintaining a precarious neutrality (at least in the eyes of some local Ch'ing officials, see Chu, 1955, 345), whilst simultaneously increasing the fortifications around Chin-chi-p'u and building up the armed forces at his command. It was widely rumoured that Ma Hua-lung had masterminded the capture of Nianghsia city by rebel forces in 1863, but some Ch'ing officials still remained unconvinced of Ma's complicity. Tso Tsung-t'ang, the military veteran who was appointed Governor-General of Shensi and Kansu in 1868, with specific orders to crush the Muslim revolt, had no such doubts. Tso "regarded the Chin-chi-p'u centre as one of first importance and determined to concentrate upon the reduction of the Muslims in that area. He had no illusions whatever about Ma Hua-lung, but was certain that he was the ringleader among all the Kansu Muslims, and he determined to proceed on that basis" (Chu, 1955, 346).

Tso estimated that he would require five years to reconquer Shensi and Kansu; he launched his attack in November 1868, aiming primarily to capture Chin-chi-p'u, with Mochow as a secondary target. It was a savage campaign, with little quarter given or asked. Tso played upon the traditional rivalries between adherents of the "Old" and "New" teachings by giving amnesty to followers of the "Old Teaching" who surrendered (a policy which paid off, for in 1872 Ma Chan-so, commander of the "Old Teaching" centre based on Mochow, surrendered to Tso shortly after inflicting a crushing defeat on the Imperial forces; for his pains he was made a general in Tso's army and went on to play an important part in the "pacification" of Kansu); in marked contrast Tso "never treated with a single 'New Sect' leader, but executed every one that fell into his hands" (Bales, 280),

Throughout 1869, Tso's armies advanced slowly across Shensi and into eastern Kansu, driving the highly-mobile Muslim cavalry of Shensi before them. In early 1870 the Imperial forces arrived before Chin-chi-p'u; the assault was to be long and hard, for over the whole plain was a network of canals, all the villages were fortified, and the Muslims had erected numberless stockades covering every approach to Chin-chi-p'u (Bales, 243; for details of the campaign, see 258-65). Tso built a huge moat and accompanying rampart around Chin-chi-p'u, and set about reducing the Muslims through a combination of bombardment and starvation. Ma Hua-lung's position was made critical by his earlier decision to send a large force of his followers into Shensi in a bid to draw off Tso's armies from Chin-chi-p'u, an action which caused Bales, Tso's biographer, to comment: "Had Ma Hua-lung enjoyed a reasonable talent for generalship along with his many other endowments, he could have driven Tso Tsung-t'ang out of Kansu, perhaps from Shensi as well, and delivered an irreparable blow to the Imperial cause" (247).

By January 1872 the population of Chin-chi-p'u was starving; the defenders had been reduced to eating human flesh. On 6 January Ma Hua-lung left his stronghold behind the city walls and presented himself, accompanied by a single servant, at the headquarters of Liu Chia-t'ang, the Imperial commander. Ma asked that all blame for the resistance at Chin-chi-p'u be laid on him, and that his followers should be spared. After prolonged interrogation by the victorious Ch'ing commanders, Ma was executed, together with twelve members of his immediate family, by the "slicing process"; some eighty of the lesser Muslim leaders were beheaded. Chin-chi-p'u was depopulated, and the surviving Muslims were sent, *en masse*, into exile or slavery. Tso Tsung-t'ang went on to reconquer western Kansu, and by 1875, ten years after the commencement of his offensive in Shensi, he succeeded in reconquering Kashiagar, the last major town of Northwest China.

After his execution on 2 March 1872, Ma Hua-lung became a martyr for followers of the "New Teaching". The victorious Ch'ing forces made strenuous attempts to stamp out Ma's adherents (it has been estimated that between 1862 and 1878 the Muslim revolt and the Ch'ing reconquest resulted in over 10 million deaths; see Chu, 1966, p. vii), but to no avail. According to W. A. Saunders, a Christian missionary who was active in Kansu during the Republican period, Ma's body was buried at Chen-chi-p'u, but his head was taken, presumably in secret, to Hsian-hua-kang, near Chang-chia-ch'uan in south-eastern Kansu. When Saunders visited Hsian-hua-kang in 1934 he found Ma's tomb to be "quite an imposing affair of carved brick with a kind of 'Li Pai Sh' (temple) as an entrance" (q.v. *cit.* in *Sihl*, 70). Saunders records that "worship" was made at the tomb every year on Ma Hua-lung's birthday, a practice strongly denounced by local Muslims belonging to the "Old Teaching". It is not known whether Ma's tomb at Hsian-hua-kang still exists.

Bibliography: The most important contemporary Chinese sources for the Muslim rebellion of 1862-78 are the complete works of Tso Tsung-t'ang, *Tso Wen-hsiang-hung Ch'üan-chü*, 1888-97, published together with a biography of Tso written by Lo Cheng-chün, *Tso Wen-hsiang-hung Nien-p'u*; details of these works are to be found in Chu Wen-djang's 1966 study of the Muslim rebellion in Northwest China at p. 212. A collection of anecdotes taken from the oral recollections of a Muslim

myth who lived through the great rebellion as a child is to be found in Shao Hui-p'u's *Shao-Kan Chieh-yi-tu*, in P'ai Shou-i's 1951 collection, iv, 303 ff.; this source, based partially on personal experience and partially on hearsay, is indicative of the paucity of Muslim sources for this period. A further useful contemporaneous Chinese source is Po Ching-wen's *Feng-shih-tao-fang-chi*, Nanking 1924, the collected works of a member of the Shensi gentry who served with the imperial forces and was present during the siege of Chin-chi-p'u. An interesting, but not always reliable, contemporaneous western source is F. von Richthofen's *Baron Richthofen's letters (1870-1872)*, Peking 1947. See also: H. M. d'Ollone, *Recherches sur les Musulmans Chinois*, Paris 1911, esp. 223-4; Wu Tseng-ch'i, *Ch'ing-shih kang-yao* ("A summary of Ch'ing history"), Shanghai 1913, esp. ch'uan 12; M. Hartmann, *Zur Geschichte des Islam in China*, Leipzig 1921; W. A. Saunders, *Friend Hua Kung, in Friends of Muslims in China* (Hankow), viii/4 (1 October 1934), 69-71; W. L. Bales, *Tzu Tsung-fang: soldier and statesman of Old China*, Shanghai 1937, esp. 251-65; Muhammad Tawûdî, *al-Sin wa 'l-Islâm*, Cairo 1945; Ma Hsiao-shih, *Hei-pai Hsiao ho-ming chieh-shih* ("A short history of the revolutions of the Northwestern Muslim people"), Shanghai 1951, esp. 1-15 (Ma Hsiao-shih, a Hui Muslim, emphasises links between the Muslim rebellion in Shensi and the Taiping rebels); P'ai Shou-i, *Hui-hui min-shu* (i. *Asin-sheng* ("The rebirth of the Muslim people"), Shanghai 1951, esp. 65-70, P'ai Shou-i, *Hui-min ch'i-i* ("The righteous uprisings of the Muslim people"), 4 vols, Shanghai 1955, see vols. iii and iv for the Northwest China rebellions; Chu Wen-chiang, *The Policy of the Manchus government in the suppression of the Muslim Rebellion in Shensi, Kansu and Sinkiang from 1862 to 1878*, Ph. D. thesis, Univ. of Washington 1955 (the greater part of this thesis was later published (see Chu, 1966), but several important appendices were omitted from the published version, most notably supplement IV, "Ma Hui-lung and the New Sect", which may be found at 343.66 of the unpublished thesis); Mary C. Wright, *The last stand of Chinese conservatism: the T'ung-chih restoration, 1862-1874*, Stanford 1957, repr. New York 1969, see esp. 107-113 of the 1969 edition; Saguchi Tôru, *Jûkoku-jûkyû seiki Higashi Toroku-sutan shakushi kenkyû* ("The social history of Eastern Turkestan in the 18th/19th centuries"), Tokyo 1963; Chu Wen-chiang, *The Muslim rebellion in Northwest China, 1858-1878*, The Hague-Paris 1966; R. MA HUAN (*Matthews' Chinese-English dictionary*, Revised American Edition 1969, characters no. 4310, 2256), Chinese Muslim interpreter and traveller who flourished during the 9th/15th century and who was the author of *Ying-yai sheng-lan* ("The overall survey of the ocean's shores"), the best-known account of the early and mid-9th/15th century Ming Chinese maritime expeditions to South-east Asia, South Asia, the Arabian Peninsula and East Africa.

Ma Huan was born ca. 782/1380 in Kuei-chi, a district of Shao-hsing city, Chekiang Province. His home was about 24 miles south-east of Hang-chow, and a mere 7 miles from the southern shore of Hang-chow bay, one of the principal centres of navigation in 9th/15th century China (Mills, *Ma Huan* [see Bibli.], 34). Ma Huan probably came from a poor background, though "his derogatory description of himself as a 'mountain-woodcutter' need not be taken literally" (Mills, *loc. cit.*). Seemingly, Ma Huan did not belong to a Muslim family, but chose to adopt Islam when a young man—thus his surname "Ma", so common amongst Chinese Muslims, must have been purely coincidental. He must have received a good education in Chinese, for "there are classicisms in his book, and he was acquainted with the contents of Wang T'ien-yun's *Tao-i chih-t'ieh* ("A synoptical account of the islands and their Barbarians", 751/1350), of certain Chinese classics, and of 'Buddhist books'" (Mills). (On the other hand Dryvondak, in his *Ma Huan re-examined*, 9, describes *Ying-yai sheng-lan* as being "written in an almost colloquial style by an unlearned Mohammedan".)

During his youth Ma Huan seems to have adopted Islam, and to have assumed the *fu* (courtesy-name) of Tsung-jao (*Matthews*, nos. 6196, 6136); possibly as a result of becoming a Muslim he began a study of Arabic and/or Persian, enabling him to become proficient as a translator and interpreter. As a result of the acquisition of these skills, he was appointed to the staff of the great Chinese Muslim admiral Cheng Ho in 815/1412. It is interesting to note that Ma Huan's appointment came one year before the fourth of Cheng Ho's voyages (816-18/1413-15), the first to sail beyond South Asia to the Persian Gulf.

Ma Huan accompanied Cheng Ho on this fourth voyage—as with the latter's three previous voyages a "maritime expedition" in every sense of the word; the Chinese Muslim admiral had under his command a fleet of 63 ships bearing 28,500 men. The expedition visited various parts of the Malay Archipelago, Sri Lanka, Bengal, South India, the Maldives islands and Hormuz in Persia. The young Ma Huan must have been greatly interested in the various lands he saw, for together with his colleague and life-long collaborator Kuo Ch'ung-li (*Matthews*, nos. 3746, 1528, 3886), he made local journeys in the various countries he visited, and recorded details of his impressions.

On his return to China in 818/1415, Ma began work on a book based on the notes made by Kuo Ch'ung-li and himself. In 819/1416 he completed the first version of his book (he was to make numerous additions and corrections over the years), and wrote a foreword and a commemorative poem. In his 819/1416 foreword he states that:

"I collected [notes about] the appearance of the people in each country, the variations of the local customs, the differences in the natural products and the boundary limits. I arranged [my notes] in order so as to make a book, which I have entitled *The overall survey of the Ocean's shores*" (Mills, *op. cit.*, 70).

Ma Huan did not accompany Cheng Ho on his fifth expedition of 820-21/1417-19; he does not explain why. In 824/1421, however, he once again voyaged with Cheng Ho on his sixth expedition, returning in 825/1422. In addition to returning to most of those countries visited during the fourth expedition, Cheng Ho's sixth expedition took Ma Huan to Zūfār and Aden; a part of the great Chinese fleet (which comprised 41 ships and an unknown number of men) visited Mogadishu and Brava in Somalia, but Ma Huan does not seem to have accompanied

this branch expedition. Mills notes that Ma Huan probably added sections on Zulfir and Aden to his book after his return to China in 825/1422 (*op. cit.*, 35).

Ma Huan, although still a relatively young man, probably accepted that his journeys to the Indian Ocean were over when the emperor Jen Tsung forbade further expeditions to that remote region in 828/1424; however, when the Hsiao-te emperor revoked this edict in 834/1430 and ordered this ageing Cheng Ho to undertake his seventh and final expedition to the "Western regions", Ma Huan was once again employed as an interpreter.

Cheng Ho's seventh expedition is better documented than any of the preceding six. We know that more than 100 large ships took part in the voyage, and that a total of 27,550 men sailed with him. The fleet left Nanking in 835/1431, and returned to China in 837/1433. Once again, Cheng Ho and/or his emissaries visited Southeast Asia, Bengal, Southern India, the Persian Gulf, the Arabian Peninsula and East Africa. On this voyage we know that Ma Huan sailed with a branch of the main fleet to Bengal, and thence to Kozhikode (Calicut) in South India. It seems very likely that from Kozhikode Ma Huan was sent, with six other Muslim emissaries, to Mecca. Mills has calculated that Ma Huan left Kozhikode about mid-836/1432, and arrived in Mecca about three months later, he then spent a further three months in Mecca before rejoining Cheng Ho's main fleet at Kozhikode in 837/1433.

On his return to China, Ma Huan added a lengthy and accurate account of Mecca to his *Ying-yai sheng-lan*. He notes that the inhabitants of *T'ien fang* ("the Heavenly Square", a clear reference to the Ka'ba) are "stakeart and fine looking"; they "band up their hands", whilst their womenfolk "wear a covering over their hands, and you cannot see their faces". He describes the *Haram* and the Ka'ba in detail, noting that the pilgrims tear pieces from the *hizam* (so the mantle used to cover the Ka'ba) as souvenirs, just as occurs today. He also mentions the Prophet's tomb at Medina, though his error in situating the well Zamzam near the latter rather than at Mecca causes Duyvendak to question whether Ma Huan did, in fact, ever visit the Hijaz (*Ma Huan re-examined*, 73). An excellent translation of Ma Huan's account of Mecca may be found in Mills, 173-8.

To the best of our knowledge, Ma Huan never again left China. He continued working on the *Ying-yai sheng-lan*, in collaboration with Kuo Ch'ung-ii, and the completed work was eventually published ca. 855/1451. Ma Huan is thought to have died some nine years later. Unfortunately, the 1451 edition of Ma Huan's book has long been lost, and our present knowledge of the *Ying-yai sheng-lan* rests on three later editions, all dating from the latter half of the Ming dynasty (Mills, 37-41).

(A. D. W. FOSBROOK)

MA MING-HSIN (*Matthew's Chinese-English Dictionary*, Revised American Edition 1969, characters nos. 4320, 4534, 2735), also known as MUHAMMAD AMIR, a Chinese Muslim leader of the mid-12th/18th century who was instrumental in the development and spread of the "New Teaching", a neo-orthodox reformist movement in Chinese Islam which swept Northwest China in the latter half of the 12th/18th century, and which played an important part in the great mid-13th/19th century Muslim revolt of Ma Hui-lung (q.v.).

Ma Ming-hsin was born at an unknown date during the first half of the 12th/18th century at An-ting, a small town some 90 km. south-east of Lanzhou, the capital of the Chinese province of Kansu (q.v.). The site of Ma's birthplace makes it probable that he was a Hui (Chinese-speaking) Muslim, though his travels in Turkestan led Hartmann (*op. cit.* in *Bibl.*, 28, n.) to describe him as a native of that region, whilst his rôle as a religious reformer amongst the Salar Turks (q.v.) of southwestern Kansu and eastern Chinghai has also led to his identification as a Salar (see Mary C. Wright, *op. cit.*, in *Bibl.*, 108). Confusion over Ma's ethnic origins may have been further compounded by his adoption of an Arabic sobriquet, a practice common amongst the Hui.

Ma Ming-hsin seems to have first come to the attention of the Chinese authorities in 1175/1762, when he returned to Kansu after a prolonged period of travel and study in Central Asia and Arabia. During the course of these travels Ma made the pilgrimage to Mecca, and visited the Yemen, where he was initiated into the Nakshbandi *tarīqa* (Tawāqūf, *op. cit.* in *Bibl.*, 115). It seems probable that he returned to Kansu via the major Nakshbandi centre of Bukhārā, as well as through the lesser Nakshbandi centres of Kāshghar (q.v.) and Yarkand. On his return, Ma proclaimed himself the "Possessor of the True Teaching" (Hartmann, in *Bibl.*, 123, n. 128), and armed with a "magnetic personality" (Ford, *op. cit.* in *Bibl.*, 154) and the prestige naturally accruing to *hujjāt* on this distant periphery of the Muslim World, he began to expound a heterodox form of Islam with the avowed aim of reforming the Chinese *umma*.

Within a short period of time, Ma was expelled from his native An-t'ing for "causing trouble" (Ford, *ibid.*). He went next to preach amongst the Salar, a Turkic people with a reputation for fierceness and independence who inhabit the hills to the south of the Yellow River in the Chinghai-Kansu borderlands. In the Salar hills, Ma gained the support of two local *mullas* Su-szu-shih-san and Hu-ma-liu-hu. His teaching, which rapidly gained widespread popular support, became known as the "New Teaching" (*hsin chiao*, *Mathews*, nos. 2737, 719) to differentiate it from the various forms of established Islamic practice in Kansu, which in turn became known as the "Old Teaching" (*lao chiao*, *Mathews*, nos. 3833, 719, or *chiao chiao*, nos. 1205, 719). According to Hsu (in *Bibl.*, 23), Ma Ming-hsin's "New Teaching" was distinguished by the following characteristics: (1) loud chanting of the scriptures, as opposed to the soft chanting of the old sect (i.e. followers of the "Old Teaching"); (2) prayers with head-shaking and body movement in dance-like manner, so. foot-stamping, hand-waving, and face turning up towards heaven; (3) belief in miracles, visions, apparition of spirits, and prediction of good or bad omens; and (4) the worship of saints or their tombs.

Until recently, the identity of the "New Teaching", though obviously Sufi in inspiration, remained unclear (see Wright, 108, together with relevant footnotes). Recent research undertaken by Saguchi and Fletcher, however, indicates that Ma Ming-hsin introduced to Kansu a sub-group of the Nakshbandi *fariha* which practiced *dhikr dhikr* (vocal recollection) as opposed to the *dhikr khatir* more usually associated with the Nakshbandiyya. This sub-group, which is generally known as the Nakshbandiyya-Djishriyya, can be traced back to Khudja Mahmud Anghir Faghnavi, who introduced the "*dhikr* of those who act publicly" (*dhikr 'alāniyya*) to the Nakshbandi *fariha* in ca. 715/1315 (Fletcher, *Central Asian Sufism*, 79-80). The "New Teaching", or Kansu form of Nakshbandiyya-Djishriyya, seems to have laid great emphasis on *karamat* (thaumaturgic and charismatic gifts (see KANANAK, 7), thus Ma Ming-hsin came to be regarded as a saint by his followers.

The followers of the "New Teaching" seem to have adopted an aggressively militant attitude towards other Muslims. An anonymous government official who participated in the defense of Lanchow during the Muslim rebellion of 1196/1201 notes of the adherents of the "New Teaching" that "When anyone hesitated to join them, they would all rise to attack him, threatening him with sword and spear until he gave way. Even if the rejector were the father and the believers were the sons, the sons would kill the father". (*P'ing-Hui chi-lieh*, *Hu-min chi-t'i*, III, 9-10). As a result of this militancy, relations between the "Old" and "New" factions grew to be extremely bitter.

The Chinese authorities first seem to have become aware of these sectarian tensions during 1196/1202, when leaders of the rival factions in the Salar region laid charges against each other before the Chinese magistrate. The leaders of both groups were found guilty and banished from the area. In 1183/1189 the charges were renewed, and this time the penalties incurred were heavier against the "New Teaching" (Wright, 108). It is not clear whether Ma Ming-hsin was personally involved in either of these incidents.

During this period, the town of Hsin-hua, located in the Salar hills on the right bank of the Yellow River some 95 km. upstream from Hsichow, (the modern Linxia), emerged as the centre of the

"New Teaching". In 1196/1201 sectarian tension in Hsin-hua boiled over, and followers of the "New Teaching" leader Su-szu-shih-san attacked and killed at least forty adherents of the "Old Teaching" (Schram, *op. cit.* in *Bibl.*, 64). Government troops despatched from Lanchow to quell the disturbances were defeated by Su-szu-shih-san's followers, and the successful rebels occupied the city of Hsichow.

The provincial authorities in Lanchow responded by sending a force of five hundred men to occupy T'iao, a small town on the right bank of the Tao River some 85 km. south-east of Hsichow. In this action, the provincial forces scored their first real success by capturing Ma Ming-hsin, the founder and spiritual leader of the "New Teaching". Ma was taken to Lanchow, where he was incarcerated; shortly thereafter rebel forces from Hsichow, believed to number upwards of 2,000 men, crossed the Tao River and besieged Lanchow. They succeeded in cutting the floating bridge across the Yellow River, thus isolating relief forces from Northern Kansu, and demanded the release of Ma Ming-hsin. The Chinese commandant refused to hand Ma over, but took him to the city walls whence he might address the besieging forces (de Groot, *op. cit.* in *Bibl.*, 312-13). The anonymous government official who witnessed this scene records that "When Ma Ming-hsin was taken to appear on top of the city walls, all the Muslims who saw him from below rolled down from their horses and prostrated themselves on the ground. They called him a saint and wept" (*P'ing-Hui chi-lieh*, *ibid.*). This display seems to have made an adverse impression on the Chinese commandant, who "had him killed at once, in order to keep down sedition within the walls" (de Groot, 314). Ma's son was seemingly killed with him (Schram, *ibid.*).

Ma's death did not bring about the end of the rebellion, but served only to increase the bitterness of his followers. The Chinese troops stationed in Kansu proved incapable of suppressing the rebels, a task which fell initially to Salar followers of the "Old Teaching", later assisted by Mongol troops from Alashan and Chinese troops from Szechwan. Some three months after the murder of Ma Ming-hsin, Ch'ing troops surrounded the foremost of the surviving "New Teaching" leaders, the Salar *mulla* Su-szu-shih-san, at his stronghold in the Hsai-lin mountains. Su was captured and executed, and with his death the rebellion came to an end. The Chinese authorities banned the "New Teaching" and inflicted a series of bloody reprisals against its surviving adherents. An edict issued by Ch'ien-lung after the imperial victory in the Hsai-lin mountains exhorts his officials as follows: "Of these rebels not a trace, however slight, must remain. All insurgents yet at liberty shall be hunted out . . . and their wives, daughters and babies now incarcerated in the provincial capital, in Hsichow, in Hsin-hua and other places, shall be thoroughly examined for the better realisation of this object; and finally, the transports to the penitential places of banishment shall start with all possible speed" (de Groot, 315). The Ch'ing authorities massacred whole families and clans with "New Teaching" affiliations, but to no avail. The "New Teaching" leaders went underground, and within three years a still bloodier *Asia-chiao* rising, under the leadership of T'ien Wu (q.v.) broke out in the Kansu-Chinghai region. The "New Teaching" or Ma Ming-hsin was also to prove instrumental in the great mid-19th/19th century rebellion of Ma Hsueh-lung (q.v.).

Bibliography: Details of contemporaneous

Chinese sources may be found in C. J. Piekens, *Chinese annals*, pp. 30-3 of his *Annotated bibliography of literature on Islam in China*, Hankow 1930; this source is especially useful for details of the 1196-9/1782-4 Muslim risings contained in the *Ta-Ch'ing Kuo-tsing Ssu-huang-ti shih-tu* (i.e. the official edicts of the Ch'ien-lung period). See also Wei Yuan, *Sheng-wu chi* ("History of the Imperial wars"), 1842, *chüan* 7 (cited in Ford, *op. cit.* below). For further details, see D. D. Leslie, *Islam in China to 1800: a bibliographical guide*, in *Abn-Nahrain*, xvi (1976), 25 (Section H, "Imperial Edicts"). Further primary sources, including the *P'ing-Hui chi-lüeh* ("Brief record of the pacification of the Muslims"), Karsu, ca. 1196/1782 may be found in *Pai Shou-i*, ed. *Hui-min ch'i-i* ("The righteous uprisings of the Muslim people"), published in 4 vols., Shanghai 1932, of which vols. iii and iv refer to events in the Chinese northwest during the 18th and 19th centuries.

Secondary sources dating from the late 19th and early 20th centuries include: G. Imbault-Huart, *Deux insurrections des Moukousans au Kansou*, in *JA*, ser. 8, vol. xiv (1889), 494-525; J. J. M. de Groot, *Sectarianism and religious persecution in China*, Amsterdam 1903-4; M. Eronchaw, *Islam in China: a neglected problem*, London 1910, see esp. 130-1; H. M. d'Ollone, *Recherches sur les musulmans chinois*, Paris 1911; and M. Hartmann, *Zur Geschichte des Islam in China*, Leipzig 1921. China: from eclecticism to syncretism, in *JESHO*, xxi/2 (1978), 99-109. (A. D. W. FORREST)
MĀ WARĀ' AL-NAHR (A.) "The land which lies beyond the river", i.e. beyond the Oxus or Āmū-Daryā (g.v.), the classical Transoxiana or Transoxania, so-called by the conquering Arabs of the 1st/7th century and after in contrast to Mā dūn al-Nahr, the lands of Khurāsān (g.v.) this side of the Oxus, although the term Khurāsān was not infrequently used vaguely to designate all the eastern Islamic lands beyond western Persia.

I. THE NAME

The frontiers of Mā warā' al-nahr on the north and east were where the power of Iran ceased and depended on political conditions; of the statements of the Arab geographers on Mā warā' al-nahr in G. Le Strange, *The lands of the Eastern Caliphate*, Cambridge 1905, 433-4; W. Barthold, *Turkistan down to the Mongol invasion*, London 1928, 64 ff. The phrase Mā warā' al-nahr passed from Arabic literature into Persian. As late as the 9th/15th century, Hāfiẓ-i Abrū (g.v.) devotes a special chapter (the last) to Mā warā' al-nahr in his geographical work. Under the influence of literary tradition, the phrase Mā warā' al-nahr was used down to quite recent times in Central Asia itself (e.g. by Bābur, in his *Bābur-nāma*, ed. Beveridge, see index; by Mirzā Haydar Dughlāt later in the 10th/16th century in his *Tārīkh-i Raghlā*, tr. Khas and Ross, *A history of the Moghols*, London 1895, 79, 95 ff., 150, etc.; and by the Uzbek Muhammad Šālih, cf. *Sprava hishka Samarhandskii oblasti*, v, 240 and *passim*), although to the people of Central Asia the lands in question were on their side of and not across the river. (W. BARTHOLD)

2. HISTORY

Pre-Islamic Transoxania comprised, in the widest sense, Soghdia (Arabic *Sughd* (g.v.), essentially the basin of the Zarafshān river) and the lands as far as the Sir Daryā basin, northwards to Kh'wārazm (g.v.) and eastwards to Farghāna (g.v.) and across the Tien Shan Mountains into Eastern or Chinese Turkistan (on the general concept of "Turkistan", Eastern and Western, see TURKISTĀN). For these regions in classical times, see W. Tomaschek, in *FW*, II, cols. 2804-13 (Baktra, Baktriane, Baktrianoi), III, cols. 2405-8 (Chorasman). All this was still largely an Iranian region, with such Middle Iranian languages flourishing there as Kh'wārazmian and Soghdian, both written in scripts going back to the Aramaic alphabet; Bactrian in the upper Oxus provinces of Tukhāristān, Caghāniyān, Khatlān and Wakhsh (g.v.), written in a modified Greek alphabet; and Khotanese and Tokharian dialects in the Tarim basin of Eastern Turkistan, written in scripts of Indian origin. In Soghdia, however, the strong cultural influence of Sāsānid Persia may have given Persian a foothold in the main cities at least. Nārshakhī states that just after the time of the conquest of Bukhārā by Kaitayba b. Muslim (sc. in ca. 94/712-13), the people there used Persian (*pārsī*) for reciting the Qur'ān, though no doubt Soghdian remained for some time to come the main language of daily intercourse (*Tārīkh-i Buḡdād*, ed. Mederici Ridawī, Teheran 1939, 57, tr. R. N. Frye, *The history of Bukhara*, Cambridge, Mass. 1954, 48). Just over two-and-a-half centuries later, al-Muqaddasī, 335, calls the speech of Bukhārā *darī*, i.e. Persian; this must nevertheless still refer to urban speech patterns only, for Soghdian lasted much longer in the countryside.

In regard to religion, no single faith was dominant. Buddhism was still in full bloom in Eastern Turkestan and still strong in the upper Oxus provinces, where it was the faith of the northern branch of the Hephthalites [see KAYATAI] who put up such a strenuous resistance to the Arabs in the later 1st/7th and early 2nd/8th centuries, and where Balḫ [q.v.] was still a major Buddhist centre, but it had, for some time, been waning in Soghdia. When the Chinese Buddhist pilgrim Hsien-Tsang arrived in Samarkand in ca. 630, he found the Zoroastrians completely in the ascendant there and the Buddhist monasteries deserted; the restorative measures which he took can only have arrested this decline temporarily. For as in the linguistic field, cultural pressures from Sāsānid Persia must have given Zoroastrianism an access of prestige and power in Transoxania, even though direct Sāsānid military authority did not extend beyond Marw (cf. W. Barthold, *Histoire des Turcs d'Asie Centrale*, Paris 1945, 53-5). Manichaeism and other dualist faiths were tolerated, and their adherents found an especially sympathetic haven in Eastern Turkestan and among the Uygur Turks, as numerous surviving religious texts from the Turim basin attest, as late as ca. 372/982 the *Kitāb al-Ḥidāyah*, tr. Minorsky, London 1937, 113, § 25.13, records the presence in Samarkand of a conventual house of the Manichaeans, *ḥiṣṣanagh-i Mānawiyān*, with *awdōres* or *nighāshāh*. Mazdakites are mentioned also in Samarkand, and if the followers of the late 2nd/8th century heretic al-Mukannas, the "wearers of white" (see below) were Mazdakites (or Manichaeans?), their adherents still persisted at Kḫh and Nakhshab in the time of the continuator of Narghakhī Ahmad b. Muḥammad b. Naṣr (*Tarīkh-i Būkhārā*, 88-9, tr. 75). The Christian presence was strong. A bishop is mentioned at Marw in 334 A.D. and there was probably one in Samarkand by the 6th century. Nestorians, Jacobites and Melkites were all represented in Transoxania. When the Sāsānid *amir* Ismāʿīl b. Ahmad [q.v.] conquered Tais in 80/693, a "great church" was transformed into a mosque (*ibid.*, 102, tr. 86-7). The absence of any one preponderant faith meant that there did not exist in Transoxania a dominant priesthood as there was in Sāsānid Persia, though religious scholars (*shūhr*: al Tabarī, ii, 1237) are mentioned in *Kitāb al-Kāzīm* at the time of Kutayba's incursions of 93/712, perhaps Zoroastrian priests but resistance there to the Arabs was on grounds of local patriotism rather than on a religious basis.

Socially, there was an influential class of merchants in such Soghdian towns as Būkhārā, Paykand and Samarkand, which was involved in long-distance trade operations with the Turkish peoples of the Siberian steppes and with the Chinese. The Arab invasions would not seriously hamper these trade movements, and indeed, the Soghdian merchants eventually found new markets within the Islamic caliphate for the goods which they imported from Inner Asia. The landed aristocracy of *dihāns* was dominant in the countryside and smaller towns, and the pattern of large estates in *Kitāb al-Kāzīm*, along the Oxus channels and their canals, revealed by Soviet archaeology, was probably repeated in the irrigated lands of the Zarafshān valley and the upper Oxus ones. The local Iranian princes of Transoxania mentioned in the sources, such as those in rural Ilāk [q.v. in Suppl.], Shāsh [q.v.] and Farghāna, and in cities like Samarkand and Būkhārā, comprised the more powerful members of the *dihān* class and bore Iranian regal titles such as *shāhshāh* [q.v.] from Old Persian *shahshāy* (*ya-*

"king, ruler"), e.g. in Soghdia and Farghāna. Such a land-owning class (which may be called, not anachronistically, one of feudal magnates) of *dihāns* was the backbone of resistance to the Arabs, and continued to play a leading social role—evenually as an Islamised caste—in Transoxania till the end of the Sāsānid period, during which political authority was still to a considerably extent decentralised; its decline only came with the influx of Turkish steppe peoples in the 3th/11th century and after.

The Arabs who had invaded Persia and overthrown the Sāsānid empire penetrated to Tūgharistan in ʿUthmān's caliphate, during the governorship in Khutāsān of ʿAbd Allāh b. ʿĀmir [q.v.], and al-Balḫhūrī, *Radāʾ*, 408, records, on the authority of Abū ʿUbayda, a plunder raid across the Oxus to Māy-murgh near Samarkand in 33/653-4. It would have been obviously unwise to commit major Arab forces across the river until some progress had been made against the resistance of the Hephthalites in Cisoxania and until a key point like Balḫ had been captured (first raided in 35/653, but not fully secured till the time of Kutayba, see *ibid.*) and the Oxus crossing points of Amul-i Shatt [q.v.] and Zamm taken.

In the spring of 54/674 Muʿāwīya's general ʿUbayd Allāh b. Ziyād [q.v.] crossed the Oxus, attacked Paykand and defeated the army of the local Soghdian ruler of Būkhārā, the Būkhār-Khudā, Yazid I's governor, Salān b. Ziyād (61-4/681-3) was the first Arab commander actually to winter across the river. Any hopes of Arab progress in Transoxania were dashed by the civil war which broke out in the heart of the caliphate on Yazid's death and the protracted resistance to the Umayyad government in Damascus of the anti-caliph ʿAbd Allāh b. al-Zubayr, even though the Soghdian cities remained disunited and their nominal suzerain the Chinese emperor was unable, despite embassies despatched to Peking and appeals for help, to supply any assistance.

It was the great Kutayba b. Muslim al-Bahlīl [q.v.] who was the first Arab general to establish a firm Arab hold over Transoxania. Appointed governor of the east by al-Madīdīdī in 86/705, he was to enjoy a ten years' tenure of power, spanning the caliphate of al-Walīd b. ʿAbd al-Malik, a reign particularly significant for the extension of Muslim power in both east and west. Kutayba first campaigned successfully in the Upper Oxus provinces at the invitation of the ruler of Čaghānyān, who sought aid against local rivals (86/705). Between 87/706 and 90/709 he conquered Paykand and Būkhārā, installing in the latter city a local prince Tughshāda as his vassal, and received the submission of Tarkhān of Samarkand and his successor Qhṭrak. Mosques were now built in Būkhārā, Samarkand, etc., in order to encourage the implantation of Islam and the inhabitants of Būkhārā were forced to give up half the houses of the *madīna* or *ghārasatān* as billets for the incoming Arab garrison; but according to Narghakhī, 57, tr. 48, Kutayba had to pay the local inhabitants two *dīrkans* a time to attend the Friday prayers. It was first in 88/707 that Kutayba had to repel Turkish forces which appeared in Transoxania when the people of Būkhārā appealed to the powerful Kāghān of the Eastern Turks, whose name is known only in the Chinese transcription of Mo-č'o; and a further Turkish invasion into Soghdia in 93/712, at the invitation of the people of Samarkand, repulsed by Kutayba in the following year, may be that mentioned in the early Turkish Orkhon inscriptions (Khočot-sandam, Kultigin I B 39) as the one undertaken by

the prince Kültigin which penetrated as far as *Tamir Kapış*, the 'Iron Gate' (see the present Buzgala debate between Kiech and Tirmidh). 'in order to organise the Soghdian people' (the connection of these seems fairly certain, as proposed by Marquart and Barthold; cf. R. Giraud, *L'empire des Turcs celtiques, les royaumes d'Elterich, Qaghan et Bulğ* [188-724], Paris 1960, 44, 182-3, who also notes that this same inscription (Kültigin I, E 31) mentions an earlier expedition to the Iron Gate under Tonyukuk in 701). Kutayba further sent two expeditions against Kh'arazm in 93/712, when the Kh'arazm-Shāh was killed, although it was long before Islam became firmly implanted there (see Kh'arazm). His forces also campaigned in the Sir Daryā valley in Ughrāsana (q.v.) and Shāh, meeting no resistance from the Turks, although this brief report in al-Tabarī, II, 1276, of a raid by one of his commanders as far as Kāshghar, on the other side of the Tinn Shan, seems improbable (see H. A. R. Gibb, *The Arab invasion of Kāshghar in A.D. 712*, in *BSOS*, II [1923], 167-74).

The Turks' ability to intervene once more in Transoxanian affairs was for a while hampered by internal disputes between the Eastern and Western Turks, but after 718, a forceful ruler, Su-lu, made himself leader of the Western Turks or Türgesh. In 106/724 he inflicted a sharp defeat, the so-called 'Day of thirst', on the Arab commander Sa'īd b. 'Amr al-Hārithi who had invaded Farghāna, in the Sir Daryā basin, and this reduced aggressive activity on the part of the Arabs for a decade or two. It is from these years, immediately after the fall of Kutayba, that there dates the important cache of documents in Soghdian, the archives of Dīwāstī, prince of Pandjīent on the upper reaches of the Zarafshān, kept at his stronghold on Mount Nugh, sacked in 104/722-3 by the Arabs (al-Tabarī, II, 1247-8; cf. A. L. Monait, *Archaeology in the U.S.S.R.*, Moscow 1959, 289-95). In the ensuing years, the Arabs, now on the defensive, were pushed back by the joint efforts of the Soghdian princes and the Turks, so that by 110/728 the Arabs only held Samarkand and Dabūsiyya. The Arabs themselves were divided after 126/734, when the rebellion of al-Hārith b. Surayh al-Muḍabbihī (q.v.) broke out, first in Tūkhārīstān and then in Transoxāna (where al-Hārith allied with the Kaghān of the Türgesh, Su-lu), lasting for several years. There was also much discontent amongst that part of the indigenous Transoxanian population which had been converted to Islam but which nevertheless found itself still liable to pay the poll-tax for the benefit of the Arab treasury.

Arab fortunes only revived under the energetic and experienced—he had fought under Kutayba—governor Naṣr b. Sayyār al-Kināfi (q.v.) (120-30/728-48), who made a generous financial settlement for the new converts and for those inhabitants who had apostatised from Islam when Arab military control had been relaxed and looked like disappearing altogether, and who brought al-Hārith b. Suraydī to terms in 126/744. He carried Arab arms into Farghāna again, but spent most of his efforts in pacifying Soghdia and in conciliating its people. Arab embassies to the Chinese court were resumed by Naṣr after an hiatus in the period 115-23/733-41, and the regulation of commercial contacts may have been one of the motives involved (see Gibb, *Chinese records of the embassies of the Arabs in Central Asia*, in *BSOS*, II [1923], 619-22).

Naṣr was forced to abandon both Transoxania and Khurāsān by the growing menace of the 'Abbā-

sid *da'wa* under Abū Muslim (q.v.), and pro-'Abbāsid governors were installed in the East from 130/748 onwards. This internal revolution amongst the Arabs must have been welcomed by the *dissidents* of Transoxania, disturbed at the waning of their political and social influence through the increased momentum of conversions to Islam. In 133/750-1 there was, moreover, a pro-'Alid rising among the Arab garrison of Bukhārā, bloodily suppressed by the new 'Abbāsid governor Ziyād b. Šālib al-Khuzā'ī (q.v.). Although the Bukhār-Khuzā'ī had co-operated with the Arab authorities against the insurgents, he was afterwards executed on Abū Muthīn's orders.

Meanwhile, the dissensions into which the Türgesh steppe confederation had fallen in 738 with Su-hu's defeat in battle at the hands of the Chinese and his assassination by a rival Turkish chief, permitted a recrudescence, now on a scale much more threatening than ever before to the Arabs, of Chinese activity in Central Asia. In 748 Chinese forces captured the Türgesh capital of Šōyab, in the Ču river valley to the north-east of Farghāna, and in 749 executed the local ruler of Šōyab for 'the non-fulfilment of his duties as a vassal'. For several decades, virtually since the first coming of the Arabs, the Soghdian rulers and the princes of Tūkhārīstān (including among the latter the Yabghu, Arabic *Ḥabbūyā*) had been sending embassies to China appealing for help against the invaders. Now in 750-1 the Korean general Kao-hsien-chih was sent by the Chinese governor of Kūta in Eastern Turkestan, firstly against rebels in the Pamir region of Gilgit (q.v. in Suppl.), and then into Farghāna. Here the Chinese army, assisted by the Turkish Kertük (q.v.), met an Arab force under Ziyād b. Šālib at Ajlakh or Ajlakh near Talas in 135/752, and was soundly defeated, with heavy losses of killed and captured (see D. M. Dunlop, *A new source of information on the Battle of Talas or Ajlakh, in Ural-Altaische Jahrbücher*, xxxvi [1965], 326-30). Amongst the prisoners-of-war were Chinese artisans who are supposed to have taught the people of Samarkand the art of paper-making (al-Ṭa'ālībī, *Lata'if al-ma'drif*, tr. Bosworth, *The book of curious and entertaining information*, Edinburgh 1966, 140, and Kāghān). This marked the end of Chinese attempts to assert their hegemony west of the Tien-Shan; to the subsequent entreaties of the Iranian princes of Transoxania and Kh'arazm for help against the Arabs, the Tang emperors, pre-occupied by succession quarrels 755-63, were compelled to return non-committal answers. Arab authority was thus made reasonable firm in Transoxania for the first time, since the local potentates no longer had any strong allies either in the Turkish steppes (the Eastern Turkish confederation had collapsed with the death of the Kaghān Mo-li-hien in 744, to be replaced by that of the Uyghurs, who were essentially concerned with Mongolia and Eastern Turkestan) or in the Far East. That the masses of population in Transoxania were as yet far from wholly reconciled to Arab political and social domination was to be demonstrated by various outbreaks of religio-political protest in the early 'Abbāsid period (see further on these, below), but Arab authority was by that time never seriously jeopardised.

For the detailed history of this first century or so of Arab domination in Transoxania, see F. H. Skrine and E. D. Reiss, *The heart of Asia, a history of Russian Turkestan and the Central Asian Khanates from the earliest times*, London 1899, 34-89, Gibb, *The Arab conquest in Central Asia*, London 1923; Barthold, *Histoire des Turcs d'Asie Centrale*, 47 ff.;

idem, *Turkistan down to the Mongol invasion*, London 1968, 180-96; R. Grousset, *L'empire des steppes*, Paris 1952, 150-72; A. D. H. Bivar, in G. Hambly et al., *Central Asia*, London 1969, 63-8.

Under the first 'Abbāsids, Transoxania gradually became integrated politically as a province of the caliphate as a whole. The first governors appointed there by the victorious Abū Muslim speedily began intriguing against their patron at the instigation of the caliph Abū 'l-'Abbās al-Saffāh, who became deeply suspicious of his over-mighty subject. Abū Muslim accordingly executed Sibtā b. al-Nu'mān al-Azdi in 135/752-3 at Āmul, whilst the fugitive Ziyād b. Šālib was executed, to Abū Muslim's satisfaction, by the Iranian dākhān of Bārkāth, on the route from Samarkand to Ushrusāna. Discontent among Abū Muslim's own followers after his death at the caliph al-Mansūr's hands in 137/755, discontent which came to regard the murdered leader as a semi-divine, messianic figure who would return and establish a reign of justice (cf. G. H. Sadighi, *Les mouvements religieux iraniens au II^e et au III^e siècle de l'Adgée*, Paris 1938, 134 ff.), united sectarian Islamic and non-Islamic religious dissent with politico-social resentment at Arab domination; these combined strands made Transoxania a much-troubled region in the ensuing decades. The rapidly-changing series of Arab governors sent out to govern Khurāsān and Transoxania (see the list in Zambaur, *Manuscript*, 48) were mostly intent on lining their own pockets during their expected brief tenure of power there rather than on trying to bring about a community of interest between the Arab central government representatives and the local populations. Several governors debased the local silver currency, although it is favourably recorded by Nārshāhī that the governor Ghilzī b. 'Aṭā' [c.v. in Suppl.], appointed to Khurāsān in 175/792 by his own nephew Hārūn al-Rašīd, introduced the useful reform of alloy dirhams, called *ghilzī*, to replace the old, largely vanished coinage of the Bukhār-Khūdās (see Barthold, *Turkestan*, 203-6).

Most of what we know about Transoxania's specific history in this period from the advent of the 'Abbāsids to the rise of the Sāmānids is concerned with various rebellions there. In the caliphate of al-Mahdī, ca. 150-60/776-7 and during the governorships of Humayd b. Kaṭaba al-Tā'i and Abū 'Awn 'Abd al-Malik b. Yazīd, there occurred the outbreak of the Khārijī *muwāḍi* Yūsuf al-Barm al-Thaqafī at Bukhārā and in the countryside of Bādgīs, and later, in the time of al-Ma'mūn, Yūsuf's grandson Mansūr b. 'Abd Allāh also rebelled; such Khārijī activity was an aspect of the general vitality of Khārijī doctrines in Khurāsān and Sūstān at this period. More serious at the time and with a protracted aftermath was the movement of the "wearers of white garments" (*al-muḥabbayya*, *asbiḥān-dīmagān*), followers of the "voiced prophet" al-Mukanna' [c.v.], whose real name was Hūshim b. Haldm or 'Aṭā', a former partisan of Abū Muslim's. The revolt, erupting during Humayd's governorship, is treated at length by Nārshāhī (77-89, tt. 63-76; Barthold, *Turkestan*, 198-200; Sadighi, *op. cit.*, 183-86; B. S. Amoretti, *Sects and heresies*, in *Cami, Hist. of Iran. iv. From the Arab invasion to the Saljuqs*, ed. R. N. Frye, Cambridge 1975, 498-503). It attracted widespread support in Soghdia, at Kish and at Nakhshab or Nasaf, whilst in Bukhārā, the son of the Bukhār-Khūdā Tughshāda, Bunyāt, renounced official Islam and joined the movement. It is not easy to discern from the sources the exact nature of al-Mukanna's

religious doctrines. He himself may have been originally a Zoroastrian, but his ideas may have come to include neo-Mazdaic elements and perhaps even Manichean ones; and certainly, Abū Muslim, whose avatar al-Mukanna' claimed to be, was accorded an exalted, almost divine position. The outbreak was suppressed during the governorship of al-Musayyab b. Zuhayr al-Dabbī (163-6/780-3), but the "wearers of white garments" persisted in the rural areas of Transoxania and Khurāsān for at least two centuries after this. The years 191-4/806-9 were characterised by the revolt centred on Transoxania, but with partisans joining his standard from the upper Oxus provinces of Caghāniyān and Khuttal and from Kh'ārazm, at Rāfi' b. Layth, the grandson of Naḥr b. Sayyār. The motive behind this seems to have been purely personal, without any religious or ideological impulse, and doubtless the prestige of Rāfi's descent from the popular Naḥr b. Sayyār brought him support. The Arab governor of Samarkand was killed, and Rāfi' secured help from the Iranian prince of Shāhsh, from the Karluk and the Toghr-Oghuz Turks of the steppes and from Tibet before he submitted voluntarily to al-Ma'mūn and secured pardon (see Barthold, *Turkestan*, 200-1).

This intervention by the Turks in Transoxanian affairs continued during the early 'Abbāsīd period, but not on the same scale as during the Umayyad one. The disintegration of Tūghsh power in the Western Turkistan steppes was followed by the ascendancy of the Toghr-Oghuz, precursors of the Oghuz or Ghuzz [c.v.] who are mentioned in the 4th/10th and 5th/11th century Islamic sources as harrying the borders of Sāmānīd Transoxania and then emerging to form the tribal harking of the Saljuqs [c.v.] when they overthrew Chamanīd power in Khurāsān and entered northern Persia and the central lands of the Middle East. In the early 'Abbāsīd period, the Toghr-Oghuz had their pasture grounds on the confines of Kh'ārazm and also along the lower Sir Daryā. The Karluk, possibly the ancestors of the later Hek Khāns [c.v.] or Karakhānids, took over the eastern Sir Daryā basin and Semirečys (Turkish Yeti Su, "the land of the seven rivers"), acquiring in 766 Süyāb, the former capital of the Tūghsh. Islamic Transoxania suffered sporadically from their incursions, and these Turks continued also to give help on occasion to insurgent local Iranian princes and to rebels like Rāfi' b. Layth. To protect the settled agricultural lands, walls were built to the north of Bukhārā and to Shāhsh; in Nākh, in the great southern bend of the Sir Daryā, the construction of a wall from the mountains to the river is ascribed to 'Abd Allāh b. Humayd b. Kaṭaba, governor of Khurāsān in 159/776 after his father's death. As shows of strength, the Arabs periodically sent expeditions into Farghāna; Ghilzī b. 'Aṭā' sent thither an army to drive out the forces of the Yabghu of the Karluk, and Faḍl b. Yabghū al-Barmakī (177-9/793-5) exacted the submission of the Afshīr or prince of Ushrusāna, who according to Gardīzi, had never before acknowledged the suzerainty of any outside ruler. The caliph al-Mahdī received at one point the homage of various Central Asian rulers, amongst whom are mentioned the Ikhshīd of Soghdia, the Afshīr of Ushrusāna, the prince of Farghāna, the Yabghu of the Karluk, the Kaghān of the Toghr-Oghuz, etc., but this cannot have meant much in practice. This was also a period when, because of the early 'Abbāsīd dependence on their Khurāsānian guards, Transoxanian fighting men entered the caliphal army in considerable numbers; in the reign

of al-Mu'tasim, the *Afshin* of Ushrūsāna, Haydar, was to play a leading role in suppressing the revolt of Bābak al-Khūramī [q.v.] in northwestern Persia until his own spectacular fall in 226/841 [see ARGENT].

Of special concern to us here is the contemporary rise to power, under the overlordship of the Tāhirids, of the Sāmānids, who laid the foundations for what became a powerful amirate, at first in Transoxania and then also, in the 4th/10th century, in Khūrisān [204.393/819-1005]. Whether the semi-mythical ancestor of the Sāmānids, the person given the title of Sāmān-Khūdā, was really a scion of the Sāsānids or not (see Bosworth, *The heritage of rulership in early Islamic Iran and the search for dynastic connections with the past*, in *Iran, JEPIS*, xi [1973], 59-9) is impossible to decide, but the family was clearly a typical Iranian *dihlān* one hailing from Tukhristān. A Sāmān-Khūdā of the late Umayyad period is said to have accepted Islam at the hands of the governor Asad b. 'Abd Allāh al-Kasrī (105/9-723-7), and in the caliphate of al-Ma'mūn, his four grandsons, Nūh, Ahmad, Yaqūb and Ilyās received, as rewards for their fidelity to al-Ma'mūn's interests, the governorships of Samarkand, Farghāna, Shāsh and Harāt respectively. The Harāt branch was unable to maintain power south of the Oxus, and the Sāmānids developed essentially as the dominant power in Transoxania, being designated governors, in effect independent rulers there, by the caliph in 261/875 after the downfall of the Tāhirids in the hands of the Saffārids Ya'qūb and 'Amr b. Layth [q.v.]. For a detailed consideration of the Sāmānid dynasty and its history, see Sāmānids, and for the present, a useful general survey by Frye, *The Sāmānids*, in *Camb. Hist. of Iran*, iv, 136-61.

Here it may merely be noted that it was a cardinal feature of Sāmānid policy, from the time of the real founder of the dynasty's fortunes, Ismā'īl b. Ahmad (279-95/892-907) [q.v.], onwards, to maintain those frontiers of Transoxania which faced the steppes against the pagan Turks and thereby to provide a bastion against nomadic pressure from Inner Asia. Ismā'īl in 280/893 led a punitive expedition against the Karluk, taking an immense plunder (presumably of beasts and slaves) from them at Talas (modern Dzambul), and he also brought to heel the prince of Ushrūsāna. Other outlying Iranian principalities were however normally allowed to subsist as vassals, sending tribute and/or presents to the *amirs* of the Sāmānids. This was the case with the Afrighid Kh'arazm-Shāhs, the Saffārids in Sistān, the Farighūnids in Gurgān, the Abū Dāwūdids in Balkh, the Muhtajids in Chaghāniyān, etc., and whilst the *amirs* remained vigorous and fiefwise, this was no source of weakness. Contemporary geographers describe the fringes of Transoxania as dotted with *ribāts* [q.v.] against the pagan Karluk, Oghuz and Kinnik [q.v.], whose ghāzīs or enthusiasts for the faith, from the Transoxanian towns, could work off their energies in the defence of Islam. In Isfijāb [q.v. in Suppl.], on the northernmost frontier of Islam, as many as 1,700 *ribāts* are mentioned, partly manned by volunteers from Nakhshab, Bukhārā and Samarkand. Even when some of these Turks had been nominally converted to Islam, *ribāts* as centres for offensive and defensive operations were still necessary; al-Mukaddasī, 274, tells how two places on the middle Sir Daryā, in the district of Isfijāb, were frontier points (*ḥaḡarīb*) against the *Türkmenā* (*al-Türkmanīyyīn*) who had only become Muslims "out of fear". It was also from these frontier-posts that Sāffs and other zealots set off into the *terra*

incognita of the steppes as evangelists, such as the missionary from Nishāpūr, one Abū 'l-Ḥasan Muḥammad al-Kalīmī, who worked amongst the Karluk in the middle years of the 4th/10th century and who played some part in the conversion of the founder of the Karakhanid line, Satuk Bughrā Khān, the Islamic 'Abd al-Karīm (Barthold, *Turkistan*, 175-6, 254-6).

Transoxania flourished under the Sāmānids, and there was a dying-down of sectarian religious and socio-political protest movements during their time, compared with the previous period, although these did not entirely disappear. The geographers and travellers praise the ease of life there, the plentifulness of provisions, the comparatively light hand of government and incidence of taxation and tolls. There was quite a complex central administration in the capital Bukhārā, known to us from the accounts of Narshakhī and of the encyclopaedist of the sciences Abū 'Abd Allāh al-Kh'arazmī [q.v.], with a cluster of *diwāns* or government departments adjacent to the palace built in Bukhārā by Nasr b. Ahmad (301-11/913-43); the model for these was doubtless the 'Abbāsīd bureaucracy in Baghdad (see Narshakhī, 31-2, tr. 257; Bosworth, *Abū 'Abdallāh al-Khwarazmi on the technical terms of the secretary's art...*, in *JESHO*, xii [1969], 113-64). Because of the province's frontier position, the people of Transoxania are described as tough, bellicose and self-reliant; also, perhaps because of the continued social influence of the *dihlān* class, the ancient Iranian virtues of hospitality and liberality were kept up (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 949-1020*, Edinburgh 1963, 27-34). Culturally, both the Sāmānids themselves and the local, petty courts of the empire encouraged the persistence of Iranian oral and literary traditions, seen to the birth and florescence of New Persian lyrical and heroic poetry (by Shāhid Badkhibī, Rūdākī, Dākiqī, etc.) which characterised the 4th/10th century and prepared the way in the early part of the following century for such figures as Firdawsī and the Ghaznavīd lyric poets (see G. Lazard, *The rise of the New Persian language*, in *Camb. Hist. of Iran*, iv, 595-632). At the same time, Transoxania shared to the full in the Arab-Islamic heritage of the caliphate as a whole. Several of the compiles of the canonical collections of *ḥadīths*, the *sunan*, were from Transoxania and Khūrisān, and their scholars played a large role in the consolidation and elaboration of orthodox Sunni theology (*ḥanbalī*) and law (*shāfi*). Similarly, the fourth section of al-Tha'alibī's literary anthology, the *Yatimat al-dahr*, shows how brilliantly Arabic poetry and artistic prose were cultivated in Khūrisān, Transoxania and Kh'arazm (see V. Danner, *Arabic literature in Iran*, in *Camb. Hist. of Iran*, iv, 586-94; Bosworth, *The interaction of Arabic and Persian culture in the 10th and early 11th centuries*, in *al-Abhāth*, xxvii [1978-9], 60, 68 ff.).

As in other fields, during the period 750-1000 Transoxania acquired strong economic and commercial links with the heartlands of the caliphate, including with the supreme centre of consumption, *Qirāḡ* and its capital Baghdad. Instead of the old military systems of the Arab *sukūkīds* and then of the early 'Abbāsīd Khūrisānian guards, the caliphs began in the 3rd/9th century to surround themselves with Turkish slave troops (see GRAYSON, I and GRONMAN, I). Hence the trade in Turkish slaves, who passed from the Inner Asian steppes through Transoxania to the slave markets there, became highly important, Turkish slaves were an integral part of the annual

tribute which the Tāhīrids, whose governorate involved responsibility for Transoxania, forwarded to Baghdad; according to Ibn Khurrādādhbih, 28, 28,000 were sent each year, their value amounting to 500,000 *dirhams*. In the Sāmānid period, a century or so later, al-Muqaddasi, 340, states that the Sāmānid government issued special licences (*ijāzāt*) for the transit across their lands of Turkish slave boys and collected dues for them at the Oxus crossings. The detailed list of the products of the Inner Asian steppes, the Siberian forest zone and the Volga basin given by idem, 323-6, has been conveniently translated by Barthold, *Turkistan*, 235-6. Transoxania and Khwārazm processed and sewed together the furs of the forest lands, those being highly-prized, luxury articles in Islam (see FARW), and were important centres for the manufacture of cotton and other textiles. Particularly mentioned are the silks and satin brocades of Samarkand; the towels of Kaniyāy; the cloth of the village of Dāwānā, near Bukhārā used for the livery of the Sāmānids' palace guards; the cottons of Tawāz, also near Bukhārā; and the cotton garments of Waghār near Samarkand. Nargahkhi, 24, tr. 1920, mentions a *fiḍā* (q.v.) factory (*kārgāh*) in Bukhārā, where carpets, cloth, etc. were woven for the caliphs and which were also exported as far as Syria, Egypt and Byzantium; it may have been founded when al-Ma'mūn was governor in Marw, but by Nargahkhi's time (or by that of his continuator?) was no longer in use (see R. B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, 92-106). Another luxury item which came into the caliphate, certainly by sea but also probably overland through Central Asia and Transoxania, was Chinese porcelain, including the "imperial" variety, *chini faḡfāri* as the Ghaznavid historian Abū 'l-Faḡl Bayhaḡ calls it, imported in the time of Hārūn al-Rashīd (see P. Kable, *Chinese porcelain in the lands of Islam*, in *Opera minora*, Leiden 1956, 334); whilst from Khwārazm, the local *brāndi* melons were so coveted as to be exported for al-Ma'mūn and al-Wāḡhū in leaden containers packed with snow (al-Tha'ālibi, tr., *The book of curious and interesting information*, 125). The direct interest of the caliphs and their ministers in Central Asia, as well as being seen in the *bayt al-fīrā* at Bukhārā, to which the caliphs' tax-collectors came each year to collect the stipulated tannation of the city in textiles, is paralleled by the fact, mentioned by Ibn Faḡlān, that in the opening years of the 4th/10th century, the caliph al-Muqtadir's vicer Ibn al-Furāt (q.v.) had an extensive estate at Artakhushmān in Khwārazm, administered by a local Christian steward or *wakīl* (*Reisenbericht*, ed. A. Z. V. Togan, Leipzig 1939, § 5, text 3-4, tr. 2-3, and *Excursus* 58, 110-11).

The increasingly acute internal dissensions within the Sāmānid emirate of the later 4th/10th century, when powerful Turkish commanders like the Sāmānids, Fāḡh and Begtuzun secured an ascendancy in the state, making and unmaking *amirs* at will, and when an internal financial crisis, bringing sharp increases in taxation, manifested itself, heralded the fall of the dynasty. The decisive factor here was the appearance on the northern frontiers of Transoxania, now inguarded, of the Karluḡ. The Karluḡ were converted to Islam in ca. 345/960, and from their centres at Kāshghar and Balāshghūn (q.v.) (the latter in the Ču valley, perhaps near modern Frunze) began to take advantage of the emirate's weakness. Apparently with some encouragement—as, in former times, against the Arab governors—from the local

Iranian *dāḡāns*, the Karluḡ temporarily occupied the capital Bukhārā in 382/992. Further incursions followed, and in the end, the Karakhanids or Tiekilīg Khāns, as the ruling family of the Karluḡ began to be called, divided up the Sāmānid dominions with Maḡmūd of Ghazna (q.v.), the Karakhanids taking Transoxania and the Ghaznavids Khurāsān (see Barthold, *Turkistan*, 246-71; idem, *Histoire des Turcs d'Asie Centrale*, 59 ff.; Grousset, *L'empire des steppes*, 198-203).

For a detailed account of the political and dynastic changes in Transoxania over the next two centuries or so before the coming of the Mongols, see *SLXV* and for the next wave of Inner Asian peoples to enter Semirēye and Transoxania, the Kitai (Chinese Kī-tan or Liao), see the Mongolian fringes of northern China, see FARW 1874v; and since the history of the Great Seljuḡids, successors of Transoxania in the sultanates of Maḡhshāh and Samḡhar (q.v.), impinges on that of Transoxania, see further *SLXV* 605.

The long-term political, social and ethnic effects of the installation of Turkish and Mongol peoples like these in Transoxania were profound. The pastoralisation of the land outside the oases and irrigated river valleys may have begun in the Karakhanid period, since we know about royal hunting-grounds (*ghuruḡs*) being set up. The process certainly took effect under the Mongol Čaḡatayids and the Tīmūrids, when urban life declined in the province after the savage sackings of towns by the Mongols in the 7th/13th century. Political authority was now decentralised, with tribally-organised nomadic confederations, often without firmly-fixed capitals, directing affairs, instead of the centralising states and autocratic rulers of the Perso-Islamic tradition. This is, indeed, one aspect of the fact that, with the fall of the Sāmānids, the ancient bastion which had for centuries protected the Iranian and Middle Eastern heartlands from the incursions of steppe people was now removed. Transoxania became a corridor of entry for these hordes—Karakhanids, Seljuḡids, Mongols, etc.—until the advent of the Salawids in Persia, who, though themselves of Türkmen stock, constituted a powerful and resolute barrier state which increasingly had the advantages of better firearms and military techniques (see *SLXV*, v) and could accordingly withstand the assaults of the Shāy-bānid Uzbeks or Özbeks and others from across the Oxus and the Atrak.

But by this time, viz. the 10th/16th century, the passing of the previous five or six centuries had almost completely accomplished the process of ethnic and linguistic Turkicisation in Transoxania and Khwārazm, the old "Iran extérieur". The continued influx of Turks gradually swamped the Iranians or Tājiks (q.v.), as the Turks called them in distinction from themselves, and the population became mixed, with the Turkish element emerging uppermost, as it also did eventually at the other end of the modern Turkish world, i.e. in Aḡharbāydīs and Anatolia. It was the sums in regard to language. It is unclear exactly when Soghdiana died out, but this must have been roughly contemporaneous with the fall of the Sāmānids; and the New Persian which had been replacing Soghdian during the Sāmānid period subsequently vanished also from most of Transoxania. In Khwārazm, Turkicisation began in Seljuḡid times, although the indigenous Iranian languages persisted until the 8th/14th century (see Barthold, *Histoire des Turcs d'Asie Centrale*, 109-10). Only in the upper Oxus regions of what were the

medieval provinces of Čaghāniyān, Khutai and Waḡḡsh did an Iranian-speaking population persist now speaking the form of New Persian known as Tāḡīk/Tadzhik (see IRAN, III. Languages, in Suppl.), and living in what is now the Tadzhik SSR, their numbers amounting to under 1 3/4 millions (1970 census), it is also during these centuries of the Turkicisation of Transoxania that the region becomes known, at least in popular parlance, as Turkistān (q.v.).

Transoxania and Eastern Turkestan or Kīshgharia were of course the first Islamic lands which Čingiz Khān encountered when he came westwards with the Mongol hordes. Balkhāghān (q.v.), the main urban centre of Semiretʿye, was occupied after it had already suffered a severe plundering by the Karā Khān. Bukhārā was ravaged in 616/1220, and soon afterwards, Ötrār or Utrār (q.v.), the former Fārāb (q.v.), in the Sir Daryā basin, and Samarkand were attacked before Čingiz pushed on into Khūfistān in pursuit of the Kh'ārazm-Shāh 'Alā' al-Dīn Muḥammad (see KH'ĀRAZM-ŠĀH), Guzḡandī (q.v.) in Kh'ārazm was bravely defended, but fell to the Mongols (618/1221) and was later named Urgenāc, The Great Khān Ögedey (1227-41) appointed governors in Transoxania for Nakhshab, Bukhārā and Samarkand, and the sedentary indigenous population was at the beginning of his reign ruled by his representative Maḥmūd Yalawāc Kh'ārazmī (q.v.), appointed to collect the taxation there, Djuwaynī praises Maḥmūd Yalawāc's just rule and that also of his son Maḥmūd Beg (q.v.), stating that Bukhārā reached its former level of prosperity (the latter governor was, for instance, the founder of the Maḥmūdīyya madrasa in Bukhārā), though in fact there was a popular, anti-Mongol rebellion there led by one Maḥmūd Tārābī, only ended by the appearance of a large Mongol army (636/1238-9) (see Barthold, *Turkestan*, 381-319; Grousset, *L'empire des steppes*, 293 ff., 324-5; Hambly, *The career of Čingiz Khan and The Mongol empire at its zenith, in Central Asia*, 85-112).

Transoxania, together with those steppe lands to the north henceforth to be known as Moḡgholstān (q.v.) or Nuḡghulstān, came within the *ulus* or patrimony of Čingiz's second son Čaghatay, together with Eastern Turkestan (Kh'ārazm came within the *ulus* of Djöči, the eldest son, together with western Siberia and South Russia); but the Čaghatay khānate was not properly constituted till some time after Čaghatay's own death in ca. 1241. Čaghatay and his descendants took little interest in the sedentary and urban life of Transoxania. Pre-Mongol Turkish land-owners and chiefs, the successors of the Iranian dīkhāns, remained influential in the countryside; the descendants of the Karākhānids remained in power in Farghāna, it seems (Barthold, *Histoire des Turcs d'Asie Centrale*, 118-19). In Moḡgholstān, to the north of the Ili river, there was a distinct decline of urban life in favour of pastoralisation (see *ibid.*, 149-53). Urban traditions in Transoxania were much stronger, and especially notable in the towns there is the prominent role, from Karākhānid times onwards, of local Hanafī religious leaders functioning as headmen (*ris'āsā'*, sing. *ra'īs*), usually with the title of *padr* or *padr-i dīkhān*. Leaders with this title are found in Bukhārā, Samarkand, Khujand, Uxgend, Shāgh and Almalyk; the best-known of these were the Ālī Burhān in Bukhārā (till the revolt of Maḥmūd Tārābī in 636/1238) and their successors, the Ālī Maḥbūbī (till the mid-8th/14th century) (see O. Peitsch, *Ālī Burhān*, in *Isl.*, xxx

[1958], 81-96, and *ibid.*). Because of this lack of interest in the settled lands on the part of the Čaghatayid khāns, the amade traditions of the Mongols lasted longer amongst them, as also amongst the Golden Horde in South Russia and the Kipčak steppes (see *DAĞIST KİPÇAK* in Suppl.), than in the Persia of the Il-Khānids or the northern China of the Great Khāns. The Čaghatayid khāns' favoured encampments were in Semiretʿye, in the Ili basin, with the town of Almalyk (q.v.), between the Tien-Shan and Lake Balkash, as their administrative centre; this town flourished and is favourably described by western travellers to the Great Khāns' court until it was destroyed in the civil strife amongst the Mongols in the 8th/14th century. Kebek (ca. 1318-26), though still, like the previous khāns, resistant to Islam, moved his capital to Transoxania proper and built a palace near Nakhshab in the Kashka Daryā valley, although this did not entail renunciation of the nomadic life; from the Mongol term for "palace", *darḡāh*, the nearby town of Nakhshab came to receive the name which it still bears today, that of Karḡh/Karshi (see *KARSHI*). Kebek's move must nevertheless have favoured the eventual conversion of the Čaghatay khāns to Islam, from the time of Tarmashīn onwards (1326-34). Čaghatayid rule lasted in Transoxania till the rise of Tīmūr (see below), and in other parts of Central Asia till after then, but Tīmūr's successes were facilitated by increased disunity amongst the Čaghatayid family, with Čaghatayid puppet rulers placed on the thrones by Turkish *amirs*. For an account of the khānate, see ČAGHATAY KHAN and ČAGHATAY KHANATE; Barthold, *Histoire des Turcs d'Asie Centrale*, 153 ff., 169-72; Grousset, *L'empire des steppes*, 397-420; Hambly, *The Čaghatay Khānate, in Central Asia*, 127 ff.

Tīmūr, a Barlas Turk from Kīsh in Transoxania, succeeded by force of arms to the Čaghatayid heritage there. In 771/1370 he became *de facto* ruler of Transoxania, ruling in the name of faintant descendants of Ögedey, se. Soyushtatmīsh (771-90/1370-88) and then his son Maḥmūd (790-781/1388-7413). He linked himself by marriage to the Čaghatayid royal house, including to a daughter of Khidr Khodja (d. 807/1399) of Nuḡgholstān, who was reputedly a son of the last significant Čaghatayid khān Tughluk Tīmūr (760-71/1359-70). Under the rule of Tīmūr's descendants, above all, that of Shāhrūkh (807-50/1405-47), Transoxania enjoyed much material prosperity, with Samarkand and Bukhārā becoming lively centres of artistic and literary life, of painting and book production, and of poetry in both Persian and in Eastern Turkish or Čaghatay. Samarkand was the city which Tīmūr preferred to all others as his main capital. European travellers like the Spanish envoy Clavijo (1405) describe the splendour of his court, and fine buildings in Samarkand, of which the Gūr Amr mausoleum and the Bibi Khānum mosque survive, attest the high aesthetic level of early Tīmūrid architecture. The reign of Tīmūr's grandson Ulugh Beg (q.v.) (ruler in Transoxania from 814/1411, at first as Shāhrūkh's deputy, to 853/1449) is associated with his foundation of a short-lived observatory in Samarkand and the compilation of astronomical tables (see Barthold, *Ulugh-Beg*, tr. V. and T. Minorsky, in *Four studies on the history of Central Asia*, II, Leiden 1958, 229-34). As his second capital, Tīmūr developed Shāhr-i Saba in the Kashka Daryā valley, in the heart of the area of the Barlas Turks and near his own birthplace, starting there the construction of impressive buildings, including his own tomb (see Barthold, *Shahr-i*

Saba from Timūr to Ulugh Beg, tr. J. M. Rogers, in *Iran, JIBPS*, xvi (1978), 105-26, xviii (1980), 121-43). Popular Islam, in the form of a cultivation of Sūfī mysticism and the growth of a network of dervish orders, especially flourished in Transoxania during Ġaghataiyid and Timūrid times, and the *ghayyās* and their orders enjoyed the patronage of the Timūrid rulers. Thus the Naqshbandī *ghayyā* Khwāzma 'Ubayd Allāh Ahrār (806-95/1404-90) strengthened the nascent *farāḥ* in Transoxania, benefiting particularly from the favour of Timūr's great-grandson Abū Sa'īd and his son Sulāḥn Ahmad; the Naqshbandiyya were henceforth to play a major role in the history of Islam in Central Asia (see *APRIL*, 88th 1924, in Suppl.). Meanwhile, the Ġaghataiyids managed to survive during these years in the lands beyond Transoxania, and under Esen Buka II (833-67/1429-62) flourished in Moghulistan and Eastern Turkestan, being hostile however to the later Timūrids. For the detailed history of this period, see Barthold, *Histoire des Turcs d'Asie Centrale*, 105-84; Grousset, *op. cit.*, 486-526, 568-80; Mahin Hajianpur, *The Timurid empire, in Central Asia*, 150-62; TIMŪR and TIMŪRID.

In 906/1500, Muhammad Shaybānī, the scion of a line of Mongol khāns, the descendant of Būkhā's youngest son Shāhan (one part of whom had remained in Siberia as khāns and another part of whom had moved southwards into Transoxania, forming the horde of the Uzbeks [q.v.] or Ōzbeki), seized power in Transoxania from the last Timūrids. Transoxania was, indeed, to become the permanent home of the Shaybānids and the Uzbeks, this last Turkish people giving their name to the modern Uzbek SSR, in which they probably form some 70% of the present population. The Shaybānids brought into Transoxania a Turkish following amongst whom the nomadic steppe traditions remained strong and who were virtually untouched by Iranian cultural and religious influences, as had been most of their predecessors there. It was the strength of popular religion, that of the dervishes and Sūfīs, already notable in Timūrid times (see above), rather than that of the orthodox 'ulama', which characterised Islam there in the time of the Uzbeks. Like Timūr, they exalted the cult of the Sūfī saint Ahmad Yasawī [q.v.], whose tomb in the lower Syr Daryā valley at Yasī had long been a popular pilgrimage place for Turks from all over Inner Asia. The Shaybānids in fact made Yasī their capital for a while, and under them it received its new name of Turkistān, indicative of its importance to the Central Asian Turks in general.

Politically and diplomatically, Sunni Transoxania under the Uzbeks was in the 16th/17th and 17th/18th centuries frequently involved in warfare with the powerful and aggressive Shī'ī monarchy of Safawid Persia. As so many earlier Turco-Mongol dynasties had done, the Shaybānids coveted the rich province of Khurāsān, and invaded it on several occasions. But Muhammad Shaybānī (905-16/1500-10) and successors of his like Abū 'Ubayd Allāh (940-6/1534-6) failed to overcome the experienced troops of Shāh Ismā'īl and Shāh Tahmasp, who had a greater appreciation of the value of the modern weapon of firearms and who had seasoned troops in their *Kilībāsh* Türkmens and then in their Georgian, Armenian, etc., slave guards. The long-term result of this warfare was the virtual sealing-off of Transoxania from the rest of the Islamic world through the erection by the Safawids of this bulwark on their northeastern frontier. Although Turks

from Central Asia and Afghāns streamed into Muslim India as mercenaries, adventurers, etc., the traffic was largely one-way. Hence Transoxania became culturally introverted and impoverished, since the steppelands of South Russia and western Siberia were by the 17th century beginning to come under Russian, Christian control, and the popular Islam of such orders as the Yasawiyya, the Cihitiyya and the Naqshbandiyya, though intense in religious fervour and emotion, was weak in intellectual content. Only in the sphere of Eastern Turkish or Ġaghataiy literature may it be said that Transoxania made a significant contribution to the cultural stock of Eastern Islam at this time. It was a flexible and expressive enough language for Bābur [q.v.] to write his memoirs in it; to produce a lively folk-poetry, seen e.g. in the verses of the 16th century Gōlden Türkmen bard Mahdūm Kūlt, and to give rise to a genre of historiography amongst the Shaybānids, the Dīwāns or *Ashārkhānids* and the *Mangils* of Būkhārā and the *'Arabkhānids* of Khīwa in the former Khwāzma, although such outstanding figures as the 16th/17th century Shaybānī historian Hāfiṣ Tanīhī [q.v. in Suppl.] continued to write for preference in Persian. For the detailed history of the Shaybānids, see Hambly, *The Shaybānids, in Central Asia*, 103-74; Barthold, *Histoire des Turcs d'Asie Centrale*, 185 ff.; and *SHAYBĀNIDS*.

In the course of the 16th/17th century, Būkhārā and Khīwa formed themselves into separate, often mutually hostile khānates, and then in the early 18th century, a third Uzbek khānate arose in the Farghāna valley, that of Khokand. The three principalities were to have separate existences, punctuated by much squabbling and internecine warfare, till the Russian occupation of Central Asia in the second half of the 19th century, Būkhārā and Khīwa remaining, however, as virtual protectorates of Russia until the aftermath of the Bolshevik Revolution.

The history of these khānates can be followed under *SURKHĀRĀ*, *SHWĀRAZM*, *KHĪWA*, *GHOKAND*, see further *SHĀNIDS*, *KUNGRĀT*, *MANGILS*, and also *INAR* in Suppl.

Bibliography: Given in the article.

(C. E. BOSWORTH)

MĀ' (A) "water". The present article covers the religio-magical and the Islamic legal aspects of water, together with irrigation techniques, as follows:

1. Hydromancy
2. Water in classical Islamic law
3. Hydraulic machines
4. Pre-20th century irrigation in Egypt
5. Irrigation in Mesopotamia
6. Irrigation in Persia
7. Irrigation in North Africa and Spain
8. Irrigation in the Ottoman empire
9. Irrigation in pre-20th century Muslim India
10. Irrigation in Transoxania
11. Economic aspects of modern irrigation
12. Ornamental uses in Muslim India

2. HYDROMANCY

As a vehicle for the sacred, water has been employed for various techniques of divination, and in particular, for potamomancy (sc. divination by means of the colour of the waters of a river and their ebbing and flowing; cf. P. Cumont, *Études syriennes*, Paris 1917, 250 ff., notably on the purification power of the Euphrates, consulted for divinatorial reasons); for pegomancy (sc. omens given by rivers, springs, floods, a feature of Babylonian divination, cf.

A. Boissier, *Choix de textes relatifs à la divination babylonienne*, Geneva 1903-6, I, 235-50; Fr. Nötscher, in *Orientalia*, Serie prior, li-iv (1930), 121 ff., 137 ff., 146 ff., 131 ff., 141), hydromancy (called *istinsal*, according to Douët, *Magie et religion*, 389); lecanomancy (sc. divination from the waves set up on any shiny, liquid surface, such as water, blood, milk, honey, oil or petroleum, cf. Nötscher, in *loc. cit.*, 110-11, 118-19); and crystallo-mancy and catoptromancy (sc. omens drawn from the features appearing upon any polished, reflecting surface, cf. J. Hunger, *Becherwahrung bei den Babyloniern*, in *Leipziger Semiotische Studien*, 8/1, Leipzig 1903; G. Furlani, in *Aegyptus* [1927], 287-92).

The lack of perennial water courses in Arabia and the infrequency of springs prevented the development of such divinatory techniques at these amongst the Arabs. We have nothing to confirm that the reflective surfaces of waters in oases were ever used for these. Water, like perfume, was used in the rituals over the making of pacts and alliances (see LA'ARAT AL-DAM), but these procedures had no divinatory character at all.

Bibliography. In addition to references given in the article, see T. Fahd, *La divination arabe*, Lunde 1966, 405-6 (T. FAHD).

2. WATER IN CLASSICAL ISLAMIC LAW

In Islamic law there are seven kinds of water which it is lawful to use for drinking or ablution: water from rain, snow, hail, springs, wells, rivers and the sea. These sources may, however, be rendered impure by the presence in them of unclean objects.

Questions of ownership and the right to take water depend on the nature of its source, whether natural or artificial watercourses, wells or springs (freshwater lakes are not generally discussed in the sources owing to their scarcity in the Islamic lands). Ownership of a source of water implies ownership of its *harim* (reserved area), consisting of that portion of land adjacent to the water source sufficient to enable the source to be used. One *haddith* defines the extent of the *harim* of a well as 40 cubits on every side, but other measurements are also given.

The *Shari'ah* distinguishes three types of water source which may be the subject of use or ownership:

1. Water from rivers, which may be (a) great rivers, such as the Tigris and Euphrates, which are of such a size that they can be used by all for drinking and irrigation to any extent; (b) lesser rivers, in which case two possibilities may be distinguished:

(i) where there is generally enough water for all users but where it is possible to cause shortage to other users by e.g. digging a canal to take water from higher up the river than other users (whether this is allowed or not must be decided after inquiry into the consequences); or

(ii) where damming or the allocation of fixed times is necessary to provide enough water for irrigation. In such cases, the river is normally regarded as the joint property of the riparian cultivators, and the question of how much water may be retained by the highest riparian cultivator depends on differing circumstances, such as the season of the year, the type of crop irrigated, etc. (c) canals. These are the property of the landowner or landowners in whose property they are situated; where they are the common property of several landowners, none of them may make unilateral changes in arrangements for sharing the water, or by building a mill or bridge over it, etc.

2. Wells: (a) Well-dug for the public benefit;

here the water is freely available to all, the digger merely having the right of first comer. (b) Wells dug by persons for their own use, e.g. wells dug in the desert by tribesmen. Such persons have first right to the water while they are living in the vicinity, but are obliged to give water to persons suffering from thirst. After they move away, the water becomes freely available to all. (c) Wells dug by persons intending them to be their own property. Ownership, however, cannot be claimed until water has actually been found, and if the well needs lining, until it has been lined. The owner of the well has a duty to give water to anyone suffering from thirst. This is illustrated by a tradition which records that 'Umar made some owners of water pay the *diya* for a man who died of thirst after they had refused him request for water.

3. Springs: (a) Natural springs: these are treated as analogous to permanently flowing rivers. If the water supply is limited, the first person to undertake irrigation in the area has priority; otherwise the water has to be shared equally. (b) Springs opened up by digging: the person who does this becomes the owner, together with the surrounding *harim*. (c) Springs opened up by persons on their own property. In such cases, the only claim against the owner is that of persons suffering from thirst. If the owner has a surplus of water, he may be obliged to give it gratis to other men's cattle, but not for irrigating crops.

A person who possesses water in a vessel is its sole owner, and he is not obliged to give it to others gratis; he is, however, obliged to relieve someone suffering from thirst in return for a recompense.

3. HYDRAULIC MACHINES

There is ample evidence from written and archaeological sources for the widespread use in pre-Islamic times of all the main hydraulic machines, described below, in all the areas that were to form part of the Muslim world. The *ghadaf* was known in ancient times. The *sābiya*, although it did not become fully effective before the introduction of the pawl in the 4th or 5th century A.D., was known in Roman times. Both machines are still in use today. The *noris* (*nā'ira*) and the vertical undershot mill-wheel are both described by Vitruvius, without any claim to originality (*On architecture*, Loeb Classics, ed. F. Granger, 1929, II, 302-7). Vertical mill-wheels were sometimes mounted on boats moored to the banks of rivers (M. Smith, *Man and water*, London 1973, 140). The origins of the horizontal, vane mill-wheel are still obscure: it may have been referred to by a Greek writer of the 1st century B.C., and it was in use in Ireland in the 7th century A.D. (Smith, *op. cit.*, 142). It is described in a Byzantine treatise, probably of the 7th century A.D., extant only in Arabic versions (Wiedemann, *Aufsätze*, II, 50-6, see

Bibl.) Hand-operated force pumps were used by the Greeks and Romans; these had single vertical cylinders that were placed directly in the water without suction pipes (Vitruvius, 311-12, quoting Ctesibius, who lived ca. 200 B.C.). The problem of the origins and diffusion of these machines is largely unresolved, but our chief concern here is that they were all in existence in the 1st/7th century.

The *ghadîf* is a simple machine consisting of a wooden beam pivoted on a raised fulcrum. At one end of the beam is a bucket, at the other end a counterweight. The bucket is dipped into the water, then the beam is rotated by means of the counterweight and the contents of the bucket are emptied into a cistern or supply channel. The flume-beam sump is a development of the *ghadîf*. Instead of a solid beam, a channel is connected rigidly to the bucket; when this is raised the water runs through it into the outlet.

The *sâbiya* is more complex, and indeed has over two hundred components parts. It consists essentially of a large vertical wheel erected over the water supply on a horizontal axle. This wheel carries a chain-of-pots or a bucket chain. On the other end of its axle is a gear-wheel that engages a horizontal gear-wheel to which the driving bar is attached. The animal is harnessed to the free end of this bar, and as it walks in a circular path, the gears and the wheel carrying the chain-of-pots rotate. The pots dip in succession into the water and when they reach the top of their travel they empty into a channel. The *noria* (sometimes confused with the *sâbiya*) is a large wheel driven by water. It is mounted on a horizontal axle over a flowing stream so that the water strikes the paddles that are set around its perimeter. The water is raised in pots attached to its rim or in bucket-like compartments set into the rim. The large *norias* at Hamât in Syria can still be seen today; the first known mention of *norias* at Hamât is by Ahmad b. al-Tayyib in 971/884-5 (Sifer, 33).

The Vitruvian multi-wheel turns a vertical gear-wheel that meshes with a horizontal gear-wheel to which the driving shaft is attached. The horizontal vane wheel is fixed directly to the driving shaft; there are no gears. It cannot be mounted directly in the stream since the water must be directed on to its vanes from a pipe or channel.

There can be no doubt that all these machines were in continuous use in Islam from the early conquests until the introduction of modern technology. (As mentioned above, the *ghadîf* and the *sâbiya* are still in use; they are cheaper and more easily maintained than motor-driven pumps.) The evidence comes from treatises on machines, references in the works of historians and geographers, and archaeological investigations. For a selection of the available evidence, the reader is referred to the *Bibl.* under Wiedemann, *Aufsätze*; Schieler; Hill 1 and 2. The remaining discussion will be confined to developments of particular importance in the history of technology.

Mills were used in Islam for other purposes beside the grinding of corn and other seeds, e.g. for crushing sugar cane and for sawing timber (A. Y. Hassan, *Taqî al-Dîn and Arabic mechanical engineering* [in Arabic], Aleppo 1976, 51, quoting al-Nuwayrî and Ibn 'Asâkir). This suggests that rotary motion was converted to reciprocating, probably by means of trip-hammers. More examples of similar applications may be discovered when a systematic study of the historical and geographical works is undertaken.

Another area of interest is the use of the overshot mill-wheel, in which the water is conducted through a channel to the top of the wheel, which has bucket-like compartments around its rim. The overshot wheel works mainly by the weight of the water, whereas the Vitruvian one is operated by its force. In many conditions, the former is the more efficient of the two. Its use is recommended by a certain al-Murâdî in a treatise composed in Andalusia in the 5th/11th century (D. R. Hill, *A treatise on machines*, in *Journal for the History of Arabic Science*, 1/1 (Aleppo 1977), 33-36. In this paper the treatise was wrongly attributed to the well-known astronomer Ibn Mu'âdh). Shams al-Dîn al-Dimashqî, d. 757/1327, describes a similar wheel in operation near Tabriz (ed. M. A. F. Mehren, 188). The overshot wheel did not come into general use in the West until about the 8th/14th century. Al-Djazarî (q.v. in Suppl.) often uses small overshot wheels in his devices, but these are usually scoop-wheels, a kind of primitive Pelton wheel, the scoops being fixed to the ends of spokes that radiate from a solid disc.

It is reasonable to infer that the scoop-wheels used by al-Djazarî were miniature versions of wheels in full-size machines, an inference that is strengthened by the fact that he uses such a wheel in one of his water-raising machines (Category V, Ch. 3). The visible part of this is a *sâbiya*, which is provided with a model cow to give the impression that this is the source of motive power. The actual power, however, is provided in a lower, concealed chamber and consists of a scoop-wheel and two gear-wheels. This system drives the vertical axle that passes up into the main chamber, where two further gear-wheels transmit the power to the chain-of-pots wheel. Such devices (without the model cow) were in everyday use. A similar machine was in continuous use on the River Yazdî above Damascus from the 7th/13th century until about 1960 for water supply and irrigation. It was restored to working order by the staff and students of Aleppo University (Hassan, *op. cit.*, 58-9).

Al-Djazarî describes four other water-raising machines in Category V, Chs. 1, 2 and 4 deal with flume-beam swapes operated by animal power through gear trains. The first two of these incorporate segmental gears. The earliest known occurrence of these gears in Europe is in the astronomical clock completed by Giovanni de' Dondi in 1365. The fifth machine is a slot-rod pump, driven through gears from a paddle wheel. It is remarkable for having two horizontally opposed cylinders and true suction pipes. Taqî al-Dîn (10th/16th century) describes a similar pump, but equally remarkable is his six-cylinder "Monochloc" pump (Hassan, *op. cit.*, 47-50). The vertical cylinders are fitted into a single wooden block which rests in the water. Delivery pipes lead out from the sides of the cylinders, near their tops, and are brought together into a single outlet. Each cylinder has a check-valve at the bottom. The pistons are provided with weights at the top and lever arms at the sides. The lever arms are supported at fulcrums and their free ends extend inside the perimeter of a scoop-wheel. As the water strikes the scoop-wheel it rotates, the scoops bear down in succession on the lever arms and the pistons rise and fall in continuous succession.

It should be apparent from the foregoing brief discussion that Islamic engineers were active in the construction and development of hydraulic machines for water-raising and power supply throughout the mediaeval period and beyond. Similar activity took

place in Europe, India and East Asia. Each region used the machines that were best suited to its needs, to the local hydraulic conditions, and to the available constructional materials.

Bibliography: (in addition to works mentioned in the text): two treatises are available in annotated English translations by D. R. Hill, *The Book of knowledge of ingenious mechanical devices by al-Jazari*, Dordrecht 1974, see esp. 32, 95-6, 179-98, 275; and *The Book of ingenious devices by the Banū Mūsā*, (B. Baḡdādī mud-jarīth century), Dordrecht 1979, see 222, 226, for horizontal water-wheels; there is an Arabic-English glossary that includes many terms used in hydraulic engineering; an Arabic edition of al-Dīzārī, also with Arabic-English glossary, is now available, ed. A. Y. Hassan, Aleppo 1979; Abu 'Abd Allāh al-Khwarazmī, *Maḡdīh al-ḡalām*, ed. van Vloten, 246-55 (this section contains definitions and brief descriptions of parts used in hydraulic and other machines); E. 4. PRE-20TH CENTURY IRRIGATION IN EGYPT

Until the 20th century, irrigation in Egypt remained much as it had been in Pharaonic times. The continuity of practice stemmed from the dependence on the annual Nile floods, which provided Egypt not only with water for irrigation but also with the alluvial soil deposits to renew the fertility of the cultivated lands. The great river, however, does not only bestow its gifts, but may also be the cause of misfortune to the country. Up to modern times and before major dams and irrigation projects were undertaken, a high Nile promised the richest increase to the fields, while with a low Nile came the inevitable dread of a year of famine.

¹Abd al-Latif al-Baḡdādī (d. 639/1231) discussed this phenomenon and the rôle of the Nile in the irrigation and the agricultural situation in mediaeval Egypt. He states that after the water of the Nile overflowed and covered the soil for several days, it receded to let the peasants plough and sow the fields. No further irrigation was needed until the crops were ready to be harvested. If the Nile exceeded some fingers beyond 20 cubits (*ḡarḡa*), some areas became submerged like lakes for a long time and the proper time for sowing passed without calculation being possible. Also, lands could not be cultivated if the Nile did not rise sufficiently to reach the minimum of the necessary flood (16 cubits). In such cases, the amount of land covered with water was insufficient, the size of the crop did not meet the needs of one year and there was a scarcity of food more or less great in direct ratio to the water level above or below sixteen cubits.

No one in pre-20th century Egypt felt secure be-

fore the flood reached the height of 16 cubits and when all necessary land had been naturally irrigated by the Nile. Until it reached that level, the news of its height was kept secret from the common people. It seems that this was a custom introduced by the Fīṭimīd Caliph al-Mu'izz in 360/973, when he prohibited the announcement in the streets of Cairo of the exact rising of the Nile before it had reached 16 *ḡarḡa*. This was to prevent tension, fear and financial crises among the inhabitants; cf. al-Makrizī, *Kāḡib*, Cairo 1270/1853: 4, i, 61. The person who was in charge of the Nilometer (*ḡābiḡ al-miḡyās* [see *miḡyās*]) used to call the increasing level of the Nile water in fingers without telling the exact cubit. Only when the water level reached the height of 16 cubits, normally in the Coptic month *Misrā* (July-August), could the *ḡābiḡ al-miḡyās* proclaim it to the people in Cairo, and the sultan then had the right to impose the *ḡharāḡi* on the cultivated land, cf. al-Kāḡashandī, *Ṣubḡ al-nā'ira*, Cairo 1914, iii, 293-4, 297; al-Nuwayrī, *Nihāyat al-arab*, Cairo 1923, i, 264; al-Makrizī, *Kāḡib*, i, 60, 273; H. M. Rabie, *The financial system of Egypt A.H. 564-741/A.D. 1169-1341*, London 1972, 73 and the sources cited therein.

Pre-20th century irrigation in Egypt did not rely only on the floods, but also on the yearly digging and cleaning of the irrigation canals and the maintenance of the irrigation dams. Both al-Nuwayrī (i, 265) and al-Makrizī (*Kāḡib*, i, 61) state that without such maintenance there would be little benefit from the Nile. Al-Makrizī (i, 74-5) traces the importance of canals and irrigation dams in controlling the Nile in pre- and early Islamic periods. It was one of the most important functions of both the sultans and the holders of the *ihḡā'* (q.) under the Ayyūbids and the Mamlūks to dig and clean the canals and to maintain the irrigation dams (the *ḡisār*). The sources provide us with ample information about the efforts of the sultans in Egypt in digging and cleaning canals. The irrigation dams (the *ḡisār*), which were of paramount importance for the irrigation of the fields, were classified into two types in mediaeval Egypt: the small irrigation dams (*al-ḡisār al-ḡalāḡiyya*) and the great irrigation dams (*al-ḡisār al-sulḡāmiyya*). The first were important for conveying water from one field to another in the villages. Each *muḡṭa'* (holder of an *ihḡā'*) with his clerks was responsible for the upkeep of these irrigation dams within the confines of his *ihḡā'*. As for the great irrigation dams which were constructed for the benefit of the provinces, the sultan was responsible for them, at least in theory. In practice, especially under the Mamlūk sultans, the *muḡṭa'*s assisted the sultan in the construction of this type of dam by supplying peasants, oxen, harrows and tools, cf. Ibn Mammāl, *Kawāsin al-damāsin*, ed. A. S. Atiya, Cairo 1943, 232-3, 344; al-Kāḡashandī, *Ṣubḡ*, iii, 449; al-Makrizī, *Kāḡib*, i, 101.

Because of the importance of the great irrigation dams, both the Ayyūbid and the Mamlūk sultans used to select distinguished and able *amirs* and officials to supervise the work of their maintenances. Al-Nābulusī (d. 660/1261) states in the *Kiṣṣ al-Luma'* *al-kawāsin al-muḡṭiyya* (ed. C. H. Becker and C. Cahen in *Bulletin d'études orientales*, xvi [1958-60], 39-40) that every year the Ayyūbid sultan al-Malik al-Kāmil used to send him with 3 or 4 *amirs* to the *ḡisā* province during the flood period in order to keep the dams of that province in good condition. It seems that the Ayyūbid sultan sent officials like al-Nābulusī to other Egyptian provinces for the same purpose. Under the Mamlūks there was an office called *ḡāḡi al-ḡisār*

(office of inspection of irrigation dams) for each province in Egypt. The holder of this office, called *ḥaṣṣif al-ḡirār*, was an amir who was aided by assistants in the construction and maintenance of the irrigation dams in the province under his charge, cf. al-Kalkashandī, *Ṣubḥ*, III, 448-9.

Each year before the advent of the Nile flood, not only had the canals to be dug and the irrigation dams to be constructed and repaired, but also the land to be cultivated had to be prepared. The methods of that preparatory work as well as the tools used were more or less the same traditional ones known to have been used by the Egyptian peasants for thousands of years. As for irrigation, al-Nuwayrī and al-Makrizī state that when the Nile rose during the flood period, the water covered all cultivated lands. One could only reach the villages, which were established on hills and mounds, by boat or on the great irrigation dams. When the soil had been sufficiently watered, the *ḥāṣar* (stewards) and the *ḡayāḥis* (village headmen) supervised the cutting off of the irrigation dams from specified places at certain times in order to draw off water from the fields, thus letting it flow benefit other places, cf. al-Nuwayrī, I, 264-5, al-Makrizī, *Ḳāṣaf*, I, 92; see also al-Marʿudī, *Murādī al-ḡiḥāb*, Beirut 1965, I, 375; Nāṣir-i Khusrāw, *Safar-nāma*, ed. and tr. C. Schefer, 39, tr. 118. al-Kawzūnī (d. 692/1283), *Alḥikm al-bilād wa-ḡibḥat al-Ṣūdā*, ed. Wüstenfeld, Göttingen 1848, 175, mentions that when the water of the Nile receded gradually after being on soil for forty days, the peasants began sowing.

The crops which were cultivated after the Nile flood season in mediaeval Egypt did not need any more irrigation than their inundation during the flood period, cf. Ibn Hawqāl, 97; al-Isṭaḡrīf, 49. This was the most common method of irrigation, called *bī 'l-sayḥ* by al-Nābulusī, *Ta'wīḥ al-Fayyūm*, ed. B. Moniz, Cairo 1899, 63, and *mā' al-nāḥa* by al-Makrizī, *Ḳāṣaf*, I, 102. The last term is still used by the contemporary *fellāḥ* to denote irrigation without artificial implements. Crops watered in this manner were called "winter crops" in order to distinguish them from the summer ones which the peasants began sowing during the Coptic month Baramūḥ (February-March) and which relied on irrigation by artificial means such as water-wheel, shadoof, etc., cf. Ibn Mammālī, 248.

Al-Makhrūmī in the *Musḥaf* and al-Makrizī in the *Ḳāṣaf* distinguish between the winter and summer crops when discussing the times of sowing and harvesting. Al-Makhrūmī states that the winter crops were wheat (*ḡamb*), barley (*ḡa'ir*), beans (*ḡil*), bitter-vetch (*ḡilbān*), lentils (*ḡadas*) and flax (*ḡalān*). Al-Makrizī adds to al-Makhrūmī's list of winter crops chick peas (*ḡummiḡ*), clover (*ḡur*), onions (*ḡaṣal*), garlic (*ḡūm*) and lupine (*ḡurmus*). For summer crops al-Makhrūmī mentions urupe melons (*ḡaḡās*), water-melons (*ḡiḡḡāḡ*), kidney beans (*ḡiḡiḡa*), sesame (*ḡim-sim* or *ḡamasim*), cotton (*ḡur* or *ḡiḡāḡ*), sugar-cane (*ḡaḡab al-ḡaḡhar*) and colocasia antiquorum (*ḡiḡāḡ*). Although al-Makrizī lists the same for summer crops, he adds aubergines (*ḡiḡḡiḡāḡ*), indigo (*ḡilā*), radishes (*ḡuḡḡ*), turnips (*ḡiḡḡ*), lettuce (*ḡiḡḡḡ*) and cabbage (*ḡurḡab*), and puts both the urupe melon and water-melon under the one name *ḡiḡḡāḡ*, cf. al-Makhrūmī, *Ḳitāb al-Minhāḡi fī 'ilm ḡarḡāḡi Mīṣr*, ms. B.M. London Add. 23483, ff. 30b-33b, al-Makrizī, *Ḳāṣaf*, I, 101-2.

There were many methods known in pre-20th century Egypt to irrigate the soil under the summer crops. They were inherited from older times and continue until today, with the exception of one which

was very primitive and arduous. This was the transportation of water to the fields in buckets, jars, etc., hung from the necks of the oxen. This method was mentioned by al-Nābulusī as the means of irrigation for the two villages Dimashḡin al-Baḡal and Damaḡh, known as Kām Darī, in the Fayyūm province, cf. *Ta'wīḡ al-Fayyūm*, 99, 102. This method, which was a continuation of a Pharaonic technique, seems to have been known in other Egyptian villages.

The other methods of irrigation used by the mediaeval Egyptian peasant employed any one of four artificial irrigation contrivances, namely, the *naḡḡā*, the *ḡāḡiḡa*, the *ḡāḡiḡa* and the *ḡāḡat*. These four contrivances were used in Egypt before the advent of the Arabs and are still in current use.

There is no mention of what was known as the *naḡḡā* in the available classical sources, but the existence of such a device in Ancient Egypt, as well as its depiction in the *Description de l'Égypte, État moderne*, Planches, Tome deuxième, Paris 1817, *Arts et métiers*, Pl. vi (4), proves its existence in pre-20th century Egypt. It is still in use in Egypt, as well as in many African countries. Two men stand face to face, each holding two cords of palm-fibre ropes to which is attached a wide, shallow waterproof basket. This basket, made from twisted palm leaves or leather, is known in Egypt by the name *ḡaḡa*. The two men holding the ropes bend slightly toward the water, dip the basket and fill it. Then they straighten while turning to the field, thus raising the basket which is emptied into the mouth of the irrigation canal, cf. Lane, *An account of the manners and customs of the modern Egyptians*, London 1871, II, 27.

The *ḡāḡiḡa* or shadoof is a kind of draw-well which was used in Pharaonic Egypt and in mediaeval 'Irāq, and is still used in Egypt and other eastern countries for raising water for irrigation. It usually consists of two posts, beams of the acacia tree or shafts of cane, about five feet in height. These posts are coated with mud and clay and then placed less than three feet apart. The two beams are joined at the top by a horizontal piece of wood, in the centre of which a lever is balanced. The shorter arm of the lever is weighted with a heavy rock or dried mud, while at the end of the longer arm hangs a rope carrying a leather pail. The peasant stands on a platform on the river bank and pulls down the balanced pole until the pail dips into the water and is filled. A slight upward push, which is helped by the counterweight, raises the bucket above the irrigation canal, into which it is emptied.

As for water-wheels, al-Muḡaddasī (14th/15th century) states that there were many *ḡawḡāḡ* (pl. of *ḡawḡ*, a Persian word which denotes a water-wheel) on the banks of the Nile for irrigating orchards during the low waters. He also says that the *ḡawḡāḡ* was the bucket of the *ḡawḡāḡ*, cf. *Aḡḡon al-ḡaḡāsim*, 208. In the next century, Nāṣir-i Khusrāw mentions in his *Safar-nāma*, 39, French tr. 118, that "up the Nile there are different cities and villages, and they have established so many *ḡawḡāḡ* that they are difficult to count."

In mediaeval Egypt, there were two words used to denote wooden water-wheels, i.e. the *ḡawḡāḡ* (sing. *ḡāḡiḡa*) and the *maḡḡāḡ* (sing. *maḡḡāḡ*), al-Nābulusī, *Ta'wīḡ al-Fayyūm*, II, 27, 31, 48, 52, 54, 63, 94, 126, mentions that some villages in the Fayyūm province had *ḡawḡāḡ* to raise irrigation water. In Bāḡja, for example, he states that there were *ḡawḡāḡ* which were running day and night. In the *Ḳitāb Luma' al-ḡawḡāḡ*, 48-9, al-Nābulusī warns the Ayyūbīd Sultan al-Malik al-ḡāḡiḡ Ayyūb of the negligence and dis-

honesty of officials with which his own long experience in the work of offices had made him conversant. Specifically, he reports that acacia trees, which were a state monopoly, have been illegally sold down to construct *sawāḥī*, presses and other instruments.

Al-Nuwayrī, *Nahḍat al-awṣāḥ*, viii, 233-4, writes in the Mamlūk period, states that wells were dug in the land, apparently supplied by water from the underground bed of the Nile. At the mouth of these wells the *sawāḥī*, made from acacia or other trees, were installed. Al-Nuwayrī also states that these irrigation wheels were called *al-maḥāḍī* in Egypt, while at Ḥamā in Syria they were called *al-mawḍīʿ* (sing. *mawḍīʿ*). He differentiates, as does al-Balkhashandī, *Ṣubḥ*, iv, 80, 140, in a later period, between the two kinds, by stating that the *mawḍīʿ* were run by water current, while the *maḥāḍī* by oxen.

The Arabic word *maḥāḍī* (sing. *maḥāḍī*) denotes the huge pulley which is used for raising water from wells, cf. Ibn Maṣūʿ, *LA*, Beirut 1936, iii, 620-1. However, al-Makrīzī in the *Aḥyāʾ*, i, 102, uses it to refer to the water-wheel. When discussing the irrigation of sugar-cane when the Nile water is low, al-Makrīzī says that each of these *maḥāḍī* can raise the water to irrigate eight *faddans* of sugar-cane, providing that the waterwheel is installed close to the Nile and that eight excellent beasts are available to work it. When the wells are established at a distance from the Nile, each of the *maḥāḍī* cannot irrigate more than 4 to 6 *faddans*. Al-Makrīzī also refers to the *ḥādāḥ*, which al-Mukaddas earlier explained as the bucket of the water-wheel.

It is apparent that the ordinary, contemporary Egyptian water-wheel is more or less the same as the mediaeval one, since it does not differ appreciably from the one depicted in the *Description de l'Égypte*, *État moderne*, ii, i, 301-2; *Planches*, Tome deuxième, *Arts et métiers*, Pl. v. The flat horizontal wheel of the *sāḥiya* is turned counter-clockwise by a single beast or pair of oxen. The flat wheel's rough cogs engage a vertical wheel which carries a long chain of earthen pots (*ḥawādīḥ*). These clay pots are suspended from ropes and are lowered, mouthdownward, into the water. Following the path of the wheel, the pots scoop up water which they spill out into the irrigation channel as they arrive at the top of the wheel on their circular journey. The work of the peasant or his son is to goad the beast, to watch the turning wheel, and to avoid wasting water on the way to the field.

As for the *ḥādāḥ* (water-screw), it was apparently invented by the Greek mathematician and inventor Archimedes (ca. 287-212 B.C.) while studying in Egypt. Observing the difficulty in raising water from the Nile, he is said to have designed this screw to facilitate the irrigation of the fields.

The water-screw has been continuously in use in Egypt when the level of water is not very low, from the times of the Ptolemys until the present. It consists of a wooden cylinder (about 6-9 feet in length) hooped with iron. While the spiral pipe is fixed between the inside wall of the *ḥādāḥ* and an iron axis, its upper extremity is bent into a crank and its lower end turns on a stake set under the water. One or two peasants crouch at the water's edge, endlessly turning the crank handle. The water rises from bend to bend in the spiral pipe until it flows out at the mouth of the canal.

However, using the primitive implements of the *nahḍiya*, the *ḥādāḥ*, the *sāḥiya* and the *ḥādāḥ*, the pre-20th century peasant in Egypt irrigated the land and managed to produce the necessary crops to maintain the economy of the country. Many of the

techniques and implements that he devised or used have proved to be efficacious to such a degree that they are still extant.

5. IRRIGATION IN 'Irāq

Since it is impossible here to look at the use of water in all its aspects and in regard to all the problems which it raises, the present section merely deals with irrigation in the same way as is done for other regions of the Islamic world.

Taken as a whole, 'Irāq is a flat plain irrigated by two great rivers, whose risings and fallings lack however the comparative regularness of the Nile. Since the Euphrates (al-Furāt [p. 6]) flows at a higher level than that of the Tigris (Dijlā [p. 6]), the canals which, from ancient times, have connected them run at an oblique angle in relationship to them. Aerial photography, together with other sources of information, has allowed Adams to supplement and complete, for the left bank of the Tigris,

the falsification of the mediaeval authors and, especially, of Ibn Sarafiyūn (Serapion). In regard to the zone between the two great rivers, periods of neglect before and after the coming of Islam have transformed part of central 'Irāk into a marshland, the Baṭṭha [q.v.], the drainage of which has not been possible. The rivers and the great canals, constructed and maintained by the state, were important routes for communication, which were not impeded by the bridges of boats across them or by the mills. The upkeep of the smaller canals was the responsibility of local people. An ancient system of customary law regulated the amount and the periods of water used amongst the holders of land along the banks, and specially-appointed officials had the task, through the manipulation of sluices and water-gates, of securing this regulation. The latest shown about irrigation questions by mediaeval authors arises from the fact that, both for the land-tax and for local dues, irrigated land was distinguished from non-irrigated land.

The anonymous author of the *Kutūb al-Hāwī* (5th/11th century) has provided us, in the shape of mathematical problems, with some interesting details about the administration of the canals and about hydraulic machinery in mediaeval 'Irāk. He describes various kinds of waterwheels, *ḥawābiq*, *gharrāfa*, *ghūḥḥāf*, giving their capacity for drawing up water and then spreading it for irrigation purposes, according to the season, and the numbers of men and animals required to work them. Then he moves on to the "balancing out of ground" intended to fix the levels of canals which have to be dug out (see E. Wiedemann, *ET*, art. *mizān*). Finally, he raises the question of the construction and upkeep of the raised canal banks, which he calls *ḥawād*, a pre-Islamic term not listed in the classical dictionaries, hence often wrongly read. It is necessary to know the volume of earth, reeds and brushwood which has to be transported, which is counted according to a special unit, the *azala* = 100 cubic cubits "of balance", and it is to be understood that an *azala* is procured by 33 "spade loads", handled by two men, one digging and the other transporting the earth, etc. in sacks. The provision of materials and the labour, which seem never to have been done by slaves, are paid according to an official tariff.

6. IRRIGATION IN PERSIA

The distribution and density of population and the development of agriculture in Persia throughout history have been closely dependent upon the availability of water, and the nature of the irrigation systems has influenced both the siting of settlements

and the pattern of society. Precipitation is scanty and seasonal, it is concentrated on the periphery of the country, as also are the major perennial rivers.

As a general rule, rainfall, which occurs between October and May, decreases from the north to the south of the country and from west to east, but in a number of areas the high relief of the Alburz and the Zagros mountains has modified this pattern. Along the Caspian Sea coast and the northern flanks of the Alburz, precipitation reaches more than 1,500 mm. near the mouth of the Safrūd Rūd; annual totals fall to less than 500 mm. on the east side of the Caspian near Guabad-i Kūbūs. Along the western flanks and summits of the Zagros Mountains, precipitation amounts are thought to exceed 800 mm. on some of the higher peaks, and large areas to the west of Shirāz receive more than 400 mm. In the north-western highlands, between the two belts of high precipitation, there is a zone of moderate precipitation of 250-400 mm. In the centre of the country occupied by the Dasht-i Kavir and the Dasht-i Lūt, great sterile deserts, precipitation totals almost everywhere less than 100 mm., though a higher precipitation is found on the eastern borders of the Anzīr in the highlands around Bīrdjān and Zīhādān. Everywhere, with the exception of the Caspian littoral, low and episodic rainfall is a major constraint on agriculture, hence the importance of artificial irrigation.

Dependable supplies of surface water exist only in isolated districts around the margins of the country, but there is nowhere an annual surplus of water, and seasonal surpluses, except in the north and west, are insignificant. Run-off is episodic, and occurs only because precipitation momentarily exceeds the infiltration capacity of the surface. The flow of water in streams and rivers throughout the country is seasonal and highly variable from year to year. Peak flows are too late for winter crops and the minimum discharge occurs when summer crops are in greatest need of moisture. The control of water by artificial irrigation is therefore immensely important for agricultural production and prosperity. Without artificial irrigation the cultivation of plants native to regions where summer rainfall is normal, such as cotton, millet, rice and sugar would not be possible.

There are few great rivers in Persia—the great hydraulic civilisations have no place there. The largest are the Kārdn and the Karkha [q.v.] which flow into the Persian Gulf, draining almost all the area between Abādān and Kirmānshāh. Further south are the basins of the Mend [q.v.] and the Shīr, which also drain into the Persian Gulf and the Gulf of Oman respectively. The Safrūd Rūd flows into the Caspian, as also do the Aras [see AL-ARAS] and the Atrek [q.v.]. The water of the two last-named, which flow along the modern Russo-Persian border in the north-west and the north-east respectively, is shared with Russia. The central zone of Persia, covering the largest part of the country, is an area of internal drainage. Small rivers flow into the closed basins of Lake Urmīyya (Rūd-i 'Uyya) in Āgharbay-dān, into the Hāmān in Sīstān and into dry lakes and saline marshes in structural basins in the East Zagros, the depression between the Zagros and the volcanic axis extending from Kūmān to Kirmān, the Dīax Muryān basin, the southern Lūt, Balū-dīstān, the eastern highlands north of Bīrdjān and in the frontier zone with modern Afghanistan. South-west of the central desert is the basin of the Zāyandā Rūd, which supports Isfahān and to the south of this, the basin of the Kur. The discharge

of most streams in the central zone is small. Many of the larger streams, gathering in high mountains, have steep and irregular profiles. Leaving the mountains, they dwindle quickly as a result of evaporation, seepage and diversion for irrigation, leaving dry channels, the underflow of which now and then supports an exotic agricultural efflorescence. From ancient times, the water of these rivers and streams has been used for irrigation and has formed the basis on which flourishing civilisations have been established in pre-Islamic and Islamic times. The history of the water use of the Kur in the Marvdasht plain illustrates the importance of the role played by irrigation in the establishment of the early Persian empires in that region and the changes in the prosperity of the region and the density of settlement which took place over the centuries as a result of fluctuations in the upkeep of dams and irrigation channels (see further, G. Kortum, *Die Maridscht-Ebene-Fars*, Kiel 1976). For the most part, the rivers flowing into the southern end of the Caspian Sea, apart from the Oxus (see *ANC OXYA*) appear to have been less used for irrigation in early and mediaeval times than the rivers in central, southern and eastern Persia. Hamid Allah Mustawfi states that little of the water of the Qūrdjān River was used for irrigation and most of it ran to waste (*Nuzhat al-fulāḥ*, ed. G. Le Strange, 214). Similarly, hardly any of the water of the Saffid Rūd was used for irrigation, except for that little which watered the lands lying immediately along its bed; most of it was wasted (*ibid.*, 217); and the same, he alleges, was true of its tributary, the Shāhrūd (*ibid.*, 218), though this was not so in the case of the rivers of the two Fārsas, which also flowed into the Saffid Rūd: in summer most of their waters were used for irrigation and little flowed into the Saffid Rūd (*ibid.*, 227).

The smaller basins of the arid centre of Persia and the south-east, together with the fringes of the *hamir*, receive incoming water mainly by pediment seepage of many small ephemeral streams. The traditional method of tapping this water is by *kanāts* (q.v.), which, with its associated network of canals, is characteristic of irrigation on the Persian plateau; hence too the frequent siting of settlements on gentle slopes some distances from the foot of the hills that feed the *kanāns*. From earliest times, the material basis of the population on the Persian plateau has been provided by *kanāt* water (H. Gobiol, *Essai d'une histoire des techniques de l'eau sur le plateau iranien*, in *Persica*, viii [1979], 220). The various systems of irrigation—by river, *kanāt*, spring or storage dam—are not mutually exclusive; many districts use more than one.

The configuration of settlements has been decided in many cases by the nature of the water supply. Where water is scarce, villages tend to be concentrated; elsewhere they may be more scattered. They frequently flank water-courses and cluster about the outlet of *kanāts* or round springs. The area immediately round a town or village is usually intensively cultivated with irrigation—even in the dry farming regions there is often a small irrigated area in or near a town or village. Beyond the cultivated land there is sometimes a periphery of marginal land which may be cultivated in years when the water supply is extraordinarily plentiful. Similarly, mountain villages in regions where the rainfall is sufficient for cultivation usually have an irrigated area, however small. In mountain valleys, the villages tend to be situated on rocky slopes rising above the intensely cultivated

valley floors or to straggle along the mountain streams. Mountain slopes are often skillfully terraced, and much time and labour is expended on the construction and repair of dry stone retaining walls for the cultivated plots (cf. X. de Planhol, *Geography of settlement*, in *The Cambridge history of Iran*, I, ed. W. B. Fisher, Cambridge 1968, 419–20. The need for regular attention to the upkeep of irrigation works has, further, been an important factor in making the village, rather than the isolated farmstead, the typical form of settlement throughout most of Persia).

Artificial irrigation may already have existed in late Neolithic times. By the Achaemenid period, there was an extensive network of *kanāts*, and with the extension of irrigation there was an expansion of agriculture. It is probable that drainage schemes were also undertaken in different parts of the empire. Later, the Seleucids brought more land under cultivation by clearances and drainage and applied new techniques to irrigation (R. Ghirshman, *Iran from the earliest times to the Islamic conquest*, Harmondsworth 1954, 230). In Islamic times, control of water for irrigation remained crucial to prosperity and settlement.

Such control is a highly complex matter, and requires for its successful implementation not only technical skill but also political stability. The heavy load of solids carried by streams in spate makes storage and control both difficult and costly. Flash floods often destroy irrigation works, especially those connected with *kanāts*, while spring floods may also cause much damage in lowland districts. On the plateau, the lowering of the stream-beds through normal erosion results in the lowering of the water-table (feet) and leaves irrigation canal intakes above the new water level. In modern times, the lowering of the water-table by the extraction of water by pump operation connected with the sinking of semi-deep wells has led in many *kanāts* falling into disuse, especially round the central desert but also in other regions. Inadequate drainage, on the other hand, often leads to a rising water-table under irrigated lands, water-logging, salinisation and alkalinisation, which result in considerable loss of output. These processes vary widely in different districts and different years. In some regions, notably Khūzistān and Sistān, deterioration of the soil because of a change in the water-table due to over-lavish irrigation and inadequate drainage, or both, has been a major problem. Another problem is that ground water in some districts may be heavily charged with soluble salts and be too saline for use in irrigation. This is the case in many districts on the borders of the central desert and in the Persian Gulf littoral.

Natural conditions and agricultural practices cannot alone, however, explain the fluctuation in the history of irrigation in Persia. The shifting of centres of political authority which accompanied dynastic changes and demographic changes resulting from invasion and the decrease in dead lands because of the slaughter or flight of their inhabitants have also played a part. A breakdown in the control of water, for whatever reason or reasons, was inevitably followed by a decline in prosperity. The decay of Khūzistān, which culminated under the 'Abbāsids, is an illustration of this. Under the Sāsānids, the waters of the Karḡha, Diz and Kārūn had been utilised by an elaborate system of barrages, tunnels, inverted syphons, lifting devices and canals (see below). Cereals, sugar cane, rice and dates were produced in abundance. In the last fifty years or so

of Sāsānid rule, irrigation was neglected. Under the rule of the Orthodox Caliphs and the Umayyads, adequate attention was not paid to artificial drainage of the irrigated land, and under the 'Abbāsids the province declined—rising water-tables under irrigated land may have been responsible for the attempts of the 'Abbāsids to irrigate new lands of poorer quality. Water-logging, alkalinisation and salinisation, and the hazards of flood, all contributed to the decline of the region which occurred in post-'Abbāsīd times (see further R. McC. Adams, *Agriculture and urban life in early southwestern Iran*, in *Science*, cxxvii, 3511 [1963], 109-22). Changes in prosperity in other regions brought about by a failure to control irrigation have been, perhaps, less spectacular but none the less important. The decay of irrigation and drainage not only resulted in an increase of waste and unproductive land, but may also have led to the spread of malaria [see MALAYĀ], thus contributing to a decline in population and output.

Water utilisation: technical features. Irrigation works, plain take-offs, dams (see *BARO*), weirs, lifting devices, artificial reservoirs and *bandis*, supplemented by principal and secondary canals, are to be found all over the country; and some are ancient structures.

(f) *Dams*. Several large dams existed in Khūzistān in Sāsānid times, including the bridge dams at Shūsh-tar and Dīzfūl, built by Shāpūr I and Shāpūr II or Ardāshīr II respectively, the dam on the Dījarrāhī near Khālafābād, and the dam on the Mārūt at Acredīlān (on the last, see H. Gaube, *Die spätpersische Provinz Arragēn/Kūh Gildāyēk*, Vienna 1973, 189-90). They continued in use for varying periods after the fall of the Sāsānids. Repairs and reconstructions were numerous, and the Romano-Sāsānid work at Shūsh-tar and Dīzfūl was partially replaced by pointed-arch bridges. The dam at Shūsh-tar, known as the Band-i Mīrān, had a length of 2,700 ft and raised the water to the level of the city of Shūsh-tar, which was situated on a rocky outcrop on the east bank of the Kārūn. The dam was built partly by Roman prisoners of war taken in Shāpūr I's victory over Valerian in A.D. 260. It had a rubble masonry core set in hydraulic mortar; the facing was of large, cut masonry blocks, held in place by both mortar and iron clamps set in lead. It was pierced by numerous sluices for the purpose of releasing water in time of excessive flow. It took three years to build, during which time the Kārūn River was diverted through two by-pass channels. One of these, the Āb-i Gargar, winds its way south for some twenty-five miles and then rejoins the Kārūn. When the work of the dam was completed, the entrance to the Āb-i Gargar was closed by a second dam, the Kayzar dam. This was made of large stone blocks mortared and clamped together, and six sluices were provided to control the flow of water into the Āb-i Gargar. Part of the bridge at Shūsh-tar and the Band were swept away by floods several times during the 19th century. Muḥammad 'Alī Mīrān, when governor of Kirmānshāh, undertook repairs to it in the early 19th century (J. M. Kinnear, *Geographical memoir of the Persian empire*, London 1813, 98-9). When Curzon visited Shūsh-tar in 1889, there was a gap of over seventy yards in width in the middle of the bridge, which had been swept away by a flood in 1885. The efforts of Nāẓim al-Saltāna, the governor of 'Arabīstān, to repair it proved abortive (*Persia and the Persian question*, London 1892, ii, 374-5). A further canal, the Mīyān Āb canal, was cut, apparently to divert water through a tunnel made in the face of

the castle rock in order to irrigate the high-lying lands to the south of the city, the level of the water of which was regulated by dams. As a result of the rupture in the Band-i Mīrān and the bridge, the river bed was lowered at the point where it formerly fed the canal and the land which it was intended to irrigate became derelict (Curzon, *op. cit.*, ii, 376).

The Dīzfūl dam, a replica of the Shūsh-tar dam, was 1,250 ft. long. When Curzon visited Dīzfūl, the dam was in a dilapidated condition, two of its arches having recently fallen in (*op. cit.*, ii, 303). After it fell into decay, all local irrigation depended upon rough dams of stone and brush-wood, which were reconstructed after every flood (H. Wulff, *The traditional crafts of Persia*, Chicago 1967, 248; N. Smith, *A history of dams*, London 1971, 59, 82, 82; A. K. S. Lambton, *Landlord and peasant in Persia*, repr. Oxford 1969, 226).

South of Shūsh-tar, where the Āb-i Diz and the Āb-i Gargar flow into the Āb-i Shūtāyt, the main channel of the Kārūn, another Sāsānid dam, the Band-i Kīr, of which only the name survives, was located. The name is of interest because it suggests that bitumen (*hir*) may have been used to make the dam watertight and solid. Another dam on the Āb-i Gargar, called the Pul-i Bulaylī, was added to the Shūsh-tar system in Islamic times. This was a power dam; mills were installed in tunnels cut through the rock at each side of the channel, the dam providing the necessary head of water to drive the mill wheels (see Curzon, *op. cit.*, i, 372-4). A third bridge dam was built, also in Sāsānid times, over the Karkha at Fā-yī Pul. It fell out of use when it burst in 1837. Its remains were seen by Sir Aurel Stein in 1938 (Sir Aurel Stein, *An archaeological journey to Western Iran*, in *Geogr. J.* [October 1938], 327).

At Ahwāz (q.v.), there was another great dam (but not a bridge dam), probably over 3,000 ft. long, and about 25 ft. thick. Its remains were to be seen until recently. Al-Mukaddas describes the dam as being wonderfully constructed from blocks of rock behind which the water was held back. He states that the water was divided into three canals, which watered the fields of the estates of the people of the city, and that without the dam Ahwāz would not have been populous and that its canals could not have been used (*Aḥsan al-taqdīm*, 411; see also Curzon, *op. cit.*, ii, 347-8). The collapse of the dam in the 9th/15th century brought ruin to the city.

Numerous storage dams and their remains are to be found in many parts of Persia. Although their overall contribution to irrigation was not as great as that of *bandis*, or of the dams in Khūzistān, they were of considerable local importance and enabled land which could not otherwise have been cultivated to become productive. One of the most interesting systems is that on the Kur River in Fārs, which has provided irrigation for the Kurbāl district to a greater or lesser extent for some 2,000 years. The most famous dam of this complex is the Band-i Amīr, built about 340/960 by the Būyid 'Aḍud al-Dawla (q.v.), probably on earlier, possibly Achaemenid, foundations. Prior to its reconstruction, the water of the Kur could not be raised to irrigate Upper Kurbāl. Al-Mukaddas, who wrote soon after the dam was built, and Ibn al-Balkhī (q.v. in Suppl.), who wrote rather under 150 years later, describe the dam in similar terms. The latter states that 'Aḍud al-Dawla brought engineers and workmen to the place in order to build the dam and spent much money on its construction. The dam was made of

stone set in mortar, reinforced by iron anchors, which were set in lead. Upstream and downstream the river-bed was paved for several miles, and the supply canals extended for over ten miles, serving 300 villages in the Marwadhagh plain. Ten water-mills were built close to the dam, the crest of which was wide enough to allow two horsemen abreast to ride across it (al-Mukaddas, 444; Ibn al-Balkhī, *Fārs-nāma*, ed. G. Le Strange, London 1921, 151-2; see also G. Le Strange, *Description of the provinces of Fars in Persia at the beginning of the 13th century A.D.*, London 1912). Upstream from the Band-i Amīr there were five other major dams for the irrigation of Lower Kūrbāl. These included the Rāmdjird dam, built on Achaemenid foundations, which was almost as large as the Band-i Amīr, and five downstream, the last of which, the Band-i Qāṣṣār, was only a few miles from Lake Bahktāgin into which the Kur flows (A. Houtum-Schindler, *A note on the Kur River in Fars, its sources and dams and the districts it irrigates*, in *Proc. Royal Geogr. Soc.*, [1891], 287-92; see also N. Smith, *op. cit.*, 83-5, and Kortum, *op. cit.*). By the 6th/12th century, the Band-i Amīr, the Band-i Qāṣṣār and the Rāmdjird dam had fallen into a state of decay and were repaired by the Saljūq governor of Fars, the Atābeg Djalāl al-Dīn Cawli Saḡāw (Le Strange, *Lands of the Eastern caliphate*, 277-8). The Rāmdjird dam was again rebuilt towards the end of the 9th/beginning of the 13th century, and there were several reconstructions after that date (Smith, *op. cit.*, 85).

In the eastern provinces of Persia there were also a number of dams and irrigation works on the Oxus or Āmū Daryā (q.v.) and on other great rivers and lesser streams. Some of these were repaired, and others constructed by the Muslims. Sīstān was dependent almost wholly upon the control of the water of the Hīrmand (Helmand) River (see HELMAND). Zaranj, the capital of the province under the 'Abbāsids, was situated near the original capital of Rām Shīhrīstān (Abrağahīyīr), which according to tradition, had been abandoned when a dam across the Hīrmand had burst and the water had been permanently diverted from the Rām Shīhrīstān canal (Le Strange, *op. cit.*, 339-40). From the works of the Muslim geographers, it would appear that Zaranj was irrigated by six dams on the Hīrmand near where it enters Lake Zarab. Some of these may have been of Sāsānid origin. The Muslim added various water-wheels to the system. In 769/1363 Zaranj and its irrigation works were destroyed by Tīmūr, as was also the Band-i Rustam on the Hīrmand River near Bust, the water of which had served to irrigate all the western lands of Sīstān. Failure to repair and maintain the elaborate system of canals and dams on the Hīrmand River resulted in much of the land formerly irrigated and drained being converted into reed beds and swamps. The headwaters of the Hīrmand and the main stream are at the present day in Afghānistān. After entering Persian Sīstān, the river divides into two branches, the Pārīyān and the Sīstān rivers. The former flows in a northerly direction, and with its tributaries waters northern Sīstān. The latter flows through southern and south-western Sīstān. Near the Afghān frontier, the Kabak dam diverts water into the Pārīyān, while another dam lower down, the Band-i Zabāk, diverts more water for irrigation. The use of the water of the Hīrmand and the construction of new dams has been the subject of bitter controversy between Persia and Afghānistān. The first award of the river waters between them was made in 1872. In 1950

the Helmand River Delta Commission was set up (though subsequently disbanded).

The water of the Murghāb River in Khurāsān was diverted by numerous dams and canals for irrigation. Al-Isfahārī relates that one march south of Marw, its bed was artificially dyked with embankments faced by wooden works which kept the river-bed from changing. Under the Saljūqs, the number of dams and dykes on the Murghāb was increased. These were later destroyed by the Mongols and the oasis of Marw converted into a desert swamp, according to Hāfiṣ Abū (Le Strange, *op. cit.*, 397, 402). He states that after Tīmūr's conquest of Khurāsān, various of the emirs and pillars of the state each made a canal leading off from the Murghāb, in order to irrigate the land, and that when he was writing, i.e. at the beginning of the 9th/15th century, twenty of these were in existence. He describes the city as being in a flourishing condition (*Ḍugharīyī-yi Hāfiṣ Abū, ḡisṡat-i rak'a Khurāsān: Harāṣ*, ed. Māyil Harnwī, Tehran A.H.S. 1349/1970-1, 34).

One of the most important periods in mediaeval Persia in the construction of dams appears to have been the Ilkhān period, when, in the late 7th/13th century and early 8th/14th centuries, several dams were constructed. The great achievement of this period was the construction of a number of arch dams. One at Kibar (River), some 15 miles south of Kūman, is the oldest surviving example of this type of structure so far located. Built in a V-shaped gorge, which narrows about halfway down to a deep gully, the dam is 85 ft. high and 180 ft. long at the crest, the thickness of which is between 15 and 16½ ft. The air-face, the radius of curvature of which is 125 ft., is vertical except near the face where there is a slight slope in the downstream direction. The dam has a core of rubble masonry set in mortar (*sārdūg*) made from lime crushed with the ash of some desert plant, which makes it hydraulic and results in a strong, hard and highly impervious mortar ideal for dams. The dam has a vertical series of openings on the water-face connected by shafts and galleries to provide passage for the water through the dam walls (though their precise function is uncertain). Two other arch dams, probably also belonging to the Ilkhān period are situated near Ṭabas, the Shāh 'Abbās, east north-east of Ṭabas, so called because it was repaired in the Safawid period, presumably by Shāh 'Abbās I or Shāh 'Abbās II, and the Korīf dam, to the south of Ṭabas. The latter is remarkable for its height of some 120 ft. (H. Goblet, *Du nouveau sur les barrages iraniens de l'époque mongole*, in *Art et Manufactures*, no. 339 [April 1973], 15-20; *idem*, *Kibar en Iran sans doute le plus ancien des barrages voûtés*, in *Science Progress*, no. 3358 (February 1965); *idem*, *Sur quelques barrages anciens et la genèse des barrages voûtés*, in *Revue d'histoire des Sciences*, cahier no. 6; Smith, *op. cit.*, 53-8). Another dam, a large gravity dam at Sāwa, was also built in the Ilkhān period. Hāmid Allāh Mustawfī states that it was constructed on the orders of Shāme al-Dīn Muḥammad Shāh-Dīwān (see *ḡuwāyīn, ḡisṡat al-dīn muḥammad*) (*Nashat al-hudūd*, 21). It was situated in a valley south-east of Sāwa and east of the point where the Karāckī (Gāvmīha) joins two streams from Sāwa and Āwa respectively. Although the limestone rock at the side of the valley was sound (as far as is known), the base of the dam was built on river alluvium consisting of sands and gravel, which go down 90 ft. before bed-rock is reached. Consequently, as soon as the reservoir began to fill, the pressure above the foundations drove the

water through the alluvium and the water established a permanent outlet for itself. The dam was abandoned, but the structure survived (Smith, *op. cit.*, 64-5). It is not without interest that a number of dams and irrigation works were constructed about the same time in Yunnan by Sa'id Adjal, who apparently became governor of Yunnan in A.D. 1274 (J. Needham, *Science and civilisation in China*, IV/3, Cambridge 1971, 297).

The dating of the gravity dams at Kührūd and Kamgar near Kāshān and at Farfān and Turūk in Khurāsān is uncertain. The Kührūd dam is attributed to Shāh 'Abbās and the Kamgar dam to Djalāl al-Dīn b. Muḥammad Khārazm-Shāh ('Abd al-Raḥmān Durrābī, *Tārīkh-i Kāshān*, ed. Irāqī Afshār, Tehran A.H.S. 1335/1956, 8, 40-1, 42, 43). The Gulistan dam in Khurāsān was made by the Timurid Abū Sa'id Mirzā (855-71/1452-67) (*Āmūd wa muḥādāt-i āmūd-i-yi Irān as Tiūsir-i Shāh Ismā'īl*, ed. 'Abd al-Ḥusayn Nawāzī, Tehran A.H.S. 1347/1962, 313). The Salām Dam in Khurāsān was constructed by Ghāyath al-Dīn Kurt (706-15/1306-24) (N. M. Clevenger, *Dams in Fārs, some preliminary observations*, in *East and West*, N.S., xix (1969), 393). These dams were still in use in the 1960s, but most of them furnished very little water because their reservoirs were heavily silted up.

Under the Safawids, there was renewed activity in dam-building and other constructions for irrigation. Shāh Tahmāsp (930-84/1524-76) attempted to divert the water of the Kārdū into the Zāyanda Rūd by a connecting tunnel through the mountain ridge which separates them. The work was abandoned owing, it was said, to the foul atmosphere of the workings. Shāh 'Abbās I (996-1038/1587-1629) revived the project, but abandoned the idea of a tunnel in favour of an open cutting. It is reported that at times he employed 100,000 men on this undertaking, but the scheme came to naught. Shāh 'Abbās II (1052-77/1642-67) made another attempt, in which he was advised by a French engineer named Genest. A dam, 300 ft. long and about 100 ft. high was built across the Kārdū to divert the water of the river while the channel was cut. Smith thinks that Genest may have had in mind more than a mere diversion of the river and that he may have hoped to reduce the amount of excavation through the mountains by raising the level of the river. The scheme, however, was also abandoned after 100 ft. of the connecting channel between the two rivers had been cut. The idea was revived during the reign of Rūḍ Shāh Pahlawī. Work was begun on the cutting of a tunnel connecting the two rivers. Known as the Kührang tunnel, it was finished in 1933 (Smith, *op. cit.*, 72-3). The increase in the flow of water in the Zāyanda Rūd which resulted has enabled more land to be cultivated in the districts through which the river flows. Shāh 'Abbās II also built, on the foundations of an earlier weir, the Khwājū Bridge over the Zāyanda Rūd in Isfāhān. It is a combination of a weir with sluice gates and flood arches above these, with a permanent roadway on the top (Wulfi, *op. cit.*, 248; Smith, *op. cit.*, 73-4).

(ii) *Wells and lifting devices.* A variety of lifting devices operated by men and animals to raise water from rivers, streams and wells have been widely used in the past, especially in Khurāsān, the Persian Gulf littoral, Fārs, in the neighbourhood of Isfāhān, in some districts in eastern Persia and on the shores of Lake Urmīyya (Rūdīlīyya). They are still used, but have been largely superseded by power-operated wells. Man-operated wells consist of a windless set

over the well with a large leather bag attached to it. Those operated by draught animals are worked by one or more draught animals such as oxen, mules and, less frequently, buffaloes, each draught animal having one or more men working with it. The constructing of these devices varies slightly in different regions, but the general principle is the same. Their operation is both laborious and inefficient. A wooden wheel is set in two brick or stone built pillars, or two heavy upright posts, above the well, connected by a wooden scaffold. Two pulleys are run on either attached to the scaffold, over which a main and an auxiliary rope run into the well; the wheel end of the main rope is attached to a hook and a ring carrying a wooden cross from which a large leather bag is suspended. This runs out into a narrow spout to which the auxiliary rope is attached. The draught animal is harnessed to the ropes and sets the wheel in motion by walking up and down a runway beginning at the well-head and descending at an angle of about 30 degrees. By this action, the bag is let into the well. When it is full, it is lifted to the surface and empties itself in front of the well into a trough which carries the water into the irrigation channel. In some wells, a big wooden horizontal cog-wheel, geared to a vertical wheel which turns a bucket-carrying wheel set on the same axle in the water is set in motion by an ox or mule walking round and round a circular runway made about the well (see further Wulfi, *op. cit.*, 256-8, and Lambton, *Landlord and peasant*, 227-8; and also C. Cohen, *Le service de l'irrigation en Iran au début du XIX^e siècle*, in *BEO*, xiii (1949-50), 118-19). Curtzon describes how water was lifted for irrigation from the Kārdū above Ahwāz, where the river was confined within banks from 20 to 30 ft. high. Pools were hollowed in the river bank and water was drawn up by means of leather skins and a pulley worked by oxen pading up and down an inclined plane on the top of the bank (*op. cit.*, II, 356-7).

(iii) *Cisterns, water tanks and ponds.* There are to be found in regions in which water supplies are scarce and are especially common in districts on the edge of the central desert, though they are also to be found elsewhere, notably in Fūmīnāt. They are supplied by water from *ḥamās*, underground springs or rain-water. Some are made with stones or bricks and cement and are often of a considerable size. 'Abd al-Raḥīm Durrābī states that almost all the villages and *hamās* in Kāshān had small cisterns (*istakhār*); that of Nīyāsār was 100 *ghar* by 50 *ghar* and 1/2 *ghar* deep. He describes the purpose of an *istakhār* as follows: "In some *hamāts* (*maḥāḥ*) the water is less than [the amount required for] a plot of land (*kand*) for the first rotation when water is due to be let into sown land or orchards. As a result, it takes a long time for the plot to be inundated, because when the quantity of water is small, as soon as it enters the land it sinks in and the plot will not be inundated. Accordingly, water is held back in a cistern (*istakhār*). When the latter is full, it is emptied, or whatever amount is needed for the land is let into the irrigation channel until the desired result is achieved. Or it may be that the water of a *hamāl* is sufficient for the first rotation period but it is desired to lead the water to a piece of land (*daḥḥ*) or fields (*maḥāḥ*) which are distant, and so half or more of the water will be lost in the channel between the mouth of the *hamāl* and the land to be irrigated, with the result that the plot will not be inundated (unless a greater head of water is first held back in a cistern). Or it may be that a village
